Building Department

Staff Report

February/March Totals

Over the winter we started issuing Mechanical permits for Commercial projects and come July we will do Mechanical permits for Residential. I think that will be a good thing for the community and is one more step to making this department more of an all-inclusive Building department for our community.

March 1st we also re-implemented the siding permits that had been gone away with. Siding is a very important part of any structure and I think it is very important for that t get a set of eyes on it.

A few of the bigger projects from last year are still rolling right along, with a couple wrapping up soon or have already been wrapped up.

I'm really looking forward to this spring and summer and have some good projects that will be coming up in the near future that will be very beneficial for the community.

As always If any of you have any question please don't hesitate to reach out.

If I don't have the answer I'm pretty good and getting it.
