

Communications Center Audio Clips from June 18, 2026

An audio clip from June 18, 2026, will be played during the Council meeting. The audio has been transcribed below to assist listeners in hearing and understanding the radio traffic between the dispatcher and officers. The audio is condensed with dead air being removed from the recording so, be aware that the actual timeline of these calls and the radio traffic took longer to occur than the recording would make it seem. The numbers in the 400's denote City of Whitewater PD officer badge numbers, while the numbers in the 600's denote UW-Whitewater PD officer badge numbers.

The primary reason this audio clip was selected is that they are typical calls that highlight how Flock cameras have become integrated into the day-to-day activities of WPD staff. Due to the strategically placed network of cameras in the city, the cameras are exceptionally useful to officers during active investigations where the location of a suspect or endangered person is time sensitive. This increases officers' efficiency, greatly increases the likelihood of successful outcomes in terms of investigations or community caretaker efforts.

The audio clip depicts two separate calls that slightly overlap in terms of the timing of the radio traffic outlined below. A summary of each distinct call is provided prior to the radio traffic pertaining to that call. Specific personally identifiable information has been redacted from the recordings.

Call 1 Summary:

Officers are dispatched to a disorderly conduct incident that took place in the Walmart parking lot. The complainant states that the suspect, a Walmart employee, threw him to the ground and kicked his vehicle. This incident was not resolved by the end of the audio clip, but it highlights the day-to-day use of Flock and shows how that interaction occurs between our dispatchers and officers real-time.

Call 2 Summary:

Officers are dispatched to check the welfare of an individual with suicidal ideation with a plan of how she will commit suicide. At the time the call was received, the individual's location was unknown, but it was known that she resided in the city. Since this was a time-sensitive safety concern, the individual's license plate was established by staff and added to the Flock "hot list" which will notify dispatch if that specific plate passes a Flock camera. In this case, the individual drove past a Flock camera and dispatch swiftly notified officers so that they could check her welfare, potentially preventing the individual from committing suicide. This highlights the utility of the Flock system for not only criminal investigation, but also for community caretaker functions.
