Clean up dollars - letter of interest due soon to the Roy A Hunt Foundation, could be a good collab with Navajo and Ute Nations, or with Montezuma County.

\*\*\*\*\*

Letters of Inquiry due January 16th for their Environment program.

The Environment Committee will consider grant requests of between \$25,000 and \$75,000 for specific projects or programs that improve the environment at a multi-state, national, and/or systems level. Typical costs funded include project management, contracted services, education and outreach programs, applied research, and innovations that could lead to public policy solutions.

Program priorities include:

Climate and Energy – To reduce the consequences of climate change in the United States, primarily through:

- Increasing the affordability and use of cleaner and renewable energy sources, and
- Reducing demand for carbon-intensive energy sources and carbon-intensive goods and services

Toxics and Waste – To reduce damage to the environment and human health caused by the manufacture, use, and disposal of consumer and industrial products. Typical strategies include green chemistry, sustainable design, sustainable manufacturing, and product stewardship.

Clean Water – To protect and restore the quality of freshwater, coastal, and nearby oceanic areas of the United States.
