Statutes:
Municipal Code: N/A

BACKGROUND / ANALYSIS:

The Emergency Standby Generator serving Fire Station # 2 is original to the building and is no longer able to supply adequate power in the event of a power outage. In addition, the generator is located in the basement of the fire station and new codes dictate that these machines are to be mounted outside of the structure for safety. The City engaged the services of MSA Architects to design a replacement system which assures the building is protected with adequate standby power and meets or exceeds current standards and codes.

STAFF COMMENTS:

The City of Sheboygan issued Request for Bids # 2018-22 for replacement of the system. Because of the increased generator capacity, the work includes installation of a new, larger natural gas service to serve the station. During the bidding process it was determined that the City ought to consider an alternate exterior location for the equipment which will not only reduce the likelihood of disturbing the residential neighbors when the machine is running but also have a favorable impact on the costs for installing the equipment. An addendum was issued for same to the bidders of record to include the relocation plan in their bids. K-W Electric of Plymouth submitted the low bid for the project in the amount of \$ 118,800.00. A review of the bid by City Staff and the Engineer has determined that the bid meets all of the specifications.

ACTION REQUESTED:

Motion to recommend the Common Council adopt Res. No. 27-22-23 authorizing the appropriate City officials to enter into a contract with K-W Electric, Inc. for the replacement of the emergency electrical generator at Sheboygan Fire Department Fire Station # 2.
