#### Comprehensive Plan and Unified Development Code (UDC)

##### A. General Overview

*This property is designated Office on the Future Land Use Map (FLUM) in the Comprehensive Plan. This designation is meant to provide opportunities for low-impact business areas. These uses would include professional offices, technology and resource centers; ancillary commercial uses may be considered (particularly within research and development centers or technological parks).*

*The existing Cedar Springs subdivision is zoned L-O and contains twelve (12) commercial lots in which seven (7) of the buildings are completed or underway. The uses include personal or health services. Cedar Spring Lot 18, a .249-acre parcel, is located in the center circle of this business complex and has commercial buildings, drive lanes, and parking stalls buffering it from the residential lots on all sides.*

## VII. ADDITIONAL NOTES & DETAILS FOR STAFF REPORT MAPS, TABLES, AND CHARTS

(link to [Community Metrics](#))

### A. One-Mile Radius Existing Condition Notes

This data is automatically derived from enterprise application and GIS databases, and exported dynamically. Date retrieved notes generally reflect data acquired or processed within the last 30-days. Analysis is based on a one-mile radius from the centroid of the identified parcel. Parcel based data excludes certain properties and represents land as it exists now. Properties considered are only those with a total assessed value greater than 0 (i.e. excludes most HOA area, transitional development, government, and quasi government facilities). The following values also constrain included property acreage to reduce outliers and non-conforming instances from distorting averages: R-2 < 5.0; R-4 < 2.0; R-8 < 1.0; R-15 < 0.5; R-40 < 0.25.

Conditional Use Permits and Preliminary plat data likely include duplicate project submittals as they may be for the same project, approved at different times through multiple application types. Consider each independently or review prior application approvals. Some approved entitlements, and particularly older ones, may be constructed.

Decennial population counts and household counts are based on the most recent Decennial Census. Current population and current household values are COMPASS estimates, usually for the year previous, and are based on traffic analysis zone boundaries (TAZ's).

### B. Mixed Use Analysis Notes

This data is derived from enterprise application and GIS databases, and exported dynamically. Data considered for analysis are only those areas overlapping the overall Mixed Use boundary area. Mixed Use areas across arterial roadways are distinct, separate, and not considered as they do not meet the mixed use principles in the Comprehensive Plan (e.g. pedestrian safety, transportation efficiency, etc.). Mixed Use parcel areas may be greater or smaller than the future land use area designation boundary due parcel size, configuration, right-of-way, and other factors. Conditional Use Permits and Preliminary plat data likely include duplicate project submittals as they may be for the same project, approved at different times through multiple application types. Consider each independently or review prior application approvals.

### C. Service Assessment Notes

This data is derived from enterprise application and GIS database, and exported in dynamic reporting. The system references the most recent available from a variety of sources including sewer main lines, sewer trunksheds, floodplain, fire service areas and response times, police crime reporting, pathway information, existing and planned transit, existing and planned roadway improvements, school proximity, park proximity, and other resources.

The overall score represents the total points scored using weighted criteria (it is not a ranked order), and the percentile score is relative comparison value of the parcel being considered versus every other parcel in the City (the higher the better). This tool was developed as a City Council prioritized outcome of the 2019 Comprehensive Plan.

### D. ACHD Roadway Infographic Notes

The Ada County Highway District utilizes a number of planning and analysis tools to understand existing and future roadway conditions.

- **Existing Level of service (LOS).** LOS indicator is a common metric to consider a driver's experience with a letter ranking from A to F. Letter A represents free flow conditions, and on the other end Level F represents forced flow with stop and go conditions. These conditions usually represent peak hour driver experience. ACHD considers Level D, stable flow, to be acceptable. The LOS does not represent conditions

for bikes or pedestrians, nor indicate whether improvements: are possible; if there are acceptable tradeoffs; or if there is a reasonable cost-benefit.

- **Integrated Five Year Work Plan (IFYWP).** The IFYWP marker (yes/no) indicates whether the specified roadway is listed in the next 5-years. This work may vary, from concept design to construction.
- **Capital Improvement Plan (CIP).** The CIP marker (yes/no) indicates whether the specified roadway is programmed for improvement in the next 20-years.
