**SECTION 2. AMENDMENT OF MILPITAS MUNICIPAL CODE TITLE I, CHAPTER 2, SECTION 3
“Procurement Authority - Methods and Procedures”**

Title I (Administration), Chapter 2 (Purchasing), Section 3 (Procurement Authority - Methods and Procedures), Subsection I-2-3.12 (Contracting for Consultants) of the Milpitas Municipal Code is hereby amended to read as follows:

I-2-3.13 - Contracting for Consultants

3.13-1 Consultants are required for professional or technical expertise and for matters requiring specialized abilities or a high degree of skill. Their numbers (in relation to a particular skill or expertise required) are comparatively limited. Where consultants are involved, the bidding process is not likely to result in a lower price to the City or eliminate unnecessary expense or delay. However, the request for proposals (RFP) process established in Section I-2-3.09, the request for qualifications (RFQ) process established in Section I-2-3.10, or a similar process based on evaluating consultant qualifications, is better suited.

3.13-2 The requesting department shall be empowered to engage a consultant (including, but not limited to, material testing services and construction inspection services) without the necessity of competitive procurement or notice thereof:

- a. Without City Council approval if the consultant’s total fee for materials and services under the contract by which the consultant is engaged does not exceed \$100,000.00.
- b. With City Council approval if the consultant’s total fee for materials and services under the contract by which the consultant is engaged exceeds \$100,000.00.

3.13-3 Architects, Engineers and Land Surveyors. In addition to the provisions of paragraph 3.13-1 and 3.13-2 of this section, the following requirements shall be applicable to the selection of architects, engineers and land surveyors.

- (a) The requesting department or division head shall negotiate a contract with the firm that possesses the demonstrated competence and professional qualifications for the required architectural, engineering and land-surveying services.
- (b) Should the requesting department or division head be unable to negotiate a satisfactory contract with the firm considered to be competent and qualified, at a price determined to be fair and reasonable, negotiations with that firm shall be formally terminated. The requesting department or division head shall then undertake negotiations with the second most qualified firm. Failing accord with the second most qualified firm, the requesting department or division head shall formally terminate negotiations. The requesting department or division head shall then undertake negotiations with the third most qualified firm.

- (c) Should the requesting department or division head be unable to negotiate a satisfactory contract with any of the selected firms, the requesting department or division head shall select additional firms in order of their competence and qualifications and continue negotiation until an agreement is reached.

XI-15-5.1 - Standards of Construction

In all areas of special flood hazards the following standards are required:

- (a) Anchoring.
 - (1) All new construction and substantial improvements, including manufactured homes, shall be adequately anchored to prevent flotation, collapse or lateral movement of the structure resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy.
 - (2) All manufactured homes shall meet the anchoring standards of Section XI-15-5.4.
- (b) Construction Materials and Methods. All new construction and substantial improvements, including manufactured homes, shall be constructed:
 - (1) With materials and utility equipment resistant to flood damage;
 - (2) Using methods and practices that minimize flood damage;
 - (3) With electrical, heating, ventilation, plumbing and air conditioning equipment and other service facilities that are designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding; and
 - (4) Within Zone AH or AO, so that there are adequate drainage paths around structures on slopes to guide flood waters around and away from proposed structures.

(c) Elevation and Floodproofing. (See Section XI-15-2, definitions for “basement,” “lowest floor,” “new construction,” “substantial damage” and “substantial improvement.”)

(1) Residential construction, new or substantial improvement, including manufactured homes, shall have the lowest floor, including basement:

(i) In an AO Zone, elevated above the highest adjacent grade to a height exceeding the depth number specified in feet on the FIRM by at least one (1) foot, or elevated at least three (3) feet above the highest adjacent grade if no depth number is specified.

(ii) In an A Zone, elevated at least one (1) foot above the base flood elevation, as determined by the developer's engineer, and approved by the City Engineer.

(iii) In all other zones, be elevated at least one (1) foot above the base flood elevation.

This includes all non-flood resistant building material and all of the structure's support equipment such as, but not limited to, electrical, heating, ventilation ductworks, plumbing, and air conditioning equipment and other service facilities that could be damaged if submerged under water.

Upon the completion of the structure, the elevation of the lowest floor including basement and the structure's support equipment shall be certified by a registered professional engineer or surveyor, to be properly elevated. Such certification or verification shall be provided to the Floodplain Administrator.

(2) Nonresidential construction shall either be elevated to conform with Section XI-15-5.1(c)(1) or together with attendant utility and sanitary facilities:

(i) Be floodproofed below the elevation recommended under subsection (c)(1) of this Section so that the structure is watertight with walls substantially impermeable to the passage of water;

(ii) Have structural components capable of resisting hydrostatic and hydrodynamic loads and effects of buoyancy; and

(iii) Be certified by a registered professional engineer or architect that the standards of this Section are satisfied. Such certification shall be provided to the Floodplain Administrator.

(3) All new construction and substantial improvement with fully enclosed areas below the lowest floor (excluding basements) that are usable solely for parking of vehicles, building access or storage, and which are subject to flooding, shall be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwater. Designs for meeting this requirement must exceed the following minimum criteria:

(i) Be certified by a registered professional engineer or architect; or

(ii) Be certified to comply with a local flood-proofing standard approved by the Federal Insurance Administration, Federal Emergency Management Agency; or

(iii) Have a minimum of two (2) openings having a total net area of not less than one (1) square inch for every square foot of enclosed area subject to flooding. The bottom of all openings shall be no higher than one (1) foot above grade. Openings may be equipped with screens, louvers, valves or other coverings or devices provided that they permit the automatic entry and exit of floodwater.

(4) Manufactured homes shall also meet the standards in Section XI-15-5.4.

SECTION 12. SEVERABILITY

The provisions of this Ordinance are severable, and the invalidity of any phrase, clause, provision or part shall not affect the

validity of the remainder.

The City Clerk of the City of Milpitas shall cause this Ordinance or a summary thereof to be published in accordance with 36933 of the Government Code of the State of California.
