Consultant shall defend itself against any and all liabilities, claims, losses, damages, and costs arising out of or alleged to arise out of Consultant's performance or non-performance of the work hereunder and shall not tender such claims to Mission Springs Water District nor to its directors, officers, employees, or authorized volunteers, for defense or indemnity.
- b. Other than in the performance of professional services, to the fullest extent permitted by law, Consultant will immediately defend, indemnify and hold harmless Mission Springs Water District, its directors, officers, employees and authorized volunteers from all claims and demands of all persons arising out the performance of the work or furnishing of materials; including but not limited to, claims by the Consultant or Consultant's employees for damages to persons or property except for the sole negligence or willful misconduct or active negligence of Mission Springs Water District, its directors, officers, employees, or authorized volunteers.
- c. By his/her signature hereunder, Consultant certifies that he/she is aware of the provisions of Section 3700 of the California Labor Code which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and that Consultant will comply with such provisions before commencing the performance of the professional services under this agreement. Consultant and sub-consultants will keep workers' compensation insurance for their employees in effect during all work covered by this agreement.

In the event that the Consultant employs other Consultants (sub-Consultants) as part of the work covered by this agreement, it shall be the Consultant's responsibility to require and confirm that each sub-Consultant meets the minimum insurance requirements specified above.

## Company Overview

Kenwood Energy is an energy management consulting firm that acts as an advocate for our customers, serving as a source of independent information and guidance that enables customers to make informed decisions for achieving their goals related to energy use, GHG emissions and sustainability.

The services offered by Kenwood Energy fall into four categories:

- **Energy Management** – Our energy management services focus on the development of comprehensive energy assessments and plans, with expertise that includes lighting, refrigeration, pumping, fans, air conditioning, heating, hot water, and manufacturing processes. Our assessments include technical and financial parameters that identify payback periods and cost, allowing our clients to make more informed implementation decisions.
- **Renewable Energy Generation** – We formulate sophisticated energy output projections and feasibility analyses to assess renewable energy options for our clients. We provide technical expertise to support implementation by developing Requests for Proposals and construction specifications, aiding in vendor selection after the evaluation of proposals, and providing support and supervision during installation. We have extensive experience with solar electricity, solar thermal, wind, fuel cells, battery storage, and conventional cogeneration.
- **Sustainability** – Kenwood Energy has been helping customers reduce their environmental footprint while improving reliability and reducing operating costs. We have supported our customers in reducing and quantifying their greenhouse gas (GHG) emissions and developing Action Plans that define how targets will be reached, reported, and tracked. We also support our customers in the application of Energy Storage Systems (ESS) and microgrids to isolate them from planned and unplanned utility outages.
- **Energy Modeling** – Models developed by Kenwood Energy evaluate detailed energy consumption information in combination with relevant rates, reflecting not only differences between traditional utility providers but also the impact of Community Choice Aggregation (CCA) entities. Within rate categories, our models adjust for specifics such as seasonal changes, time-of-use differences, non-bypassable charges, and the power charge indifference adjustment (PCIA). The electricity rates are updated as needed, corresponding with published changes made by the relevant utility or CCA.
  - On-site renewable energy: our model includes detailed area specific weather profiles, and evaluate the impacts of programs such as net-energy metering, aggregated net metering, and lesser-known options such as the Renewable Energy Self-Generation Bill Credit Transfer program (RES-BCT) for local governments.
  - On-site ESS: building on the renewable energy model, this model captures detailed battery performance parameters and optimizes system sizing in light of customer energy use and goals, such as reliability, peak energy reduction or overall cost savings.
