| \geq | RE: | Water Treatment Plant Probable Cost – Probable |

Based on the 30% design of the replacement water treatment plant cost estimates between \$12 million and \$14 million, the Town requested an evaluation of the impact of the project cost on the Town's water utility rate structure. After discussion with the Town's WTP Engineer, the \$14 million upper end of the project includes adequate contingency for the project, so the below analysis utilizes the upper end as the needed capital. The goal would be to get to a 90% design standard prior to issuing the debt, with the hopes of having a better final number to minimize the debt that would be issued.

Rate Impact Analysis

In looking at the anticipated impacts, the following assumptions were used:

- Base Water Rates as established
- Volumetric Water Rate Tiers as established
- Implementation of a Senior Water Rate Structure that impacts 30 customers
- Adjustment of the Tap Fee to reflect cost of new plant revised tap fee of \$15,383
- Anticipated Community Development of 426 additional taps broken out and absorbed as follows:
 - Minturn North 30 taps already accounted for
 - Malloit Park 120 taps
 - 100 Block Redevelopment 30 taps
 - Infill/Other 246
 - Assume 30 Senior Rate Class accounts (frozen monthly fees)

| | | 2024 | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 |
|-------------------|-------|-------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| Current SFEs | | 792.3 | 792.3 | 762.3 | 777.3 | 802.3 | 832.3 | 862.3 | 892.3 | 922.3 | 937.3 | 942.3 |
| Minturn North | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |
| Malloit Park | 120.0 | 0.0 | 0.0 | 10.0 | 20.0 | 20.0 | 20.0 | 20.0 | 20.0 | 10.0 | 0.0 | 0.0 |
| 100 Block | 30.0 | | | 5.0 | 5.0 | 5.0 | 5.0 | 5.0 | 5.0 | | | |
| Infill | 246.0 | 0.0 | 0.0 | 0.0 | 0.0 | 5.0 | 5.0 | 5.0 | 5.0 | 5.0 | 5.0 | 5.0 |
| Less Senior Rates | | | (30.0) | (30.0) | (30.0) | (30.0) | (30.0) | (30.0) | (30.0) | (30.0) | (30.0) | (30.0) |
| Total SEEs | 396.0 | 792.3 | 762.3 | 777.3 | 802.3 | 832.3 | 862.3 | 892.3 | 922.3 | 937.3 | 942.3 | 947.3 |

- Anticipated Borrowing Rate of 3.50%
- Total Borrowing, including remaining engineering, construction management, and issuance costs of \$13,590,000
- 30-year amortization schedule
- Assume fully amortized debt payment in 2025
- Debt Coverage at a minimum 1.20x to meet bond covenants.

Michelle Metteer, Manager Tiered Rate Structure – Water Utility August 26, 2024 Page 2

Based on the above assumptions, the rate estimate would require debt service fees to be set at a high of \$117.89/month (impact 2025) and declining thereafter based on the absorption of additional SFEs due to development. This represents a \$100.42 increase over the current debt service requirements to service the existing debt issued in 1997 and 2021. As noted above, it is assumed that in 2025 there would be a fully amortized debt payment that the Town may be able to work with CWRPDA on the defer principal through 2025 (increases principal payments thereafter).

An alternative would be to pay off the Town's existing non-CWRPDA debt early utilizing reserves, eliminating the covenant to maintain a 1.20x coverage, allowing the town to drop the coverage down to 1.10x. While the Town would be paying off the original USDA-RD loan (since refinanced), the impact would reduce the impact high in 2025 down to \$106.33/month, saving each SFE approximately \$139 in the first year. The overall savings per SFE over the 30-year amortization with the reduction in coverage requirement is approximately \$2,960.
