

January 16, 2024

This letter supports Seerstone Development LLC, the project for Lisbon Valley Graphite for Commercial-scale Domestic Processing of Battery Material Precursors. The overall project will be to build, own, and operate a commercial-scale green graphite plant utilizing CO<sub>2</sub> emitted from an existing, fully operational natural gas processing plant. This project will be the cleanest, lowest emissions graphite available in the market.

The location for this project is in San Juan County, Utah, and can potentially bring additional employment positions to the area. In the operating phase, this project could employ as many as 40+ FTEs at industry-competitive wages. San Juan County needs this employment opportunity.

In addition, this project at the site of an already operating natural gas processing plant will be the first of its kind to produce commercial quantities of green carbon and graphite with a CO<sub>2</sub> feedstock.

San Juan County is fully supportive of this project.

Respectfully,

Jamie Harvey, Commission Chair

San Juan County, Utah Commission
