ENERGY STAR[®] is a program developed by the U.S. Environmental Protection Agency and the U.S. Department of Energy. The goal of the program is to protect the environment and save you money by encouraging energy efficient products, services and practices. To that end, Masonite is proud to produce a wide variety of door and glass combinations that ensure our products can be used as part of an ENERGY STAR[®]-qualified assembled door system. Masonite doors and sidelites include a premium polyurethane foam core that insulates up to five times better than wood. Our triple-pane decorative

glass with coming creates an excellent insulator against the cold in the winter and the heat of summer. A properly installed ENERGY STAR[®]-qualified door system can save you money all year. Our NFRC-certified door systems may qualify for the ENERGY STAR[®] program. Other criteria exist for eligibility, including U-Factor and Solar Heat Gain Coefficients. Use the charts below as a general guideline for which Masonite products may qualify.

For further information, see our website at: www.masonite.com

- 1. U-FACTOR:** Measures the rate of heat transfer through a product. It considers all elements of an assembly including conductivity, air flow and glass emissivity. A lower U-Factor indicates a better-insulating product.
- 2. SHGC (SOLAR HEAT GAIN COEFFICIENT):** Measures the amount of energy that passes through glass from the sun, creating additional heat. The lower the SHGC, the better it blocks solar heat.

MASONITE GLASS

More Light. More Comfort. Less Energy.

As the leader in both innovation and trend, Masonite has invested in new state-of-the-art, automated, high-speed warm-edge spacer assembly lines that put Masonite Glass at the forefront of the door lite industry.

Warm-edge flexible spacers have been shown to have up to nine times the life expectancy of traditional metal insulating glass systems available on the market today. They expand and contract and always return to their original shape, protecting against stress cracks that can lead to seal failure.

WARM-EDGE FLEXIBLE SPACERS

= LESS SEAL FAILURES

Warm-Edge Flexible Spacer

Flexible spacers can move as glass bows inward or outward, resulting in a reduction of seal failures when compared to metal spacers.

VS.

FULL-METAL SPACERS

Full-Metal Spacer

Metal spacers are rigid and seal stress can result in seal failure.

SPACER SYSTEM	CONDENSATION RESISTANCE	EDGE OF GLASS TEMPERATURE	EFFECTIVE THERMAL CONDUCTIVITY	TOTAL IGU FACTOR
Warm-Edge Flexible Spacer	43.9	38.1°F / 3.39°C	0.182 W/m•C	0.265
Stainless Steel U-Channel / Butyl	38	35.1°F / 1.72°C	0.333 W/m•C	0.269
Stainless Box / PIB Primary Sealant	36	33.6°F / 0.89°C	0.365 W/m•C	0.271
Tin U-Channel / Butyl	27.3	29.5°F / -1.39°C	0.806 W/m•C	0.278
Aluminum Spacer / Silicone	19.6	23.7°F / -4.61°C	1.623 W/m•C	0.296

Simulations were completed using WINDOW 7.4 / THERM 7.4 as per NFRC 200-2014. Outside temperature 0°F, inside temperature 70°F.

PERFORMANCE BENEFITS OVER OTHER SPACERS

CLEARER VIEWING

Warm-Edge Flexible Spacers

All-foam design dramatically reduces interior condensation, delivering a clear view

Less-Metal Spacer

Mid-performance spacer systems that still contain metal improve condensation resistance.

Full-Metal Spacer

With conventional metal spacers, condensation is a fact of life.

SOUND REDUCING

Improved sound absorption over traditional metal spacers; warm-edge flexible spacers help keep in keeping the decibels down

LONGER LASTING

Warm-Edge Flexible Spacers

Warm-edge flexible spacers feature a unique no-metal composite-laminating technology that provides superior durability and thermal performance in insulating glass units

ENERGY SAVING

The thermal performance of a window plays a major role in household energy conservation. A high-performance window system will keep your energy costs low by reducing heat loss in the winter and heat gain in the summer

Many transom shapes exist. Please see Masonite's glass price guide for a complete list with full dimensions.

All dimensions shown are for inswing doors. Deduct 1-1/8" from the actual door unit size, the rough opening size and the outside brickmould size height for outswing. For handicap accessible doors, see product selection detailed in the catalog to determine if the entry door style you have selected is available. Recommended rough openings for the FAST-FRAME, adjustable steel frame offering are different than the dimensions shown in this chart (see rough opening chart titled FAST-FRAME). Floor covering can affect rough opening heights. *Height dimensions shown are for 79" and 95" tall doors with 1-3/8" sills. For variations, adjust accordingly.

How to Measure Your Door

IMPORTANT

There is no 'industry standard' for door sizing, so follow these steps carefully. Measuring your door and determining your door handing are very important to ensure the best fit for your opening. For best results, have a professional measure your opening and install your door.

STEP 1. Measure the width of your existing door slab

This is the edge of one side of the door slab to the edge of the other side of the door slab. (A)

STEP 2. Measure the height of your existing door slab

This is the top edge of the door slab to the bottom edge of the door slab. Do not include the sweep on the bottom of the door. (B)

STEP 3. Measure the jamb depth of your existing door

This is the inside edge of the door jamb to the outside edge of the door jamb (area where hinges are). Do not include any trim in this measurement.

STEP 4. Determine the handing of your existing door

A) All handing must be done from the exterior of the door. Looking at your door from the outside, your door swings:

- ☐ A - Into the house (inswing)
☐ B - Out of the house (outswing)

B) Looking at your door from the outside, your door knob is:

- ☐ A - On the left side of the door
☐ B - On the right side of the door

C) Select the combination below to determine the proper handing of your door.

- ☐ AA - Right-Hand Inswing
☐ AB - Left-Hand Inswing
☐ BA - Left-Hand Outswing
☐ BB - Right-Hand Outswing

STEP 5. Determine final calculations of your existing door

To find the estimated size of your existing unit, use the calculations below.

Measurement A		
Add for Jamb	1-3/4"	1-3/4"
Total Unit Width

Measurement B
