Re: Industrial Space Application-Additional Information

Please add this information to our application for the Industrial Space (old vets office). At the last City Council meeting we were asked what we would be using the space for and we weren't as prepared as we should have been.

This space will allow us to fabricate items for projects, do maintenance on our equipment and job trailers, store tools, and prep for jobs. It will also allow us to have our hoist for use since the ceilings are higher and the space has had a hoist in the past. So it will not be just a storage space.

The discussion also came up regarding the original plans for those spaces and employing local people. At that meeting we did not add anything to the discussion of employing people and we should have. We do not directly employ very many people but indirectly we, depending on the size of the project, help employ between 50 and 100+ people.

At the Child Development Center we had at least 30 people working on just concrete and framing. We hire local specialty contractors and they are able to keep their employees working.

I hope this helps you understand how we plan to use the space and that we are indeed helping local employees stay working even if we don't directly write their paychecks.

Thank you for taking the time to review our application.
