-----> Description Of Repair Job A <-----

Removal of Equipment

-----> Solution Of Repair Job A <-----

FST 72490 - 4/25/2022

We removed the damaged ABS pump from the well. Wired Mini Cas for new Flygt pump into control panel and installed pump. Pump runs but does not sit properly on the base elbow. We removed the pump back to our shop to adapt to the ABS rail bracket.

#### FST 72928 - 4/29/22

Installed new Flygt pump with new ABS profile gasket and we were able to get it to seat. The pump is still spraying a little at the base elbow and it may be worn. Well would need to be pumped out, isolated and a confined space entry made to inspect. Left system working at this time.

All labor is priced per the Co-Op contract B279-13.

----> Description Of Repair Job A <-----

Customer has a pump #1 fail and can't get the pump to run in hand or auto either.

----> Solution Of Repair Job A <-----

FST 72482 - 6/6/22

Upon arrival found pump tripped out, pump megged ok. Pump vibrates badly and pulls high amps out of water. Pulled pump for repair. Customer has new pump for this station but volute needs to be drilled out to fit ABS bracket. Brought new pump back to shop to be drilled and tapped for ABS bracket. Will return 6/7/22 to install.

FST 72972 - 6/7/22

Wired in and checked rotation, installed pump and test ran. Running at 240 volts/ 18 amps. Tested station in Auto. All ok.
