TABLE OF CONTENTS

The proposed project is the replacement of the Downhill Ski Lodge (Lodge) at the Tahoe Donner Downhill Ski Area located at 11603 Snowpeak Way, Truckee CA.

The Existing Tahoe Donner Downhill Ski Lodge was approved as part of the original Tahoe Donner comprehensive zoning and built by the Dart Corporation in 1971. The site/lodge have undergone upgrades and remodeling over the years. In 1987, a 3-phase addition/remodel was approved (Nevada County Use Permit no. U86-56). The current use and operations for all seasons is to remain the same.

On December 14, 2019, the Tahoe Donner Association Board of Directions approved moving forward with a full building replacement. The new Downhill Ski Lodge will be constructed at the location of the existing Downhill Ski Lodge, which will be demolished. After a 2-year comprehensive community feedback and engagement initiative, the Board received extensive feedback and ultimately considered a number of options during the April 4, 2022 open board meeting. The Board narrowed it to three options and held a final open meeting on Saturday, April 23, 2022 where they selected the size. A detailed overview of the communication and outreach plan is also provided with this submittal. Tahoe Donner Association has been actively studying the needs for the new Downhill Ski Lodge for several years through involvement by the membership, staff, the Downhill Ski Sub-Committee, the Downhill Ski Lodge Task Force, the General Plan Committee and design/planning consultants.

The project site is +/-1-acre parcel located in the Tahoe Donner Subdivision. Tahoe Donner Association (TDA) is currently also submitting a Minor Boundary Line Adjustment (MBLA) application to adjust the lot line between Recreational parcels APN:046-250-009, APN: 046-250-007 and APN: 046-250-005.

The proposed project is a 24,490 sq-ft ski area day lodge to accommodate all aspects of Tahoe Donners Downhill Ski Area Operation. The table to the right depicts the existing site and surrounding zoning, land use, and improvements.

<u>Level 1</u>	<u>BUILDING SIZE</u>
Staff support and Prep kitchen	1,600 sqft
Storage, Utility, Restrooms	1,650 sqft
Circulation and Walls	1,015 sqft
<u>Level 2</u>	
Rentals and Guest services	5,135 sqft

INTRODUCTION / PROJECT DESCRIPTION

Site Planning

After the lot line adjustment, the ski lodge parcel is expanded to less than 3 acres. The parcel size is around 115,000 SF. This allows 20 feet setbacks on three sides. The project proposed is under the 40% maximum site coverage. The location of the lodge is shown on the Architectural and Civil Site Plans.

The new lodge is sited to allow for proper shuttle drop-off area as well as emergency vehicle access from Slalom Way. The siting of the new building also allows us to keep the existing north access road for accessing the loading area and ski patrol, as well as the existing condominiums. The proposed lodge has three levels, terracing the site to minimize cut and fill and provides a deck that is on the same level as the existing ski lift, rather than one floor below on the existing deck.

Height

The proposed building is under the 35 feet height limit. The information can be found on the Maximum Height Diagram. The measurement of Height limit established by Article II allows measurement as the vertical distance from the highest point of the building to the average of the highest and lowest points where the exterior walls touch the natural grade.

Parking & Circulation

A parking study has been analyzed by LSC Transportation consultant. The findings are provided in the LSC report and the Parking & Circulation and the Existing Parking Lots Plans exhibits.

Exterior Lighting

The exterior lighting is included on the floor plans and the Lighting Type exhibit. Exterior lighting will be low level, shielded fixtures conforming to the design guidelines including light trespass and dark sky requirements. Site photometric study shows no light trespass beyond the project site's property line.

Trees

The existing tree can be found on the Architectural and Landscape Site Plan. The proposed building location is in the same general location of the existing lodge. Tree protection notes can be found on the Landscape Plan. Evergreens and shrubs have been added to the front and side setbacks.

Circulation and Emergency Access

The site plan is currently being reviewed by the Truckee Fire Protection District for general conformance with emergency vehicle access needs. The design team will continue to coordinate with the department as the design progresses.

Signage

See Signage Types exhibit for current and proposed signage.

PLANTING LEGEND

LANDSCAPE PLANTING NOTES

1. Refer to Civil plans for site layout, drainage, final grading and utilities. Information shown on Civil plans shall take precedence over landscape plans.
2. Trees shall bear same relation to finished grade as it bore to existing.
3. Trees to be planted a minimum of 4 feet from face of building, or pavement, except as approved by Owner's Representative.
4. All vegetation and irrigation shall be consistent with the requirements of the Town of Truckee Development Code and Water Efficient Landscapes.
5. All areas disturbed by construction shall be revegetated and restored.
6. Dust control measures shall be in place during construction. Broadcast mulch shall not be permitted as a dust control measure within 35 feet of structures.
7. Fencing, bollards and boulders as seen on the plan shall be in place to restrict parking to approved parking surfaces only.
8. All plants shall be irrigated with low flow drip irrigation.
9. The proposed plant palette includes sufficient drought-resistant species to reduce the demand for gas-powered landscape maintenance equipment.
10. Certified, weed-free, imported erosion-control materials shall be used. Construction supervisors and mangers shall be educated about noxious weed identification and the importance of controlling and preventing their spread.

REVEGETATION NOTES

1. All areas disturbed by construction activities shall be revegetated if not shown improved with another material. Additional revegetation may be required beyond what is shown on plans.
2. A minimum of two inches (2") of topsoil shall be placed on all disturbed areas. Topsoil shall include all of the organic-rich layer of soil immediately under the duff layer. Topsoil shall be stored with minimal handling and no compaction, and it should not be mixed with spoil material.
3. Disturbed areas that are compacted or have experienced heavy vehicle and equipment use shall be plowed with a ripper or other deep tillage implement where feasible to a depth of 6"-12". Soil may be loosened with a backhoe bucket equipped with cutting teeth if loosening is done such that clods remain and soil is not pulverized or inverted. Following soil loosening, all further equipment traffic shall be eliminated from the planting area.
4. Areas should be irrigated by a low-flow irrigation system approximately once every three (3) weeks. The goal for all revegetated areas is to minimize irrigation needs and discontinue the need for irrigation after a maximum of three (3) growing seasons.
5. Following seeding and planting, all revegetation areas shall be mulched with pine needles. Pine needles shall be applied evenly to the entire area to a depth of one inch (1") if applied by blower or two inches (2") if applied by hand.

En	<i>Ericameria nauseosa</i>	Rubber Rabbitbrush
LI	<i>Lupinus lepidus</i>	Pacific lupine
Wm	<i>Wyethia mollis</i>	Mules Ears

TREE PROTECTION NOTES

Truckee Development Code section 18.30.155

1. Fencing at the dripline or at the limits of grading should they be located within the dripline shall be installed prior to the start of any grading or construction activity. This requirement shall be noted on all relevant construction and grading plans. If the dripline fencing is determined to unreasonably obstruct construction access or operations, the review authority may allow modifications to this requirement, including temporary construction paving within a tree's dripline.
2. No grade cuts whatsoever shall occur within six feet of the trunk of a tree to be retained and no grade cuts shall occur within the dripline of such tree, except that when recommended by a certified arborist or Registered Professional Forester, grade cuts not to exceed a maximum of one foot in depth may be permitted when not closer than six feet of the trunk and not exceeding one-third of the area of the dripline of the tree; provided, however, that higher standards may be applied by the review authority.
3. No fill whatsoever shall be placed within six feet of the trunk of a tree to be retained, and no fill shall be placed within the dripline of such tree, except that when recommended by a certified arborist or Registered Professional Forester, up to one-third of the area of the dripline of such tree may be filled not exceeding a maximum depth of one foot, with no fill whatsoever placed within six feet of the trunk; provided, however, that higher standards may be applied by the review authority.
4. No mechanical trenching whatsoever shall be allowed within the dripline of a tree to be retained. If it is absolutely necessary to install underground utilities within the dripline of a tree, the trench shall be hand dug in the vicinity of major trees to prevent root cutting and mangling which may be caused by heavy equipment.
5. Support roots that are inside the dripline of the tree shall be protected.
6. Cross-section drawings of proposed grading may be required where trees are located adjacent to roadways, new slopes or critical areas.
7. Drainage changes shall be minimized within driplines of trees to be retained.
8. No irrigation system shall be installed within the dripline of a tree which may be detrimental to the preservation of the tree unless specifically authorized by the review authority or the Town Planner.
9. Paving within the dripline of a tree to be retained should be stringently minimized, with no paving whatsoever within six feet of the trunk. When paving is absolutely necessary within the dripline, porous material should be used, and not cover more than one-third of the area of the dripline.

SEWER PROFILE
 SCALE (H): 1" = 40'
 SCALE (V): 1" = 10'

C6 UTILITY PLAN (UPDATED)

L1- EXTERIOR DOWNLIGHT

Type: Exterior Downlight Fixture

Manufacturer: EATON

Product: Halo - SLD 4" Surface LED Downlight

Material: Die cast aluminum trim ring and die formed aluminum frame

Electrical: 12.2 W LED luminaire

Finish: SLD designer trims are accessory rings that attach to SLD for a permanent finish. Color: Tuscan Bronze

Location: Refer to building floor plans

Lumens: 800 lumens per fixture X 23 fixtures = 18,400 lumens

L3- EXTERIOR WALL LIGHT

Type: Direct Wall Fixture

Manufacturer: Targetti

Product: Mr. Smith wall mounted luminaire 5"H x 5"W x 2"D

Material: Powder coated anodized die-cast aluminum body and optical unit with injection molded opal polycarbonate lens

Electrical: High efficiency LED chip on board monoemission 7W/ Biemission 13W

Finish: Powder coated texture finish. Color: Bronze

Location: Refer to building floor plans

Lumens: 1261 lumens per fixture X 23 fixtures = 29,003 lumens

Note: There is no lighting at the existing parking lots.

L2- EXTERIOR SIGN LIGHT

Type: Sign Light

Manufacturer: EATON

Product: Cambria 920

Material: Housing, hood, hook arm and wall mounting plate are precision-machined from corrosion resistant 6061-T6 aluminum

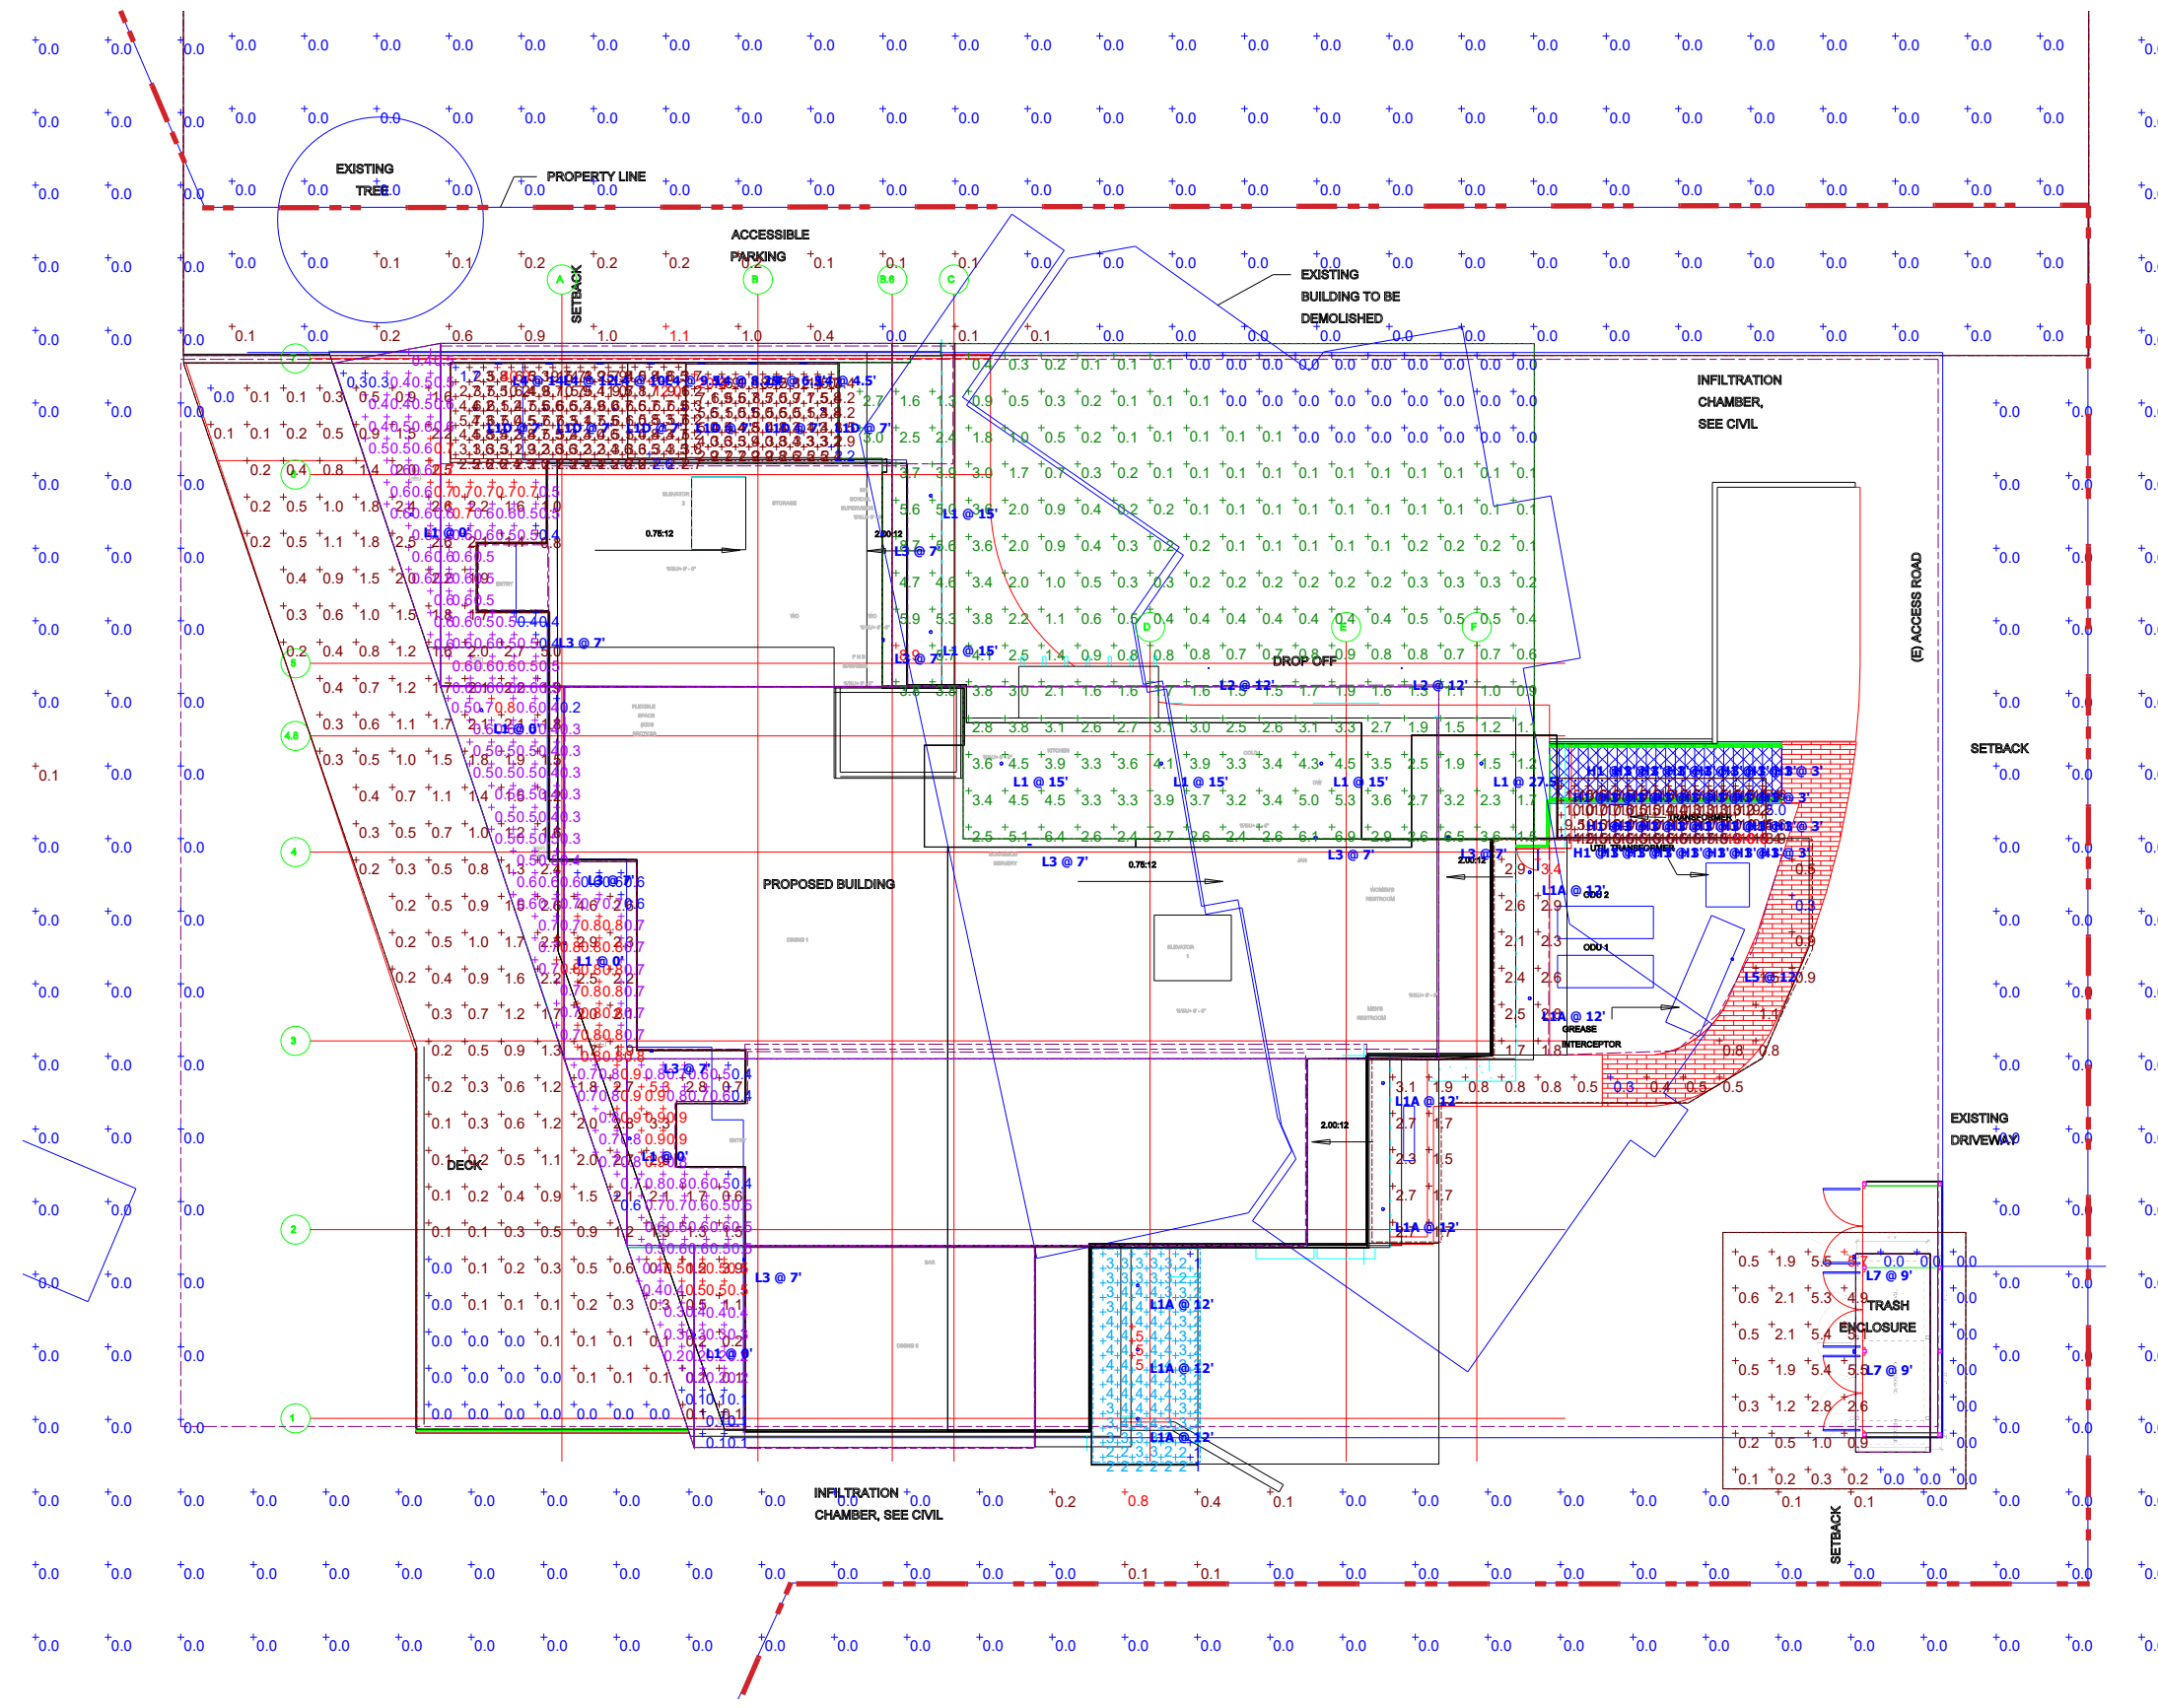

Electrical: Dimmable LED (50 W max) or MR 16 low voltage sign lighting luminaire

Finish: Fixtures are double protected by a chromate conversion undercoating and polyester powdercoat paint finish. Color: Bronze

Location: Refer to building floor plan - Level 3

Lumens: 600 lumens per fixture X 3 fixtures = 1,800 lumens

To: Yumie Dahn; Jiane Du
Subject: RE: Tahoe Donner Downhill Ski Lodge Complete Letter
Attachments: Tahoe Donner Ski Lodge - Logistics Plans 081022 (002).pdf

Hi Yumie,

The temporary operations facility will likely house the following:

- A point of sales mainly for printing tickets, all orders will be online.
- Ski rentals
- Ski patrol
- Employee rest area

The structure will be either portables or a sprung structure. We are still looking at the advantages, disadvantages, and cost of those options.

Restrooms will be provided at lot five in either a separate bathroom trailer or porta potties. As shown on the “winter site usage plan”, restrooms will also be available as either a bathroom trailer or porta potties on the mountain just down from the lifts.

At this time all operations including rentals are planned to be run out of the temporary operations facility. Although we have discussed it we are not proposing any off-site operations at this time.

As shown on the “winter site usage plan” the only proposed staging area during winter operations is the lower portion of lot 5. The rest of the parking lots will be for guests. In the “summer site usage plan” we are proposing to use all of the lots for staging areas but we will not be running any operations and will not need guest parking in the spring, summer, and fall when the ski resort is not open.

I hope I’ve answered all of your questions. Feel free to reach out to discuss any of this.

Regards,

Jon

Catalog #:

Quantity:

Features

Teslyte HR-TD Series is inconspicuous recessed handrail light that serve as an exceptional lighting source for stairways. The HR-TD is ideals to illuminate stairways and walkways of residential and commercial buildings like hospitals, movie theaters, public parks, and apartment complexes.

- Housing: Aluminum or stainless-steel options
- Lens: Symmetrical or Asymmetrical options
- LEDs:
 - Highly efficient integral LED and driver.
- Applications:
 - Suitable for walkway and stairways for Residential or Commercial.
- Ratings:
 - Suitable for wet locations
 - IP67
- Warranty: 5-year warranty.

BEVELED 2.2 SPECIFICATIONS

FIELD REPLACEABLE LED LIGHT ENGINE

is serviceable through the aperture without tools or with a Philips screwdriver. All USAI Lighting light engines feature industry-leading color consistency.

FIELD REPLACEABLE DRIVER

Unless otherwise specified, a 0-10V, 100%-1% solid state electronic constant current integral D6E dimming driver with a high power factor is provided standard and sources 2mA. All integral dimming drivers are located within the fixture housing and are serviceable from below the ceiling through the aperture. Some on-time delay may be experienced depending on control system used. All dimming drivers comply with IEEE C62.41 surge protection. NOTE: Color Select tunable white requires additional 0-10V dimming wires; see wiring diagrams for details.

INTEGRAL EMERGENCY BATTERY

IOTA emergency battery provides backup power for 90 minutes. NC EM fixtures are provided with an integral emergency battery with integral test switch and can be serviced through the aperture from below the ceiling plane. NCSM EM fixtures are provided with an integral emergency battery with a remote test switch, which comes with a 24" lead length for location of the test switch. Remote EM test switch is dry/damp only; select EMW emergency option for a wet location-rated EM test switch. NCSM EM fixtures require above ceiling access for service of the EM pack. Fixtures that have no USAI EM option may be connected to an inverter (by others) for emergency lighting. Battery is not available with 347V.

Integral Test Switch is only provided with NC housing.
EM = Dry/Damp/Wet Location Rated Integral Test Switch
EMW is not an available selection with NC housings.

Remote Test Switch is only provided with NCSM housing. Above ceiling access is required with EM options and NCSM housing.
EM = dry/damp rated remote test switch
EMW = dry/damp/wet location, gasketed remote test switch

REMOTE LOCATION DRIVER

If a remote dimming driver is required, specify "RM" in the fixture part number and proceed to the RP table to complete the dimming driver specification. All remote power supplies must be clearly specified in the "RP" table, with one remote power supply required per fixture. Remote power supplies require enclosures by others that meet local codes and must be located in an accessible service panel within 100ft of the light fixture; see table below for coordination of enclosure sizes. All dimming drivers comply with IEEE C62.41 surge protection.

REMOTE LOCATION EMERGENCY

Remote emergency battery IOTA ILB-CP05 provides 5W to one fixture for 90 minutes. Remote power supplies with EM option require an enclosure by others with minimum size of 11"L x 6.75"W x 3.25"H that meets local codes. Emergency battery remote power supplies cannot be located any more than 50 feet from light fixture.

BEVELED 2.2 SPECIFICATIONS

BEVELED 2.2 REMOTE POWER SUPPLY WIRING DIAGRAM

ENCLOSURES FOR REMOTE DRIVERS

Remote drivers require enclosures per local code. Enclosures can be provided by others, or for convenience, USAI can provide them to you. The choices available depend on the dimming driver specified. In the case of the metal encased drivers, USAI can offer a metal mounting plate sized 5-1/8" x 5-1/8" which attaches to the back of each dimming driver and can be installed directly inside a standard 4" square junction box. For the other dimming drivers we offer, USAI can provide an enclosure sized 4-1/8" wide x 9-11/16" long x 2-3/8" deep to accommodate one dimming driver each. Please refer to remote dimming driver ordering tables for clarification on which driver installation accessories, mounting plate or enclosure, are available for each remote dimming driver option. When choosing to use USAI remote dimming driver mounting accessories, whether enclosures or mounting plates, specify the accessory in the accessories column of the remote dimming driver ordering table to indicate selection. Field wiring should be according to NEC code; per article 411.7. EC is responsible for adherence to all local codes. Refer to remote dimming driver tables for maximum distances, locations, and wire gauges required, which varies by driver type.

MP JUNCTION BOX MOUNTING PLATE

ENC SINGLE DRIVER ENCLOSURE

HOUSING

All BeveLED 2.2 fixtures are field-flexible which allows for field changes from trimless or millwork to trimmed with a simple components change with parts from USAI. Housings are fabricated of 20 ga. steel construction with thru wire J-box, 4 in 4 out at min. 90°C, #12 AWG thru branch circuit wiring, except for NCSM which is fabricated of 18 ga. steel. FTIC and NCIC housing for use with 9W, 12W, and 16W light engines only are rated for direct contact with spray foam insulation of R-42 or less. FTIC housing is IC-rated up to 16W maximum, NCIC housing is IC-rated up to 33W maximum.

MOUNTING

B4RDF overlap flange fixtures are designed for use in sheetrock, acoustical ceiling tile, and many other ceiling materials. B4RDL trimless fixtures are provided with a spackle collar and are designed for use in sheetrock/mud-in ceiling applications. B4RDM millwork fixtures are provided with a millwork collar in finish to match trim finish specified and are designed for use in wood/millwork, stone and tile construction applications. Butterfly brackets and residential grade adjustable nailer bars extendible from 14" to 24" centers with integral nails are provided standard for attachment to building structure. C-channel bars are optionally available for acoustical ceiling applications.

FIXTURE WEIGHT

FT, FTIC, and FTCP housings weigh 8 lbs. NC, NCIC, and NCCP housings weigh 16 lbs. NCSM housing weighs 10 lbs., NCSM with EM weighs 16.5 lbs, and NC housing with EM weighs 24.5 lbs.

WARRANTY

Based on IESNA LM80-2008, BeveLED has a 50,000 hour rated life at 70% lumen maintenance (L70). USAI Lighting Warranty covers replacement parts for 5 years from date of shipment. Ambient temperatures at fixture location should not exceed 40°C during normal operation.

BeveLED® 2.2 Complete 4.5" Round Downlight - B4RD

BEVELED 2.2 SPECIFICATIONS

CEILING CUT OUT

B4RDF Trimmed with Overlap Flange: 5-1/16" Ø
B4RDL Trimless Spackle-in: 5-1/2" Ø
B4RDM Millwork Knife-edge: 4-15/16" Ø

TRIM FINISH

BeveLED 2.2 trims are available in a wide range of finishes. USAI's standard powdercoat painted trim finishes are white, conduit silver, gray, black, and bronze. A clear matte anodized bevel and piano gloss black electrocoated bevel are also available with matching or contrast-painted flange finish options. Anti-microbial painted finish available in white. Natatorium finishes are triple-coated for corrosion resistance; these coatings are offered in painted finishes only and are not available for trimless or millwork. All trim finishes are dry/damp/wet location rated, with the exception of the anodized (-AC-) and electrocoated (-AB-) bevel finishes, which are dry/damp only. Please contact the USAI factory with a RAL number specification for custom color trims, or specify the field-paintable primer finish option.

LISTINGS

Dry/Damp/Wet location. AC and AB trim finishes are dry/damp only. Remote EM test switch is dry/damp only. Select EMW option for wet location remote test switch. UL2043 rated for use in air handling plenums. NRTL/CSA-US tested to UL standards. IBEW union made.

NOTES

- Use of pressure washer voids warranty

PHOTOMETRICS

Consult factory or website for IES files. Tested in accordance with IESNA LM79.

BeveLED® 2.2 Complete 4.5" Round Downlight - B4RD

LED COLOR OPTIONS

Classic White Light

Our proprietary LED light engines achieve a 2-step MacAdam ellipse along the black body locus, resulting in reliable and uniform color from fixture to fixture. You'll see the results in consistently beautiful light throughout your space, whichever USAI LED product you specify.

Warm Glow® Dimming

Warm Glow Dimming provides warmth and glow once possible only in dimmed incandescent sources. Utilizing our patented proprietary algorithm and circuitry, Warm Glow Dimming technologies precisely mimic the black body curve of a standard 100W A19 lamp by gradually transitioning from 2700K or 3000K down to 2200K. The result is virtually indistinguishable from an incandescent light source.

Color Select® Tunable White

Color Select represents the next innovation in color temperature control for advanced LED recessed downlighting. Color Select® products allow users to adjust color temperature from 6000K down to 2200K while independently adjusting intensity to achieve ultimate control over the quality of light in a space with a single fixture type. Color Select interfaces with standard dimming and control systems.

Specifications

Material

Machined 6061-T6 aluminum with 18-8 stainless steel hardware.

Head

Machined head comes in two styles: Side Mount and Rear Mount. (See illustration for aiming capability of each head style.)

Stem

1" diameter machined stem comes in various stem lengths and three stem styles: Straight, 180° U-Bend, and 90° Gooseneck. (See illustration for calculating overall projection from wall for each stem style.)

Knuckle

Rotate and Lock knuckle (protected under U.S. Patents #6,966,679, #7,108,405 and #7,458,552) mounts the head to the stem and allows for adjustability. Double taper design allows fixture to hold position during aiming and ensures a solid lock when tightened. LED models have a molded silicone wire seal to prevent water entry at knuckle.

Cap

Machined caps come in seven styles, lock in place with one 18-8 stainless steel set screw, and are sealed to the body with a high temperature silicone O-ring. Regress Lens caps have drain holes for water drainage from top of lens if mounted in the up position. All caps accept up to three internal accessories, held in place by a stainless steel clip.

Mount Canopy

Available with the following mount options: MO3 (Machined Round Canopy), MO15 (Machined Square Canopy), and MO12 (Surface Mount Canopy). Stem is permanently attached to mount canopy using a 304 stainless steel threaded nipple to prevent loosening or sagging. See mount specification sheets for more information. (Mount canopy must be mounted to an appropriate wall or junction box, in such a manner that is capable of holding the weight and torque created by the fixture. Junction box and hardware not included).

Finish

TGIC thermo set polyester powder coat paint available in 14 standard colors. Finish is applied over a corrosion resistant, hexavalent chromium free, RoHS compliant coating. Also available in one additional metal finish: Clear Anodized.

Lens

1/8" thick, tempered, clear lens, secured to cap with a high temperature, UV curing, silicone adhesive.

LED

Integral Driver LED: 100 to 277 VAC (50/60 Hz) input, 20W max. power (17W@120V, 20W@277V). LED lamp features: integral driver, 1280 lm max output, 75 lm/W max efficacy, field changeable optics (15°, 23°, 35° & 51°), push button selection of light level (100%, 80%, 55% & 18%), 120-277V 0-10V dimming available at three highest (100%, 80%, 55%) light levels, 120V phase dimming at highest (100%) light level (see Dimmer Compatibility List), an L70 of 60,000 hrs., and patented LEDSense® thermal management to ensure reliability and lumen maintenance. Note: thermal management system may cause power input and light output to vary slightly depending on fixture material, orientation, lens accessories, mounting, and ambient temperature.

COB LED: COB LED package uses modular industry standard components to simplify future upgrades and includes features like: performance of 1800 lm, 16W max input (@350mA) or 2400 lm, 21W max input (@500mA), field replaceable optics (12°, 25°, 40° & 60°), and an L70 > 55,000 hrs. Note: requires Vision3 approved 350mA or 500mA constant current driver mount.

Certification

CSA tested & certified to US and Canadian safety standards for wet location wall mount use per UL1598.

All ratings subject to change without notice. See web site or contact V3 for most current info.

Projection From Wall = Stem Length + Mount Thickness + 1 5/8" (for Style S1)
6" (for Style S2)
18" (for Style S3)

Ordering Information

- Notes:**
- Rear Mount head has limited adjustability and will not aim back towards the wall when on an S1 Style stem. See spec. sheet illustration for aiming capability of each head style.
 - Short cap options only available with COB LED options.
 - Other stem lengths are available upon request. Consult your Vision3 Lighting sales representative.
 - See MO3, MO12, or MO15 specification sheet for mount details.
 - Integral Driver LED available in other color temperatures and / or CRI's (contact V3 for info).
 - COB LED must be used with V3 approved constant current driver mount.
 - Specifications, certifications, and ordering information are subject to change. Please check website for latest specification sheets.

ZEDGE LINE

Recessed Direct View Linear Line Voltage Steplight

Concept: Recessed linear LED steplight for indoor and outdoor applications.

Materials: Die-cast anodized aluminum body and external powder coated frame. ^AConsult factory for use in marine grade environments.

Source: LED High Efficiency Board.

Optic: Polycarbonate opal screen. Floor Washer frame allows for uniform optical distribution on the floor and excellent visual comfort.

Mounting: To be completed with PVC installation sleeve for flush or semi-flush installations. Secured with stainless steel spring system.

Driver: Integrated 4/1 driver (Non-dimmable / 0-10V / Reverse Phase / Forward Phase). Dimmable to 1%.

Finish: Textured Standard Finishes – Ferrite Grey / Heritage Brown / Bronze RAL 8019 / White / Black / Sandstone Grey

Wattage: 9W

Color Temperature: 2700K / 3000K / 3500K / 4000K

CRI: Ra84

Delivered Lumens: **2700K** 230Lm **3000K** 245Lm **3500K** 251Lm **4000K** 257Lm

Lumen Maintenance (L70): 50,000hrs

Calculation for LED fixtures are based on measurements that comply with IES LM-80.

Voltage: Universal Voltage 120-277V AC 50/60Hz

IK Rating: IK10

IP Rating: IP66

BUG: B0-U1-G0

Certifications: cULus Listed Wet Location
Tested in accordance with LM-79-08
Energy efficient for California installations.

Warranty: 5 year limited warranty

Designed in collaboration with Gensler as Product Design Consultant

^AConsult factory for use in marine grade environments. Not to be in direct contact with salt for extended periods of time or used with corrosive agents.

Shown in Ferrite Grey Finish

Suitable for indoor and outdoor applications.

LQ421

MATERIALS

Lumiquad column is made of 6061-T6 extruded aluminum alloy. All other parts are made of corrosion resistant 356 aluminum alloy with a copper (CU) content of less than 0.1%.

ELECTRICAL

DRIVER Standard driver is 0-10V dimming-ready (dims to 10%) with: 120-277 multi-volt compatibility (50-60Hz), operating temperatures of -40°C/-40°F to 55°C/131°F, output over voltage protection, output over current protection, output short circuit protection with auto-recovery.

LED 3000K/3500K/4000K CCT with 80 CRI.
Optional true amber LED for turtle sensitive areas.
Wavelengths: 585nm to 597nm.

LIFE

60,000hrs L₇₀B₅₀ (based on IESNA TM-21 Test Method and LM-80 data).
Up to 70,000hrs L₇₀B₅₀ (calculated projection from LM-80 data).

FINISH

Five-stage preparation process includes preheating of cast aluminum parts for air extraction. Polyester powder coating is applied through an electrostatic process, and oven cured for long term finish.

CERTIFICATION

Certified and Approved as per CSA C22.2 No.: 250.0 standard and ANSI/UL 1598 standard, for wet location. Rated IP65.
Photometric testing performed by an independent laboratory in accordance with IES LM-79-08 standards at 25°C. Lumen depreciation in accordance with IESNA LM80 standards.

MOUNTING

Lumiquad column is designed for ease of access and installation. The cast aluminum base plate is secured with a set of (4) 1/2"-13 x 18" lg. galvanized anchor bolts.

NOTES

- 1- If no voltage is specified, luminaires are factory prewired by default for 120V. For other voltages, please specify with catalog number, or consult factory.
- 2- GFI and CGF options are installed 30" above grade unless otherwise specified. CGF cover protrudes by 3.62" (92mm). 120V required for GFI or CGF.
- 3- BLC1 installed on back side when distribution Type II is selected.
- 4- BLC2 and BLC3 not available with distribution type II.
- 5- LVR cannot be combined with Blockout shield option.
- 6- Not compatible with PH, MSD.
- 7- Compatible with Amber Led.
- 8- White sensor available upon request.
- 9- Faux wood finish not applied to the fixture head, base cover or accessories.

For IDA certification compliance, luminaire must be ordered with 3000K or warmer.

Specifications

Depth (D1):	5.5"
Depth (D2):	1.5"
Height:	8"
Width:	9"
Weight: (without options)	9 lbs

Introduction

The WDGE LED family is designed to meet specifier's every wall-mounted lighting need in a widely accepted shape that blends with any architecture. The clean rectilinear design comes in four sizes with lumen packages ranging from 1,200 to 25,000 lumens, providing true site-wide solution.

WDGE1 delivers up to 2,000 lumens with a soft, non-pixelated light source, creating a visually comfortable environment. The compact size of WDGE1, with its integrated emergency battery backup option, makes it an ideal over-the-door wall-mounted lighting solution.

WDGE LED Family Overview

Lumen Multiplier for 90CRI

CCT	Multiplier
27K	0.845
30K	0.867
35K	0.845
40K	0.885
50K	0.898

Lumen Output in Emergency Mode (4000K, 80 CRI)

Option	Dist. Type	Lumens
E4WH	VF	646
	VW	647

Lumen Ambient Temperature (LAT) Multipliers

Use these factors to determine relative lumen output for average ambient temperatures from 0-40°C (32-104°F).

Ambient	Lumen Multiplier
0°C / 32°F	1.03
10°C / 50°F	1.02
20°C / 68°F	1.01
25°C / 77°F	1.00
30°C / 86°F	0.99
40°C / 104°F	0.98

Projected LED Lumen Maintenance

Data references the extrapolated performance projections for the platforms noted in a 25°C ambient, based on 10,000 hours of LED testing (tested per IESNA LM-80-08 and projected per IESNA TM-21-11).

To calculate LLF, use the lumen maintenance factor that corresponds to the desired number of operating hours below. For other lumen maintenance values, contact factory.

Operating Hours	0	25,000	50,000	100,000
Lumen Maintenance Factor	1.0	>0.96	>0.95	>0.91

Photometric Diagrams

To see complete photometric reports or download .ies files for this product, visit the Lithonia Lighting WDGE LED homepage. Tested in accordance with IESNA LM-79 and LM-80 standards.

LEGEND

MH = 8ft
Grid = 8ft x 8ft

Emergency Egress Options

Emergency Battery Backup

The emergency battery backup is integral to the luminaire — no external housing required! This design provides reliable emergency operation while maintaining the aesthetics of the product. All emergency battery backup configurations include an independent secondary driver with an integral relay to immediately detect loss of normal power and automatically energize the luminaire. The emergency battery will power the luminaire for a minimum duration of 90 minutes (maximum duration of three hours) from the time normal power is lost and maintain a minimum of 60% of the light output at the end of 90 minutes.

Applicable codes: NFPA 70/NEC – section 700.16, NFPA 101 Life Safety Code Section 7.9

The example below shows illuminance of 1 fc average and 0.1 fc minimum in emergency mode with E4WH and VF distribution.

WDGE1 LED xx 40K 80CRI VF MVOLT E4WH

Dual Switching (DS) Option

The dual switching option offers operational redundancy that certain codes require. With this option the luminaire comes integrated with two drivers and two light engines. These work completely independent to each other so that a failure of any individual component does not cause the whole luminaire to go dark. This option is typically used with a back generator or inverter providing emergency power.

Applicable codes: NFPA 70/NEC – section 700.16, NFPA 101 Life Safety Code Section 7.9

FEATURES & SPECIFICATIONS

INTENDED USE

Common architectural look, with clean rectilinear shape, of the WDGE LED was designed to blend with any type of construction, whether it be tilt-up, frame or brick. Applications include commercial offices, warehouses, hospitals, schools, malls, restaurants, and other commercial buildings.

CONSTRUCTION

The single-piece die-cast aluminum housing integrates secondary heat sinks to optimize thermal transfer from the internal light engine heat sinks and promote long life. The driver is mounted in direct contact with the casting for a low operating temperature and long life. The die-cast door frame is fully gasketed with a one-piece solid silicone gasket to keep out moisture and dust, providing an IP66 rating for the luminaire.

FINISH

Exterior painted parts are protected by a zinc-infused Super Durable TGIC thermoset powder coat finish that provides superior resistance to corrosion and weathering. A tightly controlled multi-stage process ensures a 3 mils thickness for a finish that can withstand extreme climate changes without cracking or peeling. Standard Super Durable colors include dark bronze, black, natural aluminum, sandstone and white. Available in textured and non-textured finishes.

OPTICS

Well crafted reflector optics allow the light engine to be recessed within the luminaire, providing visual comfort, superior distribution, uniformity, and spacing in wall-mount applications. The WDGE LED has zero uplight and qualifies as a Nighttime Friendly™ product, meaning it is consistent with the LEED® and Green Globes™ criteria for eliminating wasteful uplight.

ELECTRICAL

Light engine consists of high-efficiency LEDs mounted to metal-core circuit boards to maximize heat dissipation and promote long life (up to L91/100,000 hours at 25°C). The electronic driver has a power factor of >90%, THD <20%. Luminaire comes with built in 6kV surge protection, which meets a minimum Category C low exposure (per ANSI/IEEE C62.41.2). Fixture ships standard with 0-10v dimmable driver.

INSTALLATION

A universal mounting plate with integral mounting support arms allows the fixture to hinge down for easy access while making wiring connections. The 3/8" Architectural Wall Spacer (AWS) can be used to create a floating appearance or to accommodate small imperfections in the wall surface. The ICW option can be used to mount the luminaire inverted for indirect lighting in dry and damp locations. Design can withstand up to a 1.5 G vibration load rating per ANSI C136.31.

LISTINGS

CSA certified to U.S. and Canadian standards. Luminaire is IP66 rated. PIR options are rated for wet location. Rated for -40°C minimum ambient. DesignLights Consortium® (DLC) Premium qualified product and DLC qualified product. Not all versions of this product may be DLC Premium qualified or DLC qualified. Please check the DLC Qualified Products List at www.designlights.org/QPL to confirm which versions are qualified. International Dark-Sky Association (IDA) Fixture Seal of Approval (FSA) is available for all products on this page utilizing 2700K and 3000K color temperature only and SRM mounting only.

BUY AMERICAN

Product with the BAA option is assembled in the USA and meets the Buy America(n) government procurement requirements under FAR, DFARS and DOT. Please refer to www.acuitybrands.com/buy-american for additional information.

WARRANTY

5-year limited warranty. This is the only warranty provided and no other statements in this specification sheet create any warranty of any kind. All other express and implied warranties are disclaimed. Complete warranty terms located at: www.acuitybrands.com/support/warranty/terms-and-conditions

Note: Actual performance may differ as a result of end-user environment and application. All values are design or typical values, measured under laboratory conditions at 25 °C. Specifications subject to change without notice.
