

Hi Hailey,

So there are two options for lighting the dog park.

1. Randy can build a field built structure that we would run a service to, if shorter than 100' from one of the poles would likely be free. But we do not allow customers to hang their lights on our poles so your own poles would have to be set for the lights. So going this route is likely no up front cost from us, you would have the monthly meter charge and useage bill from Alliant and whatever it would cost for Randy to do all of this work for.
2. We hang your choice of LED light on each pole the we own and maintain. We take care of any facilities needed (secondary cable and transformer) to power the lights. Your only cost is a monthly light charge per light, roughly \$20-\$22 each.

If you choose option two please fill out the attached form and choose from the two light options that are highlighted.

Troy Pittz can also assist you with questions regarding the lights.

Thank you,

Alexa Dash | Engineer Technician
