RE: Permit #AK0062295
Bonanza Channel Placer – IPOPOP LCC

The Nome Common Council, by motion unanimously adopted, hereby joins with the Solomon tribe and other community entities, in registering the City's opposition to the proposed permit that would allow IPOPOP LLC to explore and mine in the Bonanza Channel east of Nome.

A joint letter (copy attached) signed by the Tribe and various entities, dated April 12, 2024, articulates compelling concerns as to why the proposed activity is not in the public interest. In fact, it would pose a significant threat to fish habitat and jeopardize valuable food sources. The pristine area is also of cultural and economic significance to Solomon, as well as to Nome, where visitors flock from around the world for a glimpse at migratory birds, and where regional residents conduct subsistence activities – including fishing, hunting and berry picking.

Local biologists have pointed out the fallacy in reasoning and blatant disregard of solid science. We believe the Army Corps of Engineers Alaska Region initial determination to deny the permit was correct, and are perplexed by the ACOE's about face, i.e. Pacific Division's overruling experts on the ground in Alaska.

The City requests the Department convene a public hearing in Nome or Solomon, and look forward to learning of the date and time when it has been scheduled. Thank you.

Sincerely,

FOR THE NOME COMMON COUNCIL

John K. Handeland
Mayor

Protecting a Fragile Ecosystem: A Unified Position to Protect the Safety Sound & Bonanza Channel Estuary near Nome, Alaska

The Village of Solomon, Solomon Native Corporation, Kawerak, Inc., Bering Straits Native Corporation, Sitnasuak Native Corporation, and Norton Sound Economic Development Corporation join together in opposition to IPOP, LLC's proposed mining activity near the Bonanza Channel.

The proposed mining activity poses a significant threat to The Clean Waters Act protections for essential fish habitats, resulting in irreversible impacts on the local aquatic ecosystem and fisheries resources. The Bonanza Channel provides fish and wildlife with an estuary to produce young, provides shelter from predators, and is a source of food. There are approximately 10 Native Allotments and over 100 campsites all along the Bonanza Channel area due to its prime location for hunting, fishing, and gathering, helping to ensure food security.

The Bonanza Channel serves as a vital hub for both non-consumption use (i.e. birdwatching) and subsistence activities. It is an area rich with migratory birds, protected marine mammals, fish and land resources such as moose, bears, plants and berries.

The Southern Seward Peninsula is in the midst of a salmon crisis that has lasted nearly five years. The majority of salmon that enter the Bonanza Channel and Safety Sound Estuary come through the eastern most outlet just past the Bonanza Bridge. If IPOP is allowed to dredge and mine these waters, their operations will impact salmon migration, further exacerbating salmon declines. The Bonanza Channel and Safety Sound are listed in the Anadromous Body of Water Catalog and chum salmon are noted by the Alaska Department of Fish and Game to have spawning grounds in close proximity to the proposed dredging and mining operation. Further, Safety Sound has been documented as an important rearing and growth habitat for juvenile chum salmon as they migrate to the ocean.

The Army Corps of Engineers' Pacific Division's actions to overturn the Alaska Region's decision to deny IPOP's mining project fails to consider the opposition of local testimony and comments, is contrary to actions requested during Tribal Consultation with the Village of Solomon, and ignores the recommendations of the US Fish and Wildlife Service and NOAA. The listed Tribe, Tribal organizations and non-governmental organizations within the Bering Straits region request Congressional intervention on this issue and ask you to obtain an Engineer Inspector General Report on the process that led to the reversal of the USACE's thoroughly and publicly considered initial permit denial. Additionally, we request that USACE Headquarters overrule the Pacific Division's flawed reversal of the Alaska Division's original permit denial.

For the protection of the pristine environment and subsistence resources of the Bonanza Channel and Safety Sound Estuary, we urge your intervention.
