

To: Joe Trueblood, Utility Superintendent

From: Dave McMillan, Distribution Supervisor

Subject: 2024 GPS Survey Equipment

The Water Utility has budgeted to replace its current GPS Survey unit. Acquiring this unit will benefit the Utility by improving safety, accuracy, and efficiency within the Distribution Department.

- Bluetooth capability- The new unit's data collector and GPS rod use bluetooth for connectivity. This
 will improve accuracy, safety, and efficiency in the field. During water main projects, as well as
 Water Utility construction work, the GPS rod will be able to be handed to construction staff in the
 trench to mark infrastructure. Engineering staff will be able to operate the data collector from the
 top of the trench and record the data. This is a safer option when working with contractors and will
 replace methods of gathering measurements from inspection notes when updating databases.
- Upgraded Technology- The upgraded technology allows for a higher level of accuracy in the field.
 Accurate X and Y coordinates, along with elevations can be gathered all at once. When imported into AutoCAD in the office, it will save the time needed to generate as-builts and update mapping.
- City Engineering- This is the same unit and software being used by our colleagues at City
 Engineering. It has been proven to be a reliable and long-term investment. By using the same
 equipment, it allows for additional resources when troubleshooting software, completing updates,
 and eases the sharing of information between departments.
