INTERPRETATION OF THE ANALYSIS. Figure 1 shows the effect of the concentration of the monomer on the rate of polymerization. The rate of polymerization increases with increasing monomer concentration. The rate of polymerization is also affected by the concentration of the initiator. The rate of polymerization increases with increasing initiator concentration. The rate of polymerization is also affected by the temperature. The rate of polymerization increases with increasing temperature. The rate of polymerization is also affected by the solvent. The rate of polymerization increases with increasing solvent polarity.
