

Introduction: Nearly 40 Years of Proven Success

Founded in 1985 by Sam Godfrey, SAMCO has spent decades refining its approach to water conservation and loss prevention. Over the years, the company has built a reputation for **reliability, innovation, and unmatched industry knowledge.**

There are few topics more important than water conservation, especially during an economic downturn. Identifying and reducing nonrevenue water is comparable to **managing your liquid money.** As we delve deeper into this subject, it is evident that water conservation will remain a paramount concern for years to come.

Identifying Non-Revenue Water

Strategic planning and consulting to assess and address the hidden water system loss and improve accountability are the essential keys to implementing a sustainable operation. Aging infrastructure and lack of proactive water conservation plan can lead to unaccounted for nagging water system leaks, draining utilities of valuable revenue.

Cost-Efficiency of Conservation

Implementing SAMCO's cost effective services will identify assets and infrastructure concerns of unaccounted for water through methodic conservation measures. Utilities must consider the significant operational costs that are associated with constant water loss and be proactive in implementing a water conservation plan.

SAMCO's Support

SAMCO offers leak surveys, asset management, consulting services, and providing our training expertise, to help utilities establish effective conservation programs. Our expertise aids in reducing treatment costs, creates increased water accountability, and optimizing asset management for long-term water system reliability.

Conclusion

Utilities must prioritize water management to safeguard this precious resource and improve their financial stability. At SAMCO, we are ready to assist you in achieving effective water conservation.
