Preventive maintenance is performed based on manufacturer schedules: all major equipment is entered into a computer system which generates work orders based on those schedules. Work orders are automatically generated then maintenance is performed on the equipment. Also staffing is such that we have a dedicated mechanic who oversees the plants maintenance needs. Operational staff also work with the plant mechanic when needed.

Influent Flow and Loadings: Grade = F

We have been meeting with Riverside Foods to reduce loading into the collection system. They have made operational and sanitation changes which have shown a minimal reduction in loading. They have installed a 6000 gallon grease trap which has also produced minimal results. We will continue to work with the company to address this problem.
