

MOSQUITOFISH

HOW THEY CAN HELP

PINELLAS COUNTY MOSQUITO CONTROL

WHAT ARE MOSQUITOFISH?

Eastern Mosquitofish, *Gambusia holbrooki*, are a native fish to Florida. They are small, and grow to be around 2 to 3 inches in length. They are naturally found in many lakes, ponds, and ditches.

WHAT CAN THEY DO?

Mosquitofish serve as a great form of biological control against mosquitoes. Each adult mosquitofish can consume up to 100 mosquito larvae per day. They are a great resource for large areas of standing water, such as pools in disrepair or ornamental ponds.

WHERE CAN I GET THEM?

Pinellas County Mosquito Control breeds mosquitofish, and can send a technician to place them on a resident's property for **FREE** with the property owner's permission. If interested, contact us!
