

Bend Rite Fabrication is a custom metal fabrication shop located in Marshall Mn. We specialize in commercial fabrication in mild steel, stainless steel and aluminum. Bend Rite has purchased a new laser that will help increase our production capacity as well as provide future growth for our business. This laser will have the largest cutting capacity in the state of Minnesota. We are excited about what this will be able to provide for our current business but are thrilled to see where this will take us in the future!

We currently have maxed out the space our existing building and feel that with the purchase of the new machine, it would be a great time to invest in our facility for future growth as well. We are looking to add 80'x 80' to the north end of our existing shop. This would be a steel frame design to match the existing steel frame in our current facility.

We would be able to add additional parking for more customers at our facility, although most of parts cut on the new laser would be shipped directly to our customers. We are hoping to have the project completed by early November, if not sooner.

The cost of the addition to our facility with infrastructure for the new machine will be roughly \$600,000

We feel that once this expansion is complete, we will be adding employees to operate the laser as well as more welders and fabricators as needed. Our addition will add new jobs to the local economy as well as adding economic impact to our local communities.
