Pearl River Navigational Canal Feasibility Study

Scope: Project goal is to demonstrate the need for removal of the sill on the Pearl River Navigational Canal. This will provide natural hydrology and ecosystem function, and reduce the risk of flooding. It will also reduce structural failure and dangers to public boat traffic. The study will also show that removing the sill will allow for recreational opportunities and public access by creating a 16-mile lake system next to federal and state wildlife management areas. A proposed plan is in place to entomb Locks No. 1, 2, and 3, the surrounding land to be stabilized, and a siphon to be installed through Lock No. 2 to maintain water levels between Lock No. 1 and 2.

Status: Once approved, the estimated time for completion will be 18-24 months.

Budget including work completed to date:
