

1. Proposed new pit location.
2. We need to come up with a near term solution for the stockpiling of wet fill materials etc.
3. The current location is probablamtic when is comes to complying with certain aspects of out town codes.
4. the new location would be further out, not impeding adjacent properties.
5. The attorney has worked with a Title Company to verify that we do indeed own the property.
6. There is a question as to weather or not the property exists in the county or the Town. We are currently working on verifying that.
7. If we can verify that property is useable for a pit, i would propose we satisfy any requirements from deq. Get the property surveyed. Select a limited portion of it, fence it off and gate it. Simultaneously with that we would begin hauling materials from our pit to the new location. That may be an optimal time to crush more of the millings and mixed asphalt we have up there to make more crush asphalt as we haul it to the new location. I would also propose letting anyone who would want to haul the concrete off do so.
