Subject: Formal complaint and request for assistance regarding aircraft noise as well as low flying planes over my Watertown Wi home

Dear Sirs;

I am a Watertown resident at 1307 Allermann Drive, writing to formally document my ongoing concern about aircraft noise and constant aircraft activity over my home and neighborhood. Often times low flying.

I previously contacted Watertown Municipal Airport and was advised that there was nothing the airport could do. I therefore ask that this complaint be forwarded to the appropriate members of the Watertown Airport Commission and reviewed at the appropriate level.

The frequency and pattern of aircraft passing over my residence have become a significant quality-of-life concern. Some aircraft appear to be flying relatively low, and the noise is often particularly intrusive to the point I don't want to be at home.

I am not asking the airport to stop normal aviation operations. I am asking for help understanding the cause of this activity and whether anything can reasonably be done to reduce or redirect its noise impact on nearby residents.

Specifically, I would appreciate answers to the following:

1. What flight paths and procedures are currently used by aircraft arriving at and departing from Watertown Municipal Airport near Allermann Drive?

2. Are pilots using the airport expected or encouraged to follow any voluntary flight paths, altitude guidelines, or noise-abatement procedures?

3. Can the City or Airport Commission review the frequency, altitude, direction, or types of aircraft operating over my neighborhood?

4. If the City and airport lack authority to address this issue, which agency or authority does?

5. Please formally provide this complaint to the Watertown Airport Commission for consideration and inclusion in the appropriate meeting record.

6. Are there any programs that provide sound barrier windows?

Please provide a written response explaining the options available to residents and any additional information you need from me.
