**Attachments:** Permit Exhibit package.pdf

Hi Ellise

The attached plan (sheet 1) shows the new equipment in red. Essentially all the old will go and new will come in. The new includes 4 major pieces of equipment: a new padmounted transformer, deadend structure, circuit breaker, and metal clad switchgear building.

The fence will be replaced in its current location. No additional noise will be created by the new equipment, and you can go walk by the site to see what noise is created now.

I provided an example of the fence fabric, but I think Alliant can work with the City on other ideas for sure. Such as we did at 824 S 7<sup>th</sup> Street.

I don't know of any exceptions. Hope this helps.
