2021 Assessment of Donner Lake's Ecological Condition

Zach Bess, M.Sc. and Dr. Sudeep Chandra

Ecology, Evolution, and Conservation Biology
Interdisciplinary Graduate Program

**Prepared for the Donner Lake Interagency Partnership for Stewardship
March 23, 2022**

Population growth in Truckee and Nevada County since 1950

- Population in Nevada County grew significantly from ~1980 to 2005
- Population in Truckee grew significantly from ~1990 to 2005
- Therefore, it is interesting to compare data from Donner Lake from the 1980s-1990s to the present

Data from mynevadacounty.com

(<https://www.mynvadacounty.com/378/Demographic-Information-About-the-County>)

Sampling Sites

Lake Area: 3.4 km²

Shoreline Length: 12.5 kilometers

Max Depth: 71 meters (July 2021)

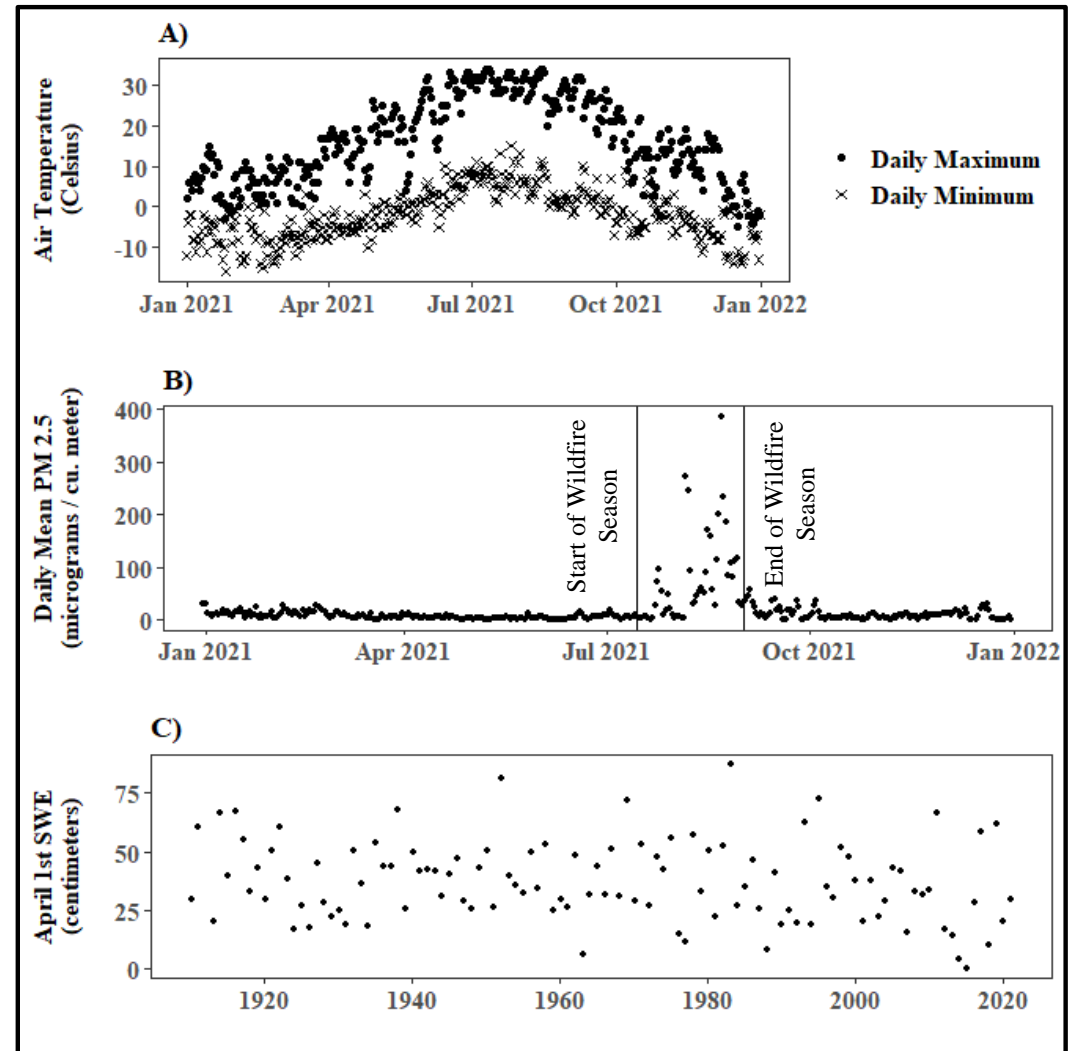

- 2021 sampling sites
- 2021 & historic sampling sites

2021 Sampling Sites

Site	Sampling Activities
A	Nearshore temperature, nearshore oxygen, benthic invertebrates (3 meters depths)
B	Benthic invertebrates (10 meters depth)
C	Benthic invertebrates (20 meters depth)
D	Benthic invertebrates (30 meters depth)
E	Benthic invertebrates (40 meters depth)
F	Gill nets (~20 meters depth)
G	Gill nets, mysid collections in 1978-1980 and 2021 (~40 meters depth)
H	Light profile, secchi depth, nutrient profile, temperature profile, dissolved oxygen profile, chlorophyll <i>a</i> profile (~70 meters depth)
I	Mysid collections in 1978-1980 and 2021 (~60 meters depth)
J	Mysid collections in 1978-1980 and 2021 (~40 meters depth)
K	Mysid collections in 1978-1980 and 2021 (~50 meters depth)
L	Gill nets, crayfish sampling (30 meters depth)
M	Crayfish sampling (20 meters depth)
N	Crayfish sampling (15 meters depth)
O	Crayfish sampling (10 meters depth)
P	Crayfish sampling (3 meters depth)
Q	Air particulate concentration (PM _{2.5}), surface radiation
R	Nearshore temperature, nearshore oxygen (~3 meters depth)
S	Gill nets (~20 meters depth)
T	Mysid collections in 1978-1980 and 2021 (~15 meters depth)

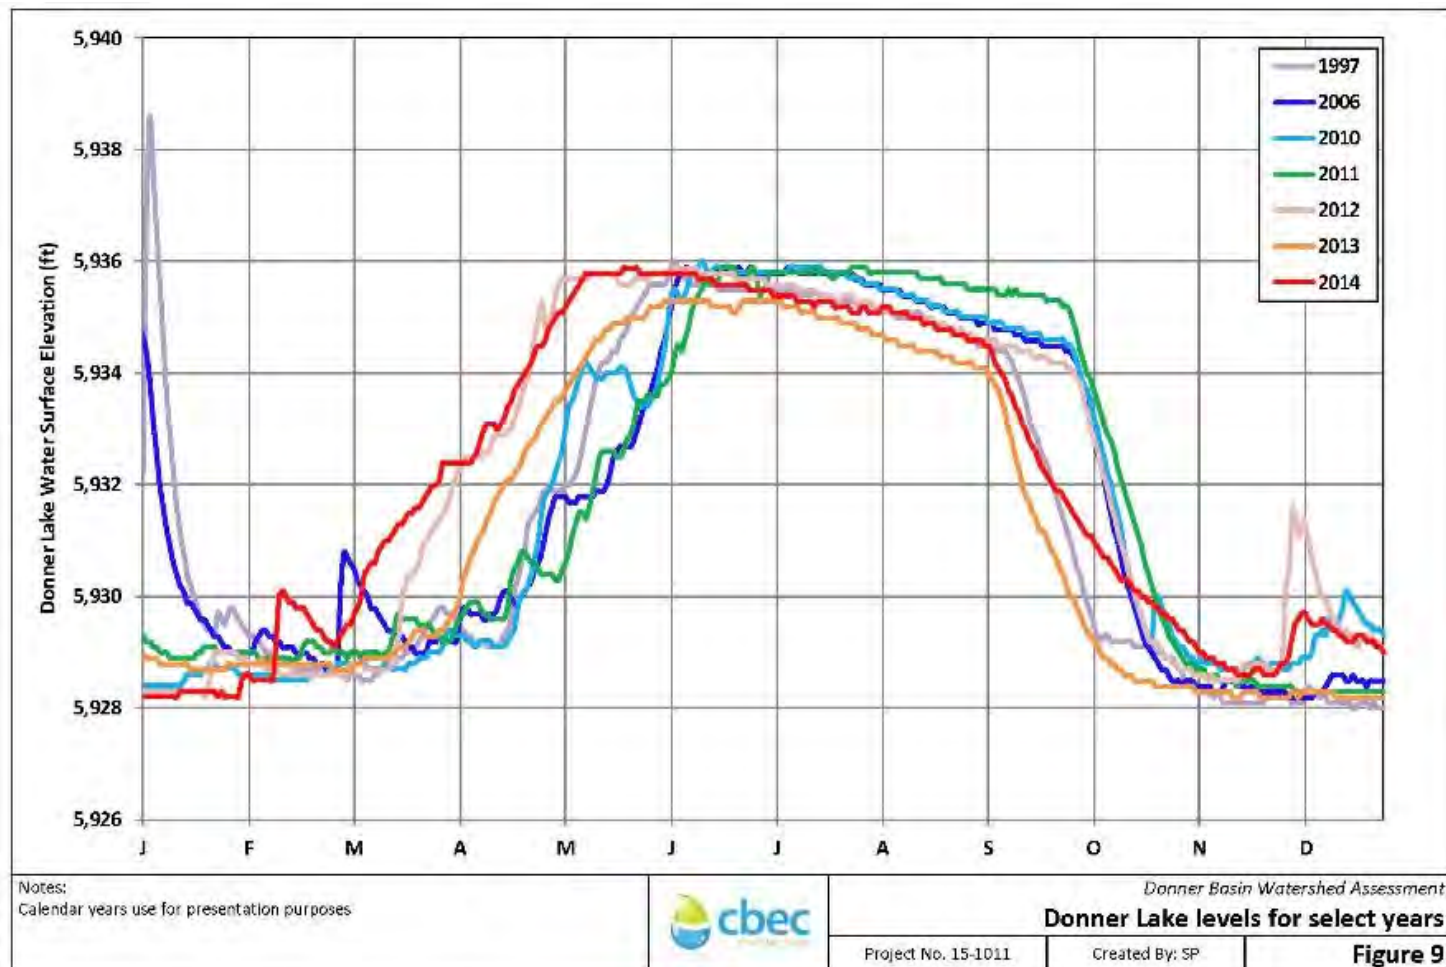

Regional Climate

- **Air temperatures at the Truckee-Tahoe Airport in 2021**
 - Daytime maximum = 34°C
 - Daytime minimum = -5°C
- **Air particulate concentration (PM2.5) spiked during the wildfires of 2021.**
- **April 1st snowpack—snow water equivalent (SWE)—at Donner Summit have not changed significantly since 1910**
 - Maximum = 221.5 cm in 1983
 - Minimum = 1.3 cm in 2015

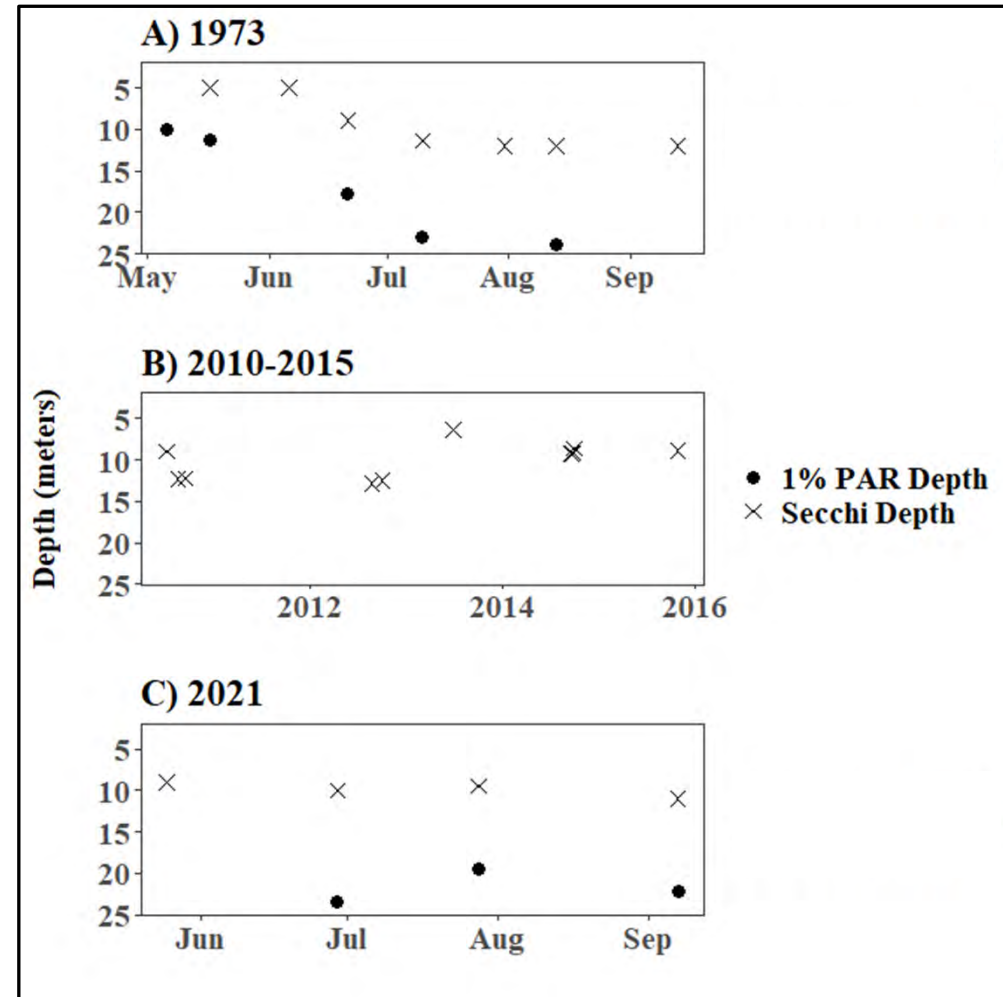

- Temperature data from KTRK site at mesowest.utah.edu
- SWE data from USDA
(https://wcc.sc.egov.usda.gov/reportGenerator/view/customSingleStationReport/monthly/start_of_period/20K10:CA:SNOW%7Cid=%22%22%7Cname/POR_BEGIN,POR_END/WTEQ::value?fitToScreen=false)

Donner Lake Levels Are Dam-Regulated

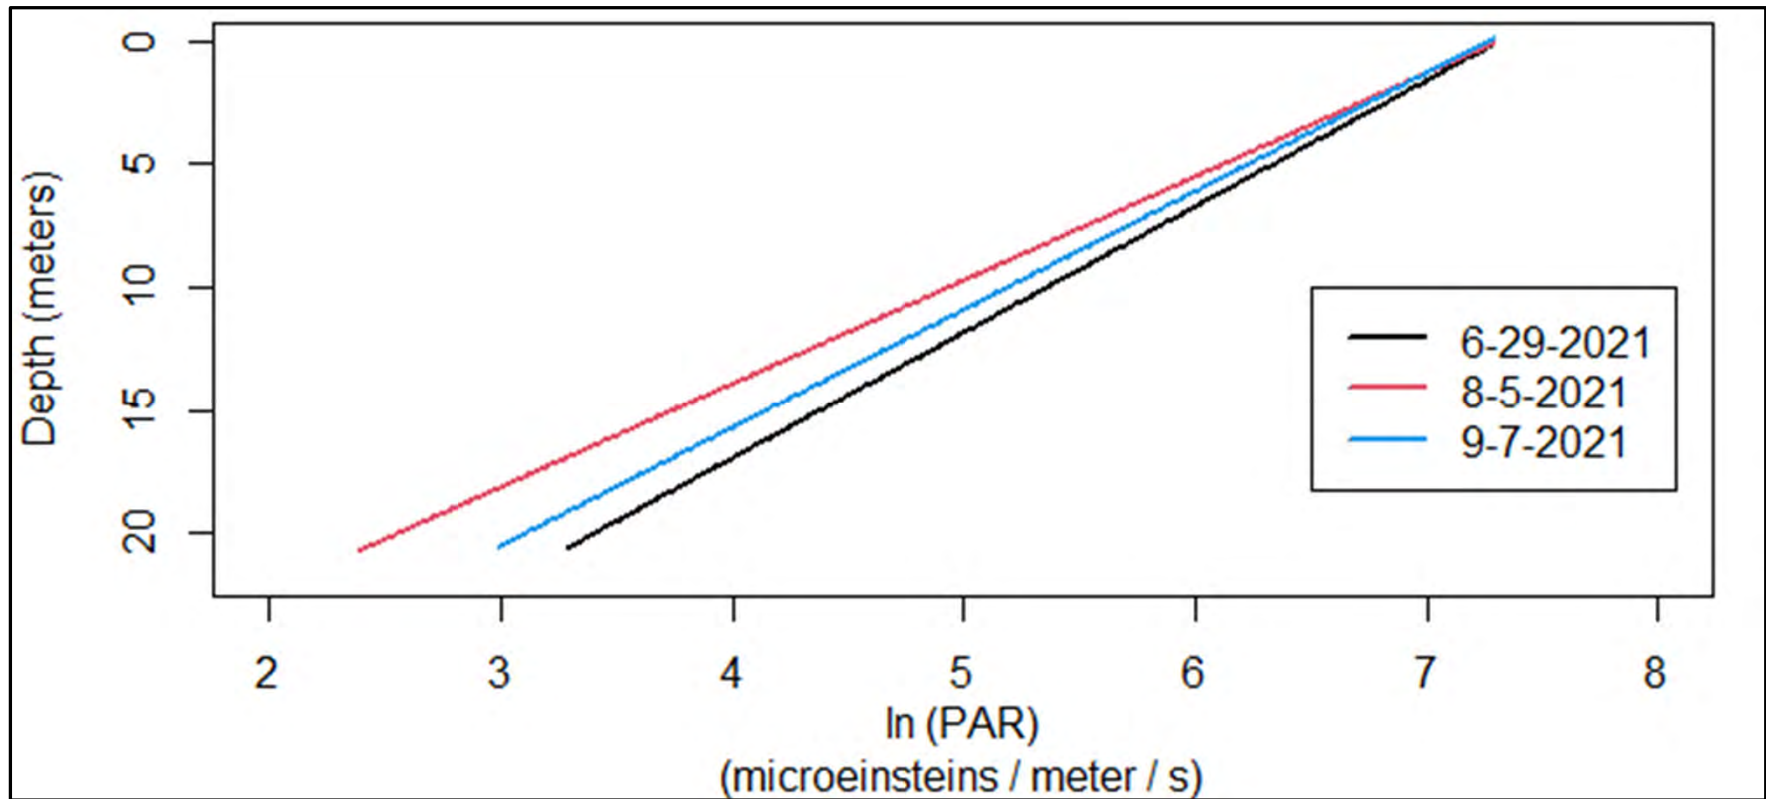

Light Conditions have been stable since 1980s

- **Summer 2021**
 - 1% Photosynthetically Active Radiation (PAR) Light Depth: Secchi Depth Ratio for Donner Lake ~ 2.0
 - Generally 1.8 - 2.5 for inland waters
 - Secchi depths (depth at which a disk lowered into the water can no longer be seen from the surface) ranged from 9 to 11 meters in summer 2021
 - 1% PAR depths (maximum depth at which algae may grow) ranged from 19 to 22 meters in summer 2021
- **Early 1973 show degraded condition**

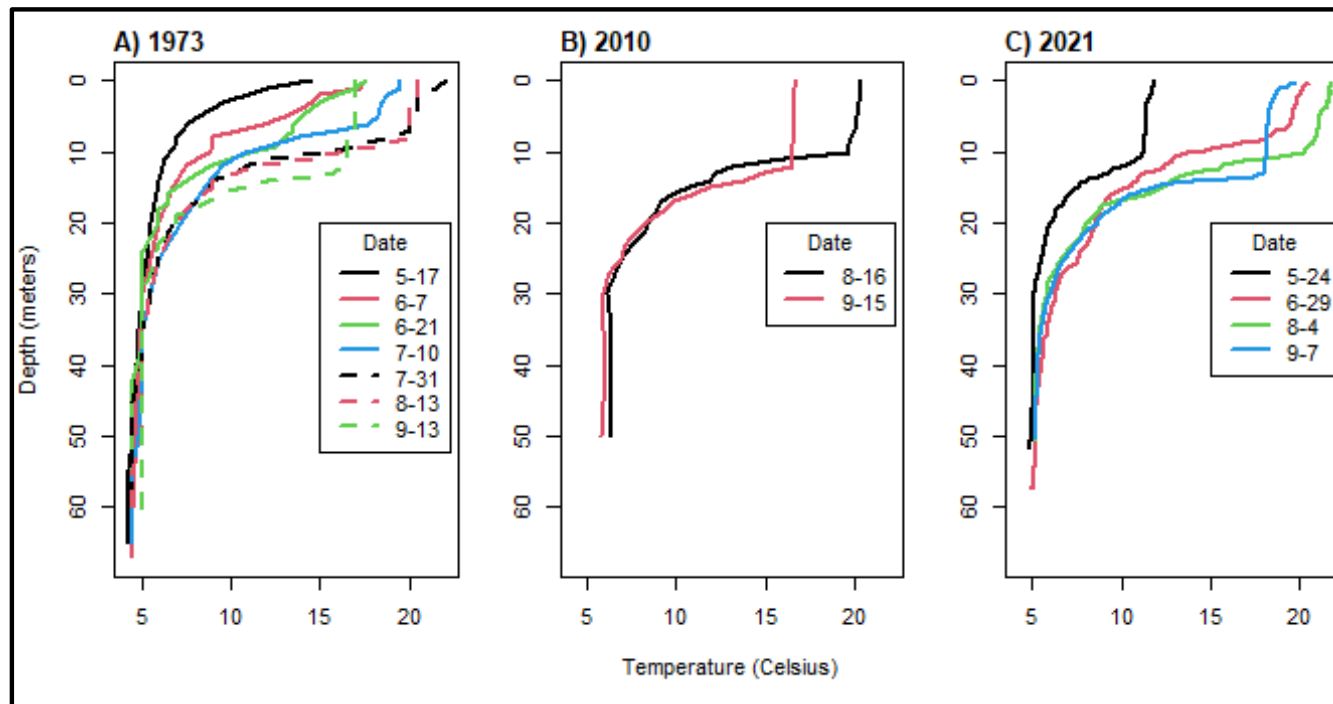

Light Conditions shift more by season than year (Results summer 2021)

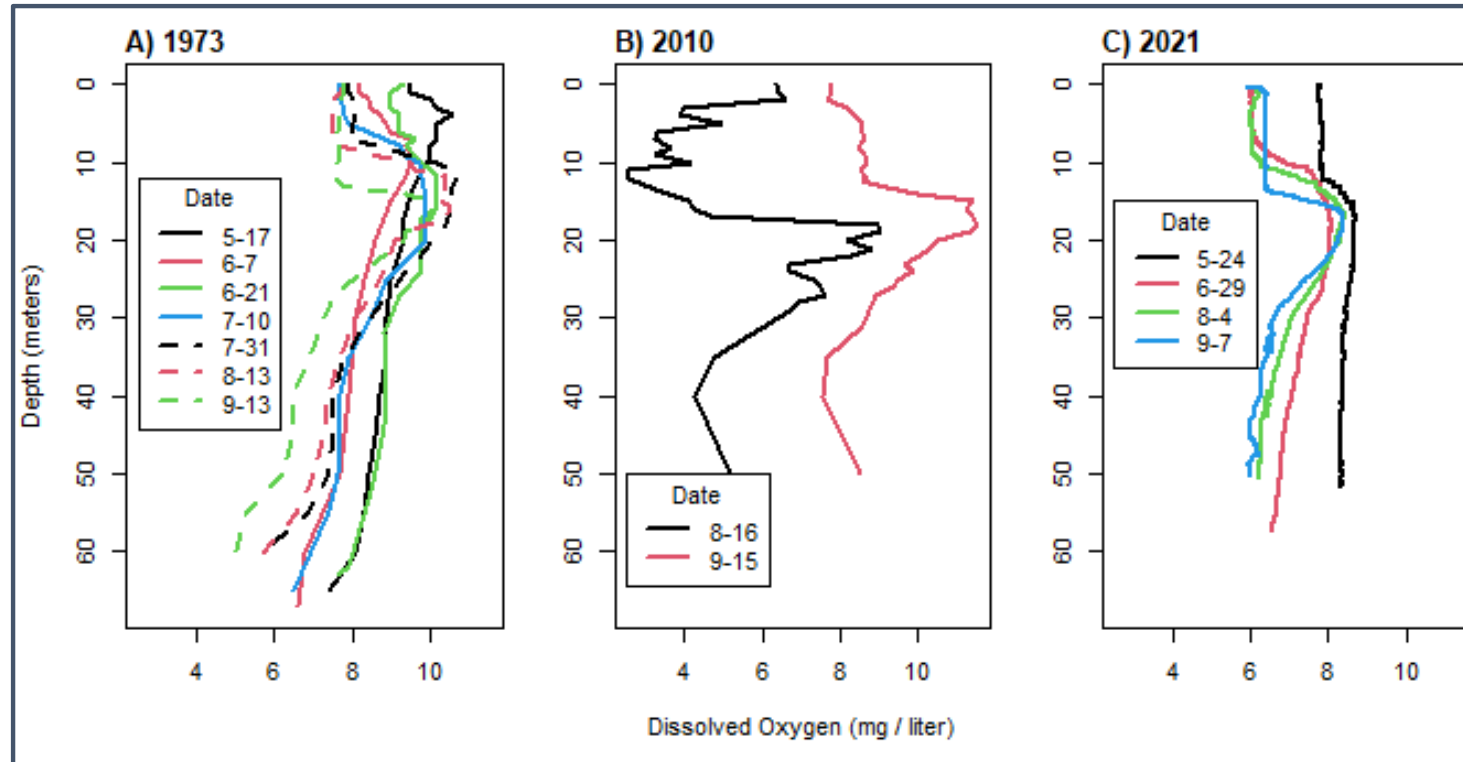

Water temperature conditions – as expected

- Little interannual variation in summertime water temperatures between historical (1973, 2010) measurements and today (2021)
- Upper water column temperatures reach a high in late July/early August
- Bottom water column temperatures are consistently $\sim 5^{\circ}\text{C}$

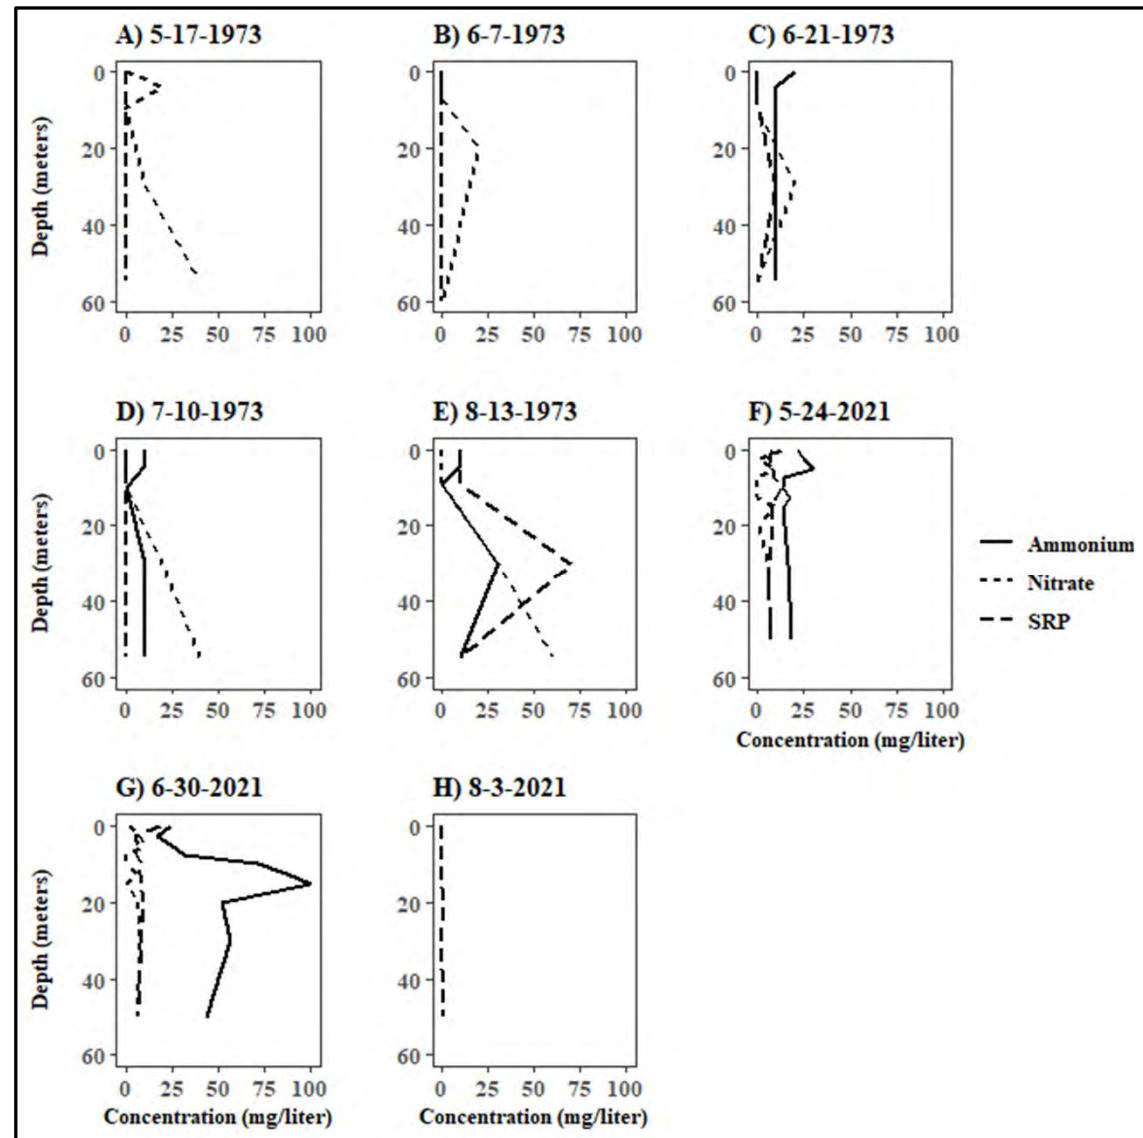

Oxygen conditions – as expected

- Dissolved oxygen profiles indicated the lake is well oxygenated towards the lake bottom
- Highest concentrations near the thermocline (where water temperatures change rapidly and algal growth is likely dominating)

Nutrients – *mostly* as expected

- Nutrient concentrations are generally highest near the thermocline, but concentrations are highly variable throughout the year
- Slightly low in 2021

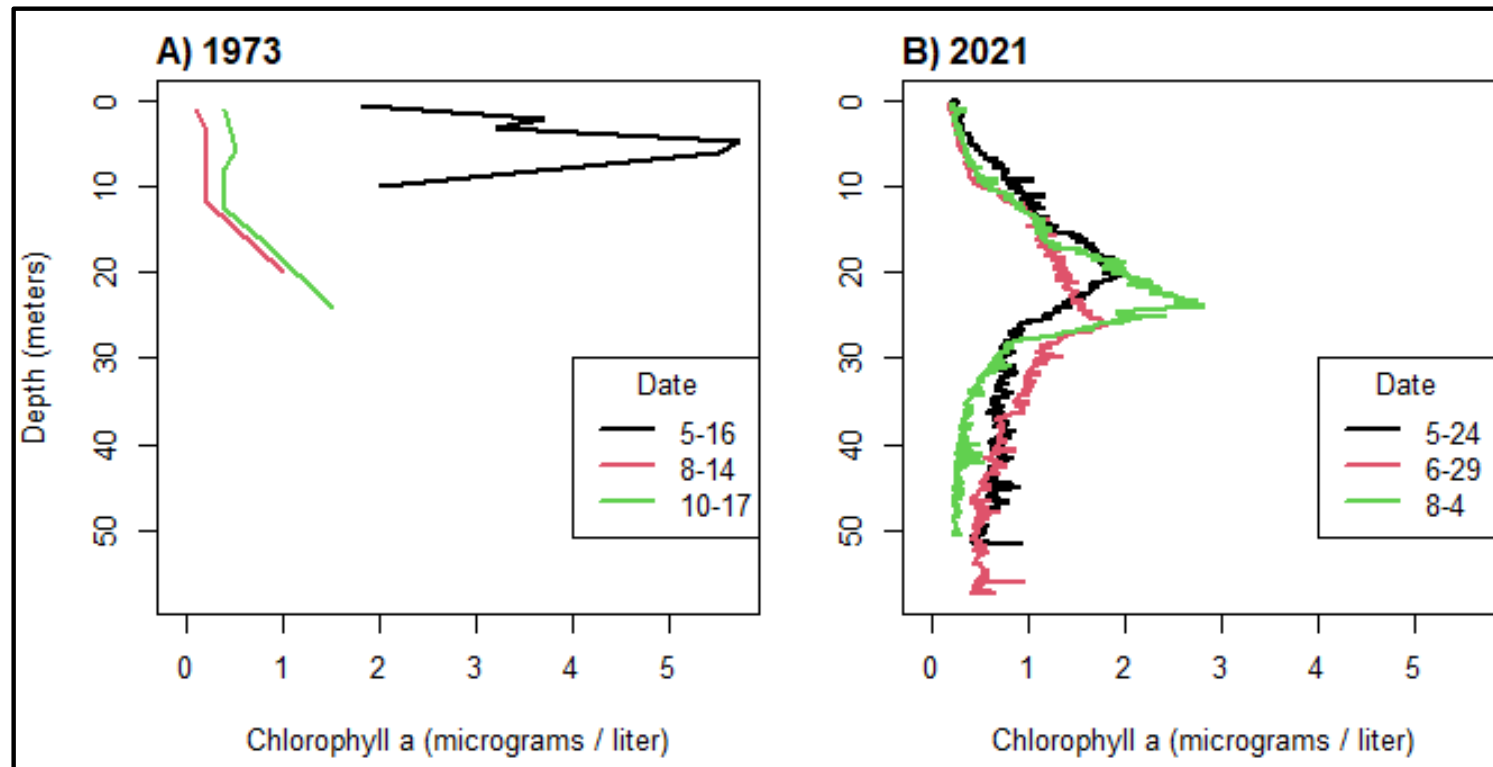

Profile chain deployed on 9/7/2021 to measure algal primary productivity at the lake

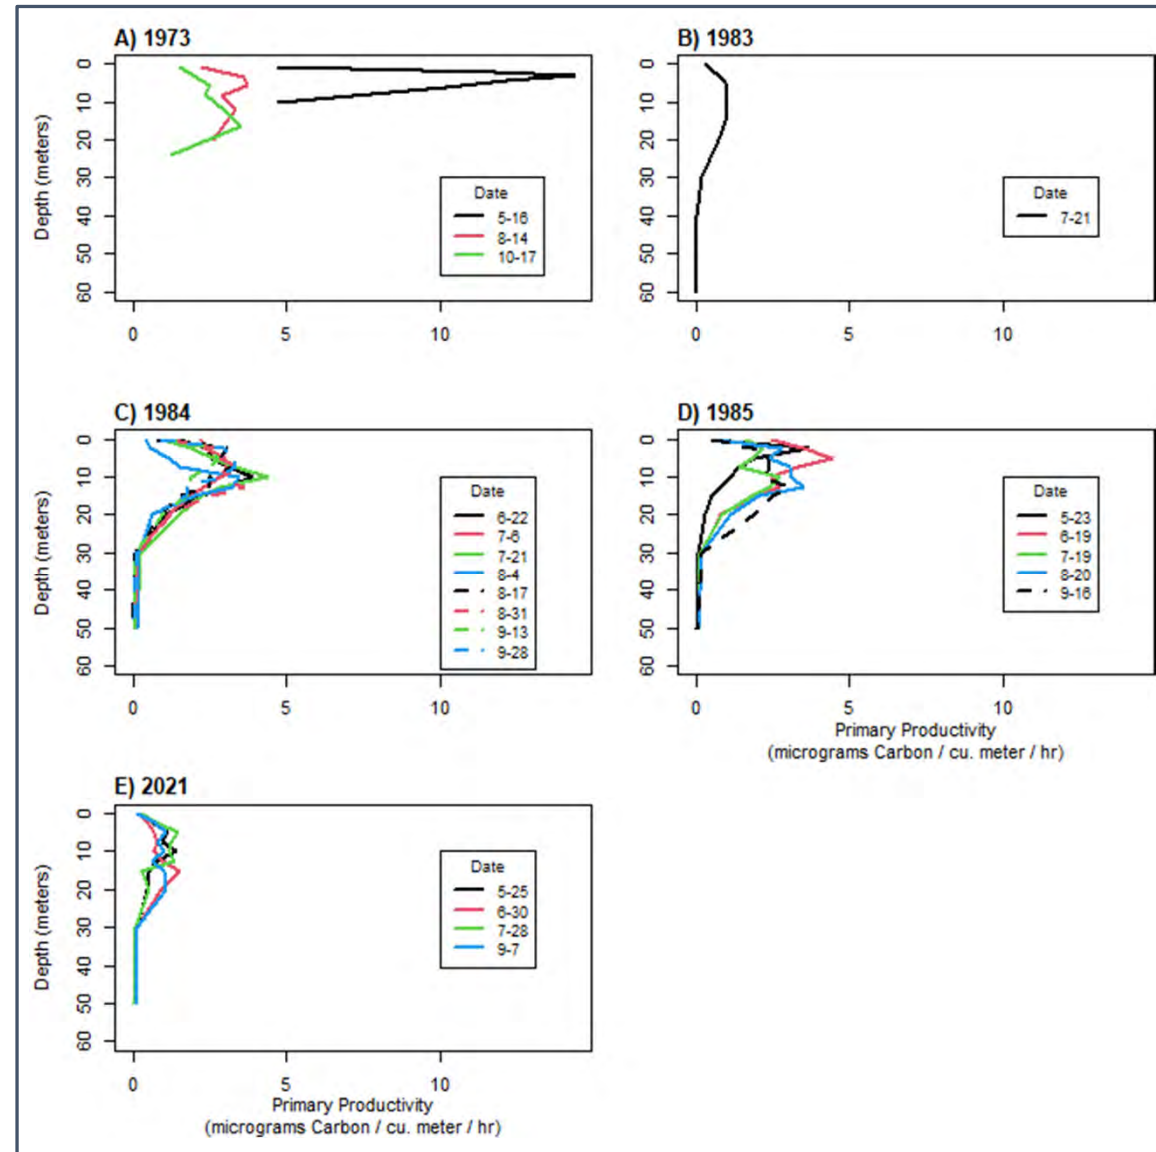

Phytoplankton Biomass (Algae) – as expected in 2021

- Deep chlorophyll maxima occur at 20-25 meters depth
- The deep chlorophyll maxima in summer 2021 ranged from ~2 to 3 micrograms/liter and occurred below the thermocline, as is typical for mountain lakes

Phytoplankton Productivity (Photosynthesis) Shows Improved Water Quality Over Time

- Phytoplankton productivity at 5-15 meters depth in summer 2021 was 50% lower than in summer 1984 & 1985, indicating a general improvement in water quality conditions compared to the historical condition
- High productivity in May 1973 corresponds with high phytoplankton biomass (previous slide) and low water clarity

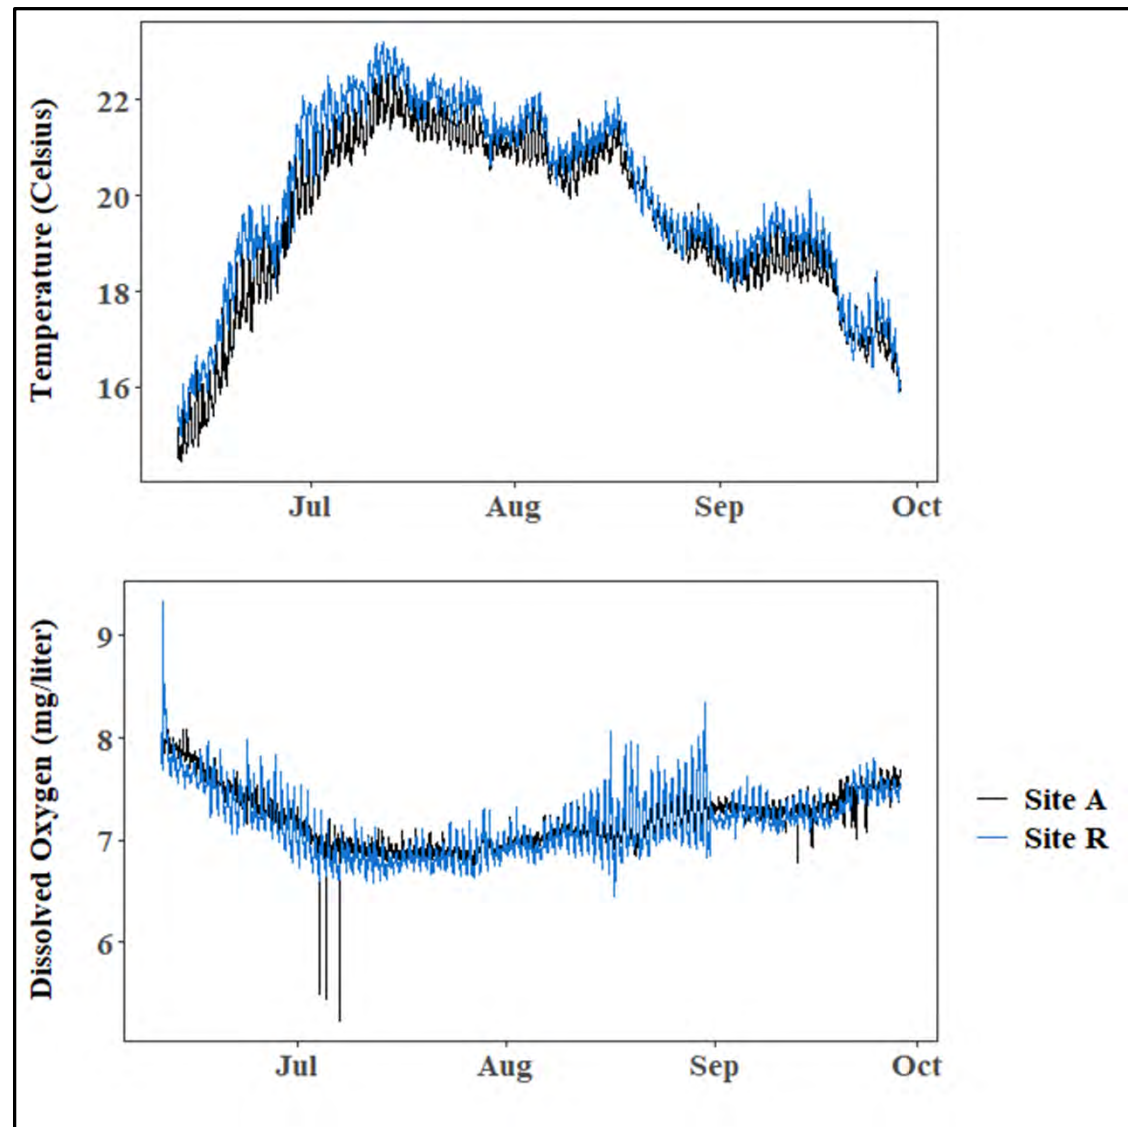

**Retrieving nearshore
sensors in September
2021 along the lake's
northern shore**

Nearshore Oxygen and Temperature – as expected

- Nearshore temperatures reached a high of 22.5 °C on July 12th at site A and a high of 23.2 °C at site R
- Maximum nearshore water temperatures and maximum air temperatures were both recorded on July 12th
- Nearshore dissolved oxygen concentrations mirror temperatures, reaching a low in the second week of July
- Site A = SW side of lake
- Site R = NE side of lake

Wildfire season impacts Nearshore Productivity in 2021

- Increases in nearshore Gross Primary Productivity (GPP) and decreases in Ecosystem Respiration (ER) correspond with increases in smoke during wildfire season

Collecting mysids at Donner Lake during fire season

Invasive mysid shrimp density consistent since 1979

- Mysids were sampled at 5 sites in 1978, 1979, 1980, and 2021.
 - Sampled at Sites G, I, J, K, & T
- The densities observed in summer 2021 agree with the densities seen in June 1979 and November 1980 but are significantly less than what was seen in August 1978

Invasive adult mysid shrimp were smaller in 2021 than 1978, 1979

Morgan 1981

Native Zooplankton

Daphnia

Copepodite

Cyclopoid

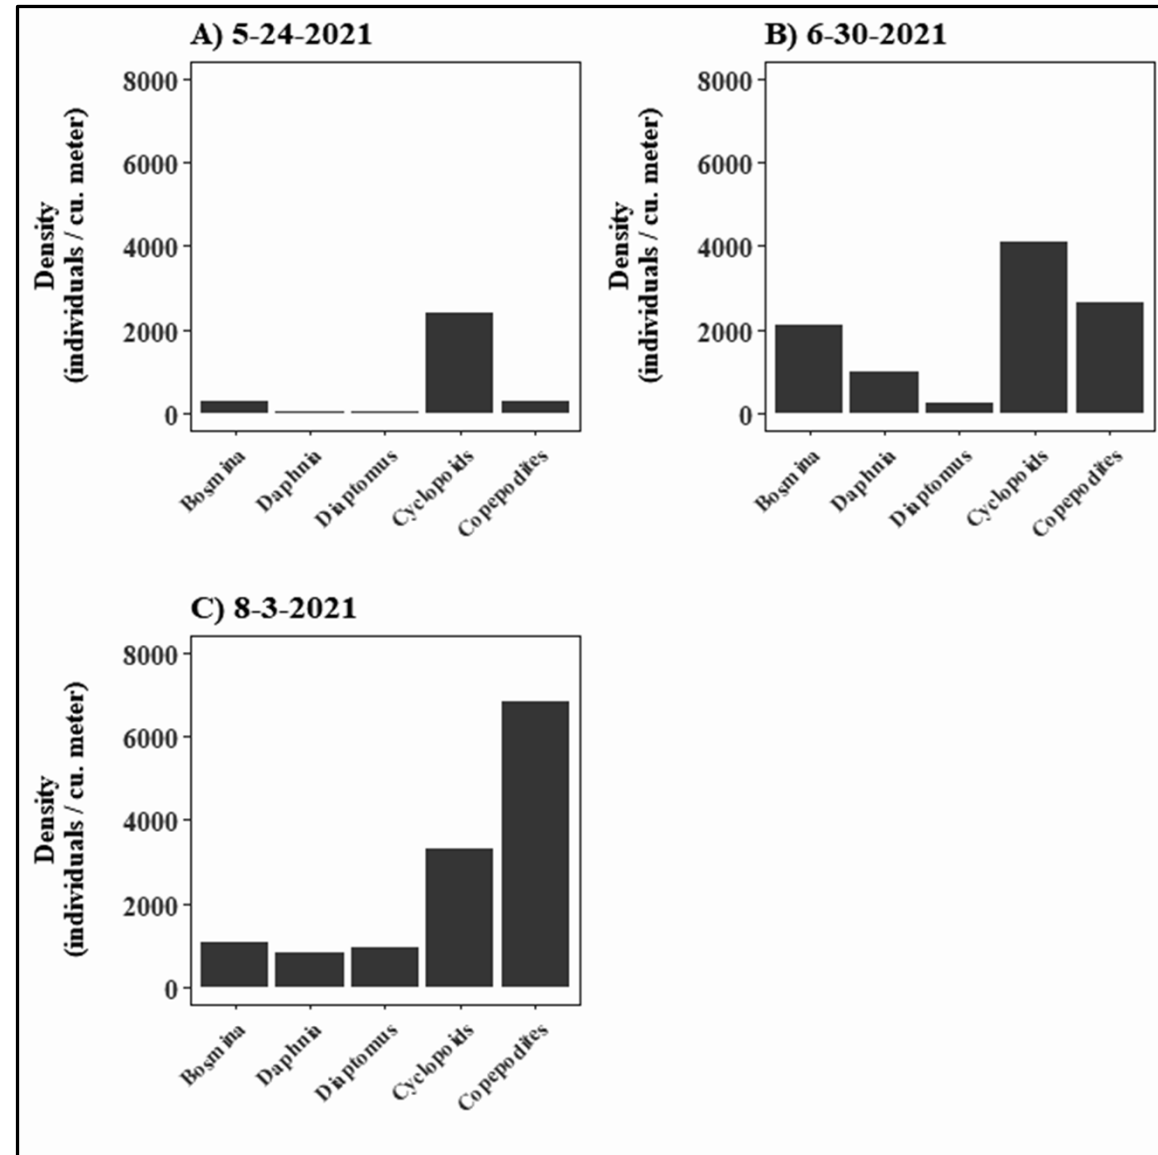

Bosmina

Diaptomus

Daphnia rebounded since 1981, Unexpected co-existence with Mysid

- Zooplankton densities generally increased throughout the summer
- The macrozooplankton community is dominated by two cladoceran taxa (*Bosmina* and *Daphnia*) and two copepod taxa (*Diaptomus* & Cyclopoids)
- Juvenile copepods (copepodites) made up a significant portion of the community in summer 2021.
- The last published zooplankton sampling from the lake (1981) found no *Daphnia* in the lake

Benthic Invertebrates

Caddisfly

Fly larvae

Oligochaete

Stonefly

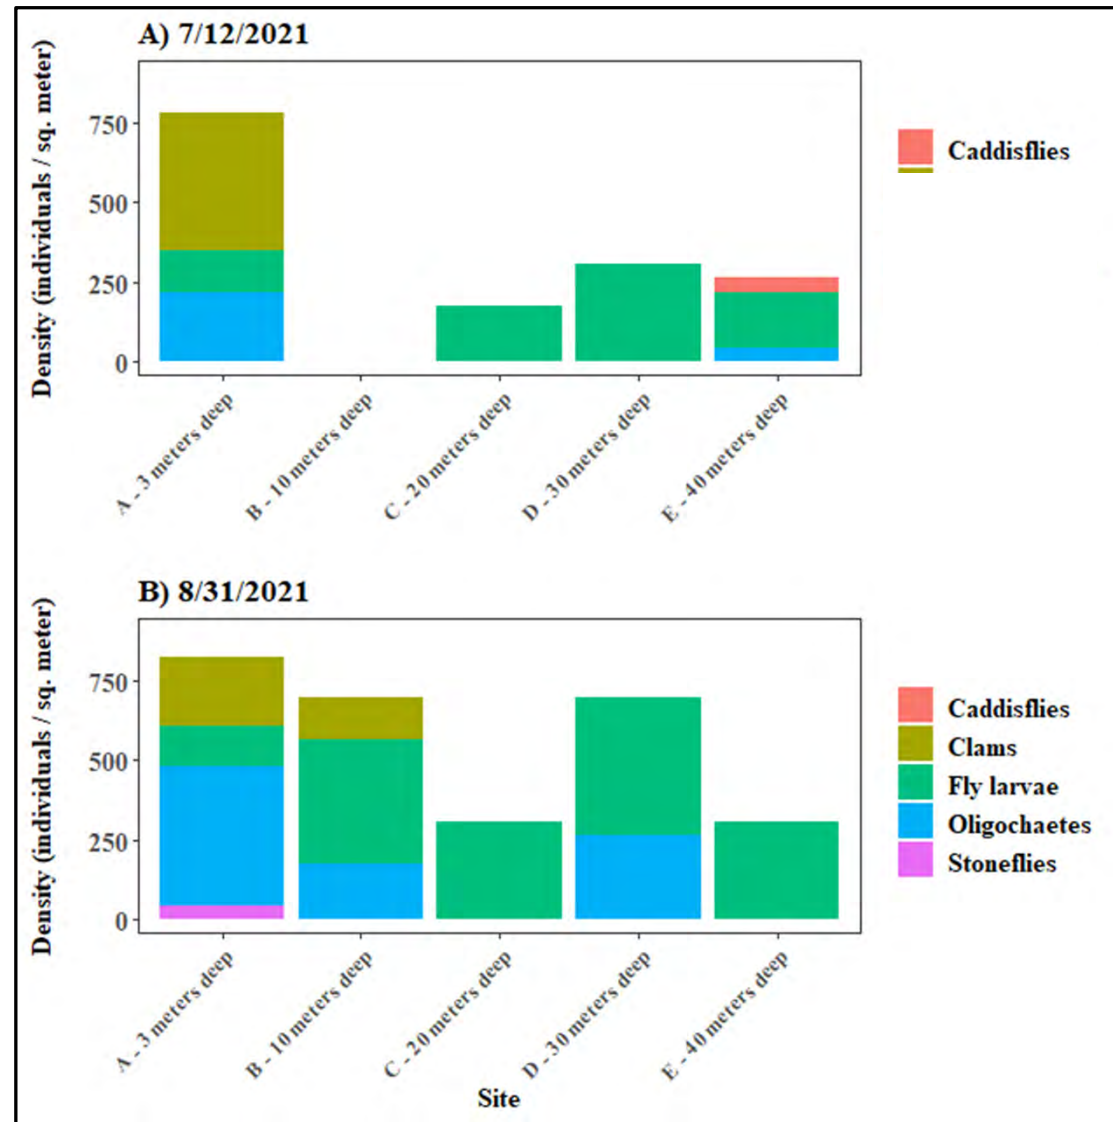

Invasive Asian clam

Native *Pisidium* clam

Caddisflies and stoneflies are less abundant than other Benthic Invertebrates

- The benthic invertebrate community along the lake's southeast shore consists of clams, fly larvae, and oligochaetes.
- Both invasive Asian clams and native *Pisidium* clams are in Donner Lake

Watercraft inspection certificates by year

Year	Number of AIS Certifications
2018	1,548
2019	1,400
2020	985
2021	1,314

Data from Truckee Police Department, Truckee
Regional Aquatic Invasive Species Prevention Program

**Invasive Asian
clams have spread
significantly over
the past decade.**

2011

2021

Donner Lake has more Invasive Crayfish than neighboring lakes

- Crayfish reach their highest densities at 15 meters
- Densities in summer 2021 were higher than in summer 2010 and other lakes in the region

Fish

Non-native Kokanee salmon
Spawning (top); Non-spawning (bottom)

Native Tahoe sucker

Non-native brown trout

Native tui chub

Non-native lake trout (“mackinaw”)

2 species of native fish are missing from Donner Lake – Why?

- Gill nets deployed at Sites F, G, L, & S returned fish taxa similar to those found in Lake Tahoe and historically found in Donner Lake
 - Native – Tahoe suckers, tui chubs
 - Non-native – brown trout, Kokanee salmon, lake trout
- *BUT would expect to see Paiute sculpin and Mountain whitefish*
- Majority of fish stomachs were empty, but some contained fish, mysids, benthic invertebrates, and crayfish.

Summary of Findings and Recommendations for Donner Lake

- 1) Water quality in the **NEARSHORE** habitat is degrading. Changes in the nearshore habitat are influenced by the changes in biological structure (e.g. invasive species, runoff, and internal mixing dynamics in lakes).
 - Invasive Asian clams have spread throughout the nearshore zone of Donner lake over the past decade. Clams are known to influence the water quality in Lake Tahoe and Lake George (New York).
 - The timing of runoff from snowpack is sensitive to changes in climate and should influence nearshore water quality.
 - Wildfires will increase under current climate conditions

RECOMMENDATIONS:

- Establish a nearshore water quality and biological monitoring program.
- Water quality and production can be determined using high frequency oxygen/ temp probes, a weather station, and collections of water quality samples for nutrients in the sediments and water column.
- Biological monitoring would include an assessment of invasive species (crayfish and clam densities) at the end of summer around the lake.

Summary of Findings and Recommendations for Donner Lake (cont.)

- 2) Water quality in the **OFFSHORE**, open water habitat seems to have improved since historical collections were made in Donner Lake.

RECOMMENDATION:

- Establish a primary water quality station in the center of the lake.
- Deploy a water quality sonde with a suite of sensors that can profile at the center of the lake for temperature, oxygen, conductivity

Summary of Findings and Recommendations for Donner Lake (cont.)

- 3) **BIOLOGY** has changed. Two native fish species (mountain whitefish and Paiute sculpin) were not observed in the lake. The native zooplankton like *Daphnia* have returned to the lake since the most recent samplings in the late 1970s and early 1980s. This indicates that *Daphnia* and mysids are able to coexist in Donner Lake, while in other lakes (e.g. Tahoe) mysid predation has led to the near elimination of native *Daphnia*. This "coexistence" may change over time depending on the water quality conditions and changes in the growth rates of plankton.

RECOMMENDATIONS:

- Establish a biological monitoring program for fishes, mysids, and zooplankton (2-3 times per year (late spring, early summer and summer))

Community Conditions

- Local population growth
- Facilities and Infrastructure
- Recreational Use
- Other

Population growth in Truckee and Nevada County since 1950

- Population in Nevada County grew significantly from ~1980 to 2005
- Population in Truckee grew significantly from ~1990 to 2005

Data from mynevadacounty.com (<https://www.mynvadacounty.com/378/Demographic-Information-About-the-County>)

Facilities and Infrastructure: Zoning

Table. Total acreage of land zoned for each generalized purpose.

Zoning Group	Total Acreage
Commercial	33
Forest	1,780
Recreation	481
Residential	1,047
Lake	834
Other	594
Total	4,769

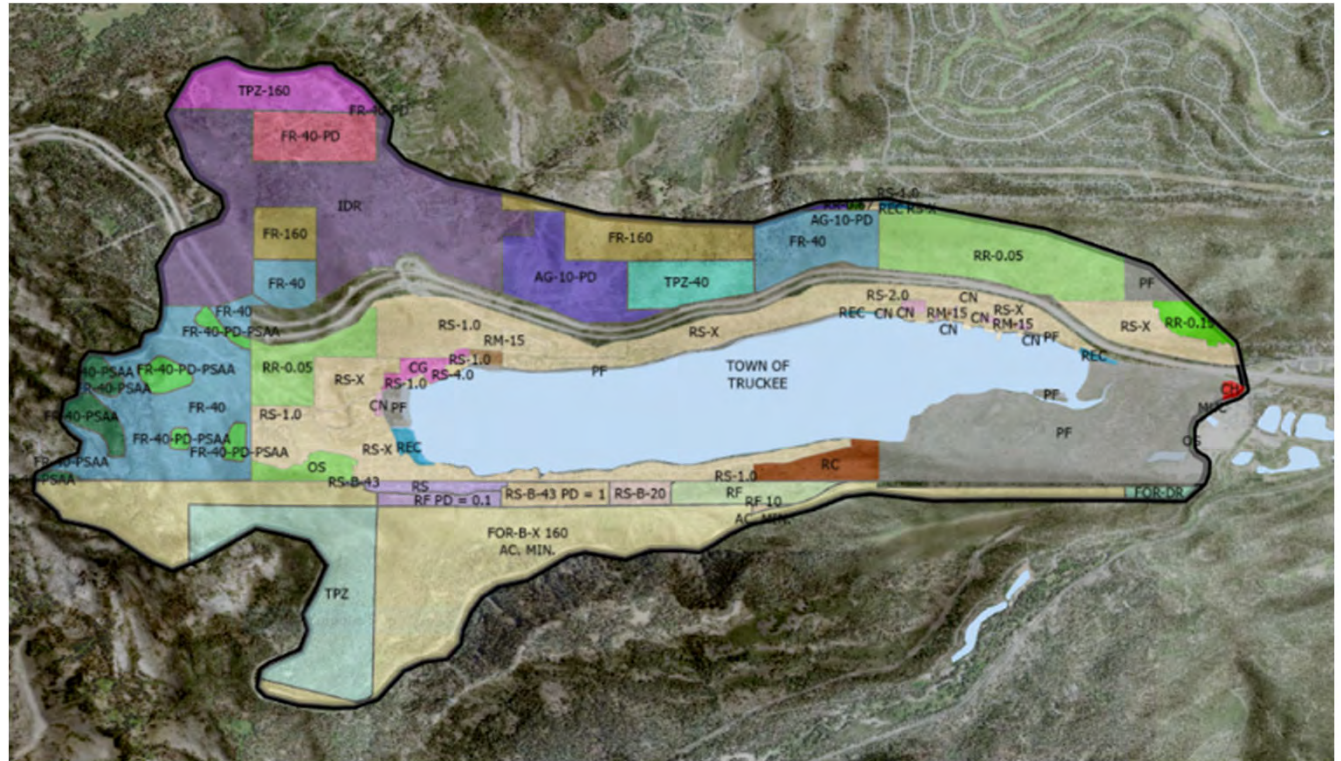

Figure. Nevada County, Placer County, and Town of Truckee combined zoning classification map. See appendix for zoning codes.

Facilities and Infrastructure: Housing Supply

Table. Total available housing stock by type of dwelling as of 2022.

Type of Dwelling	Number of Housing Units
Apartment	12
Condo	105
Multi-Family Residential	8
Single Family Residential	883
Unknown	6
Miscellaneous Residential	42
Total	1,056

Source: Town of Truckee as of 3/3/2022

Facilities and Infrastructure: Of Major Land/Water Rights Owners

Table. Existing infrastructure in Donner Lake study area by land and water rights owners.

Organization	Existing Infrastructure
California State Parks	High Sierra Crossing Museum; Administrative Offices; Pioneer Monument; 2 residential duplexes; 2 residences; 2 developed trailer pads; 1 undeveloped trailer pad; 1 mobile home site; 2 maintenance buildings; 18.5 miles of non-motorized trails; 4.4 miles of paved roads; 24 miles of unpaved roads; 1-mile lakeside interpretive trail; 1.5 miles of frontage on Donner Lake and Donner Creek; 78 picnic sites (3 ADA); 3 comfort stations at day use areas (1 ADA); 147 campsites (12 ADA); 6 comfort stations or restroom/shower buildings for campers (5 ADA); Campfire center; 60 car parking lot at Visitor Center (3 ADA); 15 car parking lot at China Cove (1 ADA); ~75 paved parking spaces (2 ADA) and 75 roadside/dirt parking throughout Day Use area; 5 bridges (1 vehicle public, 1 vehicle operations/pedestrian, 1 pedestrian, 2 in Lakeview Canyon);
Tahoe Donner Association	2 small sheds, boat house building, boat storage/camp building, check-in kiosk, dumpster storage structure adjacent to boat house; 11 boat and trailer parking spots, 34 regular parking spots, boat launch, storage racks to accommodate 150 kayaks and SUPs, 3 floating docks (1 fishing, 1 boat dock, 1 swim dock) secured with chains to lakebed
Truckee Donner Land Trust	Johnson Canyon info kiosk and dog waste station, Donner Summit Canyon dog waste station, Creekside Woods dog waste station
Truckee Donner Recreation and Park District	37 public piers; 2 boat lane-wide boat ramp; fish cleaning station; parking lot (undetermined number of spots); all-access fishing pier (Shoreline Park); West End Beach: tennis court, boat storage, pavilion, entrance gate, staff building/restrooms, basketball court, beach volleyball court, playground, picnic areas, horseshoe pits, parking lot (# spaces unknown)
Truckee Meadows Water Authority	1 dam
Truckee Sanitary District	7 main lift stations convey sewage from South Shore Drive, through 11,200' of force mains, clockwise around the lake to discharge at Deerfield Dr., wetwell for sewage collection, drywell with two independent pumps, 10,000 gallon overflow tanks

Facilities and Infrastructure: Planned Improvements

Table. Planned improvements in Donner Lake study area by major land and water rights owners.

Organization	Planned Improvements
California State Parks	Road and Trail Management Plan: Improve 10 mi, decommission 2.5 mi, remove 3.3 mi of “volunteer”, convert 4 mi, construct 9.1 mi of new, align with Donner Lake Rim Trail, new trailhead at Coldstream Valley Rd, improve connection between Summit and Lakeview Canyons
Tahoe Donner Association	Deck expansion in the near future
Truckee Donner Land Trust	Forestry and wildfire resilience and restoration work Billy Mack Canyon (Summer 2022/2023) and Creekside Woods (Summer 2022); Discussion of parking lot and bathroom at Johnson Canyon, Completion of Donner Rim Trail no planned dates
Truckee Donner Recreation and Park District	Boat ramp improvements: \$2.1 million from State - ramp extension on both ramps, new bathroom, parking lot paving, ADA upgrades potential for Fall 2022; Pier Renovations - piers #15, 17, and 23 Fall 2022
Truckee Meadows Water Authority	Money allocated within next 5 years to assess need to dredge Donner Lagoon - may not be used; no additional dam repairs anticipated in near future
Truckee Sanitary District	Capital Improvement Plan to upgrade the plumbing (FY 2025) and electrical components (annually for 5 years) at the stations, Cathodic protection coatings (annually for 5 years) to reduce structural corrosion of the dry wells, increasing capacity at lift station 1B (FY 2023-2024)

Recreational Use: Paid admissions

Table. Total paid usership of recreation facilities.

Organization	2018	2019	2020
TDA	41,852	36,614	42,586
TDRPD	54,863	55,641	56,307
State Parks*	190,115	208,700	233,313
Total	286,830	300,955	332,206

* State Parks user estimates based upon day use, overnight use, and annual passes. Does not include non-paying walk-ins which are estimated to make up a significant proportion of usership.

DIPS

DONNER LAKE INTERAGENCY PARTNERSHIP FOR STEWARDSHIP

Other: New Initiatives

- Sustainable Truckee Ambassadors: Implemented Summer of 2021 to connect with and provide information to visitors and residents and monitor use in highly trafficked areas including Donner Lake public piers
 - Sponsored by Truckee Trails Foundation, Visit Truckee Tahoe, Town of Truckee, Nevada County, and others
- Improved alternative transit: Starting in 2021, exploring opportunities to decrease traffic through peak period shuttles, micro-transit, bike share, etc.
 - Sponsored by Town of Truckee, Tahoe Donner Association, and Tahoe Truckee Area Regional Transportation
- Underwater cleanup and monitoring: In 2022, repeat circumnavigation of Donner Lake to collect trash and monitor invasive species and algal blooms
 - Sponsored by Clean Up The Lake

Recommendations for future data collection

- Continue to collect trending data (annually)
 - Recreational use: paid admissions, boat launches, watercraft rentals
 - Sewage flows
- Collect more stable data periodically (as needed, 5-10 years)
 - Population
 - Facilities and infrastructure: zoning, unpaved surface condition
 - Housing supply
 - Development permits
- Look to improve data collection
 - Economic indicators
 - Stormwater infrastructure and water quality monitoring
 - Transit
