Subject: Time to Speak Up -- if you want to prevent data centers in Warrenton

[EXTERNAL EMAIL] DO NOT CLICK links or attachments unless you recognize the sender and know the content is safe.

Friends in Warrenton and Fauquier -

Do you want to avoid more battles over data centers in Warrenton?

If so, now is the time to speak up. The 2021 data center zoning ordinance is still on the books. If you think it should be removed -- **if you think there is NO PLACE IN THE SMALL TOWN OF WARRENTON FOR A DATA CENTER -- you need to let the Warrenton Planning Commission know, because they are holding a hearing and a vote soon -- on Tuesday May 20 at 6:30 pm.**

Unfortunately, there are indications that some of the Planning Commission -- maybe a majority -- are thinking of recommending it be kept in place.

Please email the Planning Commissioners now -- because they are forming their views now -- and please plan to attend and speak at the 5/20 hearing.

Here are some messages you might consider sending and speaking -- but please use your own words!

- *Members of the Planning Commission: Please recommend revoking the 2021 data center zoning ordinance.*
- *Warrenton is a small historic town. There is no conceivable place for a data center within the 4 square miles of this special town.*
- *In 2022-2023, Town and County citizens erupted in anger over the proposal to approve a massive data center on the entrance to Town.*
- *Citizens were equally angry over the NDAs, the withheld FOIAs, the cozy relationship between Town staff and Amazon, and the secretive, "done deal" process behind the ordinance and the data center itself.*
- *In 2022-2023, citizens of the Town and County sent an overwhelming message of opposition to the Warrenton data center on Blackwell Road -- and opposition to ANY data center in the small town of Warrenton.*
- *The Town's own records show over 2,800 citizens went on record against the data center. Only 11 individuals went on record in support.*

- *Yet the 2023 Town Council voted 4-3 to approve the Amazon data center, after citizens packed Fauquier High School's auditorium on Valentine's Day 2023 and spoke into the late hours in opposition.*
- *If you are thinking of retaining the data center zoning amendment, go back to the recording of the Valentine's Day hearing to re-live what citizens said and what happened: <https://www.regionalwebtv.com/warrentontc>*
- *If the Planning Commission votes to recommend keeping the 2021 data center zoning ordinance, you are repudiating these citizens and this dark history.*
- *If you vote to keep the 2021 data center zoning ordinance, you are saying you think there is a place in Warrenton for a data center.*
- *[Please tell us exactly WHERE you think a data center would be allowable in Warrenton.](#)*
- *Vote to remove the data center zoning ordinance, to protect Warrenton from data centers, and to rebuke the process that played out in 2021-2023.*

Notice of May 20 public hearing and Planning Commission vote, at 7:00 pm:

TOWN OF WARRENTON NOTICE OF PUBLIC HEARING

Notice is hereby given that the Planning Commission of the Town of Warrenton is holding a Public Hearing on Tuesday, May 20, 2025, at 7:00 PM in the Warrenton Town Council Chambers (First Floor) located at 21 Main Street, Warrenton, Virginia. The following item(s):

ZOTA-25-1 - A Zoning Ordinance Text Amendment to Remove Data Center Permissible Use in the Industrial District. As initiated by Town Council on May 13, 2025, this Zoning Ordinance Text Amendment will amend Articles 3, 9, and 10 of the Town of Warrenton Zoning Ordinance, for the purpose of removing Data Center Permissible Use within the Industrial District, and therefore make Data Center Impermissible Use Within the Town of Warrenton.

People having an interest in the above are invited to attend the hearing and express their opinion regarding the issues. The public may also choose to submit written comments through the Town's website or by emailing citizencomment@warrentonva.gov. The public comment period which will end at noon the day of the public hearing. The Planning Commission may make a recommendation to the Town Council, which may hold a public hearing at a later date. Information is available for viewing on the Town's website www.warrentonva.gov. If there are any questions, please call 540-342-1234 or visit Town Hall located at 21 Main Street, Monday through Friday, 8:30 AM to 4:30 PM.

The Town of Warrenton desires to make its programs, services, facilities, and meetings accessible to persons with disabilities. If you need accommodations or services, please contact the Town as far in advance as possible.

May 12, 2025

Dear Warrenton Planning Commission,

Please recommend that the Town Council reverse the zoning amendment that allowed the Amazon data center application to move forward in Warrenton. You are likely aware of the overwhelming public outcry and legal process that ensued from the 2021 code amendment and subsequent Amazon data center application. Far from benefiting Warrenton, the singular decision to alter the zoning code in 2021 launched the town of Warrenton down a dark and extremely expensive path. I encourage you to now be part of the solution, rather than the continuance of the problem.

First, it is likely that the resolution of the court matter alleging that the 2021 rezoning was handled incorrectly under Virginia law will be resolved against the town and Amazon. The arguments are simple. Town staff, the Council, and Amazon rushed to amend the code and in so doing, failed to follow key state requirements. Consider that any future data center applied for or approved under the original flawed legal process will likely be presented with the same public challenges and costly battles.

Second, the concern of Warrenton citizens over the original zone change was and is so great it will not go away. As you know, it grew into a two-year fury that saw an entire turnover of the town Council. The only path to reconciliation with most local constituents is to reverse the wrong that originally allowed data centers to apply for an exception in the first place. I urge you to see this truth and make a recommendation to correct the matter.

Despite the Mayor's repeated assertions that there is a silent majority in favor of data centers, this is simply not true and not supported by the record. The record shows at least 2,000 against data centers and only 11 in favor. If there is any silent majority, logic tells us that these silent people are almost certainly against data centers not for them. Silent majorities still vote, and we have a new town Council majority that was elected from an anti-data center platform.

As part of the public and governmental decision-making process, you have the responsibility to consider the public will, the extensive cost and disruption the zoning change has had on this town, and whether that should continue. In other words, a decision by you to ignore the opportunity to begin correcting the problem will certainly result in:

- More legal cost and political anxiety for Warrenton.
- A major public battle each time a data center application is proposed.
- Continued public mistrust of process and a community divided against its town.

Please be bold and do your part to return Warrenton to where it was before the zoning mistake occurred.

Sincerely,

Chuck Cross

Dear Warrenton Planning Commission:

Having just taken a moment to review the Planning Commission's minutes from the April 22 meeting, I feel compelled to amend my earlier comments. First, I'm dumbfounded at the current Planning Commission's understanding of the zoning amendment process that occurred, or more correctly, failed to occur in 2021. While my earlier comments stand as written, this addition addresses specific understandings or questions by the Planning Commission in the April minutes:

1. Questions were raised about the need for this undertaking and concerns about the necessity for reconsideration of the zoning amendment, that it feels arbitrary, and whether there was any basis for the change.

The Town Council, as a higher governmental body, has already determined the need for consideration of this matter. The Town Council passed a resolution to begin text amendments to the zoning ordinance. I do not believe the Town Council asked the Planning Commission to determine whether they were thinking clearly when they made this resolution. Rather, the Planning Commission has been tasked with considering text amendment language.

There is nothing arbitrary about this request or the desire to consider amending the ordinance. Anyone living in Warrenton for the last several years knows that this matter is the most contentious, damaging matter to come before the town in decades, possibly ever, and that it all ties back to the original text amendment in 2021. The matter has survived judicial review without being found arbitrary or without merit and the court has found that there is clearly a basis for that challenge.

2. Apparent concerns that this matter was not raised previously and that this current request is a result of “political winds.”

The political winds felt today are simply a residual breeze left behind by a several-year hurricane. The matter was raised previously. Over and over and over, with an ever-increasing intensity. It resulted in a lawsuit because the prior Town Council was too deaf to reverse its original change of the inappropriate amendment. I, along with many others stood in front of this Planning Commission and the Town Council in 2022 and 2023 challenging the ordinance change and everything that ensued from that change. This is not new. It is not arbitrary. Please review your own history before believing such.

3. The town needs to stand by its decision in order to provide predictable guidance to land owners.

No. The Town needs to acknowledge that it fell victim to deception, misrepresentation, and big corporate influence to the detriment of citizens. This is why the Town Council asked you to begin this undertaking. Why the Town Council is seeking to follow good process by including you in the mechanisms of government rather than excluding you and bypassing an important part of the system like the prior Council did in 2021 and 2022. Were you consulted on the zoning amendment brought forth in 2021? Nope.

4. The Town had conducted public hearings, vetted the matter and found the change to be in the best interests of the Town.

Again, no. The Town disguised the matter inside a consent agenda. Only one citizen even noticed that this was happening and appeared to raise voice. No one else, including council members at that time realized what they were approving.

*The term "consent agenda," sometimes called consent calender, refers to a specific section of a meeting agenda that groups **routine, non-controversial** items for quick approval. Instead of discussing and voting on each individual item separately, the group can approve all items on the consent agenda at once.*

The use of a consent agenda to sneak the amendment passed everyone and avoid discussion and debate was diabolical and intentional as evidenced by the town administrator's own statement to

Amazon's attorney that she had "slipped" it into a consent agenda. You know the rest of the story. She did this working hand in hand with Amazon. Then Town staff in response to specific questions, stated that there were no known interested data centers at the time; clearly false. And then once the amendment was passed allowing data centers, the Town administrator promptly accepted a position with Amazon.

There was no vetting of this matter other than how it might be snuck through the system unnoticed. In fact, the zoning amendment in 2021 was put forth in the consent agenda on the very day the Town Council approved the Planning Commission's recommendation of the Comprehensive Plan; a plan that did not even contemplate data centers inside Warrenton. If nothing else, this Commission should be so upset by that deception that you should be the first in line to explain why this now needs to happen.

Not only was there no vetting, no discussion, no debate, no consideration. There was no compliance with state law when the town amended the zoning ordinance (see lawsuit against the Town of Warrenton).

Virginia Code 15.2-2486(A)(7): Whenever the public necessity, convenience, general welfare, or good zoning practice requires, the governing body may by ordinance amend, supplement, or change the regulations, district boundaries, or classifications of property.

There was no consideration or showing of "*public necessity, convenience, general welfare, or good zoning practice*" in 2021. This Council is trying hard to follow correct process, follow law and do things the way they should have been done in 2021.

5. The creation of precedence setting special rules for special processes.

Again no. The Town Council is trying to reverse a matter that resulted from "special rules" and "special processes" that benefitted some Town staff and Amazon in 2021. The precedence for dishonesty and avoidance of law was already established with this matter. The only precedence you risk setting here is that Warrenton "can" do things the right way.

6. Concern that no other jurisdiction has disallowed data centers.

The more relevant concern should be whether any other jurisdiction has violated state law in amending a zoning ordinance under the cloak of darkness, obscured by the use of a consent agenda to the detriment of its own citizens.

7. Concerns about revenue loss.

There should be greater concerns about the cost already expended by the Town in defending its improper and dishonest actions set in motion in 2021. Rather than the Town's future opportunity cost with no data centers, please consider the money the Town will save by no longer continuing to battle a situation that should have never occurred in the first place.

I am not arguing that you have an obligation to see things the way the majority of local citizens see them. I'm arguing that you have a responsibility to give your full consideration of a zoning text amendment as the Town Council has requested.

Sincerely,

Chuck Cross

Hi Heather - I hope this message finds you well, and enjoying a fine spring day. I enjoyed attending Last Tuesday evening's Planning Commission meeting, and hearing everyone's points on the Data Center text amendment issue. It was a good, smart discussion and I look forward to the Public Hearing on this. Technology is moving so very, very fast these days - fortunately with better, safer and much quieter cooling, recycling, Liquid Immersion Cooling/LIC, power efficiency and especially super low sewer & water use compared to the technology of 2021, four years ago, when the Data Center text was first adopted. Fortunately things are much different and better now, completely different now for the better. If only companies would always commit to using the very best technology.

On sewer & water for example, for planning for the future, things have greatly changed for the better in the Town. The Town has substantially invested in sewer & water improvements and continues to do so in this year's budget. This year's Town budget shows strong continued capital investment for improving Town sewer & water capacity. Our **current capacity is 3M GPD**, as recently confirmed publicly by Town Council Member Bill Semple in the March Town Council Meeting. To help even more, I have done much research to find simple, low-cost ways to easily increase Town sewer & water capacity. **The good thing is that the Town can dramatically increase its sewer & water capacity today with already well established, simple, super low-cost sewer & water conservation programs that can effectively add up to 1M more GPD by simply replacing older toilets, faucets and showerheads with [EPA WaterSense](#) products like dual flush toilets, low flow toilets, water efficient faucets, showerheads and rain barrels too. Dramatic, easy and super low-cost savings of Town sewer & water, yielding much, much more effective capacity. And it would be easy to begin this program with swapping out at Town and County government offices, schools, apartments, and hotel/motel units, and of course older homes.**

So I wanted to share what I have seen. Our neighbors in Charlottesville and Albemarle County have been **running water conservation programs for 20 years** very successfully! These are proven efforts that have contributed to their sewer & water capacity at super low cost and simple effort. Their water conservation is saving them **68.9 million gallons of water annually** (according to their 2022 Water Conservation Report: <https://www.charlottesville.gov/495/Water-Conservation>). These are very simple and super low-cost ways to conserve the Town's sewer & water - most notably their rebate program or Swap-Out Program for replacing older toilets, faucets and showerheads with more water-efficient [EPA WaterSense](#) products like dual flush toilets, low flow toilets, water efficient faucets, showerheads and rain barrels too.

The Charlottesville Sewer & Water Conservation Program Director, Jennifer Patterson, said it well from their experience, **"Just think, 1,161 old-fashion toilets replaced here in just the last two (2) years with a basic replacement rebate program of just \$150 per old-fashioned toilet and showerhead (and with no installation/removal help either!) - and each fixture replaced represents several houses saved on sewer & water use."** Here is Charlottesville & Albemarle's Water Conservation Program details:

1) Toilet Rebate Program: Provides a rebate of up to \$150 to any city or county water customer who purchases and installs a low flow WaterSense toilet to replace older high flow models. **Since its inception in 2003, the number of toilet rebates issued is 7,234, saving 68.9 million gallons of water a year!** A note about these rebates: Multi-unit properties and businesses also receive rebates and they will be on the hunt for ways to save money and water moving forward.

2) Rain Barrel Rebate Program: Provides up to 2 \$30 rebates for rain barrels purchased per water service address. This program encourages homeowners to use harvested rainwater for outside uses like washing cars, watering plants and irrigating landscapes. Since its inception in 2009, the City of Charlottesville has provided 873 rebates.

3) Free Water Conservation Kits: Kits to residents from the City's Utility Billing Office and passing them out at community events. Each kit includes these water saving devices:

- City of Charlottesville Rebate brochure (information on Toilet and Rain Barrel Rebate Programs)
- WaterSense labeled 1.5 gallon per minute faucet aerator, good for kitchen use
- WaterSense labeled 0.5 gallon per minute faucet aerator, good for bathroom use
- WaterSense labeled self-cleaning, massaging showerhead plus 1 roll of extra duty Teflon tape for installation
- 2 toilet leak detection dye tablets, to help with detecting a running toilet

4) Fix A Leak Week: A national campaign which seeks to inform the public on how to identify and fix leaks. Fix a Leak Home Scavenger Hunt with participants are entered to win a prize of \$50 gift card to a local gardening business. Also features a youth art contest to show why we must value and save water.

These ideas can work today for the Town of Warrenton for sewer & water conservation, and I have more resources which I will send. The Town has a sewer & water conservation advocate in me, and I have offered my support and assistance to Mayor Nevill; Town Manager Frank Cassidy; Town Council and to Town staff like Seth Cannonier, Superintendent of Public Utilities; Steven Friend, Director of Public Utilities; Paul Bernard, Director of Public Works; Rob Walton, Director of Community Development; and Denise Harris, Planning Manager. **I have even asked Mayor Nevill if the Town can form a simple Swap-Out Program to implement these savings to benefit our Town. We can effectively add up to another 1M more GPD to our 3M GPD current capacity by establishing a Swap-Out Program for the Town. All virtually at no cost!**

These are simple and super low-cost ways to help increase the Town's sewer & water capacity by large amounts - just like the successful programs used for 20 years in nearby Charlottesville and Albemarle. I will also send more details on the Town of Warrenton that I have been working on, and how we can do a Swap-Out Program here. It really will work well at super low cost and effort for Warrenton. **I will send you more ideas too as I keep working on this.** I think there are great easy and low-cost savings ahead. I look forward to seeing you at the next Planning Commission meeting. Best regards, David

Hi Jim - I hope this message finds you well, and coming off a nice weekend with your family. Tomorrow's Town Council Meeting will review the discussion I attended at the April 22 Planning Commission work session on amending Data Centers as a Permissible Use within the Town's Industrial Districts. My point - removing Data Centers as a potential Permissible Use seems premature and a bit hasty. Data Centers are now a really very normal part of our everyday life. They just need to use cutting edge technology, get quieter, look prettier and adopt the rapid improvements now available in the industry - with many more technical improvements arriving every month now. **Let's give technology and future Town Councils this chance and choice.** Technology keeps improving on Data Centers and technology is moving very fast - with better, safer and much quieter cooling, recycling, Liquid Immersion Cooling/LIC, power efficiency and especially super low sewer & water use compared to the Data Center technology of 2021, when the Data Center text was first adopted. Things are much better now, completely different now for the better. For sure we need the Data Center companies to commit to using the very best technology in our communities! In short, let's give better technology and future Town Councils a chance at deciding this.

Just as one example, a major improvement to provide very quiet, no-water and energy efficient Data Centers is the great new technology now being used - **Liquid Immersion Cooling/LIC**. It involves submerging electronic components, like servers, in a dielectric fluid (a non-conductive liquid) that efficiently absorbs and dissipates heat. This method offers super quiet, no vibration, superior cooling compared to traditional air or water cooling, allowing for increased server density and performance while greatly reducing energy consumption, noise and vibrations - helping to eliminate them for top "neighborliness". Technology is fast eliminating negatives - so the future gets much, much better every year.

LIC is now known as the industry's new standard for offering excellent cooling efficiency. I recently received a [flyer](#) (streamed below) from [nVent Data Solutions](#) for an [LTA Sidecar](#) liquid cooling solution for existing Data Centers. **The most remarkable note for this LTA Sidecar is that it completely bypasses public water systems! That means there are ways to cool Data Centers without even using the Town's sewer & water systems.** The LTA Sidecar is a completely integrated liquid-to-air heat rejection systems that enables up to **two racks of liquid cooled IT equipment with no public water**. The technology used for this device cools liquid by pulling air over coils and rejecting heat into the hot aisle. **This method avoids the complexities of facility water, reducing operational costs while maintaining high performance.** This new technology is like the difference between today's quiet EVs with no noise or vibrations running on clean batteries compared to an old rumbling Model T with no muffler using leaded gas!

The use of new technology can aid us in our new normal, allowing for more efficient use of resources. And this is just one example - just one example - of how Data Center technology is quickly changing for the better. The LTA Sidecar could help Warrenton decision makers, as just 20 of these devices will disconnect a major Data Center from public sewer & water use, and quiet things way, way down. Just wanted to share this exciting new development, and show how all this new technology today and tomorrow makes the Town's Data Center text amendment unnecessary. I have also streamed below several links that offer more information on LIC that help. Best regards, David

Liquid Cooling: A Year in Review

We'll examine some of the biggest updates in the Liquid Immersion Cooling industry and how these new innovations will impact your Data Center.

The 2025 Outlook for Data Center Cooling

Rapidly increasing server rack densities and 24/7 uptime requirements will increase demand for liquid and hybrid cooling systems, including retrofits,...

Data Centers Look to Immersion Cooling as a Path to Sustainability - and Lower Costs

Data Center usage is rapidly increasing, driven to a great degree by demand for artificial intelligence. This technology revolution could...

Quiet of Immersion Cooling Improves Quality of Life

Data centers are **noisy places** – both inside and out. On the inside, high velocity fans on IT equipment and the HVAC system create an ...

Immersion Cooling Solution for Data Centers - Gigabyte

The scalable, faster, and energy-efficient way to cool your **data center**, **immersion cooling** can save more for your business and is overall more reliable.

Liquid Immersion Cooling for Data Centers | ICeraQ | GRC

GRC is the leader in **liquid immersion cooling** for **data centers**. Our ICeraQ™ micro-modular systems increase efficiency and lower CAPEX & OPEX by 50%.

Immersion Cooling with 3M Fluids for Data Centers

Immersion cooling is a method for cooling **data center** IT hardware by directly immersing the hardware in a **non-conductive liquid such as 3M™ Fluorinert™** ...

Subject: Deploying Liquid Cooling without Facility Water - nVent LTA Sidecar

/ern

the efficiency of existing data centers. The nVent Liquid-to-Air Sidecar Heat Rejection Unit is a completely integrated liquid-to-air heat rejection unit that is designed to be installed in a server rack and rejecting heat into the hot aisle. This method avoids the complexities of facility water, reducing operational costs while maintaining

Intelligent design: The LTA Sidecar comes standard with 14 hot-swap fans in N+1 configuration, a reservoir pump unit with N+N hot-swap pumps, a hot-swap controller, a hot-swap concurrently maintainable redundant filtration system, 6 x N+N redundant power supplies, integrated leak detection, leak-free hose connections, and an LED Light Path status panel.

Deploying liquid cooling: colocation data centers can now deploy liquid cooling inside of existing data centers with minimal infrastructure changes.

Minimizing leaks and failures: Integrated internal and external leak detection.

Hot swap and serviceability: toolless hot-swap, redundant pumps, fans power supplies, temperature and pressure sensors.

Flexible hose connections allowing installation flexibility.

Designed to enable up to two racks when
is no Facility Water System

Nvidia NVL36 Configuration

GB200 NVL36 rack supported by a single Sidecar HRU (1:1)

[Nvidia NVL72 Configuration](#)

GB200 NVL72 rack supported by two Sidecar HRUs (2:1) in parallel

Please circulate to the Planning Commission members:

Shortly after they took office, the new Town Council asked the Planning Commission to reconsider the 2021 data center ZOTA. That was a great move -- **and should be an easy decision.. do not let the mayor influence you to cover up his past mistakes.**

Let us make intelligent Common Sense decisions for our future.

Subject: ZOTA-25-1

Dear Planning Commissioners,

As a Fauquier resident for over a quarter century, I'm concerned about including data centers in the zoning for our county seat, Warrenton. Data centers are large, noisy, industrial complexes that should not be near any residential or mixed use area. They also require transmission lines and substations that reach beyond Warrenton into the surrounding county, taking by eminent domain private property for rights of way. In addition, all ratepayers currently pay for data centers' power infrastructure, to the detriment of our rising electric bills.

The legality of the prior ZOTA that included data centers as an acceptable use in Warrenton is an issue that is currently being litigated. That ZOTA was introduced by a flawed resolution on the same date as the Warrenton Comprehensive Plan's approval which explicitly stated that data centers are not appropriate in Warrenton. So why would you keep data centers as a potential use in Warrenton? There was and currently is a direct conflict between the Comprehensive Plan and that ZOTA. What was the Comprehensive Plan about if not good planning for Warrenton's future?

Warrenton's citizens have protested the Amazon data center and voted to expel those counsel people who supported that folly. Why would you, the Planning Commissioners vote to maintain such democratically rejected zoning? Data centers are not consistent with Warrenton's town character and should not be included as a possible use in Warrenton.

Please vote to remove data centers as a permissible use in Warrenton's industrial district.

Sincerely yours,

Florence Keenan
Tax Paying Fauquier Resident

To members of the Town of Warrenton Planning Commission:

Warrenton is no place for data centers. Surely you felt the pulse with the many who spoke out against the Amazon data center. There is no new information to change that position. In fact, thanks to nationally recognized industry experts and diligence of local organizations such as PEC, CFFC, Protect Fauquier and Protect Catlett along with on going reports from Loudon and Prince William, there are volumes of new and emerging information to give you and your constituents every reason to JUST SAY NO.

I became a Warrenton resident in 1962. I thought I'd seen the worst of it with residential and service area development. To even consider industrial use of large tracts within the Town of Warrenton is just plain ludicrous.

Please, remove the data center zoning ordinance and do not entertain industrial use of land nor attendant transmission lines, sub stations, along with their noise, pollution, water use that devalue the quality of life in small town Warrenton.

Thank you for considering my concerns.

Good morning -

I am writing to you this morning to request that you remove/repeal the 2021 Data Center Zoning Ordinance. This ordinance came about under less than ideal circumstances, being proposed by Brandie Schaeffer who later left her Town of Warrenton position to go work for Amazon; and Amazon having played a role in the drafting of the provision. During 2022-2023, hundreds of Town of Warrenton residents/property owners made it abundantly clear over the course of several Planning Commission/Town Council public hearings that we were very concerned about the impacts of the Amazon data center and that we do not want to see additional data centers within the Town of Warrenton. Prior to that, several hundred local residents spent months creating the Warrenton 2040 Plan - their vision and plan for Warrenton over the next twenty plus years - and it did not include data centers. Now is the time to repeal this ordinance. THERE IS NO PLACE IN THE SMALL HISTORIC TOWN OF WARRENTON FOR A DATA CENTER.

Below is the link to the Town Council Feb 14th meeting in which the Fauquier High School gym was packed with Town residents, Town property owners and Fauquier County residents speaking out against the data center. I invite you to go back and watch the comments that were made that evening. <https://www.regionalwebtv.com/warrentontc>
