

OVERARCHING POLICIES

These policies are designed for all Character Areas throughout Norman, as applicable.

GENERAL

- Based upon the recommendations of the most recent Stormwater Management Plan (SWMP), improve stormwater management for all development projects.
 - *Improve stormwater and floodplain management with all infill development.*
- Based on the most recent Transportation Plan and Complete Streets Policy, City projects and new development should establish a network of complete streets (see glossary).
- Appropriately regulate development within the floodplains and Stream Planning Corridors via the Floodplain and Water Quality Protection Zones (WQPZ) ordinances.
- Create and uphold quality build and site design standards to bolster community identity and pride.
- Where feasible, new streets and internal streets should follow a grid pattern of small blocks for a more condensed form of development.
- Improve pedestrian and bicycle connectivity, especially between public transit stops and destinations with new projects, redevelopments, or reconfiguration of existing development.
- Amenities such as, but not limited to, seating, public art, natural green space, fountains and other outdoor landscape elements should be included within each development. These amenities should be conscious and considerate of impacts on the natural environment.
- Develop buildings that meet or exceed Universal Design principles.
- Promote building principles such as energy efficiency and renewable energy sources, indoor environmental quality, water conservation, and minimizing impacts on wildlife through space and material optimization and building with resilient design.
- Coordinate all capital improvement projects between all necessary City departments (e.g. transportation, water, wastewater, stormwater, parks).
- Strengthen programming for disseminating information on the City's Fertilizer Ordinance and other pollution prevention initiatives.

RESIDENTIAL

- New residential development should blend with existing housing, incorporating tools such as buffering requirements and right-sized public spaces as defined in land use categories.
- Accommodate a variety of housing styles, sizes, densities, and price points to suit diverse housing needs.
- New residential development should use a variety of techniques to avoid the appearance of identical homes, increasing vibrancy and diversity in the built environment.

NON-RESIDENTIAL

- New non-residential development should use high quality building materials such as glass, brick, stone, wood or cementitious siding.
- Require that loading areas be located to the rear and sides of buildings and screened from view.
- Ensure that all sides of a parking garage that are visible from public view are architecturally consistent with the buildings it serves.
- Buildings in a corporate campus setting should have an internal pedestrian network between buildings.

SUBURBAN NEIGHBORHOOD AREAS

CHARACTERISTICS & INTENT

Suburban Neighborhood Areas are where suburban residential subdivision development has or is likely to occur (due to availability of water and sewer service). This area is characterized by low pedestrian orientation, existing but limited public transit access, high to moderate degree of building and use separation, predominantly residential with scattered civic buildings and varied street patterns, often curvilinear.

In the future, the neighborhoods with good trail access and connections to surrounding services will likely continue to be highly attractive neighborhoods. Future development should elevate connectivity and traditional neighborhood design (TND).

GOALS

- Encourage areas with new development to have greater housing variety and a higher overall density.
- Provide for medium- to high-intensity residential development near the Core and major streets, transitioning to lower density, single-unit uses further from arterial streets.
- Foster retrofitting of these areas to promote moderate to high density where appropriate, and expand options for multi-modal transportation.
- Promote balanced commercial and business/industry

uses with appropriate mixed-use development and locally serving commercial establishments.

OPPORTUNITIES

- Naturally occurring affordable housing options near Core, Classic, and Corridor Character Areas.
- Trail network connection possibilities.
- Greenfield development opportunities for efficient, compact subdivision design.

CHALLENGES

- Lack of a seamless multi-modal transportation network including safe, convenient, active and public transportation options results in an over-reliance on personal vehicles.

POLICIES

- Infrastructure extensions should occur incrementally, and new developments must connect to City water and sewer, which may require extension of lines.
- Protect drainageways in accordance with WQPZ ordinance within new development and expand their use for public trail access.
 - *Treat water quality volume from runoff for volume recommended in stormwater master plan and in accordance with EDC Section 7000.*
 - *The open spaces created around drainageways should be connected when feasible to create wildlife corridors.*
- Reduce the impact of higher intensity uses to

adjacent lower intensity uses with screening and landscaping. Native landscaping is encouraged.

- *Prioritize preservation of existing mature street trees.*
- Promote a mix of housing types, including accessory dwelling units, and new, well-designed similarly scaled multi-unit residences to increase neighborhood density and income diversity.
 - *Priority for higher density, mixed-income, and affordable housing opportunities should be assigned to locations with multi-modal transportation access and capacity.*
 - *Based on associated Land Use, housing typologies of all intensity levels are appropriate within the Suburban Character area.*
- Encourage:
 - *More mixing of uses, including neighborhood services, job centers, and residential uses of similar intensities.*
 - *Retrofitting existing commercial and retail strip development in areas that are likely to undergo renovation or potential demolition in the life of this plan.*
 - *Civic, cultural uses, entertainment establishments that will promote community interaction and public open space.*
- As streets move further from the center of the Core Neighborhood Character Area and parcel sizes and development patterns work against pedestrian circulation, focus should shift to vehicular safety, corridor appearance and traffic speeds while still providing basic access and safety for pedestrians and bicyclists. Transportation accommodations should:
 - *Ensure interconnectivity between developments for local and collector streets.*
 - *Provide access to trails with all new development, when feasible to integrate trail plans outlined in the Transportation and Park Master Plans into developments.*
 - *Connect streets between land uses and include complete street approaches for undeveloped sites.*
 - *Use the most recent Transportation Master Plan to fill pedestrian system gaps along streets, to trails, and within developments.*
 - *Encourage network of multi-modal transportation options to neighborhood centers and local mixed-use developments.*
- *Use building and site design as transitions between commercial centers and adjacent residential areas, as opposed to distance.*
- *Promote pedestrian access between buildings.*
- *New, transformative housing developments must have multiple access points onto the road network to ensure adequate external connections to the larger neighborhood community.*
- *Create incentives for establishing natural, undeveloped spaces for ecological conservation and interconnectedness of these areas across multiple developments (i.e. wildlife habitat corridors).*
- *Protect and/or preserve wetlands when developing east towards the 2045 Reserve.*

ACTION ITEMS

- Continue to work with developers on dedication of park land for neighborhood parks.
- Based on the most recent Transportation Plan, expand access to public transit.
- Update regulations to:

LAND USE

Land Use Category Descriptions

The following attributes for each land use category help guide rezoning, site plan approvals, and other site development decisions.

BUILDING TYPES

The scale and transparency of buildings dictate the feel and intensity of the areas. Larger commercial spaces or buildings with more residential units generate more trips, impacting factors like parking demand. Scale also influences the feel of an area, such as the difference between a block of one- and two-story structures versus structures with five or more stories. Transparency, or the ability to see into or out of a structure (often with windows), can make an area feel more comfortable, safe, and interesting for pedestrians. The recommendations in this section guide how to regulate and administer building types and uses in the adopted Development Codes.

SITE DESIGN

The area and shape of lots, streets, sidewalks, parking, landscaping, design of open spaces, and access all influence the feel of a development and should be handled differently based on the intensity of the use. Site design can often mitigate the effects of higher intensity uses on less intense neighboring uses. The recommendations in this section guide how to regulate and administer site design standards through the adopted Development Codes.

TRANSPORTATION NETWORK, CIRCULATION & ACCESS

Transportation accommodations vary depending on the intensity of the use. For example, commercial uses that generate more traffic will require access to arterial and collector streets. Site design will guide circulation and access within a site, but projects also need to consider how circulation and access are addressed between sites and future developments. The recommendations in this section guide how to regulate and administer access and circulation standards through the adopted Development Codes.

UTILITY ACCESS

Access to public services - water, wastewater, and regional stormwater management - may be required depending on the location and/or intensity of a development. Utility access recommendations in this section are strict to ensure services can support the development.

PUBLIC SPACE TYPES

Public spaces are open and accessible to anyone in the community. These spaces can include plazas, parks, courtyards, natural areas, and more. They create a sense of community and a way for residents to interact with their neighbors. The recommendations in this section guide where public spaces are needed and guide standards through the adopted Development Codes.

LOCATIONAL CRITERIA

Location Criteria considers the influence of a use on adjacent properties and land uses. The recommendations in this section guide how to administer compatibility of adjacent land uses and their influence on one another through the adopted Development Codes.

ZONING DISTRICTS

This section identifies the most appropriate zoning districts (based upon the current code) for each land use designation. For properties within an Overlay Zoning District, the base Zoning District will apply.

ZONING DISTRICTS IN GREEN ARE TYPICALLY APPROPRIATE IN THE DESIGNATED LAND USE

ZONING DISTRICTS IN YELLOW MAY BE APPROPRIATE IN THE DESIGNATED LAND USE, BUT REQUIRE INTENSE REVIEW

ZONING DISTRICTS IN RED ARE TYPICALLY NOT APPROPRIATE IN THE DESIGNATED LAND USE

Norman's Current Zoning Districts are:

- PUD: Planned Unit Development
- SPUD: Simple Planned Unit Development
- A-1: General Agricultural
- A-2: Rural Agricultural
- RE: Residential Estate Dwelling
- R-1: Single-Family Dwelling
- R-1-A: Single-Family Attached Dwelling
- R-2: Two-Family Dwelling
- RM-2: Low Density Apartment
- RM-4: Mobile Home Park
- RM-6: Medium Density Apartment
- R-3: Multi-Family Dwelling
- RO: Residence-Office
- O-1: Office-Institutional
- CO: Suburban Office Commercial
- C-1: Local Commercial
- C-2: General Commercial
- TC: Tourist Commercial
- CR: Rural Commercial
- C-3: Intensive Commercial
- I-1: Light Industrial
- I-2 Heavy Industrial
- M-1: Restricted Industrial
- MUD: Mixed-Use Development
- FH: Flood Hazard
- PL: Park Land
- CCFBC: Center City Form-Based Code

More information on Zoning and Overlay Districts may be found in Section 36-505 of the City of Norman Municipal Code.

LAND USE CATEGORY

Urban Low (UL)

DESCRIPTION & CONTEXT

An efficient, walkable pattern of lower-density urban development. Moderate to high building spacing and separation of uses, with further distances between destinations and fewer shared amenities.

- Low-intensity areas will be predominately residential over non-residential uses at compatible densities and scales.
- Gross densities in any single development should be greater than 3 units per acre.

BUILDING TYPES

Existing: All types of residential structures, primarily 1 or 2 story; single-story commercial, often with large parking lots, civic/institutional uses such as fire stations and schools are in close proximity.

New Development:

- Varied types of residential structures.
 - *Emphasis on single-unit detached and attached residential developments, including small-, standard, and large-lot single-unit detached, duplexes, and townhomes.*
- Attached housing may transition to higher intensities along collector and arterial streets, or adjacent to higher intensity uses.
 - *Attached housing may be allowed throughout a development to create variety.*
 - *Higher intensity multi-unit residential housing would be allowed when parcels are located along and with direct access to an arterial street.*
- 2 or 3 story commercial and higher density residential on arterials with limited parking areas.

SITE DESIGN

- It is critical that these locations take every opportunity to improve connectivity and help mitigate missing connections to nearby developed areas in order to strengthen neighborhood connectivity.
- The variety and diversity of housing stock should be improved as should the functionality of these areas, such as extensive street and sidewalk connections, a wider variety of lot sizes, and integration of and access to open spaces and other nearby activities should be incorporated into the design of new areas.

TRANSPORTATION NETWORK, CIRCULATION & ACCESS

Existing: The type and arrangement of streets means that almost all trips require a private vehicle to use at least one arterial road. Some of these areas have connections, or potential connections, to the regional trail network. Few of these areas have easy access to transit at this time.

Projected: A highly connected multi-modal network is required to support the current and future needs of these important areas. Improving access for pedestrians and bicyclists will be a priority, including modernizing multi-modal infrastructure.

UTILITY ACCESS

A full range of utilities should be available. If services are not already in place, they must be extended by the developer during the platting process to be suitable for development. If development occurs adjacent to existing facilities that are determined to be insufficient to meet the demands of the proposed development, the developer must upgrade the existing facilities to enhance the capacity of the utility systems.

LOCATIONAL CRITERIA

- Low intensity residential uses shall be adequately buffered or spaced from intensities posing adverse effects including noise, odors, air and light pollution, and heavy traffic.
- Lower intensity residential uses are not appropriate along arterial streets and should be located behind higher intensity residential, commercial, or mixed-use developments along arterial streets.
- Non-residential development is appropriate along arterial and collector streets, primarily at intersections.
- Urban Low is most compatible adjacent to: UM, RR, AR, UR, LCC, TOD, and OP.
- Urban Low is least compatible adjacent to: ULC, CBD, and C and requires additional buffering from uses that generate more noise, odors, air and light pollution, and heavy traffic.

R-1	R-1-A	R-2	RO	O-1	CO	C-1					
MUD	PUD	SPUD	RM-4	C-2							
A-1	A-2	RE	RM-6	R-3	TC	CR	C-3	I-1	I-2	M-1	

LAND USE CATEGORY

Urban High (UH)

DESCRIPTION & CONTEXT

Highly compact, walkable pattern of urban development prioritizing alternative means of transportation. Low to no building spacing and separation of uses. This area is intended to create opportunities for economic activities attracting a city-wide audience, and place residents closer to services and jobs.

- High-intensity areas strive for more residential than non-residential uses with frequent master-planned mixed-use development nodes. Non-residential uses may be more common in UH than in UM or UL due to higher concentrations of population.
- Gross densities in any single development should be greater than 12 units per acre.

BUILDING TYPES

- Medium and Small-scale 3- to 5-story buildings are common. Within existing developed areas, buildings may go up to 2-stories higher than surrounding properties.
- Multi-unit structures are the priority, but a variety of housing types from townhomes to apartments are expected.
- Mixed-use buildings including retail, work-spaces, and residences are most common.
- Public and private spaces (i.e. balconies, recreational roof decks, outdoor dining, etc.) are clearly defined and cultivate a sense of place.
- New developments that are single-use developments or predominantly single-unit or garden apartments are not appropriate.

SITE DESIGN

- The scale and layout of the built environment are conducive to walking. Trails and pathways are integrated throughout developments to connect to parks, neighborhoods, and community destinations.
- Multi-unit developments without connections to neighboring properties and uses weakens the development pattern and should be limited or avoided altogether.
- Street trees should form a continuous urban canopy over public areas and rights-of-way.
- Stormwater to be addressed at the project level, but designed as part of a larger neighborhood or sub-basin system.
- Site layout should take every opportunity to maximize the public infrastructure available in this area.

TRANSPORTATION NETWORK, CIRCULATION & ACCESS

This area features a relatively dense grid of streets and sidewalks. A full street hierarchy provides a variety of connections and route choices to people moving to, through, and within the area. Parking is a secondary use and should be as small as possible due to character and value of land in the area. Most of these areas have, or will have, easy access to public transportation (less than one half-mile walk of a stop). Improving access for pedestrians and bicyclists will continue to be a priority, including modernizing multi-modal infrastructure.

UTILITY ACCESS

A full range of utilities should be available. If services are not already in place, they must be extended by the developer during the platting process to be suitable for development. If development occurs adjacent to existing facilities that are determined to be insufficient to meet the demands of the proposed development, the developer must upgrade the existing facilities to enhance the capacity of the utility systems.

PUBLIC SPACE TYPES

Consisting of appropriately scaled public spaces including small parks, plazas, parklets, regional trail connections, and walking paths. Pedestrian amenities should commonly integrated into public and private projects.

LOCATIONAL CRITERIA

- Large building footprints (>12,500 SF) compromise the development pattern and are not appropriate, except along arterials and at arterial intersections.
- Medium intensity residential uses should be discouraged along arterial streets and should be located behind higher intensity residential, commercial, or mixed-use developments along arterial streets.
- Medium intensity residential uses shall be adequately buffered or spaced from intensities posing adverse effects including noise, odors, air and light pollution, and heavy traffic.
- High Urban is most compatible adjacent to: UM, ULC, MX, IMX, CBD, LCC, C, JC, TOD, and OP.
- High Urban is least compatible adjacent to: AR and UR and requires additional buffering from uses that generate more noise, odors, air and light pollution, and heavy traffic.
