

Jessie Gerke / Wallace
Public Works Director Report
03/05/21

WATER:

1. Booster Station and Well logs completed as normal.
2. Meter reading went quick this time. I did still find two-meter heads that are dead and will be replacing those asap.
3. Still checking for leaks as calls come in.
4. Daniel shoveled out fire hydrants.

SEWER:

1. Sewer logs completed as normal.
2. Discharging is going well.
3. I have not scheduled to take my sewer treatment test yet. With all of the snow, I ran out of time to study.
4. Went through sampling procedures with Daniel, he is very eager to learn and is doing awesome.
5. We had another overflow in the auger room with the same type of insulation.

EQUIPMENT/SHOP:

1. I greased the loader and grader before the last big snowstorm.
2. Changed the oil in the white pickup and tried to find the antifreeze leak.

STREETS:

1. Daniel and I have been working hard to find the storm drains that aren't draining. There have been a few that are more difficult from being under so much ice.
2. I have graded a few intersections. I can't quite grade whole roads yet because of the ice still on them.
3. In the afternoons with the warmer weather, I am trying to get the slush off of the roads.
4. Daniel is taking gravel and filling in some of the big potholes that I can't quite get to with the grader yet.
5. Shadyn and Devin were amazing help with the last few snowstorms.

PARK/RESTROOMS:

1. I plowed the sidewalk with the backhoe once and was able to use the snow blower the next time.
2. Daniel has also plowed the sidewalk and put ice melt down.
