- **Evaluate Utility Easement and Right-of-Way Needs:** Identify long-term utility easement and right-of-way requirements needed to support phased extension of water and sanitary sewer infrastructure throughout the Planning Area.

PLANNING

This category focuses on aligning zoning, infrastructure planning, transportation systems, environmental regulations, and economic development strategies with the long-term vision for the BCPA.

LAND USE AND ZONING

- **Apply the Planned Development Industrial (PDI) Zone Across Basalt Creek with Modifications:** Support a broad range of industrial and employment uses consistent with the BCMP and Economic Inventory while allowing flexibility for evolving market conditions and business types. Modifications may include applying the Coffee Creek Design Overlay District (CCDOD) to portions of the BCPA, though further evaluation is required to determine feasibility.
- **Prohibit Low-Intensity Uses and Address Existing Contractor Establishments:** Establish zoning prohibitions or limitations on low-intensity uses that do not support long-term employment density goals. Determine appropriate approaches for existing contractor establishments, such as conditional, nonconforming, or prohibited use status.
- **Evaluate Additional Standards or Allowances for the Craft Industrial Area:** Consider additional uses and development standards within the Craft Industrial Area, such as live-work spaces, small-scale offices, incubator spaces, or small-scale production facilities, that better respond to site constraints and nearby residential development.
- **Evaluate West Railroad Zoning Flexibility:** Consider zoning and development standards within West Railroad that maintain flexibility for a variety of industrial and employment uses while emphasizing site organization, environmental integration, circulation, and development quality. This work should continue to involve coordination with property owners, regional partners, and potential development interests.
- **Update Urban Planning Area Agreement (UPAA):** Amend agreement with Washington County to transfer planning authority for Basalt Creek to the City, ensuring alignment with Wilsonville's long-term vision. This would reduce the risk of continued low-intensity uses, alleviate staffing burdens at the County level, and reduce future pressures to expand the urban growth boundary (UGB). As an example, Troutdale has an Intergovernmental Agreement with Multnomah County that transfers planning authority to the City for areas within its UGB.

COORDINATION AND INFRASTRUCTURE PLANNING

- **Coordinate with Washington County on Annexation Planning:** Continue coordinating with Washington County on development review, transition planning, and long-term implementation within the BCPA. For properties that remain under County jurisdiction, encourage interim site and design improvements that support the long-term industrial and employment vision for the area while maintaining communication with property owners regarding future expectations. Upon annexation, require new development and redevelopment to comply with the City's Development Code and applicable design, infrastructure, and resource protection standards consistent with the BCMP vision. Continue evaluating whether future updates to the Urban Planning Area Agreement (UPAA) are needed to support long-term implementation and coordination.
- **Conduct Preliminary Urban Renewal Area (URA) Analysis:** Conduct a feasibility study evaluating whether expanding the existing Coffee Creek Urban Renewal Area or establishing a new URA for Basalt Creek could support infrastructure, redevelopment, environmental, and site readiness improvements. The study should also evaluate opportunities for land assembly and coordinated redevelopment within fragmented portions of the Planning Area. Findings should provide City Council with options and recommendations regarding long-term infrastructure funding and implementation strategies.
- **Coordinate Future Transit Service:** Continue coordinating with SMART to expand future transit service within the BCPA as development occurs, including consideration of future routes, stops, and connections serving employment areas and regional destinations.
- **Coordinate Future TSP and Regional Transportation Planning:** Continue coordinating with Metro, Washington County, and neighboring jurisdictions regarding long-range transportation projects identified in the Metro Regional Transportation Plan (RTP) that may affect the BCPA. This includes evaluating whether additional long-range roadway improvements, such as future Grahams Ferry Road widening or improvements to 124th Avenue, should be incorporated into future updates to the Transportation System Plan (TSP).
- **Continue Stormwater Planning:** Continue refining stormwater planning for Greenhill and the broader BCPA, including downstream capacity, regional detention opportunities, and coordination with future transportation improvements and natural resource protection.

NATURAL RESOURCES, OPEN SPACE, AND TRAILS

- **Evaluate Wildlife Corridor and Habitat Impacts:** Continue evaluating potential impacts to wildlife movement, habitat connectivity, and ecological function associated with future development and infrastructure improvements within West Railroad and the broader BCPA. Future planning should consider opportunities to avoid fragmentation, maintain habitat connections where feasible, and integrate restoration or enhancement strategies into long-term development and planning.

- **Update the Significant Resource Overlay Zone (SROZ):** Update Wilsonville's SROZ maps, inventory, and Development Code provisions using the findings of the PHS 2024 Natural Resources Inventory. Consider whether updates to mapping, buffers, mitigation standards, review procedures, or habitat enhancement requirements may be appropriate to support long-term implementation and coordination with future development and infrastructure planning efforts.
- **Evaluate Enhanced Day Road Crossing:** Consider an enhanced pedestrian and bicycle crossing of Day Road connecting the southern end of the Basalt Creek Canyon Ridge Trail (LT-02) with future pedestrian and bicycle facilities along the Coffee Creek Supporting Street.
- **Support Ice Age Tonquin Trail Connectivity:** As development occurs within the West Railroad area, continue evaluating opportunities for development to improve or extend on-street sidewalks, bicycle lanes, and related multimodal facilities that support safe and comfortable connections to the future Ice Age Tonquin Trail.

ECONOMIC DEVELOPMENT AND IDENTITY

- **Promote Economic Development, Site Readiness, and Branding:** Continue actively marketing the BCPA as a long-term industrial and employment opportunity area by maintaining clear information related to site readiness, infrastructure availability, incentives, zoning flexibility, and available funding tools. Continue coordinating with Greater Portland Inc. (GPI), Business Oregon, regional partners, developers, employers, and site selectors to increase awareness of Wilsonville's industrial development opportunities and strengthen the city's position within the regional industrial market. Outreach efforts should include proactive communication, targeted engagement, and site-specific marketing materials that highlight the BCPA's transportation access, environmental amenities, flexible development potential, and long-term infrastructure planning efforts. As redevelopment opportunities become clearer over time, consider establishing a distinct identity and branding strategy for West Railroad and the broader BCPA.
- **Extend Wayfinding and Signage Planning to the BCPA:** As future updates to the City's wayfinding and signage program occur, extend the framework to include the BCPA. Future wayfinding planning should consider gateway features, district identity, freight and visitor navigation, trail and multimodal connections, and coordinated signage that supports the long-term employment, industrial, and recreational vision for the Planning Area.

FUNDING

This category focuses on identifying financing tools, partnerships, and long-term funding strategies needed to support infrastructure improvements and redevelopment.

- **Explore and Establish Funding Mechanisms:** Continue evaluating funding tools and financing strategies that could support transportation, utility, stormwater, environmental, and redevelopment improvements throughout the BCPA.
- **Evaluate Urban Renewal and Tax Increment Financing:** Evaluate use of Urban Renewal or Tax Increment Financing mechanisms to help fund infrastructure improvements, site preparation, transportation upgrades, environmental restoration, and redevelopment coordination efforts.
- **Explore Local Improvement Districts (LIDs) and Cost Sharing:** Explore Local Improvement Districts, reimbursement districts, public-private partnerships, and horizontal development agreements to distribute infrastructure costs among benefiting properties. Recognize that participation levels may vary depending on the operational needs of existing uses.
- **Pursue Regional Infrastructure Partnerships:** Continue coordinating with Metro, Business Oregon, Washington County, utility providers, and regional economic development organizations to pursue infrastructure funding partnerships and implementation support.
- **Explore and Leverage State and Federal Funding:** Leverage grants, loans, and other funding programs to support infrastructure upgrades and attract investment. These could include, but are not limited to: Statewide Transportation Improvement Program (STIP); Immediate Opportunity Fund (IOF); Oregon Transportation Infrastructure Bank (OTIB); Safe Drinking Water Revolving Fund (SDWRLF); Water Wastewater Fund (W/W); Special Public Works Fund (SPWF); U.S. Economic Development Association (EDA) Public Works Program; Business Oregon Industrial Site Readiness Programs; Metro planning and development grant programs

INVESTMENTS

This category focuses on prioritizing infrastructure, redevelopment, and economic development investments that could help catalyze long-term growth within the BCPA.

- **Prioritize Early Infrastructure Investments:** Focus early infrastructure improvements on properties that are cost-effective to serve and likely to develop in alignment with the BCPA vision, such as the SW Greenhill Road site. These early investments can demonstrate feasibility and attract additional development. The City could collaborate with property owners, Greater Portland Inc. (GPI), and Business Oregon to attract a catalytic user that could justify and accelerate infrastructure development for the site.
- **Invest in Transportation Access and Freight Mobility:** Prioritize improvements that enhance regional access, freight circulation, and multimodal connectivity, including future improvements to Grahams Ferry Road, Tonquin Road, and Basalt Creek Parkway.
- **Expand Site Readiness and Development Incentive Programs:** Continue evaluating opportunities to expand or refine existing economic development and infrastructure assistance programs, including the Wilsonville Investment Now (WIN) program and Regional Site Investment Strategy (RSIS) opportunities, to better support infrastructure delivery, site preparation, redevelopment coordination, and industrial land readiness within the BCPA. Priority should be placed on strategic sites and catalytic infrastructure investments that can support long-term employment growth and phased redevelopment.
- **Explore Development Incentives:** Consider system development charge (SDC) adjustments or deferrals for targeted developments that support the City's vision for BCCP and where it would not place undue burdens on funds available for capital improvements. Explore providing relocation assistance to contractor establishments to enable redevelopment. This could include support identifying alternative sites and streamlining permitting processes if those sites are in Wilsonville.
- **Pursue Site Acquisition and Aggregation:** Partner with public or private entities to assemble large, contiguous parcels that can support high-value industrial users. The City could explore securing purchase options on key parcels to facilitate land assembly. A purchase option allows Wilsonville the right to buy property within a specified timeframe, offering flexibility without the immediate cost of full acquisition. This proactive approach provides leverage and control over future development while allowing the City to decline the purchase if circumstances change or acquisition becomes unfeasible. To advance this strategy, the City should identify and prioritize purchase option agreements with property owners of high-opportunity sites, building momentum for collaboration and development.

Phasing Strategy

Implementation of the BCMP is expected to occur incrementally over time as infrastructure funding, market demand, redevelopment interest, and partnership opportunities evolve. The phasing strategy outlined in Table 4 below organizes the BCMP recommendations into near-term, medium-term, and long-term actions intended to guide ongoing coordination, planning, investment, and implementation efforts over time.

The timing categories generally reflect when an action may begin or become a higher priority rather than when it would necessarily be completed. Many actions, particularly those related to infrastructure coordination, economic development, environmental planning, and partnership building, are expected to continue across multiple phases as development occurs and conditions change.

Table 4. Implementation Phasing

		Timeframe		
Action Step	Description	Near-Term 0-5 yrs	Mid-Term 6-10 yrs	Long-Term 11+ yrs
Conduct Preliminary Urban Renewal Area (URA) Analysis	Evaluate whether expanding the existing Coffee Creek URA or establishing a new URA for Basalt Creek could support infrastructure, redevelopment, environmental, and site readiness improvements.	●		
Amend the Urban Planning Area Agreement (UPAA)	Coordinate with Washington County to strengthen annexation planning, development review coordination, and long-term implementation authority within the BCPA.	●		
Coordinate with Washington County on Annexation Planning	Coordinate on development review, transition planning, and implementation for properties remaining under County jurisdiction prior to annexation.	●	●	
Evaluate Zoning and Development Code Updates	Update to zoning and development standards related to industrial uses, contractor establishments, Craft Industrial development, and long-term flexibility within the BCPA.	●		
Evaluate Additional Standards or Allowances for the Craft Industrial Area	Consider additional development standards and use allowances supporting live-work, incubator, and small-scale industrial uses compatible with surrounding residential areas.	●		
Evaluate West Railroad Zoning Flexibility	Consider zoning and development standards that maintain flexibility for industrial and employment uses while addressing environmental and access constraints.	●		
Continue Property Owner and Stakeholder Coordination	Engage property owners, utility providers, regional agencies, and railroad partners regarding development opportunities, infrastructure needs, and redevelopment barriers.	●	●	●
Support Contractor Establishment Relocation or Compliance	Explore relocation assistance, redevelopment coordination, or compliance strategies for contractor establishments over time.	●	●	●

Action Step	Description	Timeframe		
		Near-Term 0-5 yrs	Mid-Term 6-10 yrs	Long-Term 11+ yrs
Coordinate with BPA Regarding Power Easement Opportunities	Coordinate with the Bonneville Power Administration (BPA) regarding potential development, access, trail, stormwater, utility, or multimodal circulation opportunities within or adjacent to the BPA transmission easement in the West Railroad area.		●	●
Coordinate with PGE on Anticipated Power Needs	Continue coordinating with Portland General Electric (PGE) regarding anticipated long-term power demand, transmission capacity, substation needs, and utility infrastructure requirements associated with future industrial and employment development within the BCPA.	●	●	●
Explore Partnerships	Coordinate with public agencies, utilities, Business Oregon, GPI, and other regional partners to support infrastructure and economic development goals.	●	●	●
Coordinate with Utilities and Service Providers	Continue coordination regarding long-term water, sewer, stormwater, and power needs associated with industrial and employment growth.	●	●	●
Evaluate Opportunities to Reduce Reliance on Private Pump Systems	As redevelopment occurs, evaluate opportunities to refine sanitary sewer infrastructure and utility alignments to reduce long-term reliance on privately maintained pumping systems where feasible.		●	●
Evaluate Utility Easement and Right-of-Way Needs	Identify and secure utility easements, access rights, and right-of-way needed to support future water and sanitary sewer infrastructure throughout the BCPA and West Railroad area.		●	●
Coordinate with Regional and Railroad Partners	Continue coordination regarding freight mobility, regional transportation planning, and long-term opportunities such as a future Cahalin Road railroad crossing.		●	●
Evaluate Transportation Access Opportunities	Continue evaluating long-term access opportunities related to Grahams Ferry Road, Tonquin Road, and the West Railroad area.	●	●	
Continue Environmental and Infrastructure Analysis	Continue evaluating and understanding environmental constraints, utility alignments, stormwater strategies, and infrastructure feasibility throughout the Planning Area.	●	●	
Coordinate Future Transit Service	Coordinate with SMART regarding future transit routes, stops, and employment-serving connections within the BCPA.		●	●
Coordinate Future TSP and Regional Transportation Planning	Coordinate with Metro, Washington County, and neighboring jurisdictions regarding future transportation improvements affecting the BCPA. This includes potentially adding Metro RTP projects #11924 and #11469.	●	●	
Evaluate Enhanced Day Road Crossing	Consider enhanced bicycle and pedestrian crossing improvements connecting the Basalt Creek Canyon Ridge Trail and future Coffee Creek facilities.		●	●
Support Ice Age Tonquin Trail Connectivity	Continue evaluating opportunities to improve multimodal access and connections supporting the future Ice Age Tonquin Trail.	●	●	●
Promote Economic Development, Site Readiness, and Branding	Continue marketing the BCPA as a long-term industrial and employment opportunity area while coordinating with regional economic development partners.	●	●	●
Extend Wayfinding and Signage Planning to the BCPA	Extend future wayfinding, gateway, and signage planning efforts to include the BCPA and West Railroad areas.		●	

Action Step	Description	Timeframe		
		Near-Term 0-5 yrs	Mid-Term 6-10 yrs	Long-Term 11+ yrs
Explore and Establish Funding Mechanisms	Continue evaluating funding tools and financing strategies supporting transportation, utility, stormwater, and redevelopment improvements.		●	●
Monitor Market Trends and Adjust Policies Over Time	Continue monitoring economic and industry trends and adjust zoning, policies, incentives, or infrastructure strategies as needed.	●	●	●
Evaluate Urban Renewal and Tax Increment Financing	Explore tax increment financing and Urban Renewal strategies supporting infrastructure and redevelopment investments.	●	●	●
Explore Local Improvement Districts (LIDs) and Cost Sharing	Explore reimbursement districts, cost-sharing agreements, and public-private partnerships to distribute infrastructure costs.		●	●
Pursue Regional Infrastructure Partnerships	Coordinate with regional agencies and organizations regarding infrastructure funding and implementation support.		●	●
Explore and Leverage State and Federal Funding	Pursue grants, loans, and infrastructure funding opportunities supporting industrial land readiness and redevelopment.	●	●	●
Prioritize Early Infrastructure Investments	Focus early infrastructure planning and investment efforts on strategic opportunity sites that are cost-effective to serve and likely to redevelop.		●	●
Invest in Transportation Access and Freight Mobility	Prioritize improvements supporting regional access, freight circulation, and multimodal connectivity.		●	●
Expand Site Readiness and Development Incentive Programs	Continue evaluating opportunities to expand or refine programs such as WIN and RSIS to support redevelopment and industrial land readiness.	●	●	●
Explore Development Incentives	Consider SDC adjustments, relocation assistance, infrastructure participation agreements, and other targeted incentives supporting redevelopment.	●	●	●
Pursue Site Acquisition and Aggregation	Explore land assembly, redevelopment partnerships, purchase options, and acquisition strategies supporting larger development-ready industrial sites.		●	●
Complete Phased Infrastructure Build-Out	Continue phased transportation, utility, and stormwater infrastructure improvements supporting long-term redevelopment and full site utilization.			●
Implement Major Regional Transportation and Freight Improvements	Advance major regional transportation and freight mobility improvements as funding and partnerships allow.			●
Reassess Infrastructure Priorities and Implementation Strategies	Reevaluate infrastructure priorities, development strategies, and implementation approaches as redevelopment occurs over time.			●
Evaluate Wildlife Corridor and Habitat Impacts	Conduct additional analysis of wildlife movement corridors, habitat connectivity, and ecological impacts associated with future development and infrastructure improvements within West Railroad and the broader BCPA. Use findings to help inform refined alignments, site design, mitigation strategies, habitat restoration opportunities, and long-term resource planning efforts.		●	●
Update the Significant Resource Overlay Zone (SROZ)	Update SROZ maps and Development Code provisions using the PHS 2024 Natural Resources Inventory.	●		
Further Evaluation of Drainage and Stormwater Facilities	Continue evaluating drainage patterns and points of discharge, such as the Basalt Creek Parkway Extension, specifically along the northern boundary of the Greenhill planning area.			●

Moving Forward

The Basalt Creek Master Plan establishes a long-term framework for future industrial and employment development within one of Wilsonville's last major growth areas inside the Urban Growth Boundary. The Master Plan builds upon the vision established in the Basalt Creek Concept Plan while responding to changing economic conditions, updated infrastructure analysis, environmental considerations, and evolving development opportunities.

Implementation of the BCMP will require ongoing coordination among the city, property owners, utility providers, regional agencies, and private development partners over many years. While portions of the Planning Area are positioned for earlier redevelopment and infrastructure investment, other areas, particularly West Railroad, will require additional coordination, funding, environmental review, and infrastructure improvements before redevelopment can occur at an urban scale.

As development occurs over time, Wilsonville will continue refining infrastructure planning, zoning, transportation improvements, environmental protection strategies, and economic development tools needed to support implementation of the BCMP. Future development proposals, public investments, and infrastructure decisions should continue to balance economic opportunity, freight mobility, natural resource protection, multimodal connectivity, and long-term employment growth objectives.

Ultimately, the BCMP positions the BCPA as a long-term employment and industrial opportunity area capable of supporting Wilsonville's economic competitiveness, expanding the city's industrial land supply, and creating opportunities for family-wage jobs in industries that contribute to the region's economic vitality. Through continued coordination and investment over time, the BCPA can become a place where businesses thrive, workers have access to quality employment opportunities, and future generations benefit from a strong local economy.

Basalt Creek Master Plan

Appendix A: Ordinance No. 834

ORDINANCE NO. 834

AN ORDINANCE OF THE CITY OF WILSONVILLE APPROVING COMPREHENSIVE PLAN TEXT AND MAP AMENDMENTS AND TRANSPORTATION SYSTEM PLAN AMENDMENTS RELATED TO THE BASALT CREEK CONCEPT PLAN AND APPROVING A COMPREHENSIVE PLAN MAP AMENDMENT RELATED TO THE COFFEE CREEK MASTER PLAN.

WHEREAS, in 2004, the Metro Council added two areas located generally between the cities of Wilsonville and Tualatin to the Metro Urban Growth Boundary ("UGB") in Metro Ordinance No. 04-1040B to meet an identified industrial land need; and

WHEREAS, the above-described two areas are known as the Basalt Creek and West Railroad Planning Areas which are generally referred to as the "Basalt Creek Planning Area;" and

WHEREAS, in 2011 the City of Wilsonville approved Resolution No. 2293 authorizing an Intergovernmental Agreement ("2011 IGA") with Metro, Washington County, and the City of Tualatin (the "Parties") to engage in concept planning for the Basalt Creek Planning Area; and

WHEREAS, the above Parties agreed to memorialize and endorse the recommendations and results of the 2013 Basalt Creek Transportation Refinement Plan, and in 2013 the City of Wilsonville approved Resolution No. 2435 acknowledging the Basalt Creek Transportation Refinement Plan; and

WHEREAS, from October 2013 through October 2016, the Wilsonville and Tualatin City Councils held five joint Council work sessions considering several boundary and land use alternatives for the Basalt Creek Planning Area; and

WHEREAS, over that same time period, two public workshops were held and the Wilsonville and Tualatin Planning Commissions and City Councils convened several work sessions; and

WHEREAS, the City of Wilsonville approved Resolution No. 2657 authorizing an Intergovernmental Agreement ("2017 IGA") with Metro, Washington County, and the City of Tualatin to ask Metro to make an arbitration determination on the appropriate designation of the land use for an area within the Basalt Creek Planning Area that consists of approximately 52 net acres of land, commonly referred to as the "Central Subarea;" and

WHEREAS, in the 2017 IGA, the City agreed to pass a Resolution adopting the Concept Plan, reflecting the Metro determination, within 120 days after the date Metro's decision becomes final and effective, and to adopt an Ordinance amending the City's Comprehensive Plan within one year after the Metro determination; and

WHEREAS, Metro made its determination on April 19, 2018 in accordance with the 2017 IGA and adopted Resolution 18-4885 on May 3, 2018 acknowledging that decision and beginning the 120-day time period requiring the City to adopt the Basalt Creek Concept Plan and one year to adopt comprehensive plan amendments; and

WHEREAS, on August 6, 2018, the City of Wilsonville approved Resolution No. 2697 acknowledging the Basalt Creek Concept Plan; and

WHEREAS, with respect to the Coffee Creek Industrial Area, on March 4, 2019, the City Council adopted Resolution No. 2726, amending the Urban Planning Area Agreement, which expands the City of Wilsonville Urban Planning Area Boundary and, among other things, removes the condition requiring annexation of property in Coffee Creek prior to application of a City Comprehensive Plan Map designation and thus allowing the City to include the Coffee Creek Industrial Area in its Comprehensive Plan Map; and

WHEREAS, in April 2019, the City and Washington County anticipate executing the Urban Planning Area Agreement; and

WHEREAS, on December 12, 2018 the Wilsonville Planning Commission held a work session to discuss and take public testimony on the Basalt Creek Comprehensive Plan and Transportation System Plan amendments; and

WHEREAS, on February 21, 2019 the Wilsonville City Council held a work session to discuss the Basalt Creek Comprehensive Plan and Transportation System Plan amendments and Urban Planning Area Agreement; and

WHEREAS, following the timely mailing and publication of the required notice, the Planning Commission conducted a public hearing on February 13, 2019, wherein the Commission received public testimony, staff reports and input, and Attachments and Exhibits, and thereafter deliberated and voted unanimously to approve Resolution No. LP19-0001 recommending approval to the City Council; and

WHEREAS, a copy of the record of the aforementioned Planning Commission action and recommendation is marked Exhibit C, attached and incorporated herein; and

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

WHEREAS, following the Planning Commission public hearing, the Wilsonville Planning Director forwarded the recommended Basalt Creek Comprehensive Plan and Transportation System Plan amendments to the City Council, along with a staff report and attachments, in accordance with the public hearing and notice procedures that are set forth in Sections 4.008, 4.011, 4.012, and 4.198 of the Wilsonville Code; and

WHEREAS, the City Council, after Public Hearing Notices were provided to a list of interested parties, property owners, and affected agencies, and posted in three locations throughout the City and on the City website, held a public hearing on April 1, 2019 to review the proposed Basalt Creek Comprehensive Plan and Transportation System Plan amendments, and to gather additional testimony and evidence regarding the proposal; and

WHEREAS, the City Council has afforded all interested parties an opportunity to be heard on this subject and has entered all available evidence and testimony into the public record of their proceeding; and

WHEREAS, the City Council has duly considered the subject, including the Planning Commission recommendations and all the exhibits and testimony introduced and offered by all interested parties;

NOW, THEREFORE, THE CITY OF WILSONVILLE ORDAINS AS FOLLOWS:

1. FINDINGS.

   The above-recited findings are adopted and incorporated by reference herein as findings and conclusions of Resolution No. LP19-0001, which includes the staff report and attachments (Exhibit C). The City Council further finds and concludes that the adoption of the proposed Basalt Creek Comprehensive Plan and Transportation System Plan amendments are necessary to help protect the public health, safety, and welfare of the municipality by planning that will support the development of employment lands within the City limits.

2. DETERMINATION.

   Based on such findings, the City Council hereby adopts Comprehensive Plan text and Comprehensive Plan Map amendments, attached hereto and marked as Exhibit A, and Transportation System Plan amendments, attached hereto and marked as Exhibit B, and incorporated by reference as if fully set forth herein. The City Recorder is hereby

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

directed to prepare final Comprehensive Plan formatting to make sure such style and conforming changes match the format and style of the Comprehensive Plan.

3. EFFECTIVE DATE OF ORDINANCE.

   This Ordinance shall be declared to be in full force and effect thirty (30) days from the date of final passage and approval.

SUBMITTED to the Wilsonville City Council and read for the first time at a regular meeting thereof on the 1st day of April, 2019, and scheduled for a second reading at a regular meeting of the Council on the 15th day of April, 2019, commencing at the hour of 7:00 P.M. at the Wilsonville City Hall.

Kimberly Veliz, City Recorder

ENACTED by the City Council on the 15th day of April, 2019 by the following votes:

Yes: 5 No: 0

Kimberly Veliz, City Recorder

DATED and signed by the Mayor this 15th day of April, 2019.

TIM KNAPP, Mayor

SUMMARY OF VOTES:

Mayor Knapp	Yes
Council President Akervall	Yes
Councilor Stevens	Yes
Councilor Lehan	Yes
Councilor West	Yes

Exhibits:

A. Comprehensive Plan Text and Map Amendments
B. Transportation System Plan Amendments
C. Planning Commission Record

Wilsonville Comprehensive Plan
Proposed Amendments associated with Basalt Creek: February 6, 2019

Proposed additions to the Comprehensive Plan text are shown in purple.

LAND USE AND DEVELOPMENT

INDUSTRIAL DEVELOPMENT

Wilsonville is basically a compact City, for this reason all industrial development should be compatible with adjacent or nearby commercial and/or residential areas. Therefore, there is little need for more than one industrial designation. For all practical purposes, all development should be guided by the same general standards; dealing with intensity, etc.

Policy 4.1.3 City of Wilsonville shall encourage light industry compatible with the residential and urban nature of the City.

Implementation Measure 4.1.3.a Develop an attractive and economically sound community.

Implementation Measure 4.1.3.b Maintain high-quality industrial development that enhances the livability of the area and promotes diversified economic growth and a broad tax base.

Implementation Measure 4.1.3.c Favor capital intensive, rather than labor intensive, industries within the City.

Implementation Measure 4.1.3.d Encourage industries interested in and willing to participate in development and preservation of a high-quality environment. Continue to require adherence to performance standards for all industrial operations within the City.

Implementation Measure 4.1.3.e Site industries where they can take advantage of existing transportation corridors such as the freeway, river, and railroad.

Implementation Measure 4.1.3.f Encourage a diversity of industries compatible with the Plan to provide a variety of jobs for the citizens of the City and the local area.

Implementation Measure 4.1.3.g Encourage energy-efficient, low-pollution industries.

Implementation Measure 4.1.3.h The City, in accordance with Title 4 of the Metro Urban Growth Management Functional Plan, supports appropriate retail development within Employment and Industrial Areas. Employment and Industrial areas are expected to include some limited retail commercial uses, primarily to serve the needs of people working or living in the immediate Employment or Industrial Areas, as well as office complexes housing technology-based industries. Where the City has already designated land for commercial development within Metro's employment areas, the City has been exempted from Metro development standards.

Implementation Measure 4.1.3.i The City shall limit the maximum amount of square footage of gross leasable retail area per building or business in areas designated for industrial development. In order to assure compliance with Metro's standards for the development of industrial areas, retail uses with more than 60,000 square feet of gross leasable floor

area per building or business shall not be permitted in areas designated for industrial development.

Implementation Measure 4.1.3.j All industrial areas will be developed in a manner consistent with industrial planned developments in Wilsonville. Non-industrial uses may be allowed within a Planned Development Industrial Zone, provided that those non-industrial uses do not limit the industrial development potential of the area.

Implementation Measure 4.1.3.k Encourage high-growth employment industries in which the City is already competitive, including advanced manufacturing, corporate and professional services, and health care and medical-related fields.

Implementation Measure 4.1.3.l Encourage growth in industrial business types prevalent in the region but new to the City, such as "craft" manufacturing (such as bicycle manufacturing, breweries, distilleries). Consider integrating live/work units into "craft" manufacturing areas.

Implementation Measure 4.1.3.m Encourage new industrial development that contributes to employment districts with a high density of jobs and a range of employment opportunities.

Implementation Measure 4.1.3.n Encourage development that incorporates active urban green spaces, such as trails, linear parks, and pocket parks, and use vegetation for buffering where possible.

Wilsonville Comprehensive Plan
Proposed Amendments associated with Basalt Creek: February 6, 2019

AREAS OF SPECIAL CONCERN

AREA M

This area, known as Basalt Creek, is located to the northwest of Wilsonville in Washington County. The area is generally oriented east-west, and is bound by Interstate 5 (I-5) to the east, the Portland and Western Railroad (PNWR) and the Coffee Creek Correctional Facility to the west, and Clay Street and Day Road to the south. The northern boundary is the location of the Basalt Creek Parkway, which extends from 124th Avenue and connects to Grahams Ferry Road. The Basalt Creek Parkway will run east-west between Grahams Ferry Road and Boones Ferry Road, and eventually extend over I-5. The Parkway is designed as a high-capacity major freight arterial with limited access to local streets providing industrial access between Tualatin, Sherwood, and Wilsonville.

The primary existing land uses in Basalt Creek are rural agriculture, industrial and rural residential consisting of low-density single-family housing. South of the area within the City of Wilsonville are existing and planned commercial, office, and industrial uses. The employment areas around Commerce Circle, Ridder Road, and 95th Avenue include advanced manufacturing, clean tech, warehouse, distribution, and logistics businesses. Abutting Area M along the south side of Day Road is the Coffee Creek Industrial Area, which has an adopted Master Plan and Industrial Form-based Code to enable the creation of a high-caliber business district.

The Cities of Wilsonville and Tualatin prepared the Basalt Creek Concept Plan to provide a framework for development and the provision of services in the area between the two cities. Land uses planned within the Wilsonville portion of Basalt Creek include a mix of employment development types and modest opportunities for live/work housing to support the nearby employment areas. The Concept Plan identifies three land use categories within Basalt Creek.

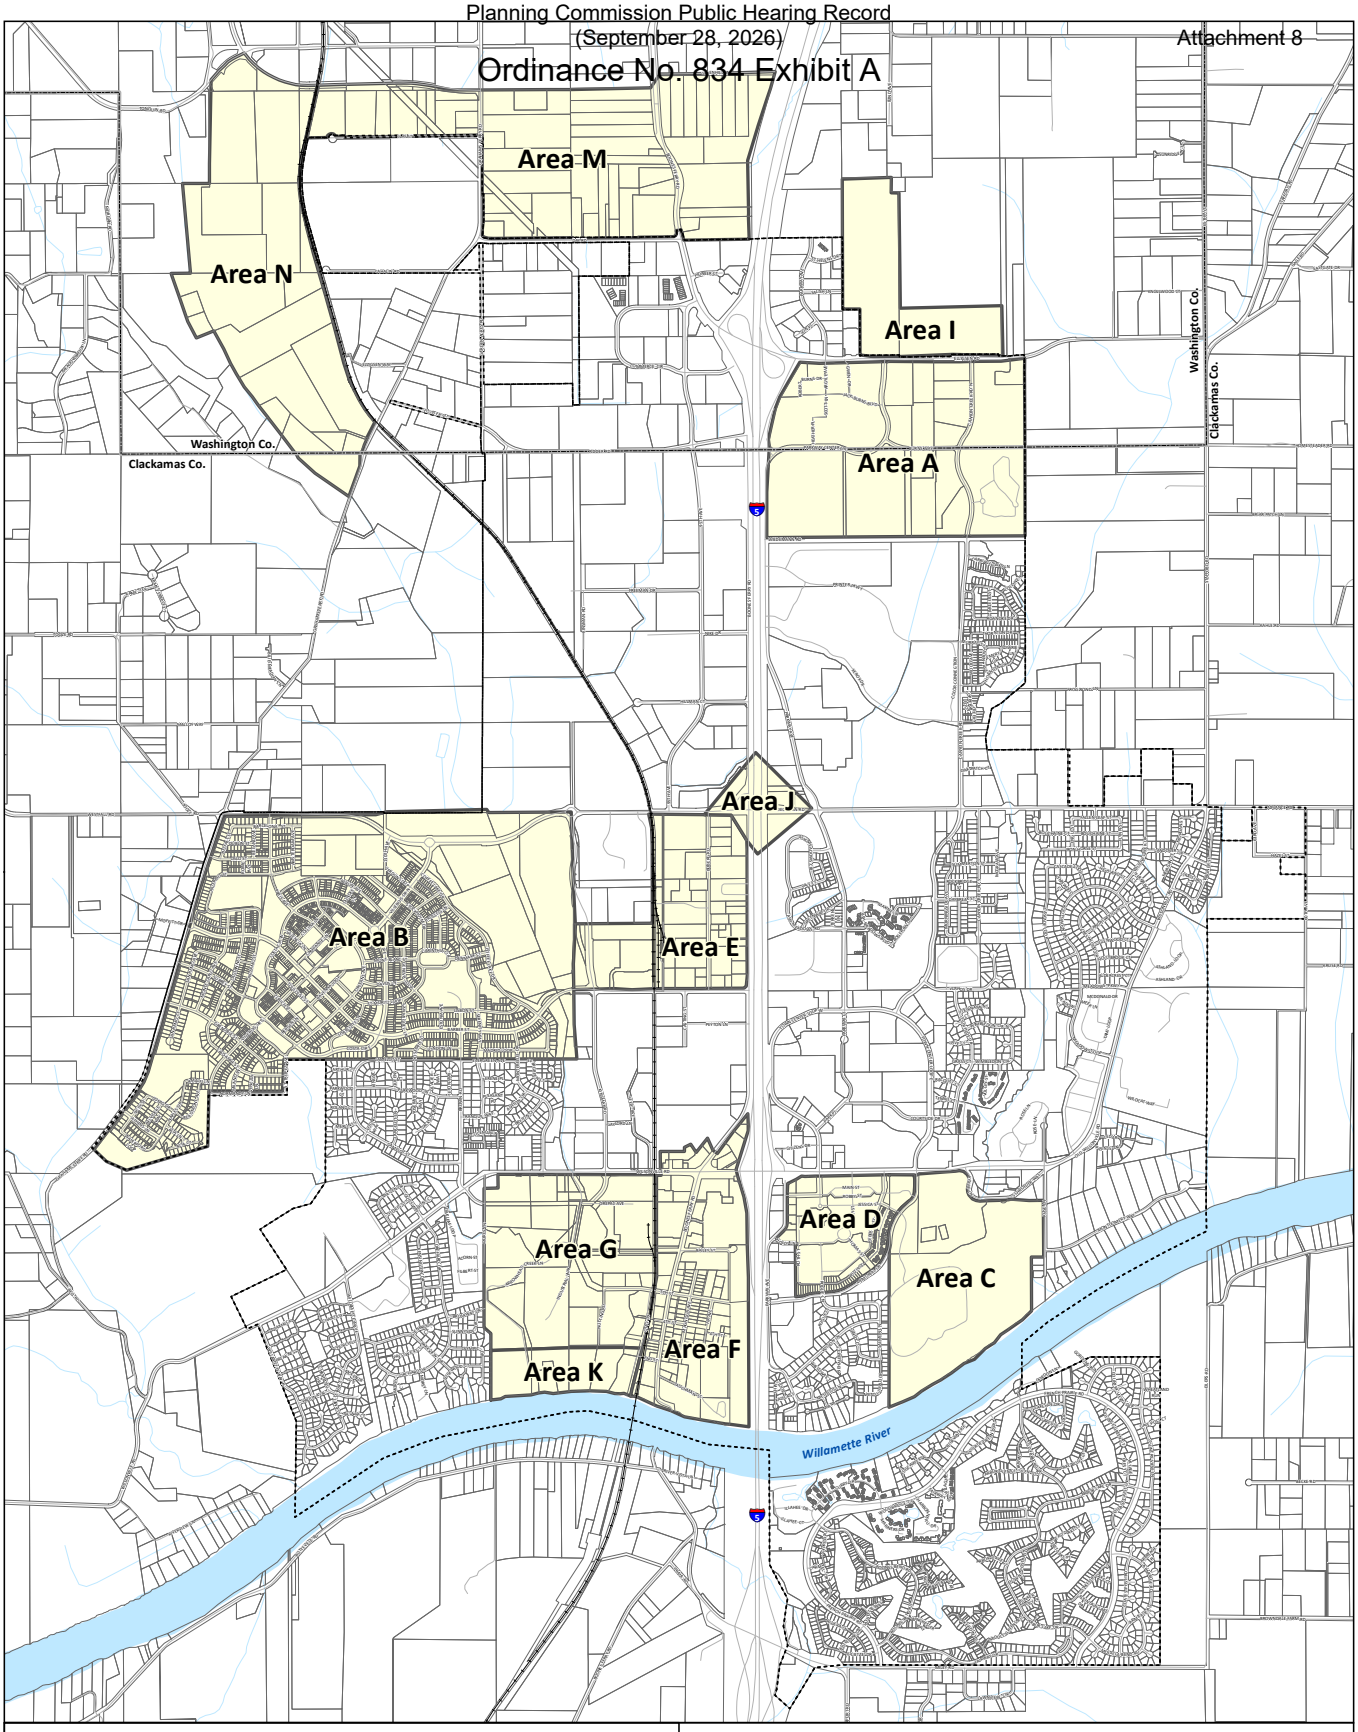
- High Tech Employment District. Most of the buildable acres in this area are devoted to a mix of higher density employment land. The High Tech Employment District is expected to accommodate jobs in manufacturing and high tech, with warehousing components. This land use is in the southern and eastern sections of the area, covering

all land east of Boones Ferry Road, and most of the land south of Clay Street, extending to Day Road and bordered to the west by Coffee Creek Correctional Facility.

- Craft Industrial. The southwest corner of the intersection of Boones Ferry Road and the future Basalt Creek Parkway is planned as Craft Industrial, which allows for a mix of smaller scale commercial uses. This area allows less than 20 percent residential use and is expected to accommodate live/work units. This development responds to the topography on these parcels and their location directly south from residential land and southwest of the neighborhood commercial node north of the Basalt Creek Parkway. Craft Industrial provides a transition to the higher intensity employment uses to the south.
- Light Industrial District. This land is located along the southern edge of the Basalt Creek Parkway just north of the Coffee Creek Correctional Facility and will accommodate jobs primarily in warehousing and light manufacturing.

The 2013 Basalt Creek Transportation Refinement Plan (TRP) sets the layout of major new roads and improvements for the area. As the area develops, property owners will plan and build local roads connecting to this network. These roadway improvements will include enhanced bike and pedestrian facilities and connections to the future SMART transit system.

Design Objectives



1. Consider adoption of a form-based code, similar to that adopted in the Coffee Creek Industrial Area, for new industrial development located in Basalt Creek. A form-based code in Basalt Creek would guide the development of a well-designed and uniquely attractive business community, while providing flexibility for development.
2. Protect key natural resources and sensitive areas while making recreational opportunities accessible by integrating the new parkland, open spaces, natural areas and trails in Basalt Creek into existing regional networks. The area has distinctive natural features, particularly its namesake - Basalt Creek - and the surrounding wetlands habitat running north-south through the eastern half of the area. Development should protect, enhance, and provide access to these natural resources.

3. Locate north to south trails near the Basalt Creek Canyon and provide bicycle connections that would connect to other cities and trail systems, serving as an asset for both residents and employees in the area.
4. Provide strong transit access to support employment within Basalt Creek. Integrate transit access with the bike, pedestrian, and trail services at key access points along Grahams Ferry Road, Boones Ferry Road, Day Road, SMART Central, and the Coffee Creek Correctional Facility.

AREA N

This area, known as West Railroad, is south of the Basalt Creek Parkway and in City of Wilsonville jurisdiction. The West Railroad area is divided from the Basalt Creek area by the Portland and Western Railroad (PNWR) and the Coffee Creek Correctional Facility. The area is heavily constrained by wetlands habitat, steep slopes, limited access, and fragmented property ownership. Without addressing any of these constraints, development potential is limited, and initial estimates show it would be costly to serve this area with adequate water, sewer, and transportation infrastructure. However, once development and the extension of infrastructure occurs in the rest of Basalt Creek as well as the Coffee Creek Industrial Area, additional analysis should be completed on infrastructure service costs and appropriate land uses. The area also has potential for resource conservation and future public access to nature. The area will require master planning before any development occurs.

MEMORANDUM

DATE: February 5, 2019

TO: Miranda Bateschell, Planning Manager | City of Wilsonville
Zach Weigel, Capital Projects Engineering Manager | City of Wilsonville

FROM: Scott Mansur, P.E., PTOE | DKS Associates
Jenna Hills, E.I. |DKS Associates

SUBJECT: **Wilsonville Transportation System Plan (TSP) Amendment Summary** P18197-001

The Basalt Creek Concept Plan was formally adopted by the City of Wilsonville on August 6, 2018. A summary of the Basalt Creek Analysis is attached to memorandum for reference. This memorandum discusses necessary amendments to the City of Wilsonville's Transportation System Plan (TSP) based on transportation requirements and projects identified in the plan. This memorandum also documents other amendments to the TSP based on general updates and a recent City Council Resolution. The TSP changes include:

<u>Basalt Creek Concept Plan</u>

- Show the current alignment of 124th Avenue extension and add the Basalt Creek Parkway extension project from 124th Avenue to Boones Ferry Road on the higher priority project list.
- Add the Basalt Creek Parkway overcrossing of I-5 to the additional planned project list.
- Add the Day Road overcrossing (Boones Ferry Road to Elligsen Road) to the additional planned project list (unfunded).
- Add Boones Ferry Road widening to 5-lanes from Day Road to Basalt Creek Parkway on the higher priority project list.
- Update Grahams Ferry Road widening to three lanes from Day Road to Basalt Creek Pkwy and move to the higher priority project list.
- Update project UU-P4 text under "Why Not Higher Priority" to recognize the function of Grahams Ferry Road between Day and Clutter to serve Coffee Creek Industrial area.
- Add the Boones Ferry Road/95th Avenue Intersection access management project on the higher priority project list.
- Add Basalt Creek Canyon and the I-5 Easement trail projects to the bicycle/pedestrian map.

General Updates

- Update Figure 3-1 to show Garden Acres Road, Clutter Road, and Advance Road to 60th Avenue as City of Wilsonville jurisdiction.
- Update Figure 3-2 to show Garden Acres Road (from Grahams Ferry Road to Ridder Road) as a Minor Arterial and Ridder Road (from Garden Acres Road to Kinsman Road) as a Minor Arterial.
- Add a second southbound right turn lane on the ramp at Boones Ferry Road/I-5 Southbound on the higher priority project list.
- Update the Brown Road Extension Alignment to 5th Street that was selected and approved by Wilsonville City Council Resolution No. 2610.
- Add the Pioneer Court roadway extension project to the Additional Planned Projects list.

The following sections provide more detail for the specific proposed modifications to the TSP.

PROPOSED AMENDMENTS FOR TSP COMPLIANCE

The discussion of recommended revisions is generally organized by reference to the applicable chapter(s) of the TSP. In all chapters, revisions to existing TSP language are presented with deletions shown in ~~strikethrough~~ and additions shown as underlined. The revised TSP figures and text are attached to this memorandum. The revisions identified in this memorandum will also be addressed in a final amended TSP document once the revisions are approved by the Planning Commission and City Council.

Executive Summary

The following changes are recommended to the Executive Summary of the City of Wilsonville's TSP.

Higher Priority Projects Figure (Page iv)

See the recommended changes to this figure in Chapter 5 (pages 3-4 of this memorandum).

Higher Priority Projects Table (Page v)

Add or update the following projects to this table:

- RE-04B Brown Road Extension (with ~~Bailey Street or~~ 5th Street Connection)
- RE-14 Basalt Creek Parkway Connection
- RW-04 Boones Ferry Road Widening
- RW-05 Grahams Ferry Road Widening
- SI-07 Dual Southbound Right Turn Lanes on I-5 Off-Ramp at Boones Ferry Road
- SI-08 Boones Ferry Road/95th Avenue Access Management
- LT-02 Basalt Creek Canyon Ridge Trail
- LT-03 I-5 Easement Trail

Chapter 3: The Standards

The following changes are recommended to Chapter 3 of the City of Wilsonville's TSP.

Figure 3-1: Roadway Jurisdictions (Page 3-3)

Summary of changes:

- Change the jurisdiction of Clutter Road from Washington County to City.
- Change the jurisdiction of Garden Acres Road (Day Road to Ridder Road) from Washington County to City.
- Change the jurisdiction of Advance Road (to 60th Avenue) from Clackamas County to City.

Figure 3-2: Functional Class Designations (Page 3-5)

Summary of changes:

- Update the functional classification of Clutter Road to Collector.
- Modify the functional classification of Garden Acres Road (Day Road to Ridder Road) from Collector to Minor Arterial.
- Modify the functional classification of Ridder Road (Garden Acres Road to Kinsman Road) from Collector to Minor Arterial.
- Add the Day Road overcrossing (Boones Ferry Road to Elligsen Road) and show it as a Future Minor Arterial.

Figure 3-4: Freight Routes (Page 3-9)

Summary of changes:

- Show Basalt Creek Parkway and Boones Ferry Road (between Day Road and Basalt Creek Parkway) as a Future Truck Route.

Figure 3-5: Bicycle Routes (Page 3-11)

Summary of changes:

- Add the Basalt Creek Canyon Ridge trail project
- Add the I-5 Easement trail project
- Remove the bike lane and Tonquin Trail alignment for the Bailey Street Connection for the Brown Road Extension

Access Management (Page 3-20)

Add the following text to Page 3-20 after the third paragraph:

- <u>The Basalt Creek Parkway is considered an Access Management Interest Area because the parkway will be a high-capacity major freight arterial, limited to at-grade accesses at 124th Avenue, Grahams Ferry Road, and Boones Ferry Road. The parkway creates a new connection between I-5 and 99W.</u>

Figure 3-13: Access Management Interest Areas (Page 3-21)

Summary of changes:

- Add Basalt Creek Parkway as Access Management Interest Area (from Grahams Ferry Road to Boones Ferry Road).

Chapter 4: The Needs

The following changes are recommended to Chapter 4 of the City of Wilsonville's TSP.

Figure 4-2: Future 2035 Capacity Deficiencies (Page 4-7)

Summary of changes:

- Remove the textbox that states "Basalt Creek Study will refine projects"

Chapter 5: The Projects

The following changes are recommended to Chapter 5 of the City of Wilsonville's TSP.

Figure 5-2: Higher Priority Projects (Page 5-5)

Summary of changes:

- Remove the alignment for the Bailey Street Connection for project RE-04 Brown Road Extension
- Remove the Brown Road Extension Area of Special Concern textbox and callout
- Add a new project RE-14 Basalt Creek Parkway Connection (from Grahams Ferry Road to Boones Ferry Road as a Major Arterial Roadway Extension
- Add project RW-04 on Boones Ferry Road from Day Road to Basalt Creek Parkway (Major Arterial)
- Add project RW-05 Grahams Ferry Road Widening from Day Road to Basalt Creek Parkway (Collector)
- Add project SI-07 at the I-5 Southbound Exit Ramp at Boones Ferry Road intersection
- Add project SI-08 for access management for the Boones Ferry Road/95th Avenue intersection
- Add Basalt Creek Canyon Ridge Trail project LT-02 to Basalt Creek Planning Area as described in Table 5-2.
- Add I-5 Easement Trail project LT-03 to Basalt Creek Planning Area as described in Table 5-2.

Table 5-2: Higher Priority Projects (Northwest Quadrant) (Page 5-6)

Add the following projects and their descriptions:

- RE-14 Basalt Creek Parkway Connection

  Construct Basalt Creek Parkway as a limited access five-lane Major Arterial between Grahams Ferry Road and Boones Ferry Road. This project would be a joint Washington County, City of Wilsonville and City of Tualatin project and will work together to seek funding. RTP project #11470.

- RW-04 Boones Ferry Road Widening

  Widen Boones Ferry Road from Day Road to Basalt Creek Parkway to five lanes. RTP project #11487.

- RW-05 Grahams Ferry Road Widening

  Widen Grahams Ferry Road from Day Road to Basalt Creek Parkway to three lanes with bike lanes, sidewalks, and transit improvements.

- SI-07 Dual Southbound Right Turn Lanes on I-5 Off-Ramp at Boones Ferry Road.

  Add a second southbound right turn lane to the I-5 Exit Ramp at the Boones Ferry Road intersection. RTP project #11489

- SI-08 Boones Ferry Road/95th Avenue Access Management.

  Improve operations at the Boones Ferry Road/95th Avenue intersection by removing the east private access approach. Pioneer Court access onto Boones Ferry Road will be right-in / right-out. Additional access will occur via a north-south local street connection between Pioneer Drive, passing under the Day Road I-5 overcrossing approach, and a new west-east local street (north of Day Road) with full intersection access with Boones Ferry Road.

- LT-02 Basalt Creek Canyon Ridge Trail.

  Build a north/south trail connection within Basalt Creek (west of the Canyon) to improve the pedestrian and bicycle network and make connections to east/west roads that run north and south. This trail would require a grade-separated crossing of Basalt Creek Parkway and would be connected to the regional trail network by extending Tonquin Road with bike/pedestrian facilities across Graham's Ferry to this future Basalt Creek Canyon Ridge Trail.

- LT-03 I-5 Easement Trail.

  Build a trail parallel to I-5 in the ODOT easement that would provide an additional north/south connection connecting to existing bike and pedestrian facilities.

Figure 5-3: Higher Priority Projects (Northwest Quadrant) (Page 5-7)

Summary of changes:

- Remove the textbox regarding the Basalt Creek Refinement Plan
- Add Basalt Creek Parkway Connection project RE-14 as described in Table 5-2.
- Add Boones Ferry Road project RW-04 from Day Road to Basalt Creek Parkway (Major Arterial)
- Add Grahams Ferry Road Widening project RW-05 from Day Road to Basalt Creek Parkway (Collector)
- Add I-5 Southbound Exit Ramp/Boones Ferry Road project SI-07.
- Add Boones Ferry Road/95th Avenue intersection project SI-08.

- Add Basalt Creek Canyon Ridge Trail project LT-02 to Basalt Creek Planning Area as described in Table 5-2.
- Add I-5 Easement Trail project LT-03 to Basalt Creek Planning Area as described in Table 5-2.
- Add 124th Avenue extension to Grahams Ferry Road as a Collector Roadway

Table 5-4: Higher Priority Projects (Southwest Quadrant) (Page 5-10)

Update the following projects and their descriptions:

- RE-04B Brown Road Extension

  Construct remaining 2-lane roadway with bike lanes, sidewalks, and transit stop improvements from Wilsonville Road to Boones Ferry Road (connecting at ~~either Bailey Street or~~ 5th Street); includes roadway connection to Kinsman Road (with bike lanes and sidewalks), portion of Ice Age Tonquin Trail connecting to trial terminus on Arrowhead Creek Lane, and Brown Road/Kinsman Road intersection

Figure 5-5: Higher Priority Projects (Southwest Quadrant) (Page 5-11)

Summary of changes:

- Remove the textbox that states "Area of Special Concern:"
- Remove the alignment for the Bailey Street Connection for project RE-04B Brown Road Extension.

Brown Road Extension Alternatives (Page 5-15)

- Remove entire page.

Figure 5-7: Additional Planned Projects (Page 5-17)

Summary of changes:

- Remove the "124th Avenue Extension from Tualatin-Sherwood Road (Washington County Project)" text
- Remove the "Possible Basalt Creek Connection (Conceptual)" text
- Remove project RW-P1 Grahams Ferry Road Widening (move to Higher Priority Projects)
- Add project RE-P6 Basalt Creek Overcrossing as a Minor Arterial (from Boones Ferry Road over I-5) as described in Table 5-9.
- Add project RE-P5 Day Road Overcrossing as a Minor Arterial (from Boones Ferry Road to Elligsen Road) as described in Table 5-10.
- Add project RE-P15 Pioneer Court Extension as a Collector from Pioneer Court to 1,000 feet north of Day Road, then west to Boones Ferry Road.

Table 5-9: Additional Planned Projects (Northwest Quadrant) (Page 5-18)

Add, remove, or update the following projects and descriptions:

- RE-P6 Basalt Creek Overcrossing

  Extend Basalt Creek across I-5 as a four-lane overcrossing. This project would be a joint Washington County, City of Wilsonville and City of Tualatin project and will work together to seek funding. RTP project #11436. No funding has been identified within the planning horizon for this project.

- RE-P15 Pioneer Court Extension

  Extend Pioneer Court to the north, approximately 1,000 feet north of Day Road, connect to Boones Ferry Road to the west.

- UU-P4 Grahams Ferry Road Urban Upgrade

  Why Not Higher Priority? ~~Grahams Ferry Road is primarily a rural road and Ice Age Tonquin Trail is a preferred option for providing north-south connection through this part of Wilsonville.~~ Grahams Ferry Road will be a key urban connection to serve Coffee Creek Industrial Area. It is assumed that the roadway segment between Day Road and Clutter Road will be constructed as the Coffee Creek industrial lands develop.

Figure 5-8: Additional Planned Projects (Northwest Quadrant) (Page 5-19)

Summary of changes:

- Remove the "124th Avenue Extension from Tualatin-Sherwood Road (Washington County Project)" text
- Remove the "Possible Basalt Creek Connection (Conceptual)" text
- Add project RE-P6 Basalt Creek Overcrossing as a Minor Arterial (from Boones Ferry Road over I-5) as described in Table 5-9.
- Remove project RW-P1 Grahams Ferry Road Widening (move to Higher Priority Projects)
- Add project RE-P15 Pioneer Court Extension as a Collector from Pioneer Court to 1,000 feet north of Day Road, then west to Boones Ferry Road.

Table 5-10: Additional Planned Projects (Northeast Quadrant) (Page 5-20)

Add the following project and description:

- RE-P5 Day Road Overcrossing

  Extend Day Road from Boones Ferry Road to Elligsen Road as a four-lane overcrossing of I-5. This project would be a joint Washington County, City of Wilsonville and City of Tualatin project and will work together to seek funding. RTP project #11490. No funding has been identified within the planning horizon for this project.

Figure 5-9: Additional Planned Projects (Northeast Quadrant) (Page 5-21)

Summary of changes:

- Add project RE-P5 Day Road Overcrossing as a Minor Arterial (from Boones Ferry Road to Elligsen Road).

Please let us know if you have any questions.

- Basalt Creek TSP Amendment Analysis Summary
- TSP Amendments (Figures, Tables, and Text)

Basalt Creek TSP Amendment Analysis
February 2019

The purpose of this document is to demonstrate that the solutions identified in the 2013 Basalt Creek Transportation Refinement Plan are still appropriate in response to the 2018 Regional Transportation Plan update. The Basalt Creek Transportation Refinement Plan was adopted in 2013 and provided the framework for the development of concept and comprehensive plans for the Basalt Creek Urban Growth Expansion Area. Since that time, the plans for the area have refined the types of expected urban development that will occur in the area. In addition, regional planning efforts, such as the 2018 Regional Transportation Plan, have continued to be refined.

The Basalt Creek Transportation Refinement Plan was developed to determine the major transportation system necessary to serve development throughout the Basalt Creek Planning Area. The Basalt Creek Transportation Refinement Plan set the stage for concept planning and comprehensive plan development for the Basalt Creek Planning Area. The transportation investments identified by the Basalt Creek Transportation Refinement Plan considered not only future growth within the Basalt Creek Planning Area itself, but also future growth in adjacent areas, including:

- Southwest Tualatin Concept Planning Area
- Tonquin Employment Planning Area (in Sherwood)
- Coffee Creek Planning Area in Wilsonville

Since the development of the Basalt Creek Transportation Refinement Plan the Cities of Tualatin and Wilsonville have proceeded with concept and comprehensive planning for the Basalt Creek Planning Area. These planning efforts have built upon the Basalt Creek Transportation Refinement Plan as a framework for organizing the land use plans.

Furthermore, the 124th Avenue connection and Basalt Creek Parkway has been constructed as an interim 3-lane facility between Tualatin-Sherwood Road and Grahams Ferry Road. Washington County is currently beginning design work for the extension of the Basalt Creek Parkway between Grahams Ferry Road and Boones Ferry Road. The interim improvement is intended to serve existing transportation needs. Development along the corridor is encouraged to dedicate the right-of-way and complete the ultimate cross-section as appropriate.

The Regional Transportation Plan was updated in 2014 to reflect the Basalt Creek Transportation Refinement Plan. Regional land use growth assumptions and additional regional planning efforts have continued as the concept and comprehensive planning for the Basalt Creek area has been developed through an extensive multi-year and multi-jurisdictional public process.

With the advent of the 2018 Regional Transportation Plan and revised growth assumptions it seemed prudent to revisit the Basalt Creek Transportation Refinement Plan to ensure that the transportation system anticipated at the start of the process was indeed still adequate to serve the Basalt Creek Planning Area.

Ordinance No. 834 Exhibit B

The following tables document the land use assumptions for the Basalt Creek Planning Area.

Land Use in the 2010 Regional Transportation Plan travel demand forecast
(Land Use in the 2012 Basalt Creek Transportation Refinement Plan Technical Report)

Zone Number	2005 Households	2035 Households	2005 Total Employment	2035 Total Employment
1013	94	706	52	896
1014	54	645	16	938
Total	**148**	**1,351**	**68**	**1,834**

Land Use in the 2018 Regional Transportation Plan travel demand forecast

Zone Number	2015 Households	2040 Households	2015 Total Employment	2040 Total Employment
980	45	0	79	1,447
981	107	646	167	1,447
Total	**152**	**646**	**246**	**2,894**

Buildout of the Basalt Creek Concept Plan

Zone Number	2015 Households	2040 Households	2015 Total Employment	2040 Total Employment
980	45		79	2,227
981	107	581	167	2,227
Total	**152**	**581**	**246**	**4,453**

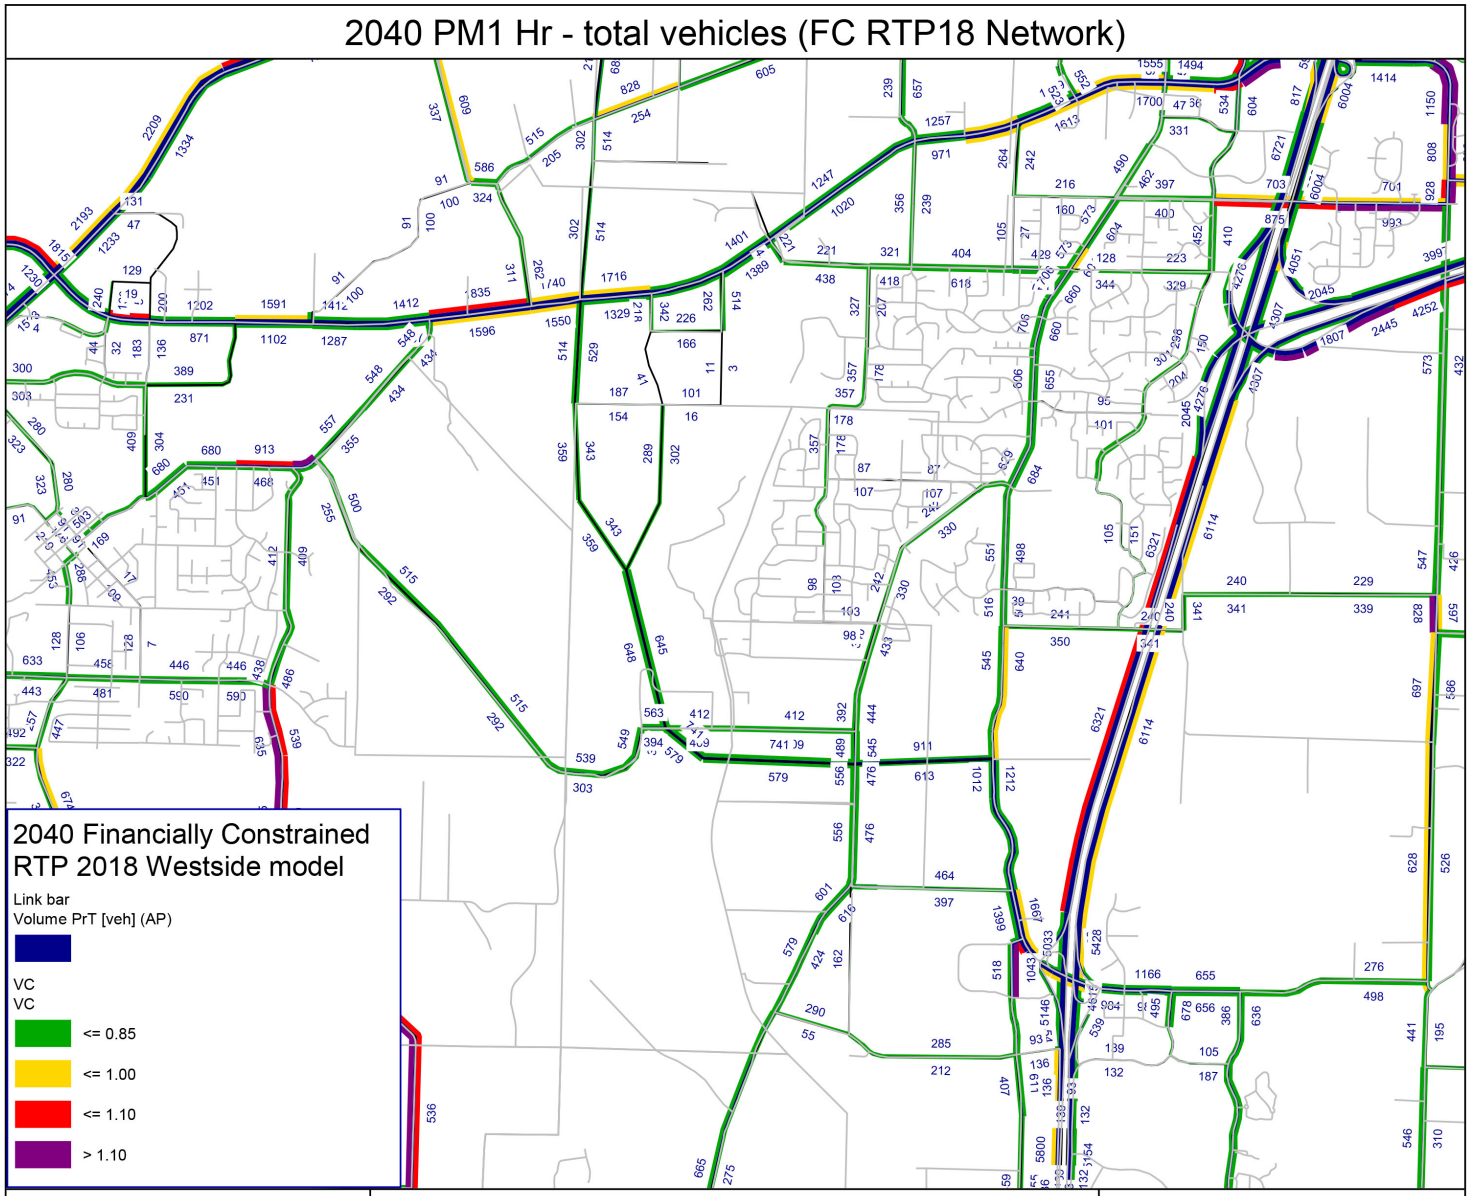
It should be noted that the zone numbering system changed in 2013 but the geographic boundaries of these two zones remained the same.

Also note the total 2040 employment for both zones is the same number; however the model assumed zone 981 will have slightly more service employment than zone 980.

Ordinance No. 834 Exhibit B

The following table provides a list of transportation investments assumed in the 2040 regional travel demand forecast:

2040 Financially Constrained RTP Projects near Basalt Creek Planning Area



Nominating Agency	2018 RTP ID	Project Name	Start Location	End Location	Description	Estimated Cost (2016 Dollars)	Time Period	Financially Constrained	RTP Investment Category	Primary Purpose
Washington County	10568	Tualatin-Sherwood Rd Improvements	Langer Farms Pkwy	Teton Ave	Widen from three to five lanes with bike lanes and sidewalks.	$35,000,000	2018-2027	Yes	Roads and Bridges	Relieve current congestion
Sherwood	10674	Oregon-Tonquin Intersection Improvements	SW Oregon St	SW Tonquin Rd	Reconstruct and realign three leg intersection with a roundabout (partial two-lane roundabout) approx 400 feet northeast of existing roundabout at SW Oregon St & Murdock Rd. ROW, PE, design & construction. Potential for signal in-lieu of dual-roundabout system if better for development and once SW 124th Ave project is completed. If roundabout, project will include rapid flashing beacons at new roundabout and retrofit of adjacent roundabout to meet MUTCD suggestions for pedestrian crossings at roundabouts. This is currently a Washington County facility but would likely become Sherwood's upon completion of project to TSP standards.	$2,400,000	2018-2027	Yes	Roads and Bridges	Relieve future congestion
Wilsonville	10588	Grahams Ferry Rd Improvements	Day Rd	County line	Widen Grahams Ferry Road to 3 lanes, add bike/pedestrian connections to regional trail system and fix (project development only) undersized railroad overcrossing.	$13,200,000	2028-2040	Yes	Freight	Improve freight access to indust & intermodal
Washington County	10590	Tonquin Rd Improvements	Grahams Ferry Rd	124th Ave	Realign and widen to three lanes with bike lanes and sidewalks and street lighting.	$11,400,000	2018-2027	Yes	Roads and Bridges	Build Complete Street
Wilsonville	10853	Garden Acres Road Extension	Day Road	Ridder Road	Construct three lane road extension with sidewalks and cycle track and reconstruct/reorient Day Road/Grahams Ferry Road/Garden Acres Road intersection.	$14,260,000	2018-2027	Yes	Roads and Bridges	Relieve future congestion
Wilsonville	11243	Day Rd Improvements	Grahams Ferry Rd	Boones Ferry Rd	Widen street from 3 to 5 lanes with buffered bike lanes, sidewalks and street lighting. Improve structural integrity for increased freight traffic and provide congestion relief. Sidewalk infill and creation of Tonquin Trail multi-use path spur will reduce pedestrian and vehicle conflicts. Bike buffers will reduce bicycle and freight conflicts.	$10,560,000	2028-2040	Yes	Roads and Bridges	Relieve future congestion

2040 Financially Constrained RTP Projects near Basalt Creek Planning Area (Continued)

Nominating Agency	2018 RTP ID	Project Name	Start Location	End Location	Description	Estimated Cost (2016 Dollars)	Time Period	Financially Constrained	RTP Investment Category	Primary Purpose
Tualatin	11417	Blake Street Extension	115th Ave	124th Ave	Extend Blake Street to create an east-west connection between 115th and 124th. Install signal at Blake and 124th. New road section will provide an alternative route for industrial traffic on the high injury corridor: Tualatin/Sherwood Road.	$17,000,000	2018-2027	Yes	Roads and Bridges	Increase access to jobs
Washington County	11470	Basalt Creek Parkway	Grahams Ferry Rd	Boones Ferry Rd	Extend new 5 lane Arterial with bike lanes, sidewalks and street lighting.	$31,700,000	2018-2027	Yes	Roads and Bridges	Serve new urban area
Washington County	11487	Boones Ferry Improvements	Basalt Creek East-West Arterial	Day Rd	Widen from 3 lanes to 5 lanes with bike lanes, sidewalks and street lighting	$1,200,000	2028-2040	Yes	Roads and Bridges	Relieve future congestion
Wilsonville	11489	Boones Ferry / I-5 off ramp improvements	SB I-5 off ramp	Boones Ferry Rd	construct second right-turn lane	$1,063,000	2028-2040	Yes	Roads and Bridges	Relieve current congestion
Tualatin	11962	Grahams Ferry Rd	SW Ibach Rd	Helenius Rd	Upgrade SW Grahams Ferry Road to roadway standards between SW Ibach Road and Helenius Road.	$5,048,800	2028-2040	Yes	Roads and Bridges	Build Complete Street

Summary

The 2018 Regional Transportation Plan contains a number of Financially Constrained projects identified in the Basalt Creek Planning Area. These projects were generally identified by the Basalt Creek Transportation Refinement Plan in 2012. It is anticipated that these projects will be implemented in conjunction with development in the area. The resulting planned system, including the build out scenario documented in the land use tables above, results in anticipated traffic operations consistent with regional and local level of service standards.

The level of service maps and analysis in this report are intended to provide a planning level system assessment consistent with the requirements for Transportation Planning in Oregon. A detailed operational analysis will be necessary prior to project development. The detailed operational analysis should consider needed turn lanes and assess vehicular movements at intersections to determine the appropriate design configuration. This analysis is intended to provide a generalized system assessment that would be an appropriate input into an operational evaluation necessary for project development.

HIGHER PRIORITY PROJECTS

iv Wilsonville Transportation System Plan 2013

Higher Priority Projects (Listed Alphabetically By Improvement

No.	Higher Priority Project
Roadway Extensions (Multimodal Connectivity)	
RE-04A	Corridor Study for Brown Road Extension
RE-04B	Brown Road Extension (5th Street Connection)
RE-13	Java Road Connection and Signal
RE-14	Basalt Creek Parkway Connection
Roadway Widening (Capacity)	
RW-01	Boeckman Road Bridge and Corridor Improvements
RW-02	Day Road Widening
RW-04	Boones Ferry Road Widening
RW-05	Grahams Ferry Road Widening
Urban Upgrades (Multimodal Connectivity and Safety)	
UU-01	Boeckman Road Dip Improvements
UU-02	Boeckman Road Urban Upgrade
UU-03	Brown Road Upgrades
UU-04	Grahams Ferry Urban Upgrade
UU-05	Parkway Avenue Urban Upgrade
UU-06	Stafford Road Urban Upgrade
UU-07	Tooze Road Urban Upgrade
UU-08	Garden Acres Road Urban Upgrade
Spot Improvements (Transportation System Management/Operations)	
SI-02	Grahams Ferry Railroad Undercrossing Project Development
SI-03	Stafford Road/65th Avenue Intersection Improvements
SI-04	Wilsonville Rd/Town Center Loop West Intersection Improvements
SI-07	Dual Southbound Right Turn Lanes on I-5 Off-Ramp at Boones Ferry Road
SI-08	Boones Ferry Road/95th Avenue Access Management
Bikeways and Walkways (Standalone Pedestrian and Bicycle Improvements)	
BW-01 A/B	Canyon Creek Road Enhanced Pedestrian Crossings
BW-02	95th Avenue Sidewalk Infill
BW-03	Boberg Road Sidewalk Infill
BW-04	Boeckman Road Bike Lanes and Sidewalk Infill
BW-05	Willamette Way East Sidewalk Infill
BW-06	Willamette Way West Sidewalk Infill
BW-07	Boones Ferry Road Sharrows

No.	Higher Priority Project
Bikeways and Walkways (Standalone Pedestrian and Bicycle Improvements) . . . Continued	
BW-08	Town Center Loop Pedestrian, Bicycle, and Transit Improvements
BW-09	Town Center Loop Bike/Pedestrian Bridge
BW-10	French Prairie Drive Pathway
BW-11	Frog Pond Trails
BW-12	Parkway Center Trail Connector
BW-13	Villebois Loop Trail
BW-14	Wayfinding Signage
Safe Routes to School (Standalone Pedestrian and Bicycle Improvements)	
SR-01	Boeckman Creek Primary Safe Routes to School Improvements
SR-02	Boones Ferry Primary Safe Routes to School Improvements
SR-03	Lowrie Primary Safe Routes to School Improvements
SR-04	Wood Middle School Safe Routes to School Improvements
Local Trails (Standalone Pedestrian and Bicycle Improvements)	
LT-01	Memorial Park Trail Improvements
LT-02	Basalt Creek Canyon Ridge Trail
LT-03	I-5 Easement Trail
Regional Trails (Standalone Pedestrian and Bicycle ImprovementsSafety)	
RT-01A	Boeckman Creek Trail (North)
RT-01B	Boeckman Creek Trail (South)
RT-02	Frog Pond Trail
RT-03A	Tonquin Trail (North)
RT-03B/C	Tonquin Trail (Villebois)
RT-04	Waterfront Trail Improvements
RT-05	Wiedeman Road Trail
RT-06	Willamette River Bike/Pedestrian/Emergency Bridge Project Dev.
Transit Improvements	
TI-01	Pedestrian Access to Transit
TI-02	Transit Street Improvements

FIGURE 3-1. ROADWAY JURISDICTION

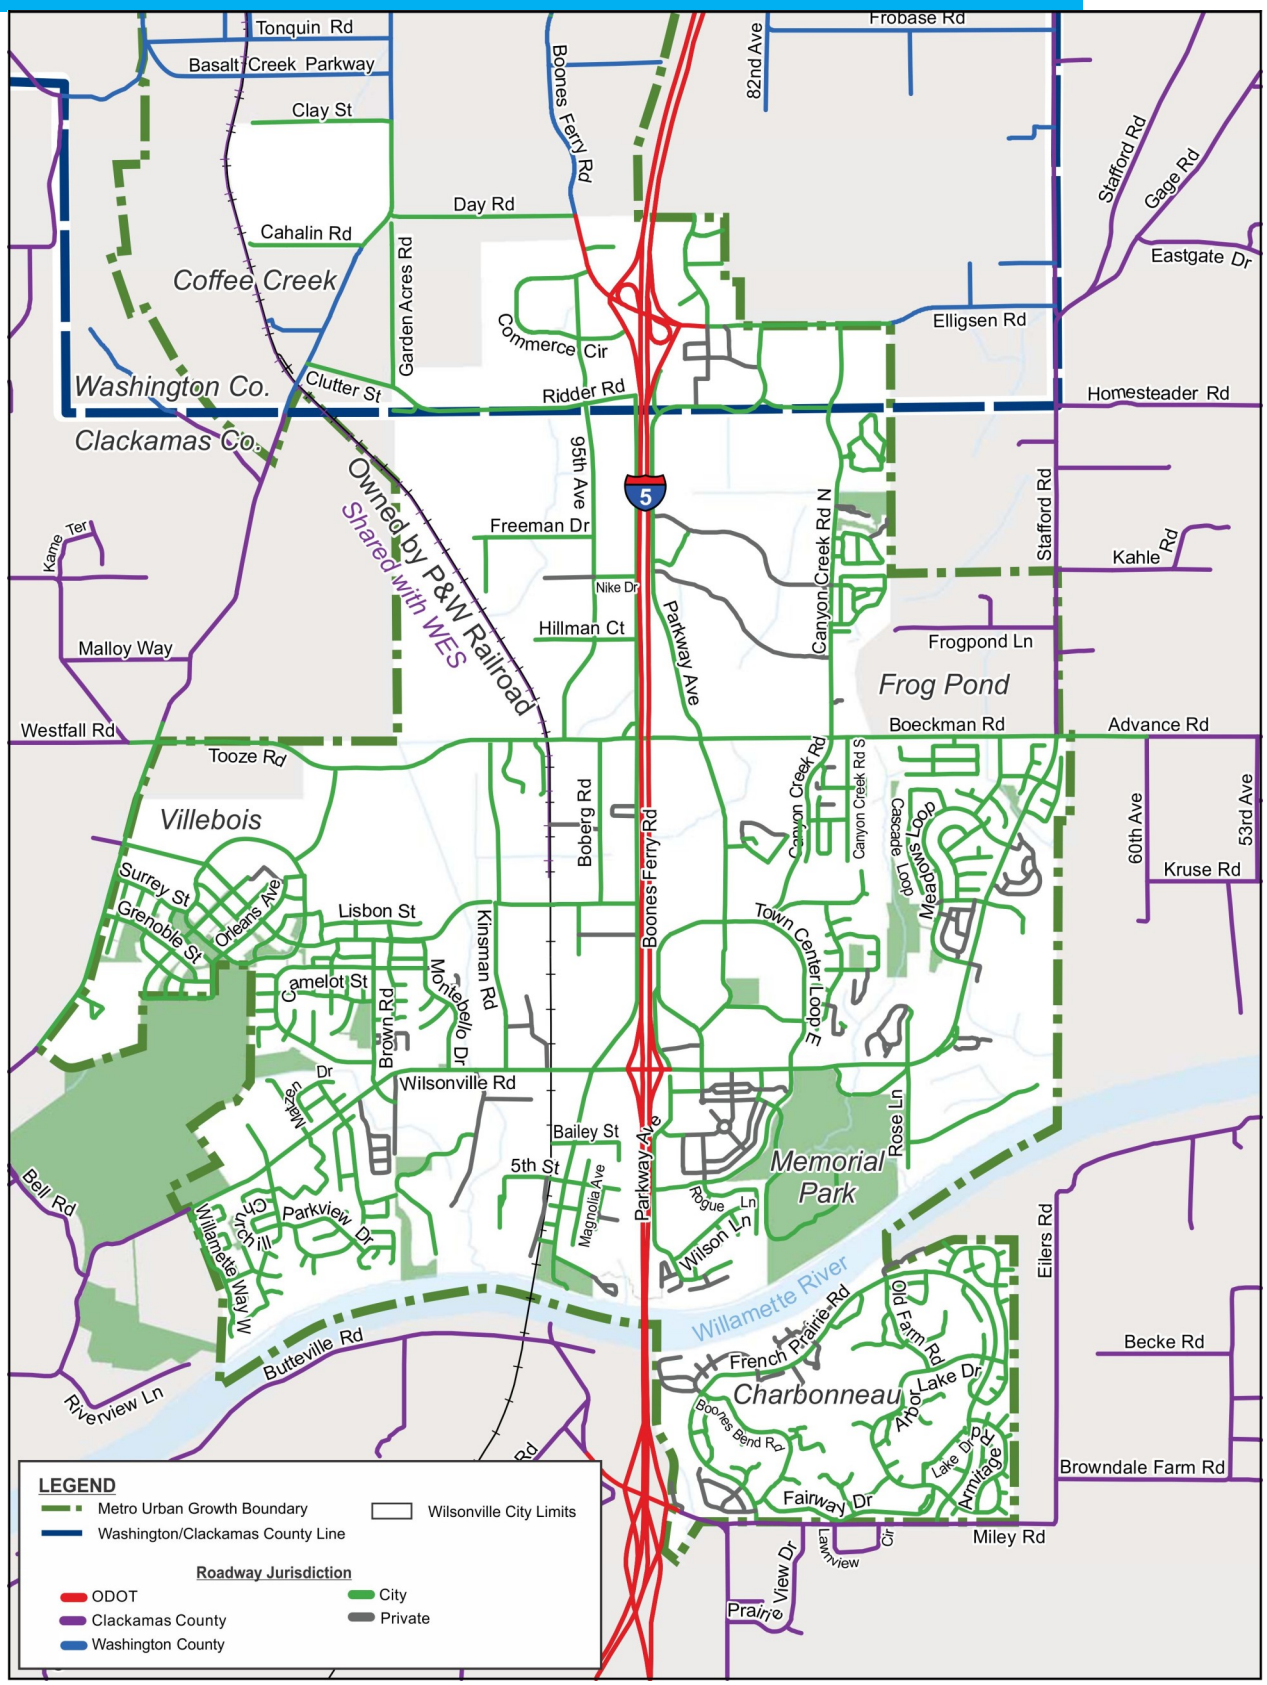

FIGURE 3-2. FUNCTIONAL CLASS DESIGNATIONS

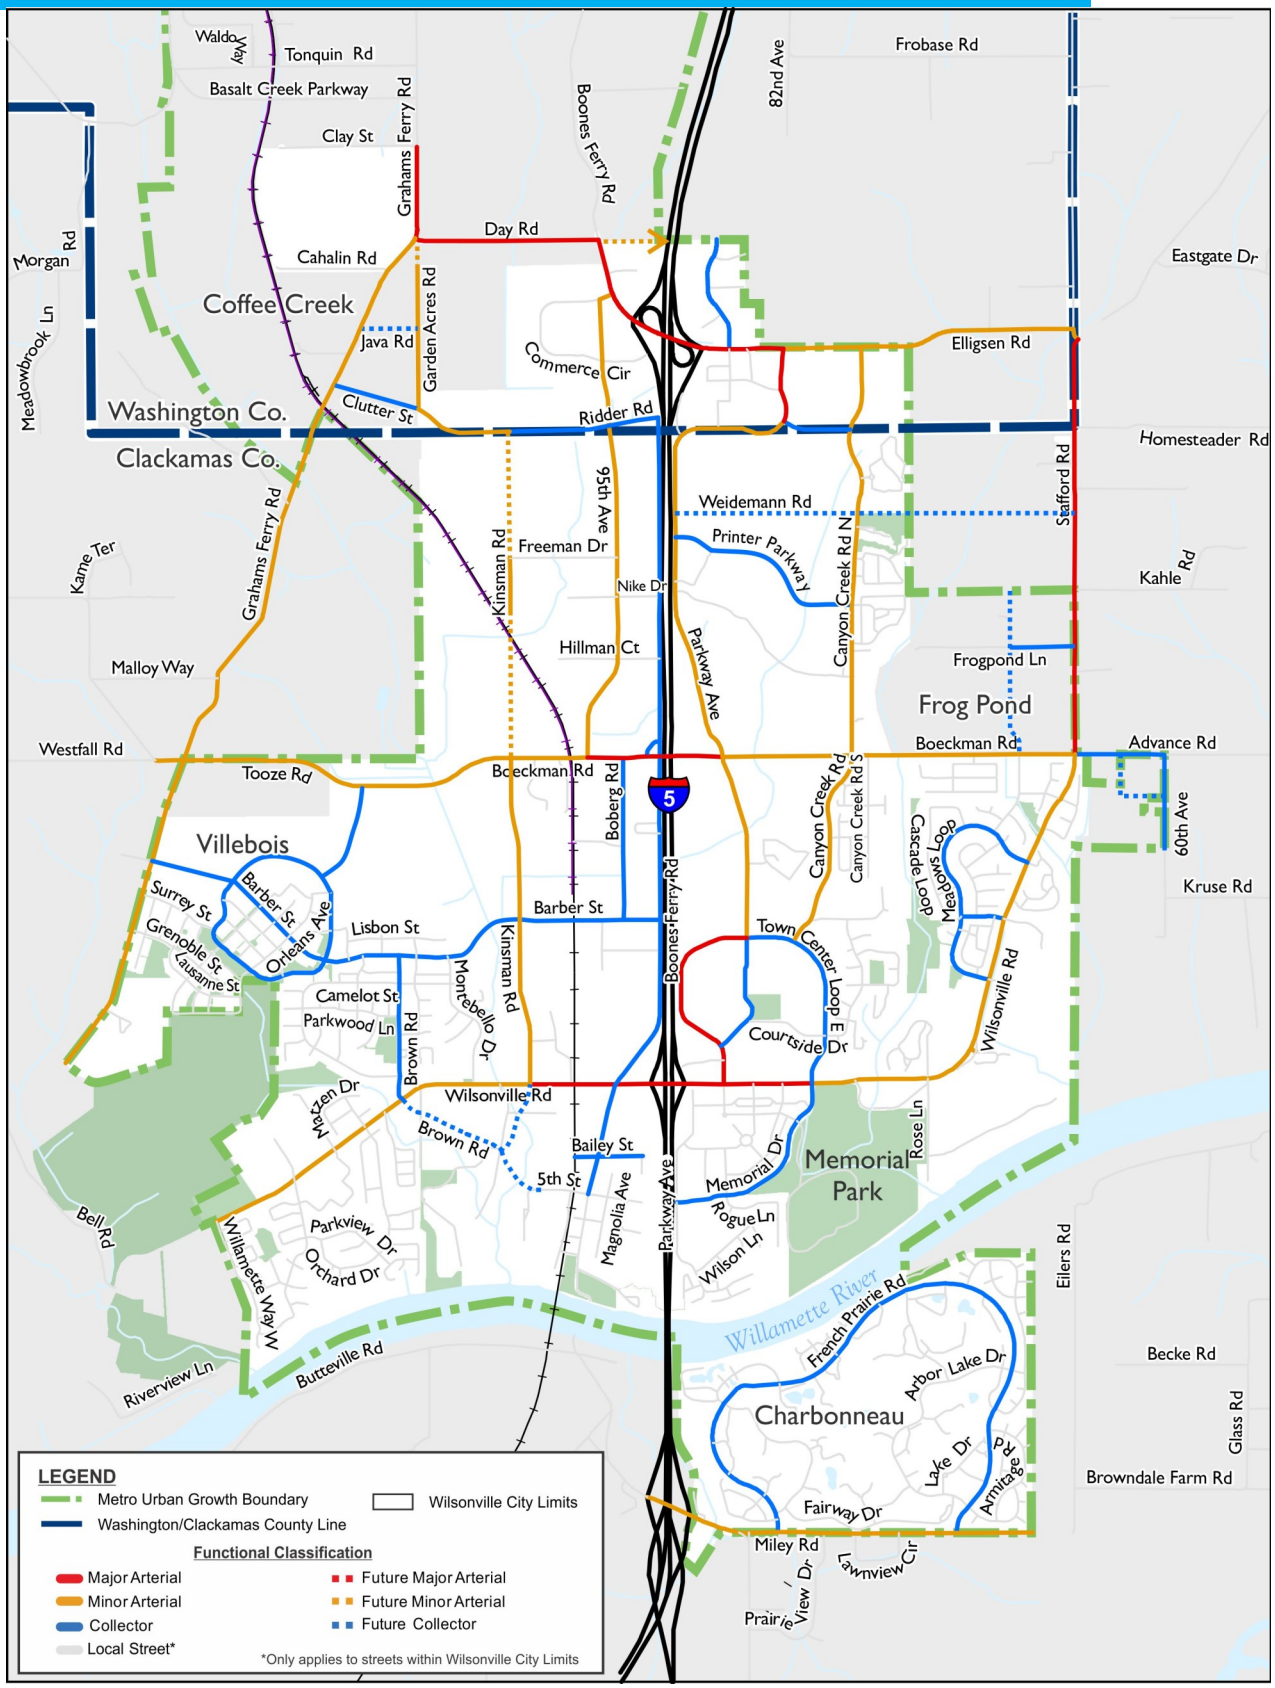

FIGURE 3-4. FREIGHT ROUTES

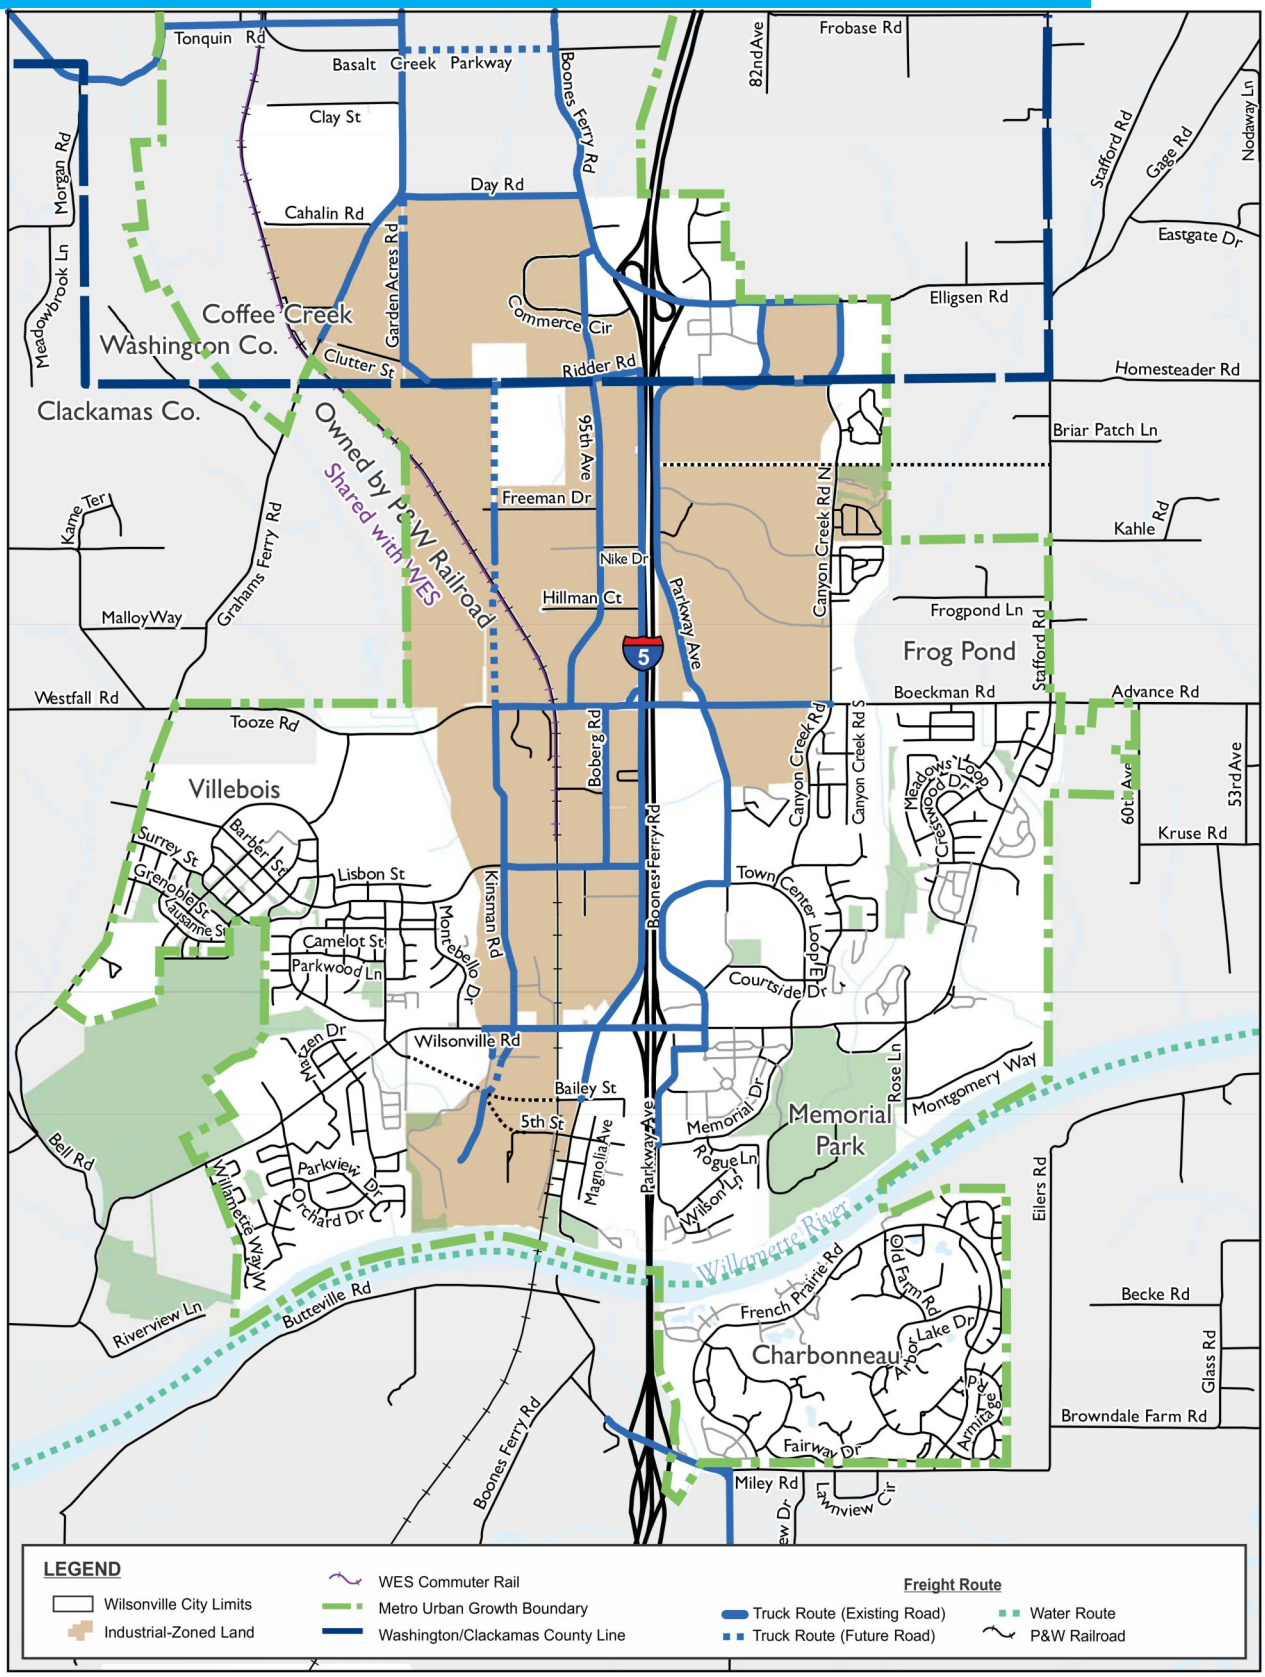

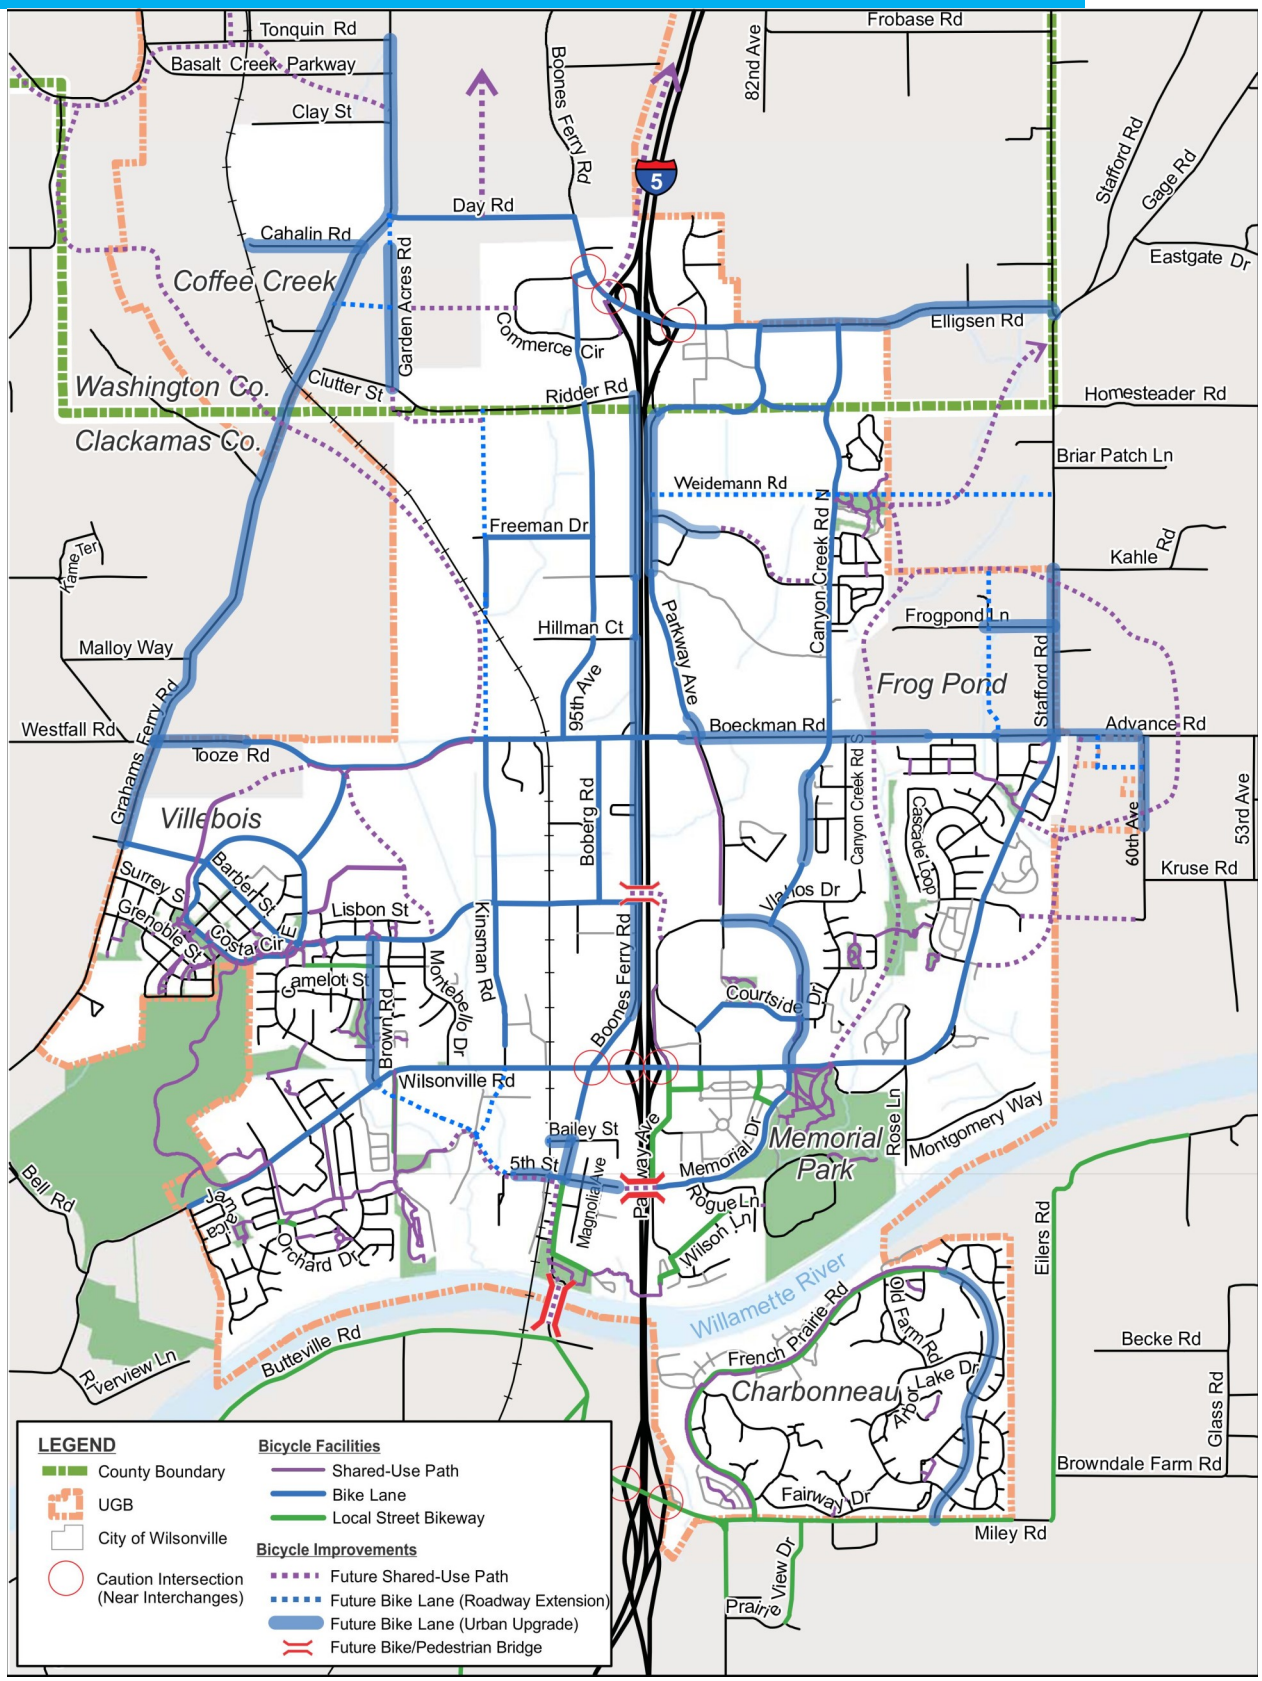

FIGURE 3-5. BICYCLE ROUTES

Access Management

Access management refers to the broad set of techniques that are used to balance safe, efficient, and timely travel with the ability to allow access to individual properties. Access is an important component of the city's transportation infrastructure and significantly affects system operations and safety.

Wilsonville should continue to manage roadway access to improve traffic flow and safety. By limiting access to higher classification roadways (especially Major and Minor Arterials), conflicts between vehicles entering and exiting driveways and vehicles on the roadway are reduced. Pedestrians and bicyclists also benefit from reduced conflicts with vehicles entering and exiting the roadway.

Table 3-2. Access Spacing Standards

Functional Classification	Access Spacing Standards[a]	
	Desired[b]	*Minimum*
Near Interchanges	ODOT Requires 1,320 ft	
Major Arterial	1,320 ft	1,000 ft
Minor Arterial	1,000 ft	600 ft
Collector	300 ft	100 ft
Local Street	Access Permitted to Each Lot	

[a] Spacing is measured from centerline to centerline on Major Arterials and Minor Arterials and between adjacent curb returns on Collectors and Local Streets

[b] Desired Access Spacing shall be adhered to unless otherwise approved by the City Engineer. Reasons for deviating from Desired Access Spacing include aligning with existing driveways, topography, property limitations, and other safety related issues as identified in a transportation study.

Table 3-2 lists the City's access spacing standards. Because there are existing non-conforming accesses, these standards will primarily guide access layout of future development consistent with the strategies listed in the call-out box at right. ODOT also has access spacing standards that apply to the I-5 interchange areas and to the section of Boones Ferry Road that is under ODOT jurisdiction (i.e., between Parkway Avenue and Day Road). The I-5/Wilsonville Road Interchange Area Management Plan (IAMP) should also be consulted when considering access needs near the Wilsonville Road interchange.

The Basalt Creek Parkway is considered an Access Management Interest Area because the parkway will be a high-capacity major freight arterial, limited to at-grade accesses at 124th Avenue, Grahams Ferry Road, and Boones Ferry Road as shown in Figure 3-13. The parkway creates a new connection between I-5 and 99W.

Looking east to the I-5/Wilsonville Road interchange.

Access Management Strategies

The City can use various access management strategies to help improve mobility and safety:

- **Interchange Areas:** Eliminate or consolidate accesses within one-quarter mile of the I-5 interchanges as opportunities arise.
- **Adjacent to High Volume Intersections:** Pursue appropriate treatments at accesses adjacent to high volume intersections, particularly when queues block access.
- **Existing Driveways:** Evaluate accesses that do not conform to the City's access spacing standard and consider modifications as practicable, while maintaining reasonable access to each property.
- **Ongoing Development Review:** Manage new driveway locations and spacing on a case-by-case basis. Where driveways do not meet spacing standards, consider mitigation treatments, such as consolidating accesses or

FIGURE 3-13. ACCESS MANAGEMENT INTEREST AREAS

FIGURE 4-2. FUTURE 2035 CAPACITY DEFICIENCIES

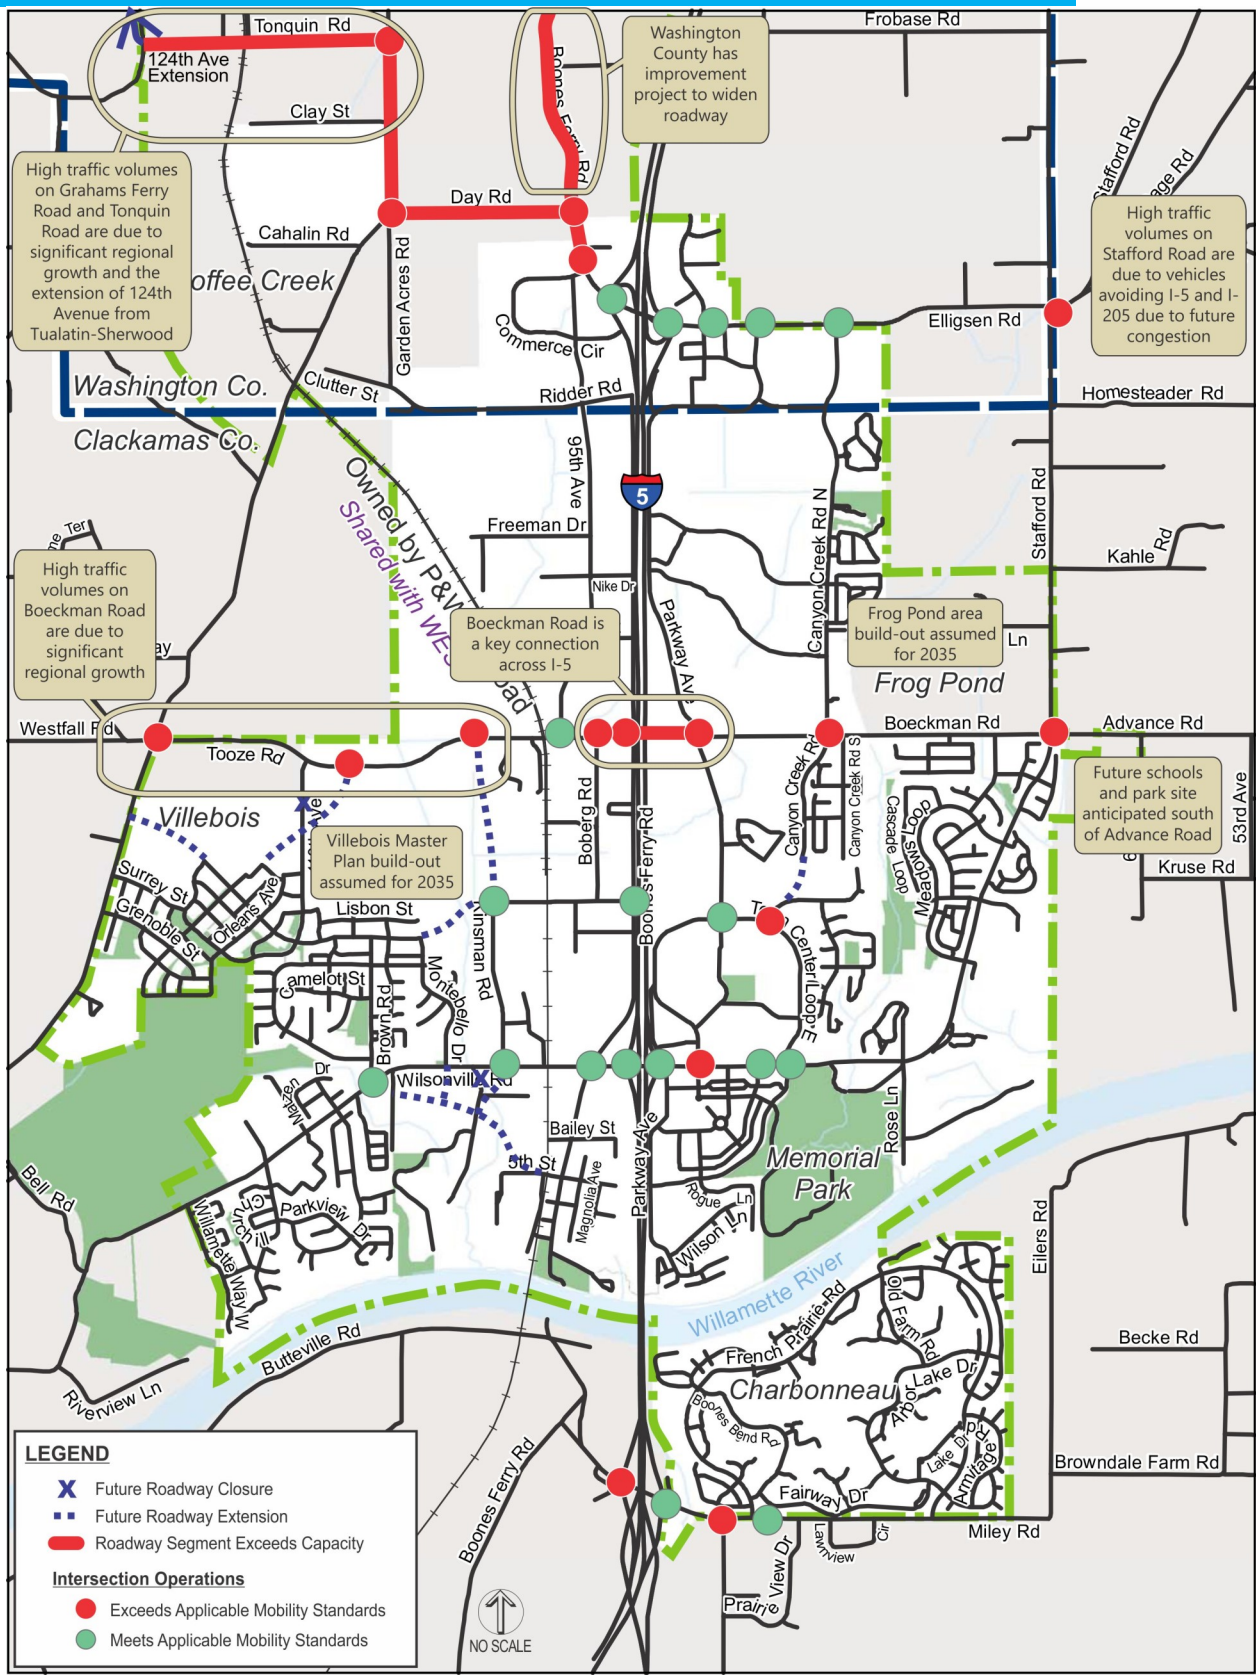

FIGURE 5-2. HIGHER PRIORITY PROJECTS

This figure provides an overall perspective of the Higher Priority projects throughout the city. Additional details are provided on the pages that follow for each of the City's four quadrants (Northwest, Northeast, Southwest, Southeast), which use I-5 and Boeckman Road as dividing lines.

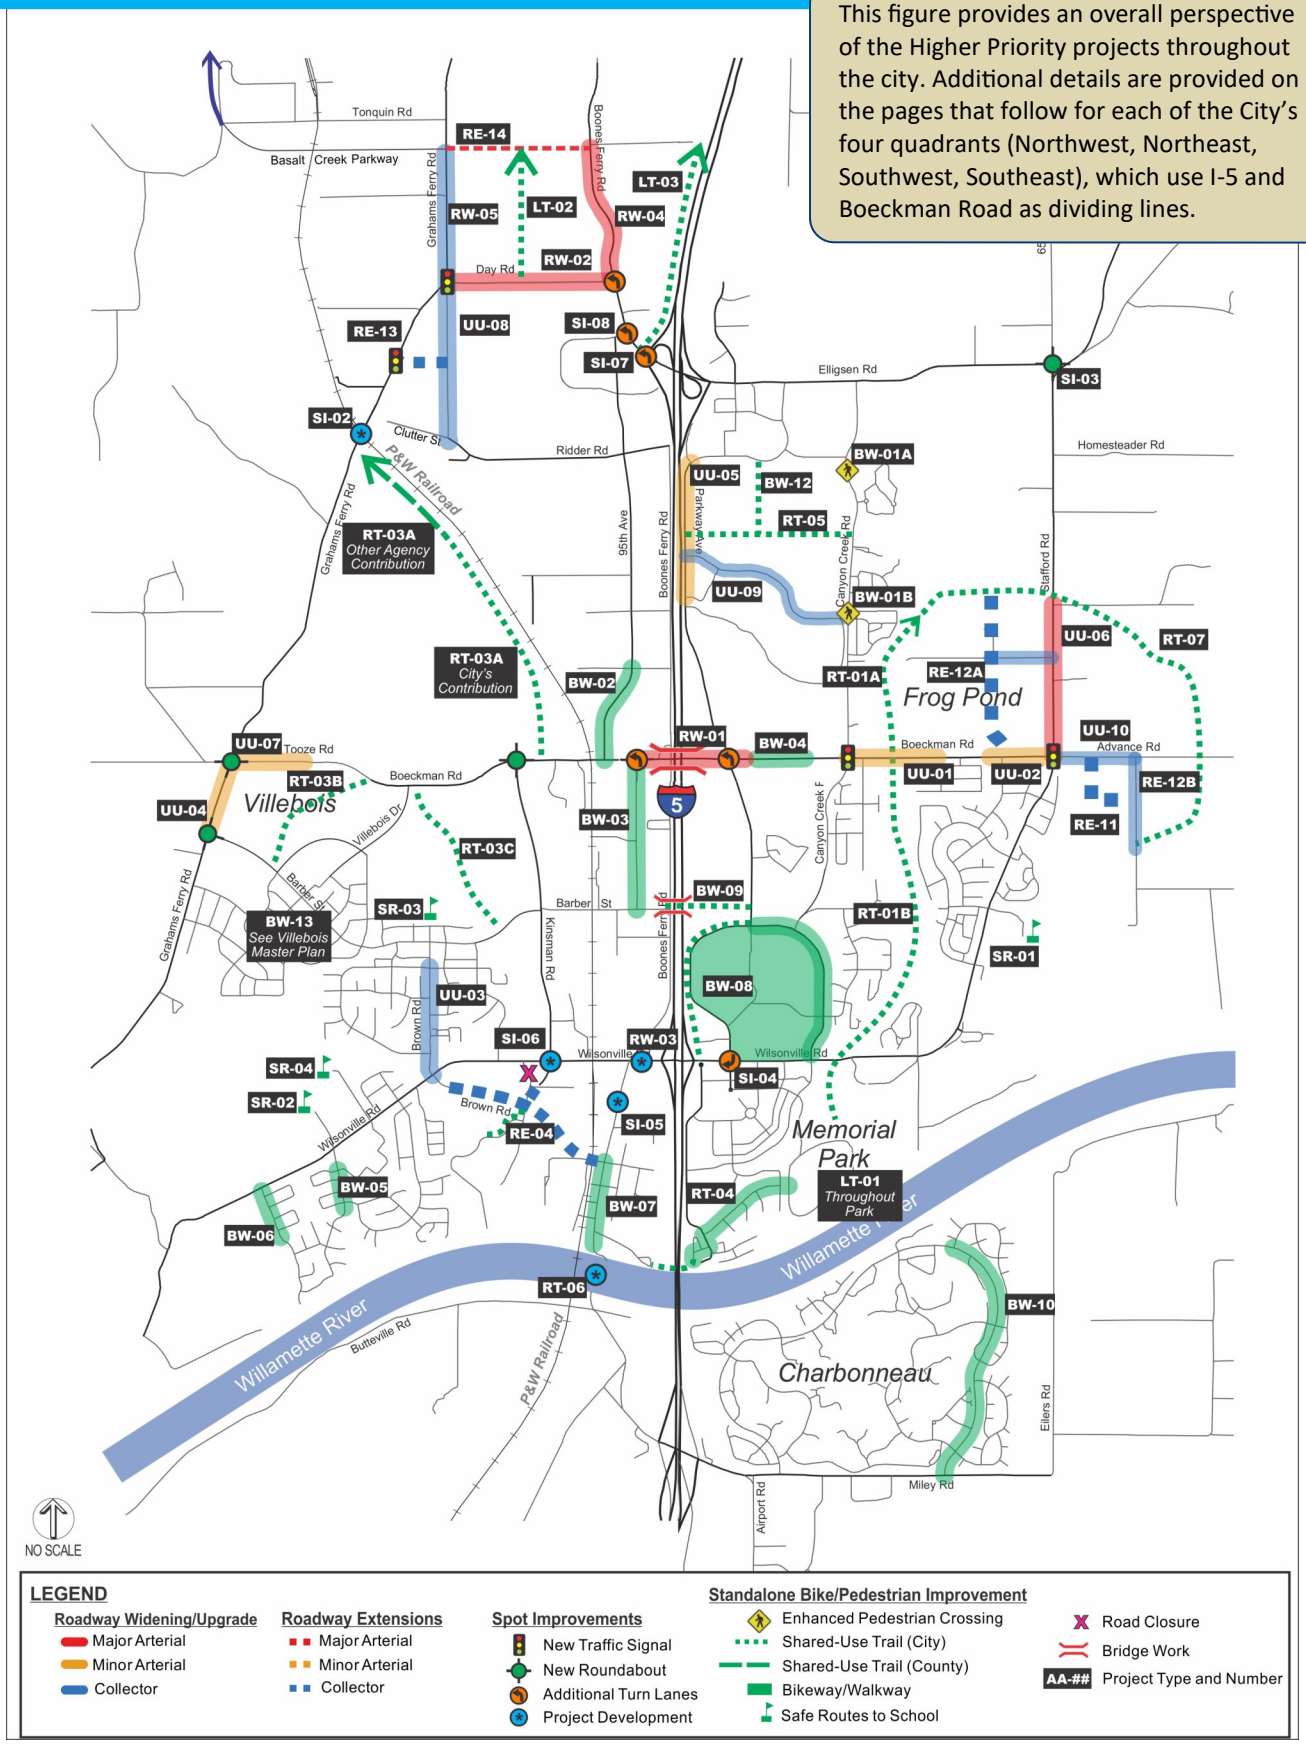

Table 5-2. Higher Priority Projects (Northwest Quadrant)

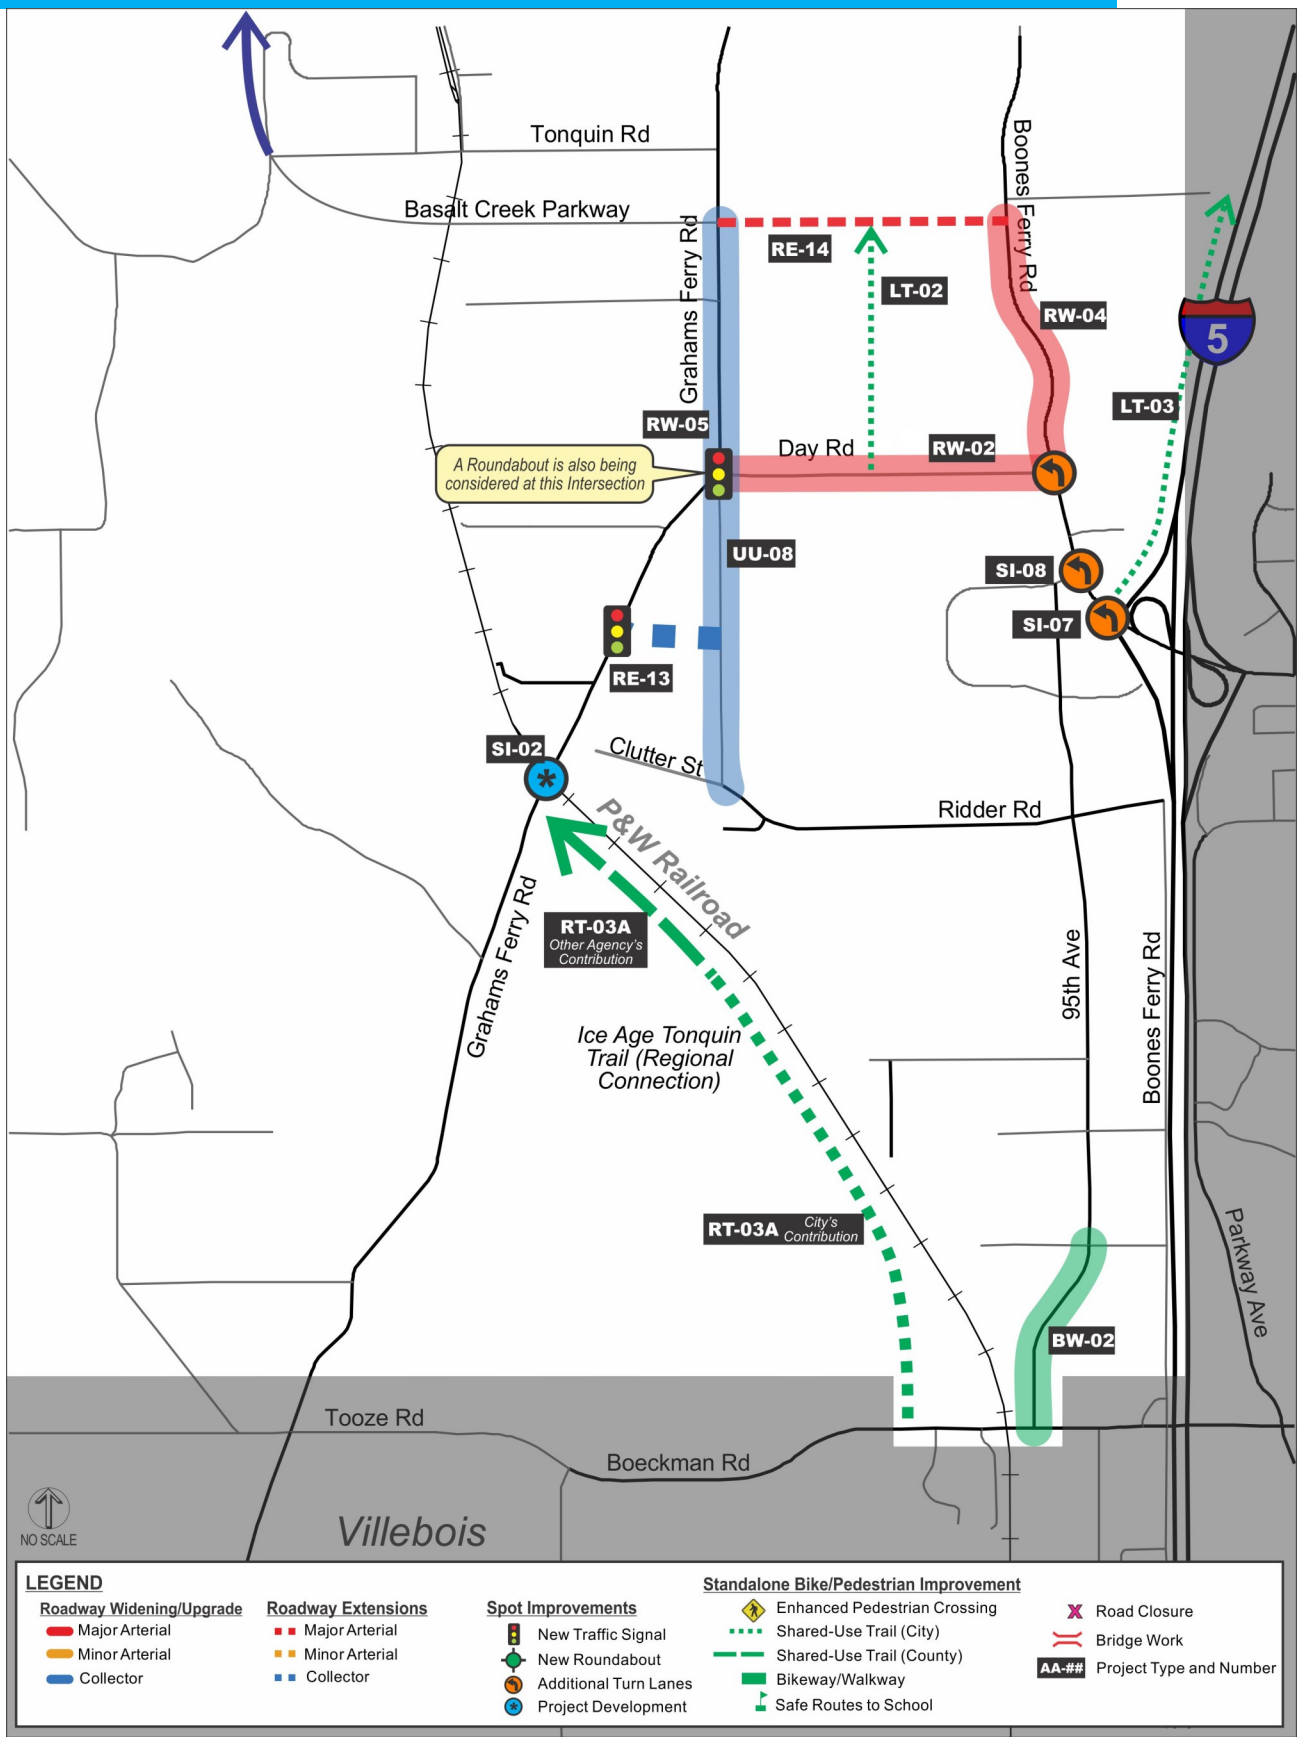
Project		Description	Cost
Roadway Extensions			
RE-13	Java Road Connection and Signal	Construct Java Road from Boones Ferry Road to Grahams Ferry Road and Garden Acres Road with a signal at the Java Road/Grahams Ferry Road intersection and disconnect Clutter Street from Grahams Ferry Road.	$1,500,000
RE-14	Basalt Creek Parkway Connection	Construct Basalt Creek Parkway as a limited access five-lane Major Arterial between Grahams Ferry Road and Boones Ferry Road. This project would be a joint Washington County, City of Wilsonville and City of Tualatin project and will work together to seek funding. RTP project #11470.	$31,700,000
Urban Upgrades			
UU-08	Garden Acres Road Urban Upgrade	Upgrade Garden Acres Road to a three-lane collector with bicycle lanes and upgrade the Garden Acres Road/Day Road intersection to either a signal or a roundabout. Realign Ridder Road to Garden Acres Road. Close the existing Clutter Road connection to Grahams Ferry Road after completion of Project RE-13. Close the existing Coffee Creek Correctional Facility driveway to Grahams Ferry Road and relocate the driveway to Cahalin Road.	$14,260,000
Roadway Widening			
RW-02	Day Road Widening	Widen Day Road from Boones Ferry Road to Grahams Ferry Road to include additional travel lanes in both directions along with bike lanes and sidewalks; project includes improvements at the Day Road/Boones Ferry Road and Day Road/Grahams Ferry Road intersections	$5,900,000
RW-04	Boones Ferry Road Widening	Widen Boones Ferry Road from Day Road to Basalt Creek Parkway to five lanes. RTP project #11487.	$1,200,000
RW-05	Grahams Ferry Road Widening	Widen Grahams Ferry Road from Day Road to Basalt Creek Parkway to three lanes with bike lanes, sidewalks, and transit improvements. RTP project #10588.	$13,200,000
Spot Improvements			
SI-02	Grahams Ferry Railroad Undercrossing Project Development	Perform preliminary analysis to determine needs, feasibility, etc.	$500,000
SI-07	Dual Southbound Right Turn Lanes	Add a second southbound right turn lane to the I-5 Exit Ramp at the Boones Ferry Road intersection. RTP project #11489	$1,063,000
SI-08	Boones Ferry Road/95th Avenue Access Management	Improve operations at the Boones Ferry Road/95th Avenue intersection by removing the east private access approach. Pioneer Court access onto Boones Ferry Road will be right-in /right-out. Additional access will occur via a north-south local street connection between Pioneer Court (RE-P15), passing under the Day Road I-5 overcrossing approach, and a new west-east local street (north of Day Road) with full intersection access at Boones Ferry Road.	$2,500,000
Standalone Pedestrian and Bicycle Improvements (Bikeways and Walkways)			
BW-02	95th Avenue Sidewalk Infill	Fill in gaps in the sidewalk network on the east side of 95th Avenue from Boeckman Road to Hillman Court, and construct transit stop improvements	$85,000
Standalone Pedestrian and Bicycle Improvements (Regional Trails)			
RT-03A	Ice Age Tonquin Trail (North)	Construct sections of the Ice Age Tonquin Trail north of Boeckman Road; City to construct portion within City limits (approximately $750,000) and coordinate portion farther north with Washington County and neighboring cities	$2,040,000 (Partial Regional funding)
Standalone Pedestrian and Bicycle Improvements (Local Trails)			
LT-02	Basalt Creek Canyon Ridge Trail	Build a north/south trail connection within Basalt Creek (west of the Canyon) to improve the pedestrian and bicycle network and make connections to east/west roads that run north and south. This trail would require a grade-separated crossing of Basalt Creek Parkway and would be connected to the regional trail network by extending Tonquin Road with bike/pedestrian facilities across Graham's Ferry to this future Basalt Creek Canyon Ridge Trail.	$450,000
LT-03	I-5 Easement Trail	Build a trail parallel to I-5 in the ODOT easement that would provide an additional north/south connection connecting to existing bike and pedestrian facilities.	$750,000

5-6 Wilsonville Transportation System Plan 2013

FIGURE 5-3. HIGHER PRIORITY PROJECTS (NORTHWEST QUADRANT)



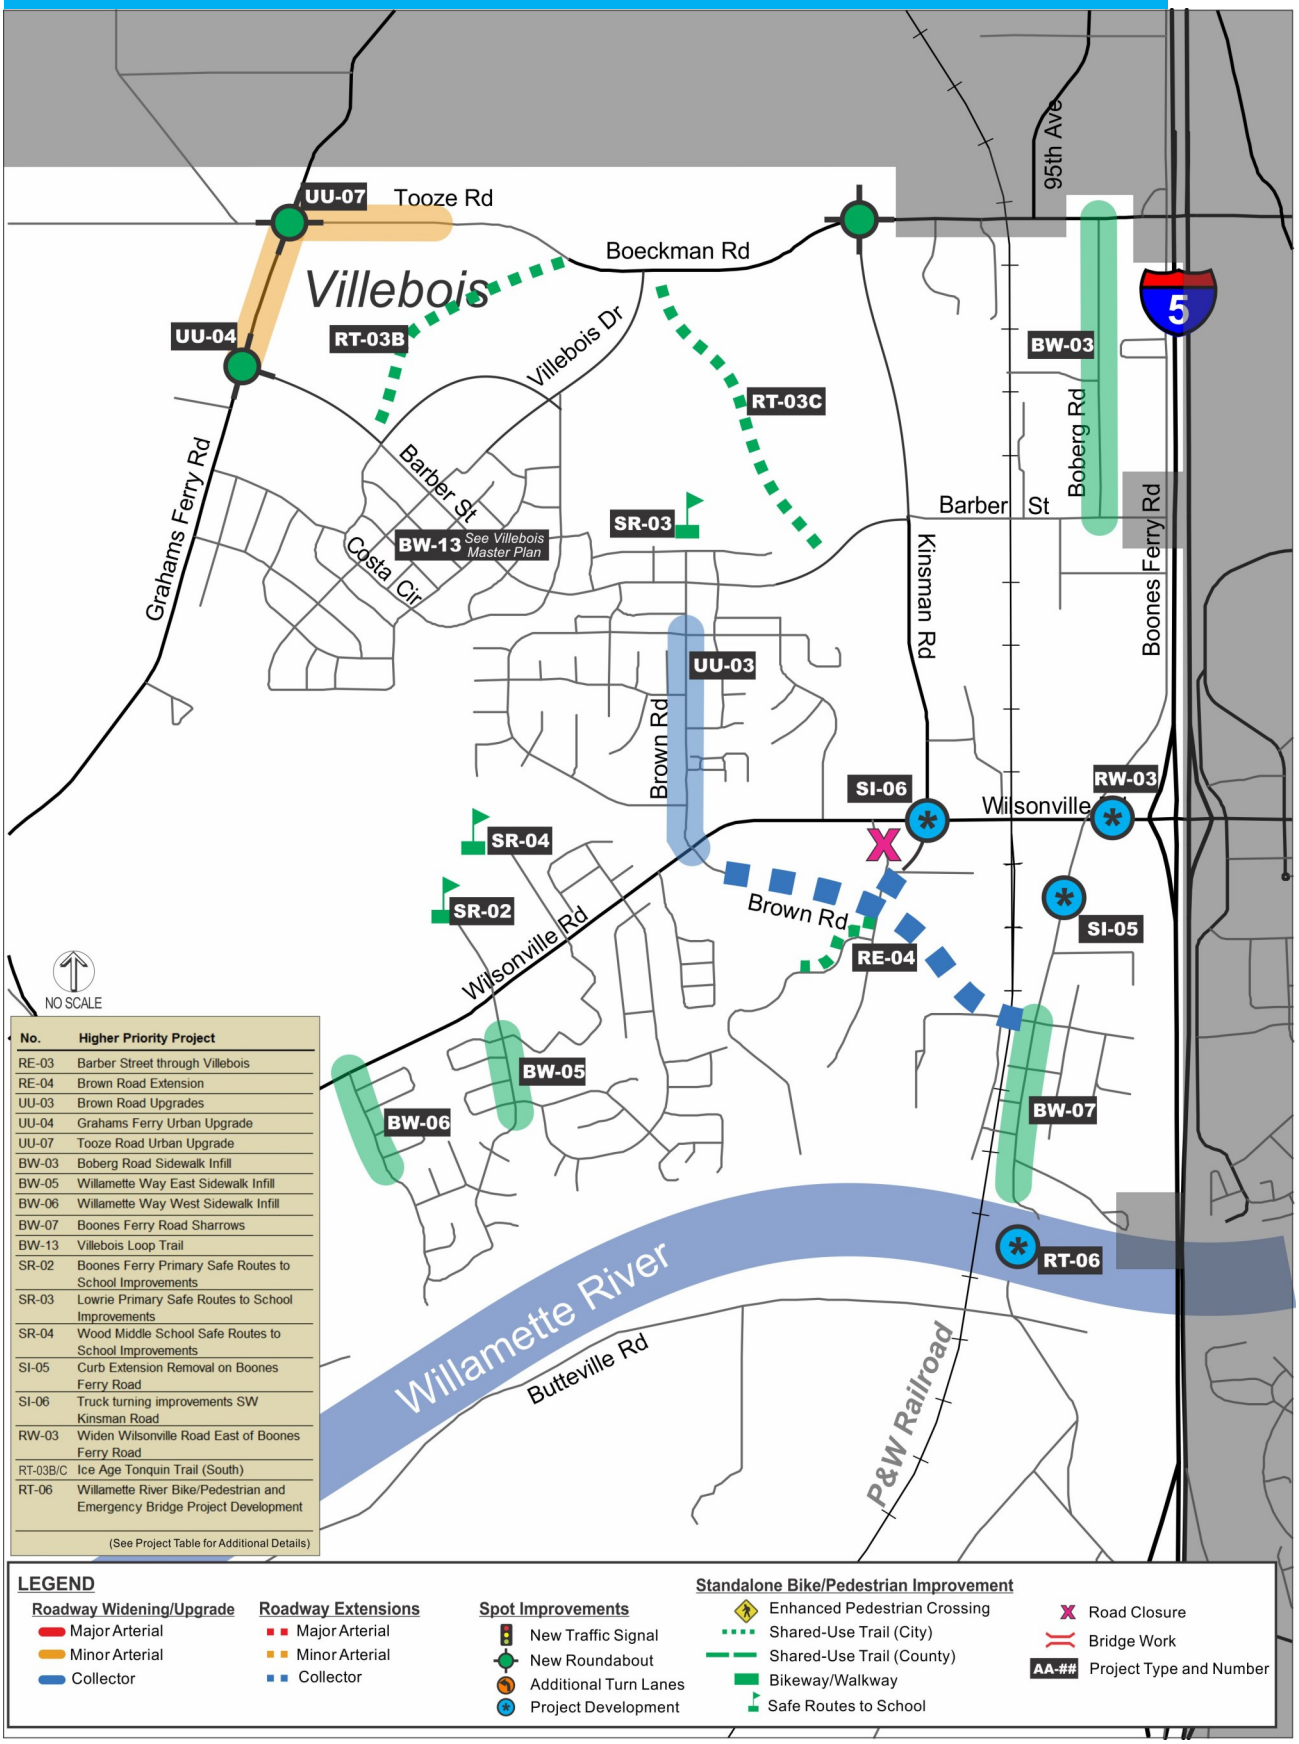


Table 5-4. Higher Priority Projects (Southwest Quadrant)

Project		Description	Cost
Roadway Extensions			
RE-04A	Corridor Study for Brown Road Extension	Perform a corridor study to determine the recommended Brown Road extension alignment	$20,000
RE-04B	Brown Road Extension	Construct remaining 2-lane roadway with bike lanes, sidewalks, and transit stop improvements from Wilsonville Road to Boones Ferry Road (connect at 5th Street); includes roadway connection to Kinsman Road (with bike lanes and sidewalks), portion of Ice Age Tonquin Trail connecting to trial terminus on Arrowhead Creek Lane, and Brown Road/Kinsman Road intersection.	$15,200,000
Urban Upgrades			
UU-03	Brown Road Upgrades	Upgrade to meet cross-section standards (i.e., 3 lanes with bike lanes, sidewalks, and transit stops)	$3,500,000
UU-04	Grahams Ferry Urban Upgrade	Upgrade to meet cross-section standards (i.e., 3 lanes with bike lanes, sidewalks, and transit stop improvements); includes roundabout at Grahams Ferry Road/Barber Street intersection	$2,400,000
UU-07	Tooze Road Urban Upgrade	Upgrade to meet cross-section standards (i.e., 3 lanes with bike lanes, sidewalks, and transit stop improvements); includes roundabout at Grahams Ferry Road/Tooze Road intersection	$7,900,000
Standalone Pedestrian and Bicycle Improvements (Bikeways and Walkways)			
BW-03	Boberg Road Sidewalk Infill	Fill in gaps in the sidewalk network on the east side of the roadway from Boeckman Road to Barber Street, and construct transit stop improvements	$375,000
BW-05	Willamette Way East Sidewalk Infill	Fill in gaps in the sidewalk network on the west side of the roadway from Chantilly to south of Churchill (part of Ice Age Tonquin Trail)	$50,000
BW-06	Willamette Way West Sidewalk Infill	Construct a new sidewalk on west side of the roadway from Wilsonville Road to Paulina Drive	$50,000
BW-07	Boones Ferry Road Sharrows	Stripe sharrows (shared travel lanes) from 5th Street to Boones Ferry Park; this will connect Ice Age Tonquin Trail (once the portion along the Brown Road Extension is completed) to Waterfront Trail	$5,000
BW-13	Villebois Loop Trail	Construct shared-use path as part of Villebois development; include connections to Villebois Greenway, the Ice Age Tonquin Trail, and the Village Center	$180,000
Standalone Pedestrian and Bicycle Improvements (Safe Routes to School)			
SR-02	Boones Ferry Primary Safe Routes to School Improvements	Construct shared-use path between Boones Ferry Primary and Wood Middle School, a bicycle parking shelter near the school, and a shared-use path connecting the bicycle shelter to the sidewalks along Wilsonville Road	$200,000
SR-03	Lowrie Primary Safe Routes to School Improvements	Construct shared-use path from existing connection of Lowrie Primary School to Barber Street as part of Villebois development; include connections to new school, Ice Age Tonquin Trail, and Barber Street to future connections	$150,000
SR-04	Wood Middle School Safe Routes to School Improvements	Construct a bicycle parking shelter near the school and a shared-use path connecting the bicycle shelter to the sidewalks along Wilsonville Road; also widen and stripe the Park at Merryfield Trail, which connects Wood Middle School to Camelot Street to the north	$150,000
Standalone Pedestrian and Bicycle Improvements (Regional Trails)			
RT-03B/C	Ice Age Tonquin Trail (Villebois)	Construct the remaining sections of the Ice Age Tonquin Trail within Villebois Village in conjunction with development and adjacent roadway improvements	$560,000
RT-06	Willamette River Bike/Pedestrian and Emergency Bridge Project Development	Perform feasibility study and project development for bike/pedestrian/emergency bridge over the Willamette River to provide a non-motorized alternative to the I-5 freeway deck	$1,380,000 (Partial Regional funding)

FIGURE 5-5. HIGHER PRIORITY PROJECTS (SOUTHWEST QUADRANT)

FIGURE 5-7. ADDITIONAL PLANNED PROJECTS

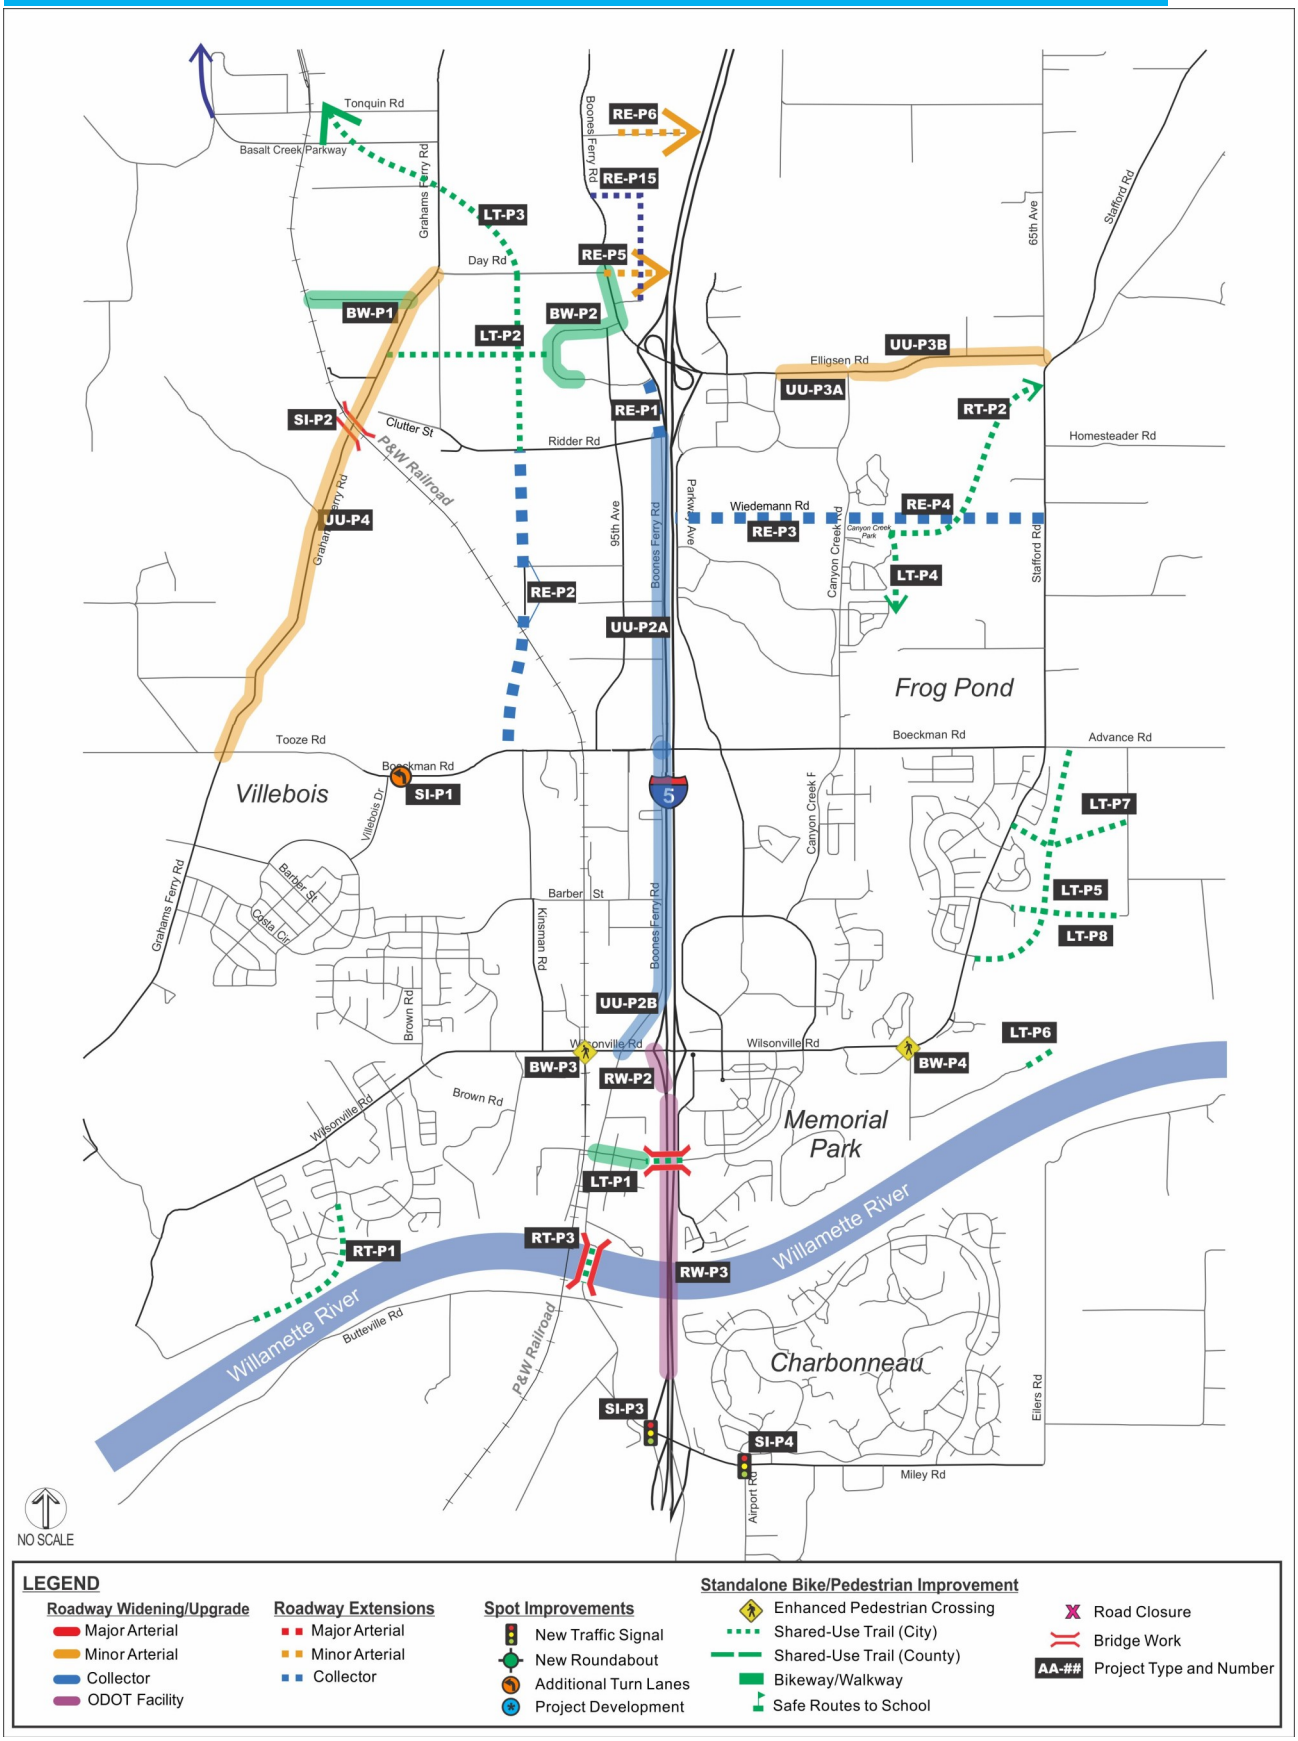

Table 5-9. Additional Planned Projects (Northwest Quadrant)

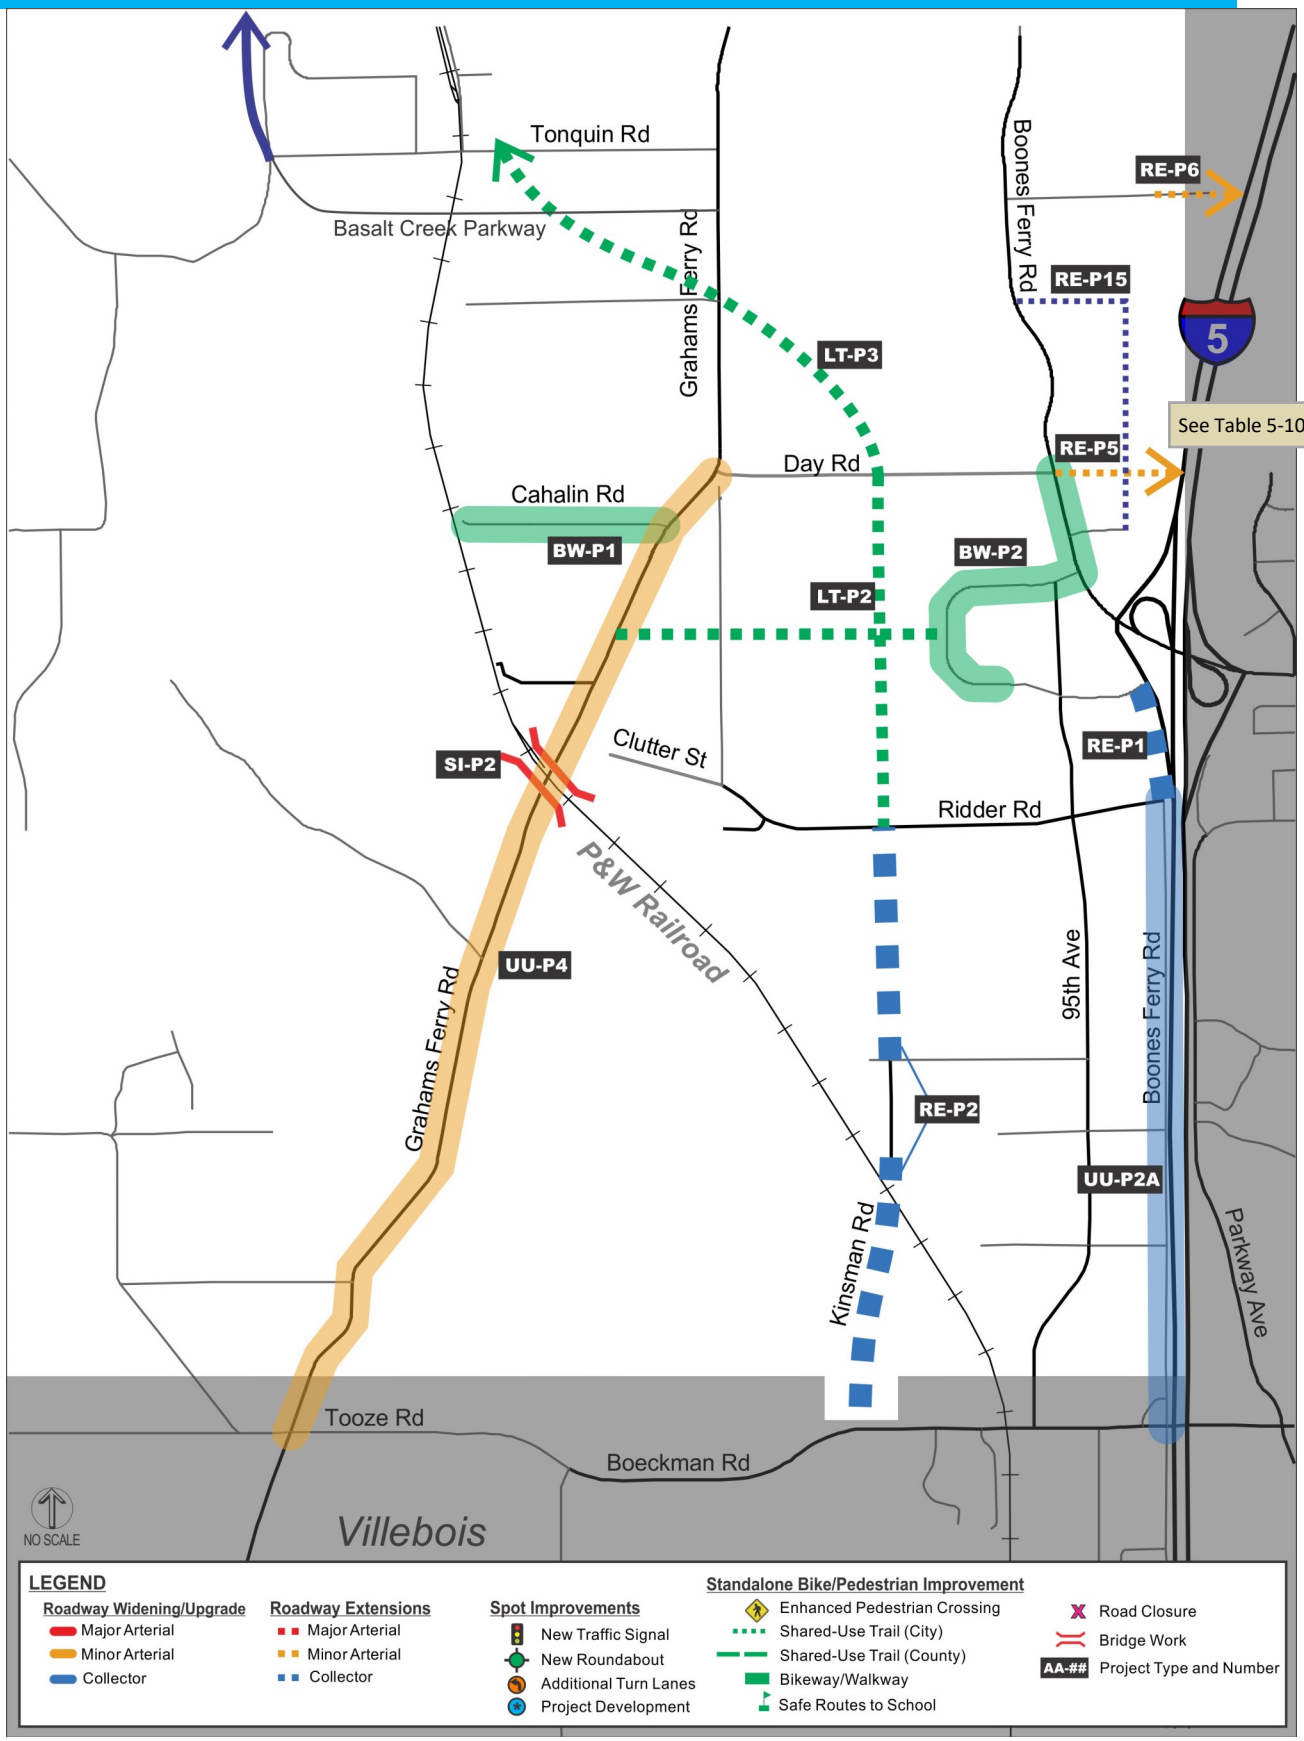
Project		Description	Why Not Higher Priority?	Cost
Roadway Extensions				
RE-P1	Boones Ferry Road Extension	Construct 2-lane roadway from Ridder Road to Commerce Circle with bike lanes, sidewalks, and transit improvements to facilitate access and circulation in the area surrounding Ridder Road and 95th Avenue	Identified as potentially helpful freight connection, but not a critical need at this time	$2,100,000
RE-P2	Kinsman Road Extension (Central)	Construct 2/3-lane roadway from Boeckman Road to Ridder Road with bike lanes and sidewalks	High cost due to grade-separated RR crossing and construction across Metro lands; alternative route (95th Avenue) is available	$12,000,000
RE-P6	Basalt Creek Overcrossing	Extend Basalt Creek across I-5 as a four-lane overcrossing. This project would be a joint Washington County, City of Wilsonville and City of Tualatin project and will work together to seek funding. RTP project #11436.	This project timeline is outside of the planning horizon of the City's current TSP	$46,000,000
RE-P15	Pioneer Court Extension	Extend Pioneer Court to the north, approximately 1,000 feet north of Day Road, connect to Boones Ferry Road to the west.	Identified to help improve operations at the Pioneer Court /Boones Ferry Road intersection after Boones Ferry Rd/95th Ave Intersection Improvements are made (SI-08)	$4,000,000
Urban Upgrades				
UU-P2A	Boones Ferry Road Urban Upgrade	Upgrade Boones Ferry Road from Wilsonville Road to Ridder Road with bike lanes on both sides and sidewalks on west side only	High cost with limited connectivity benefit alternative parallel routes exist	$5,900,000
UU-P4	Grahams Ferry Road Urban Upgrade	Upgrade Grahams Ferry Road from Day Road to Tooze Road to meet applicable cross-section standards (i.e., 3 lanes with bike lanes, sidewalks, and transit improvements)	Grahams Ferry Road will be a key urban connection to serve Coffee Creek Industrial Area. It is assumed that the roadway segment between Day Road and Clutter Road will be constructed as the Coffee Creek industrial lands develop	$2,000,000
Spot Improvements				
SI-P2	Grahams Ferry Road Undercrossing Improvements at Railroad Bridge	Reconstruct existing railroad under-crossing to City of Wilsonville Minor Arterial standards; Higher Priority project list includes project development portion of this project (costs are separate)	Located within Washington County jurisdiction, and it is an important safety-related project with particular benefits for freight travel; however, it comes with high cost and freight traffic has alternate travel routes	$4,500,000
Standalone Pedestrian and Bicycle Improvements (Bikeways and Walkways)				
BW-P1	Cahalin Road Bike Lanes and Sidewalks	Construct bike lanes and sidewalks from Kinsman Road extension to Ice Age Tonquin Trail	High cost due to railroad crossing barrier	$700,000
BW-P2	Commerce Circle Loop Sidewalk Infill	Fill in gaps in the sidewalk network on Commerce Circle Loop	Industrial area with no connectivity to other facilities	$100,000
Standalone Pedestrian and Bicycle Improvements (Local Trails)				
LT-P2	Area 42 Trail	Shared Use Path from Kinsman Road to Day Road	To be constructed as Coffee Lake Creek Master Plan Area Redevelops	$220,000
LT-P3	BPA Power Line Trail	Shared Use Path from Day Road to Ice Age Tonquin Trail providing trail users to City's northern industrial area	Ice Age Tonquin Trail provides key connection to north (more critical when Coffee Lake Creek develops)	$500,000

FIGURE 5-8. ADDITIONAL PLANNED PROJECTS (NORTHWEST QUADRANT)



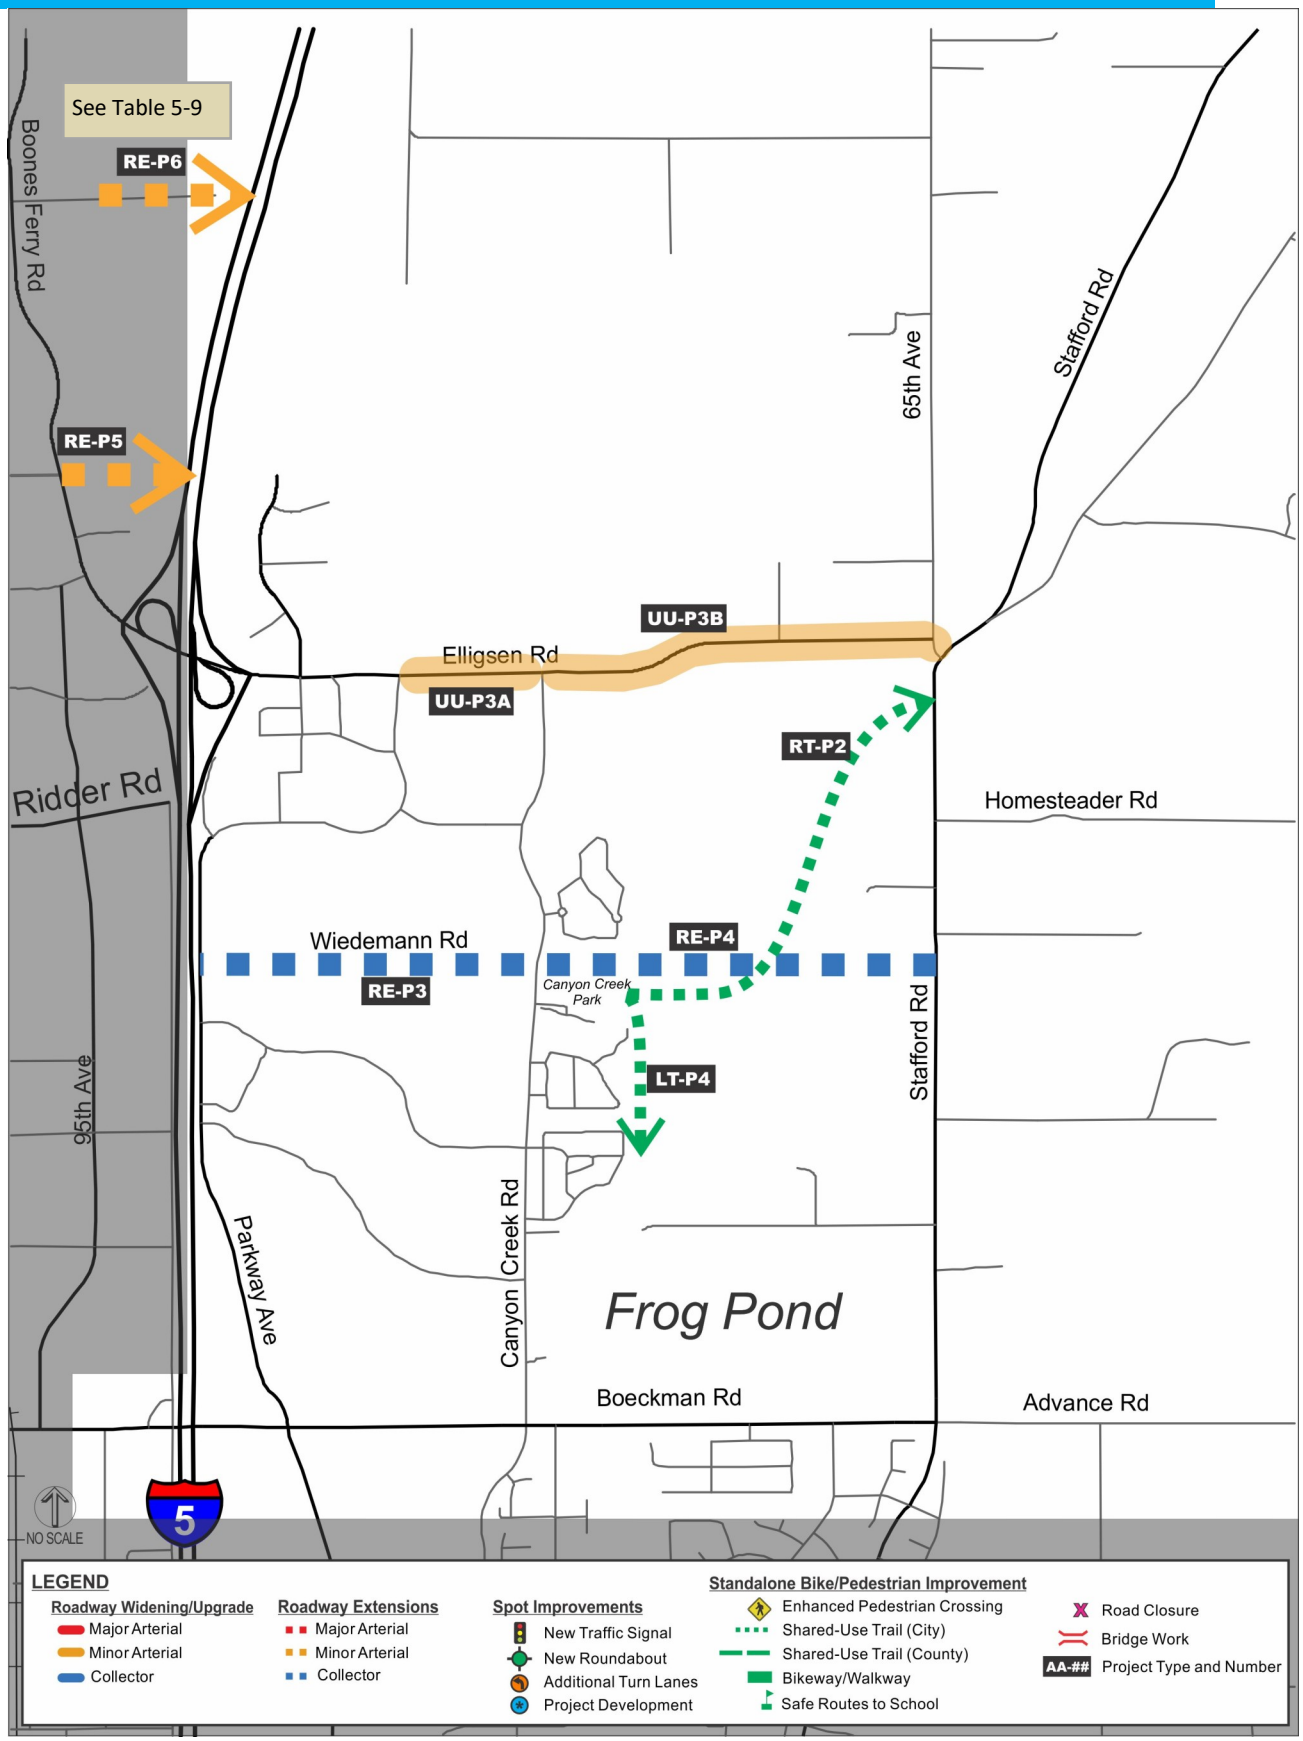


Table 5-10. Additional Planned Projects (Northeast Quadrant)

Project		Description	Why Not Higher Priority?	Cost
Roadway Extensions				
RE-P3	Wiedeman Road Extension (West)	Construct 2/3-lane roadway from Parkway Avenue to Canyon Creek Road with bike lanes and sidewalks	Limited impact on system capacity; money better spent upgrading Boeckman Road and Elligsen Road	$4,300,000
RE-P4	Wiedeman Road Extension (East)	Construct 2/3-lane roadway from Canyon Creek Road to Stafford Road with bike lanes and sidewalks; would require construction over Boeckman Creek	Only needed with future development on land east of Canyon Creek Road; costly (especially over wetlands) and has limited impact on system capacity; and money better spent upgrading Boeckman Road and Elligsen Road	$8,800,000
RE-P5	Day Road Overcrossing	Extend Day Road from Boones Ferry Road to Elligsen Road as a four-lane overcrossing of I-5. This project would be a joint Washington County, City of Wilsonville and City of Tualatin project and will work together to seek funding. RTP project #11490.	This project timeline is outside of the planning horizon of the City's current TSP.	$40,800,000 — $53,400,000
Urban Upgrades				
UU-P3 A/B	Elligsen Road Urban Upgrade	Upgrade Elligsen Road from Parkway Center to Stafford Road to meet applicable cross-section standards including bike lanes, sidewalks, and transit improvements	Much of the land is in Clackamas County; significant slopes from Parkway Center Drive to Canyon Creek Road would likely require retaining walls (higher costs) and large oak trees would be impacted	$6,000,000 (Partial Federal funding)
Standalone Pedestrian and Bicycle Improvements (Local Trails)				
LT-P4	Canyon Creek Trail	Shared Use Path from Canyon Creek Park to Boeckman Creek Trail providing connectivity to neighborhoods to the south	Low priority as it needed after the Boeckman Creek Trail is constructed	$200,000
Standalone Pedestrian and Bicycle Improvements (Regional Trails)				
RT-P2	Stafford Spur Trail	Shared-Use Path from Canyon Creek Park to Stafford Road	High cost project that provides limited connectivity to land uses in Clackamas County	$1,640,000

Wilsonville Industrial Land Readiness Phase 1: Basalt Creek Recommendations Report

City of Wilsonville

Prepared for: City of Wilsonville

ECOnorthwest
222 SW Columbia Street • Suite 1600 • Portland, OR 97201 • 503-222-6060

Acknowledgments

ECOnorthwest prepared this report with support from the guidance and input of several partners, including members, staff, and leadership of the ***City of Wilsonville***. Most notably we are appreciative of the involvement and input of ***Cindy Luxhoj, Daniel Pauly, Miranda Bateschell, and Matt Lorenzen***. This work was financially supported by grants from ***Business Oregon and Metro.***

That assistance notwithstanding, ECOnorthwest is responsible for the content of this report. The staff at ECOnorthwest prepared this report based on their general knowledge of the economics of regional economies. ECOnorthwest staff contributing to this study included ***Bob Parker, Nicole Underwood, Barrett Lewis, and Michelle Anderson.*** ECOnorthwest also relied on information derived from government agencies, private statistical services, the reports of others, interviews of individuals, or other sources believed to be reliable. ECOnorthwest has not independently verified the accuracy of all such information and makes no representation regarding its accuracy or completeness. Any statements nonfactual in nature constitute the authors' current opinions, which may change as more information becomes available.

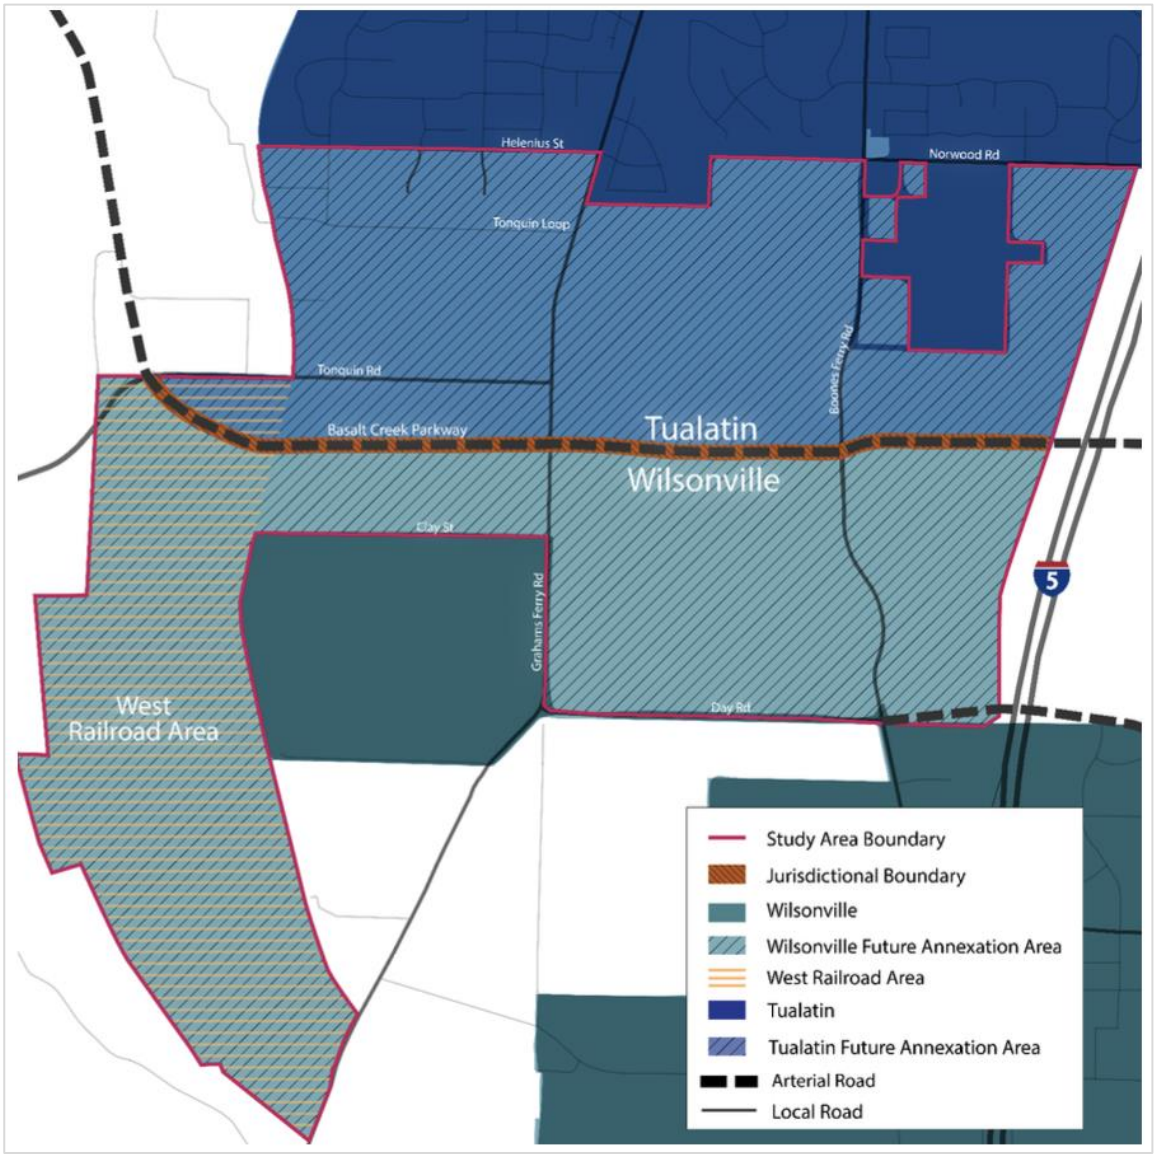
Conclusion and Recommendations..... 11
Appendix A: Economic Inventory and Basalt Creek Concept Plan Land Use Analysis 17
Appendix B: Buildable Lands Inventory and Site Suitability Analysis 60
Appendix C: Redevelopment Feasibility of Contractor Establishments 102

Purpose and Background

The Cities of Tualatin and Wilsonville adopted the Basalt Creek Concept Plan (BCCP) in 2018 after a lengthy joint planning process. Now, in 2024-25, the City of Wilsonville is working to advance the Basalt Creek Planning Area (BCPA) beyond the concept plan to a development-ready status by designating zoning and refining infrastructure plans. However, since adoption of the BCCP, economic conditions at national, state, regional, and local levels have shifted significantly and must now be considered.

To address these evolving conditions, the City hired ECOnorthwest to conduct a market assessment and industrial lands study focused on Wilsonville's portion of the BCPA. This study is comprised of several interconnected tasks:

- An **Economic Inventory** that evaluates current market trends and identifies industries suitable for the area (Appendix A).
- A **Buildable Lands Inventory (BLI)** that reflects recent land developments, adjusted constraints, and revised capacity estimates (Appendix B).
- A **Site Suitability Analysis** that evaluates three key opportunity sites for their potential to support target industries based on attributes like size, location, and constraints (Appendix B).
- An **Analysis of Future Development of Contractor Establishments in the BCPA** given prevailing lease rates and market conditions (Appendix C).



This report summarizes the key findings from each task and outlines recommended policy interventions and strategic actions for the City. By addressing challenges and leveraging opportunities, these efforts aim to establish Basalt Creek as a vital hub for regional job growth and long-term economic vitality.

Planning Commission Meeting - August 12, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Basalt Creek Planning Area Overview

The Basalt Creek Planning Area (BCPA) is an 847-acre area located between southern Tualatin and northern Wilsonville. This report focuses on the Wilsonville section, which includes 453 acres in the main portion of the BCPA south of the Basalt Creek Parkway and land west of the railroad known as West Railroad (as depicted in Figure 1*). For the remainder of this report, references to the BCPA specifically refer to the Wilsonville portion.* The BCPA is centrally located in the southern portion of the Portland Metro, adjacent to Interstate-5, and easily accessible and connected to other growing industrial areas (including Sherwood and Tualatin). It has access to the Portland Metro and Mid-Valley labor sheds, making it well positioned to attract various types of industry.

Figure 1: Basalt Creek Planning Area

Source: Basalt Creek Concept Plan, 2018. Note: Wilsonville's portion of the Basalt Creek Planning Area (BCPA) is inclusive of the Wilsonville Future Annexation Area and West Railroad Area.

What is Wilsonville's portion of Basalt Creek Like today?

The Wilsonville portion of the BCPA is currently zoned under Washington County's FD-20 designation (Future Development, 20-acre minimum lot size), which permits low-intensity uses. Since the adoption of the BCCP, Washington County has continued to approve developments consistent with its zoning, resulting in much of the land now being used for contractor establishments. These establishments—used for storing tools, equipment, and vehicles—provide jobs and economic activity. But they fall short of the employment densities and development envisioned in the Concept Plan, and which are typical of land within the Metro urban growth boundary (UGB) and incorporated City limits.

Contractor establishment (above) and railroad crossing near West Railroad.

KEY STATISTICS

The Wilsonville portion of the BCPA spans 453 acres and includes 85 tax lots, with only 10 tax lots hosting covered employment. Some areas in the BCPA have a high degree of parcelization, while others are less fragmented. There are a handful of large contiguous landholdings by single ownership.

From 2012 to 2022, covered employment grew from 194 to 275 employees in the BCPA, with an average wage of $85,863—higher than the tri-county average ($73,995) and City average ($74,252)—indicating well-paying jobs. However, employment density remains low at 4.4 employees per acre (on parcels with covered employment), far below the BCCP vision of 18.5 employees per acre. It is important to note that these figures only account for covered employees.[1]

Some of the land in the BCPA is actively used despite minimal reported employment. The area is primarily used for contractor establishments, including storage yards for various businesses, which typically require fewer employees. It is likely that additional workers are present but not included in the covered employment estimates, such as sole proprietors or other types of uncovered contractors.

[1] Covered employment refers to employees covered by unemployment insurance. It *excludes* sole proprietors, certain contractors ("1099 employees"), and some railroad workers.

Due to the prevalence of storage-focused contractor establishments, many lots have minimal building improvements. The improvement-to-land-value ratio is low and has changed little over the past decade.

453 acres

85 tax lots

275 covered employees

$86,000 average wage

4.4 employees per acre in areas with employment

Little change in improvement-to-land value since 2012

Areas of high and low parcelization

Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Key Components of This Study

Economic Inventory: Basalt Creek's Market Context

The Economic Inventory provides a detailed analysis of market trends and industry opportunities for the BCPA, emphasizing its potential as a regional hub for industrial development (see Appendix A for the full inventory). Since adoption of the BCCP in 2018, economic conditions have been shifting considerably. Nationally, the industrial sector continues to experience robust demand fueled by e-commerce growth, reshoring efforts, and federal investments like the CHIPS Act, which supports semiconductor manufacturing. In the Portland Metro area, industrial trends mirror national patterns, with low vacancy rates and rising rents. While demand for industrial space has slowed from the highs of 2021–2023, it is expected to remain strong in the near term.

Locally, Wilsonville's industrial sector plays a crucial role in the City's economy, with manufacturing, wholesale trade, and construction accounting for 43 percent of employment compared to 22 percent regionally. Despite this strength, industrial growth in neighboring Sherwood and Tualatin has outpaced Wilsonville, primarily due to their supply of large, development-ready parcels. In the Portland Metro area, industrial demand is primarily driven by businesses expanding or upgrading facilities rather than businesses locating from out of state. To remain competitive, Basalt Creek must be prepared to accommodate these businesses' evolving needs.

Originally, the BCCP envisioned a mix of industrial and office uses, with the High-Tech Employment District assuming 45 percent of development in the area would be office. However, the demand for office space has declined regionally and nationally, driven by the rise of remote and hybrid work. While office space will likely remain part of the BCPA, its footprint may be smaller than originally planned.

Wilsonville is well positioned to capture industrial growth, particularly in key sectors such as semiconductor supply chain, cleantech, advanced manufacturing, and logistics. Basalt Creek's proximity to major transportation networks, its skilled labor force, and its location near established industrial clusters enhance its attractiveness. However, several challenges must be addressed to realize this potential. Fragmented land ownership, existing contractor establishments, and rural infrastructure that does not meet urban standards remain key barriers to high-intensity industrial uses.[2] Addressing these obstacles will be vital to unlocking Basalt Creek's capacity to compete for its commensurate share of regional economic growth.

[2] The City is refining its infrastructure plans for the BCPA. While plans exist, the infrastructure has not yet been built and will require funding for improvements.

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Buildable Lands Inventory: Measuring Land Capacity and Development Potential

The updated Buildable Lands Inventory (BLI) revises the 2014 inventory from the BCCP, providing an updated assessment of Wilsonville's portion of the BCPA for employment-related growth (see Appendix B). It identifies developable land and highlights areas with existing economic uses that offer redevelopment potential due to low improvement values and/or low employment density.

Of the 453 acres in Wilsonville's portion of the BCPA:[3]

- **173 acres** are currently in active use and considered developed.
- **129 acres** are constrained by physical or environmental factors.
- **150 acres** are considered buildable and available for development.

This buildable land supply is distributed across a range of parcel sizes, from small lots under 5 acres to larger parcels exceeding 25 acres, offering flexibility to meet diverse industrial and employment needs. Given the 150 acres of buildable land and the expectation of employment densities between 10 and 18.5 employees per gross acre, the BCPA is expected to accommodate between 1,500 and 2,780 jobs. The BCCP estimated employment capacity at about 2,500 jobs in Wilsonville's portion of Basalt Creek in 2018.

CHANGES FROM THE 2014 BLI

Buildable Acres

The BCCP identified 130 buildable acres whereas the updated BLI shows 150 buildable acres. This 20-acre increase is primarily due to a revised assessment of constraints in West Railroad. The 2014 BLI classified much of West Railroad as constrained, but updated constraints data show more development capacity. However, this gain was partially offset by land now occupied by contractor establishments, which has been reclassified as developed, reducing buildable acres elsewhere.

Employment Density

ECOnorthwest applied the BCCP's assumption of 18.5 jobs per gross acre to model a high-density employment growth scenario. However, shifting market conditions—such as reduced demand for office space and increased demand for industrial and flex space (which typically have lower employment densities)—led ECOnorthwest to also model medium- and low-employment density growth scenarios. This approach provides a range of potential employment densities that more accurately reflect evolving market conditions.

The updated BLI provides a clearer understanding of the land available to attract industries and support future employment growth. It emphasizes the BCPA's potential to support a variety of industrial and employment uses aligned with Wilsonville's economic development goals. However, it also reveals an increase in land used for contractor establishments since the previous BLI, highlighting the decreasing supply of land for urban industrial development. This trend is likely to continue if the area remains outside the city and unprepared for urban growth.

[3] Note that the acres do not total to 453 due to rounding.

Site Suitability: Aligning Market Potential

The Site Suitability Analysis assesses the competitiveness of three opportunity sites (Figure 2) within the BCPA to host key industries identified in the Economic Inventory (Appendix B includes the full site suitability analysis). This high-level evaluation focused on physical site characteristics—such as size, location, and constraints—without factoring in the likelihood of redevelopment. It provides a broad understanding of site benefits, barriers, and potential industry suitability, serving as a foundation for planning and zoning rather than a definitive assessment of development feasibility, building configurations or sizes.

Figure 2. Opportunity Sites

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro

Infrastructure will be pivotal in shaping the types of industries and scale of development suitable for the area. This analysis incorporated available information on infrastructure elements such as water, wastewater, and roads, and planned urban improvements with development; however, detailed system capacities, final road alignments, and the timing of improvements—particularly in areas like West Railroad—remain uncertain. These factors will play a significant role in determining the market competitiveness and potential development timeline for a site.

Water and wastewater systems are expected to meet most demands, though high-water users may require additional capacity. Similarly, industries with high electricity demands, such as those requiring five megawatts or more, may necessitate infrastructure upgrades. Road alignments will impact parcel configurations, building sizes, and overall development potential. While these elements are critical to understanding site suitability, they are not yet classified as definitive constraints or advantages.

- **The SW Greenhill** site spans 57 acres, with 91 percent (52 acres) of the land unconstrained. Minimal slopes (affecting 11 percent of the site), a high proportion of undeveloped land, consolidated land ownership (two owners), and proximity to existing infrastructure make it one of the most development-ready locations in Basalt Creek. The site could be physically suitable for high-tech supply chain, cleantech industries, advanced manufacturing, food processing, warehousing and distribution, and industrial business parks or R&D campuses. Its proximity to transportation networks and regional workforce access further enhances its competitiveness.
- **The Craft Industrial** area is split into eastern and western portions by site constraints and consists of seven tax lots with fragmented ownership, most under five acres. Only 14 acres are unconstrained, and its proximity to residential areas limits its suitability for high-intensity industrial uses. Instead, the area aligns with the BCCP's vision for small scale or micro-industrial uses, such as live-work spaces or makerspaces.

  With site aggregation, the southeastern portion could accommodate small-scale industrial or office users on up to five acres. These uses could resemble industrial condo developments like the Commerce Circle Business Park or Riverwood Business Center in Wilsonville, which integrate office and small-scale production spaces. The northeastern portion, while it could also redevelop, is likely less appealing due to its irregular shape and nearby high-value residences. The presence of existing residences, including some high-value homes, are likely to delay redevelopment timelines compared to other opportunity sites.
- **The West Railroad** site spans 165 acres, with 55 percent (90 acres) of the land unconstrained. Its large parcels and access to regional transportation networks could make it physically suitable for uses such as general manufacturing, food processing, and warehousing or distribution. Proximity to Coffee Creek's industrial area further enhances its appeal to businesses providing support services to neighboring industries. However, significant infrastructure upgrades are required, and access is limited by only one established point of vehicular ingress and egress, as well as the low railroad undercrossing on SW Grahams Ferry Road, which does not currently allow passage by standard-height semi-trucks. Additionally, the site's proximity to a rail line and a mining operation could make the site less attractive to advanced manufacturing or other industries sensitive to vibration. Ongoing infrastructure alignment and capacity studies will provide further clarity on the site’s suitability for targeted industries.

Contractor Establishments: Redevelopment Opportunities and Challenges

Contractor establishments have a substantial presence in Basalt Creek, particularly in West Railroad and along SW Day Road (Appendix C includes the full analysis of contractor establishments). These properties—often comprising small offices, storage buildings, and laydown yards—contribute limited employment and yield lower property values compared to urbanized industrial land. Figure 3 identifies the current land use categories and highlights areas occupied by contractor establishments.

While the Site Suitability Analysis assessed opportunity sites based on physical characteristics and their potential to support target industries should landowners opt to develop or redevelop, this analysis evaluates the redevelopment potential of contractor establishments under current market conditions.

Figure 3. Land Use Categories with Constraints, BCPA, 2024

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro

Key Findings

Existing contractor establishments generate substantial income for property owners, reducing their motivation to sell or redevelop. For redevelopment to be financially viable, urban industrial rents would need to increase by 60 percent or more to justify the investment. Developers assess property value based on what remains after accounting for construction, entitlement, and operational costs, as well as conservative revenue assumptions. In Basalt Creek this is likely to result in developers offering less than what existing owners value their property for, especially when they are already hosting or running successful contractor establishments.

Relocation options for businesses currently occupying these sites are limited, creating additional challenges. Owner-occupied properties are even less likely to redevelop, as owners face relocation costs and potential increases in operational expenses. With limited regional industrial land, relocation could push these businesses farther from their markets, increasing costs for labor, transportation, and operations. Without considerable increases in urban industrial rents or land values, redevelopment for these properties remains unlikely.

Contractor establishments are unlikely to transition to higher intensity uses without City intervention. The gap between property values expected by owners and what developers can pay is unlikely to close naturally, as rising rents for industrial uses will likely coincide with increased contractor establishment rents. If the City seeks to promote urban industrial development in these areas, a more proactive approach will be necessary, including targeted incentives and policies to encourage redevelopment.

Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Conclusion and Recommendations

The BCPA offers a unique opportunity for Wilsonville to support regional economic growth and industrial development. Its strategic location near transportation networks, access to a skilled labor force, and proximity to established industrial clusters position the area as a strong candidate for attracting businesses supporting semiconductor supply chain, cleantech, advanced manufacturing, and logistics. However, realizing this potential will require addressing critical challenges and capitalizing on existing opportunities.

Fragmented land ownership and contractor establishments, which continue to be approved under Washington County's jurisdiction, remain barriers to the higher-intensity urban industrial uses envisioned in the BCCP. These establishments generate substantial revenue for property owners, reducing the incentive to sell or redevelop. For redevelopment to occur, urban industrial rents would need to rise substantially to bridge the gap between property owners' expectations and what developers are willing to pay. However, this gap is unlikely to close in the near term because as urban industrial rents rise, contractor establishment rents are also likely to increase. Additionally, relocation options for contractor establishment businesses, especially for owner-occupied properties, are limited, creating further challenges.

Rural infrastructure that does not meet urban standards also remains a key barrier to industrial development. This issue affects the feasibility of both immediate development and long-term growth, particularly in West Railroad where access is limited and the railroad undercrossing on SW Grahams Ferry Road precludes truck passage. Addressing these constraints is essential to unlocking the area's potential for higher-density employment uses.

Despite these challenges, there are clear opportunities. Development-ready sites and engaged property owners provide a strong starting point. Stakeholders have expressed a willingness to invest in infrastructure improvements if given access to large unconstrained sites, creating potential for catalytic projects that could spur additional development.

Wilsonville must balance its development goals with market realities. The Portland Metro area's industrial demand is driven by businesses expanding or upgrading facilities. Imposing restrictive requirements, such as mandating a high share of manufacturing, could deter development and drive users to more accommodating locations. Additionally, declining demand for office space nationally and regionally, driven by remote and hybrid work trends, suggests a reduced role for office uses compared to the original BCCP. While there are some exceptions to weak demand for suburban office space, our assessment is that the Portland Metro market dynamics are more consistent with national trends.

In conclusion, Basalt Creek presents a strong opportunity for Wilsonville to foster economic growth and industrial expansion. However, achieving this vision requires overcoming substantial challenges related to land use, infrastructure, and market dynamics. These findings provide the foundation for identifying actionable steps to unlock the area's full potential and align development with the City's long-term goals.

Recommendations

The recommendations for the BCPA are structured into four categories: **Further Exploration, Planning, Funding, and Investment.** These strategies address zoning, infrastructure, and development challenges while providing a phased approach for implementation. Central to these recommendations is the recognition that the status quo is unlikely to change without the City taking a more direct approach to encouraging development. Challenges such as fragmented ownership, the presence (and continued growth) of contractor establishments, and substantial needed infrastructure upgrades to serve urban developments are unlikely to resolve without City intervention.

Wilsonville can approach Basalt Creek's development with varying levels of involvement. A conservative approach would prioritize zoning and regulation, planning control, and limited infrastructure investments to guide development. A more proactive approach would accelerate the BCPA's vision by supporting relocation of contractor establishments, acquiring and aggregating land, and investing in additional infrastructure needs in areas like West Railroad. Which strategy the City chooses will ultimately depend on balancing risks with the desire to unlock the area's potential.

FURTHER EXPLORATION

This category focuses on gathering data, engaging stakeholders, and building a foundation of knowledge to support strategic decisions.

- **Outreach to Property Owners**: Engage with property owners to understand their development plans, challenges, and willingness to participate in redevelopment efforts. Explore opportunities for land assembly and redevelopment partnerships.
    - *Craft Industrial Opportunity:* Engage with landowners in the Craft Industrial area to explore dividing the site into east and west portions (by partitioning lots), focusing on creating developable parcels that align with the area's potential and constraints.
- **Coordinate with Portland General Electric (PGE) on Power Needs**: Collaborate with PGE to evaluate existing and future power requirements for industries such as advanced manufacturing and semiconductor supply chains, as identified in the Economic Inventory.
- **Explore Partnerships**: Identify opportunities to work with public entities (e.g., Port of Portland, Business Oregon, Greater Portland Inc.) and private partners to align resources and attract desired industries.
- **Support Contractor Establishment Relocation or Compliance:** Develop strategies to help contractor establishments relocate or consolidate or conform with City standards. This could involve creating incentives for relocation or, if necessary, working with them to bring existing operations into compliance with City service and land use standards.

PLANNING

Strategic planning ensures the alignment of zoning, policies, and infrastructure with long-term economic goals.

- **Apply the Planned Development Industrial (PDI) Zone across Basalt Creek with Modifications.** This approach would support a wide range of industrial and office uses consistent with the BCCP and the Economic Inventory. It allows the market to determine the most appropriate locations for various business types while still prioritizing industries aligned with the City's employment and wage goals.
  - *Prohibit Low-Intensity Uses and Address Existing Contractor Establishments.* Establish zoning prohibitions or limitations on low-intensity uses, such as contractor establishments, that do not meet long-term employment density goals. For existing contractor establishments, determine the appropriate regulatory approach, such as designating them as conditional, nonconforming, or prohibited uses.
  - *Evaluate Additional Standards or Allowances for the Craft Industrial Area.* Given the site's constraints and proximity to residential development, the Craft Industrial Area has limited development potential. To maximize its utility, consider allowing additional uses—such as live-workspaces, small-scale offices, and small-scale production facilities—that may not fully align with the current PDI zone. This could involve creating a separate zoning designation or an overlay to expand the range of permitted uses within the PDI zone.
- **Update Urban Planning Area Agreement (UPAA)**: Amend agreement with Washington County to transfer planning authority for Basalt Creek to the City, ensuring alignment with Wilsonville's long-term vision. This would reduce the risk of continued low-intensity uses, alleviate staffing burdens at the County level, and reduce future pressures to expand the urban growth boundary (UGB).
  - *Example*: Troutdale has an Intergovernmental Agreement with Multnomah County that transfers planning authority to the City for areas within its UGB.
- **Preliminary Urban Renewal Area (URA) Analysis**: Evaluate the feasibility of establishing a URA or expanding the Coffee Creek URA to help fund infrastructure improvements and catalyze development. NOTE: The City already has funding for this task as part of the Wilsonville Industrial Land Readiness project.
- **Consider a Development Plan for West Railroad**: Develop a plan for West Railroad that balances industrial development with community priorities. While the BCCP deemed much of the site unbuildable and omitted detailed future use recommendations, the City has continued to address the area in broader land use and infrastructure planning. Building on these efforts, the plan should involve input from landowners, potential users, and ideally a master developer to ensure alignment with stakeholder needs and market trends. Importantly, creating this plan would not preclude zoning the area to guide immediate development efforts.

FUNDING

Identifying and securing funding sources will be critical to addressing infrastructure needs and supporting redevelopment.

- **Explore and Establish Funding Mechanisms such as:**
  - Use Urban Renewal to finance infrastructure improvements and reduce barriers for developers pending the results of the URA feasibility study.
  - Explore the potential for Local Improvement Districts (LIDs) and/or public-private partnerships to share costs and responsibilities. NOTE: Cost sharing mechanisms of owners of contractor establishments may be less attractive if they do not need the infrastructure improvements or connections to continue business operations.
- **Explore and Leverage State and Federal Funding:** Leverage grants, loans, and other funding programs to support infrastructure upgrades and attract investment. These could include, but are not limited to:[4]
  - Statewide Transportation Improvement Program (STIP)
  - Immediate Opportunity Fund (IOF)
  - Oregon Transportation Infrastructure Bank (OTIB).
  - Safe Drinking Water Revolving Fund (SDWRLF).
  - Water Wastewater Fund (W/W).
  - Special Public Works Fund (SPWF).
  - U.S. Economic Development Association (EDA) Public Works Program

INVESTMENTS

Targeted investments will help unlock development opportunities and create momentum for future growth.

- **Develop Infrastructure**: Focus early infrastructure improvements on properties that are cost-effective to serve and likely to develop in alignment with the BCPA vision, such as the SW Greenhill Road site. These early investments can demonstrate feasibility and attract additional development.
  - The City could collaborate with property owners, Greater Portland Inc. (GPI), and Business Oregon to attract a catalytic user that could justify and accelerate infrastructure development for the site. Combining this strategy with site acquisition efforts and development planning for West Railroad would further enhance its effectiveness and overall development potential.
- **Provide Development Incentives such as**:

[4] As a first step, the City should draft a list of potential projects and evaluate eligibility for funding programs; ECOnorthwest did not evaluate eligibility for these funding programs.

  - Consider system development charge (SDC) adjustments or deferrals for targeted developments that support the city's vision for BCCP and where it would not place undue burdens on funds available for capital improvements.
  - Market the City's "WIN" (Wilsonville Investment Now) program in conjunction with Basalt Creek development opportunities. NOTE: This urban renewal program would no longer be available if an area-wide urban renewal area is established.
  - Provide relocation assistance to contractor establishments to enable redevelopment. This could include support identifying alternative sites and streamlining permitting processes if those sites are in Wilsonville.
- **Site Acquisition and Aggregation**: Partner with public or private entities to assemble large, contiguous parcels that can support high-value industrial users. Consider using Urban Renewal funds and public partner contributions to facilitate these efforts.
  - The City could explore securing **purchase options** on key parcels to facilitate land assembly. A purchase option allows the City the right to buy property within a specified timeframe, offering flexibility without the immediate cost of full acquisition. This proactive approach provides leverage and control over future development while allowing the City to decline the purchase if circumstances change or acquisition becomes unfeasible. To advance this strategy, the City should identify and prioritize purchase option agreements with property owners of high-opportunity sites, building momentum for collaboration and development.

Phasing

The implementation of the BCPA recommendations is structured into three phases: Immediate (0–3 years), Midterm (3–7 years), and Long-Term (7–15 years). Each phase focuses on actionable steps to address development challenges, align infrastructure, and catalyze economic growth while adapting to market trends.

IMMEDIATE ACTIONS (0–3 YEARS)

The initial phase establishes the foundational elements for Basalt Creek's development by addressing zoning, engaging stakeholders, and identifying funding strategies. Key priorities include:

- Establish zoning
- Amend UPAA with Washington County
- Engage property owners to discuss future plans, development potential, and incentives
- Explore ways to support contractor establishment relocation and/or accommodate and bring them to City standards (urban industrial development)

- Analyze funding needs and sources and develop funding strategy to support infrastructure investments and other priorities such as land acquisition and developer incentives
- Explore partnerships
- Coordinate with PGE on anticipated power needs
- Prioritize infrastructure to properties that are both high opportunity and "low-cost-to-serve," to showcase early wins

MIDTERM ACTIONS (3–7 YEARS)

This phase builds on early successes by advancing funding mechanisms, solidifying plans for key areas, and fostering development agreements. Major actions include:

- Adopt funding mechanisms to support infrastructure investments and other priorities (this is a likely prerequisite to land acquisition)
- Acquire key parcels (or purchase options) as opportunity and funding allows
- Develop West Railroad's development plan with input from landowners, potential users, and preferably a master developer
- Secure initial development agreements and fund major infrastructure upgrades through URA or other funding mechanism
- Continue to coordinate with PGE

LONG-TERM ACTIONS (7–15 YEARS)

The final phase focuses on sustaining Basalt Creek's momentum by adapting to market trends and completing infrastructure build-out to support full site utilization. Long-term priorities include:

- Monitor market trends and adjust zoning or policies to accommodate emerging industries
- Complete phased infrastructure build-out to support full site utilization

This phased approach ensures that Basalt Creek's development progresses systematically, balancing immediate actions with long-term investments to achieve the City's vision for economic growth and industrial expansion.

1. Introduction

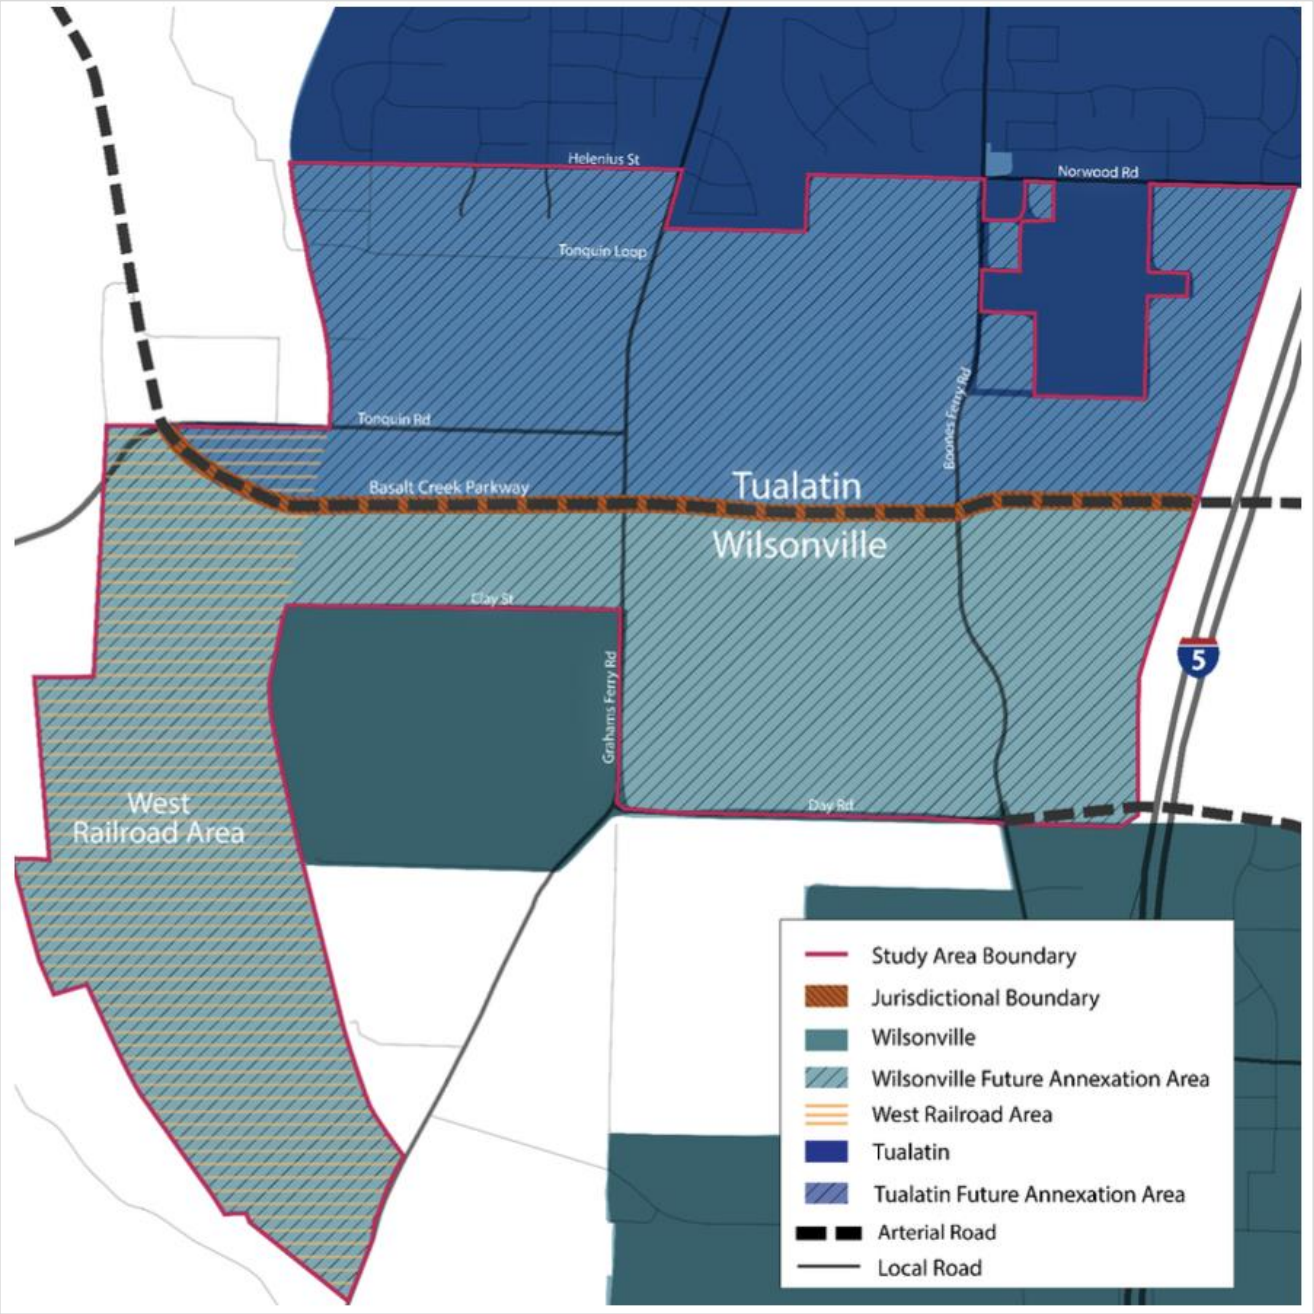
Purpose and Background

After a multiyear planning process, Wilsonville, in partnership with Tualatin, developed and adopted the Basalt Creek Concept Plan (BCCP) in 2018. The BCCP established a framework for development in the area over the next twenty years. Wilsonville is planning for the development of its portion of the Basalt Creek Planning Area (BCPA), located in unincorporated Washington County.

The City adopted the BCCP in anticipation of future industrial development. However, at the time of adoption, a number of implementation steps remained. In the years following the adoption of the BCCP, Washington County has approved development consistent with County zoning. The BCPA now hosts several contractor establishments that, while providing jobs and economic activity, are not the type of development or commerce envisioned in the Concept Plan.

The City is currently working on the final implementation steps to make the BCPA development ready. These steps include designating the zoning to be used in the area as well as refining infrastructure funding plans. Since adoption of the BCCP in 2018, significant economic shifts have occurred at national, state, regional, and local levels to be considered during the current implementation steps. Given these economic shifts, reassessing Basalt Creek's market conditions is crucial for Wilsonville's implementation process. This reassessment will help ensure that development plans align with current economic realities and future projections.

To understand the changing market conditions, Wilsonville engaged ECOnorthwest to conduct an updated market assessment and industrial lands study for Wilsonville’s portion of Basalt Creek. This Economic Inventory report is a key component of that study, providing an overview of the current economic conditions and trends affecting the BCPA. The findings from this analysis will inform recommendations on how to translate the BCCP’s land use concepts into zoning designations and inform infrastructure planning to support economic development opportunities in the area.



Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Basalt Creek Planning Area Overview

The Basalt Creek Planning Area (BCPA) is an 847-acre area located in unincorporated Washington County between the southern border of incorporated Tualatin and the northern border of incorporated Wilsonville. This report focuses on the Wilsonville section, which includes 480 acres within the designated Wilsonville Future Annexation Area and West Railroad Area (as depicted in Figure 1). The BCPA is centrally located in the southern portion of the Portland metro, easily accessible and connected to other growing industrial areas, including Sherwood and Tualatin. It has access to the Portland metro and Mid-Valley labor sheds, making it well positioned to attract various types of industry.

Currently, the Wilsonville portion of the BCPA falls under Washington County's Future Development 20-Acre District (FD-20) zoning, which allows a variety of low-intensity uses. The area has limited development, with much of the developed land used for contractor establishments, including storage of equipment and vehicles. A contractor establishment is a facility where contractors and/or subcontractors store and organize their tools, equipment, supplies, and materials. These facilities can include buildings, grounds, or structures, and often have outdoor storage and assembly areas. While important uses, these lands host limited employment and assessed property value, much less than the employment densities and development typologies envisioned in the BCCP and typical of land within the metro urban growth boundary (UGB) and incorporated City limits.

Figure 1: Basalt Creek Planning Area

Source: Basalt Creek Concept Plan, 2018. Note: Wilsonville's portion of the Basalt Creek Planning Area (BCPA) is inclusive of the Wilsonville Future Annexation Area and West Railroad Area.

How does the Basalt Creek Concept Plan guide development?

After a multiyear planning process, Wilsonville, in partnership with Tualatin, developed and adopted the Basalt Creek Concept Plan (BCCP) in 2018. The BCCP established a framework for development in the area over the next 20 years. The BCCP identifies preferred land uses across the area and strives to coordinate future land use, transportation, and infrastructure investments between Tualatin, Wilsonville, and Washington County. In particular, the BCCP:

- Established a vision for urbanization of the Basalt Creek Planning Area
- Established a new jurisdictional boundary between Tualatin and Wilsonville (to determine which parts of the Planning Area may be annexed into and served by each City)
- Identified conceptual land uses across the area
- Recommended high-level designs for transportation and infrastructure systems to support future development
- Set specific action items and implementation measures

GUIDING PRINCIPLES

Guiding Principles represent the collective interests and goals for the Basalt Creek Planning Area, as agreed to and established by the Joint Councils of Tualatin and Wilsonville.

- **Maintain and complement the Cities' unique identities.**
- **Capitalize on the area's unique assets and natural location.**
- **Explore creative approaches to integrate jobs and housing.**
- **Create a uniquely attractive business community unmatched in the metropolitan region.**
- **Ensure appropriate transitions between land uses.**
- **Meet region responsibility for jobs and housing.**
- **Design cohesive and efficient transportation and utility systems.**
- **Maximize assessed property value.**
- **Incorporate natural resource areas, and provide recreational opportunities as community amenities and assets.**

Land Use Designations

The BCCP identified a mix of land use designations for the area based on its land suitability analysis and adjacent land uses. For Wilsonville, the BCCP proposed four main land use designations. However, West Railroad did not include a specific concept because it was viewed as having lower development potential and was slated for future study and consideration. These designations, as defined in the BCCP, are:

HIGH-TECH EMPLOYMENT DISTRICT

Most of the buildable acres in the Planning Area south of the proposed Basalt Creek Parkway are devoted to a mix of higher-density employment land. The High-Tech Employment District is expected to accommodate the largest number of jobs (1,916) with a mix of warehousing, manufacturing, and office buildings. This land use is in the southern and eastern sections of the Planning Area, covering all Wilsonville land east of SW Boones Ferry Road and most of the land south of SW Clay Street, which extends to SW Day Road and is bordered to the west by Coffee Creek Correctional Facility.

The BCCP assumed the following breakdown of uses for the High-Tech Employment District, which helped estimate the amount of traffic the development would generate.

Table 1. BCCP Assumed Breakdown of Uses for the High-Tech Employment District

USE	SHARE
Retail	1%
Office	45%
Industrial	38%
Warehousing	15%
TOTAL	**100%**

Source: Basalt Creek Concept Plan, 2018. Note: Share may not equal 100% due to rounding.

CRAFT INDUSTRIAL

The southwest corner of the intersection of SW Boones Ferry Road and the new Basalt Creek Parkway is planned as Craft Industrial, which allows for a mix of smaller-scale commercial uses and may include live-work units. These envisioned development types respond to the topography on those parcels and their location directly south across the Parkway from residential land and southwest of the neighborhood commercial node across the Parkway in Tualatin. Craft Industrial is a better fit with those surrounding uses, providing a transition to the higher-intensity employment uses to the south. This area allows less than 20 percent residential use and is expected to accommodate 27 new jobs and 6 new housing units in the form of live-work units.

The BCCP assumed the following breakdown of uses for the Craft Industrial District, which helped estimate the amount of traffic the development would generate.

Table 2. BCCP Assumed Breakdown of Uses for the Craft Industrial District

USE	SHARE
Retail	24%
Office	31%
Industrial	44%
Warehousing	1%
TOTAL	100%

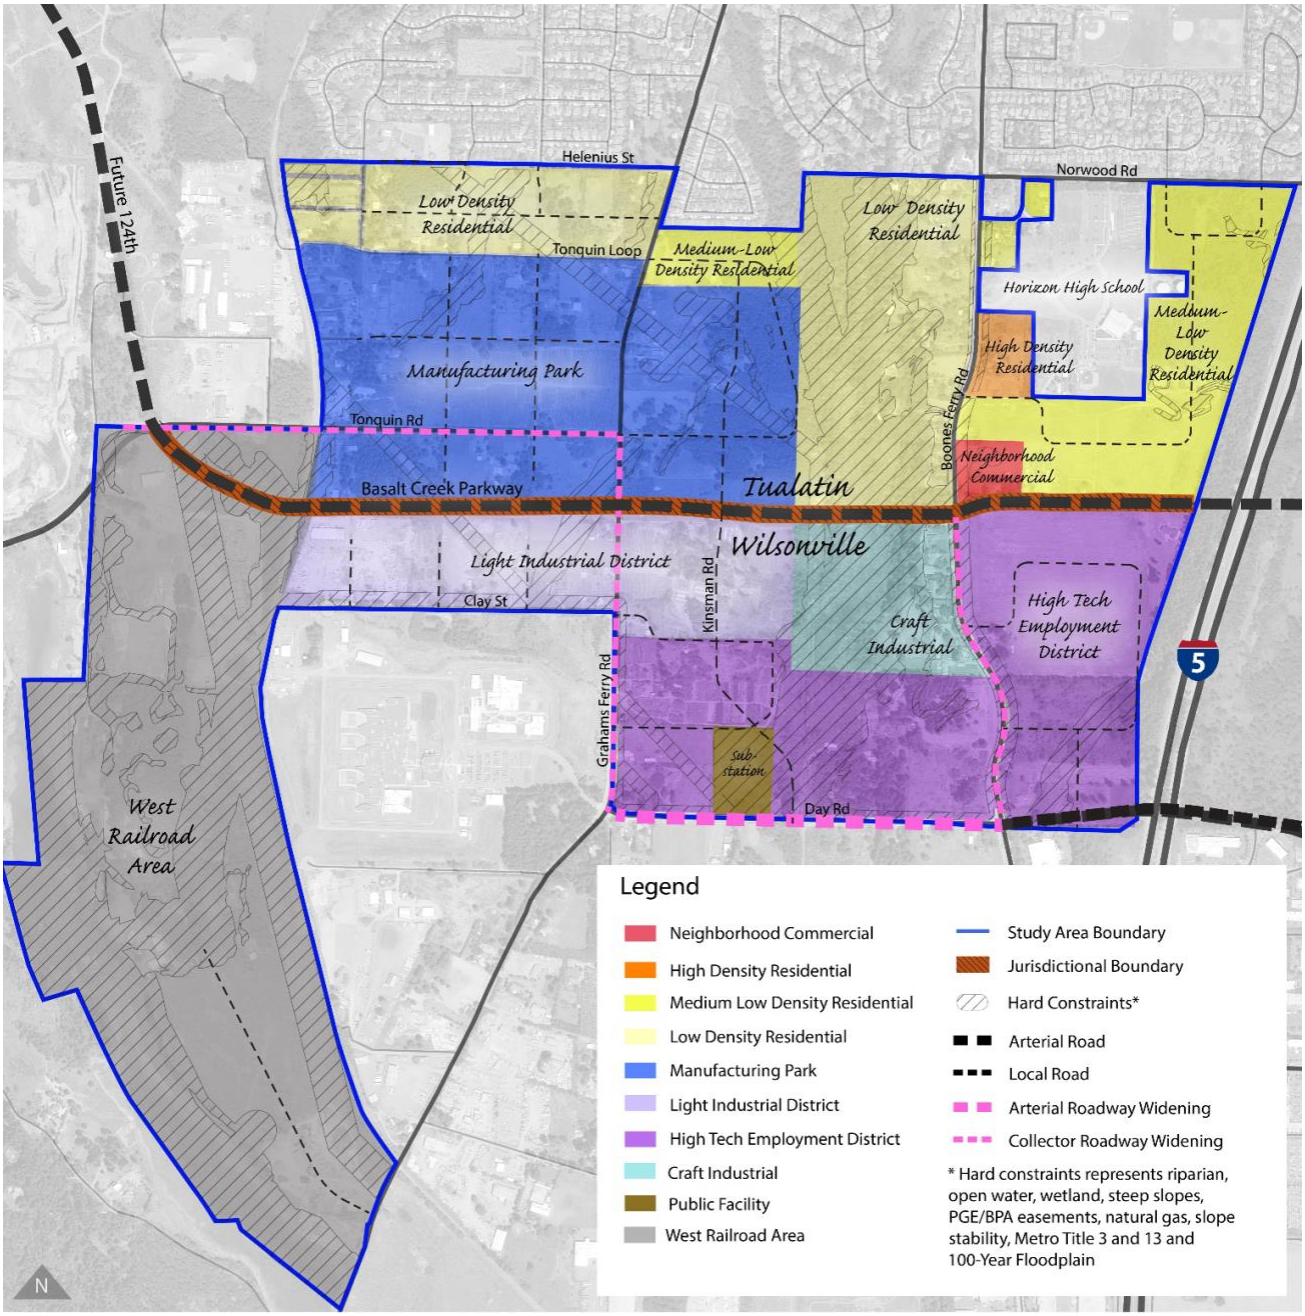
Source: Basalt Creek Concept Plan, 2018. Note: Share may not equal 100% due to rounding.

LIGHT INDUSTRIAL DISTRICT

This land is located across the southern edge of Basalt Creek Parkway and its future extension just north of Coffee Creek Correctional Facility, and it will be able to accommodate 581 new jobs, primarily in warehousing and light manufacturing.

The BCCP assumed the following breakdown of uses for the Light Industrial District, which helped estimate the amount of traffic the development would generate.

Table 3. BCCP Assumed Breakdown of Uses for the Light Industrial District



USE	SHARE
Retail	1%
Office	19%
Industrial	69%
Warehousing	11%
TOTAL	100%

Source: Basalt Creek Concept Plan, 2018. Note: Share may not equal 100% due to rounding.

WEST RAILROAD AREA

The West Railroad Area is divided from the rest of the Planning Area by the Portland and Western Railroad (PNWR) and the Coffee Creek Correctional Facility. When the BCCP was adopted, the area was heavily constrained by wetlands habitat, steep slopes, and fragmented property ownership. Initial estimates indicated that it would be costly to serve this area with adequate infrastructure due to its location. However, it was identified as having potential for resource conservation, future public access to nature, and possibly additional land uses. Because it was considered to have much lower development potential than the rest of the Planning Area, a future land use scenario was not created. Additional analysis on infrastructure funding and appropriate land uses was recommended once development and extension of infrastructure occurred in the rest of Basalt Creek.

Figure 2. Basalt Creek Land Use Concept Map

Source: Basalt Creek Concept Plan, 2018.
Note: West Railroad did not include a specific concept because it was viewed as having lower development potential and was slated for future study and consideration.

Implementation Measures

The BCCP also outlined the following implementation measures for the Cities:

1. **Update Urban Planning Area Agreements (UPAAs)** to acknowledge the future jurisdictional boundary and outline what areas may be annexed by each City, as well as transfer planning authority to the Cities.
2. **Amend Comprehensive Plans** to include the adoption of the Concept Plan.
3. **Assess zoning** and make sure it is compatible with anticipated land uses in the area and special design elements in the Concept Plan. The Concept Plan suggested Wilsonville consider applying the Coffee Creek Industrial Design Overlay District (form-based code) in the area.
4. **Annex as demand occurs** based on the pace of development and begin to make utility improvements adjacent to existing City services.
5. **Consider capital improvements** to spur development via financing the infrastructure themselves for reimbursement, creating a cooperative financing district, or developing the infrastructure to induce desired development.
6. **Consider master planning** in the area.

Wilsonville updated its UPAA in 2019 and amended its Comprehensive Plan after the Concept Plan was adopted. The City is now working on developing zoning and evaluating infrastructure needs as a part of this project.

Basalt Creek Concept Plan Proposed Employment Densities

The BCCP assigned employment densities to each land use designation to align with the regional employment capacity and traffic counts. According to the Concept Plan, the Wilsonville portion of the BCPA could support 2,524 jobs across 136.6 buildable acres, for an average employment density of 18.5 employees per gross buildable acre. The specific land use designations and respective employment densities are shown below. Note: West Railroad did not include a specific concept because it was viewed as having lower development potential in the near term and was slated for future study and consideration.

Table 4: Basalt Creek Concept Plan Land Use Designations

LAND USE DESIGNATION	BUILDABLE ACRES	TOTAL JOBS	JOBS PER GROSS BUILDABLE ACRE
Craft Industrial	1.3	27	21.7
Light Industrial District	35.3	581	16.5
High Tech Employment District	94.5	1,916	20.3
Functionally Unbuildable	5.6	0	0
TOTAL	**136.6**	**2,524**	**18.5**

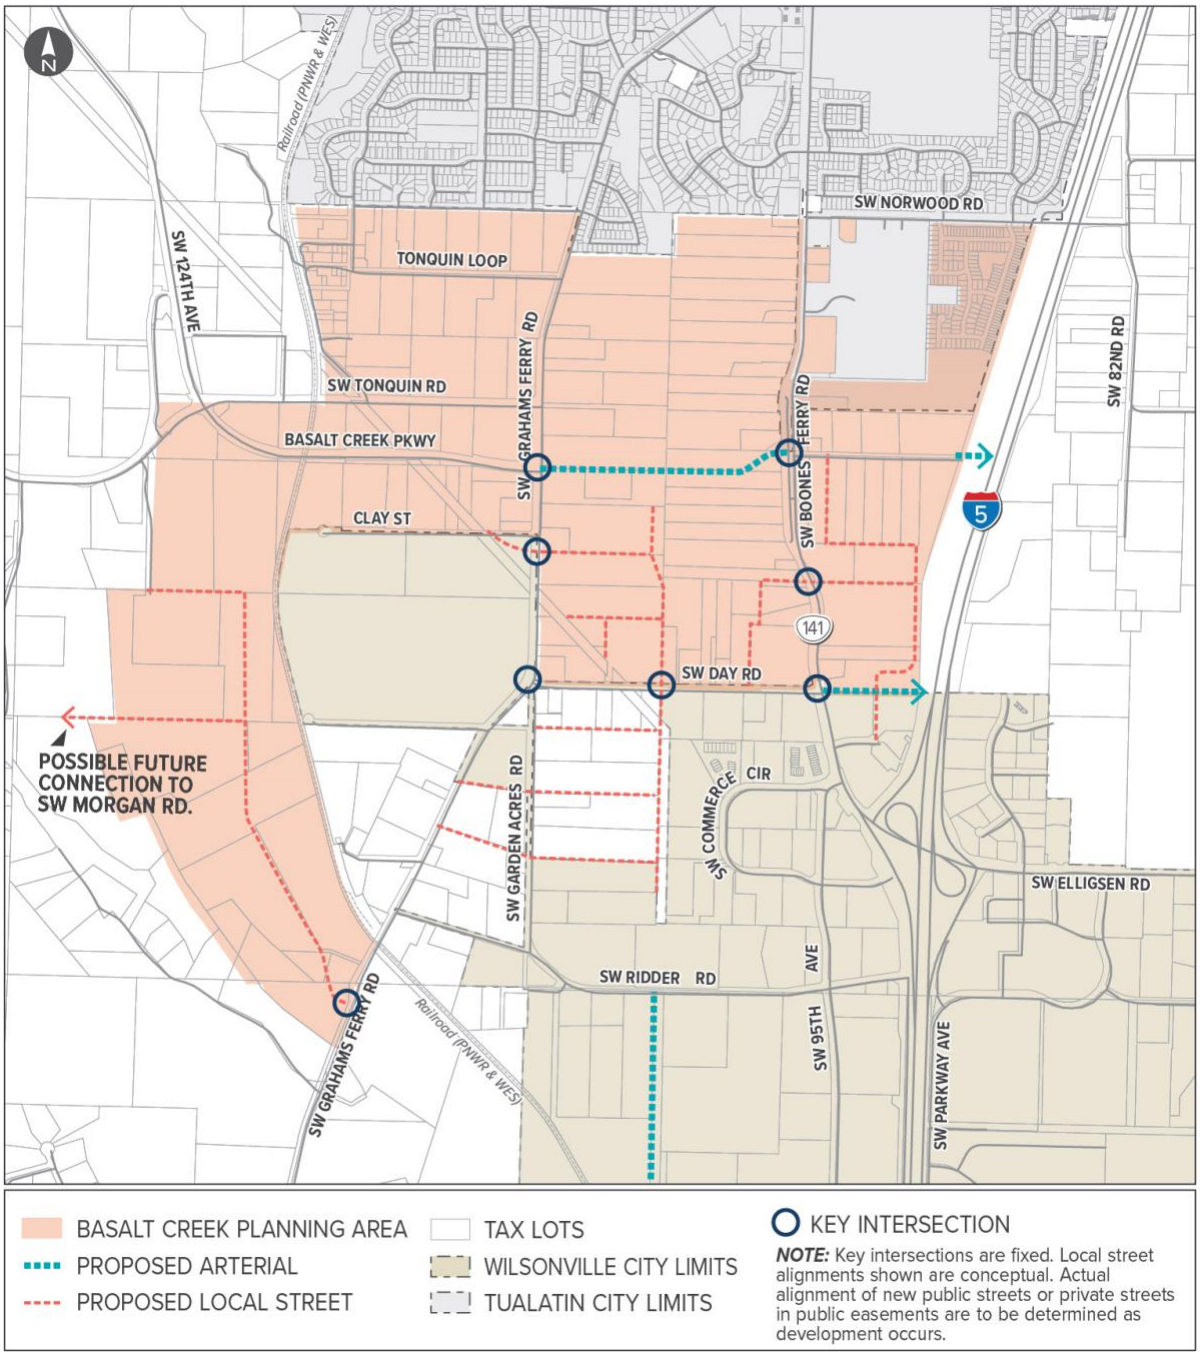
Other Guiding Plans and Documents

WILSONVILLE COMPREHENSIVE PLAN

Wilsonville's Comprehensive Plan, updated in 2024, designates Basalt Creek and West Railroad as areas of special concern (M and N), and it describes special considerations that must be addressed in development of these areas. Design objectives established for Area of Special Concern M, Basalt Creek, include:

- Consider adopting a form-based code similar to that adopted in the Coffee Creek Industrial Area for new industrial development in Basalt Creek.
- Protect key natural resources and sensitive areas while making recreational opportunities accessible by integrating the new parkland, open spaces, natural areas, and trails in Basalt Creek into existing regional networks. Development should protect, enhance, and provide access to these natural resources.
- Locate north-to-south trails near the Basalt Creek Canyon and provide bicycle connections that would connect to other cities and trail systems, serving as an asset for both residents and employees in the area.
- Provide strong transit access to support employment within Basalt Creek. Integrate transit access with the bike, pedestrian, and trail services at key access points along SW Grahams Ferry Road, SW Boones Ferry Road, SW Day Road, SMART Central, and the Coffee Creek Correctional Facility.

No design objectives were included for Area of Special Concern N, West Railroad; however, it is noted that the area will require additional planning before any development occurs.



BASALT CREEK TRANSPORTATION REFINEMENT PLAN

The 2013 Basalt Creek Transportation Refinement Plan (TRP) set the layout of major new roads and improvements for the area, including enhanced bike and pedestrian facilities and connections to the future SMART transit system. The TRP included an Action Plan that consisted of 18 transportation investments, which were prioritized according to short-term, medium-term, and long-term projects.

ONGOING INFRASTRUCTURE AND NATURAL RESOURCE PLANNING

The City is currently collaborating with several consultants to update its understanding of infrastructure needs, natural resources, and hazards in the BCPA. The City is working with DKS Associates to refine the street alignment in the BCPA. A preliminary street alignment, provided below, may undergo further changes in future iterations.

Figure 3. Proposed BCPA Street Plan

Source: DKS Associates

Simultaneously, Pacific Habitat Services is assisting the City in updating and refining natural hazard and resource maps of the area. For utility infrastructure, the City has engaged Consor to help with assessing water, wastewater, and stormwater needs, as well as with determining the costs of necessary upgrades. These collaborative efforts aim to provide a comprehensive and up-to-date overview of the area's development requirements and environmental considerations. These simultaneous projects will be incorporated and inform this planning process as information becomes available.

What has happened since the Basalt Creek Concept Plan was adopted?

Since adoption of the BCCP, significant shifts have occurred in the office and industrial real estate markets. The pandemic accelerated the trend toward remote work, leading to higher office vacancy rates and a redefinition of office space needs. Conversely, the industrial sector experienced strong growth characterized by high demand, rising rents, and robust development, which was driven in part by the federal Creating Helpful Incentives to Produce Semiconductors (CHIPS) and Science Act. National trends in these industries are detailed in Section 2, while regional and Wilsonville-specific trends are covered in Section 3.

The City of Wilsonville has not annexed any of Basalt Creek since the BCCP was adopted in 2018. As a result, the BCPA has remained under Washington County's jurisdiction and zoning. Some development has occurred at much lower densities than envisioned in the BCCP, which is allowed under the more permissive County zoning code. Many existing businesses, including contractor establishments, have few employees and are using large areas of land for equipment storage, which conflicts with the City's vision for higher employment density. These uses are permitted under Washington County zoning but do not align with Wilsonville's goals for the area, or with the goals, priorities, and industrial land needs within the greater Portland metro area. Wilsonville's portion of the BCPA consisted of 90 tax lots in 2022. Some areas have a high degree of parcelization, while others are less fragmented. There are a handful of large contiguous landholdings by single ownership. While there has been growth in contractor establishments, many of them existed before the BCCP was in place. These trends are discussed in more detail in Section 3.

The City is interested in future development in Basalt Creek that better aligns with its vision for higher industrial employment density. To make meaningful progress, the City must first establish appropriate zoning designations and plan for necessary infrastructure—key objectives of this project.

2. Changes in Market Conditions

Following the COVID-19 pandemic, office and industrial real estate markets faced challenging development conditions, particularly due to high interest rates, significantly slowing commercial real estate development activity. The increased cost of capital has made many projects economically unfeasible, especially speculative projects that rely on debt financing and those with longer loan payback periods.[1] Higher interest rates have also reduced property valuations, complicating the ability of developers to secure construction financing and attract equity investments.[2] Additionally, rising construction costs—driven by inflation and supply chain disruptions—have further complicated development efforts across these sectors.

This section examines national trends that have shaped office and industrial real estate markets in recent years. It compares these trends to projections from the 2014 Market Analysis by Leland Consulting Group, which informed the BCCP. Understanding the broader national context is crucial for several reasons: It provides a benchmark for comparing local performance. National trends often influence regional and local markets, albeit sometimes with a delay. This understanding helps identify potential opportunities or challenges that may affect Wilsonville and Basalt Creek in the future. It also allows for more informed decision-making and strategic planning at the local level.

Regional and Wilsonville-specific trends are addressed separately in Section 3, building upon this national overview.

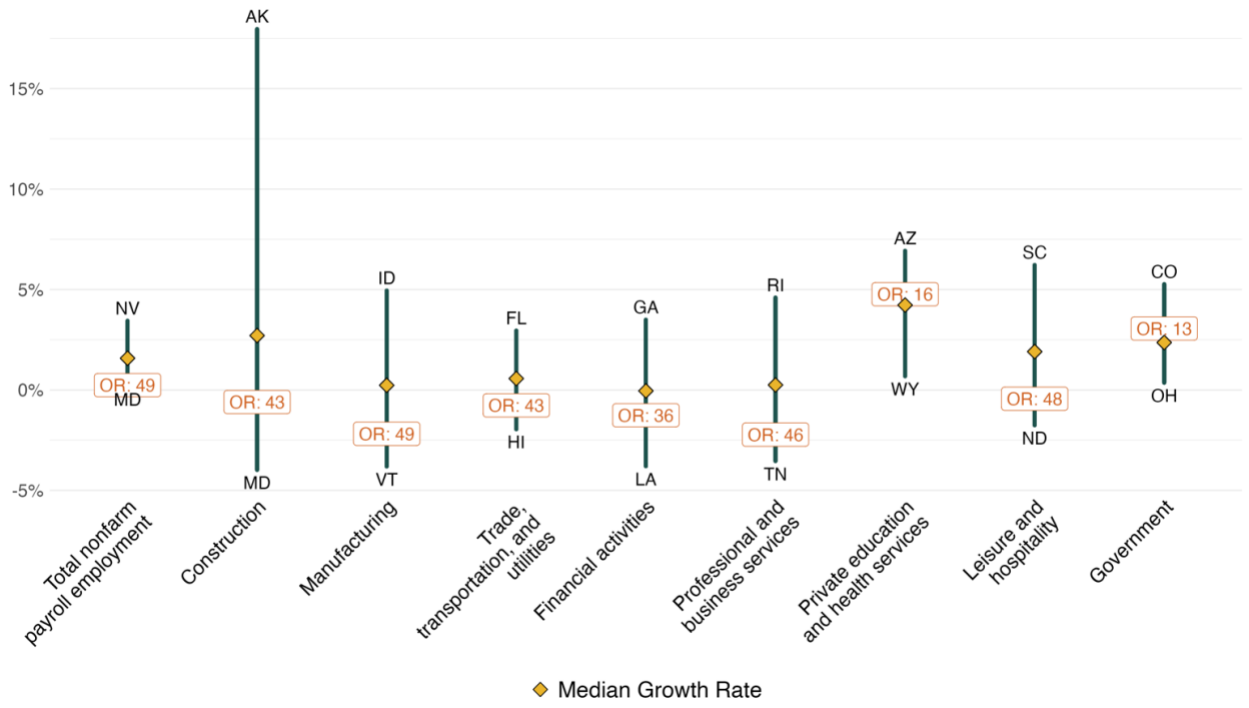
National and State Employment Trends

National Employment

The United States has seen robust employment growth since the COVID-19 pandemic. National employment increased by 21 percent between April 2020 and April 2024, surpassing prepandemic levels. The most recent year (April 2023 to April 2024) saw total nonfarm employment grow by 1.8 percent.[3]

Oregon Employment

Oregon's employment recovery, while positive overall since 2020, has fallen behind the national trend. From April 2020 to April 2024, the state's employment grew by 17 percent.



---

[1] If developers take on debt to finance a project, the longer they take to repay the loan, the more interest will accrue.
[2] In addition to loans, developers will typically finance projects in part with equity investments, in which investors become shareholders in the project.
[3] U.S. Bureau of Labor Statistics, Total Nonfarm Employment (not seasonally adjusted), 2020-2024.

However, in contrast to national growth, Oregon experienced a slight decline of 0.1 percent in employment between April 2023 and April 2024.[4]

The state's recent economic performance is concerning across multiple sectors. Oregon ranked 49th out of all states in nonfarm employment growth rate between April 2023 and April 2024. During this period, the state was among the bottom ten for employment growth (losing jobs while other states saw gains) in manufacturing, construction, trade, transportation and utilities, professional and business services, and leisure and hospitality.

Figure 4. Employment Growth Rates for All States by Sector (April 2023 to April 2024)

Source: U.S. Bureau of Labor Statistics Current Employment Survey, April 2024. Note: This figure compares Oregon's employment growth rate to all other states. For example, "OR: 49" for total nonfarm payroll employment means Oregon ranked 49th out of all states in employment growth rate between April 2023 and April 2024.

[4] U.S. Bureau of Labor Statistics, Total Nonfarm Employment (not seasonally adjusted), 2020-2024

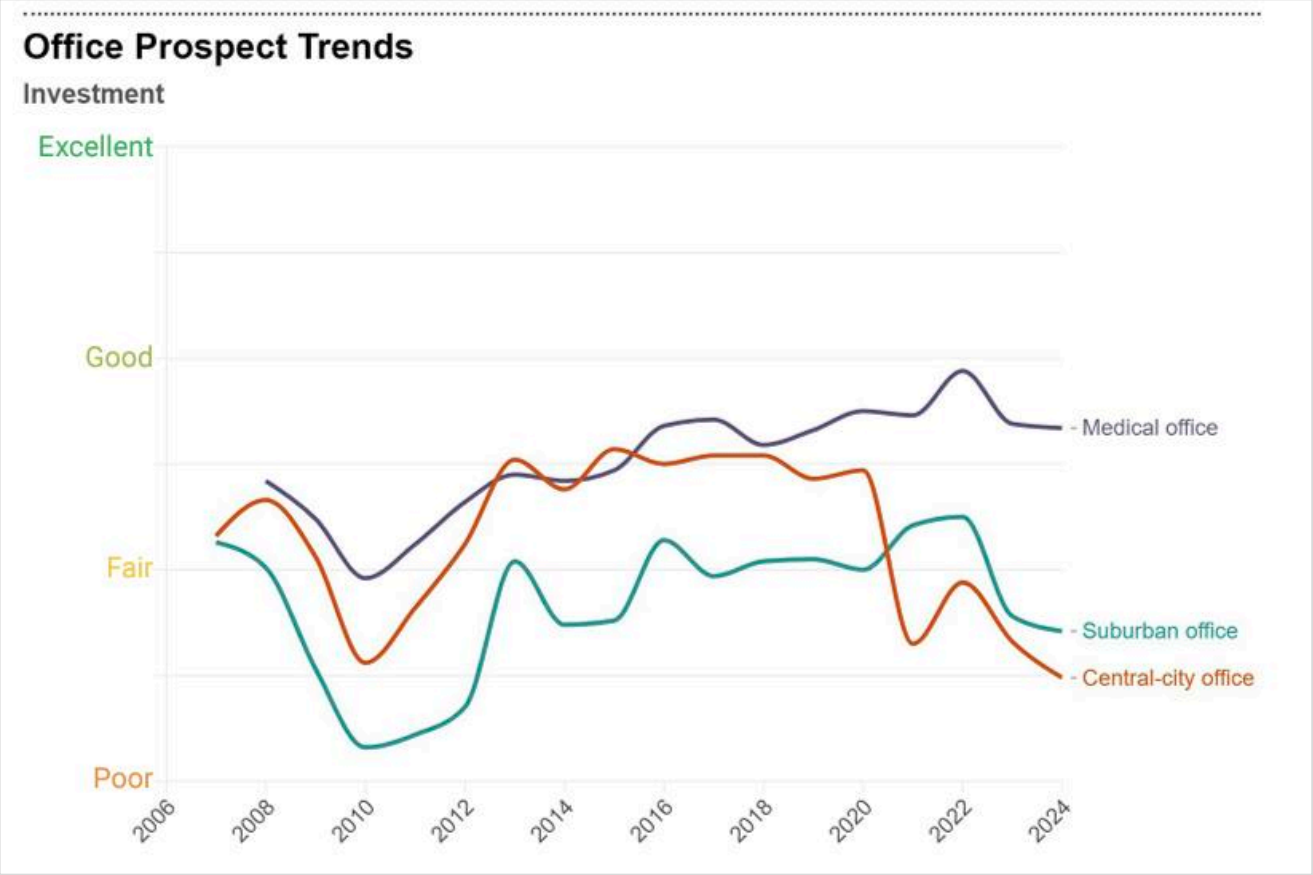
National Office Trends

This section describes national trends for office space excluding industrial, manufacturing, or flex space, which is discussed in the following subsection. The 2014 Market Analysis, which informed the Basalt Creek concept planning process, highlighted a reduced demand for office space and a less robust market, predicting a slower pace for office development. This outlook was based on the fact that regional employment levels in Portland had only recently returned to their prerecession levels of 2008.

These trends have been further exacerbated by the COVID-19 pandemic and resulting market shifts toward remote work. According to the Bureau of Labor Statistics' American Time Use Survey, the share of employees working from home rose from 24 percent in 2019 to 34 percent in 2022.[5] Nationally, the office market as a whole is declining, although high-quality office space remains in relatively strong demand. Key findings include:

- **Negative net absorption:** National net absorption for office space came in negative (at negative 18.2 million square feet) for the tenth quarter in a row.[6] However, this trend is not uniform across U.S. markets, with a third of U.S. office markets having positive net absorption. JLL, a global commercial real estate and investment management company that tracks and reports on commercial real estate dynamics, noted that many properties and markets with high negative net absorption are earmarked for conversion to other uses.[7]
- **Shrinking inventory:** The construction pipeline has decreased by 67 percent since early 2020. As of Q2, 2024 office deliveries (referring to new construction added to the market) were 27 percent below the average since 2020, and the current pipeline is at its lowest point in a decade.[8] As office inventory removals outpace market deliveries, overall office market inventory has declined.[9]
- **Favored product types:** Certain types of office space are outperforming others, with tenants favoring high-quality buildings, such as those in attractive locations or featuring additional amenities. With new construction slowing down, existing high-quality assets will likely continue to see demand as competition decreases. In contrast, older and obsolete spaces may require investment or conversion, and the performance of middle-market spaces will vary depending on factors like location, space type, and submarket.[10]

Looking ahead, the office sector is expected to adjust to a hybrid work model, with peak attendance levels stabilizing at around 60 to 70 percent. This shift will set a new baseline for office space requirements. Cushman & Wakefield predicts that office occupancy will start to stabilize in the latter half of 2025 as the pace of adjustments to hybrid spaces



[5] BLS, American Time Use Survey, 2023; does not differentiate between part- and full-time workers

slows down and growth in both employees and new businesses generate demand for office space.[11]

Figure 5 shows the Urban Land Institute's national office market investment prospect trends by secondary market type. While the investment prospect for suburban and central city office space has fallen between "poor" and "fair" in recent years, the investment prospect for medical office space has risen relatively steadily and is rated just below "good."

Figure 5: Urban Land Institute National Office Investment Prospect Trends

[11] Cushman & Wakefield, U.S. Office Marketbeat Q2 2024

National Industrial Trends

The 2014 Market Analysis, which informed the Basalt Creek concept planning process, reported that industrial space demand was likely to surge as the economy continued to recover from the 2008 recession, citing significant industrial space in the Portland region's development pipeline. It also highlighted that the I-5 South submarket would see some of the greatest demand, predicting that industrial development would continue to outpace office development—an accurate forecast.

The 2014 Market Analysis also correctly predicted stronger markets for research and development, advanced manufacturing, general manufacturing, and warehousing space. Figure 6 shows the Urban Land Institute's trends in investment prospects for industrial and distribution space nationally, showing increased development prospects for these space types from 2014 to around 2021. Historically, fulfillment and warehouse space were rated as better investment prospects than research and development, manufacturing, and flex space. However, in recent years the investment prospects for the various secondary market types have coalesced toward a similar prospect rating, just below "good."

Figure 6: Urban Land Institute National Industrial and Distribution Prospect Trends

Source: Urban Land Institute 2024 Emerging Trends in Real Estate, United States and Canada

In recent years, the industrial real estate market has shown strong performance, particularly in 2022 and 2023, though growth has started to slow in 2024. Despite this slowdown, the national industrial market remains relatively robust overall. Key trends include:[12]

- **Stabilizing vacancy rates:** Since mid-2022, vacancy rates have been rising, but the pace of increase has slowed. As of Q2 2024, the national vacancy rate stands at 6.1 precent and is expected to continue increasing. However, it remains below the 10-year prepandemic average (2010-2019) of 7 percent.
- **Positive net absorption:** Industrial market demand remains strong, with positive net absorption and rising rents. However, the rate of change has slowed compared to previous years. For instance, rents rose by 3.7 percent year over year since 2023 Q2, marking the slowest growth rate since 2020.
- **Slowing construction:** One reason for rising vacancy rates is the influx of new supply, with over 1.2 billion square feet delivered nationally in 2022 and 2023. However, the construction of new industrial projects has slowed significantly, decreasing by 46 percent from Q2 2023, reaching its lowest point in four years.

Nationally, the market is expected to stabilize over the next year as the shrinking construction pipeline and positive net absorption limit the available supply of industrial space. However, Cushman & Wakefield report that "the tailwinds of e-commerce growth, onshoring and nearshoring, and a resilient consumer all set the stage for fundamentals to trend positively going forward, albeit at a pace below 2021 and 2022 highs."[13,14] Key forecasted trends include:

- **Decreasing vacancy rates:** While vacancy rates are expected to continue to rise until early 2025, they are expected to peak at around 6.7 percent and then begin to decrease in the second half of 2025. In conjunction with this trend, annual net absorption is expected to increase through 2025.[15]
- **Increasing rents:** Although the rate of rent increase is expected to slow, asking rents for industrial space are anticipated to continue growing through 2025.[16]
- **Manufacturing growth:** According to JLL, the sustained growth in manufacturing due to reshoring trends (returning production to the United States) will likely continue to drive industrial demand nationally. Supply chains will seek strategically located facilities that can accommodate localized manufacturing, efficient distribution, and resilient inventory management systems.[17]

3. Wilsonville Basalt Creek Updated Market Assessment

The Basalt Creek Concept Plan (BCCP) was based on a market assessment conducted in 2014. In the decade since, significant changes have occurred in employment patterns and market conditions. This section provides an updated analysis of regional and Wilsonville-specific employment trends, current forecasts, and present market dynamics, building on the national overview in Section 2.

This updated information establishes a new baseline for understanding Basalt Creek's current market context. Additionally, this section evaluates Basalt Creek's competitive strengths and weaknesses and identifies industries most likely to establish a presence in the area.

Employment Trends and Forecast

In 2022, Wilsonville's employment landscape was characterized by a strong concentration in industrial sectors, with manufacturing, wholesale trade, and construction making up 43 percent of the City's total employment—a much higher share compared to the broader tri-county region. This focus on industrial jobs sets Wilsonville apart, highlighting its distinct role in the regional economy.

Employment Trends

In 2022, Wilsonville had 21,383 covered employees, representing 2.2 percent of the region's covered employment.[18] The City's top three sectors are manufacturing (17.8 percent, 3,796 jobs), wholesale trade (14.4 percent, 3,083 jobs), and construction (10.5 percent, 2,248 jobs). These three industries combined represent 43 percent of Wilsonville's total employment, nearly double the 22 percent share these sectors hold in the broader tri-county region (Clackamas, Multnomah, and Washington Counties).

This concentration in industrial jobs sets Wilsonville apart from the surrounding area. While Wilsonville's top sectors are manufacturing, wholesale trade, and construction, the tri-county region's largest employers are in health care and social assistance, government, and manufacturing.

Table 5: Industry Distribution, Wilsonville and Tri-County Region, 2022

SECTOR	WILSONVILLE		TRI-COUNTY	
	2022 COVERED EMPLOYMENT	SHARE OF EMPLOYMENT	2022 COVERED EMPLOYMENT	SHARE OF EMPLOYMENT

[18] **Covered** employment includes employees covered by unemployment insurance. Examples of workers not included in covered employment are sole proprietors, some types of contractors (often referred to as "1099 employees"), or some railroad workers. Covered employment data is from the Oregon Employment Department.

Over the past decade, Wilsonville's employment grew slightly faster than that of the tri-county region. This growth was largely driven by an increase in construction jobs, which more than tripled during this period. Although the tri-county region also experienced growth in construction jobs, Wilsonville's rate of growth was considerably higher. Wilsonville also had strong employment growth in wholesale trade. Notably, while wholesale employment rose in Wilsonville, it declined across the broader tri-county region.

In contrast, Wilsonville experienced a decline in manufacturing employment, even as the region saw growth in this sector. Wilsonville maintained stable employment in the transportation and warehousing sector, while the tri-county region grew substantially.

Table 6: Change in Employment, Wilsonville and Tri-County Region (2012 to 2022)

SECTOR	CHANGE 2012-2022			
	NUMBER		PERCENT

BASALT CREEK PLANNING AREA EMPLOYMENT

The BCPA (Wilsonville portion only) grew in employment from 2012 to 2022, with 275 covered employees reported as of 2022. The average wage in the BCPA was $85,863, which is higher than both the tri-county ($73,995) and City average wages ($74,252), suggesting these are relatively well-paying jobs.

Table 7. Change in Employment and Wage, BCPA 2012-2022

YEAR	TAX LOTS	ESTABLISHMENTS	EMPLOYMENT	TOTAL PAY*	AVERAGE WAGE*
2012	80	11.0	194	$9,593,330	$49,450
2022	90	10.0	275	$23,612,269	$85,863
CHANGE	**10**	**-1**	**81**	**$14,018,939**	**$36,413**

Source: QCEW
*not inflation adjusted

Wilsonville's portion of the BCPA consisted of 80 tax lots in 2012 and 90 tax lots in 2022. Some areas in the BCPA have a high degree of parcelization, while others are less fragmented. There are a handful of large contiguous landholdings by single ownership. In 2012, 8 tax lots had businesses with covered employment, increasing slightly to 10 tax lots in 2022. Employment density on lots with covered employment remains low at 4.4 employees per acre as of 2022, with most tax lots having no covered employment at all.

Table 8. Lots with and without Covered Employment in the BCPA, 2012-2022

	2012			2022		
	TAX LOTS	ACRES	EMPLOYMENT DENSITY	TAX LOTS	ACRES	EMPLOYMENT DENSITY
With Employment	8	62	3.1	10	63	4.4
Without Employment	72	410	n/a	80	406	n/a
Total	**80**	**472**	**0.4**	**90**	**469**	**0.6**

Source: QCEW Note: The minor change in acreage from 2012 to 2022 resulted from constructing of the Basalt Creek Parkway and small adjustments in the recording of tax lots over that period.

It is important to note that these figures only account for covered employees.[19] Some of the land in the BCPA is actively used despite minimal reported employment. The area is primarily used for contractor establishments, including storage yards for various businesses, which typically require fewer employees. It is likely that additional workers are present but not included in the covered employment estimates, such as sole proprietors or other types of uncovered contractors. Due to the prevalence of storage-focused contractor establishments, many lots have minimal building improvements. The improvement-to-land-value ratio is low and has changed little over the past decade.

Table 9. Improvement to Land Value, BCPA, 2012-2022

	LAND VALUE	BUILDING VALUE	IMPROVEMENT TO LAND VALUE
2012	$16,577,800	$6,738,020	0.41
2022	$32,892,790	$16,996,440	0.52

Source: Regional Land Information System (RLIS)

[19] **Covered** employment includes employees covered by unemployment insurance. Examples of workers not included in covered employment are sole proprietors, some types of contractors (often referred to as "1099 employees"), or some railroad workers. Covered employment data is from the Oregon Employment Department.

Employment Forecast

Between 2020 and 2045, the City is projected to grow by 3,471 employees at an average annual growth rate of 0.7 percent. This rate is faster than Tualatin but slightly slower than Sherwood and the region overall. Washington County is projected to grow the fastest of the three counties in the region.

Table 10: Metro Employment Forecast, 2020 to 2045

			CHANGE 2020-2045		
	2020	2045	NUMBER	PERCENT	AAGR
Tualatin	34,115	36,792	2,677	8%	0.3%

Source: Oregon Metro, 2045 Distributed Forecast
AAGR = Annual Average Growth Rate

For 2022 to 2032, the Oregon Employment Department (OED) forecasts the strongest growth for the Portland tri-county region in commercial sectors, led by information, leisure and hospitality, and private education and health services. However, OED also predicts growth in industrial sectors, with the strongest relative growth in the construction industry followed by transportation, warehousing, and utilities.

Table 11: Portland Tri-County Industry Projections, 2022 to 2032

INDUSTRY	EMPLOYMENT		CHANGE	
	2022	2032	NUMBER	PERCENT

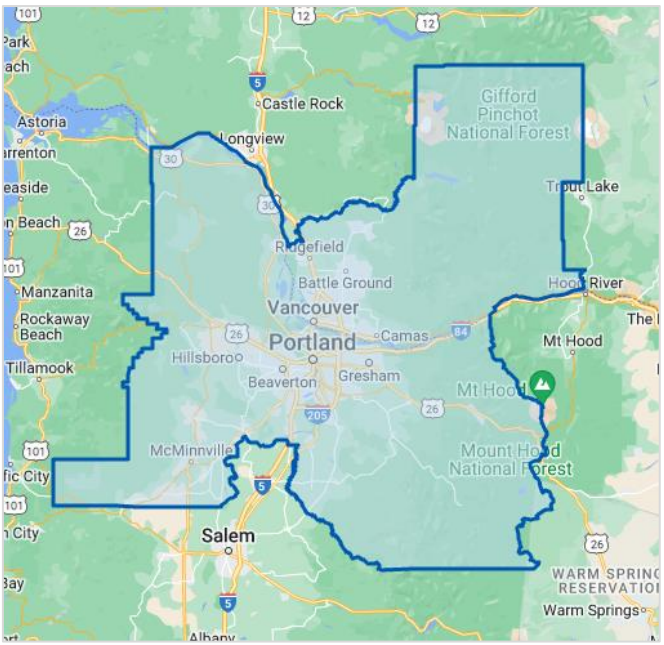
Real Estate Market Trends

The real estate market trends in Wilsonville and the Portland region generally align with the national trends outlined in Section 2. While Wilsonville's office market typically has a lower vacancy rate compared to the broader region, it has had consistently negative net absorption and recent spikes in the vacancy rate, reaching over 12 percent in 2024.

More positively, Wilsonville's industrial market has a relatively low vacancy rate, large average building sizes, and a variety of industrial space types that could appeal to a mix of tenants. Wilsonville is also well positioned to benefit from promising industrial trends in the broader region, including investments in semiconductor manufacturing and market growth that could attract tenants to the area. However, industrial development in Wilsonville has been limited over the past decade. Only 1.7 percent of its total industrial space has been built in the last 10 years, compared to 11 percent in the broader Portland metro area. According to CoStar, in the past five years, three buildings have been under construction in Wilsonville: one completed in 2022 and two slated to be completed in 2025.

NOTE ON COSTAR DATA

While CoStar data provides valuable, up-to-date data across a wide range of metrics, data quality is more limited in smaller markets and at the property level. The data here should be read as an indication of overall market statistics and trends, rather than an exact reflection of all properties in a given market.



This section analyzes real estate market trends for various submarkets encompassing the BCPA, including the I-5 South submarket (Figure 7) and the Portland metro area (Figure 8).

Figure 7: I-5 South Submarket Boundary

Source: CoStar

Figure 8: Portland Metro CoStar Boundary

Source: CoStar

Office Market Trends

Portland Metro Regional Trends

Like the national office space market, office spaces in the Portland metro are experiencing high vacancy rates and lower leasing activity. Work-from-home policies have decreased the demand for office space. Consequently, tenants have increased bargaining leverage; they are pressuring landlords to reduce rates, increase lease concessions, and raise tenant improvement budgets. Despite these adjustments, an increase in vacancies is expected, with interest rates and economic uncertainty adding volatility to the office market.[20] Other key findings include:

- **Record high vacancy rates:** High vacancy rates have continued to climb, reaching a record high of 13.3 percent vacant office space in 2024 Q2.[21]
- **Continued negative net absorption:** Net absorption in the Portland market was just over negative 500,000 square feet in 2024 Q2, the fourth quarter in a row of negative net absorption. Since the beginning of 2020, the Portland office market has only had positive net absorption for five quarters.[22]
- **Leasing activity:** Leasing and sales activity are on par with 2023, indicating that the vacancy and absorption trends are due to companies exiting the marketplace or downsizing at a higher rate, likely due to continued work-from-home policies.[23]

However, the Portland office market is not uniform, with the suburban office market performing better than the downtown and regional office markets. The Portland suburbs' office vacancy rates are 8.6 percent, compared to 23.9 percent downtown.[24]

Wilsonville Office Market

Wilsonville currently has approximately 1.4 million square feet of office space, representing roughly 18 percent of office space in the I-5 South submarket and 1 percent in the broader Portland metro region. According to CoStar, over the past decade, one office building was added to Wilsonville's market in 2020, located at 29250 Southwest Town Center Loop West. This office building was about 30,000 square feet, or roughly 2 percent of Wilsonville's total office space. Over the same period, the Portland metro added a greater share (9 percent) of

[20] Cushman & Wakefield, Office Marketbeat Q2 2024 Portland Office Report
[21] Cushman & Wakefield, Office Marketbeat Q2 2024 Portland Office Report
[22] Kidder Matthews, Portland Office Market Report Q2 2024
[23] Kidder Matthews, Portland Office Market Report Q2 2024
[24] Cushman & Wakefield, Office Marketbeat Q2 2024 Portland Office Report

space to its office market. These projects, on average, have been significantly larger than usual office buildings, with a few very large projects surpassing 100,000 square feet.

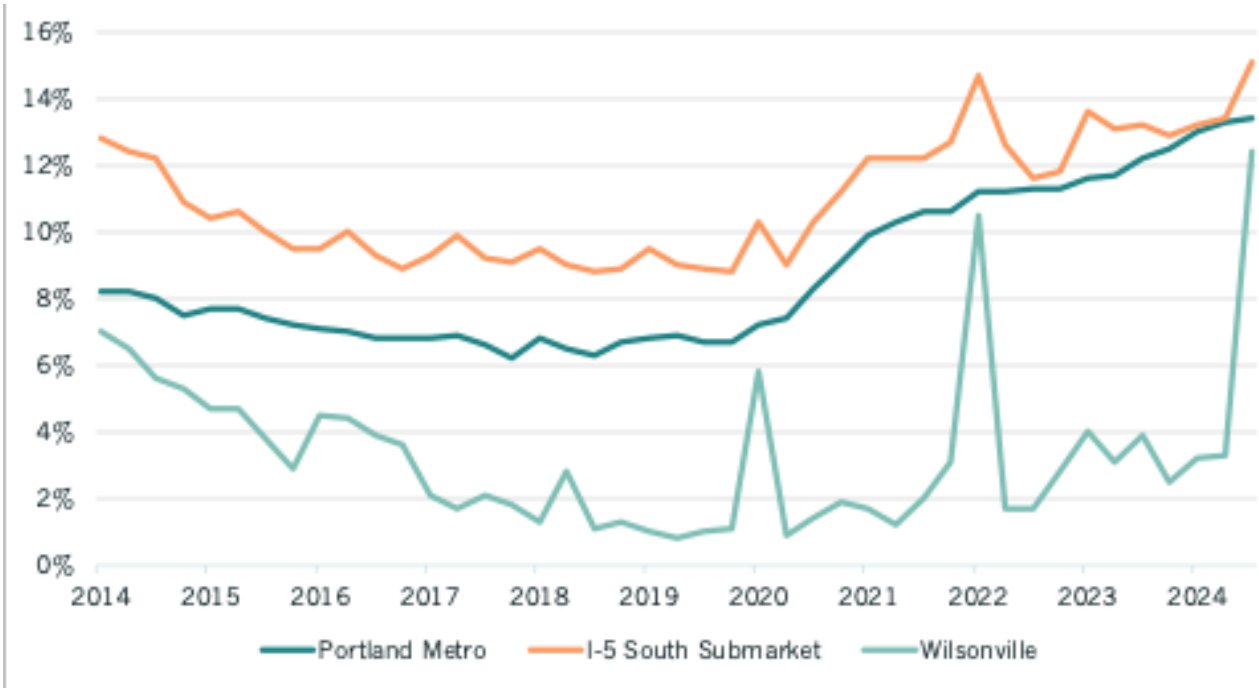


Table 12: Office Space Development Trends, 2014 to 2024

GEOGRAPHY	TOTAL BUILDINGS	TOTAL SQUARE FEET	AVERAGE BUILDING SIZE
ALL OFFICE DEVELOPMENT			
Portland Metro	6,217	118,809,170	19,110
I-5 South Submarket	431	7,533,437	17,479
Wilsonville	62	1,358,335	21,909
BUILT IN THE LAST 10 YEARS			
Portland Metro	66	10,354,342	156,884
I-5 South Submarket	4	80,976	20,244
Wilsonville	1	30,000	30,000

Source: CoStar, pulled August 2024

Per Costar, the I-5 South submarket office vacancy rates have been higher than the Portland metro's vacancy rates since 2014, although vacancy rates have been much more similar since 2022. Both have vacancy rates above 13 percent as of July 2024. While Wilsonville office vacancy rates have remained much lower, the end of a few leases are reflected in vacancy rate spikes in 2020, 2022, and 2024, when the vacancy rate spiked closer to the Portland metro average.

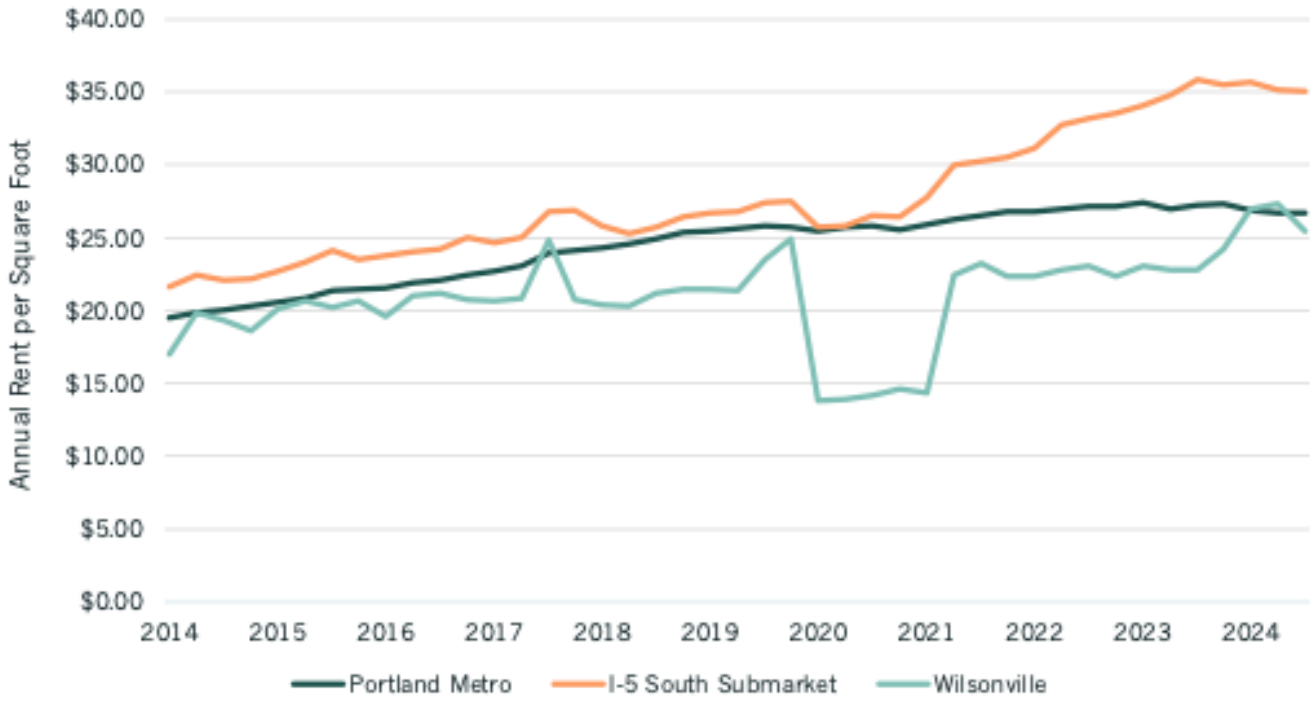

Figure 9: Office Vacancy Rate Trends, 2014-2024

Source: CoStar, pulled August 2024

Office rents have increased in the I-5 South submarket despite high vacancies, and they remain substantially above the Portland metro region's average, according to Costar. Historically, office rents in Wilsonville have been lower than in the Portland metro area. However, since an initial decline in 2020, rents in Wilsonville have risen steadily, reaching over $26 per square foot, now equal to the Portland metro average for the first time in a decade.

Figure 10: Office Lease Rate Trends, 2014-2024

Source: CoStar, pulled August 2024

Net absorption and delivery trends also indicate a relatively slow office market. From 2019 to 2024 Q3, net absorption was negative in all three areas. Over the same period, net absorption in the Portland metro area was negative 4.6 million square feet, negative 387,000 square feet in the I-5 South submarket, and negative 122,000 square feet in Wilsonville.

Industrial Market

Portland Metro Regional Trends

Like the national industrial market overall, the Portland metro area industrial market has been strong in recent years, particularly from 2021 to 2023. However, similar to national trends, a few metrics indicate that demand for industrial space is decelerating in the region:[25]

- **Increasing vacancy rates:** Vacancy for industrial space in the Portland metro region has risen steadily since early 2023, and net absorption was negative in both Q1 and Q2 of 2024. While overall leasing activity for industrial space in the area remained higher than the area's 10-year average, a few large companies downsizing or exiting the market contributed to negative net absorption and vacancy trends.
- **Slow lease-up for new construction:** The delivery of 1.2 million square feet to the market in early 2024 also contributed to the region's supply of vacant industrial space. However, newly constructed industrial space has been slow to lease up, with 93 percent of recent leasing activity in buildings built before 2010.
- **Rising unemployment rates:** In early 2024, Portland's unemployment rate (4.1 percent) surpassed the national average (3.8 percent) amid layoffs, including the shutdown of a large UPS location in North Portland, which impacted 300 sorting and distribution jobs.

However, investors and leasing professionals are confident in the regional market's long-term health, particularly due to significant investments in the region's semiconductor manufacturing sector.[26] Market strengths include:

- **CHIPS Act:** In 2022, the federal government allocated $50 billion as part of the CHIPS Act to bolster U.S. semiconductor manufacturing, which is expected to create thousands of regional manufacturing and construction jobs.[27] The expansion of the semiconductor industry could also have a ripple effect, creating demand for industrial space for equipment suppliers, supply chain materials manufacturers, and testing facilities.
- **Strong submarkets:** According to market reports from Cushman & Wakefield and CBRE, other strong industrial submarkets include food and beverage warehousing, tech warehousing, and auto part manufacturing.[28] These are some of the most common types of tenants seeking space in the market, although deals are taking longer on average to reach completion.[29]

---

[25] CBRE, Q2 2024 Portland Industrial Market Update
[26] Cushman & Wakefield, Industrial Marketbeat Q2 2024 Portland Industrial Report
[27] Cushman & Wakefield, Industrial Marketbeat Q2 2024 Portland Industrial Report
[28] Cushman & Wakefield, Industrial Marketbeat Q2 2024 Portland Industrial Report
[29] CBRE, Q2 2024 Portland Industrial Market Update

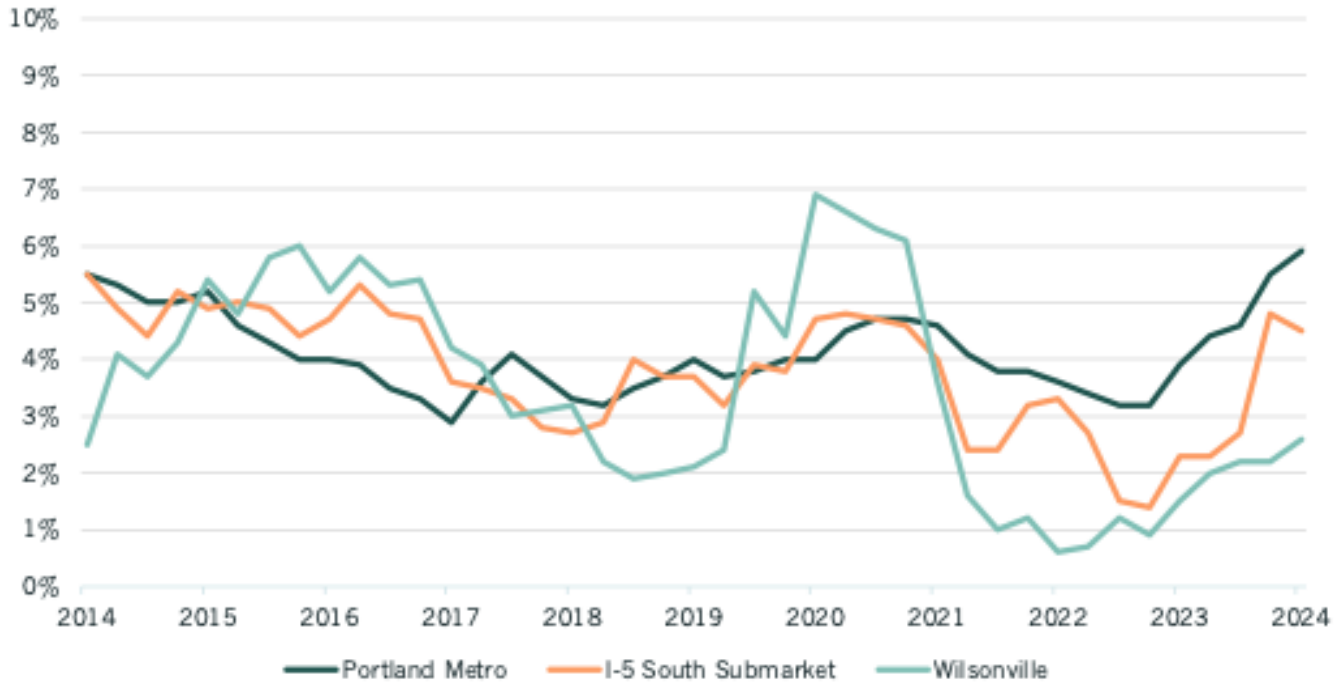
- **Market growth:** Current forecasts estimate that 2.4 million square feet will be delivered to the market in 2024, roughly 1 percent of the current Portland industrial space inventory. As reported by CBRE, investors and leasing professionals are confident that the Portland market has additional room for growth.

Wilsonville Industrial Market

Wilsonville has about 8.6 million square feet of industrial and flex space, representing roughly 24 percent of the I-5 South submarket and 3 percent of the Portland metro region's industrial space. The average size of Wilsonville's industrial building is roughly 63,000 square feet, almost twice as large as the average industrial building in the broader Portland metro (34,000 square feet).

Wilsonville has had limited industrial development in the past decade. Only 1.7 percent of Wilsonville's total industrial space was built in the last 10 years, compared to roughly 11 percent of the I-5 South submarket and Portland metro industrial space. This slow pace of development makes sense given the limited supply of developable industrial land in the City and, more precisely, the development constraints that exist on those lands.

Table 13: Industrial & Flex Space Development Trends, 2014 to 2024



GEOGRAPHY	TOTAL BUILDINGS	TOTAL SQUARE FEET	AVERAGE BUILDING SIZE
ALL INDUSTRIAL DEVELOPMENT			
Portland Metro	7,535	257,487,989	34,172
I-5 South Submarket	900	35,089,559	38,988
Wilsonville	137	8,605,081	62,811
BUILT IN THE LAST 10 YEARS			
Portland Metro	278	30,328,230	109,094
I-5 South Submarket	50	3,848,383	76,968
Wilsonville	2[30]	145,611	72,806

Source: CoStar, pulled August 2024

[30] The two buildings listed in CoStar are located at 96500 SW Parkway Ave (2025) and 10680 SW Clutter Road (2022). However, city staff noted three others: the Black Creek development in the Coffee Creek industrial area and two SSI Shredding facilities.

Wilsonville's industrial vacancy rate has remained below 6 percent for most of the past decade. In 2020 and 2021, Wilsonville saw a brief spike in vacancy, likely driven by the COVID-19 pandemic, which quickly dropped to just over 1 percent in 2022. As of July 2024, Wilsonville's combined industrial and flex space vacancy rate was 2.6 percent (Figure 12). Wilsonville's industrial vacancy rate has been below the Portland metro since 2021. As of July 2024, the Portland metro had a vacancy rate of 5.9 percent and I-5 South submarket had a vacancy rate of 4.5 percent.

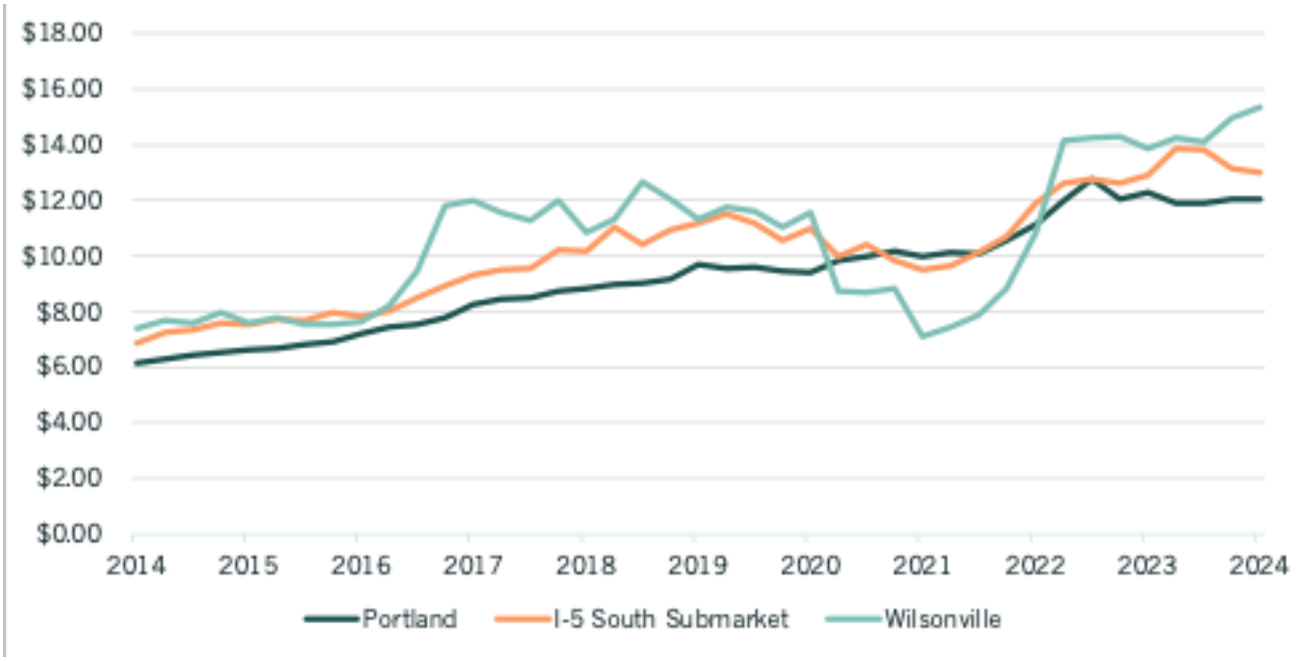


Figure 11: Industrial & Flex Vacancy Rate Trends, 2014-2024

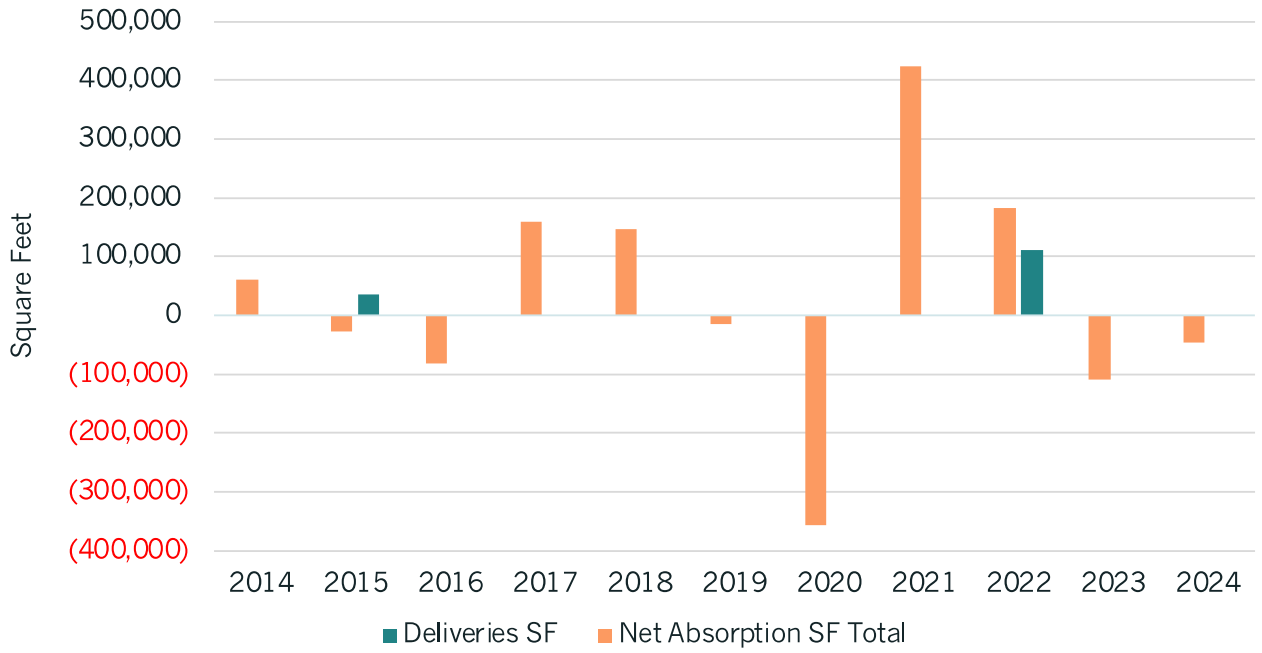
Source: CoStar, pulled August 2024

Triple net industrial rents in Wilsonville increased from 2014 to 2020 and were generally higher than the Portland metro region over the period.[31] Wilsonville shows a large drop in lease rates between 2020 and 2021, likely due to COVID-19 impacts. However, rates rebounded in 2022, reaching $15.35 per square foot in July 2024, higher than the Portland metro ($12.03) and I-5 South submarket ($12.99). The combination of rising rents and very low vacancy rates suggests a robust industrial market in Wilsonville, potentially attracting new development, especially speculative development.

Figure 12: Industrial & Flex Rents Trends, 2014-2024



Source: CoStar, pulled August 2024

[31] Triple-net (NNN) rents are annual rents on a per-square-foot basis not including any pass-through expenses such as taxes, insurance, and any utilities or maintenance costs, which are passed on to the tenant and paid separately.

Net absorption has been generally positive for industrial properties over the past decade, with a large vacancy in 2020; however, it was followed by high positive net absorption the following year. Net absorption was negative in 2023 and through August 2024 (when data was pulled) but at a smaller magnitude than in 2020.

Figure 13: Net Absorption for Industrial & Flex Space in Wilsonville, 2014 to 2024

Source: CoStar, pulled August 2024

Planning Commission Meeting - August 12, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

TYPE OF INDUSTRIAL PRODUCT BUILT SINCE 2014

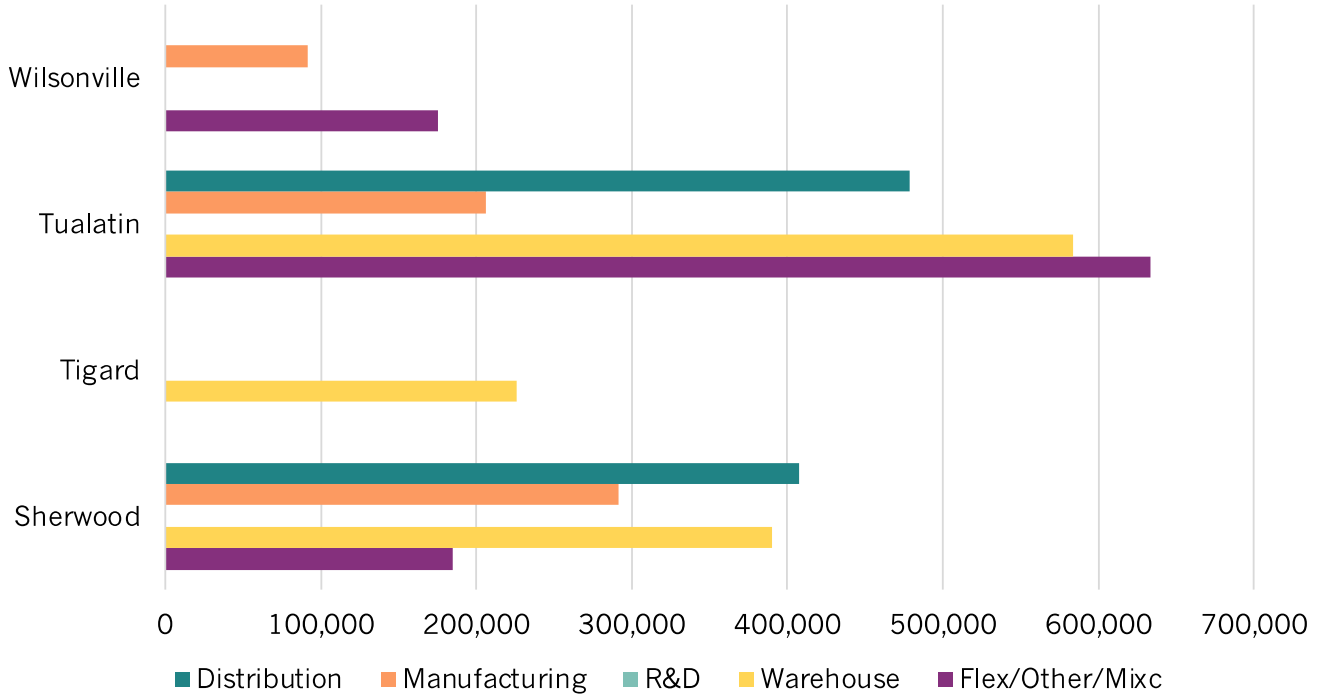
Within the industrial product type, CoStar delineates the properties into a secondary type based on their use, size, and amenities to industrial users. CoStar utilizes the following definitions for the secondary types of industrial space:

- **Distribution:** Spaces used for warehousing and distribution of inventory that are typically 200,000 square feet or more, have clear heights of 28 feet, are less than 5 percent office space, and have site coverage that can be up to 40 percent.
- **Warehouse:** Buildings that are 25,000 square feet or greater, are up to 20 percent office area, have clear heights of 22 feet or greater, and have site coverage up to 50 percent.
- **Manufacturing:** Buildings that are typically 300,000 square feet or greater with an office area up to 50 percent.
- **R&D:** Flex space specifically used for research and development.
- **Flex/Other/Misc.:** A versatile building that may be used with office (corporate headquarters), research and development, mixed-use industrial and retail sales, and includes but is not limited to industrial, warehouse, and distribution uses. At least half of the rentable area of the building must be used as office space. Flex buildings typically have ceiling heights under 18 feet, with light industrial zoning. Flex buildings have also been called Incubator, Tech and Showroom buildings in markets nationwide.

Table 14 shows industrial development by submarket, or secondary market, types. Over the past 10 years, the I-5 South submarket has captured a slightly smaller share of the total market at 8.7 percent compared to its total share of 10.2 percent. The secondary market type distribution has also changed. While the I-5 South submarket contains roughly 27 percent of the total market space for R&D and warehouse space, it has captured about 35 percent of the space built in the last 10 years. Meanwhile, it captured a smaller share of manufacturing and distribution development (19 percent in the past 10 years compared to 27 percent of the total market share).

Table 14: Industrial Development Trends by Secondary Market Type, Portland Metro and I-5 South Submarket, 2014 to 2024

	ALL DEVELOPMENT		PAST 10 YEARS		I-5 CAPTURE RATES	
	METRO	I-5	METRO	I-5	ALL DEV'T	2014-2024
Distribution	49,002,646	5,677,113	16,716,663	1,222,159	11.6%	7.3%
Manufacturing	43,382,806	6,661,789	5,802,456	700,301	15.4%	12.1%
R&D	4,036,770	409,055	514,319	87,476	10.1%	17.0%
Warehouse	116,255,396	19,920,386	11,999,179	2,178,085	17.1%	18.2%
Flex/Other/Misc	156,220,367	4,831,339	24,957,511	1,053,586	3.1%	4.2%
Total	**368,897,985**	**37,499,682**	**59,990,128**	**5,241,607**	**10.2%**	**8.7%**



Source: CoStar, pulled August 2024

Industrial development along the I-5 South submarket has recently concentrated in Tualatin and Sherwood, with Wilsonville falling behind. This trend is likely due to Wilsonville's shortage of development-ready industrial land and large parcels, a view supported by interviews with local developers, brokers, and economic development organizations.

Many speculative industrial developers are seeking large sites, as demonstrated by recent developments in Sherwood and Tualatin on parcels exceeding 10 acres. Notable examples include the recently completed Sherwood Commerce Center on a 30+ acre site and the proposed Rock Creek industrial site development on 25 acres in Sherwood. In Tualatin, the Tualatin Sherwood Corporate Park was completed in 2022 on over 40 acres, while the Hedges Creek Industrial Park is expected to be completed in 2025 on a 20-acre site.

Local developers report that most of the industrial demand is coming from existing regional businesses rather than out-of-state companies. These local industrial users are primarily looking to expand or upgrade their current facilities within the area. Many express a desire to be outside the City of Portland and Multnomah County, citing concerns about public safety and higher rates of taxation.

Figure 14. Secondary Industrial Space Recently Built or Proposed in I-5 South Submarket by City, 2019-2026

Source: CoStar, pulled August 2024

Target Industry Assessment

Wilsonville is well positioned within the region to capture industrial growth. It has access to a strong base of employment, proximity to I-5, and connections to other growing industrial areas in Sherwood and Tualatin. This section examines industries likely to be drawn to Wilsonville, considering its strengths and competitive edge. The analysis begins by identifying common barriers to industrial development, based on local stakeholder interviews. It then reassesses strengths and weaknesses outlined in the Basalt Creek Concept Plan (BCCP), updating these factors to reflect market and employment trends over the past decade. The section concludes by summarizing how these market trends will shape Basalt Creek's development.

Barriers to Industrial Development

Stakeholders identified a number of key barriers for industrial users that prevent development. While some of these challenges are more directly applicable to Basalt Creek than others, they all represent important considerations for the City as it prepares the area for development:

- **Site Readiness:** Many sites lack the necessary transportation and utility infrastructure and preparations to immediately accommodate industrial users.
- **Power Availability:** Immediate or quick access to heavy power is currently the most significant barrier for many industrial businesses. The increasing power demands of modern industrial operations make this a crucial factor.
- **Outdated Existing Buildings:** Many existing structures do not meet the needs of modern industrial users, requiring significant renovations or complete rebuilds.
- **Lack of Intermediate Industrial Spaces:** Medium-sized industrial users (users that require 20,000 to 40,000 square feet) have limited spaces to choose from.
- **Misaligned Visions and Overly Prescriptive Zoning:** Sometimes, the landowners' or city's vision for an area does not align with the diverse needs of potential users. Discussions with local developers and brokers highlight the importance of allowing a mix of uses for better financing opportunities. This is particularly relevant for speculative development, where end users are not known at the time of entitlement and construction. Overly prescriptive zoning that designates specific uses, such as manufacturing, can be more challenging to finance because banks see risk and concern if they perceive the list of potential tenants is too small or narrow. Additionally, various types of uses tend to cluster together due to supply chain benefits. For example, manufacturers often have suppliers located nearby. Overly prescriptive zoning can disrupt this natural ecosystem by preventing clustering.
- **Fragmented Land Ownership:** Areas with multiple small parcels under different ownership can make it difficult to assemble larger sites needed for significant industrial development.

- **Incompatible Neighboring Uses:** The presence of nonindustrial uses in close proximity can preclude development out of concern for possible or future conflicts that have the potential to limit or complicate the operations of industrial businesses.
- **Requirements for Connectivity:** In some cases, required access roads can deter large industrial developers because the roads may decrease the area of developable land while adding significant cost to a speculative project. Additionally, some industrial users who prioritize confidentiality and security may be less attracted to areas with public access requirements.

Comparative & Competitive Advantage

The BCCP outlined the Basalt Creek area's advantages and challenges, many of which are still relevant. The following includes Basalt Creeks' advantages and challenges drawing from the BCCP and updating based on new information gathered as a part of this report.

STRENGTHS AND COMPETITIVE ADVANTAGES

- Centrally located in the south metro, within the urban growth boundary, and designated in the City's comprehensive plan for industrial uses.
- Large contiguous cluster of existing and planned industrial employment areas, including Wilsonville's Coffee Creek Industrial Area, and adjacent employment lands in Tualatin and Sherwood.
- Large areas of contiguous land ownership with property owners who are interested in developing or selling for redevelopment.
- Long-term growth projections for employment and population in the southwest Portland metro area.
- Excellent access to I-5, I-205, and Highway 217. Additional transportation strengths include existing and planned arterial roads as well as local and regional transit service provided by TriMet, WES Commuter Rail, and SMART.[32]
- Access to an educated workforce as part of the Metro labor shed and Mid-Valley labor shed.
- Easily accessible to other growing industrial areas, particularly in Tualatin and Sherwood.
- Planned substation development.

CHALLENGES

- Zoning needs to be in place prior to development.
- Planning, financing, and construction of new infrastructure.

[32] Existing major arterials include SW Grahams Ferry Road, SW Boones Ferry Road, and SW Day Road; the City is also planning the extension of Basalt Creek Parkway.

- Existing low employment density uses (contractor establishments and storage uses) that generate income for property owners may reduce appetite to sell for redevelopment.
- Lot sizes and property aggregation. There is a mix of large and small lots throughout Basalt Creek. The time and cost required to secure properties from multiple parties to aggregate developable industrial properties of adequate size can be a significant deterrent to developers.
- Natural features, including wetlands and slopes. Basalt Creek and its surrounding slopes and wetland areas run north-south through the study area and divide the area into east and west sections.
- Growing power demands from industrial users and uncertainty on timing and capacity of additional service.[33]

Which industries may be attracted to Basalt Creek?

Basalt Creek's long-standing vision as an industrial area aligns well with current market trends, which show strong demand for industrial space both nationally and in the Portland metro region. Stakeholders point to Wilsonville's potential to attract a diverse range of industrial businesses, including those in the semiconductor supply chain, cleantech, advanced manufacturing, and data centers.

Wilsonville's appeal to these sectors stems from its strategic location in the south metro area, access to a skilled labor force, and proximity to related industries. The semiconductor sector in particular is poised for expansion due to recent CHIPS Act investments. Similarly, cleantech industries are anticipated to see growth within the Portland metro region. The availability of large areas of contiguous land ownership in the Basalt Creek Planning Area further enhances its attractiveness to major industrial users who seek large lots for development.

It is worth noting that while the Basalt Creek Concept Plan (BCCP) originally envisioned a mix of uses—including office space associated with industrial operations, primarily in the High-Tech Employment district—current market conditions suggest that office use will likely play a smaller role than initially planned. Instead, the focus is expected to shift more toward industrial and tech-oriented developments to capitalize on emerging economic opportunities. Below are details about the potential sectors and industries that may be particularly attracted to Wilsonville:

- **Semiconductor Sector Supply Chain:** This sector includes companies involved in the design, manufacturing, and testing of semiconductor chips, as well as those providing materials, equipment, and services to chip manufacturers. Wilsonville is attractive for this industry due to its proximity to existing semiconductor clusters in

[33] ECOnorthwest has reached out to PG&E to understand how much of a challenge access to adequate power may be and is waiting to hear back. This statement may be updated after that conversation.

the Portland metro area, access to a skilled workforce, and potential for large industrial sites. Basalt Creek would likely host businesses that support the supply chain rather than producing the chips themselves.

- **Cleantech, including Battery Technology:** Cleantech encompasses renewable energy technologies, energy efficiency solutions, and sustainable manufacturing processes. Businesses in this sector include energy storage and related sustainable material technologies and a variety of alternative energy technologies and production. Battery technology, crucial for electric vehicles and energy storage, is a growing subsector that is already present in Wilsonville. Wilsonville's strategic location and potential for large industrial sites make it suitable for cleantech manufacturing and R&D facilities.
- **Advanced Manufacturing:** This sector involves the use of innovative technologies to create products. It includes robotics, 3D printing, and smart manufacturing systems. Wilsonville's access to a skilled workforce and its location near tech hubs make it attractive for advanced manufacturing operations.
- **Distribution and Logistics:** This sector involves the storage, transportation, and delivery of goods. Wilsonville's location near major transportation routes (I-5 and I-205) and its proximity to Portland make it an ideal location for distribution centers and logistics hubs.
- **Data Centers:** Data centers are facilities used to house computer systems and associated components. Wilsonville's access to available land and the potential access to reliable power sources could make it attractive for data center development.[34] The proximity to tech companies in the Portland metro area is an additional advantage.

This diverse range of potential industries positions Wilsonville to capitalize on various economic opportunities, creating a resilient industrial base in Basalt Creek.

[34] Interviews with stakeholders have suggested that Wilsonville may be attractive to data centers. ECOnorthwest has reached out to PG&E to understand if Basalt Creek has/will have access to the power necessary for this type of use and is waiting to hear back.

4. Conclusion

The Basalt Creek area in Wilsonville is strategically positioned for industrial development with the potential to attract a variety of users, from manufacturing and logistics to data centers. The area's suitability for supporting the semiconductor supply chain is underscored by recent expansions of semiconductor suppliers in nearby Sherwood. Additionally, the area could be attractive to cleantech businesses, including those involved in battery storage and alternative energy technologies.

However, realizing this potential presents several challenges. Existing contractor establishments generate sufficient income for some property owners, reducing their incentive to sell or redevelop the land for higher-intensity industrial uses. Furthermore, relocation options for these businesses may be limited, complicating redevelopment efforts. (The feasibility of redevelopment will be further explored in a subsequent separate study.)

Conversely, some developers have already assembled land, and they are ready for immediate development, eager to capitalize on the strong industrial demand seen in nearby Coffee Creek, Tualatin, and Sherwood. Stakeholders emphasized the importance of large parcels in facilitating area redevelopment, with many developers willing to fund necessary infrastructure improvements if given access to such lots. For example, Schnitzer Properties owns property east of Grahams Ferry Road, south of Basalt Creek Parkway, and north of Day Road and eagerly awaits the adoption of zoning and policy to enable industrial development in this area. They intend to submit development and annexation applications as soon as zoning and policy is in place. Their recent development in Sherwood, known as the Sherwood Commerce Center, is an example of the type of development they are envisioning for their Basalt Creek property, offering flexible spaces for various industrial users.

It is crucial for Wilsonville to carefully balance its development goals for Basalt Creek with market realities. While the City may have preferences for certain types of businesses, being overly selective could deter development altogether. This is especially significant given the current economic climate. The BCCP originally envisioned office space within each district with the highest share in its High-Tech Employment District and anticipated that this office space would be in connection with industrial users. However, nationally and regionally demand for office space has been in decline with remote and hybrid work trends continuing to impact the need for office space. While office will likely still be a part of the BCPA, it may occupy a smaller share than originally envisioned.

Nationally, there's strong demand for industrial space. But Oregon's employment growth, which has been lagging national trends since 2020, may moderate this trend locally. Developers have stated that current industrial demand in the metro area is largely driven by regional businesses seeking to expand or upgrade their facilities. If Wilsonville imposes overly burdensome or restrictive requirements on the types of industrial users it allows (such as requiring a high share of manufacturing space), it risks limiting development feasibility and driving developers and industrial users to more accommodating locations.

The City must navigate these challenges while working toward its vision for Basalt Creek: a diverse mix of industrial uses, higher employment density, high-wage jobs, an enhanced tax base, and increased community prosperity.

Next Steps

These findings are preliminary and will be refined through further analysis, stakeholder engagement, and discussions with the Planning Commission and City Council. Upcoming tasks include completing the buildable lands inventory, conducting site suitability analyses for key locations, and assessing the feasibility of redeveloping contractor establishments. All these elements will ultimately be synthesized into a comprehensive final report outlining key findings and recommendations.

Appendix B: Buildable Lands Inventory and Site Suitability Analysis

Planning Commission Meeting - August 12, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

ECOnorthwest

DATE:	December 20, 2024
TO:	City of Wilsonville
FROM:	ECOnorthwest: Nicole Underwood, Bob Parker, and Barrett Lewis
SUBJECT:	WILR Phase 1: BLI and Site Suitability Analysis

The Cities of Tualatin and Wilsonville adopted the Basalt Creek Concept Plan (BCCP) in 2018 after a lengthy joint planning process. Now, in 2024-25, the City of Wilsonville is working to advance the Basalt Creek Planning Area (BCPA) beyond the concept plan to a development-ready status by designating zoning and refining infrastructure plans. However, since adoption of the BCCP, economic conditions at national, state, regional, and local levels have shifted significantly and must now be considered.

To address these evolving conditions, the City hired ECOnorthwest to conduct a market assessment and industrial lands study focused on Wilsonville's portion of the BCPA. The study began with an Economic Inventory, which reviewed current market trends and industries suitable for the area.

This memorandum addresses Task 3 in the Scope of Work: updating the **Buildable Lands Inventory (BLI)** for the BCPA and conducting a **Site Suitability Analysis** for key opportunity sites. The updated BLI reflects recent land developments, adjusted constraints, and revised capacity estimates.

The Site Suitability Analysis examines three selected "opportunity sites" within the BCPA, assessing their potential to support the target industries identified in the Economic Inventory. This analysis considers site attributes, including size, location, access, topography, constraints, and surrounding land uses. It also considers infrastructure (transportation, water, sewer, stormwater) based on available data, with the understanding that infrastructure planning may evolve as work progresses.

Land Supply

This industrial Buildable Lands Inventory (BLI) updates the 2014 BLI from the original concept plan, providing a revised assessment of the buildable land *supply* available within Wilsonville's portion of the BCPA for employment-related growth and development. The amount of land needed to accommodate anticipated growth, often referred to as *demand* for land, depends on the type of employment-related development and other factors.

This BLI update serves two purposes: 1) to provide a revised assessment for developable acres in the BCPA and 2) to identify lands that have existing economic uses but low improvement values and/or low-density employment. These uses are inconsistent with the development vision expressed in the BCCP and are sites that may have redevelopment potential.

The BCPA encompasses a total of 453 acres across 85 tax lots. Of this:

- **173 acres** are currently in active use and are considered developed.
- **129 acres** are constrained by physical or environmental factors.
- **150 acres** are considered buildable and available for development.

The BLI also provides a basis for updating employment capacity. Given the 150 acres of buildable land and the expectation of employment densities between 10 and 18.5 employees per acre, the BCPA is expected to accommodate between 1,500 and 2,780 jobs and 2.3 million and 2.9 million square feet of development. The BCCP estimated total employment capacity at about 2,500 jobs.

This section outlines the methodology used to develop the BLI and employment and built space capacities, and it presents the results for Wilsonville's portion of the BCPA. ECOnorthwest analyzed GIS data from the City of Wilsonville, Metro, and Washington County, with City staff reviewing the findings for accuracy and completeness.

Methodology

The buildable lands inventory followed a structured process to assess land status:

1. **Generate UGB "land base":** ECOnorthwest established a baseline of tax lots within Wilsonville's portion of the BCPA designated for industrial and employment uses.
2. **Classify lands by development status:** The project team categorized parcels as vacant, partially vacant, or developed.
3. **Identify constraints:** ECOnorthwest applied physical and regulatory constraints, such as wetlands and natural resource protections, to identify unbuildable portions.

4. **Verify inventory results:** City staff reviewed classifications and aerial imagery to confirm accuracy.
5. **Tabulate and map results:** The team compiled findings into tables and maps to provide a clear overview of buildable lands.

The following section summarizes the results of the industrial BLI for the BCPA, presented in tabular and map formats.

Land Base

The land base for the Buildable Lands Inventory (BLI) includes all tax lots within Wilsonville's portion of the BCPA. Table 1 provides a breakdown of the land base by Wilsonville Comprehensive Plan designation within the BCPA.

Table 1. Employment Land Base by Wilsonville Comprehensive Plan Designation, BCPA, 2024

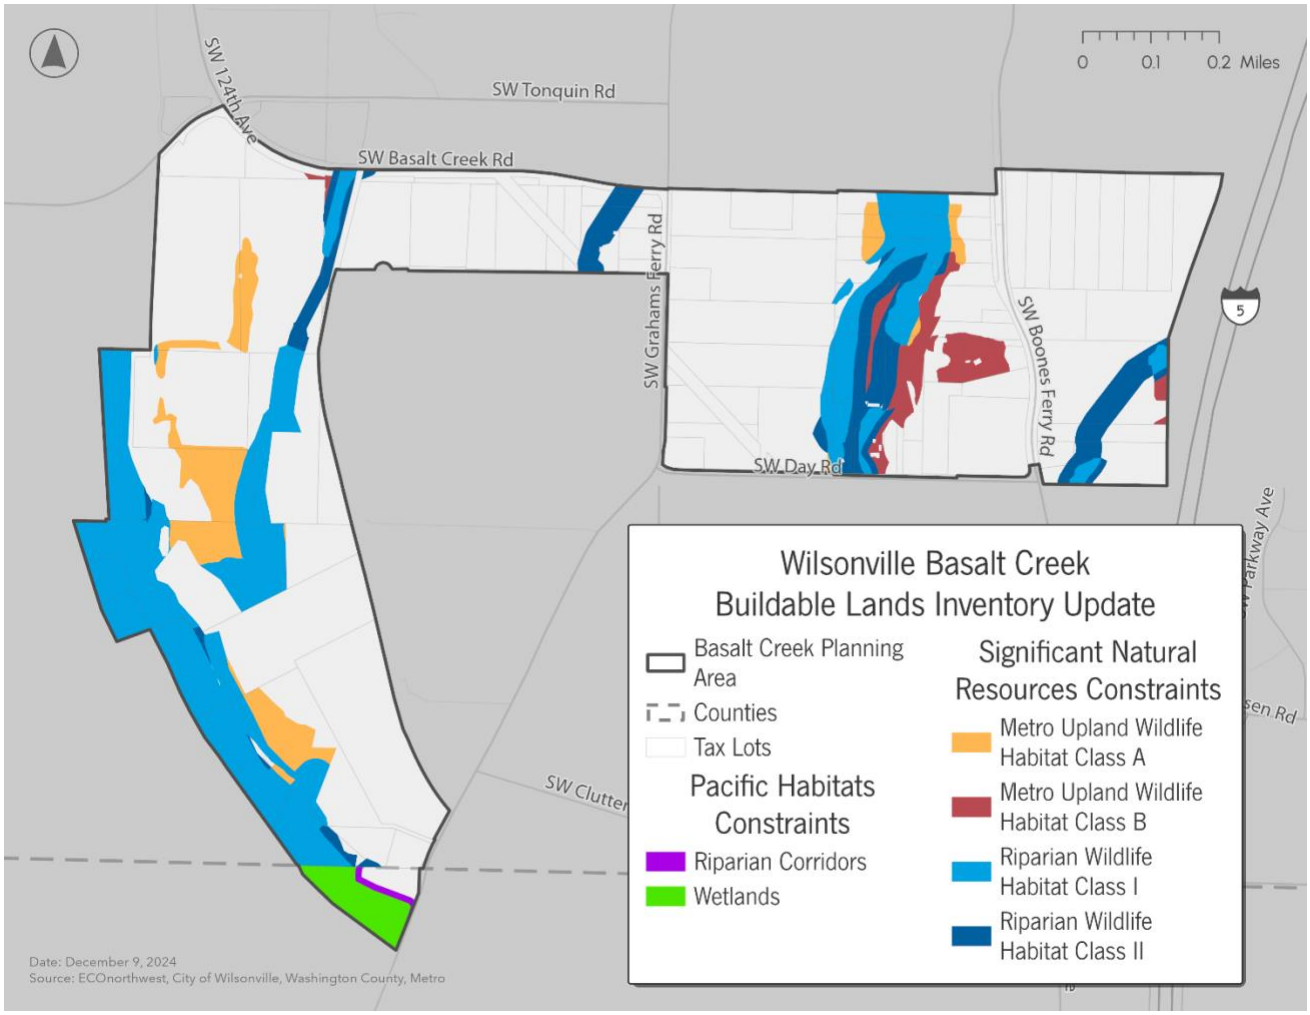
Plan Designation	Number of Tax Lots	Percent	Total Tax Lot Acreage	Percent (Total Acreage)
Industrial	63	74%	237	52%
Undesignated	22	26%	215	48%
Total	**85**	**100%**	**453**	**100%**

Source: ECOnorthwest analysis, City of Wilsonville, Clackamas County, Washington County, Metro

Development Status Classification

Table 2 displays the total acres of tax lots, categorized based on whether land is buildable. ECOnorthwest applied a rule-based classification of vacant, partially vacant, or developed land to determine the initial development status and verified the results through reviews by City staff. These reviews incorporated local knowledge and analyses of aerial maps.

Table 2. Employment Acres by Classification and Wilsonville Comprehensive Plan Designation, BCPA, 2024



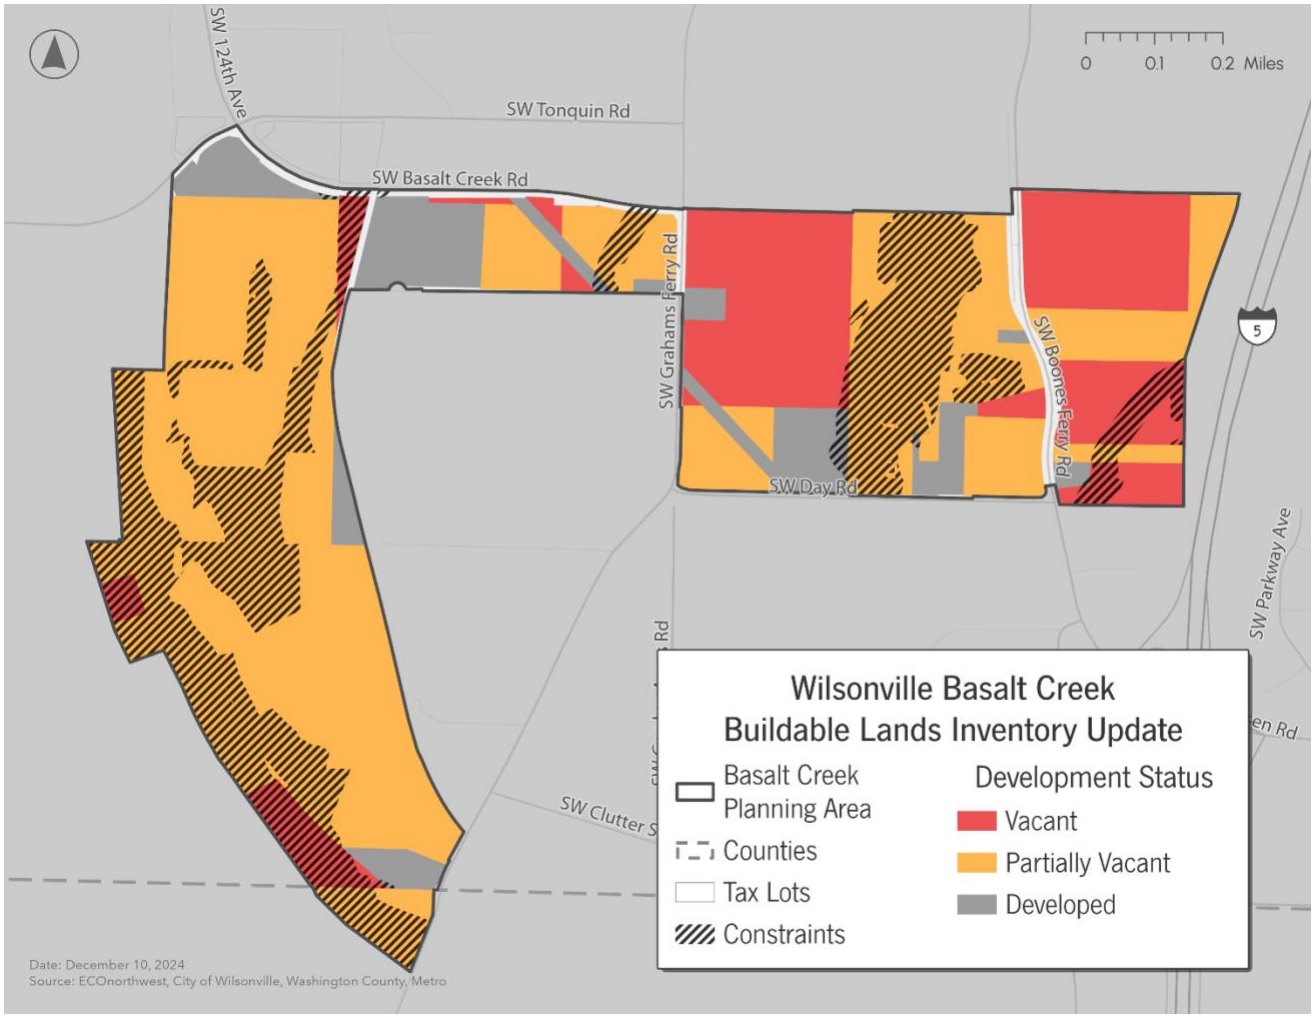
Plan Designation	Total Acres	Committed Acres	Constrained Acres	Buildable Acres
Industrial	237	63	48	127
Undesignated	215	110	81	24
Total	**453**	**173**	**129**	**150**

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro, Pacific Habitat Services

Development Constraints

In coordination with City staff, ECOnorthwest identified physical constraints based on Washington County's Significant Natural Resources (SNR), as amended by Washington County Ordinances No. 901 and No. 902.[1] The SNR includes Metro Upland Wildlife Habitat Classes A and B, as well as Riparian Wildlife Habitat Classes I and II. For the single southern parcel located in the West Railroad area and within Clackamas County, GIS data provided by Pacific Habitat Services were used to identify physical constraints. These constraints are shown in Figure 1.

Figure 1. Development Constraints, BCPA, 2024



Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro, Pacific Habitat Services

[1] https://www.washingtoncountyor.gov/lut/planning/documents/ordinance-no-901a/download?inline

Figure 2 shows development status with constraints applied, resulting in buildable acres. Land classified as vacant or partially vacant and affected by these constraints is deemed unavailable for development and has been excluded from the inventory of buildable land.

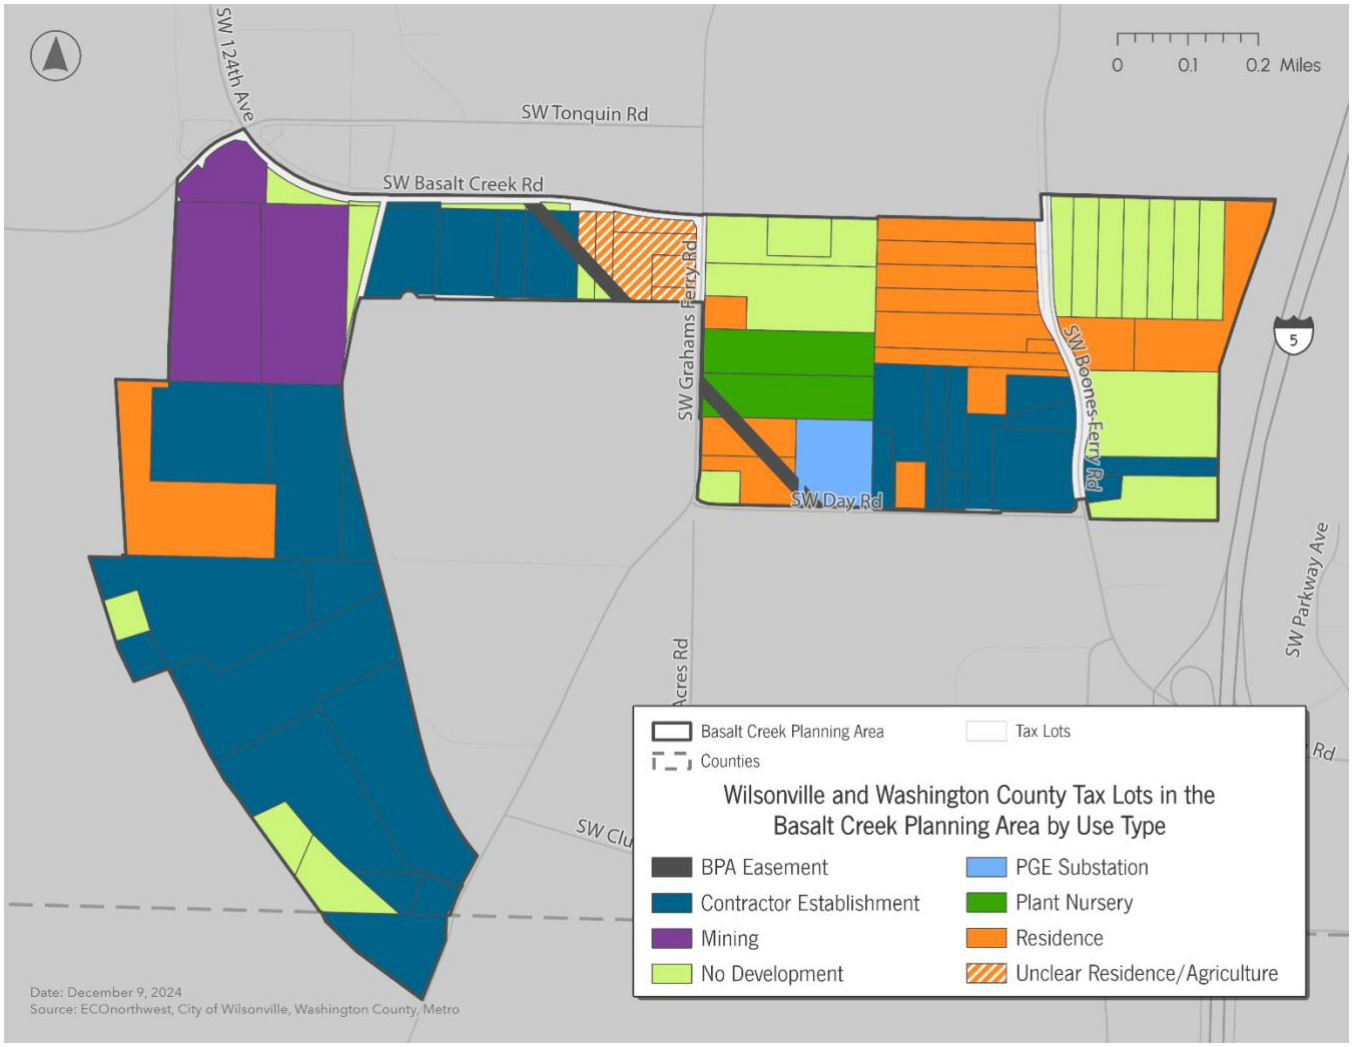


Figure 2. Development Status with Constraints, BCPA, 2024

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro, Pacific Habitat Services

Figure 3 identifies land use categories for each site. ECOnorthwest collaborated with City staff to identify these categories through a detailed review process that combined local knowledge with aerial map analysis. Unlike basic classifications of vacant or partially vacant land, this map provides deeper insights into current land uses, offering valuable context for evaluating redevelopment potential and guiding the feasibility analysis (the results of which are shared in a separate memorandum).

Figure 3. Land Use Categories with Constraints, BCPA, 2024

Source: ECOnorthwest Analysis, City of Wilsonville, Metro

Vacant Buildable Land

The next step in the buildable lands inventory involved removing portions of vacant tax lots deemed unsuitable for development. Unsuitable areas fall into two categories:

1. Developed portions of partially vacant tax lots.
2. Areas affected by physical constraints (i.e., areas within Metro Upland Wildlife Habitat Classes A and B and Riparian Wildlife Habitat Classes I and II).

Table 3 presents the buildable acres—tax lot areas remaining after deducting these constraints—for both vacant and partially vacant land, categorized by Wilsonville's Comprehensive Plan designation. The BCPA has 150 total buildable acres available for development.

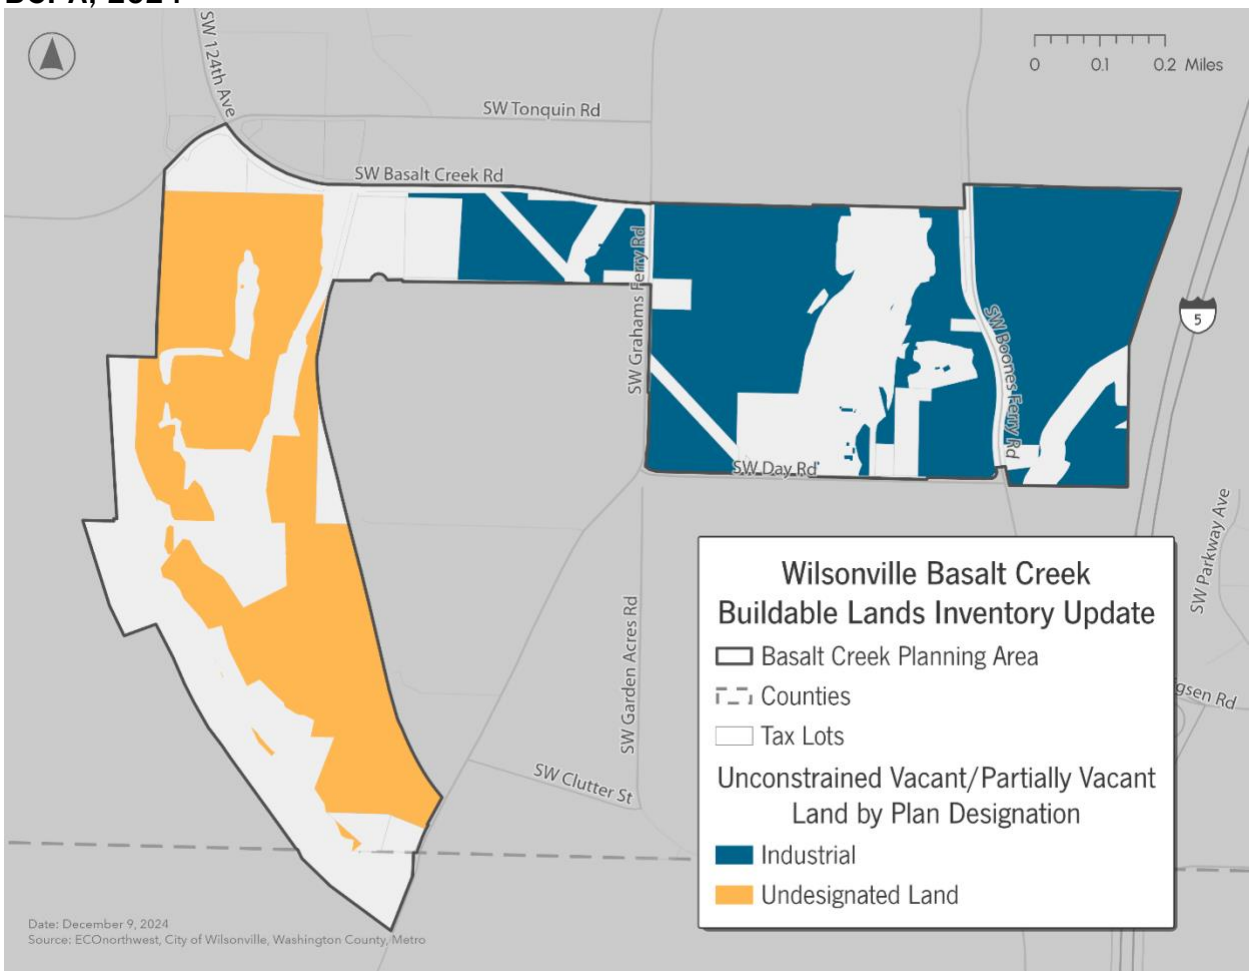

Table 3. Buildable Acres in Vacant and Partially Vacant Tax Lots by Wilsonville Comprehensive Plan Designations, BCPA, 2024

Plan Designation	Total Buildable Acres	Buildable Acres on Vacant Lots	Buildable Acres on Partially Vacant Lots
Industrial	127	87	40
Undesignated	24	0.4	23
Total	**150**	**87**	**63**

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro

Figure 4 shows the buildable vacant and partially vacant land within the BCPA, categorized by Wilsonville Comprehensive Plan designation. It is important to note that tax lots shown as partially vacant in the map do not distinguish the part of the tax lot that is unavailable for development (or has redevelopment potential). However, the buildable lands inventory database accounts for these distinctions: the developed portions (unavailable for future development) are excluded, while the vacant portions are detailed in Table 4.

Figure 4. Buildable Employment Land by Wilsonville Comprehensive Plan Designation, BCPA, 2024

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro, Pacific Habitat Services

Table 4 presents the size of buildable lots categorized by Wilsonville Comprehensive Plan designation across the BCPA. The planning area includes:

- Eight lots smaller than 0.5 acres, totaling 2 acres.
- Twenty-two lots between 0.5 and 2 acres, totaling 22 acres.
- Eighteen lots between 2 and 5 acres, totaling 57 acres.
- Six lots between 5 and 10 acres, totaling 46 acres.
- Two lots between 10 and 25 acres, totaling 23 acres.

Table 4. Buildable Acres and Tax Lots by Buildable Site Size by Wilsonville Comprehensive Plan Designation, BCPA, 2024

Plan Designation	Buildable Sites Size					
	0 - 0.5 Acres	0.5 - 1 Acres	1 - 2 Acres	2 - 5 Acres	5 - 10 Acres	10 - 25 Acres
Industrial	1	7	10	51	35	23
Undesignated	1	1	4	6	12	-
Acreage Total	**2**	**8**	**14**	**57**	**46**	**23**

Employment Capacity

ECOnorthwest analyzed the buildable land in Basalt Creek to update projections for potential job growth in the area. This assessment involved reviewing the capacity estimates from the BCCP and refining them using the updated land inventory of 150 buildable acres.

The analysis began with a review of research conducted by ECOnorthwest and other organizations on employment density. A common finding in such studies is the significant variability in employment density across industries, plan designations, and zoning districts. For example, an industrial zone may have employment densities ranging from 1-3 employees per acre for a warehousing facility and 10-15 employees per acre for flex spaces to densities over 25 employees per acre for office buildings.

The capacity estimates that follow are intended to provide a high-level estimate of job capacity based on the 2024 BLI update. Some factors, such as land needed for streets, would reduce capacity while others, such as higher lot coverages or multistory buildings, would increase capacity. The main utility of employment capacity estimates is in estimating

infrastructure needs. The figures that follow can be used to inform infrastructure demand estimates which can then be compared with infrastructure capacity to determine if existing and planned capacity are sufficient to accommodate expected employment densities.

Land Demand Methodology

When evaluating land and building capacity, two measures are commonly used to define the relationships between building size, floor area, and land area. These measures include:

- **Floor Area Ratio (FAR):** The ratio of a building's total square footage to the site's total square footage.
- **Employees Per Acre (EPA):** The total number of employees divided by the site size.

Basalt Creek Growth Capacity: Land Use Model Assumptions

This model builds on assumptions from the BCCP. Initially, the BCCP estimated an average of **18.5 jobs per gross acre** in Wilsonville's portion of Basalt Creek (excluding West Railroad). Key employment density estimates included:

- High-Tech Employment District: 20 jobs per gross acre.
- Craft Industrial: 22 jobs per gross acre.
- Light Industrial District: 16 jobs per gross acre.

ECOnorthwest applied the BCCP's assumption of 18.5 jobs per gross acre to model a high-density growth scenario. However, shifting market conditions—such as reduced demand for office space and increased demand for industrial and flex space (which typically have lower employment densities)—led ECOnorthwest to also model medium- and low-density growth scenarios to better reflect the potential range of employment densities in the study area. ECO also modeled different lot coverage ratios/FARs. The scenarios use lot coverages of 35 percent and 45 percent which is consistent with the assumptions used in the Task 4 redevelopment feasibility analysis of contractor establishments. The FARs of 0.35 and 0.45 reflect lot coverage ratios and the assumption that uses will be single story.

- **Low-Density Scenario:**
  - 10 employees per gross acre.
  - Lot coverage/FAR: 35 percent/0.35.
  - Reflects more traditional industrial densities and provides a more conservative estimate.
- **Medium-Density Scenario:**
  - 15 employees per gross acre.
  - Lot coverage/FAR: 45 percent/0.45.

- Assumes a greater share of office development compared to the low-density scenario, offering a more ambitious estimate.

- **High-Density Scenario (BCCP Adopted Assumption)**
  - 18.5 employees per gross acre.
  - Lot coverage/FAR: 45 percent/0.45.
  - Maintains the BCCP assumptions and envisions a greater share of office development than the other scenarios. It assumes the same lot coverage ratio which yields the same built space capacity as the medium-density scenario but with a higher number of employees occupying that space.

Results: Land Use Modeling for Basalt Creek

Table 5 outlines the results of this analysis, indicating that Wilsonville's portion of Basalt Creek has capacity for:

- **Employment:** Between 1,500 and 2,780 jobs.
- **Built Space:** Between 2.3 million and 2.9 million square feet.

These findings reflect the range of potential outcomes based on varying employment density assumptions.[2]

Table 5. Job Capacity and Built Space Capacity, Wilsonville BCPA

	Low	Medium	High
Job Capacity	1,500	2,250	2,780
Built Space Capacity (SF)	2,289,000	2,943,000	2,943,000

Source: Analysis by ECOnorthwest

[2] ECOnorthwest also analyzed the potential number of employees and built space under current density levels, estimated at approximately 5 employees per gross acre. If these existing conditions persist, the area is projected to accommodate around **750 employees** and **1.3 million square feet** of built space.

Site Suitability Analysis

The BCPA is well positioned to capture industrial growth in the South Metro region. It benefits from its strategic location with access to I-5, a robust employment base, and connections to other expanding industrial hubs in Sherwood and Tualatin. Over the summer, ECOnorthwest conducted an Economic Inventory to assess market conditions and identify industries most likely to establish a presence in Basalt Creek focusing on industrial and office uses in alignment with the BCCP vision.[3] The analysis highlighted strong national and regional demand for industrial space and identified key sectors with potential interest in the area, including the semiconductor supply chain, cleantech, advanced manufacturing, distribution and logistics, and data centers.

Although the BCCP originally envisioned a blend of industrial and office development, current market trends suggest a shift toward a greater emphasis on industrial uses. Office developments, while still anticipated, are expected to occupy a smaller footprint than initially planned.

WHICH SECTORS MAY BE ATTRACTED TO BASALT CREEK?

Below are the potential sectors that may be particularly attracted to Basalt Creek as identified in the Economic Inventory report.

- **Semiconductor Sector Supply Chain:** Companies providing materials, equipment, and services to chip manufacturers.
- **Cleantech, including Battery Technology:** Businesses involved in renewable energy technology, energy efficiency solutions, and sustainable manufacturing processes.
- **Advanced Manufacturing:** Companies using technology such as robotics, 3D printing, and computerized systems to manufacture specialized products or components.
- **Distribution and Logistics:** Storage, transportation, and delivery of goods.
- **Data Centers:** Facilities used to house computer systems and associated components.

To determine site specific competitiveness for these industries, ECOnorthwest evaluated three opportunity sites using the Mackenzie Infrastructure Finance Authority (IFA) Industrial Development Competitiveness Matrix as a foundation. Recognizing that industry requirements have evolved since the matrix's creation in 2015, the analysis incorporated updated reports and stakeholder feedback to align with current market demands. This Site Suitability Analysis assesses site characteristics such as size, location, and constraints to evaluate their ability to host target industries. While the analysis considered buildable land availability, its primary focus was on site potential, assuming redevelopment occurs. Feasibility and redevelopment likelihood of contractor establishments is addressed in a separate task.

[3] When evaluating the office market, medical office showed stronger growth than traditional office. However, ECOnorthwest did not further evaluate its potential, as it was not a use envisioned in the BCCP.

Opportunity Sites for Analysis

ECOnorthwest evaluated the following sites for their development potential (Figure 5):

- **SW Greenhill Site:** Selected for its consolidated land ownership and strong potential for near-term development, given the absence of active use.
- **Craft Industrial Area:** As a transitional area, the City seeks to assess this site's characteristics in detail to determine the most appropriate land uses. This will inform zoning designations.
- **West Railroad Site:** West Railroad lacked a defined concept in the original BCCP. To explore its potential, ECOnorthwest analyzed a portion of West Railroad, focusing on its development suitability. This will inform whether a zoning designation similar to the rest of the Basalt Creek area would be appropriate. The area also faces physical and service constraints, and the analysis evaluates whether these challenges might limit future development opportunities.

Figure 5. Opportunity Sites

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro

Table 6 summarizes the size of unconstrained lots for the opportunity sites. Note that "unconstrained acres" here includes developed areas. In general, larger sites are more appealing to industrial users, who often seek parcels of 5 or more acres. Smaller sites, however, may require site aggregation to meet these needs. Notably, sites in SW Greenhill and West Railroad, which exceed 5 acres, could be especially attractive to developers. While all opportunity sites may require some degree of site aggregation, the Craft Industrial area faces the greatest challenge due to its relatively small lot sizes and fragmented land ownership.

Table 6. Unconstrained Acres and Tax Lots by Site Size for Opportunity Sites, BCPA, 2024

Site Suitability Area	Unconstrained Sites Size					
	0 - 0.5 Acres	0.5 - 1 Acres	1 - 2 Acres	2 - 5 Acres	5 - 10 Acres	10 - 25 Acres
Craft Industrial	-	1	5	8	-	-
SW Greenhill	-	-	-	31	-	21
West Railroad	0.3	-	3	10	19	60
Acreage Total	**0.3**	**1**	**9**	**49**	**19**	**81**
Craft Industrial	-	1	3	3	-	-
SW Greenhill	-	-	-	8	-	2
West Railroad	3	-	2	3	3	4
Tax Lot Total	**3**	**1**	**5**	**14**	**3**	**6**

Site Competitiveness Factors

The IFA Industrial Development Competitiveness Matrix includes the following factors for evaluating the competitiveness of different industries:

- Site Size
- Competitive Slope (physical slope of a parcel, which can impact its suitability for development)
- Access to Transportation and Trip Generation (Highway, Rail, and Airport Proximity)
- Access to Utility Infrastructure (Water, Sewer, Electricity, Telecommunications)
- Special Considerations

The industries evaluated in the IFA Industrial Development Competitiveness Matrix include the following, which align with the BCCP and the Economic Inventory findings, and are the focus of this analysis (the full matrix can be found in Appendix B.1):

- **Production Manufacturing:**
  - High-Tech/Cleantech Manufacturing
- **Value-Added Manufacturing and Assembly:**
  - Food Processing
  - Advanced Manufacturing and Assembly
- **Light/Flex Industrial:**
  - General Manufacturing
  - Industrial Business Parks and R&D Campuses
  - Business Services
- **Warehousing and Distribution**
  - Regional Warehouse/Distribution
  - Local Warehouse/Distribution
- **Specialized Uses:**
  - Data Centers

Industry-Specific Considerations

Recent growth in the semiconductor and cleantech sectors has prompted additional research to understand the evolving needs of these industries. To support this, the Oregon Legislature established the Oregon Semiconductor Task Force to identify industry needs and opportunities. Similarly, Business Oregon supported the creation of the Oregon Cleantech Competitiveness Assessment Report to evaluate the needs and prospects for cleantech industries. Key findings related to site-specific requirements from these initiatives are outlined below.

SEMICONDUCTOR SECTOR

The semiconductor industry offers Oregon a prime opportunity to expand advanced manufacturing, grow its traded sector, and create high-quality jobs. The $52 billion CHIPS Act, passed in July 2022, accelerates efforts to boost domestic semiconductor production by allocating $40 billion for manufacturing and $10 billion for research over five years.

The Metro region hosts a robust semiconductor cluster centered in Hillsboro. There has also been some semiconductor activity south of Hillsboro, including LAM Research in Sherwood and Tualatin, bolstering the supply chain presence in the South Metro. This established network positions the region to attract additional semiconductor-related investments.

The Semiconductor Task Force's Industrial Lands Subcommittee identified key site characteristics most important for the semiconductor industry:

- **Workforce Availability and Talent Proximity.** Access to skilled workers—engineers, technicians, and operators—is essential. Semiconductor clusters thrive where workers can easily transition between companies, creating a dynamic employment ecosystem. Workforce access is critical for both fabrication plants and supply chain operations.
- **Parcel Size and Usage.** Parcel size varies by operational needs. Fabrication plants require ***50–100 acres*** to accommodate clean rooms and infrastructure, with large-scale R&D and production facilities needing ***500+ acres***. Supply chain operations, such as equipment and material suppliers, generally need smaller parcels of ***15–35 acres***.
- **Infrastructure Readiness.** Reliable access to ***transportation, water, electricity, and wastewater systems*** is crucial. Semiconductor companies prioritize sites with infrastructure ready to support development within ***6 months to 3 years***.
- **Clustering with R&D Partners and Suppliers.** Collaboration with suppliers and R&D partners is vital. Fabrication plants benefit from proximity to suppliers for quick equipment maintenance and research. Supply chain operations also thrive in clusters, connecting with customers and transport hubs.
- **Environmental and Regulatory Considerations:** Predictable permitting processes are essential to avoid delays. While environmental regulations remain important, fast-tracked approvals are necessary to match the industry's pace.

SITE COMPETITIVENESS FOR THE CLEANTECH SECTOR

Oregon is well positioned to capitalize on the growth of cleantech industries, driven by federal initiatives like the Inflation Reduction Act and an increasing focus on sustainability. Cleantech encompasses a range of technologies, including renewable energy, energy-efficient materials, water technologies, and recycling systems. While the IFA Industrial Development Competitiveness Matrix provides general site characteristics for cleantech, the Oregon Cleantech Competitiveness Assessment Report—developed for Business Oregon—offers more detailed site selection criteria specific to established and emerging cleantech industries within the state. Key site characteristics for these subsectors are summarized below (a complete matrix is available in Appendix B.2). Scalability is essential for many users, as industries often begin on smaller sites but require the flexibility to expand as they grow.

- **Battery Storage:** These systems store renewable energy for later use, enhancing grid stability and reliability. Technologies range from lithium-ion to flow batteries, used in applications from small urban microgrids (0-5 acres) to large grid-scale facilities (25+ acres). Electrical system proximity and access for power generation facilities may vary, depending on the scale and intended use. Microgrid systems may only need connection to the local electrical grid, while large-scale grid storage may require connection to regional transmission lines or substations. Zoning flexibility for

energy uses is critical, while water needs and transportation access are generally less significant.

- **Mass Timber:** Engineered wood products like cross-laminated timber (CLT) and glued laminated timber (GLT) serve as sustainable alternatives to steel and concrete. Production facilities need medium to large sites (5-25+ acres), reliable transportation (particularly to arterial roads and railways) for raw materials, and substantial power supply.
- **Ag-Tech:** This sector integrates advanced technologies like AI, Internet of Things (IoT), agrivoltaics, and drones to optimize agriculture. Ag-tech operations, in this sense, are generally assumed to focus on software and small-scale equipment products, generally collaborating with large existing farms for R&D. These businesses typically require small sites (0-5 acres) with low transportation, water, and power demands.
- **Circular Economy:** This sector focuses on recycling and resource reuse, supporting waste-reduction and material-recovery technologies. Businesses range from R&D to recycling and upcycling facilities. Typically, these operations require small to medium-sized sites (0-25 acres), though the specific site needs depend on the types of raw materials and finished products, as well as the scalability of the industry. Good transportation access—especially to arterial roads and potentially railways—is important, along with moderate water and power requirements and flexible zoning options.
- **Solar and Wind Energy Production:** This sector encompasses both energy production and manufacturing. Manufacturing facilities share site requirements with advanced manufacturing industries, while energy production facilities vary significantly in scale. These range from small rooftop installations to large-scale farms, which require proximity to transmission lines and substations. The electrical system needs depend on the scale and purpose of the facility—microgrid systems may only require a connection to the local grid, while large-scale grid storage typically necessitates access to regional transmission lines or substations. Transportation access requirements also vary, but wind turbine manufacturing often requires rail access due to the size of components.
- **Water Technologies:** This sector focuses on addressing water scarcity and quality through innovations such as AI-driven leak detection, wastewater recycling, and desalination. It often involves both R&D and production facilities. These businesses typically require small to medium-sized sites (0-25 acres) with access to high-pressure water systems and significant power capacity, while having relatively low transportation needs.
- **Building Energy Technologies:** This sector focuses on innovations that improve energy efficiency, including smart HVAC systems and energy-efficient lighting to reduce building energy use. R&D and software development facilities in this space

typically require small sites (0-5 acres) with moderate to high electrical needs, while having low transportation and water requirements.

- **Electric Vehicle (EV) Infrastructure Technologies:** Supporting the adoption of EVs through charging networks and technology development, this sector generally requires medium to large sites (5-25+ acres) with high electrical power demands and good access to transportation networks.

Opportunity Site Characteristics

The market analysis revealed that Basalt Creek is well suited for various industrial uses, including light industrial, flex space, warehousing, distribution, advanced manufacturing, and support for cleantech and semiconductor sectors. These industries have specific site requirements. To assess how the three opportunity sites could accommodate different sectors, ECOnorthwest analyzed each site's characteristics and evaluated them against the competitiveness matrix and additional criteria specific to cleantech and semiconductor industries.

Table 7 outlines the physical characteristics of the three sites under analysis.

Table 7. Physical Characteristics of Opportunity Sites

SITE CHARACTERISTIC	SW GREENHILL	CRAFT INDUSTRIAL	WEST RAILROAD
Site Size and Ownership	♦ 57 acres ♦ 10 tax lots ♦ 2 owners (1 owns 42 acres, 1 owns 14 acres)	♦ 32 acres ♦ 7 tax lots ♦ 7 owners (fairly even site size distribution)	♦ 165 acres ♦ 15 tax lots ♦ 8 owners (1 owns 65 acres, 4 own ~20 acres each, 3 own smaller parcels)
Slope	Slopes of 10% or greater cover about 6 acres, or 11% of the total site area.	♦ Slopes of 10% or greater cover about 15 acres, or 46% of the total site area. These slopes are generally in the middle of the site, bordering Basalt Creek.	♦ Slopes of 10% or greater cover about 34 acres, or 20% of the total site area. However, some of these slopes are from activities on the sites and not physical attributes.
Surrounding Uses	♦ North: Planned for medium-low density residential and neighborhood commercial (Tualatin portion of BCPA) ♦ East: BCPA border and I-5 ♦ South: Undeveloped land, contractor establishment (planned High-Tech Employment District) ♦ West: Craft Industrial Opportunity Site	♦ North: Planned for (and under development) low-density residential (Tualatin portion of BCPA) ♦ East: SW Greenhill Opportunity Site (planned High-Tech Employment District) ♦ South: Contractor establishments, single residential property (planned High-Tech Employment District) ♦ West: Contractor establishments, plant nurseries, and undeveloped land (planned Light Industrial District)	♦ North: Adjacent to mining site ♦ East: Coffee Creek Correctional Facility and Coffee Creek Industrial area ♦ West: Coffee Creek provides a natural buffer ♦ South: Undeveloped land in Clackamas County
Constraints	♦ 52 unconstrained acres (91% of total area) ♦ Minimal constraints running along the eastern boundary	♦ 14 unconstrained acres (42% of total area); 9 of these acres are east of the constraints that dominate the central area; the remaining 5 acres occupy the northwest corner ♦ Constraints dominate the central north-south area	♦ 92 unconstrained acres (56% of total area) ♦ Constraints run along the entire western boundary and central northern half

Table 8 outlines the existing and planned utilities on the opportunity sites. Details on water, sewer, and roads were provided by City staff based on the most current local access maps from DKS. Final infrastructure alignment and capacity are still in the planning stages.

Table 8. Infrastructure and Utility Characteristics of Opportunity Sites

SITE CHARACTERISTIC	SW GREENHILL	CRAFT INDUSTRIAL	WEST RAILROAD
Water: Potable water delivery to BCPA requires Basalt Creek Parkway extension, Zone C booster station, and may require SW Grahams Ferry Rd extension. These systems will connect SW Tooze Rd to SW Day Rd – 10,200 LF 18" diameter pipe and 4,670 LF 12" diameter pipe. *Modeling needs to confirm these requirements.*	**Current:** No existing water lines in area. **Planned:** Requires water main along SW Boones Ferry Rd alignment (2,490 LF). Water lines assumed to generally follow local road layout (5,460 LF). Will connect proposed water lines to existing lines on SW Pioneer Ct and SW Day Rd. *Sizes to be confirmed during modeling.*	**Current:** No existing water lines in area. **Planned:** Assumed to utilize proposed water main along SW Boones Ferry Rd. *Sizes to be confirmed during modeling.*	**Current:** No existing water lines in area. **Planned:** Water lines assumed to follow road layout from SW Grahams Ferry to SW Tonquin Rd (6,900 LF). *Sizes to be confirmed during modeling.*
Roads	**Current:** Existing SW Boones Ferry Rd, SW Greenhill Rd **Planned:** New arterial to I-5 from SW Greenhill Rd (300 LF). New arterial from SW Day Rd to I-5 (1,060 LF). New local roads looping SW Greenhill Rd to SW Boones Ferry Rd (3,350 LF) and connecting to SW Pioneer Ct (2,110 LF).	**Current:** Existing SW Boones Ferry Rd. **Planned:** New local road looping SW Day Rd to SW Boones Ferry Rd (1,900 LF). Assumed to utilize SW Boones Ferry Rd.	**Current:** Existing SW Grahams Ferry Rd to south and SW Tonquin Rd to north. **Planned:** New local road connecting SW Grahams Ferry Rd to SW Tonquin Rd (6,900 LF) with a possible connection to SW Morgan Rd (2,570 LF).
Sewer: Wastewater collection for BCPA requires completion of Coffee Creek Interceptor Phase 2 – 2,000 LF of gravity system upsizing to 21" diameter pipe from SW Boeckman Rd along railroad to SW Ridder Rd. This also requires Coffee Creek Interceptor Railroad Crossing – 160 LF of 21" diameter pipe.	**Current:** No existing sewer lines in area. **Planned:** Gravity collection lines flow generally south and west along proposed road layout (5,460 LF). Requires new collection line along SW Day Rd (1,600 LF) and new line to travel south between SW Day Rd to connect to SW Garden Acres Rd just north of SW Ridder Rd (3,700 LF). *10-12" diameter collection lines are anticipated.*	**Current:** No existing sewer lines in area. **Planned:** Assumed to utilize proposed line along SW Boones Ferry Rd.	**Current**: No existing sewer lines in area. **Planned:** Gravity line flows from SW Clay St west, crosses railroad, and meets proposed local street alignment in West Railroad to SW Grahams Ferry Rd (6,900 LF). Lift station is required with pressure main along SW Grahams Ferry to SW Clutter St (380 LF) before returning to gravity along SW Clutter St to SW Garden Acres Rd (1,430 LF). *A 10" diameter pipe is anticipated for gravity lines.*
Natural Gas	The IFA matrix does not identify natural gas as a requirement for industries most likely to locate in the BCCP. Natural gas did not come up as a barrier for industrial development in interviews.		
Electricity	Discussions with PGE indicate that the area can accommodate industrial users with moderate power needs. However, large power users such as a data center may require infrastructure upgrades. These types of upgrades can take 3+ years.		
Telecommunication	Since the BCPA is located within the Metro, telecommunication service is expected to be adequate to meet the needs of likely users. Telecommunication capacity did not come up as a barrier for industrial development in interviews.		

Location in the overall region and access to highways, rail, other like businesses, and labor force also play a role in site selection for industries. Given the proximity of these sites within a very small area, we detail these overall characteristics for the BCPA rather than for each site (Table 9).

Table 9. Basalt Creek Transportation and Proximity Characteristics

SITE CHARACTERISTIC	BASALT CREEK EVALUATION
Available Trips	♦ The BCCP allocated 951 trips to Wilsonville's portion of Basalt Creek. The TRP identifies the necessary improvements to accommodate those trips. Additional development and trips would require an update to the TRP and additional capacity improvements to the planned system.
Transportation Access to Interstate or Principal Arterial	♦ The entirety of Basalt Creek is within 5 miles of access to I-5 and I-205 and is less than 10 miles from Highway 217.
Proximity to Regional Infrastructure Rail/Port/Airport	♦ Basalt Creek is ~27 miles from Portland International Airport and ~26 miles from the Port of Portland. ♦ A rail line runs through Basalt Creek. The type of rail line and potential for spurs are not known at this point.
Proximity to Labor Force	♦ Access to the broader Portland Metro and Mid-Valley labor forces.
Proximity to Goods	♦ Close proximity to wine region and agricultural land. ♦ Close proximity to distributors, other manufacturers, and tech hubs, including semiconductor businesses.

Evaluation of Compatible Uses

The suitability of potential users for each site is outlined below, based on site characteristics and industry-specific needs. This high-level evaluation focuses on physical site characteristics—such as size, location, and constraints—without factoring in the likelihood of redevelopment. It provides a broad understanding of site benefits, barriers, and potential industry suitability, serving as a foundation for planning and zoning rather than a definitive assessment of building configurations or sizes.

Infrastructure will be pivotal in shaping the types of industries and scale of development suitable for the area. This analysis incorporated available information on infrastructure elements such as water, wastewater, and roads; however, detailed system capacities, final road alignments, and the timing of improvements—particularly in areas like West Railroad—remain uncertain. These factors will play a significant role in determining site suitability.

Water and wastewater systems are expected to meet most demands, though high-water users may require additional capacity. Similarly, industries with significant electricity demands might necessitate infrastructure upgrades. Road alignments will impact parcel configurations, building sizes, and overall development potential. While these elements are critical to understanding site suitability, they are not yet classified as definitive constraints or advantages.

- **The SW Greenhill** site spans 57 acres, with 91 percent (52 acres) of the land unconstrained. Minimal slopes (affecting 11 percent of the site), a high proportion of undeveloped land, consolidated land ownership (two property owners), and proximity to existing infrastructure make it one of the most development-ready locations in Basalt Creek. The site could be physically suitable for a high-tech supply chain, cleantech industries, advanced manufacturing, food processing, small warehousing and distribution, and industrial business parks or R&D campuses. Its proximity to transportation networks and regional workforce access further enhances its competitiveness.
- **The Craft Industrial** area is split into eastern and western portions by site constraints and consists of seven tax lots with fragmented ownership, most under five acres. Only 14 acres are unconstrained, and its proximity to residential areas limits its suitability for high-intensity industrial uses. Instead, the area aligns with the Basalt Creek Concept Plan's vision for small-scale or micro-industrial uses, such as live-work spaces or makerspaces.

  With site aggregation, the southeastern portion could accommodate small-scale industrial or office users on up to five acres. These uses could resemble industrial condo developments like the Commerce Circle Business Park or Riverwood Business Center, which integrate office and small-scale production spaces. The northeastern portion, while it could also redevelop, is likely less appealing due to its irregular shape and nearby high-value residences. The presence of existing residences,

including some high-value homes, are likely to delay redevelopment timelines compared to other opportunity sites. However, the feasibility of redeveloping these residential properties was not assessed as a part of this study.

- **The West Railroad** site spans 165 acres, with 56 percent (92 acres) of the land unconstrained. Its large parcels and access to regional transportation networks could make it physically suitable for uses such as general manufacturing, food processing, and small to midsized warehousing or distribution. Proximity to Coffee Creek's industrial area further enhances its appeal to businesses providing support services to neighboring industries. However, significant infrastructure upgrades are required, and access is limited by the railroad undercrossing on SW Grahams Ferry Road. Additionally, the site's proximity to a rail line and a mining operation could make the site less attractive to advanced manufacturing or other industries sensitive to vibration. Ongoing infrastructure alignment and capacity studies will provide further clarity on the site's suitability for targeted industries.

In Table 10, the compatibility of each site with various industrial uses is color coded as follows:

- Red: Not competitive for the industry
- Yellow: Moderate potential
- Green: High compatibility and strong suitability

Table 10. Evaluation of Compatible Uses Based on Site Characteristics

INDUSTRIES		SW GREENHILL	CRAFT INDUSTRIAL	WEST RAILROAD
Production Manufacturing	High-Tech / Cleantech Manufacturing	Midsized, flat site; high power or utility demands could exclude some users depending on system capacity	May be able to accommodate a small user (under 5 acres) most likely on the southeastern portion; some users may prefer larger sites with expansion potential	Vibration *may* be a concern from nearby rail and/or mining; high power or utility demands could exclude some users depending on system capacity
Value-Added Manufacturing and Assembly	Food Processing	Water and sewer needs are high; high demands could exclude some users depending on system capacity	May be able to accommodate a small user (under 5 acres) most likely on the southeastern portion	Water and sewer needs are high; high demands could exclude some users depending on system capacity
	Advanced Manufacturing & Assembly	Midsized, flat site; lower water and sewer demand than high-tech industries	Site small and constrained; increased setbacks (if required) could be a problem; often requires on-site utility service areas	Vibration *may* be a concern from nearby rail and/or mining

INDUSTRIES		SW GREENHILL	CRAFT INDUSTRIAL	WEST RAILROAD
Light / Flex Industrial	General Manufacturing	Residential proximity may reduce appeal	Site small and constrained; residential proximity may reduce appeal	Desirable site size available; distance from sensitive uses (residential, park)
	Industrial Business Park and R&D Campus	Midsized, flat site; slightly small for some users	Site small and constrained	Constraints may limit large park potential
	Business / Admin Services	Midsized, flat site; high trip generation	May be able to accommodate a small user (under 5 acres) most likely on the southeastern portion; tolerates higher slopes; compatible near residential; high trip generation	Proximity to Coffee Creek Industrial area that hosts similar services is attractive; tolerates higher slopes; high trip generation
Warehouse & Distribution	Regional	Close to I-5; existing road infrastructure; site may be a little small for some users	Site too small and constrained; limited space for trucks	Constraints could limit large distribution centers; the City is evaluating needed improvement to better accommodate truck traffic
	Local	Close to I-5; existing road infrastructure; suitable for smaller users	Site too small and constrained; limited space for trucks	Close to I-5; suitable for smaller users; the City is evaluating needed improvement to better accommodate truck traffic
Specialized	Data Center	May be suitable, but power needs could exceed available capacity, requiring upgrades	Site too small and constrained	May be suitable, but power needs could exceed available capacity, requiring upgrades

Site Competitiveness for Semiconductor Industry

Basalt Creek lacks the large parcels required for fabrication plants but is positioned to accommodate supply chain businesses that support semiconductor manufacturing.

- **SW Greenhill:** High Potential – Could be competitive for the semiconductor supply chain businesses. This site is closest to development ready, which is highly competitive because semiconductor companies prioritize sites with infrastructure ready to support development within *6 months to 3 years.*
- **Craft Industrial:** Not Competitive – Given the small parcels on the Craft Industrial site, this site is not competitive for the semiconductor supply chain businesses.

- **West Railroad:** Moderate Potential – The longer timeline required to provide adequate infrastructure, combined with existing constraints, makes this site less attractive for the semiconductor industry.

Site Competitiveness for Cleantech

- **Craft Industrial:** Moderate Potential – Given the small parcels and extent of constraints, this site is not competitive for many cleantech businesses but may be attractive to small-scale users in ag-tech and building energy tech that require sites under 5 acres.

Table 11. Cleantech Evaluation of Compatible Uses for Craft Industrial

Battery Storage	Existing businesses add appeal, but energy demands may exceed supply; site size may be too small for many users
Mass Timber	Limited by small site size, lack of direct rail access, and high energy requirements
Ag-Tech	Site may be suitable for a small user
Circular Economy	Some users may prefer direct rail access; site may be too small for some users
Solar & Wind Energy	Small site; unsuitable for power generation and manufacturing
Water Tech	High demand user; water pressure adequacy and energy needs may pose challenges; site may be too small for some users
Building Energy Tech	Site may be suitable for a smaller user; energy demands could exceed supply
EV infrastructure Tech	Limited site size, lack of rail access, and high energy requirements

- **SW Greenhill and West Railroad:** High Potential – Site size and infrastructure could appeal to a variety of cleantech subsectors, including battery storage, ag-tech, circular economy, water tech, and building energy tech.

Table 12. Cleantech Evaluation of Compatible Uses

Battery Storage	Existing businesses add appeal, but energy demands may exceed supply
Mass Timber	Limited by lack of direct rail access and high energy requirements
Ag-Tech	Sites meet needs well
Circular Economy	High transportation needs: some facilities may prefer direct rail access
Solar & Wind Energy	Unsuitable for power generation; possible for manufacturing but limited by rail and power needs
Water Tech	High demand user; water pressure adequacy and energy needs may pose challenges; low transportation needs
Building Energy Tech	Sites meet needs well; energy demands could exceed supply
EV infrastructure Tech	Limited by lack of rail access and high power requirements

Conclusion

Land Supply

The BCPA offers a promising opportunity to support a diverse range of industrial and employment uses that align with Wilsonville's economic development goals. Since the previous Buildable Lands Inventory (BLI) update, the area has experienced growth in contractor establishments. The updated BLI identifies **150 acres of buildable land,** comprising **87 acres of vacant land** and **63 acres of partially vacant land,** after accounting for constraints and existing development. The supply is distributed across parcels of varying sizes, ranging from small lots under 5 acres to larger parcels exceeding 25 acres, providing a mix of options suitable for different industry needs. Given the 150 acres of buildable land and the expectation of employment densities between 10 and 18.5 employees per acre, the BCPA is expected to accommodate between **1,500 and 2,780 jobs**.

Site Suitability Analysis

The Site Suitability Analysis evaluates the competitiveness of three opportunity sites within the BCPA based on their ability to host key industries identified in the Economic Inventory. This evaluation focuses on physical site characteristics, such as size, location, and constraints, rather than the likelihood of redevelopment. Redevelopment feasibility is addressed in a separate deliverable.

- **SW Greenhill:** With its minimal constraints, lack of development, consolidated land ownership, and existing infrastructure, this site could be physically suited for cleantech, high-tech supply chains, advanced manufacturing industries, food processing, small warehousing and distribution, and industrial business parks or R&D campuses requiring medium-sized parcels. This validates the uses originally envisioned in the BCCP for the area.
- **Craft Industrial:** Due to significant constraints, the site is currently more suitable for micro-industrial uses, such as live-work spaces, as originally identified in the BCCP. However, with site aggregation, the southeastern portion could accommodate small-scale business or administrative services and production uses, similar to industrial condo developments like Commerce Circle Business Park or Riverwood Business Center. The presence of existing residences, including some high-value homes, are likely to delay redevelopment timelines compared to other opportunity sites.
- **West Railroad:** This site has potential for development in general manufacturing, food processing, warehousing and distribution, and business services. However, significant infrastructure upgrades are required, and existing constraints may limit the scale of some types of development.

Next Steps

The findings presented in this memorandum are preliminary and will be further refined through ongoing discussions with the Planning Commission and City Council. This analysis is being conducted in parallel with an evaluation of redevelopment feasibility for contractor establishments. Ultimately, these components, along with insights from the Economic Inventory, will be synthesized into a summary report that outlines key findings and recommendations.

16	SPECIAL CONSIDERATIONS:		Adequate distance from sensitive land uses (residential, parks, large retail centers) necessary. High throughput of materials. Large yard spaces and/or buffering required. Often transportation related requiring marine/rail links.	Acreage allotment includes expansion space (often an exercisable option). Very high utility demands in one or more areas common. Sensitive to vibration from nearby uses.	May require high volume/supply of water and sanitary sewer treatment. Often needs substantial storage/yard space for input storage. Onsite water pre-treatment needed in many instances.	Surrounding environment of great concern (vibration, noise, air quality, etc.). Increased setbacks may be required. Onsite utility service areas. Avoid sites close to wastewater treatment plants, landfills, sewage lagoons, and similar land uses. Lower demands for water and sewer treatment than Production High-Tech Manufacturing.	Adequate distance from sensitive land uses (residential, parks) necessary. Moderate demand for water and sewer. Higher demand for electricity, gas, and telecom.	High diversity of facilities within business parks. R&D facilities benefit from close proximity to higher education facilities. Moderate demand on all infrastructure systems.	Relatively higher parking ratios may be necessary. Will be very sensitive to labor force and the location of other similar centers in the region. High reliance on telecom infrastructure.	Transportation routing and proximity to/from major highways is crucial. Expansion options required. Truck staging requirements mandatory. Minimal route obstructions between the site and interstate highway such as rail crossings, drawbridges, school zones, or similar obstacles.	Transportation infrastructure such as roads and bridges to/from major highways is most competitive factor.	Must be located witihn or near FAA-regulated UAV testing sites. Moderate utility demands. Low reliance on transportation infrastructure.	Larger sites may be needed. The 25 acre site requirement represents the more typical site. Power delivery, water supply, and security are critical. Surrounding environment (vibration, air quality, etc.) is crucial. May require high volume/supply of water and sanitary sewer treatment.	Located in more remote locations in the state. Usually without direct access (within 50 miles) of Interstate or City of more than 50,000 people.

Mackenzie; Business Oregon

Terms:

More Critical ↑ Less Critical	**'Required'** factors are seen as mandatory in a vast majority of cases and have become industry standards
	'Competitive' significantly increases marketability and is *highly recommended by Business Oregon* . May also be linked to financing in order to enhance the potential reuse of the asset in case of default.
	'Preferred' increases the feasibility of the subject property and its future reuse. Other factors may, however, prove more critical.
* Competitive Acreage: Acreage that would meet the site selection requirements of the majority of industries in this sector.	
**Total Site: Building footprint, including buffers, setbacks, parking, mitigation, and expansion space	
† Data Center Water Requirements: Water requirement is reported as gallons per MWh to more closely align with the Data Center industry standard reporting of Water Usage Effectiveness (WUE).	
‡ Data Center Sewer Requirements: Sewer requirement is reported as 200% of the domestic usage at the Data Center facility. Water and sewer requirements for Data Centers are highly variable based on new technologies and should be reviewed on a case-by-case basis for specific development requirements.	

Appendix B.2 Cleantech Industrial Sector Land Use Competitiveness Matrix

The Oregon Cleantech Competitiveness Assessment Report (Appendix D in the report) identified the following land use requirements for key cleantech subsectors in Oregon as described below.

Cleantech Land Use Criteria

Land use requirements for attracting and growing industrial users vary across sectors. We have reviewed typical land use and infrastructure needs based on existing facility development, anticipated growth needs, and similarities to existing established industrial users within the State. We have reviewed land use competitiveness for the following development criteria, which are commonly used when evaluating sites for attracting potential industrial users:

1. Total site size: Gross property area, including building footprint, setbacks, parking, laydown space, buffers and/or mitigation areas, and expansion areas.
   A. Small: 0-5 acres
   B. Medium: 5-25 acres
   C. Large: > 25 acres
2. Use allowance: Specific manufacturing use allowed under current zoning. Development standards also may limit feasibility of necessary elements such as utility yards.
   A. Low: Allowed outright
   B. Medium: Allowed conditionally or with limitations
   C. High: Not allowed
3. Site slope tolerance: Elevation differences across the site; generally, industries with large-footprint buildings or laydown yards require flatter sites.
   A. Low: 0-5%
   B. Moderate: 0-7%
   C. High: 0-12%
4. Access to interstate or principal arterial transportation routes: Access to shipping routes and available capacity for trips generated.
   A. Low: Relatively low need for access to transportation routes.
   B. Moderate: Access to principal transportation routes is preferred.
   C. High: Access to principal transportation routes is required.
5. Railroad access: Proximity and capacity for rail freight systems, for either raw materials or finished goods.
   A. Low: Relatively low need for rail access.
   B. Moderate: Access to rail access is preferred.
   C. High: Access to rail access is required.
6. Marine port access: Proximity and capacity for marine cargo shipping, for either raw materials or finished goods.
   A. Low: Relatively low need for marine access.
   B. Moderate: Access to marine access is preferred.

C. High: Access to marine access is required.

7. Airport access: Proximity and flight availability for employees, customers, or air cargo.
   A. Low: Relatively low need for airport access.
   B. Moderate: Access to airport access is preferred.
   C. High: Access to airport access is required.
8. High-pressure water supply: Proximity and capacity for high-pressure water supply, typically as municipal water.
   A. Low: Significant water usage is not expected to be a critical component of this industry.
   B. Moderate: Water usage may be high for this industry; high-pressure water supply is preferred.
   C. High: High-pressure water supply is required.
9. Electricity supply: Proximity and capacity for electrical power.
   A. Low: Significant electricity usage is not expected to be a critical component of this industry.
   B. Moderate: Electrical usage may be high for this industry; high-demand service and/or redundancy is preferred.
   C. High: High-demand service and/or redundant electrical supply is required.

The following table summarizes our recommendations of land use competitiveness for the selected Cleantech sectors across the criteria listed above.

Table 13. Competitiveness Matrix for Select Cleantech Industries

	Battery Storage	Mass Timber	Ag-Tech	Circular Economy	Solar & Wind Energy Prod	Water Tech	Building Energy Tech	EV Infrastructure Tech
Site Size	Small to Large[4]	Med to Large	Small[5]	Small to Med[6]	Med to Large[7]	Small to Med	Small	Med to Large
Use Allowance	Varies by jurisdiction							
Slope Tolerance	Mod.	Low	High	Mod.	Mod.	Low	High	Mod.
Transportation Access	Low	High	Low	High	Mod.	Low	Low	High
Rail Access	Low	Mod.	Low	Mod.	Wind: High Solar: Low	Low	Low	Mod.

Electrical Supply Needs	High[9]	Mod. to High	Low	Mod.	High[6]	High	Mod. to High	High

Source: Oregon Cleantech Competitiveness Assessment Report, 2024

[4] Battery storage site sizes may vary widely, from urban microgrid installations to large-scale power grid storage.
[5] The Ag-Tech industries identified in this study are assumed to generally focus on software and small-scale equipment products. These companies may use large-scale farms for product development or research; however, since those are likely to be existing operating farm facilities, we do not identify them as a land use criterion here.
[6] Site facility size for circular economy is dependent on the raw materials and finished products involved and the industry scaling.
[7] Site size for solar/wind manufacturing facilities is similar to advanced manufacturing industries, while sites for solar/wind power generation vary greatly depending on scale, ranging from rooftop systems to grid-scale farms.
[8] Offshore wind power requires marine facilities to transport turbines and equipment to the generating site. Land-based wind power marine access varies.
[9] Electrical system proximity and access for power generation facilities may vary depending on the scale and intended use. Microgrid systems may only need connection to the local electrical grid, while large-scale grid storage may require connection to regional transmission lines or substations.

Appendix B.3 Buildable Lands Inventory Methodology

The BLI is intended to identify industrial lands that are available for development for employment uses within the City of Wilsonville's BCPA. The inventory is sometimes characterized as *supply* of land to accommodate anticipated employment growth. The amount of land needed to accommodate anticipated growth, often referred to as *demand* for land, depends on the type of employment-related development and other factors.

This appendix presents methods and definitions used to develop the industrial buildable lands inventory for the BCPA. The results (shown in the Land Supply section of the memorandum) are based on analyses by ECOnorthwest of data from the City of Wilsonville, Washington and Clackamas Counties, Metro, and Pacific Habitat Services. The analysis was reviewed by City staff. The remainder of this appendix summarizes key findings of the BLI.

Methods and Definitions

The BLI in Wilsonville's BCPA includes all land that allows industrial uses within the jurisdiction of Wilsonville's comprehensive plan use designations or unincorporated areas of Washington and Clackamas Counties. From a practical perspective, land was included in the BLI if it met all the following criteria:

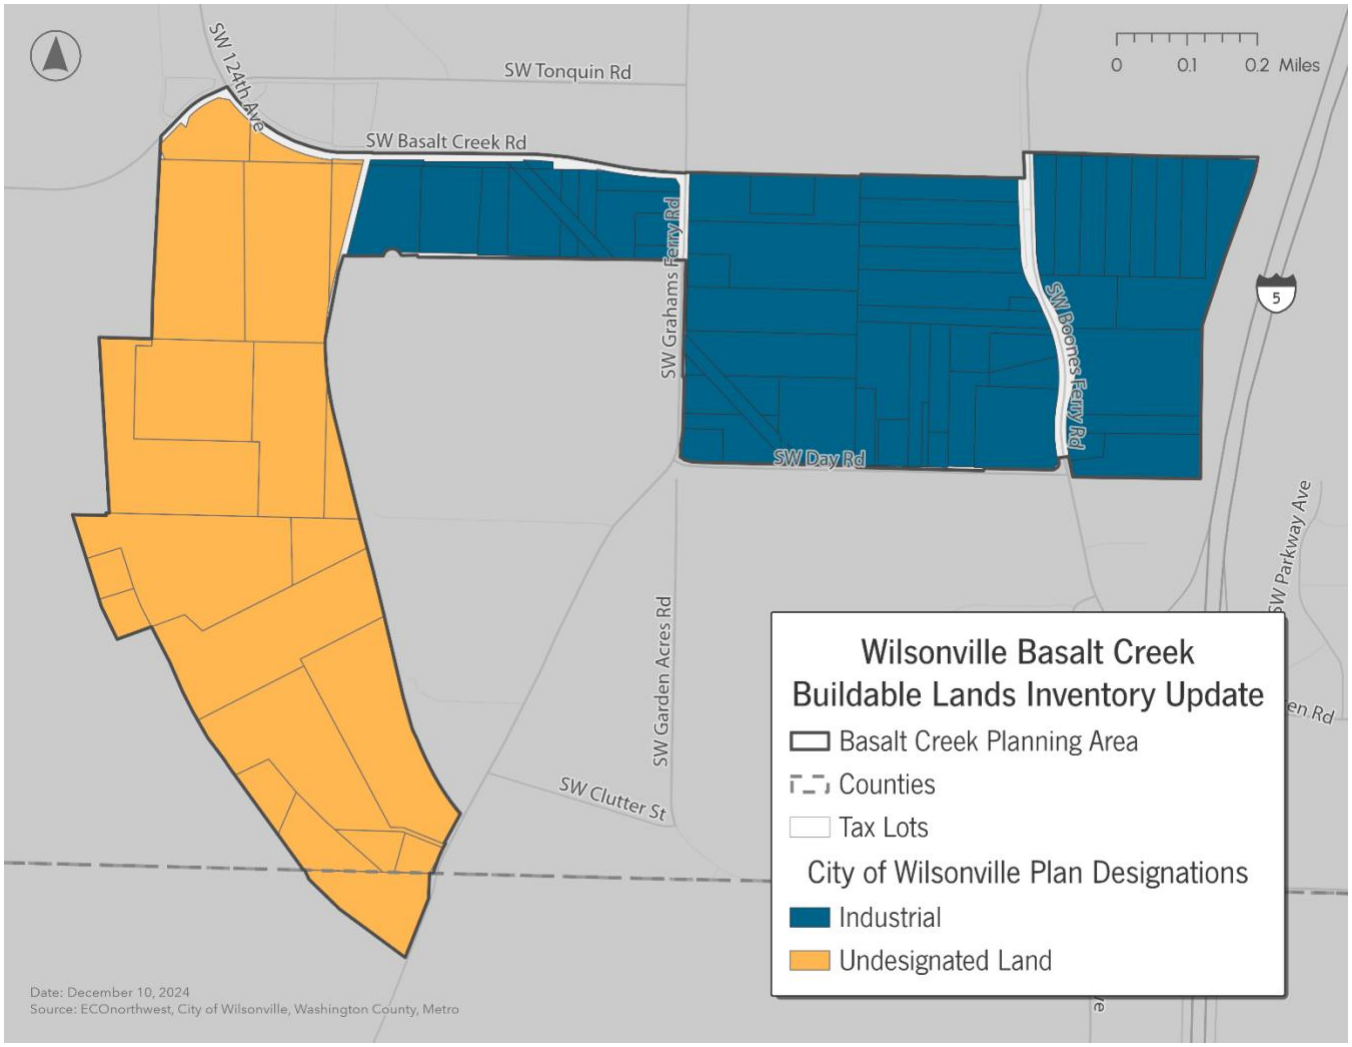
1. It is inside the BCPA
2. It is within a Wilsonville Comprehensive Plan designation or unincorporated areas of Washington and Clackamas Counties.
3. It is inside a tax lot (as defined by Metro), and
4. Its plan designation allows employment uses. *Note that tax lots do not generally include road or railroad rights-of-way or water.*

The inventory then builds from the tax lot–level database to estimate buildable land by Comprehensive Plan designation.

Inventory Steps

The five steps in the BLI are:

1. Generate UGB "land base"
2. Classify lands by initial development status
3. Identify constraints
4. Verify inventory results
5. Tabulate and map results



Step 1: Generate UGB "Land Base"

The industrial inventory used all tax lots within the BCPA with the appropriate types of comprehensive plan designations that fall under those land use categories:

- Industrial (I)
- Undesignated land (i.e., unincorporated land)

Figure 6 below shows a map of these designations used in the BLI.

Figure 6. Land Base by Wilsonville Comprehensive Plan Designation, BCPA, 2024

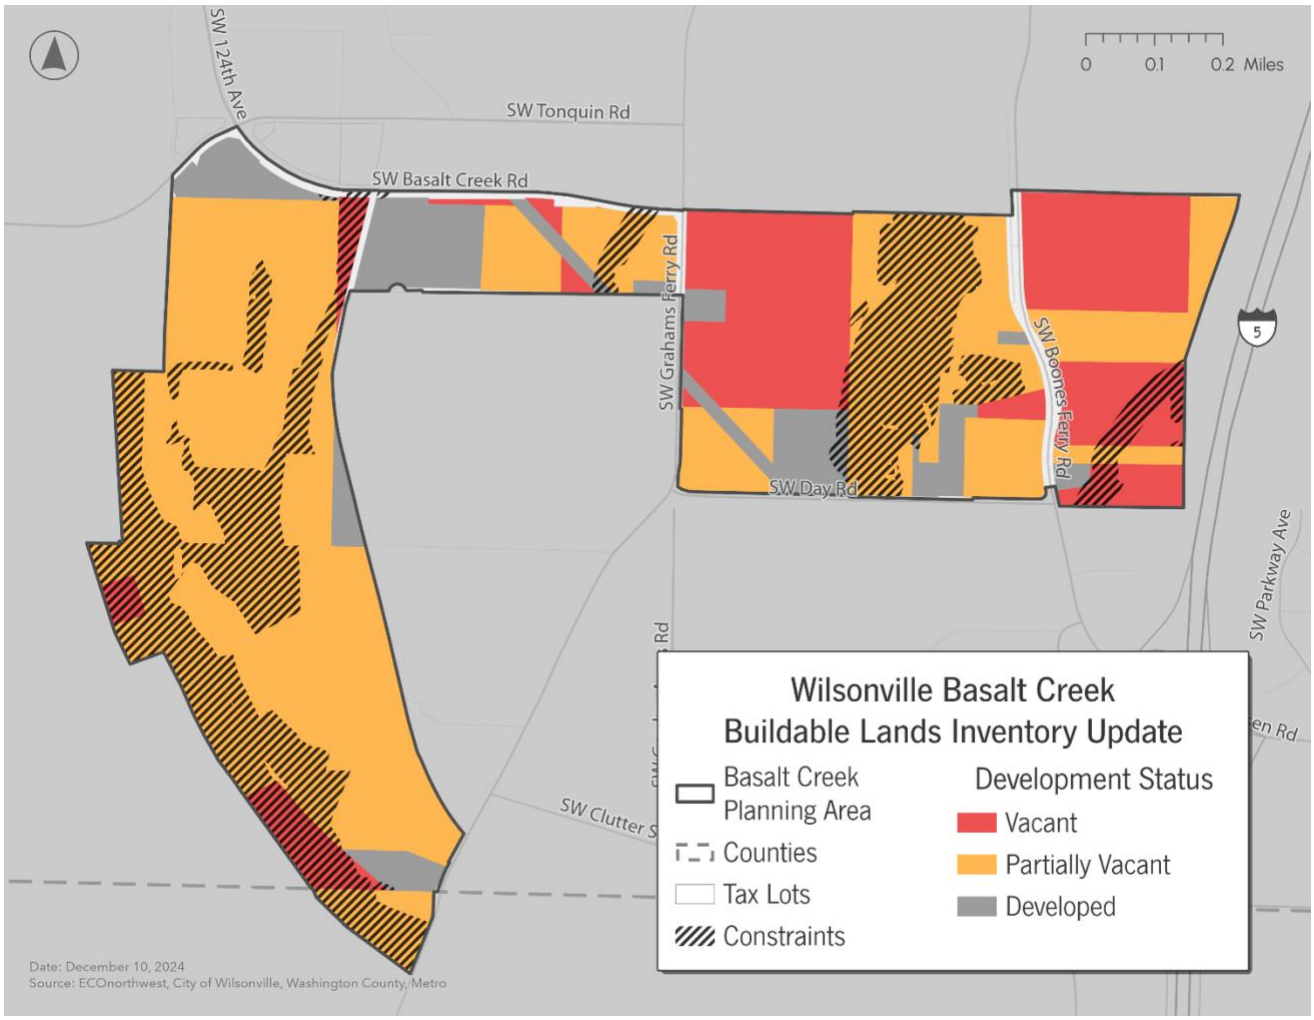
Source: ECOnorthwest Analysis, City of Wilsonville, Metro

Step 2: Classify Lands by Development Status

In this step, ECOnorthwest initially classified each tax lot with an employment plan designation (based on the definitions above) into one of three mutually exclusive categories based on development status:

- Vacant land
- Partially vacant land
- Developed land

ECOnorthwest identified buildable land and classified development status using a rule-based methodology adapted from Metro's Buildable Land Inventory documentation[10] and utilizing Metro's vacant and developed land GIS inventories. These classifications serve as a starting point for identifying development statuses and are further refined in step 4 through visual review by ECOnorthwest and the City of Wilsonville.



The rules are described in Table 14, and the development status classifications of the BLI land base are visualized in map format in Figure 7.

Table 14. Rules for Development Status Classification

DEVELOPMENT STATUS	DEFINITION	METHODOLOGICAL BASIS
Vacant Land	A tax lot where the area is: (a) Less than 2,000 sq ft and less than 10% developed, or (b) More than 95% vacant.	*Metro Appendix 2 - 2024 Buildable Land Inventory (BLI) and Capacity Estimates*[11]
Partially Vacant Land	A tax lot where the area does not meet the vacant land definition and is more than one-half acre vacant	No statutory definition
Developed Land	A tax lot that is not vacant or partially vacant.	*Metro Appendix 2*

[10] https://www.oregonmetro.gov/sites/default/files/2024/07/09/2024-UGR-Appendix-2-UGB-capacity-analysis-with-attachments.pdf
[11] Ibid.

Figure 7. Development Status with Constraints, BCPA, 2024

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro, Pacific Habitat Services

Step 3: Identify Constraints

As shown in

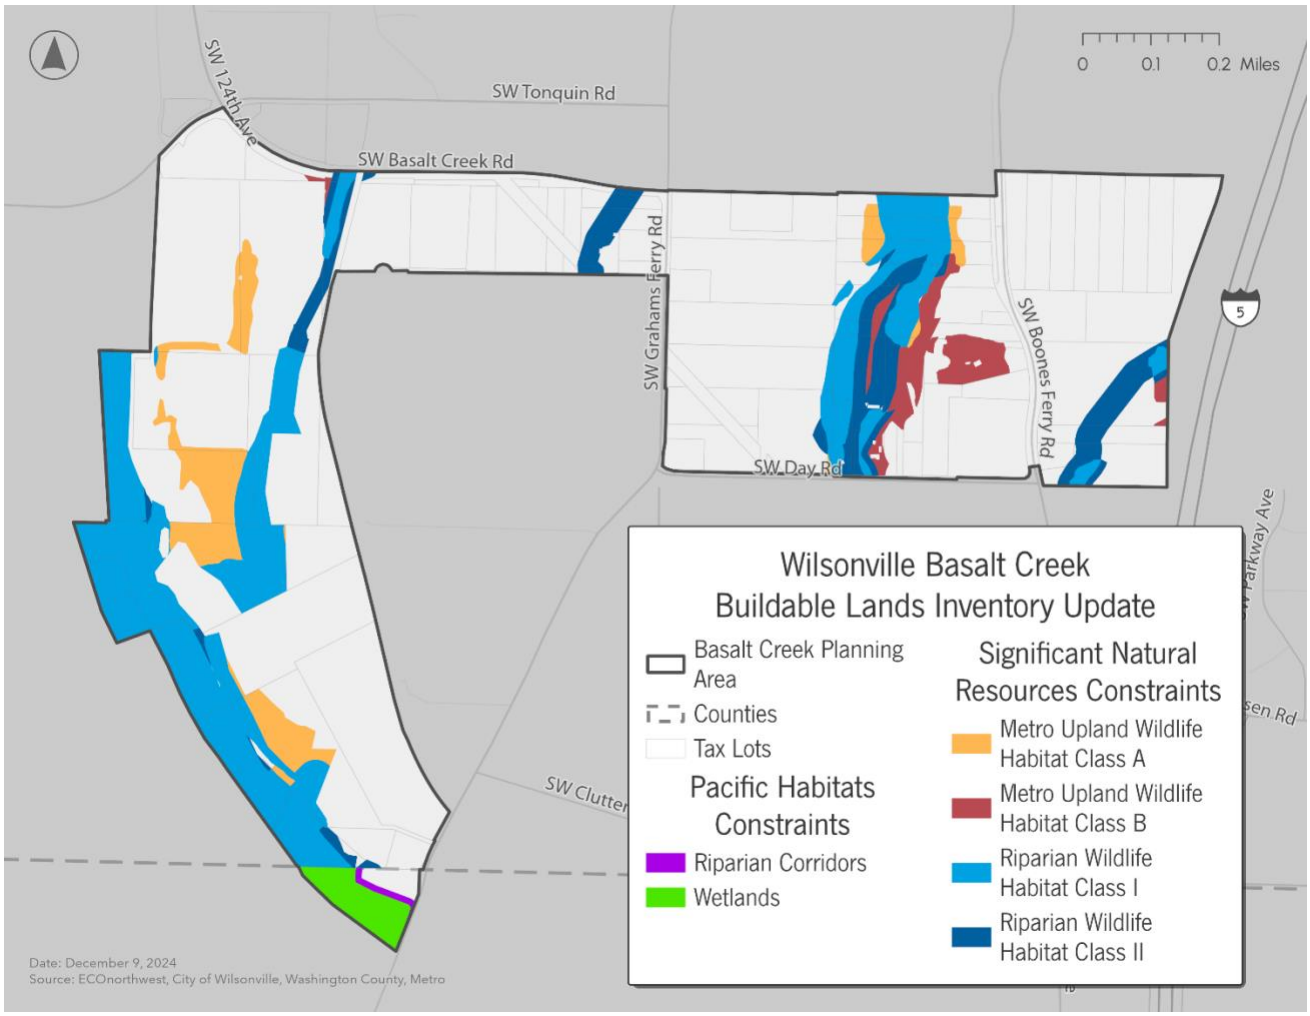


Table 15, the BLI included development constraints consistent with guidance in OAR 660-009-0005(2) and discussion with Wilsonville City staff.

Table 15. Constraints Included in BLI

DEVELOPMENT STATUS	STATUTORY AUTHORITY	THRESHOLD	SOURCE
Goal 5 Natural Resource Constraints			
Significant Natural Resources (SNR)	*OAR 660-009-0005(2)*	Lands within SNR classifications: ♦ Metro Upland Wildlife Habitat Classes A and B ♦ Riparian Wildlife Habitat Classes I and II	Washington County
Riparian Corridors	*OAR 660-009-0005(2)*	Lands within riparian corridors (Clackamas County only)	Pacific Habitat Services
Wetlands	*OAR 660-009-0005(2)*	Lands within wetlands (Clackamas County only)	Pacific Habitat Services

These areas were evaluated as prohibitive constraints (unbuildable). All constraints were merged into a single constraint file, which was then used to identify the area of each tax lot that is constrained. These areas were deducted from lands identified as vacant or partially vacant. Figure 8 shows a map of the individual constraints.

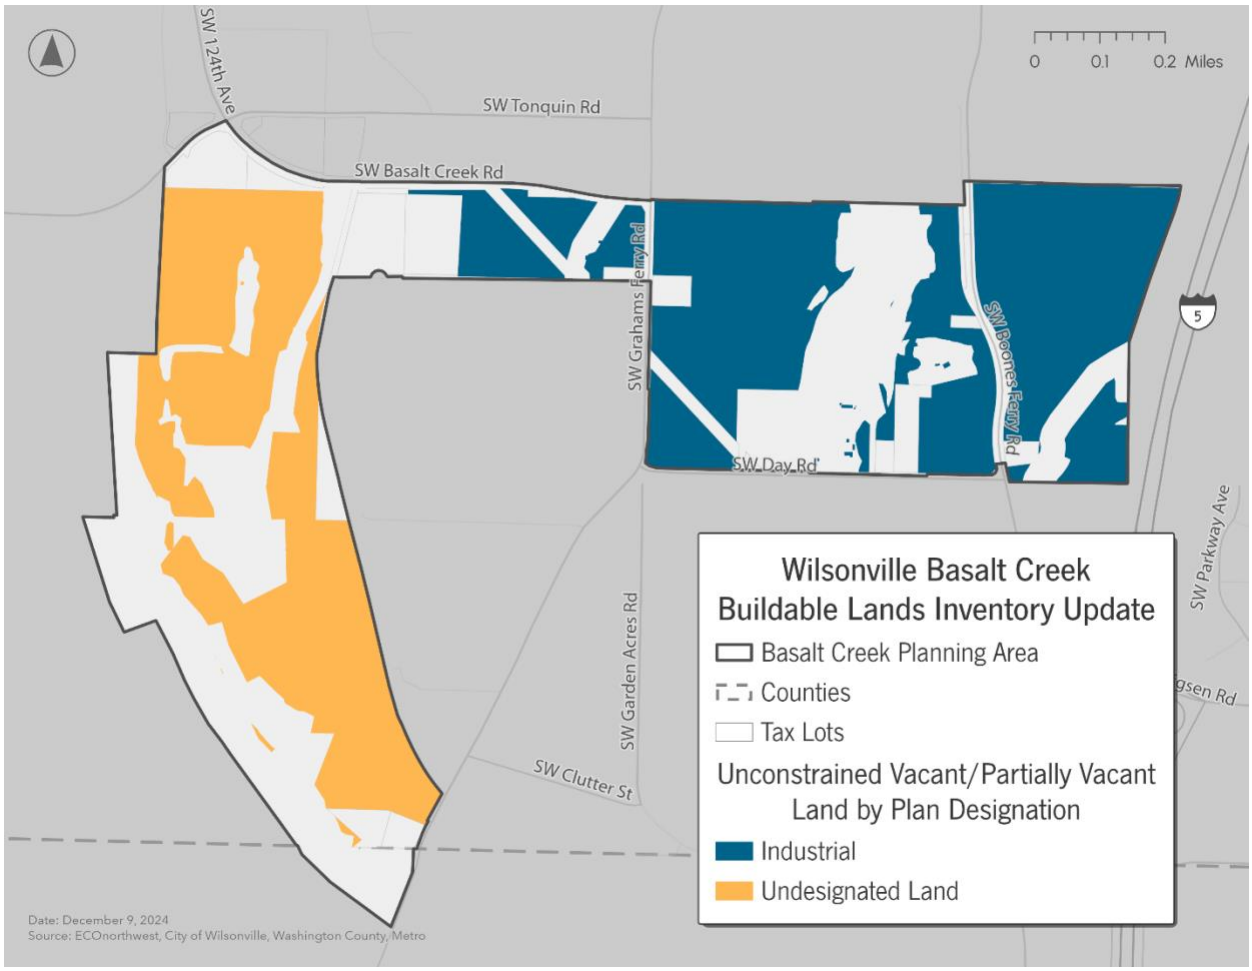
Figure 8. Development Constraints, BCPA, 2024

Source: ECOnorthwest Analysis, City of Wilsonville, Washington County, Metro, Pacific Habitat Services

Step 4: Verify Inventory Results

ECOnorthwest used a multistep verification process. The first verification step involved a "visual assessment" of land classifications using GIS and recent aerial photos. The visual assessment involved reviewing classifications overlaid on recent aerial photographs to verify uses on the ground. ECOnorthwest reviewed all tax lots included in the inventory using the visual assessment methodology. The second round of verification involved City staff verifying the visual assessment output. ECOnorthwest amended the BLI based on City staff review and a discussion of staff's comments.

Step 5: Tabulate and Map Results



The results of the industrial BLI are presented in tabular form in Table 16 and in a map in Figure 9.

Table 16. Buildable Acres in Vacant and Partially Vacant Tax Lots by Wilsonville Plan Designations, BCPA, 2024

Plan Designation	Total Buildable Acres	Buildable Acres on Vacant Lots	Buildable Acres on Partially Vacant Lots
Industrial	127	87	40
Undesignated	24	0.4	23
Total	**150**	**87**	**63**

Appendix C: Redevelopment Feasibility of Contractor Establishments

ECOnorthwest

DATE:	December 12, 2024
TO:	City of Wilsonville
FROM:	ECOnorthwest: Nicole Underwood, Michelle Anderson, and Bob Parker
SUBJECT:	WILR Phase 1: Redevelopment Feasibility of Contractor Establishments

The Cities of Tualatin and Wilsonville adopted the Basalt Creek Concept Plan (BCCP) in 2018 after a lengthy joint planning process. Now, in 2024-25, the City of Wilsonville is working to advance the Basalt Creek Planning Area (BCPA) beyond the concept plan to a development-ready status by designating zoning and refining infrastructure plans. However, since adoption of the BCCP, economic conditions at national, state, regional, and local levels have shifted significantly and must now be considered.

To address these evolving conditions, the City hired ECOnorthwest to conduct a market assessment and industrial lands study focused on Wilsonville's portion of the BCPA. This study comprises several interconnected tasks:

- An **Economic Inventory** that evaluated current market trends and identified industries suitable for the area (completed).
- An updated **Buildable Lands Inventory (BLI)** that reflects recent land developments, adjusted constraints, and revised capacity estimates (ongoing).
- A **Site Suitability Analysis** that evaluates three key opportunity sites for their potential to support target industries based on attributes like size, location, and access (ongoing).
- An **Analysis of Future Development of Contractor Establishments in the BCPA** given prevailing lease rates and market conditions (this memorandum).

This memorandum addresses the fourth task by evaluating the redevelopment potential of contractor establishments within the BCPA. Currently, the Wilsonville portion of the BCPA falls under Washington County's Future Development 20-Acre District (FD-20) zoning, which allows a variety of low-intensity uses. The area has limited development, with much of the developed land used for contractor establishments, which typically include small offices (often converted residences), storage buildings, and laydown yards. While these uses contribute to jobs and economic activity, they yield limited employment opportunities and lower property values compared to those envisioned in the BCCP or those typically expected for land within the metro urban growth boundary (UGB) and city limits.

The primary question we address in this task is: What is the redevelopment potential of existing contractor establishments in the BCPA, given prevailing lease rates and market conditions? This analysis will help the City understand what types of development the market will support, which desired development types identified in the BCCP are viable under current economic conditions, and what conditions might be necessary in the future to support desired development.

The findings from this analysis will guide recommendations on policy interventions and strategic actions the City can take to support desired development and promote redevelopment feasibility. These efforts are part of a broader initiative to position Basalt Creek as a key area for regional job growth and long-term economic success.

Redevelopment Feasibility of Existing Contractor Establishments

The Economic Inventory identified a range of industrial users who may find Basalt Creek particularly attractive due to its prime location in the Southwest Metro area, access to a skilled workforce, availability of industrial land, strong transportation networks, and proximity to existing industrial clusters. Discussions with stakeholders also highlighted strong regional demand for industrial space.

However, several challenges complicate redevelopment efforts. Many existing contractor establishments generate significant income for property owners, reducing their motivation to sell or redevelop the land for higher-intensity industrial uses. Additionally, relocation options for businesses currently occupying these sites may be limited, creating further barriers to redevelopment.

These challenges raise critical questions about whether current market rents and sales prices are sufficient to make redevelopment feasible in the BCPA. This analysis evaluates the conditions needed to support redevelopment in Basalt Creek.

WHICH SECTORS MAY BE ATTRACTED TO BASALT CREEK?

Below are the potential sectors that may be particularly attracted to Basalt Creek, as identified in the Economic Inventory report.

Semiconductor Sector Supply Chain: Companies providing materials, equipment, and services to chip manufacturers.

Cleantech, including Battery Technology: Businesses involved in renewable energy technology, energy efficiency solutions, and sustainable manufacturing processes.

Advanced Manufacturing: Companies using technology such as robotics, 3D printing, and computerized systems to manufacture specialized products or components.

Distribution and Logistics: Storage, transportation, and delivery of goods.

Data Centers: Facilities used to house computer systems and associated components.

Methods and Approach

What are the key questions?

While there is clear demand for industrial space in the BCPA, the question remains: **What conditions (e.g., market, ownership, site, zoning) are needed to promote and incentivize urban industrial development as envisioned in the BCCP?** To answer this core question, ECOnorthwest identified several subquestions to guide the analysis.

- What types of property owners are in the study area, and who is respectively occupying the site (e.g., the owner or tenant)?
  - Understanding ownership and occupancy dynamics helps assess the financial motivations of property owners and helps determine whether redevelopment offers an incentive.
- What are the potential future uses for these sites?
  - Identifying potential future uses informs construction costs, market rents, and site utilization. Evaluating the likely range of site utilization (based on constraints and zoning) helps determine whether redevelopment would offer higher returns compared to current uses.

By addressing these supporting questions, ECOnorthwest evaluated scenarios where ownership, occupancy, and future uses align to incentivize redevelopment. This structured approach provides insights into the conditions necessary to drive redevelopment in the BCPA.

How did we answer the key questions?

ECOnorthwest used a detailed pro forma model to evaluate multiple potential development scenarios. These scenarios incorporated variations in current ownership and occupancy, potential future uses, and site utilization (for additional details, see Appendix). For this quantitative analysis, we focused on conditions that could support new development, either on recently acquired properties (e.g., speculative purchases) or on land likely to transact for redevelopment in the future.

WHAT IS A PRO FORMA?

The pro forma method, a standard tool in real estate feasibility studies, replicates the decision-making process of investors and lenders. It assesses the balance between development costs, expected revenue, and financing structures to identify potential viability gaps.

The pro forma considers the site utilization and potential building program of each scenario, development hard costs (construction labor and materials), other development costs (soft

costs, contingency, developer fee, etc.), costs of capital, relevant operating costs, and land acquisition costs. For each scenario, the pro forma calculated the rent levels required to cover these costs and achieve financial feasibility.

DATA LIMITATIONS AND METHODOLOGY

While the quantitative analysis provided valuable insights, data limitations in the study area and the I-5 South Submarket (such as limited observations of contractor establishment rents) posed some challenges. These limitations are typical for studies in smaller submarkets. To address this, we supplemented the analysis with qualitative methods, including interviews with developers and brokers, to validate assumptions and refine recommendations. We also conducted a range of sensitivity testing to account for potential variance (e.g., higher and lower potential contractor establishment rents) instead of basing the results of our analysis on one assumption. As a result, we believe the findings accurately reflect current market conditions in Wilsonville and provide a reliable basis for evaluating redevelopment feasibility in the BCPA.

WHY IS DEVELOPMENT FEASIBILITY AND PRO FORMA ANALYSIS IMPORTANT?

Development can be costly and risky. Getting funding to construct new development requires lenders and investors to be reasonably confident they will earn enough financial return to justify the risks.

Economic or market feasibility is generally assessed by comparing the expected revenues (rents, sales prices) against the costs of development. If a development project is not profitable, it is not feasible; it will not be built. While some of the factors that determine market feasibility are outside a jurisdiction's direct control (e.g., labor and materials costs, interest rates, market rents), local jurisdictions can provide incentives (such as tax exemptions or land donations) or adjust building, utility, and zoning fees; zoning; programs; and other regulations that can have a substantial impact on whether development could be feasible or not.

ASSUMPTIONS AND INDUSTRY STANDARDS

We based several assumptions on industry standards to ensure consistency and accuracy:

- **Construction Costs:** Used national averages adjusted with a Portland metro–specific multiplier to account for regional building conditions.
- **Other Development Costs and Operating Costs:** Applied standard rates for soft costs (architectural design, site engineering, permitting and entitlement fees, capital carrying costs, etc.), contingency, and developer fees.

For a more detailed overview of the data, assumptions, and methodology, please refer to the Appendix.

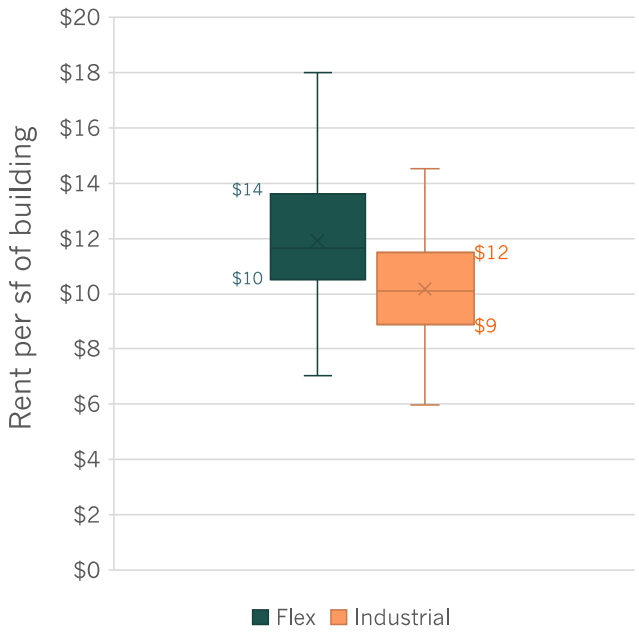
UNDERSTANDING THE PRICE OF LAND IN THE BCPA: HOW THIS IS FACTORED INTO FEASIBILITY RESULTS

Predicting the price that a landowner would require when selling property for development is an imperfect science—each landowner has reasons to sell or hold their land. Some property owners are willing to develop their land without selling, but based on interviews, we determined this would be rare in the study area. For the purposes of this analysis, we assumed the value of the property (i.e., the price of the land at which an owner would be willing to sell) could be derived from current comparable property sales prices in the area using a **"comps approach"** as well as using an **"income-based approach"** that considers the revenue stream from current tenants on the property. Therefore, this memo analyzes the rent needed based on the range of land values given these two approaches.

We identified vacant land sales (including contractor establishment sales) in the I-5 South Submarket using CoStar data. Most of the vacant land properties recently transacted (over the last 4 years) for approximately $7 to $17 per square foot of land. One improved land transaction (with a contractor establishment) had a sale price that indicated it transacted for $26 per square foot of land. These observations served as our range of land prices using a comps approach. Many of these comps, both vacant land and contractor establishments, might have been leased to tenants and generated income; however, the prices they sold for could have been decided via an unknown variety of methods (including an income-based approach and then a subsequent negotiation). Therefore, for the purposes of this analysis, we refer to all these observed transactions as being within the "comps approach" method.

The income-based approach relied on data collected during interviews, which indicated the rent for contractor yards in the area could range from $0.18 to $0.23 per square foot of land per month. We considered this gross annual revenue, net of approximately 5 percent for various operating costs, and divided by a range of capitalization (cap) rates (5 percent to 7 percent) to estimate the value. Using a cap rate is a common valuation approach in the commercial real estate industry. This analysis resulted in a range of $19 to $52 per square foot of land—considerably higher than most of the results from the comps approach. This approach more accurately reflects the value current owners place on the potential future revenue from their existing tenants, as well as the level of incentive required to encourage them to sell and repurpose the property. Although this income-based value could eventually be negotiated during a potential sale, we still use this range in our analysis to reflect values that a landowner might require to sell their land.

Key Findings



Current uses are generating substantial revenue with minimal management effort or risk.

Our market research and interviews highlighted that the rent for current uses varied based on whether the site was mostly open land or a building was present. Sites without buildings typically structured their rent per square foot of land, and this typically ranged from $0.18 to $0.23 per month. For example, a 1-acre site could generate annual gross rent of approximately $95,000 to $120,000 with minimal management effort or operating costs. (This is intended for illustrative purposes only and can scale to larger site sizes.)

Over the past four years, vacant land in the area has sold for around $7 to $17 per square foot. For the same illustrative 1-acre site, this translates to sale prices ranging from $305,000 to $750,000. The resulting ratio of annual gross lease revenue to property value ranges from 13 percent (a monthly rent of $0.18 per square foot relative to a land value of $17 per square foot) to 39 percent (a monthly rent of $0.23 per square foot relative to a land value of $7 per square foot). This means that property owners who recently purchased land and rent it to contractor establishments could recover their investment within 2.5 to 8 years. For long-term landowners who have already paid off their investment, rents represent additional income with minimal effort. Either way, given the substantial revenue from these uses, a landowner has very little incentive to redevelop.

For sites with buildings and yards, rents are typically based on the building area and range from $0.85 to $1.30 per square foot of building per month, or $10.20 to $15.60 per square foot per year. In comparison, flex and industrial spaces in the I-5 South Submarket rent for $9 to $14 per square foot per year, meaning that rent for an existing contractor establishment building with a yard is already achieving similar market rents to potential future uses. Not only are some of these contractor establishments already achieving comparable rents to flex and industrial uses, but they are also doing so without the risks of redevelopment (which include new capital investment, entitlements, the time to convert the land to the new use and generate revenue, and opportunity cost, among others).

Figure 1. Market Rent of Potential Future Uses

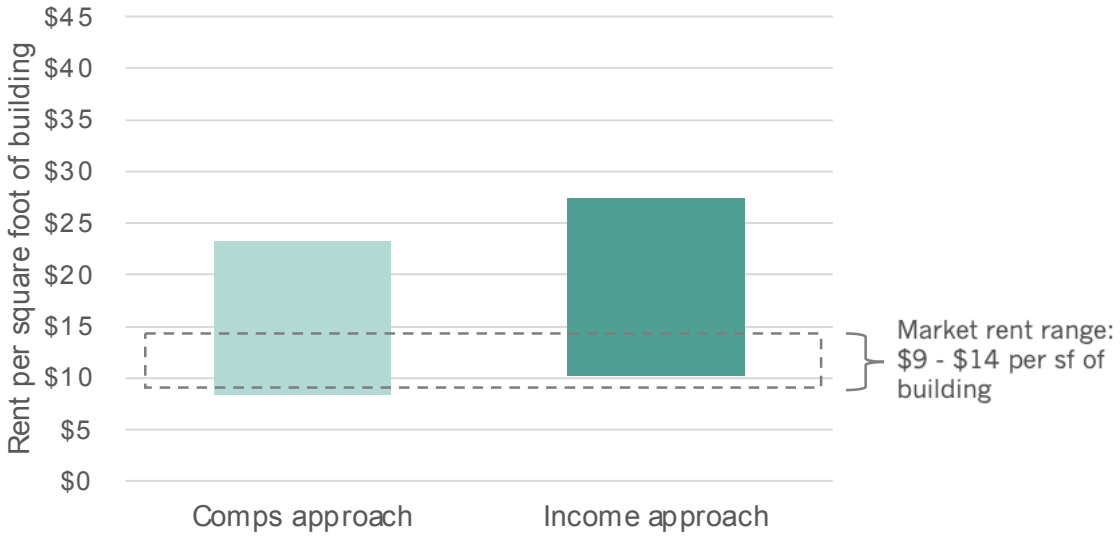
Source: ECOnorthwest analysis, CoStar

Rents would likely need to increase by at least three-fifths (60 percent), if not double (100 percent), to fund construction and create incentive to flip existing contractor establishments.

For our pro forma analysis, we evaluated a range of scenarios based on the variation in ownership and occupancy, future uses, future site utilization, and land acquisition costs (see Appendix for more detail). As previously discussed, ECOnorthwest solved for the rent needed to cover these various costs and then compared to the potential market rent of the flex and industrial uses observed in the I-5 South Submarket. We show these results for a range of potential land acquisition prices and construction costs.

We analyzed results for three different physical scenarios based on observed comparable developments (using the relationship between building square footage and site square footage):

- **Very high site utilization** based on 45 percent site coverage, similar to Graham's Ferry Industrial Center. Note: future development in some portions of BCPA may face constraints due to natural site features or zoning standards that may make achieving this site utilization challenging.
- **High site utilization** based on 35 percent site utilization, similar to the Sherwood Commerce Center
- **Low site utilization** based on 20 percent site utilization, similar to observed flex and industrial uses built over the last 20 years in the I-5 South Submarket



INTERPRETING THE RESULTS CHARTS

Development feasibility hinges on a range of different assumptions. Rather than picking one specific set of assumptions, the results charts shown in this memo encompass a range of potential assumptions, namely land acquisition costs and development costs.

ECOnorthwest compared the feasibility results to both the comps approach and income approach—**one column** in the following charts shows the resulting range of rents needed if assuming a comps approach, and **one column** shows the range needed based on an income approach. **Both columns** also include sensitivity testing given a range of construction costs and land prices, which is reflected in the size of the bars (the same range is assumed for each of the land price method scenarios). **A dashed box** is also shown to represent the range of observed rents for potential future uses. The rent results would ideally be within, if not lower than, this range for the development to be feasible.

In the **very high site utilization** scenario, future flex and industrial uses are only feasible when land acquisition costs remain low—below $20 per square foot—and other development costs are average or low. This combination of assumptions results in rents similar to the existing market rents of $9 to $14 per square foot of building (see comparison to gray bar shown in results chart in Figure 2). To make redevelopment feasible for properties with land costs higher than $20 per square foot (common for land with existing uses), the market rent for flex and industrial uses would likely need to increase by at least three-fifths, if not double, while construction costs remain constant.

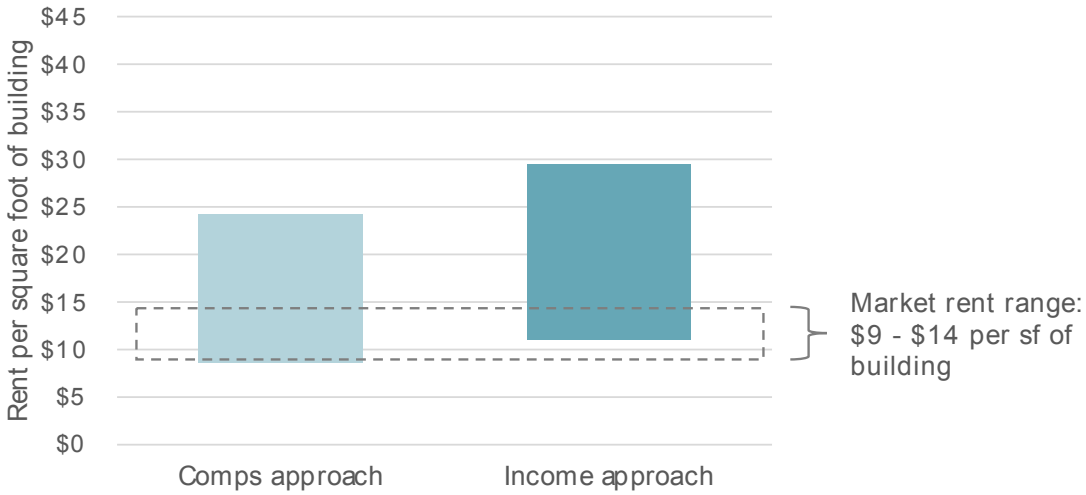


Figure 2. Rent Needed for Very High Site Utilization (45%)

Source: ECOnorthwest analysis

The results in the **high site utilization scenario** are similar to the very high site utilization scenario. However, relative to the latter, rents would need to increase to cover the same range of land and development costs. Future flex and industrial uses are only feasible when land acquisition costs remain low—below $20 per square foot—and other development costs are average or low. This combination of assumptions results in rents similar to the existing market rents of $9 to $14 per square foot of building (see comparison to gray bar shown in results chart in Figure 3). To make redevelopment feasible for properties with land costs higher than $20 per square foot (common for land with existing uses), the market rent for flex and industrial uses must increase by at least three-quarters, if not double, while construction costs remain constant.

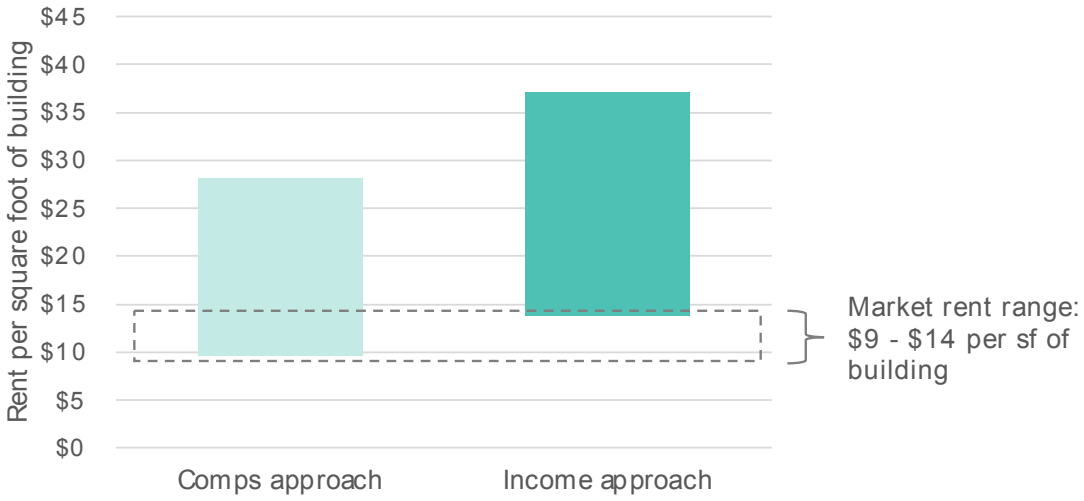

Figure 3. Rent Needed for High Site Utilization (35%)

Source: ECOnorthwest analysis

In the **low site utilization scenario**, future flex and industrial uses are only feasible when land acquisition costs are assumed to be low—less than $10 per square foot, based on the low end of recent comparable sales of vacant land—and other development costs are low. This combination of assumptions results in rents similar to the existing market rents of $9 to $14 per square foot of building (see comparison to gray bar shown in results chart in Figure 4). For properties with existing uses (where land is likely to transact between $19 and $52 per square foot), the market rent for flex and industrial uses must double while construction costs remain constant to make redevelopment feasible.

Figure 4. Rent Needed for Low Site Utilization (20%)

Source: ECOnorthwest analysis

Owner-occupied sites face greater feasibility challenges when landowners want to maintain their business operations.

Owner-occupied sites present more complex financial considerations compared to vacant or tenant-occupied properties. Landowners using their property for their own business must account for additional costs if they relocate, including relocation expenses, higher rents (or purchase prices) for new properties, and potentially higher ongoing business costs. For example, moving farther from suppliers or services could result in increased fuel or labor expenses.

To justify relocating their business, landowners would likely need to sell their property at an even higher price than what the quantitative analysis assumes. This requirement would, in turn, translate to higher rents than those shown in the results charts (Figure 3 and Figure 4). However, if the landowner does not intend to maintain their business, financial considerations would be less complex. Without the need to account for future business costs or the loss of tenant income, necessary rents could align more closely with those projected in the comps approach.

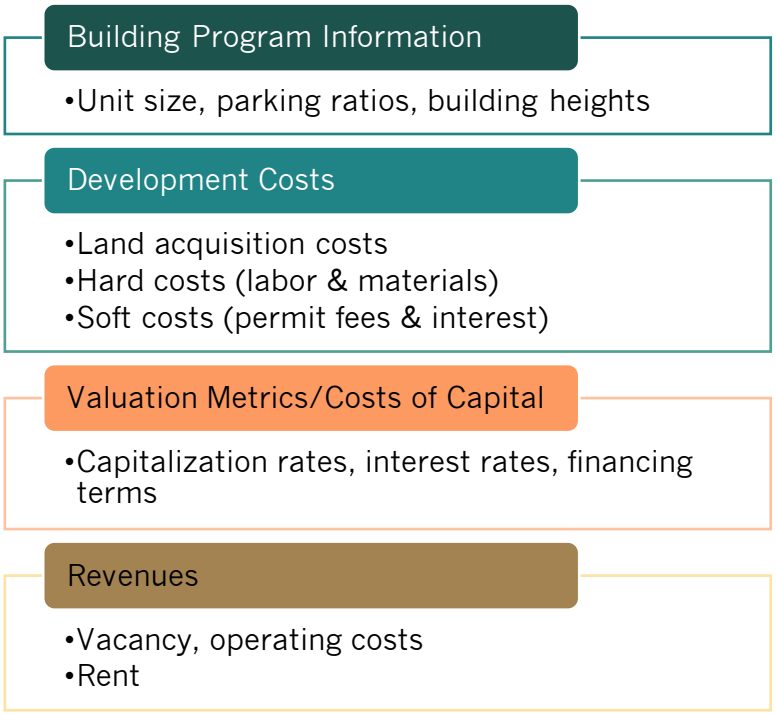
Conclusion and Next Steps

Current contractor establishments generate significant revenue with minimal effort or risk, reducing financial incentives for redevelopment. Rents for existing contractor establishments, particularly those with buildings, are already comparable to market rates for industrial and flex uses in the I-5 South Submarket. Therefore, for redevelopment to become financially feasible, market rents would likely need to rise by at least three-fifths, if not double, depending on site utilization, land acquisition costs, and construction costs. Higher site utilization scenarios present some redevelopment feasibility when land acquisition costs are low (below $20 per square foot). Conversely, properties with higher land costs or existing uses would either have substantially higher rents or reduced development costs (e.g., construction, financing) to achieve feasibility.

Owner-occupied properties are less likely to redevelop if the owner wants to maintain their business operations. Redevelopment is difficult for owner-occupants, as they must consider relocation costs and potential increases in operational expenses. Limited regional industrial land supply could push these businesses to relocate further from their markets, increasing costs for labor, transportation, and operations. Without substantial increases in land values or rents, redevelopment for these properties remains unlikely.

Achieving the City's development vision for Basalt Creek will require strategic interventions. Potential approaches could include purchasing and aggregating properties to create development-ready parcels, subsidizing infrastructure costs, adjusting system development charges (SDCs), offering other development incentives, or implementing other strategies yet to be identified.

The findings in this memorandum are preliminary and will be refined through further analysis and discussions. This study is being conducted alongside updates to the buildable lands inventory and site suitability analysis. Ultimately, these components will be synthesized with insights from the Economic Inventory into a comprehensive final report that outlines key findings and actionable recommendations.



Appendix C.1

Financial Feasibility Methods

To model development feasibility, ECOnorthwest employed a pro forma model, which is a common method used in real estate feasibility studies because it simulates the decision-making process of investors and lenders. The pro forma assesses the balance between development costs, expected revenue, and financing structure, which helps to identify viability gaps.

Figure 5. Factors Used in the Pro Forma Analysis

Source: ECOnorthwest

This method provides a general analysis of prototypical development scenarios, or prototypes, without accounting for unique conditions that might influence development feasibility (e.g., higher predevelopment costs). Therefore, this analysis serves as a strong indicator of the relative likelihood of development rather than an absolute measure of feasibility.

The pro forma considers the site utilization and potential building program of each scenario, development hard costs (construction labor and materials), other development costs (soft costs, contingency, developer fee, etc.), costs of capital, relevant operating costs, and land acquisition costs. It then calculates the rent required to cover these costs for each scenario.

Scenarios Evaluated

To establish relevant assumptions for the pro forma model, we first identified the scenarios needed to address the research questions. These scenarios were based on variations in current ownership and occupancy, potential future uses, and site utilization.

CURRENT SITE OWNERSHIP AND OCCUPANCY

We started with an understanding of the current site ownership and occupancy. Based on our understanding, there were three main categories:

- **Owners of vacant or unused land.** This category includes people who recently purchased land with the intent to develop and existing owners potentially interested in selling their land for new development.
- **Owners renting to contractor establishment tenants.** These owners might sell their property but would need compensation for the foregone future revenue from their tenants.
- **Owners using the land for their own contractor establishments.** Financial considerations for this group vary substantially. Landowners would need to account for up-front and ongoing costs associated with relocating their businesses, making this scenario more complex to quantify compared to vacant or tenant-occupied sites.

APPROACH TO ESTIMATING LAND PRICE

- **Vacant and underutilized land:** We used a comparable sales ("comps") approach to estimate land price, which accounts for the sales price of recently purchased land, especially by those intending to develop (see the callout box on page 5 for details on the comps approach).
- **Tenant-occupied land:** For owners renting to contractor establishment tenants, we used an income-based approach to estimate the financial hurdle of land price. This better reflects the potential foregone revenue from tenants (see the callout box on page 5 for details on the income-based approach).
- **Owner-occupied land:** Due to varied business conditions of landowners who are using the land for their own contractor establishment, we evaluated this scenario qualitatively, considering insights from the other scenarios.

FUTURE BUILDING PROGRAMS

We then considered the potential future building programs that could occur on these former contractor establishment sites. We based the building square footage of our two prototypes on observed comparable flex and industrial spaces, based on CoStar data from the I-5 South Submarket. Key considerations included:

- **Site Utilization:** Over the past 20 years, average site utilization (building area relative to site area) in the I-5 South Submarket was about 20 percent. Recent developments such as the Sherwood Commerce Center and Graham's Ferry Industrial Center achieved 35 percent and 45 percent site utilization, respectively. But this was enabled by maximizing impervious coverage for parking and truck logistics. Future development in some portions of the study area may face constraints due to natural site features or zoning

standards. We therefore modeled three prototypes to capture a range of potential future development conditions:

- **Low utilization:** 20 percent
- **High utilization:** 35 percent
- **Very high utilization:** 45 percent

CONSTRUCTION COSTS

Lastly, for the scenarios we modeled, we evaluated a range of potential construction costs for flex and industrial uses. We referenced the **2024 National Building Cost Manual** by Craftsman to arrive at a range of potential construction costs for various building types that could house future flex and industrial uses. We conducted sensitivity testing of the potential rents needed to cover low to high construction costs, and the results that informed our key findings are inclusive of the range used.

The land cost, site utilization, and building costs were all assumptions that varied in our analyses as we conducted sensitivity testing of different scenarios (e.g., high site coverage, high land costs, high construction costs). All other pro forma assumptions we held constant. We describe the specifics of these assumptions in the section below.

Detailed Methods and Assumptions

To evaluate future flex or industrial rental uses, we began by calculating development costs. This involved applying the cost-per-square-foot values (see Table 1. Scenarios and Assumptions Used) to the building square footage derived from the site utilization. From that construction cost, we calculated the soft cost, contingency, and developer fees to arrive at the total development cost.

Given the potential range of sources to fund these projects, we used a high-level approach and assumed all sources of money that funded the project would require a 6 percent annual return based on a 30-year term. We calculated a payment inclusive of this return, based on the total development cost, to arrive at the rent needed to cover these annual costs. We also assumed these rents would be triple net and that, therefore, the operating costs would be passed on to the tenant, which is common for flex and industrial lease terms. We highlight the specific assumptions of this analysis, and any relevant ranges, in Table 1.

Table 1. Scenarios and Assumptions Used

Source: ECOnorthwest, CoStar, Redfin, Craftsman, Stakeholder Interviews

Assumption	Values
Land price	Ranged from $7 to $26 based on observed sales comps of vacant land as well as one sale observation of a contractor establishment. Ranged from $19 to $52 per square foot based on income-based approach.
Building program	(3) square footage estimates based on a calculation of 20% site utilization, 35% site utilization, 45% site utilization
Construction costs	$75 to $200 per square foot of building; $20 per square foot of paving
Soft costs	20% of hard costs
Contingency	5% of hard and soft costs
Developer fee	5% of hard and soft costs plus contingency
Costs of capital	6% annual interest range, 30-year term for all funding sources
Operating costs	Assumed triple net rents

WILSONVILLE BASALT CREEK PLAN – WILSONVILLE TSP UPDATE EVALUATION

DATE: December 27, 2024

TO: Dan Pauly | City of Wilsonville

FROM: Jenna Bogert, PE | DKS Associates

SUBJECT: Wilsonville Basalt Creek Plan TSP Evaluation P#21123-034

BACKGROUND AND PURPOSE

The Basalt Creek Planning Area (BCPA) is generally located between the southern edge of Tualatin and the northern boundary of Wilsonville (Figure 1). The Basalt Creek Concept Plan was formally adopted by the cities of Tualatin and Wilsonville in August 2018 and provides guidance for future land use and transportation decisions in the BCPA. In April 2019, the City of Wilsonville amended their Transportation System Plan (TSP) to include the key transportation projects from the Concept Plan (Table 1). Many of these projects were already identified in the METRO Regional Transportation Plan (2014) at the time of the development of the Basalt Creek Concept Plan.

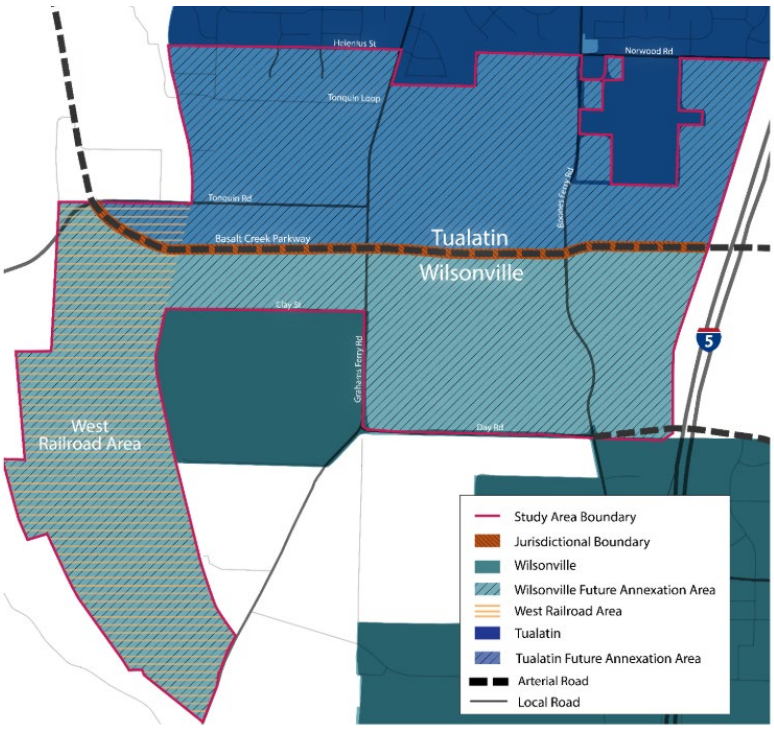

FIGURE 1: BASALT CREEK PLANNING AREA
Source: Basalt Creek Concept Plan (2018)

The purpose of this memorandum is to review the City's current list of TSP projects related to the BCPA and ensure that the land use assumptions and identified transportation projects are still applicable. Through this review, DKS will identify any new transportation improvement projects that might be needed to further support the current development plan for the BCPA.

LIST OF WILSONVILLE TSP PROJECTS RELATED TO BASALT CREEK

Table 1 shows the list of Basalt Creek projects that were added or updated in the City's Transportation System Plan (TSP) as part of the 2019 amendment. Refer to Figure 5-3 and Figure 5-8 of the City's TSP for the maps showing these projects.

It should be noted that two more amendments to the TSP have been approved by Council since 2019, an amendment in November 2020 and in May 2023. The amendment in November 2020 was related to the adoption of the City's Town Center Plan and the amendment in May 2023 was related to the adoption of the Frog Pond East & South Master Plan. Neither of these amendments involved any changes to projects in the Basalt Creek Area.

Also noted in Table 1 is whether the project is included in the Metro Regional Transportation Plan (2023). As of December 2024, there were two projects that were included in the Metro RTP that are not included in the current Wilsonville TSP.[1]

- METRO RTP Project #11924, Grahams Ferry Road from Tonquin Road to Day Road, Improve roadway to 5 lanes including sidewalks and bike lanes. Long-Term 2045 Strategic Project List.
  This project is a more aspirational investment that may need further study. The City should discuss this project internally and with Washington County to determine whether a three-lane or five-lane cross section is preferred on Grahams Ferry Road.
- METRO RTP Project #12095, Boones Ferry Road-Elligsen Road from 95th Avenue to I-5 Interchange Ramps. Improve safety and/or operations with pedestrian crossings, speed feedback signs, transit priority technology, etc. Near-Term 2030 Constrained Project List.

Another project of note in the Metro RTP is the I-5 Boone Bridge and Seismic Improvement Project (#12305). This project would replace Boone Bridge with a seismically resilient structure and add an auxiliary lane on SB I-5 from Wilsonville Road to the Wilsonville-Hubbard Highway (OR 551) interchange and is on the 2045 Long-Term Constrained Project List. Although this project is not directly located in the BCPA, it is anticipated to relieve some level of the current congestion on the I-5 mainline through Wilsonville, which today, often has secondary impacts on traffic congestion at the two Wilsonville I-5 Interchanges, including Boones Ferry Road, Day Road, and Grahams Ferry Road.

[1] Link to map of METRO RTP Projects.

TABLE 1: BASALT CREEK TSP PROJECTS (2019 TSP AMENDMENT)

PROJECT #	PROJECT	NOTES
RE-P6	Basalt Creek Parkway Overcrossing of I-5	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP
RE-P5	Day Road Overcrossing of I-5 (Boones Ferry Road to Elligsen Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP
RE-P15	Pioneer Court Extension (north and west to Boones Ferry Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List
RE-14	Basalt Creek Parkway Extension (Grahams Ferry Road and Boones Ferry Road)	Moved from Additional Planned Project List to Higher-Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP
RW-04	Boones Ferry Road Widening to Five Lanes (Day Road to Basalt Creek Parkway)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP #11487
RW-05	Grahams Ferry Road Widening to Three Lanes (Day Road to Basalt Creek Parkway)	Moved from Additional Planned Project List to Higher-Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #10588
SI-07	Boones Ferry Road at I-5 Southbound Ramps (add dual southbound left turn lanes)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP
SI-08	Boones Ferry Road at 95th Avenue (access management strategies)	New to 2019 Wilsonville TSP, added to High Priority Project List
LT-02	Basalt Creek Canyon Ridge Trail	New to 2019 Wilsonville TSP, added to High Priority Project List
LT-03	I-5 Easement Trail	New to 2019 Wilsonville TSP, added to High Priority Project List

BASALT CREEK PLANNING AREA GROWTH SINCE 2019 TSP AMENDMENT

Since the Basalt Creek Concept Plan was adopted in 2018, there has been little development within the Basalt Creek Planning Area (BCPA). Approved developments are listed below. These developments will account for approximately 20% of the total anticipated vehicle trips generated by development in the BCPA through 2035 as documented in the Basalt Creek Concept Plan.

- **Autumn Sunrise Subdivision in Tualatin**; consists of 400 single-family homes to be constructed in four phases; phases 1 through 3 are complete or nearly complete which would include 80 townhomes.
- **Plambeck Gardens Apartments in Tualatin**; includes 116 apartment units within two, four-story buildings; buildings are currently under construction
- **Brown Contracting Expansion in Washington County**; Brown Contracting is located at 9675 SW Day Road, just outside of city of Wilsonville city limits. However, the site is accessed via Day Road, which is a city-owned roadway. In May 2024, the property owner submitted a request for a site expansion that included the addition of covered, open-air storage building and a gravel storage expansion. A traffic study indicated that around 100 additional daily vehicle trips were generated by these site expansion changes, which were constructed prior to the traffic study.

Transportation infrastructure projects in the BCPA that have been constructed since 2018 include:

- **Basalt Creek Parkway/124th Avenue** Extension between Grahams Ferry Road and Tualatin-Sherwood Road (complete in 2019)

Although 10 years (48%) of the 21-year Basalt Creek Concept planning period (2014 – 2035) has elapsed, only 20% of the anticipated development and transportation infrastructure has been approved/constructed.

Because of this, a re-evaluation of the future 2035 traffic volumes and vehicle operations was not a compelling effort at this time. The best recommendation for the City of Wilsonville at this stage in the development of the BCPA is to continue to track vehicle trips generated by BCPA developments during the land use approval process.

At this point in time, no additional transportation projects beyond what is in the current TSP are needed to support the planned growth within the BCPA.

Additionally, the traffic analysis in the Basalt Creek Concept Plan was developed prior to the impacts of COVID-19. Which means that regional and baseline traffic volumes now have a lower 2035 projection as compared to when the Basalt Creek Concept Plan and Wilsonville Transportation System Plan Amendment were adopted. During 2020 and 2021, there was a notable dip in traffic citywide. The traffic volumes on the adjacent roadways had not quite reached pre-COVID-19 levels as of 2023 but appear to be increasing through 2024. See Table 2 below for a summary of traffic counts collected near the Basalt Creek area over the last few years. The dip in traffic that occurred in 2020 and 2021 indicates that there is the potential for more vehicle capacity within the BCPA beyond the analysis and identified transportation projects documented in the Basalt Creek Concept Plan and City of Wilsonville Transportation System Plan.

TABLE 2: HISTORY OF TRAFFIC VOLUMES NEAR BASALT CREEK PLANNING AREA

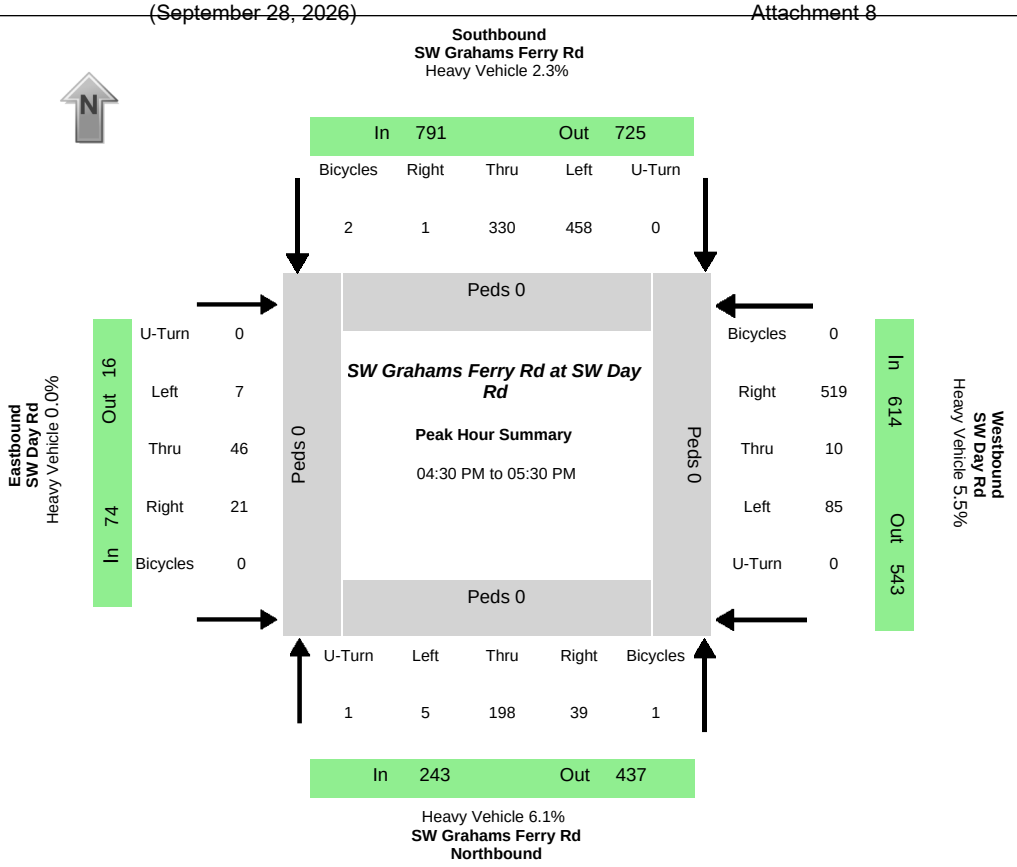
LOCATION	PM PEAK HOUR TRAFFIC VOLUMES			PERCENT CHANGE (2019 TO 2023)
	April/May 2019	March 2023	May 2024	
GRAHAMS FERRY ROAD (NORTH OF DAY RD)	1,520	1,485	1,600	-2%
DAY ROAD (BETWEEN GRAHAMS FERRY RD AND BOONES FERRY RD)	1,150	1,050	-	-8%
BOONES FERRY ROAD (NORTH OF DAY RD)	1,060	960	-	-9%
BOONES FERRY ROAD (SOUTH OF DAY RD)	2,120	2,000	-	-6%

NON-VEHICLE TSP RECOMMENDATIONS

The Basalt Creek Concept Plan only identified personal motor vehicle-related projects. Only a high-level evaluation of **transit, freight, pedestrians, and bicycles needs** were documented in the Plan. Therefore, a re-evaluation of these non-personal motor vehicle modes of travel was conducted and the following list of projects have been identified as needed to support the Basalt Creek Planning Area (BCPA) beyond what is already in the Wilsonville Transportation System Plan (TSP).

- Coordinate with SMART to expand transit service (e.g., new routes, bus stops, etc.) to the Basalt Creek Planning Area as it develops.
- Consider an enhanced pedestrian/bicycle crossing of Day Road where the south end of LT-02 (Basalt Creek Canyon Trail) would connect with the north end of the pedestrian/bicycle facilities along the Coffee Creek Supporting Street.
- Consider a trail connection (pedestrian and bicycle only) from Ridder Road north to the future Coffee Creek Supporting Street. Approximately 800 feet in length. Trail alignment would run along the west side of the BPA Substation.

BASALT CREEK AREA (WILSONVILLE) LOCAL STREET CONCEPT MAP



DKS identified likely connection points and alignments for the future local streets in the Wilsonville portion of the BCPA. This area is generally bound by Day Road to the south, Tonquin Road to the north, Grahams Ferry Road to the west, and I-5 to the east. A local access plan for the West Railroad planning area was also included on the map. This area is generally bound by Basalt Creek Parkway to the north, Grahams Ferry Road to the south, Coffee Creek to the west, and the UPRR Railroad to the east. Refer to Attachment B for the local street concept map of these areas.

BASALT CREEK PLANNING AREA
PROPOSED ARTERIAL
PROPOSED LOCAL STREET
TAX LOTS
WILSONVILLE CITY LIMITS
TUALATIN CITY LIMITS
KEY INTERSECTION

Note: Intersections are fixed. Local street alignments shown are conceptual. Actual alignment of new public streets or private streets in public easements are to be determined as development occurs.

Appendix D: Basalt Creek Master Plan Transportation Analysis

TECHNICAL MEMORANDUM

DATE: May 20, 2026

TO: Chris Myers | City of Wilsonville
Amy Maag | City of Wilsonville

FROM: Jenna Bogert, PE | DKS Associates
Hallie Turk, EI, RSP$_1$ | DKS Associates

SUBJECT: Wilsonville Basalt Creek Master Plan - Transportation Analysis Project #26367-000

INTRODUCTION

The Basalt Creek Planning Area (BCPA) is located between the southern edge of Tualatin and the northern boundary of Wilsonville. See Figure 1.

Within the BCPA, the West Railroad Area is the westernmost portion that extends south of Tonquin Road to Grahams Ferry Road, as shown in Figure 1. It is bound to the east by the railroad, owned by Oregon Department of Transportation and operated by Portland & Western railroad, and bound to the west by Coffee Lake Creek.

Currently, the City of Wilsonville is preparing a Master Plan for the BCPA. This Master Plan will be one of many studies and plans prepared for the BCPA (see *Background* section for summary of previous planning efforts). The purpose of this memorandum is to provide a summary of the previous transportation planning efforts, identify any new transportation improvements needed to support the development of the BCPA and West Railroad area, and to provide a conceptual local street layout within the City of Wilsonville portion of the BCPA.

Figure 1 Basalt Creek Planning Area and jurisdictional boundaries.

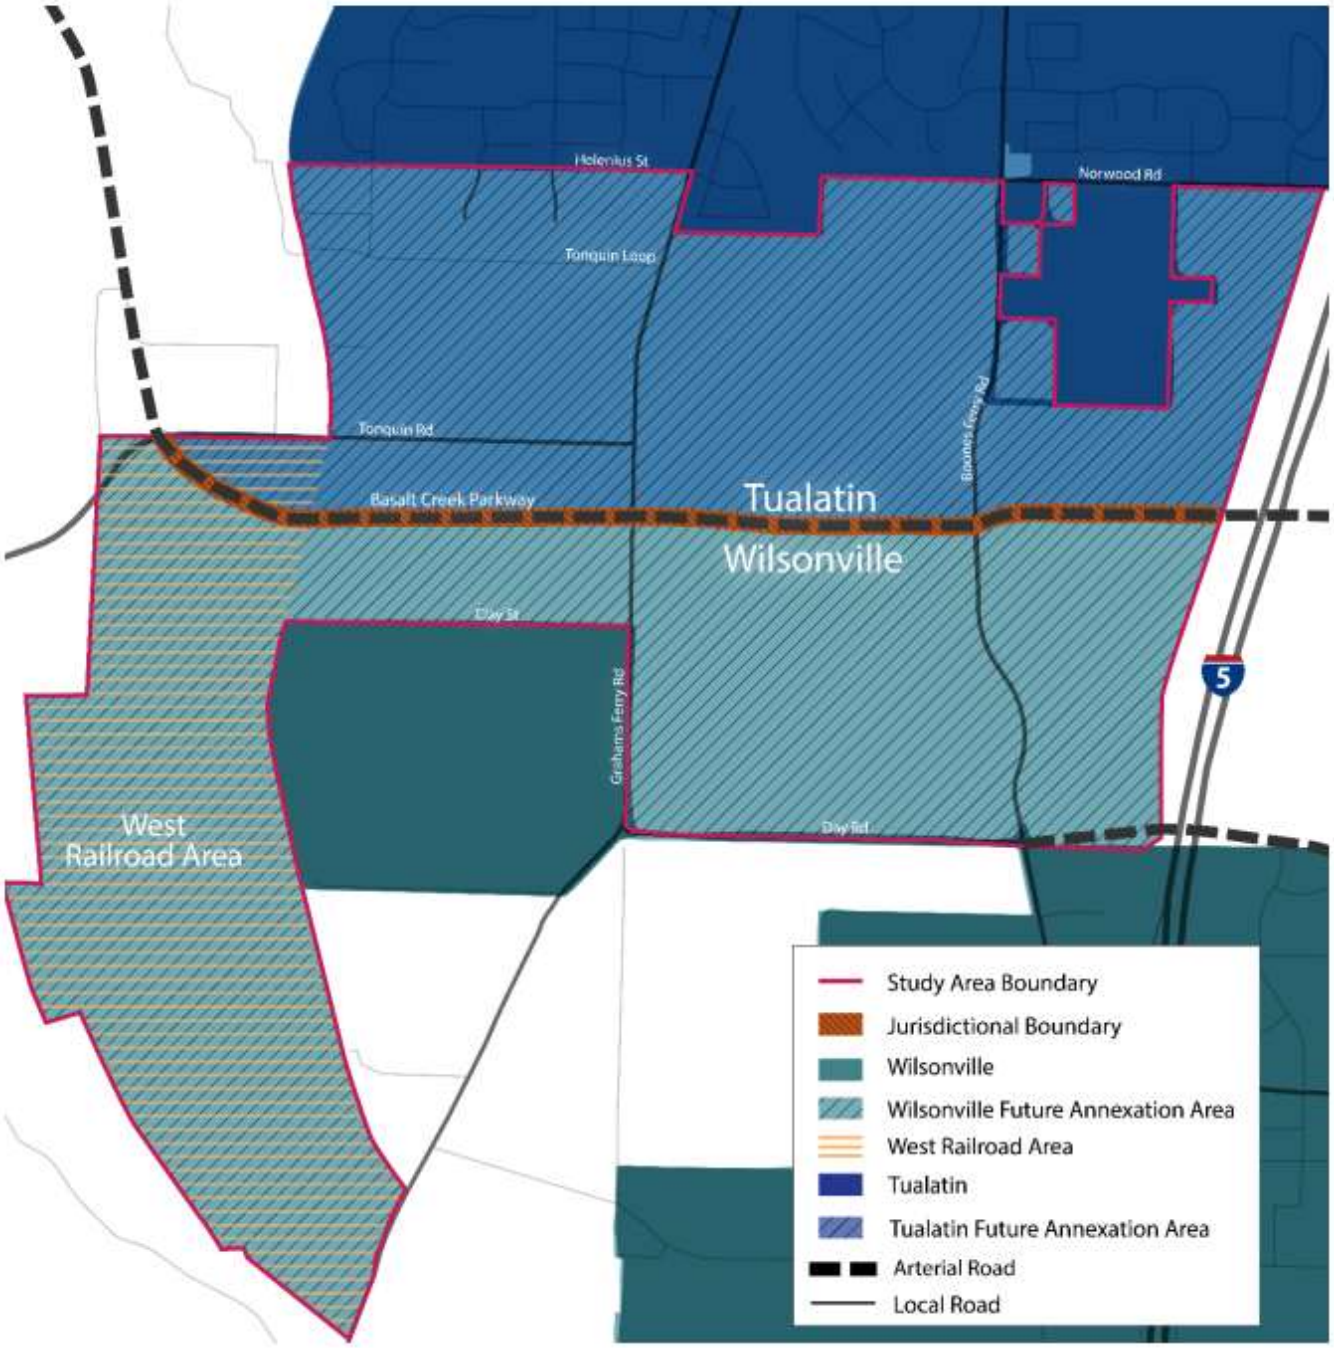

FIGURE 1: BCPA DESIGNATIONS, INCLUDING WEST RAILROAD AREA

Source: 2018 Basalt Creek Concept Plan

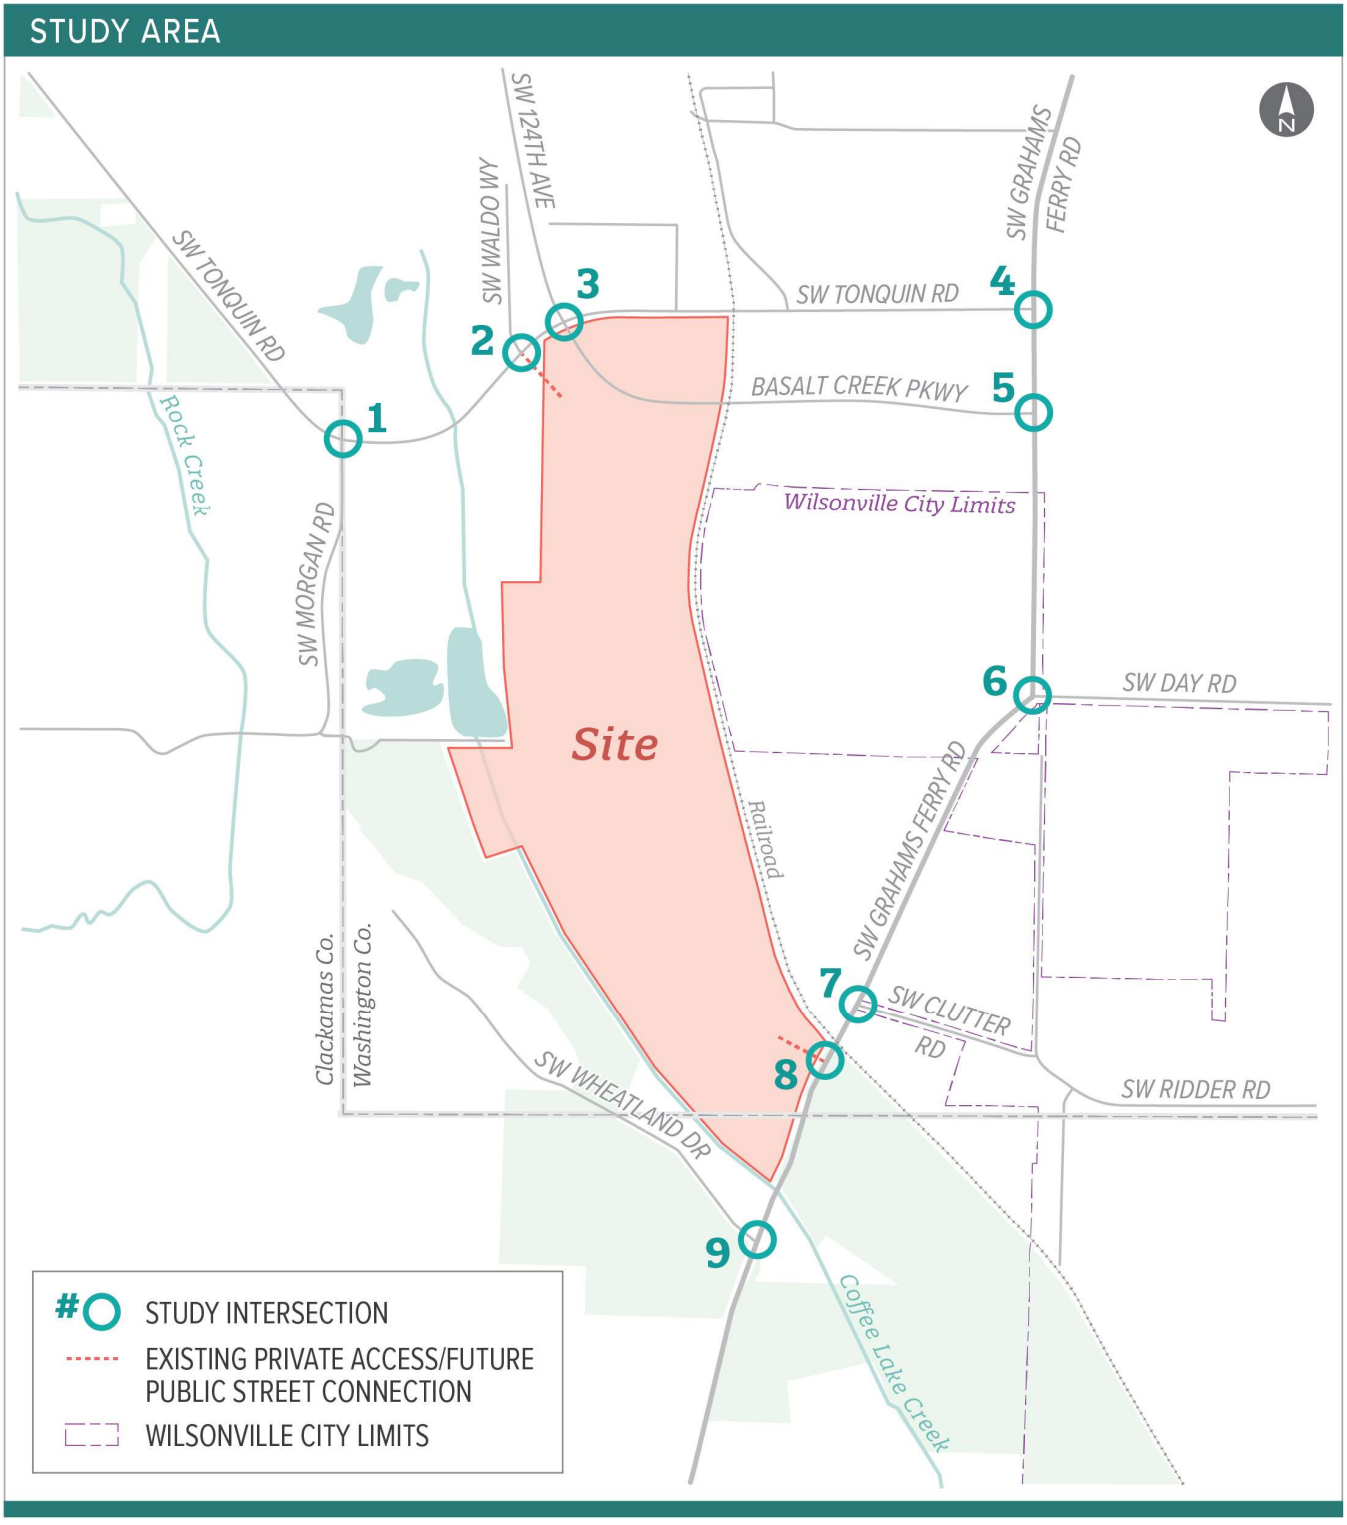
BACKGROUND

Previous planning and construction efforts relevant to the Basalt Creek area are summarized below.

- **2013 Basalt Creek Transportation Refinement Plan (TRP):** The TRP identified major new roads and improvements to support regional and local needs through 2035. The plan provided 18 transportation investments broken into short, medium, and long-term projects, all of which are important to ensure that the transportation network functions at acceptable levels over time. The transportation analysis was coordinated with the 2014 Metro Regional Transportation Plan (RTP).
- **2018 Concept Plan:** The Basalt Creek Concept Plan was formally adopted by the cities of Tualatin and Wilsonville in August 2018 and provides guidance for future land use and transportation decisions in the BCPA. The 2018 Concept Plan transportation analysis assumed multiple future transportation projects would be in place by 2035, as identified in the 2014 Metro RTP.
- **2019 Wilsonville TSP Amendment:** The City's Transportation System Plan (TSP) was amended in 2019 to add key transportation projects identified in the Basalt Creek Concept Plan to the city's project list. Some projects were new to the TSP; others were already identified in the TSP. See the table in the Appendix for a detailed description of the TSP amendments related to Basalt Creek Planning Area.
- **Ice Age Tonquin Trail:** The Ice Age Tonquin Trail is a planned regional pedestrian and bicycle trail system connecting Sherwood, Tualatin, and Wilsonville through the Basalt Creek planning area. Through the West Railroad area, the trail is proposed to be a paved shared-use path that loosely follows the alignment of Coffee Lake Creek and connects to Tonquin Road via Morgan Road.
- **Recent Transportation Improvements & Developments:** Since the adoption of the 2018 concept plan, several new transportation improvements and developments have been constructed within the BCPA, including:
  - **Basalt Creek Parkway/124th Avenue new roadway extension (opened 2019)**
  - **Autumn Sunrise Subdivision in Tualatin** consists of 400 single-family homes to be constructed in four phases.
  - **Plambeck Gardens Apartments in Tualatin** consist of 116 apartment units within two, four-story buildings.
  - **Brown Contracting Expansion in Washington County**; located at 9675 SW Day Road and includes the addition of covered, open-air storage building and a gravel storage expansion.

WEST RAILROAD TRANSPORTATION ANALYSIS

At the time of the 2018 BCPA Concept Plan, the West Railroad area was excluded from development assumptions due to large amount of geographical constraints (varied terrain with wetlands habitat and steep slopes), limited access, and the anticipated cost and complexity of serving the area with utilities.



Therefore, the following section provides a transportation analysis of the impacts of full development of the West Railroad area on the surrounding street network.

EXISTING CONDITIONS

The study intersections are listed in Table 1 and shown in Figure 2.

TABLE 1: STUDY INTERSECTIONS

#	INTERSECTION	JURISDICTION	TRAFFIC CONTROL
1	SW Morgan Road/SW Tonquin Road	Washington County	Two-Way Stop Control
2	SW Tonquin Road/SW Waldo Way/ North Site Access (Future)	Washington County	Two-Way Stop Control
3	Basalt Creek Parkway/SW 124th Avenue/ SW Tonquin Road	Washington County	Signal
4	SW Grahams Ferry Road/SW Tonquin Road	Washington County	Two-Way Stop Control
5	SW Grahams Ferry Road/ Basalt Creek Parkway	Washington County	Signal
6	SW Grahams Ferry Road/SW Day Road	City of Wilsonville	Signal
7	SW Grahams Ferry Road/SW Clutter Road	City of Wilsonville	All-Way Stop Control
8	SW Grahams Ferry Road/ South Site Access (Future)	Washington County	Two-Way Stop Control
9	SW Grahams Ferry Road/ SW Wheatland Drive	Clackamas County	Two-Way Stop Control

Note: The portion of the study area north of Basalt Creek Parkway would be under City of Tualatin jurisdiction in the future at buildout.

FIGURE 2: STUDY AREA

PEDESTRIAN AND BICYCLE FACILITIES

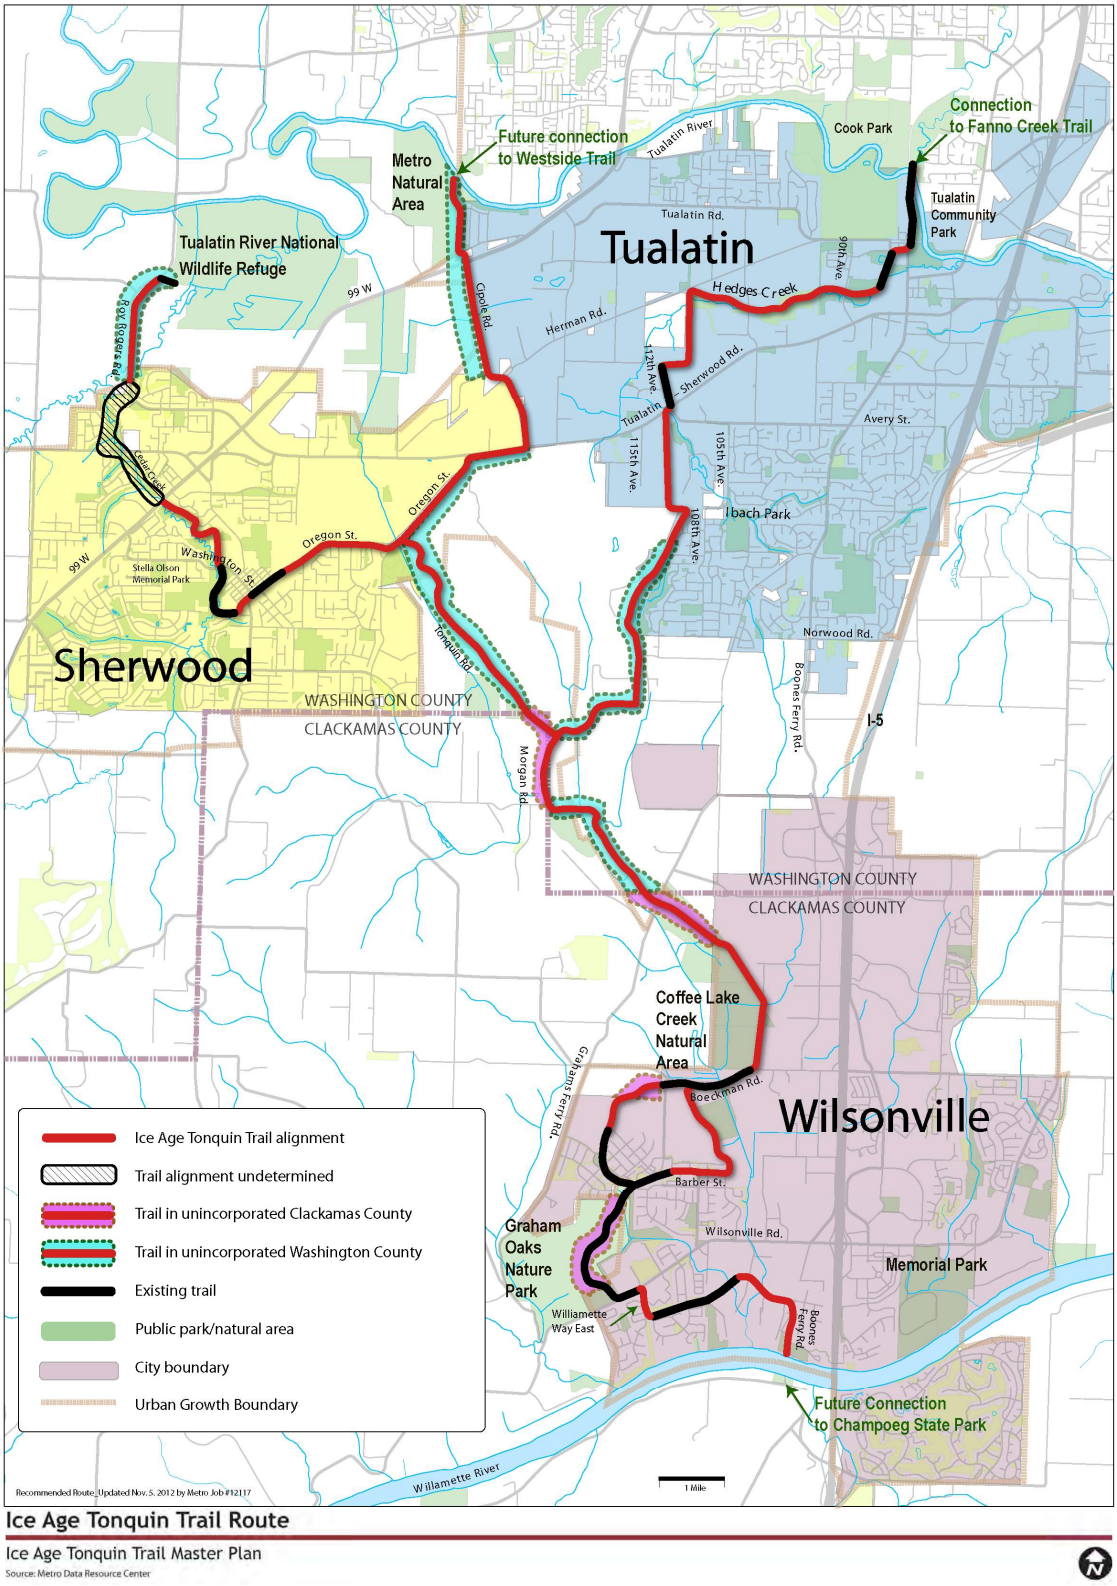
Along Grahams Ferry Road, bike lanes are present on both sides of the road from Basalt Creek Parkway to Day Road. From Day Road to Cahalin Road, there are no bike lanes. Sidewalks are present only on the west side of the road between Clay Road to Cahalin Road. From Cahalin Road to about 600 ft south of Cahalin Road, sidewalks and bike lanes are present only on the east side of the road. From this point to Wheatland Drive, there are no sidewalks or bike lanes.

Along Tonquin Road from Morgan Road to Basalt Creek Parkway, there are no sidewalks or bike lanes. West of Basalt Creek Parkway, sidewalks are intermittent until Grahams Ferry Road.

Along Basalt Creek Parkway from Tonquin Road to Grahams Ferry Road, there are no bike lanes, but the shoulders are over 5 feet wide. Sidewalks are intermittent, present only along the bridge over the Portland & Western-owned rail line and at the Grahams Ferry Road intersection.

Ice Age Tonquin Trail

Figure 3 shows the proposed alignment of the Ice Age Tonquin Trail, a planned regional pedestrian and bicycle trail system connecting Sherwood, Tualatin, and Wilsonville through the Basalt Creek planning area. Through the West Railroad area, the trail is proposed to be a paved shared-use path that loosely follows the alignment of Coffee Lake Creek and connects to Tonquin Road via Morgan Road.



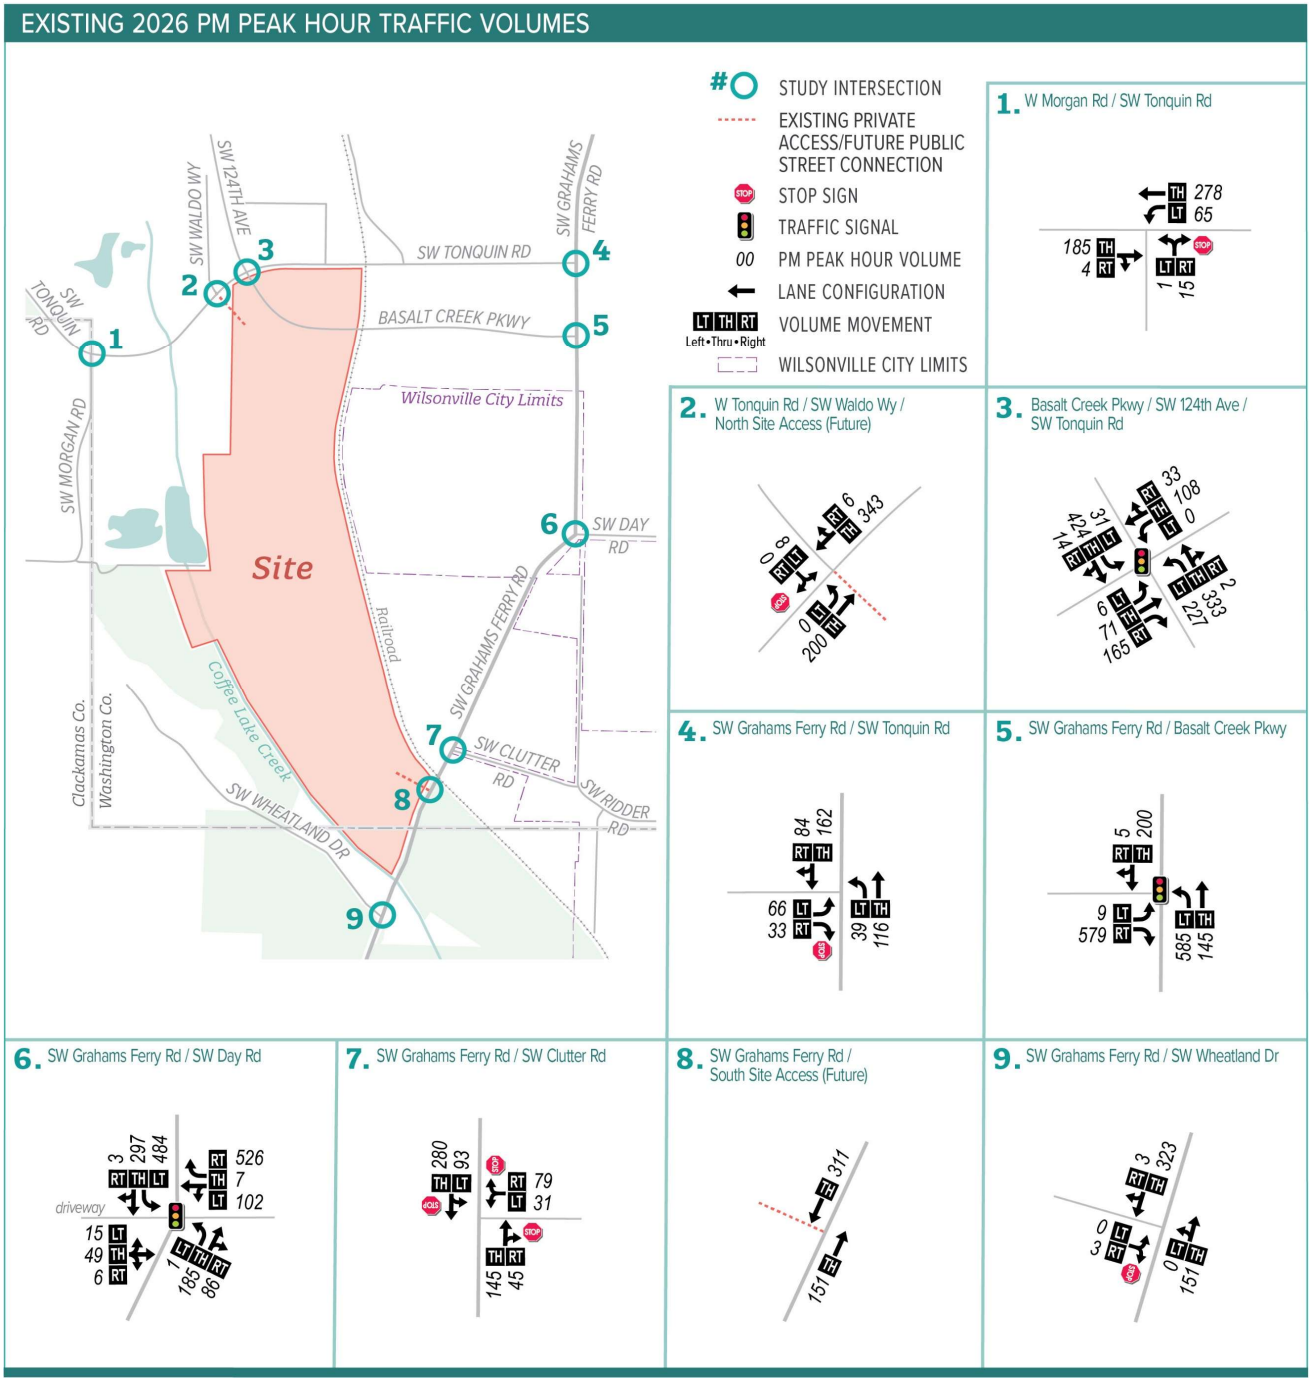


FIGURE 3: ICE AGE TONQUIN TRAIL ROUTE

Source: Ice Age Tonquin Trail Master Plan

EXISTING TRAFFIC VOLUMES

New intersection turning movement count data was collected during the weekday PM peak period (4:00pm – 6:00pm) at the study intersections in February 2026. Figure 4 shows the existing traffic volumes.

Note: The portion of the study area north of Basalt Creek Parkway would be under City of Tualatin jurisdiction in the future at buildout.

FIGURE 4: EXISTING 2026 STUDY INTERSECTION VOLUMES

INTERSECTION PERFORMANCE MEASURES

Agency operating standards often require intersections to meet level of service (LOS) or volume-to-capacity (v/c) intersection operation thresholds.

- The intersection LOS is similar to a "report card" rating based upon average vehicle delay. Level of service A, B, and C indicate conditions where traffic moves without significant delays over periods of peak hour travel demand. Level of service D and E are progressively worse operating conditions. Level of service F represents conditions where average vehicle delay has become excessive, and demand has exceeded capacity. This condition is typically evident in long queues and delays.
- The volume-to-capacity (v/c) ratio represents the level of saturation of the intersection or individual movement. It is determined by dividing the peak hour traffic volume by the maximum hourly capacity of an intersection or turn movement. When the V/C ratio approaches 0.95, operations become unstable and small disruptions can cause the traffic flow to break down, resulting in the formation of excessive queues.

City of Wilsonville: The City of Wilsonville requires study intersections on public streets to meet its minimum acceptable level of service (LOS) standard of LOS D for the PM peak period.

Washington County: Washington County's performance standards are outlined in the Washington County Transportation System Plan (TSP).[1] County intersections within an Urban Growth Boundary, but outside city limits, are considered to be within "Other Urban Areas." Therefore, the intersection mobility standard is a v/c ratio of 0.99 and LOS E.

Clackamas County: Clackamas County's performance standards are outlined in the Clackamas County Comprehensive Plan.[2] For county rural road unsignalized intersections, the intersection mobility standard is LOS E.

EXISTING INTERSECTION OPERATIONS

Intersection operations were analyzed for the PM peak hour at all study intersections for the existing conditions using Highway Capacity Manual (HCM) 7th Edition methodology.[3] The volume to capacity (v/c) ratio, delay, and level of service (LOS) of each study intersection are listed in Table 2.

[1] Table 4, Washington County Transportation System Plan. Effective November 18, 2024.

[2] Table 5-2b, Clackamas County Comprehensive Plan. Last updated March 2014.

[3] Highway Capacity Manual, 7th Edition, Transportation Research Board, 2022.

TABLE 2: EXISTING 2026 INTERSECTION OPERATIONS

INTERSECTION	JURISDICTION	TRAFFIC CONTROL[1]	MOBILITY TARGET	PM PEAK HOUR [2]		
				V/C RATIO	DELAY (SEC)	LOS
MORGAN ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.20/0.03	7.9/10.0	A/B
BASALT CREEK PARKWAY/ 124TH AVENUE/ TONQUIN ROAD	Washington County	Signal	v/c ≤ 0.99, LOS E	0.45	17.5	B
GRAHAMS FERRY ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.08/0.14	7.9/12.7	A/B
GRAHAMS FERRY ROAD/ BASALT CREEK PARKWAY	Washington County	Signal	v/c ≤ 0.99, LOS E	0.60	14.2	B
GRAHAMS FERRY ROAD/ DAY ROAD	Wilsonville	Signal	LOS D	**0.98**	**77.0**	**E**
GRAHAMS FERRY ROAD/ CLUTTER ROAD	Wilsonville	AWSC	LOS D	0.54	13.1	B
GRAHAMS FERRY ROAD/ WHEATLAND DRIVE	Clackamas County	TWSC	LOS E	0.10/0.01	0.0/10.3	A/B

Notes:
1. TWSC = Two-Way Stop Control
   AWSC = All-Way Stop Control
2. **Bold/Highlighted** = Does not meet mobility standards

As shown, all study intersections meet mobility standards under existing conditions, except for Grahams Ferry Road/Day Road. Today, this intersection experiences high vehicle volumes on the southbound approach during the PM peak hour and funnels traffic from Tualatin and other neighboring cities towards the I-5 interchange. The City has identified two high-priority improvement projects in their TSP at this intersection that include the realignment of the intersection and a new traffic signal or roundabout as well as the widening of Day Road to 5 lanes.[4]

[4] Wilsonville TSP Projects RW-02 and UU-08.

FUTURE CONDITIONS

To represent full buildout conditions, a background growth rate and trip generation estimates for full buildout conditions were applied to existing volumes. This methodology was used rather than future volume forecasting because the travel demand models assumed minimal growth in this area, which is no longer an accurate assumption.

TRAFFIC GROWTH ASSUMPTIONS

Existing traffic volumes were forecasted to the future year 2046 by applying a linear growth rate of 3.0% per year to the existing year traffic counts. This growth rate was derived from Washington County travel demand models. **The Washington County travel demand models are up to date and consistent with the 2023 METRO Regional Transportation Plan.**

The following transportation projects in the Wilsonville TSP within the West Railroad study area were assumed to be constructed by 2046:

- **Basalt Creek Parkway Extension: TSP Project RE-14**
  This project will extend Basalt Creek Parkway from Grahams Ferry Road to Boones Ferry Road. This will create a new east-west connection parallel to Day Road. The study's future traffic volumes were adjusted to reflect the expected changes in traffic patterns resulting from this project's construction.
- **Grahams Ferry Road/Day Road/Garden Acres Road Reconstruction: TSP Project UU-08**
  This intersection will be upgraded to either signal or roundabout control. Additionally, it will be completely reconstructed to incorporate the following changes:
  a) include an upgraded Garden Acres Road as the intersection's south leg;
  b) construct a new west leg that will be the continuation of Grahams Ferry Road; and
  c) remove the Coffee Creek Correctional Facility entrance from the intersection and construct a new entrance along the new west leg extension of Grahams Ferry Road.
    - It should be noted that the reconstruction of this intersection and traffic control change will address the existing operational deficiency shown in Table 1. This traffic study assumes signal control at this location.
- **Grahams Ferry Road/Clutter Road Closure and Java Road Traffic Signal: TSP Project RE-13**
  Once the Java Road extension is constructed and signalized at the intersection with Grahams Ferry Road, close Clutter Road at its approach to Grahams Ferry Road. Therefore, the Clutter Road intersection will not exist in the year 2046.
- **Day Road Widening: TSP Project RW-02**
  Widen Day Road from Boones Ferry Road to Grahams Ferry Road to include additional travel lanes in each direction with bike lanes and sidewalks.

LAND USE ASSUMPTIONS

The West Railroad planning area is assumed to have four separate areas of development, as shown in the figure below. The numbering of the areas is not indicative of the expected order of development for the planning area.

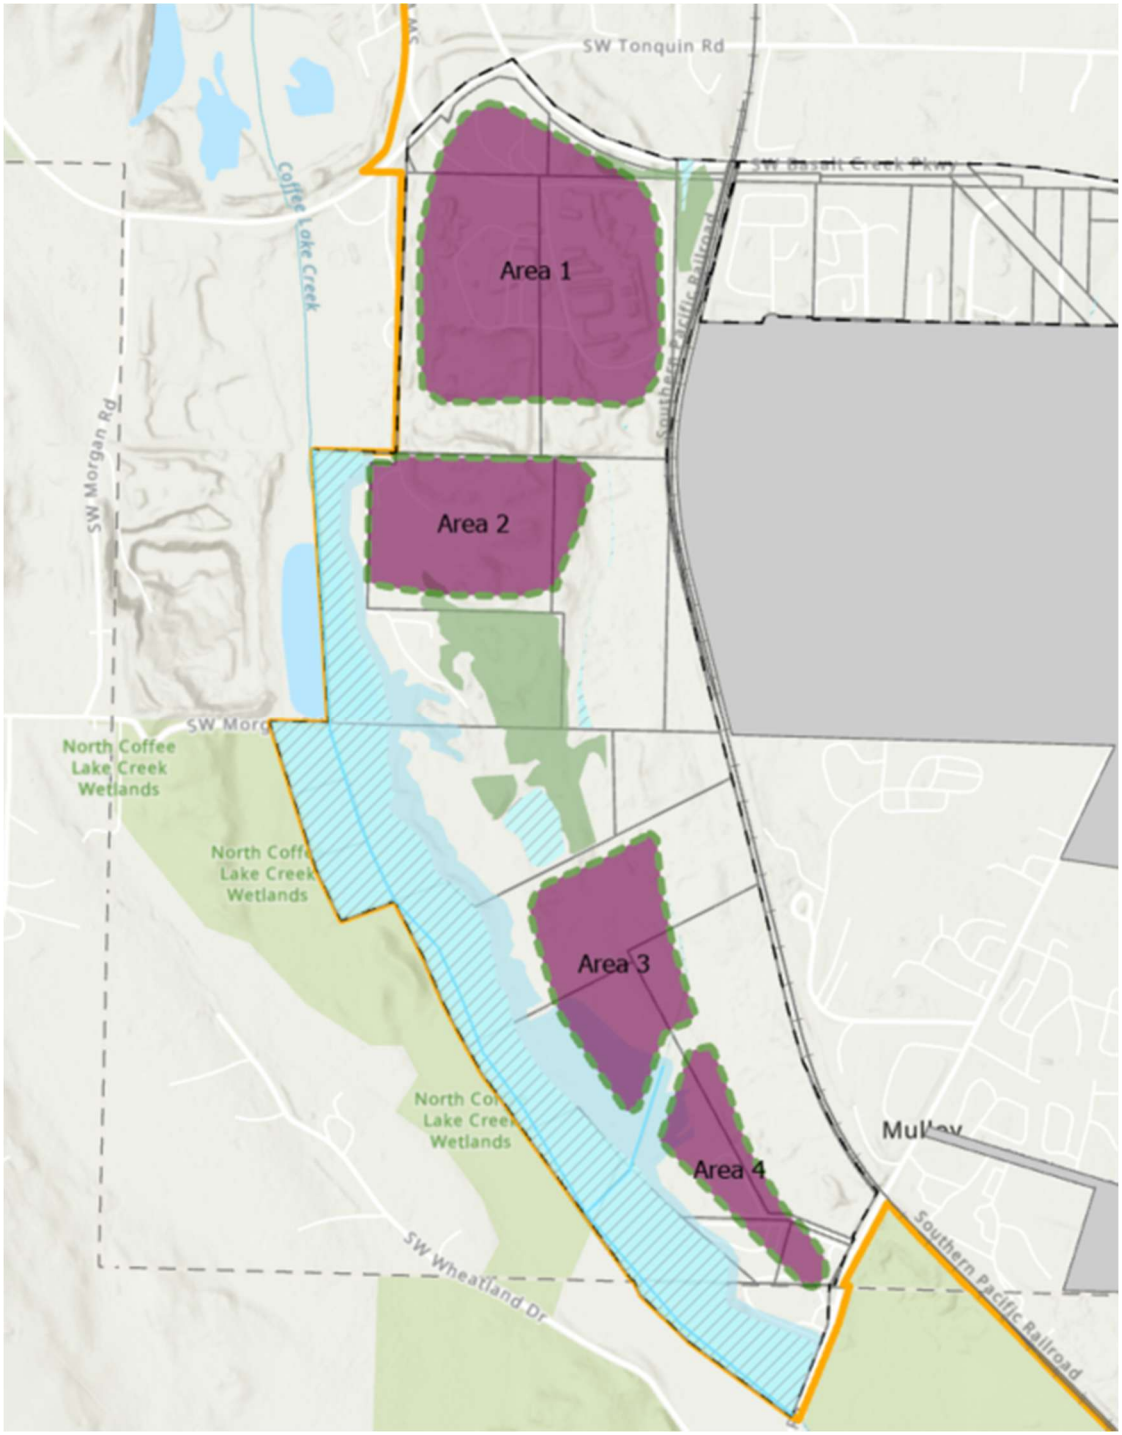

FIGURE 5: BREAKDOWN OF FUTURE EMPLOYMENT AREAS

For each of the four planning areas, trip generation was estimated for the reasonable worst-case development scenario, then added on top of the future background volumes established in the previous section. For this study, the Institute of Transportation Engineers (ITE) 12th Edition average trip generation data was used, which is based on national land use data.[5] This methodology was used in lieu of future volume forecasting because the travel demand models assumed minimal growth in this area, which does not reflect the study's assumptions.

The reasonable worst-case development scenario is based on the following assumptions:

- 35% of the overall site acreage is assumed for building footprint. The remaining 65% of the site acreage is assumed to accommodate streets, landscaping, off-street parking, and on-site circulation.
- The majority of the development is categorized as industrial, with a mix of manufacturing, warehouse, craft industries, office facilities, and some supporting retail. It is intended to be a highly diverse mix of facilities that will generate mostly employment trips and a high percentage of heavy vehicle trips. This traffic study uses ITE Land Use Code (LUC) 130: Industrial Park to represent this land use.
- One restaurant/brewery about 6,000 square feet in size within Area 1. This traffic study uses ITE LUC 971: Brewery Taproom to represent this land use.

The table below shows the trip generation estimate used to represent the full buildout of the West Railroad area.

TABLE 3: FUTURE BUILDOUT TRIP GENERATION ESTIMATE

AREA	LAND USE	SIZE [A]	PM PEAK HOUR TRIPS
AREA 1	Industrial Park	562 KSF	129 (36 in, 93 out)
	Restaurant/Brewery	6 KSF	59 (41 in, 18 out)
AREA 2	Industrial Park	265 KSF	61 (17 in, 44 out)
AREA 3	Industrial Park	278 KSF	64 (18 in, 46 out)
AREA 4	Industrial Park	151 KSF	35 (10 in, 25 out)
FUTURE DEVELOPMENT TOTAL			**348 (122 in, 226 out)**

[A] KSF = Thousand Square Feet

[5] Trip Generation Manual, 12th Edition, Institute of Transportation Engineers, 2025.

PUBLIC STREET CONNECTIONS

Public industrial local streets were assumed to be constructed through the planning area to support connectivity and access to the future development area. Due to the railroad and environmental constraints, the planning area was assumed to be accessed via two locations: Tonquin Road at the north end of the study area and Grahams Ferry Road at the south end of the study area.

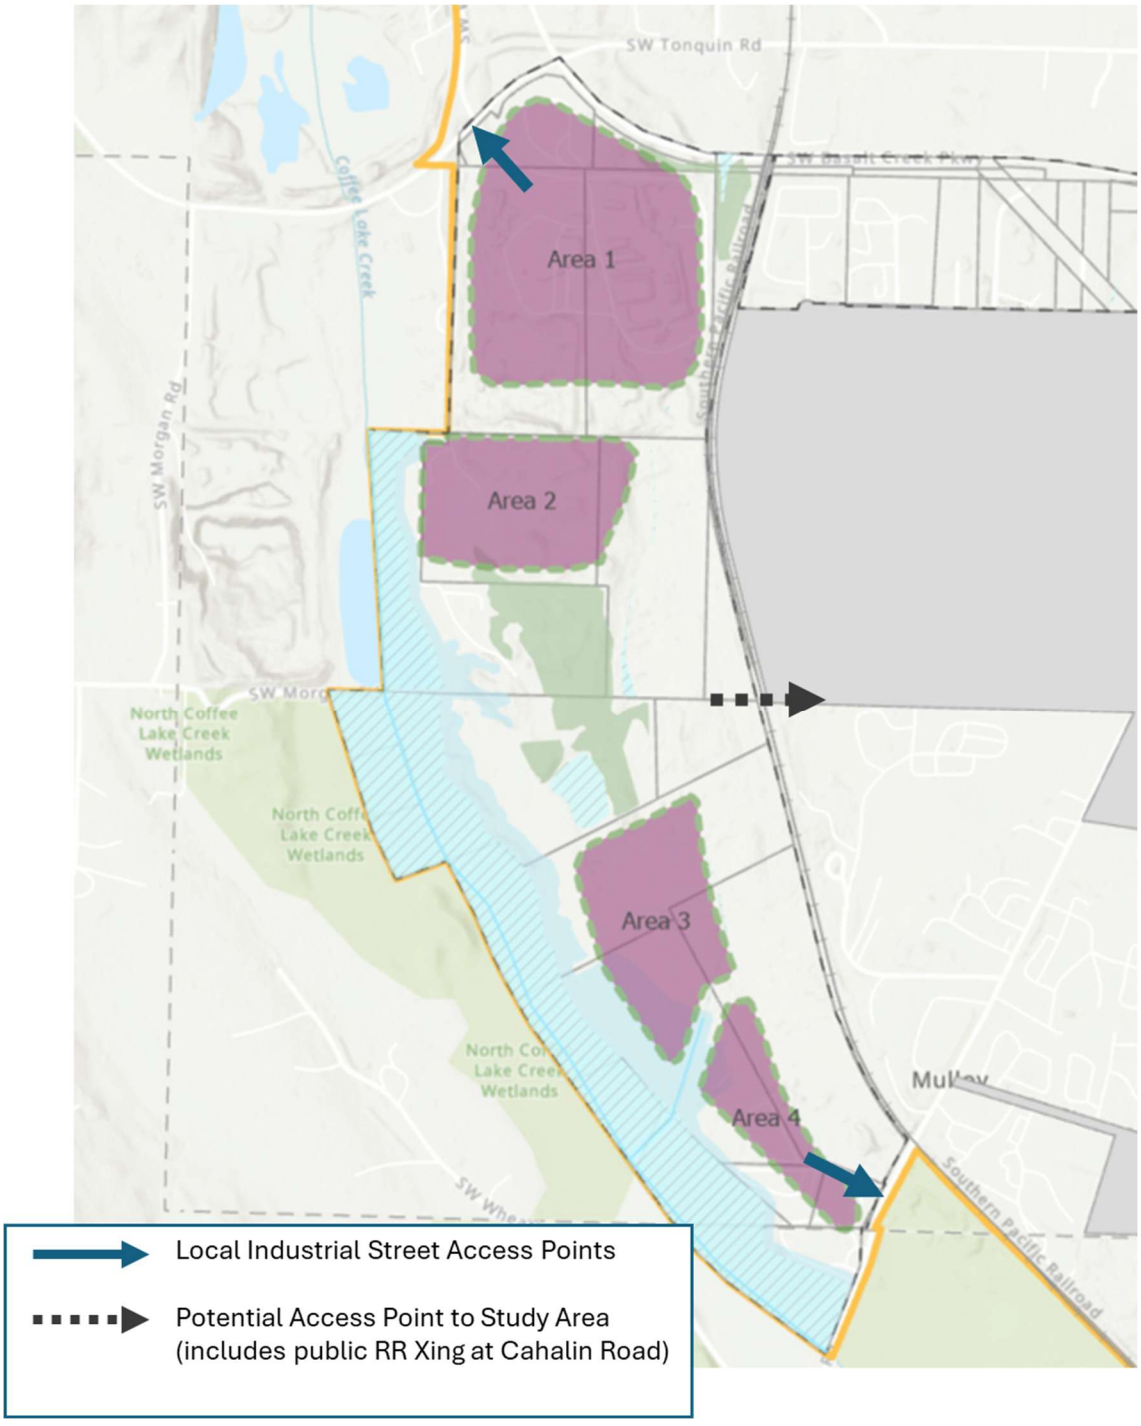

FIGURE 6: PLANNING AREA ACCESS POINTS

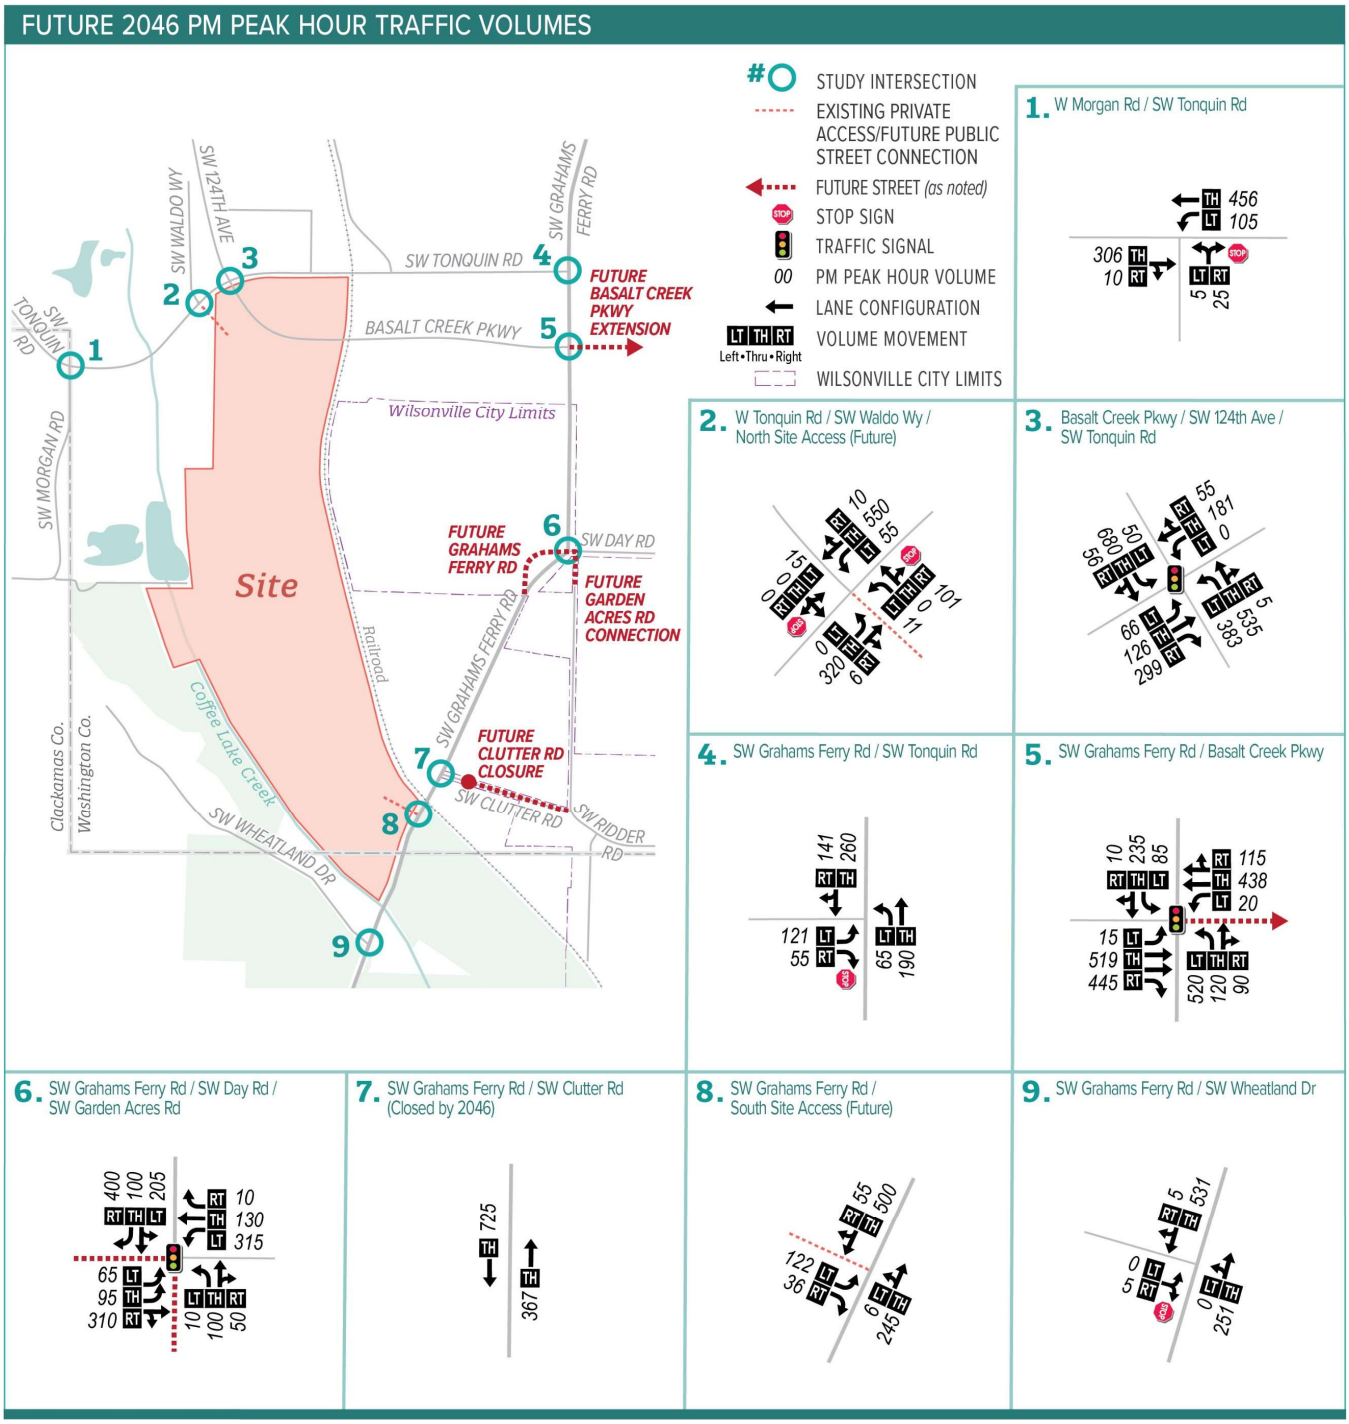
The City of Wilsonville is currently in conversation with Porland & Western Railroad (PNWR)[6] regarding the potential conversion of the existing private rail crossing at Cahalin Road to a public rail crossing. PNWR has stated that they would support industrial park development in the area and would be open to converting the crossing at Cahalin Road to a public crossing. The conversion would require that additional protection be added (i.e., gates, lights) at the existing private crossing as well as additional upgrades, yet to be determined, in lieu of the closure of an existing crossing.



For the purposes of this traffic study, the analysis assumes that there is no public railroad crossing at Cahalin Road. However, a third public street connection to the planning area across the railroad would further improve vehicle operations at the two assumed access points and provide improved general traffic circulation through the planning area and should continue to be explored as a possibility with PNWR.

> *Note: Access from the planning area to Morgan Road was briefly considered by the project team. However, this connection was ultimately found to be noncrucial to provide adequate connectivity to the planning area. Additionally, a connection to this road would have required significant street improvements to Morgan Road, which is located in a rural reserve area of Clackamas County.*

FUTURE TRAFFIC VOLUMES

Figure 5 shows the future 2046 peak hour traffic volumes for the study intersections. These volumes incorporate background growth and the estimated trip generation for the worst-case future development scenario. Additionally, the study area map shows the changes to the roadway network that are expected to be completed by 2046. Lane configurations and signal timing at future intersections (including Grahams Ferry Road/Basalt Creek Parkway and Grahams Ferry Road/Day Road/Garden Acres) were assumed to be optimized for intersection operations.

[6] PNWR is a subsidiary of Genesee & Wyoming Railroad.

Note: The portion of the study area north of Basalt Creek Parkway would be under City of Tualatin jurisdiction in the future at buildout.

FIGURE 7: FUTURE 2046 STUDY INTERSECTION VOLUMES

FUTURE INTERSECTION OPERATIONS

Intersection operations were analyzed for the PM peak hour at all study intersections for future 2046 conditions using Highway Capacity Manual (HCM) 7th Edition methodology. Operations at each study intersection are shown in Table 4.

TABLE 4: FUTURE (2046) STUDY INTERSECTION OPERATIONS

INTERSECTION	JURISDICTION	TRAFFIC CONTROL[1]	MOBILITY TARGET	PM PEAK HOUR [2]		
				V/C RATIO	DELAY (SEC)	LOS
MORGAN ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.32/0.08	8.4/13.6	A/B
NORTH SITE ACCESS/ WALDO WAY/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.37/0.11	8.2/32.3	A/D
BASALT CREEK PARKWAY/ 124TH AVENUE/ TONQUIN ROAD	Washington County	Signal	v/c ≤ 0.99, LOS E	0.79	64.0	E
GRAHAMS FERRY ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.13/0.38	8.5/21.1	A/C
GRAHAMS FERRY ROAD/ BASALT CREEK PARKWAY	Washington County	Signal	v/c ≤ 0.99, LOS E	0.58	18.8	B
GRAHAMS FERRY ROAD/ DAY ROAD/ GARDEN ACRES ROAD	City of Wilsonville	Signal	LOS D	0.83	23.8	C
GRAHAMS FERRY ROAD/ CLUTTER ROAD	City of Wilsonville	*This intersection is assumed to be closed by the year 2046*				
GRAHAMS FERRY ROAD/ SOUTH SITE ACCESS	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.17/0.43	8.8/25.0	A/C
GRAHAMS FERRY ROAD/ WHEATLAND DRIVE	Clackamas County	TWSC	LOS E	0.16/0.01	0.0/12.1	A/B

Notes:

1. TWSC = Two-Way Stop Control
   AWSC = All-Way Stop Control

As shown, all study intersections meet mobility standards under future conditions. No additional improvements beyond what is assumed in the City's Transportation System Plan or the 2023 METRO RTP are necessary to support development of the planning area.

MULTIMODAL TRANSPORTATION RECOMMENDATIONS

MOTOR VEHICLE RECOMMENDATIONS

Based on the West Railroad Transportation Analysis in this report, no additional motor vehicle improvement projects beyond the High-Priority projects in the City of Wilsonville TSP or the METRO RTP are necessary to support the full buildout of the West Railroad area.

Based on a review of the 2023 Metro RTP, there are currently two projects within the City of Wilsonville Urban Growth Boundary (current or planned) and within the BCPA that were included in the 2023 Metro RTP that are *not* included in the current Wilsonville TSP.[7] The City should discuss these projects internally and with partner agencies for inclusion in the City of Wilsonville next TSP update as Additional Projects (not High-Priority projects) as both of these projects are long-range (2045) and are unconstrained (no identified funded) projects in the RTP.

- **METRO RTP Project #11924**, Grahams Ferry Road from Tonquin Road to Day Road, Improve roadway to 5 lanes including sidewalks and bike lanes. Long-Term 2045 Strategic Project List.
  The City of Wilsonville TSP currently lists a project on Grahams Ferry Road for a three-lane roadway improvement; there is no five-lane widening project identified. Therefore, the City of Wilsonville should discuss this project internally and with Washington County and City of Tualatin to determine whether a three-lane or five-lane cross section is preferred on Grahams Ferry Road within the BCPA.
- **METRO RTP Project #11469,** 124th Ave Improvements. Improve 124th from 2 lanes to 5 lanes with bike lanes and sidewalks. Long-Term 2045 Strategic Project List.

PEDESTRIAN, BICYCLE, TRANSIT TSP RECOMMENDATIONS

The following list of non-motor vehicle projects have been identified as needed to support the Basalt Creek Planning Area (BCPA) beyond what is already in the Wilsonville Transportation System Plan (TSP).

- Coordinate with SMART to expand transit service (e.g., new routes, bus stops, etc.) to the Basalt Creek Planning Area as it develops.
- Consider an enhanced pedestrian/bicycle crossing of Day Road where the south end of LT-02 (Basalt Creek Canyon Trail) would connect with the north end of the pedestrian/bicycle facilities along the Coffee Creek Supporting Street.
- Consider a trail connection (pedestrian and bicycle only) from Ridder Road north to the future Coffee Creek Supporting Street. Approximately 800 feet in length. Trail alignment would run along the west side of the BPA Substation.

[7] Link to map of METRO RTP Projects.

- Alignment of the Tonquin Ice Age Trail through the West Railroad planning area consistent with the Ice Age Tonquin Trail Master Plan. The trail/pathway through the West Railroad area would serve both regional and local pedestrian and bicycle traffic.
- Provide interim connections at Tonquin Road and Grahams Ferry Road between the Ice Age Tonquin Trail and existing on-street sidewalks and on-street bike lanes adjacent to the West Railroad area. These crossing improvements could include new marked and/or enhanced crosswalks and should be provided or improved to facilitate safe and comfortable travel for pedestrians and cyclists.

LOCAL STREET CONCEPTUAL LAYOUT

DKS identified reasonable connection points and alignments for the future local streets in the Wilsonville portion of the BCPA. See Figure 8 for the local street concept map.

Within the West Railroad area, local street connections to Tonquin Road and to Grahams Ferry Road will be necessary to provide adequate access for the planning area under full development. The public railroad crossing at Cahalin Road was not included in this analysis and was found to be noncritical to providing adequate traffic circulation/access to the planning area. However, a third public street connection across the railroad would be desirable as it would further improve vehicle operations at the two assumed access points and provide improved general traffic circulation through the planning area and should continue to be explored as a possibility with PNWR. Local street connections within the planning area will be provided by development; they are not within the scope or purview of projects to be completed by the City of Wilsonville and will just be needed to the extent of serving development in this area.

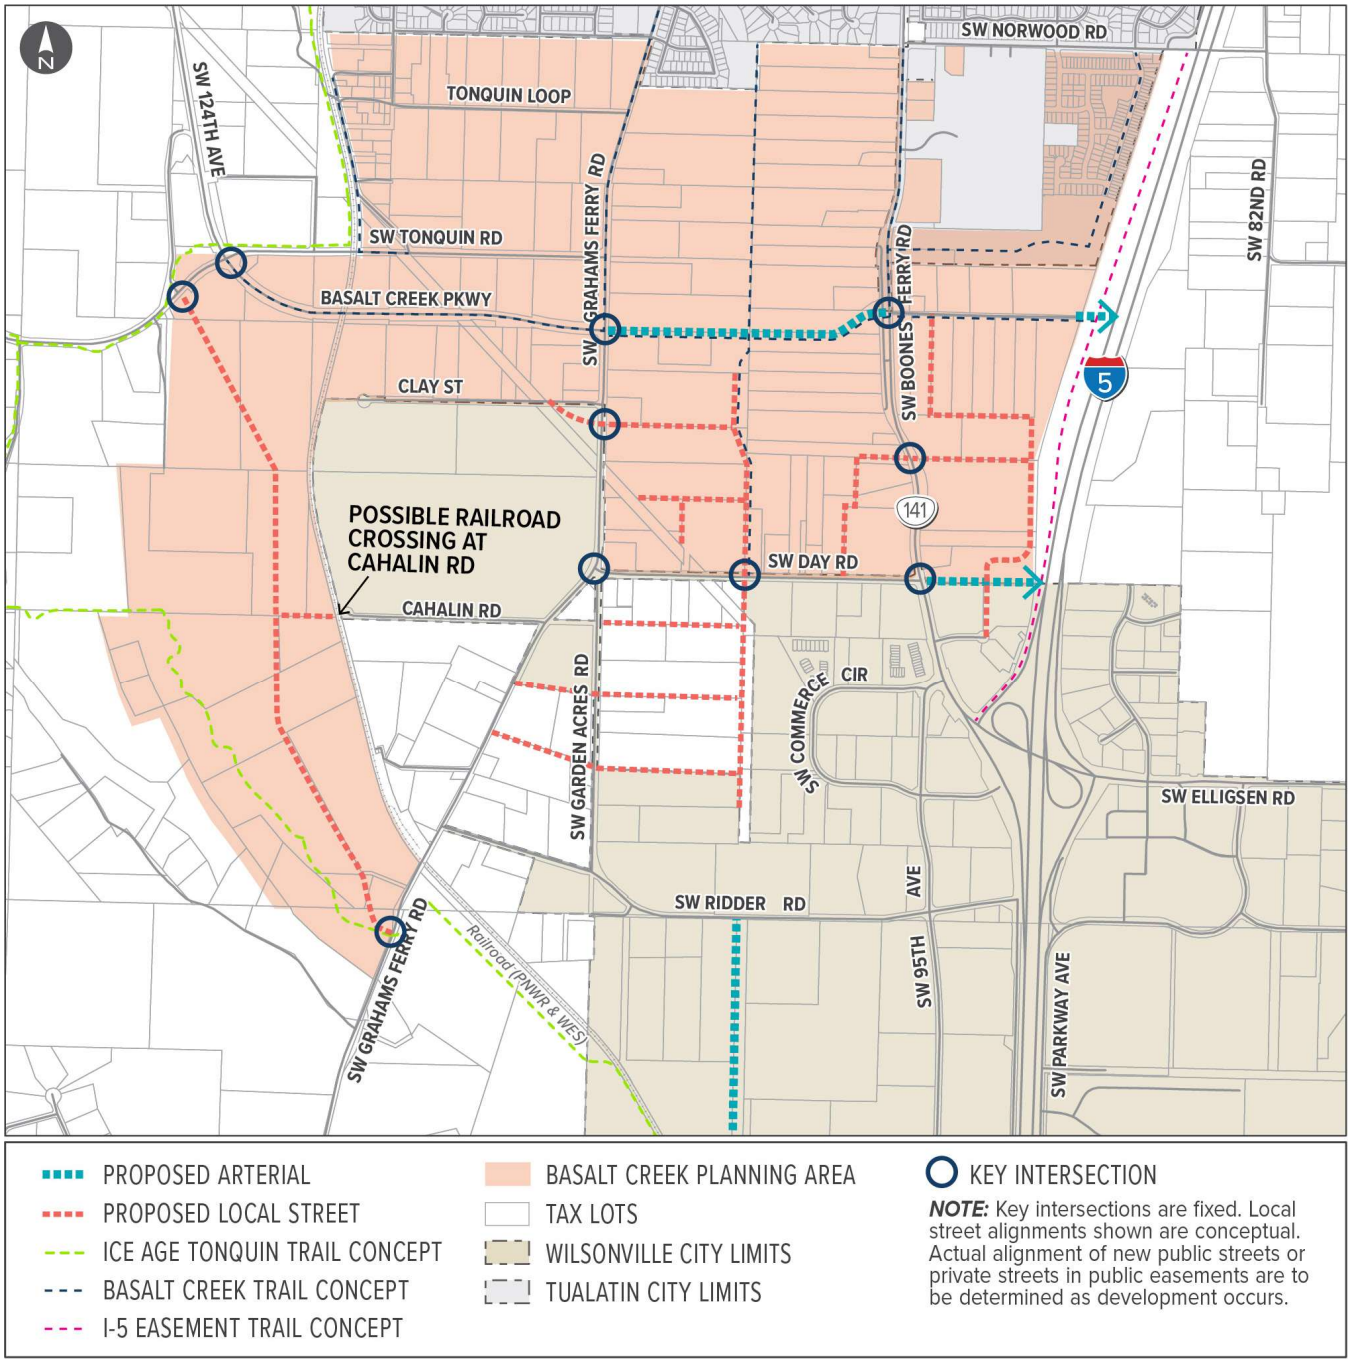


FIGURE 8: BCPA WILSONVILLE LOCAL STREET CONCEPT MAP

SUMMARY OF FINDINGS

The following summarizes the findings of this report for the Basalt Creek Planning Area in Wilsonville, Oregon.

Background

- Transportation planning efforts for the Basalt Creek Planning Area began as early as 2013 with the Transportation Refinement Plan (TRP). Recent planning efforts include the 2018 Basalt Creek Concept Plan and a 2019 amendment to the City of Wilsonville TSP.
- In 2019, the 124th Avenue extension was constructed and open for travel.
- The City of Wilsonville is currently preparing a Master Plan for the Basalt Creek Planning Area.

West Railroad Transportation Analysis

- At the time of the 2018 BCPA Concept Plan, the West Railroad area was excluded from development assumptions due to significant geographical constraints (varied terrain with wetlands habitat and steep slopes) and limited access.
- Full development of the West Railroad planning area results in an assumed 1,262,000 square feet of industrial uses, including a mix of manufacturing, warehouse, craft industries, office facilities, and some supporting retail.
- Under future 2046 traffic conditions (full development), all study intersections meet applicable agency mobility standards.
- Future 2046 conditions include future transportation projects consistent with the 2023 METRO Regional Transportation Plan as well as transportation projects in the Wilsonville TSP High-Priority project list within the West Railroad.
- No additional improvements beyond what is assumed in the METRO RTP and the City's Transportation System Plan are necessary to support the full development of the West Railroad planning area.

Multimodal Transportation Recommendations

- The two projects listed on Page 18 are located within the BCPA and are included in the 2023 Metro RTP and included in the future traffic conditions analysis in this report, but are not included in the current Wilsonville TSP. These should be discussed and considered for inclusion in the City's next TSP update.
- Coordinate with SMART to expand transit service (e.g., new routes, bus stops, etc.) to the Basalt Creek Planning Area as it develops.
- Consider an enhanced pedestrian/bicycle crossing of Day Road where the south end of LT-02 (Basalt Creek Canyon Trail) would connect with the north end of the pedestrian/bicycle facilities along the Coffee Creek Supporting Street.
- Consider a trail connection (pedestrian and bicycle only) from Ridder Road north to the future Coffee Creek Supporting Street. Approximately 800 feet in length. Trail alignment would run along the west side of the BPA Substation.

- To support the Ice Age Tonquin Trail through the West Railroad planning area, connections to existing on-street sidewalks and on-street bike lanes should be provided or improved to facilitate safe and comfortable travel for pedestrians and cyclists.

Local Street Concept

- The local street concept shown in Figure 8 shows the alignment of local and arterial streets through the Wilsonville portion of the BCPA. All alignments shown are conceptual and actual alignment will be determined at the time of development.
- Local street connections within the planning area will be provided by development; they are not within the scope or purview of projects to be completed by the City of Wilsonville and will just be needed to the extent of serving development in this area.

A. 2019 Wilsonville TSP Amendment Summary (based on 2018 BCPA Concept Plan)

B. Traffic Counts

C. Existing HCM Reports

D. Trip Generation Table and Land Use Assumptions

E. Future HCM Reports

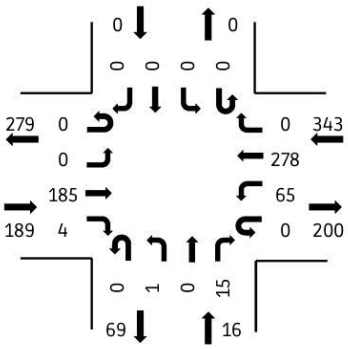

TABLE A: BASALT CREEK TSP PROJECTS - 2019 TSP AMENDMENT SUMMARY

PROJECT #	PROJECT	NOTES
RE-P6	Basalt Creek Parkway Overcrossing of I-5	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP #11436
RE-P5	Day Road Overcrossing of I-5 (Boones Ferry Road to Elligsen Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP #11490
RE-P15	Pioneer Court Extension (north and west to Boones Ferry Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List
RE-14	Basalt Creek Parkway 5-lane Extension (Grahams Ferry Road and Boones Ferry Road)	Moved from Additional Planned Project List to Higher-Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP #11470
RW-02	Day Road Widening to 5 lanes (Grahams Ferry Road to Boones Ferry Road)	Already on TSP Higher-Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #11243
RW-04	Boones Ferry Road Widening to Five Lanes (Day Road to Basalt Creek Parkway)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #11487
RW-05	Grahams Ferry Road Widening to Three Lanes (Day Road to Basalt Creek Parkway)	Moved from Additional Planned Project List to Higher-Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #10588 (Tonquin to Day Road)
UU-08	Garden Acres Road Urban Upgrade & Extension	Already on TSP Higher-Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP #10853
SI-07	Boones Ferry Road at I-5 Southbound Ramps (add dual southbound left turn lanes)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #11489
SI-08	Boones Ferry Road at 95th Avenue (access management strategies)	New to 2019 Wilsonville TSP, added to High Priority Project List
LT-02	Basalt Creek Canyon Ridge Trail	New to 2019 Wilsonville TSP, added to High Priority Project List
LT-03	I-5 Easement Trail	New to 2019 Wilsonville TSP, added to High Priority Project List

G. Class 5 Construction Cost Estimates

Introduction

The City of Wilsonville ("City") has contracted with Consor North America, Inc. ("Consor") to evaluate the existing conditions at the SW Grahams Ferry Road undercrossing of the Portland and Western Railroad (PNWR) and prepare a planning-level cost estimate to make the following specific improvements:

- Upgrade SW Grahams Ferry Road ("GFR") from Collector to Arterial classification
- Widen GFR to meet standard cross section element widths (lane, shoulder bike lane, sidewalk)
- Provide adequate vertical clearance for freight / truck traffic on GFR beneath the PNWR overcrossing

Site Location and Land Use

The evaluation site is in the City of Wilsonville, Washington County, west of Interstate 5 (I-5) and north of the City population centers and falls within the Basalt Creek Planning Area. Land use in the area is a mix of light and heavy commercial, light industrial, and limited retail, with no residential properties along GFR or intersecting streets.

Evaluation Purpose and Need

The goal of this evaluation is to review the existing conditions, identify the development standards / criteria to achieve the City's goals, prepare preliminary horizontal and vertical alignments for the desired roadway improvements, identify the impacts to the built and natural environment within the immediate study area, and develop a Class 5 construction cost estimate.

Existing Conditions

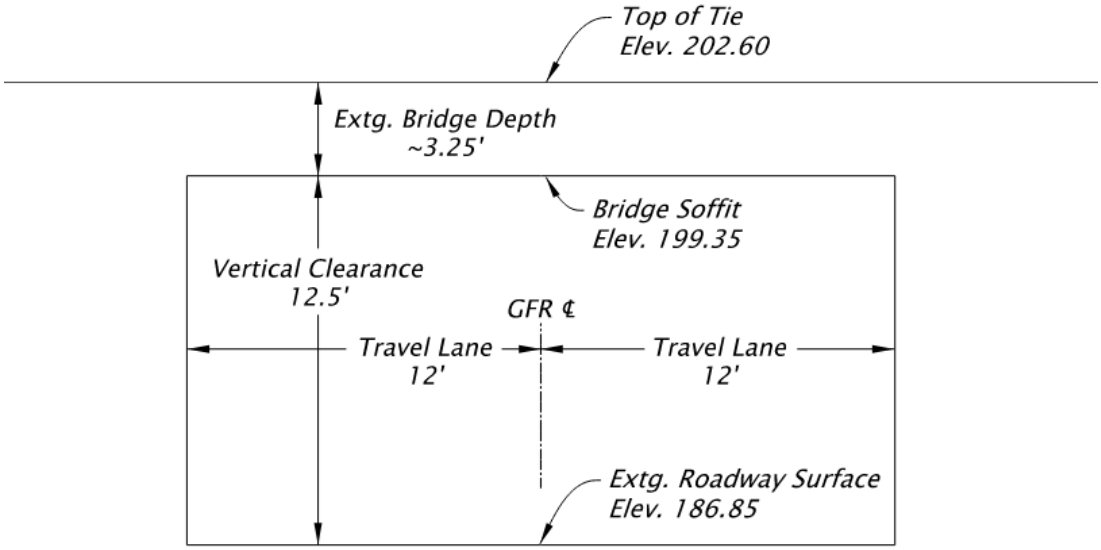
SW Grahams Ferry Road is a north-south Collector through the west side of Wilsonville, intersecting SW Wilsonville Road on the south end and SW Boones Ferry Road in Tualatin on the north end. GFR carries a mix of residential, commercial, freight, and agricultural traffic and has several distinct segments. The focus of this evaluation will be a segment located approximately between SW Wheatland Drive and SW Day Road. This portion of GFR has a posted speed limit of 45 MPH.

Existing contours (see Attachment A – Existing Conditions Map) were generated from publicly available LiDAR data that was processed into a Digital Terrain Model (DTM). Elevations shown in the attachments and discussed in this memo are based on the DTM and are not survey-level accuracy. No field survey, physical measurements, or site visits were conducted for this evaluation.

Traffic Volumes
Current (2024) traffic volumes (AADT) on Grahams Ferry Road ~1,800' north of the evaluation site:

Traffic Count Total:	6,678 veh/day
NB Traffic:	3,093 veh/day
SB Traffic:	3,585 veh/day
Percent Trucks:	15.3%

(Source: Washington County Traffic Count Station #419)



Horizontal Alignment
The existing horizontal alignment is generally within a tangent section, with the railroad undercrossing in a very flat curve. There is a substandard curve south of the PNWR undercrossing, which is within the limits of the designed vertical realignment. It is assumed that this curve would be improved along with the profile adjustment. See the Roadway Design Criteria (Attachment B) for existing and proposed geometrics.

Cross Section and Horizontal Clearance
The existing cross section consists of two 11' travel lanes with ~1'-2' gravel shoulders. Driveways connect to GFR both north and south of the crossing. The roadway pavement flares out to two 12' travel lanes beneath the PNWR bridge, with an overall horizontal clearance of 24'.

Vertical Alignment
The existing vertical alignment approaching the crossing location from the south includes a sag curve with a "K" value of 19.7, which translates to a design speed of 20 MPH. A sharp crest curve north of the crossing has a "K" value of 17.8, with a design speed of 25 MPH. Stopping sight distance in both directions is significantly less than standard for the 45-mph posted speed.

Vertical Clearance

The PNWR undercrossing is signed as 12’-6” clearance. The actual vertical clearance was not physically measured for this analysis. Therefore, the pavement elevations shown and discussed are not survey-level accuracy.

Existing SW Grahams Ferry Road Cross Section beneath PNWR overcrossing

Railroad Line and Crossing

The railroad line crossing over GFR is a single-track freight line that is leased and operated by Portland & Western Railroad (PNWR), a subsidiary of Genessee and Wyoming Railroad. The line is owned by Union Pacific Railroad.

The crossing structure consists of vertical concrete abutment walls with flared wingwalls, steel girders, and steel abutment seats, with typical timber ties and track rails.

Source: Google Maps

Proposed Roadway Design Standards

This analysis is primarily based on *Washington County Road Design and Construction Standards, Ordinance 738 (2011),* with other considerations based on AASHTO standards, ODOT design and mobility standards, and engineering judgement. The County standards can be accessed in full at the following link:

https://www.washingtoncountyor.gov/lut/documents/road-design-and-construction-standards-ordinance/download?inline

Other County design standards, inspection forms, and standard details can be accessed at this link:

https://www.washingtoncountyor.gov/lut/road-design-and-construction-standards

The Roadway Design Criteria is included as Attachment B. Design criteria for a replacement railroad bridge were not researched for this evaluation.

Roadway Design Considerations

Cross Section

The City would like to upgrade GFR from Collector to Arterial classification. The preferred cross section for this classification is two 12' travel lanes, two 6' shoulder bike lanes, a 5' buffer, and 6' sidewalks on both sides; 58' total width. Arterials typically have two-way center turn lanes but given the constraints and the relatively low anticipated turning volumes, a center turn lane has not been considered at this location.

See "Arterial Road Section" details in Washington County Exhibit #1 (Attachment C) for additional cross section standards. The recommended cross section is shown on the Plan and Profile exhibits (Attachments E and F).

Horizontal Alignment

Except for the non-standard curve south of the PNWR undercrossing (see above for discussion), no changes were considered to the horizontal alignment due to the limited scope of the proposed improvements. Horizontal realignment would further impact private property within the project limits and is, for the most part, unnecessary.

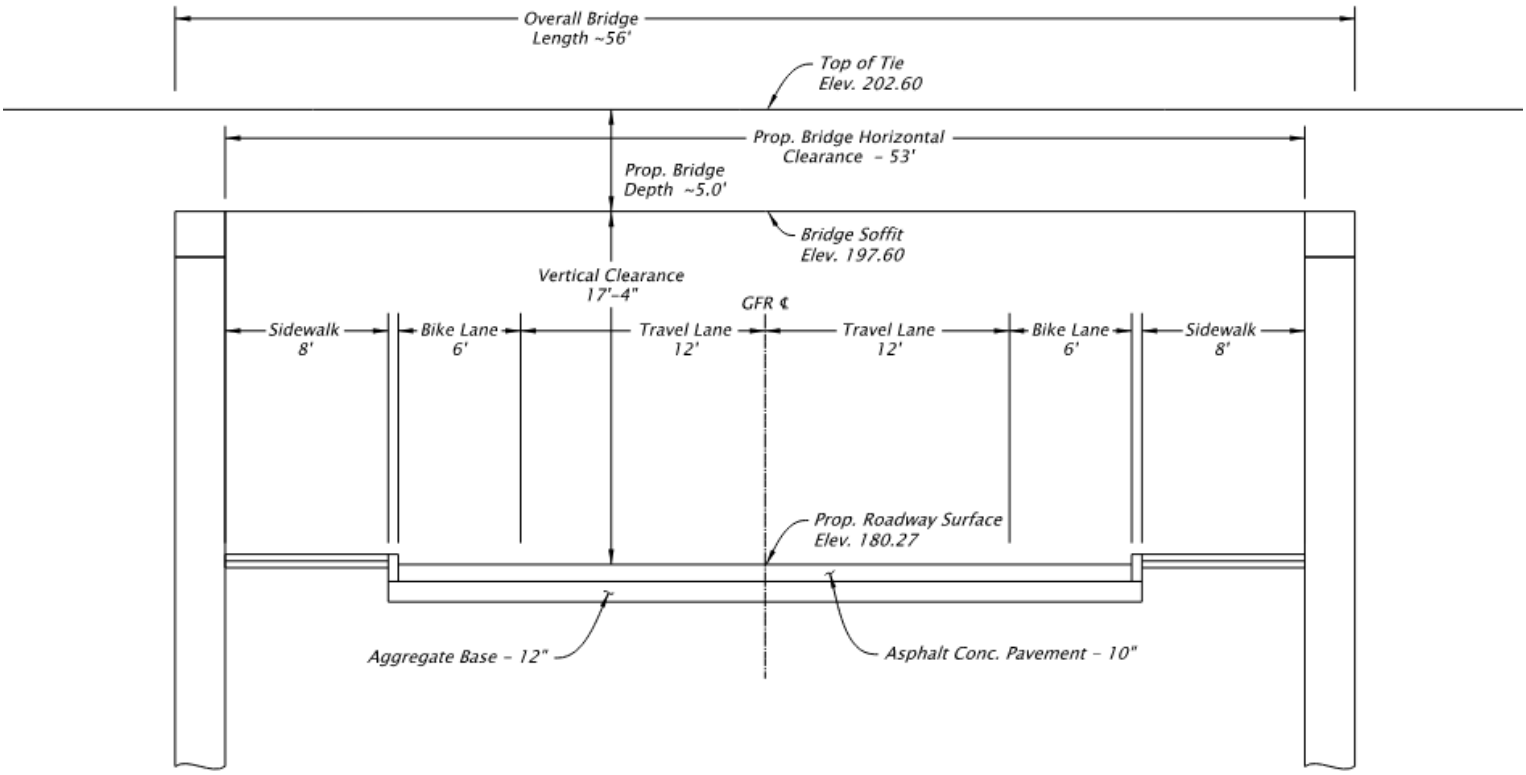
Vertical Clearance

During preliminary discussions with the City, the ultimate vertical clearance goal was undecided. There are multiple clearance criteria that could apply to this location:

17'-4" – High Routes (ODOT HDM, Section 317)
17'-0" – NHS Non-High Routes
16'-0" – Non-NHS Non-High Routes ***(GFR falls into this category)***
14'-0" – Considered minimum clearance for non-NHS Local Agency roadways if an alternate route with 16' clearance is available

Further, any project using federal funds on Local Agency roads must have 16’ vertical clearance (ODOT HDM, Section 317.4 – see Attachment D). Therefore, the 14’-0” clearance criteria was dismissed and not evaluated.

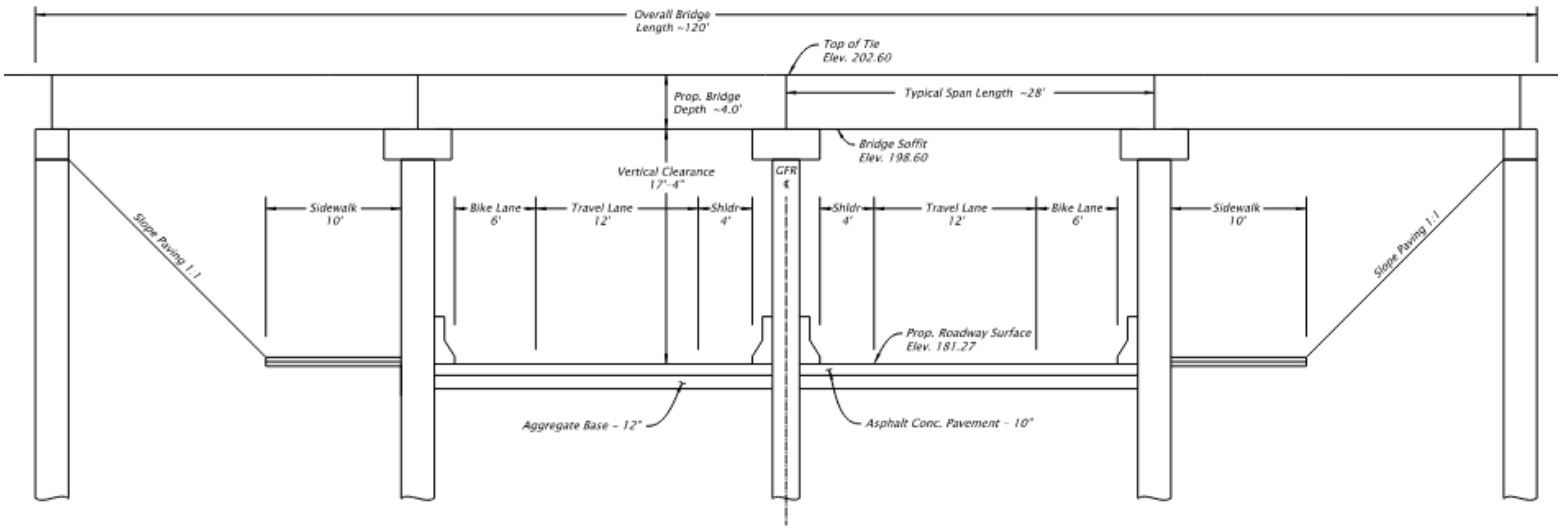
Freight movement through the corridor is effectively non-existent currently, given the vertical clearance restriction. Future freight movement will depend on the ultimate clearances provided. Since the long-term development goals for the Basalt Creek Planning Area will improve trucking and freight access through the corridor and connecting to I-5 at both SW Wilsonville Road and SW Elligsen Road, it was agreed that this evaluation would examine the full range of vertical clearances, from 16’-0” to 17’-4”.



Vertical Alignment

Two vertical alignments were developed for this evaluation and are shown in Attachments E and F. These profiles represent the range of possibilities and demonstrate the magnitude of a potential future project. After evaluating both alternatives, it became evident that the minor differences in excavation and retaining wall heights to provide the full 17’-4” clearance was insignificant to the overall cost of the project (see Attachment G – Class 5 Construction Cost Estimate for comparison).

Replacement Railroad Structure Considerations



Bridge Type and Size
The potential replacement bridge configuration options range significantly depending upon the chosen roadway cross section. Two configurations were examined for this evaluation; a 56’ long single-span bridge and a 120’ long multi-span bridge.

- **Single Span Bridge:** This configuration removes the buffer between the curb and sidewalk and widens the sidewalk to 8’ on both sides. This is the most compact bridge configuration that meets Arterial cross section standards. The 56’ span length results in a bridge depth of ~5’ and requires more roadway excavation to lower the profile at the crossing location. This would most likely be a steel girder bridge supported on deep foundations with vertical abutment walls, similar to the existing bridge. The typical section is shown below.

Typical Single Span Section
56’ Single Span Railroad Bridge over SW Grahams Ferry Road

- **Multi-Span Bridge:** This configuration adds a centerline support along with supports at the projected curb line, separating the sidewalk from the roadway in an effort to shorten the bridge spans. This layout results in four 28’ spans. The benefit of shorter bridge spans is a more slender bridge, reducing the depth from 5’ for the single span to 4’. This bridge represents the broadest layout that should be considered, and also the most expensive. The benefit of reducing the bridge depth, and subsequently the roadway excavation, is not likely significant enough to warrant the additional bridge cost. Therefore, this bridge type represents the top of the cost estimate “band” for planning purposes (see Cost Estimate section below). The typical section is shown below.

Typical Multi-Span Section
120’ Multi-Span Railroad Bridge over SW Grahams Ferry Road

Bridge Construction Staging
Removal of the existing railroad bridge will require disruption to the track line, which must remain in service. A temporary railroad bridge will be necessary to maintain rail service during construction and will increase right-of-way impacts and project costs significantly. A “shoofly” structure will likely be the simplest option for maintaining rail service and would most likely be constructed to the south of the existing track line.

Environmental Considerations

A project of this magnitude will have significant impacts to both the built and natural environments within the project vicinity. See the Existing Conditions Map, Attachment A, for an overall project vicinity map with the existing built and natural features annotated. Below is a list and discussion of the apparent impacts from the limited design effort undertaken from this evaluation.

Built Environment

The GFR corridor is fully developed north of the railroad and also along the west side, south of the railroad. The east side, south of the railroad, is undeveloped. The proposed profile adjustment will lower the grade along GFR from SW Elligsen Road through the replacement bridge section, then matching the existing roadway grade about 800' south of the railroad.

- SW Elligsen Road intersects GFR about 950' north of the railroad. The preliminary profiles developed for this evaluation were developed to match the existing grade at this intersection; no adverse impacts to the intersection are anticipated.
- A large commercial driveway exists about 775' north of the railroad, on the west side of GFR. The roadway grade will be lowered about 1' at this location, requiring regrading of the driveway to maintain the connection.
- SW Clutter Road intersects GFR about 360' north of the railroad. With the anticipated reduction in grade of about 8', this intersection will be severed and a cul-de-sac constructed on SW Clutter Road east of GFR, and the two driveways on the west side will be closed. Alternate access to the properties in the NW quadrant will have to be established.
- A commercial driveway exists about 225' north of the railroad, on the east side of GRF. This driveway will be closed; the property currently has two other accesses onto SW Clutter Road.
- South of the railroad, there are three consecutive large commercial driveways on the west side, near the BPA towers. The grade reduction on GFR will be about 2' at the north driveway and will increase about 2' at the south driveway. All three could likely be regraded to maintain connection to GFR. The roadway should be widened to the east through this portion to reduce the impacts on the developed properties and to improve the horizontal alignment.
- An access to the BPA greenway exists about 200' south of the railroad, on the east side of GFR. This connection can likely also be regraded to maintain access.

While the preliminary roadway design effort has been minimal, it does not appear that any buildings would be in conflict with the anticipated roadway widening. Retaining walls are anticipated to be constructed at the back of walk to reduce right-of-way impacts from SW Elligsen Road through the railroad crossing; wall limits are shown on the Plan and Profile exhibits in Attachments E and F.

Natural Environment

The east side of GFR, south of the crossing, is undeveloped and heavily vegetated. Much of that quadrant appears to be a greenway beneath the BPA transmission lines. The Coffee Lake Creek floodway and wetlands exist at the bottom of the hill and are within the anticipated work limits. This portion of the project should be examined closely if the City plans to avoid impacts to jurisdictional waters/wetlands. Any expansion of GFR south of the study area will result in wetland impacts.

Stormwater Management

Conveyance

A future roadway project would likely include curbed shoulders and a structured drainage conveyance system that includes a pipe network with inlets and manholes). Given the significant grade of GFR within the study area, capturing and conveying the roadway runoff can easily be achieved using a typical drainage system.

Stormwater Treatment

No analysis of the anticipated stormwater runoff volume was conducted, nor were any stormwater treatment concepts or facilities considered. However, it should be recognized that a future project will require capturing, conveying, and treating stormwater runoff in accordance with the Endangered Species Act requirements (and likely other regulatory agency requirements (National Marine Fisheries, Oregon Dept of Environmental Quality, Division of State Lands, US Army Corps of Engineers, Fish & Wildlife, etc.)). The proximity of the Coffee Lake Creek wetlands should be considered in an effort to avoid impacts to the extent possible and to locate stormwater treatment facilities uphill from the wetlands, so that untreated runoff is not discharged into the jurisdictional wetlands/waters.

Existing Utilities

A Bonneville Power Administration (BPA) transmission line crosses GFR immediately south of the railroad tracks, with two large steel towers on the west side of GFR. An aerial fiber optic line run along the west side of GFR north of and under the railroad bridge, then crosses to the east side about 400’ south of the undercrossing. Aerial power lines run along the east side of GFR, crossing over the railroad tracks, and then crossing to the west side of GFR about 600’ south of the undercrossing. Both aerial lines are on wood poles. An additional aerial power line runs east/west along the south side of SW Clutter Road, north of the railroad crossing. A buried fiber optic cable line runs along the west edge of pavement, with two vaults on the north side of the railroad bridge at the edge of pavement.

A red/amber warning flasher on span wire exists at the intersection of GFR and SW Clutter Road. Overheight vehicle warning systems exist on GFR both north and south of the undercrossing.

There is no visual evidence of a water system (valves, hydrants), sanitary sewer (manholes), or natural gas (valves, meters) using Google Street View, but may exist within the GRF ROW.

The anticipated construction would conflict with the three aerial lines and the buried fiber optic line. No impacts are expected to the BPA transmission lines or towers, assuming retaining walls along the west side of GFR near the towers.

Right-of-Way

Additional Right-of-Way will be needed for the improvements on all four quadrants of the railroad bridge. The minimum Arterial roadway cross section is 64' wide, plus slopes or retaining walls on either side. See County Exhibit #1 in Attachment C for additional details.

Construction Cost Estimate

The Class 5 Construction Cost Estimate range is **$33.0M to $37.5M** (2025 dollars), including 30% Engineering Design, 10% Mobilization, 15% Construction Engineering, and 100% Contingency. Environmental Studies, Mitigation, Land Use, and Railroad permitting, right-of-way capital and acquisition, and utility relocation costs have not been included in the estimate. Detailed construction cost estimates for each bridge alternative are included in Attachment G.

Appendix G: Natural Resource Inventory

Pacific Habitat Services, Inc.

From: **Carlee Michelson, PWS, and John van Staveren, SPWS**

RE: **Natural Resources Inventory for the Basalt Creek Neighborhood in Wilsonville**

Pacific Habitat Services (PHS) conducted an inventory of wetlands, tree groves and riparian areas within the Basalt Creek planning area during the summer of 2024. The City of Wilsonville is conducting an industrial land readiness study that will inform zoning Code amendments and an infrastructure funding plan to enable future development as envisioned in the Basalt Creek Concept Plan area (BCPA). A component of this analysis is updating the Buildable Lands Inventory, including identifying natural resources in compliance with Statewide Planning Goal 5. This memorandum describes the inventory methodology for identifying these resources within the BCPA.

Public Involvement: Prior to beginning the inventory field work, all landowners were contacted in person, or received a phone call or email from the City of Wilsonville describing the project and asking permission to enter their property. Right of access was granted to PHS by landowner permission only. The properties of those not responding were not accessed. Access information was collected in a database by the City of Wilsonville and provided to PHS to coordinate directly with landowners for site access.

Inventory Methodology: Within the study area PHS determined the location of all wetlands regardless of size or quality. All mapped wetlands accompanied with an on-site visit were determined by application of the Routine On-site Determination method, as described in the *Corps of Engineers Wetland Delineation Manual, Wetlands Research Program Technical Report Y 87 1* ("The 1987 Manual") and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region*. The quality/condition of any wetland greater than 0.5 acre was assessed for significance criteria by applying a characterization tool called the Oregon Freshwater Wetland Assessment Methodology (OFWAM).

Natural Resources Inventory for the Basalt Creek Planning Area in Wilsonville
Pacific Habitat Services, Inc.
November 26, 2024

The inventory also required the identification and mapping of upland tree groves and riparian areas. General vegetation composition within the riparian corridors was recorded, along with an evaluation of slopes within the corridor reach, which when greater than 25% requires a 50-foot offset from the break in slope. This information was used to evaluate the Riparian Corridor Type, as described in Wilsonville Municipal Code Section 4.139- Significant Resource Overlay Zone (SROZ) Ordinance.

The boundaries of tree groves were identified and mapped based upon the limits of the drip line of trees within the BCPA, as based on recent aerial photographs. Best effort was made to exclude areas that exist as part of a landscaped residence, which likely does not contribute to forested habitat connectivity, but may be adjacent to these habitats.

Routine Off-site Determination: Prior to beginning field work, off-site mapping was reviewed to determine the approximate location of wetland boundaries based on available information. This information included the USGS topographic quadrangles, Natural Resource Conservation Service (NRCS) agronomic soil survey maps, the National Wetlands Inventory maps, City of Wilsonville 1999 Local Wetland Inventory (outside of the BCPA), aerial photographs, the existing City of Wilsonville Significant Resource Overlay Zone (SROZ) maps, and a Department of State Lands (DSL) review of any past wetland delineations or permits taking place within the BCPA.

Routine On-site Determination: Where property access permission was granted, on-site observation and inspection of soils, vegetation, and hydrology were made. Soil profiles were examined for hydric soils and wetland hydrology field indicators. A visual percent-cover estimate of the dominant species of the plant community for a maximum 30-foot radius was also made at each observation point. Though numerous observations and excavations were made to determine wetland boundaries in the field, no flagging of boundaries was completed.

Wetland Quality Assessment: To evaluate significance criteria of each wetland greater than 0.5 acres, the OFWAM assessment was utilized. OFWAM evaluates the following ecological functions, where if one of the four is intact- a “Locally Significant Wetland” criteria (OAR 141-0860350) is met: diverse wildlife habitat, intact fish habitat, intact water quality, or intact hydrologic control.

Results

Wetlands: The inventory identified approximately 59.02 acres of potentially jurisdictional wetlands within the BCPA. These wetlands and their codes are listed below.

Table 1. Wetland Overview

Wetland Code	Area (acres)	Potentially Significant
BC-1	19.58	Yes
	0.03	
BC-2	5.46	Yes
	31.54	
BC-3	1.61	No
BC-4a	0.01	n/a
BC-4b	0.04	n/a

Natural Resources Inventory for the Basalt Creek Planning Area in Wilsonville
Pacific Habitat Services, Inc.
November 26, 2024

Wetland Code	Area (acres)	Potentially Significant
BC-4c	0.02	n/a
BC-4d	0.25	n/a
BC-4e	0.07	n/a
BC-4f	0.01	n/a
BC-4g	0.02	n/a
BC-4h	0.19	n/a
BC-5	0.05	n/a
BC-6	0.09	n/a
BC-7	0.02	n/a
BC-8	0.03	n/a
Total	**59.02**	**56.61**

BC = Basalt Creek

As shown, Wetlands BC-1 and BC-2 meet significance criteria as shown in the OFWAM results included with this memorandum. Wetland BC-1, which is a wetland complex surrounding Tapman Creek in the eastern study area, provides diverse wildlife habitat with a hydrologic control function intact. Wetland BC-2 is a wetland complex surrounding Coffee Lake Creek in the western study area. This complex also maintains an intact hydrologic control function and has a surface water connection to downstream waters that provide habitat for indigenous anadromous salmonids at the confluence with the Willamette River.

Wetland BC-3 is an excavated shallow pond and was evaluated under ORWAP due the size of the wetland- which is greater than 0.5 acres. The wetland did not meet significance criteria.

Wetlands BC-4a-h are remnants of what was likely a historic drainage, but residual portions of this feature now function as a wetland and have been hydrologically segregated in some areas and piped in others. This feature has a small remnant stream portion with corresponding riparian area that connects to Coffee Lake Creek.

All other wetland features are not locally significant, and either shallow wetland swales identified through topography, mapped hydric soils, mapped historic wetlands, and historical aerial imagery, and/or they are wetland features visible from nearby roadways and properties with public access.

Streams: Two major stream systems exist within the Basalt Creek (BC) study area, Tapman Creek (BC-TC), and Coffee Lake Creek (BC-CLC). A small tributary extends into Coffee Lake Creek as well (BC-CLCa). An overview of their adjoining riparian areas is described below.

Riparian Areas: Two main riparian areas were identified and assessed during this inventory process. One resides adjacent to Coffee Lake Creek and a small tributary to Coffee Lake Creek (BC-CLC and BC-CLCa); the second resides adjacent to Tapman Creek (BC-TC). The riparian areas both exhibit a width that is less than one APTH wide (Appropriate Potential Tree Height) before slopes are reached. For steep slopes greater than 25%, riparian areas were extended 50-feet beyond the break in slope as described in Table NR-1: Metro Water Quality Resource Area Slope

Calculation (WMC 4.139). Areas with habitat connectivity through adjoining riparian forested areas were also included in the riparian corridor.

Table 2: Riparian Area Overview

Riparian Code	Riparian Corridor Type	Adjacent Waters
BC-RIP1	NR-1 (Stream Riparian Ecosystem)	Tapman Creek
BC-RIP2	NR-1 (Stream Riparian Ecosystem)	Coffee Lake Creek; Coffee Lake Creek Tributary

BC= Basalt Creek
RIP= Riparian Area

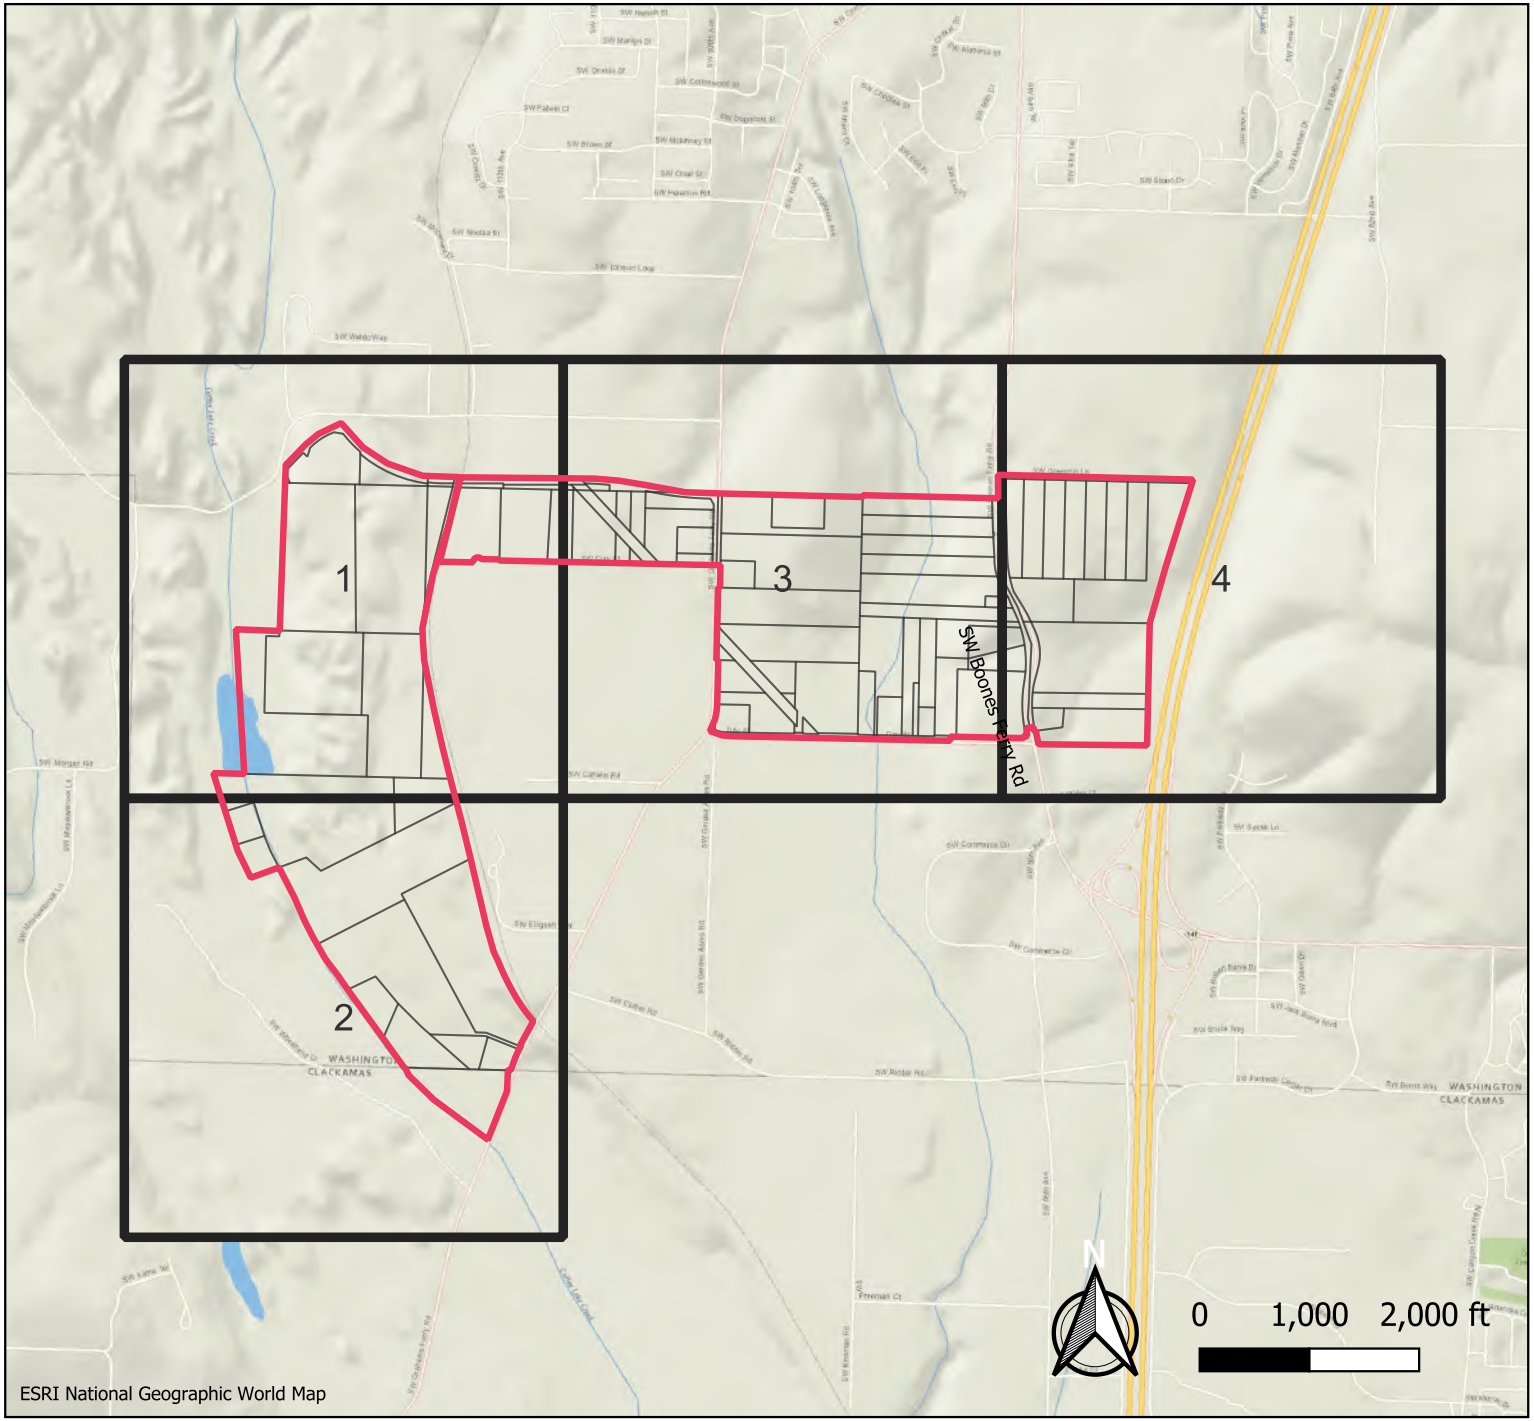
Upland Tree Groves: Several upland tree groves were mapped within the BCPA, some of which are adjacent to wetlands or very close to riparian corridors, but are isolated by a break in tree canopy. PHS mapped the boundaries as described in the methods section. The grove mapping was not based on surveyed locations of trees with known diameters at breast height. Grove mapping was isolated to areas with significant groups of trees and excluded predominantly scrub-shrub or herbaceous vegetation.

Wildlife Habitat: The City includes riparian areas and upland forested areas as Wildlife Habitat, however, Wildlife Habitat within these categories is evaluated for significance through the upland areas' potential for wildlife habitat diversity, water quality protection, ecological integrity, connectivity, and uniqueness. Evaluating this criteria, Upland Tree Grove BC-G7 was designated as significant due to its unique habitat and connectivity to Significant wetland areas.

Conclusions

PHS identified two significant wetland areas (BC-1 and BC-2), surrounded by two Significant riparian areas (BC-RIP1, BC-RIP2). Two major stream systems exist within the two significant wetland areas (Tapman Creek, Coffee Lake Creek, Tributary to Coffee Lake Creek). Several upland tree groves exist, with one meeting criteria for wildlife habitat[1] (BC-G7). A Significant Resource Overlay Zone will encompass all significant resources to meet Goal 5 objectives and include an appropriate off-set. The Significant Resources mapped by PHS within the Basalt Creek Planning Area include the following:

Significant Resources to include in SROZ	
Streams	BC-TC (Tapman Creek), BC-CLC (Coffee Lake Creek), BC-CLCa (Tributary to Coffee Lake Creek)
Wetlands	BC-1, BC-2
Riparian Areas	BC-RIP1, BC-RIP2
Wildlife Habitat	BC-G7 (Upland Tree Grove)



[1] (b) "Wildlife habitat" is an area upon which wildlife depend in order to meet their requirements for food, water, shelter, and reproduction. Examples include wildlife migration corridors, big game winter range, and nesting and roosting sites. {OAR 660-23-110}

Tax Lots:	**Various**
Hydrologic basin:	**170900070402-Coffee Lake Creek-Willamette River**
Soil -- Mapped series:	**Wapato silty clay loam**
Hydrologic Source:	**Surface Water, Groundwater**

Dominant Wetland Vegetation

TREES / SHRUBS		VINES / HERBS	
Fraxinus latifolia	***Rosa gymnocarpa***	***Toxicodendron diversilobum***	***Phalaris arundinacea***
	Spiraea douglasii		

Comments: **Locally Significant Wetland**

Yes. Wetland meets significance criteria for diverse wildlife habitat, and hydrologic control function in-tact. The wetland has a direct surface water connection to a stream segment mapped by ODFW as habitat for indigenous anadromous salmonids and the wetland's fish habitat function is impacted or degraded. DSL reports show previous delineations under WD2024-0561, WD2013-0002, WD2021-0265, WD2022-0329.

COWARDIN CODES:	E2FO = estuarine forested	E2SS = estuarine scrub shrub	E2EM = estuarine emergent
PFO = palustrine forested	PSS = palustrine scrub-shrub	PEM = palustrine emergent	PUB = palustrine unconsolidated bottom
HGM CODES:	EFB = Estuarine Fringe Embayment	EFR = Estuarine Fringe Riverine	RFT = Riverine Flow Through
RI = River Impounding	LFH = Lacustrine Fringe Headwater	LFV = Lacustrine Fringe Valley	DB = Depressional Bog
DA- Depressional Alkaline	DO = Depressional Outflow	DCP = Depressional Closed Permanent	DCNP = Depressional Nonpermanent
	S = Slope	FL = Flats

Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

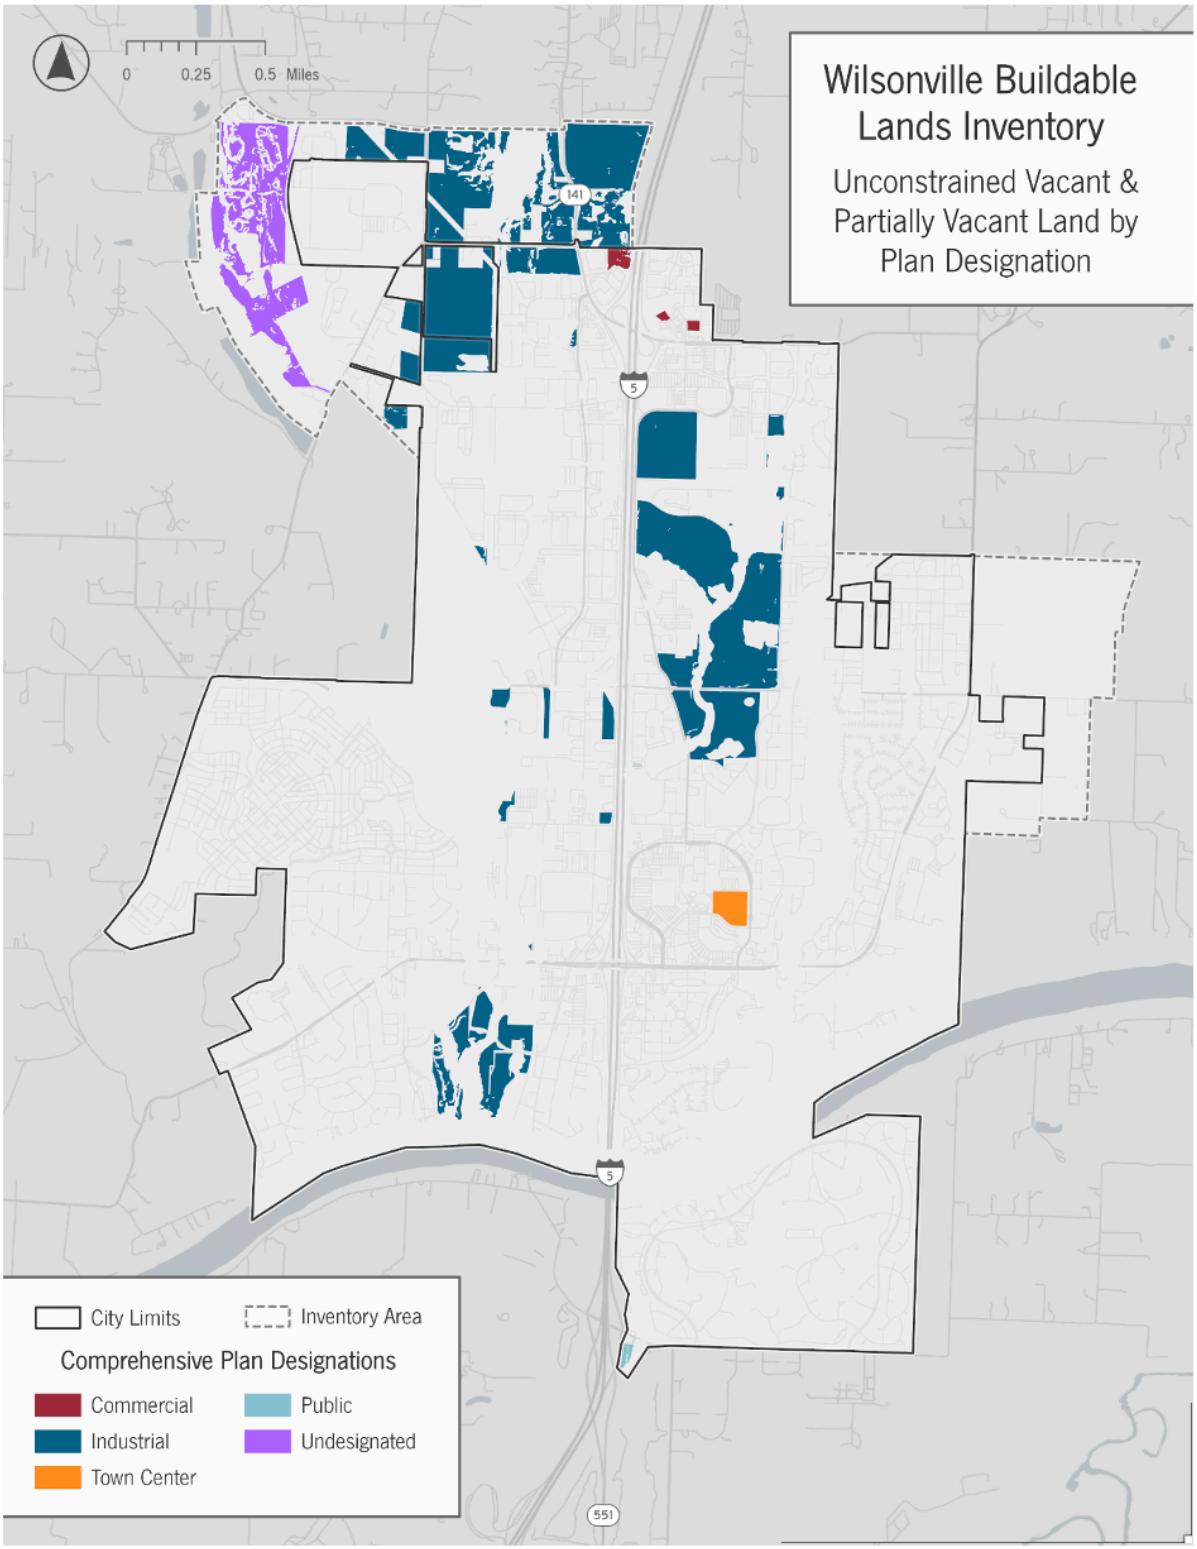
Executive Summary

The City of Wilsonville last completed an Economic Opportunities Analysis (EOA) in 2012. Since then, the City and the broader region have experienced significant economic changes driven by changes in the businesses located and growing in Wilsonville, evolving real estate market conditions, the COVID-19 pandemic, and shifts in national and state policies and priorities. One of Wilsonville's most important opportunities for future economic growth is the continued industrial development of the Coffee Creek area and Basalt Creek area (which includes West Railroad) which together form a key part of the Portland region's southern industrial land inventory.

This updated EOA aligns with Statewide Planning Goal 9 and the Goal 9 Administrative Rule (OAR 660-009). It provides an updated forecast of employment growth from 2026 to 2046, evaluates the City's available commercial and industrial land supply, and assesses whether it is sufficient to meet expected demand. The report also identifies the City's competitive advantages and target industries. Together, these findings form the technical foundation for the Economic Development Strategy (EDS), which offers recommendations to help Wilsonville maintain its position as a strong regional employment center.



PURPOSE OF THIS ECONOMIC OPPORTUNITY ANALYSIS

- **Forecast the amount of land needed to accommodate the future employment growth within Wilsonville between 2026 and 2046.**
- **Evaluate the existing employment land supply within the City to determine if it is adequate to meet that need.**
- **Help the City understand its economic opportunities in the context of Wilsonville's competitive advantages and disadvantages.**
- **Fulfill state planning requirements for a twenty-year supply of employment land.**

How much buildable employment land does Wilsonville currently have?

Wilsonville has 2,396 acres designated for commercial or industrial use within City limits and urban growth area (UGB). Of these, approximately 366 acres (15%) are vacant, unconstrained and buildable as shown in **Exhibit 1.** Of the buildable land, 353 acres (96%) are designated for industrial development, and 13 acres (4%) are set aside for commercial uses.

Exhibit 1. Buildable Employment Land by Comprehensive Plan Designation, Wilsonville City Limits and UGB Area, 2025

Source: ECOnorthwest analysis, City of Wilsonville, Metro

Much of Wilsonville's vacant industrial land is located within the Coffee Creek and Basalt Creek planning areas which are in the northern portion of the City. Some of Coffee Creek has been annexed into the City but most is still unincorporated. The area benefits from an established Urban Renewal District that can help fund infrastructure improvements and support land assembly. Basalt Creek, which is also currently outside City limits, is in the process of having zoning established in preparation for future annexation, which would happen in conjunction with proposed development. The area faces challenges related to fragmented ownership, the presence of existing contractor establishments that provide economic activity but at lower assessed values and lower employment densities than typical urban industrial areas, and limited infrastructure to support new development.

How much growth is Wilsonville planning for?

Wilsonville's employment base is projected to grow from 33,165 employees in 2026 to 39,297 employees by 2046, an increase of about 6,132 jobs over the 20-year planning period. *(See Chapter 3, "Employment Growth and Site Needs," for methodology and additional details.)*

How much land will be required for employment?

Employment growth over the 2026-2046 period is expected to create demand for about 321 gross acres of industrial land and 110 gross acres of commercial land. *(See Chapter 3, "Employment Growth and Site Needs," for methodology and additional details.)*

Does Wilsonville have enough land to accommodate employment growth?

Wilsonville has a sufficient supply of vacant industrial land to accommodate projected growth, with a modest surplus of about 32 acres. However, many vacant industrial sites are small and/or lack urban-level infrastructure, which limits short-term development potential. Assembling larger contiguous sites and investing in infrastructure will be important to meeting long-term industrial needs.

In contrast, the City has a limited supply of vacant commercial land to accommodate forecasted employment growth but considerable redevelopment potential. Wilsonville currently has about 13 acres of vacant commercial land, compared to an estimated need of roughly 110 acres. The City can address this shortfall primarily through the redevelopment and reuse of existing properties, particularly within the Town Center and along established commercial corridors such as Wilsonville Road. Several large vacant buildings, including the former Albertsons, Rite Aid, Regal Cinema, and Fry's Electronics, offer near-term opportunities for reuse or redevelopment. Together, these

known sites account for about 50 acres of redevelopment potential. The City may also consider allowing limited commercial uses in select industrial areas to support employment growth and help balance future land needs. *(See Chapter 4, "Buildable Lands Inventory," and Chapter 5, "Land Sufficiency and Conclusions," for detailed findings.)*

What are Wilsonville's key growth opportunities?

Wilsonville's economy is shaped by several strengths and challenges that influence its ability to attract and retain businesses.

(See Chapter 2, "Factors Affecting Future Economic Growth," for detailed discussion of regional trends and competitive position. See Chapter 3, "Employment Growth and Site Needs," for details on Wilsonville's target industries.)

KEY COMPETITIVE ADVANTAGES

- **Opportune Location:** Wilsonville's position at the southern edge of the Portland region along the I-5 corridor provides access to major transportation routes, regional labor markets, and nearby industrial employment centers in Tualatin and Sherwood. Its proximity to both urban and rural amenities enhance its appeal to employers and residents.
- **Industrial Land Supply:** The City has a substantial inventory of industrial land, with much of the vacant land located in Coffee Creek and Basalt Creek. These areas can support manufacturing, logistics, and other traded-sector businesses.
- **Established Industrial Base.** Wilsonville has a strong foundation of existing industrial and traded-sector employers, creating a stable economic base and opportunities for supply chain growth.
- **Labor Market.** Wilsonville benefits from a large and well-educated workforce drawn from both the Portland metropolitan area and the Mid-Valley labor sheds.
- **Redevelopment Potential.** Town Center and several large vacant commercial buildings, such as the former Albertsons, Rite Aid, Regal Cinema, and Fry's Electronics sites, offer near-term opportunities for adaptive reuse and reinvestment in retail and service uses.

KEY CHALLENGES

- **Limited Supply of Development-Ready Industrial Sites.** Much of Wilsonville's vacant industrial land lacks urban-level infrastructure.

Fragmented ownership and small lot sizes compound this issue and create barriers to assembling larger sites more suitable for modern industrial uses.

- **Lower-Intensity Existing Uses on Industrial Land.** Contractor establishments and outdoor storage on industrial land provide some economic benefit but limit higher-intensity, higher-value development.
- **Power Supply Issues.** Some future industrial users may need more than 5 megawatts of power. Meeting this demand will require additional investment in power infrastructure and long lead times.
- **Traffic and Congestion.** The I-5 corridor experiences congestion, particularly during peak hours, which can impact key arterials in the City and delay freight movement.
- **Housing and amenities.** High regional housing costs, combined with a limited range of local services and amenities such as restaurants, shopping, and entertainment options in Wilsonville, may hinder the City's ability to attract and retain workers.

TARGET INDUSTRIES

The EOA identifies a mix of industries that are expected to drive Wilsonville's future growth:

- **Manufacturing.** Manufacturing is a cornerstone of Wilsonville's economy, supported by the region's strong workforce, established industrial employers, and proximity to suppliers and markets along I-5. Growth opportunities in this sector include advanced manufacturing, clean technology, and specialized production that build on regional strengths, the City's skilled labor force and available industrial land.
- **Wholesale Trade and Logistics.** This sector benefits from Wilsonville's central location and convenient access to both the Portland and Mid-Valley markets. Wholesale and logistics firms play a key role in regional supply chains and rely on available industrial land with strong highway access to support efficient goods movement.
- **Professional, Scientific, and Technical Services.** This diverse sector includes professional consulting, engineering, research and development, and life-science-related services that support the City's industrial and traded-sector base. Future growth is expected in smaller, flexible office or lab-flex spaces near industrial clusters or in mixed-use areas such as Town Center.
- **Local Services and Retail.** This sector includes retail, dining, healthcare, and personal service businesses that meet community needs, support local employment, and enhance Wilsonville's livability.

These industry strengths and opportunities position Wilsonville to support a balanced and diverse economy that includes both traded sector and local serving businesses.

What is the relationship between the Economic Opportunities Analysis (EOA) and the Economic Development Strategy (EDS)?

The EOA provides the technical foundation for understanding Wilsonville's employment land supply and long-term growth potential. The EDS, developed alongside this report, translates these findings into practical steps for implementation.

While the EOA identifies land capacity, site readiness, and target industries, the EDS outlines goals, policies, and actions to help the City act on those findings. The Strategy focuses on improving site readiness in Coffee Creek and Basalt Creek, addressing the commercial land deficit through redevelopment, and supporting small business and workforce development.

Together, the EOA and EDS provide a coordinated framework for guiding Wilsonville's economic growth. The EOA defines the opportunities; the EDS details how to achieve them. The EDS is included in Appendix C of this document.

1. Introduction

The City of Wilsonville last completed an Economic Opportunities Analysis (EOA) in 2012. Since that time, the City and the broader region have experienced major economic shifts influenced by changes in the businesses located and growing in Wilsonville, evolving market conditions, the COVID-19 pandemic, and shifts in state and national policy priorities. These changes highlight the need for an updated EOA that reflects Wilsonville's current economic position and identifies opportunities and challenges for supporting employment growth over the next 20 years.

Wilsonville's economic future will be greatly affected by development of key employment areas, particularly Coffee Creek and Basalt Creek. These areas are part of the Portland region's southern industrial corridor, located along I-5 with access to major freight routes, regional labor markets, and nearby employment areas in Tualatin and Sherwood. Continued buildout of these areas is important to Wilsonville's long-term competitiveness but will require addressing challenges such as fragmented land ownership, existing contractor establishments, and limited urban infrastructure, particularly in parts of Basalt Creek.

Although the majority of Coffee Creek remains outside of City limits, it benefits from an established Urban Renewal District that supports infrastructure investment and helps prepare sites for development. Basalt Creek, which also remains outside City limits, has greater challenges related to fragmented ownership, existing contractor establishments, and limited urban infrastructure. Coordinated planning and investment will be necessary to improve site readiness in both areas and to position Wilsonville to capture future regional industrial growth.

Beyond industrial growth, Wilsonville's holistic economic health also depends on redevelopment within Town Center and within established commercial corridors. With limited vacant commercial land, future growth will rely on reinvestment and reuse of existing commercial properties, including large vacant buildings such as the former Albertsons, Rite Aid, Regal Cinemas, and Fry's Electronics sites.

Updating the EOA allows the City to reassess its employment land needs and realign economic development policies with emerging opportunities. The EOA projects employment growth from 2026 to 2046 and identifies the types and amounts of land needed to support that growth. It also outlines recommendations to strengthen Wilsonville's economic foundation. The EOA provides the foundation for updates to the Comprehensive Plan and the Wilsonville Economic Development Strategy (EDS), which was prepared concurrently and presented in Appendix C of this document. Together,

these efforts ensure that land use policies, infrastructure planning, and economic priorities remain aligned.

The EOA draws on data from the Oregon Employment Department, U.S. Bureau of Economic Analysis, U.S. Bureau of Labor Statistics, the U.S. Census Bureau and Costar[1] along with coordination from regional and local partners. Collectively, these sources provide a detailed understanding of Wilsonville's economic trends, industry composition, and land readiness, forming the foundation for a strategic, data-driven approach to the City's economic planning.

Framework for an Economic Opportunities Analysis

The content of this report is designed to meet the requirements of Oregon Statewide Planning Goal 9 and the administrative rule that implements Goal 9 (OAR 660-009). The analysis in this report is designed to conform to the requirements for an EOA in OAR 660-009.

1. *Economic Opportunities Analysis (OAR 660-009-0015)*. The Economic Opportunities Analysis (EOA) requires communities to identify the major categories of industrial or other employment uses that could reasonably be expected to locate or expand in the planning area based on information about national, state, regional, county, or local trends; identify the number of sites by type that are reasonably expected to be needed to accommodate projected employment growth based on the site characteristics typical of expected uses; include an inventory of vacant and developed lands within the planning area designated for industrial or other employment use; and estimate the types and amounts of industrial and other employment uses likely to occur in the planning area. Local governments are also encouraged to assess community economic development potential through a visioning process or some other public input–based process in conjunction with state agencies.
2. *Industrial and commercial development policies (OAR 660-009-0020)*. Cities are required to develop commercial and industrial development policies based on the EOA. Local comprehensive plans must state the overall objectives for economic development in the planning area and identify categories or particular types of industrial and other employment uses desired by the community. Local comprehensive plans must also include policies that commit the City or county to designate an adequate number of employment sites of suitable sizes, types,

[1] Costar is a commercial real estate platform that tracks property listings, transactions, and market metrics nationwide.

and locations. The plan must also include policies to provide necessary public facilities and transportation facilities for the planning area.

3. *Designation of lands for industrial and commercial uses (OAR 660-009-0025).* Cities and counties must adopt measures to implement policies pursuant to OAR 660-009-0020. Appropriate implementation measures include amendments to plan and zone map designations, land use regulations, public facility plans, and transportation system plans. More specifically, plans must identify the approximate number, acreage, and characteristics of sites needed to accommodate industrial and other employment uses to implement plan policies and must designate serviceable land suitable to meet identified site needs.

Stakeholder Engagement Process

The development of the EOA was informed by a Technical Advisory Committee (TAC) comprised of City staff and regional economic development professionals. The TAC met three times during the project to review key findings, provide feedback, and help shape the direction of the analysis.

The first TAC meeting focused on foundational elements of the EOA, including the buildable lands inventory, employment forecast, and analysis of Wilsonville's competitive advantages and target industries. Feedback from this meeting informed refinements to the employment forecast and buildable lands inventory. The second and third TAC meetings focused on developing and refining economic development goals, policies, and actions that will guide the City's future efforts. These discussions helped ensure consistency between the EOA, the City's Comprehensive Plan, and the EDS, which was developed concurrently and is presented in Appendix C of this document.

In addition to TAC engagement, ECOnorthwest also interviewed five business and property owners between August and October 2025. These one-on-one interviews, focused on both the industrial and commercial sectors, provided insight into local challenges and opportunities. The feedback helped assess Wilsonville's competitive position and shape recommended economic actions.

The project also included two work sessions with the Planning Commission and two work sessions with the City Council at key milestones. These public meetings provided opportunities for decision-makers to review findings, discuss economic development objectives, and ensure the analysis and recommendations aligned with Wilsonville's broader community priorities.

Organization of This Report

This report is organized as follows:

- **Chapter 2. Economic Trends Shaping Wilsonville's Future** summarizes historic economic trends that affect current and future economic conditions in Wilsonville, as well as Wilsonville's competitive advantages for economic development.
- **Chapter 3. Employment Growth and Site Needs** presents a forecast for employment growth in Wilsonville and describes potential growth industries and site needs.
- **Chapter 4. Buildable Lands Inventory** presents a summary of the inventory of employment lands.
- **Chapter 5. Land Sufficiency and Conclusions** compares the supply of employment land with the future need for land and presents conclusions.

This report also includes three appendices:

- **Appendix A. National, State, and Local Trends**
- **Appendix B. Buildable Lands Inventory Methodology**
- **Appendix C. Economic Development Strategy**

2. Economic Trends Shaping Wilsonville's Future

Wilsonville is centrally located in the southern portion of the Portland region, which includes Clackamas, Multnomah, and Washington counties. This opportune location gives Wilsonville residents access to a broad job market, both within the Portland region and extending south to Salem. It also enables local employers to draw from a larger and more diverse workforce.

The City has a strong industrial employment base. Manufacturing, wholesale trade, and construction account for over 40% of local jobs. This large industrial presence sets Wilsonville apart from many other communities in the Portland region, underscoring its distinct role in the broader regional economy.

This chapter explains the main factors driving economic growth in Wilsonville. It places the City's economy in the context of national, state, and regional trends. It also reviews Wilsonville's employment base and real estate market. Finally, it highlights Wilsonville's strengths in supporting business growth and broader economic development, as well as the obstacles that may inhibit those same outcomes.

UNDERSTANDING ECONOMIC DEVELOPMENT

What is Economic Development? Economic development refers to efforts that strengthen a community's economy by attracting investment, creating jobs, and supporting business growth. In Oregon, cities often focus on stimulating real estate development and capital investment because property tax is their primary source of revenue to fund public services. With no sales tax in Oregon, and income taxes going to the State, cities like Wilsonville prioritize facilitating new property development that grows the local tax base. Wages and jobs are important too because local payroll taxes fund public transit (SMART).

Why Do Firms Choose Certain Locations? Businesses consider multiple factors when selecting a location, including availability of skilled labor, infrastructure availability (roads, utilities, etc.), proximity to customers and suppliers, and cost factors including land, wages, taxes and the regulatory climate. Entrepreneurial environments, industry clusters, and quality of life also play a role in attracting new businesses.

Public Policy's Role in Economic Development: Government policies—including zoning, incentives, and infrastructure investments—directly impact a City's ability to attract and retain businesses.

Summary of the Effect of National, State, and Regional Trends on Economic Development in Wilsonville

This section summarizes how national, state, and regional economic trends (detailed in Appendix A) are expected to influence economic growth in Wilsonville.

- **Slowing employment growth.** Oregon is expected to continue adding jobs, although the pace of growth is projected to slow compared to previous decades. Between 2007 and 2023, Wilsonville added 2,900 jobs, representing a 15% increase. This growth rate was similar to the 16% increase seen across the Portland region.[2] Wilsonville's population is relatively young and well-educated, creating a strong base for future workforce needs. This foundation supports both ongoing industry growth and the replacement of retiring workers. However, broader demographic trends, including an aging population and slower statewide labor force growth, may lead to a tighter labor market over time.
- **Remote work and office real estate market shifts.** Remote and hybrid work have reduced demand for traditional office space nationally and regionally, leading to higher office vacancy rates. In Wilsonville, where vacancies had historically been low, rates rose above 12% in 2024, likely due to lease expirations.[3] Despite this, rents have remained steady, indicating some resilience in the suburban office market. As companies adjust to long-term hybrid work, demand is shifting toward smaller, more flexible office spaces. Peak attendance for workers is expected to stabilize at 60-70% of pre-pandemic levels, with overall occupancy leveling off by late 2025.[4] Nationwide, investor interest in traditional office buildings remains weak. In Wilsonville, this may reduce demand for conventional office development and increase interest in adaptable or mixed-use formats, especially over the five-to-ten-year timeframe.
- **Retail realignment.** Retail real estate markets across the country continue to shift toward experiential uses and categories less affected by e-commerce, including food service, entertainment, and essential goods. While retail construction has slowed nationwide, strong consumer spending has helped stabilize vacancy rates and rents. Wilsonville reflects these national patterns, with little new retail development in recent years. Although vacancy rates have increased, they remained below 5% in 2024 (similar to regional

[2] See Exhibit 2 and Exhibit 4; Oregon Employment Department, Quarterly Census of Employment and Wages, 2007–2023.
[3] CoStar Office Market Trends, 2024
[4] Cushman & Wakefield, U.S. Office Marketbeat Q2 2024

averages).[5] Retail vacancy could be explained by large anomaly vacancies, such as the former Fry's on Town Center Loop West and former Albertson's near the intersection of Wilsonville Road and Boones Ferry Road. As consumer preferences evolve, Wilsonville's high quality of life and regional accessibility may attract retail that blends experience and convenience. Much of Wilsonville's potential to support retail growth may stem from opportunities for redevelopment in Town Center, not only because of limited vacant commercial land elsewhere, but also because Town Center may offer the kind of experiential, mixed-use environment that aligns with evolving consumer and retailer preferences.

- **Industrial market strengths and constraints.** National and state trends indicate continued growth in sectors such as advanced manufacturing, logistics, and food and beverage manufacturing and warehousing. Wilsonville's industrial sector remains a core economic strength, with low vacancy rates and rising rents. However, the City faces a significant constraint: limited availability of development-ready industrial land.[6] Only 1.7% of Wilsonville's industrial space has been built in the past 10 years, compared to roughly 13% across the broader Portland region.[7] These figures highlight a relative lack of new supply of industrial space. Wilsonville is well-positioned to benefit from emerging opportunities, including semiconductor-related investments, concentrated in Washington County, and broader reshoring trends. However, without tools and strategies that facilitate land sales and the installation of infrastructure, the City may struggle to accommodate this demand and fully capitalize on its competitive advantages.
- **Shifts in manufacturing trends.** Manufacturing employment in Oregon declined by 6% between early 2019 and 2023, even as employment in manufacturing increased by 1% nationally.[8] This reflects a broader shift in the state toward productivity gains and capital investment, rather than labor-driven expansion. While manufacturing remains a vital component of Oregon's economy, its potential to drive near-term job growth may be limited. Rising costs, particularly in housing and taxes, alongside recent policy changes may be diminishing Oregon's historic appeal to manufacturers. Additionally, the shortage of development-ready industrial

[5] CoStar Retail Market Trends, 2024
[6] Development-ready land is land that is vacant with public infrastructure (e.g., water, sanitary sewer, and roads) and private infrastructure (e.g., electricity, natural gas, and internet service) sufficient to support immediate (or near-term) construction.
[7] CoStar Industrial Market Trends, 2024
[8] Oregon Employment Department, Made in Oregon: A profile of the State's Manufacturing Sector, May 2024.

land is frequently cited as a major barrier to expansion or relocation, prompting some businesses to consider other states.[9]

While manufacturing growth across the state may be more limited, Wilsonville is well-positioned to support future growth in the sector. Its central location in the southwest Portland region, availability of industrial land (but much of this land is not development-ready), presence of established manufacturers, and access to a skilled workforce create a strong foundation for manufacturing business growth. However, unlocking this potential will require efforts to make industrial land development ready. As of 2023, manufacturing accounted for about 16% of Wilsonville's covered employment, with an average wage of $88,469, above the Citywide average of $78,235.[10]

- **Increases in automation.** Automation continues to reshape employment across sectors, reducing demand for routine tasks while increasing the need for higher-skilled roles. In manufacturing, processes like assembly and quality control are increasingly automated, while in the service sector, tools such as self-checkout and automated ordering systems are becoming more common. Emerging applications of artificial intelligence (AI) are also extending automation into cognitive and administrative functions once considered resistant to change.

  For Wilsonville, these shifts present both challenges and opportunities. Routine roles may decline, but demand will grow for technical, supervisory, and analytical positions that complement automation. Wilsonville's location, access to I-5, and proximity to tech-driven firms in the Portland region support the City's ability to attract and retain businesses adapting to automation. Its educated workforce and regional talent pipelines further position the City to compete for the types of industries and jobs likely to grow in an increasingly automated economy.

- **Aging population and replacement needs.** Oregon's aging population mirrors national trends, with growing demand for replacement workers as older employees retire. While Wilsonville has a younger median age (38.7) than the state overall (40.1), its senior population is increasing.[11]

  Clackamas County's population is expected to continue aging, with people 60 years and older increasing from 27% of the population in 2024 to 30% of

[9] Oregon Business & Industry. *The Condition of Oregon's Manufacturing Sector*. October 2024. https://oregonbusinessindustry.com/wp-content/uploads/The-Condition-of-Oregons-Manufacturing-Sector_October-2024.pdf.
[10] See Exhibit 7; Oregon Employment Department, Quarterly Census of Employment and Wages, 2023
[11] See Exhibit 43 and Exhibit 44; U.S. Census Bureau

the population in 2044, consistent with statewide trends.[12] As workers retire, businesses need to replace them with new workers. With a comparatively young workforce, Wilsonville could be in a good position to replace retiring workers if workforce skills match job openings.

- **Growth of entrepreneurship and small business.** The creation of new businesses is essential to the economies of both Oregon and Wilsonville, driving job growth and introducing innovations to the marketplace. High inflation, rising interest rates, and recession risks, along with tighter access to venture capital and banking lending conditions, have slowed new business formation. However, several favorable factors could mitigate these impacts going forward and support continued strength in entrepreneurship and small business formation in Oregon. These include increased personal savings and home equity levels, which are common funding sources for new businesses, along with the shift toward remote work opportunities and the large millennial generation entering their prime entrepreneurial years (late 30s and early 40s, according to Census Bureau research).[13] Wilsonville's access to a relatively young, well-educated workforce both within the City and from across the Portland region presents opportunities for small businesses to grow in the City.
- **Continued increase in demand for energy.** Rising fuel prices and state-level pushes toward electric vehicle adoption may alter commuting behavior and increase demand for EV infrastructure. As energy costs climb, proximity to job centers and transportation-efficient development will become increasingly important. Wilsonville's location near I-5 and regional employment centers is a long-term advantage.

  Demand for electricity by businesses like data centers and energy-consumptive automated manufacturing processes are increasing demand and competition for electricity across the state. The availability of electricity is a challenge for development of businesses with large energy needs. Development of new energy sources and transmission infrastructure will be key to development of some businesses, including in the Portland region and Wilsonville.
- **Trade exposure and tariff vulnerability.** Oregon's economy is highly dependent on exports, with more than half of the state's goods shipped to just three countries—Mexico, China, and Canada. As a result, the state is particularly vulnerable to shifts in national trade policy and global market

[12] See Exhibit 46; Portland State University, College of Urban & Public Affairs: Population Research Center, Population Forecast, 2024

[13] Josh Lehner. "Strong Startup Activity Continues" Oregon Office of Economic Analysis, May 3, 2023. Retrieved from https://oregoneconomicanalysis.com/2023/05/03/strong-start-up-activity-continues/

disruptions. During the 2018–19 trade war, Oregon's GDP growth fell by 2.5 percentage points, underscoring the potential impacts of tariff escalations.[14] Wilsonville is home to manufacturing businesses, high-tech suppliers, and logistics firms. Future trade tensions could impact export-oriented businesses and reduce demand for industrial space.

- **Labor supply and immigration policy.** Stricter immigration policies initiated by the Trump Administration are expected to reduce labor availability in several key sectors that rely heavily on foreign-born workers, including construction, agriculture, food processing, and hospitality. Given Oregon's reliance on net in-migration for workforce growth, federal immigration restrictions may exacerbate hiring challenges, limit productivity, and increase wage inflation in affected sectors. In Wilsonville, these impacts are particularly relevant given its industrial employment base in construction (3,192 covered jobs as of 2023).[15] More broadly, a shortage of construction workers may slow project timelines, raise costs, and make it harder for development to pencil financially. This will be particularly relevant to the continued development of Coffee Creek and Basalt Creek, as well as redevelopment of Town Center.
- **Inflation**. For the last several decades, inflation rates have generally stayed below 3% in the United States. Inflation started to increase in 2021, reaching 9.1% in June 2022 year-over-year, the highest level in about 40 years. [16] In December 2024 the annual inflation rate was 2.9%, a marked reduction from the 2022 inflation rate.[17] Continued high rates of inflation may slow economic growth, further erode purchasing power, discourage savings, and lead to a national recession. Consumers may start decreasing spending on nonessentials, which could particularly influence retail development and investment decisions. Recent tariff policies and trade tensions may lead to new increases in inflation in 2025 and beyond.
- **Potential impacts of global climate change on Wilsonville's economy**. Climate change is manifesting in the Pacific Northwest through more frequent and severe weather events, alongside long-term climatic shifts. Increased average temperatures, heightened wildfire risks, and more extreme weather conditions such as heat waves and droughts are becoming more

[14] Oregon Economic Analysis, Oregon Economic and Revenue Forecast, March 2025. Vol. XLV, No. 1. Release date February 2025, https://www.oregon.gov/das/oea/Documents/OEA-Forecast-0325.pdf

[17] Bureau of Labor Statistics, U.S. Department of Labor, *The Economics Daily*, Consumer Price Index: 2023 in Review, https://www.bls.gov/opub/ted/2024/consumer-price-index-2023-in-review.htm

common. These changes are disrupting ecosystems, reducing snowpack and water availability, and affecting air quality due to increased wildfire smoke.

For Wilsonville, the effects of climate change could strain infrastructure, energy systems, and certain sectors of the local economy. Increased wildfire smoke and rising temperatures may impact worker health and reduce outdoor labor productivity. Reduced snowpack and water availability could affect reliability of industrial water supplies. The City's proximity to agricultural and forestry areas means disruptions in those sectors—due to drought, pests, or fire—could ripple through related industries such as manufacturing and logistics.

Employment Trends in Wilsonville and the Portland Region

The City of Wilsonville last updated its Economic Opportunities Analysis (EOA) in 2012. Since then, the local economy experienced significant changes, influenced by events such as the COVID-19 pandemic. This section examines how broader economic trends over the past decade have affected Wilsonville and the Portland region.

Employment Trends in Portland Region

Exhibit 2 shows covered employment in the Portland region (Clackamas, Multnomah, and Washington counties) for 2007 and 2023.[18] Over this period, covered employment increased by 132,382, a 16% gain. The largest increases were in healthcare and social assistance (up 37,194 jobs) and professional and business services (up 24,516 jobs). In 2023, the average annual wage across the region was $76,066.[19]

Exhibit 2. Covered Employment by Industry, Portland Region, 2007–2023

Sector	Employees		Change in Employment 2007-2023	
	2007	2023	Number	AAGR*

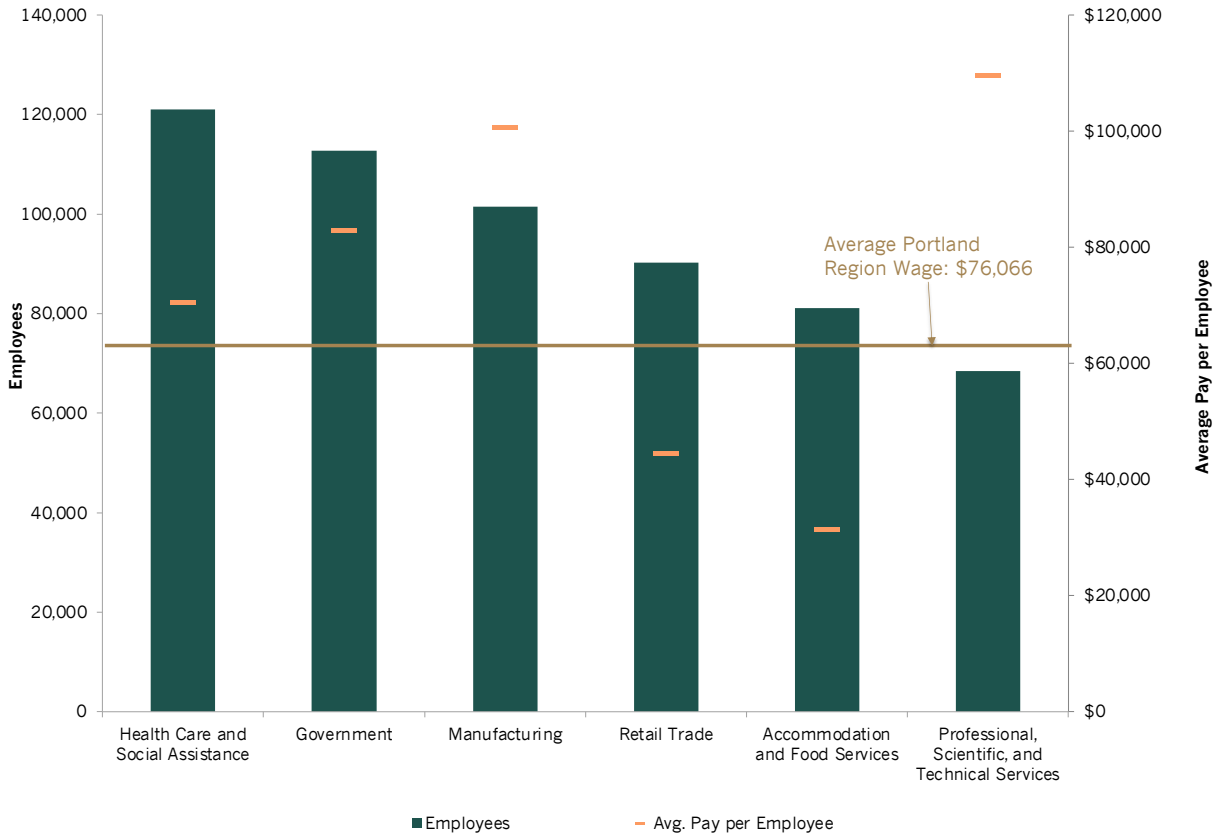
*AAGR = Average Annual Growth Rate



[18] **Covered** employment includes employees covered by unemployment insurance. Examples of workers not included in covered employment are sole proprietors, some types of contractors (often referred to as "1099 employees"), or some railroad workers. Covered employment data is from the Oregon Employment Department.

[19] Bureau of Labor Statistics, Quarterly Census of Employment and Wages, 2023.

Exhibit 3 shows covered employment and average wage for the six largest sectors in the Portland region. Together these six sectors made up 60% of covered employment.

Among these six largest sectors, professional services, manufacturing, and government paid above-average wages. Other sectors such as construction, wholesale trade, management of companies and enterprises, finance and insurance, and information also had higher-than-average wages but made up a smaller share of covered employment.

Exhibit 3. Covered Employment and Average Pay by Sector, 6 Largest Sectors Portland Region, 2023

Employment in Wilsonville

Between 2007 and 2023, covered employment in Wilsonville increased by 2,901 positions, representing a 15% total increase at an average annual growth rate of 0.9%, shown in **Exhibit 3.** This growth is similar to the Portland region's 16% growth and 0.9% annual rate.

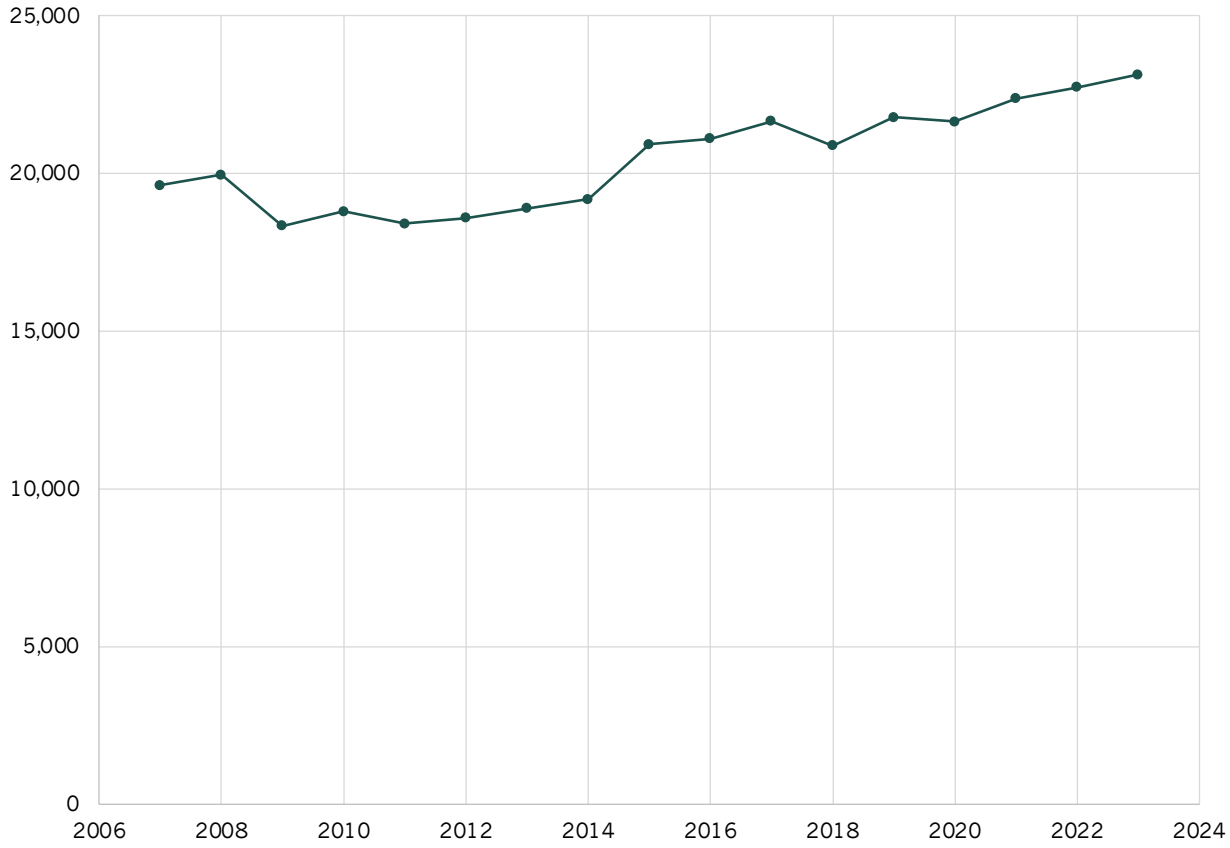

Exhibit 4. Change in Covered Employment, Wilsonville, 2007–2023

Sector	Employees		Change in Employment 2007-2023	
	2007	2023	Number	AAGR*

Sectors highlighted in blue have wages higher than the City average.
*Average Annual Growth Rate
Source: Oregon Employment Department, Quarterly Census of Employment and Wages, 2007 and 2023.

Wilsonville's net covered employment growth between 2007 and 2023 generally reflects steady annual changes, with most years showing gains or losses between 1% and 4%. One notable exception was in 2009, when covered employment declined by 8% as a result of the Great Recession that impacted the entire nation. The strongest year for growth was 2015, when Wilsonville added 1,744 covered positions (9% increase). Much of that growth was due to the relocation of Stream Global Services to Wilsonville.[20]

Exhibit 5. Change in Covered Employment, Wilsonville, 2007 – 2023

Source: Oregon Employment Department, Quarterly Census of Employment and Wages, 2007 to 2023.

[20] Michael Bamesberger, "Stream Global Services to Relocate from Beaverton to Wilsonville," *The Oregonian/OregonLive*, March 26, 2013, https://www.oregonlive.com/wilsonville/2013/03/stream_global_services_to_relo.html.

Since 2007, Wilsonville's employment has grown at a pace similar to the broader Portland region. **Exhibit 6** shows that the composition of that growth, however, differs by industry. Construction jobs in Wilsonville more than tripled over this period, far outpacing the region's growth in the same sector. The City also saw notable gains in professional services, administrative services, and wholesale trade. Notably, while wholesale trade employment rose in Wilsonville, it declined across the broader Portland region. At the same time, several sectors that expanded across the Portland region, such as management of companies, transportation and warehousing, health care and social assistance, and real estate experienced declines within Wilsonville.

Exhibit 6. Change in Covered Employment, Wilsonville compared to the Portland Region, 2007 – 2023*

Source: Oregon Employment Department, Quarterly Census of Employment and Wages, 2007 to 2023.
*Exhibit only shows industries with greater than 200 employees in Wilsonville

Exhibit 7 summarizes covered employment in Wilsonville in 2023. The largest employment sectors were manufacturing (16% of employees), wholesale trade (15%), construction (13%), professional and technical services (10%), retail trade (9%), and administrative and support services (9%). The average annual wage across all employees was $78,235, slightly higher than the regional average.

Exhibit 7. Covered Employment and Average Pay by Sector, Wilsonville, 2023[21]

[21] The following sectors were combined due to confidentiality of QCEW data: transportation and warehousing and utilities; other services and public administration

Exhibit 8 shows covered employment and average pay per employee for the six largest sectors in Wilsonville. These six sectors account for 73% of covered employment. Of these sectors, manufacturing, wholesale trade, construction, and professional services had above-average wages, with wages for professional services considerably above the wages of other sectors. Retail trade and administrative and support services had below average wages.

Outlook for Growth in the Portland Region

Exhibit 9 shows the Oregon Employment Department's forecast for employment growth by industry in the Portland region (Multnomah, Clackamas, and Washington Counties). Between 2023 and 2033, employment in the region is expected to grow at an average annual growth rate of 0.9%.

The sectors projected to add the most jobs are professional and business services (17,500 jobs), health care and social assistance (17,400 jobs), accommodation and food services (9,600 jobs), and construction (8,300 jobs). These four sectors are expected to add a total of 52,800 jobs, or about 56% of the region's employment growth. **Wilsonville accounts for about 3% of the Portland region's employment.**

Exhibit 9. Regional Employment Projections, 2023–2033, Portland Region (Multnomah, Clackamas, Washington Counties)

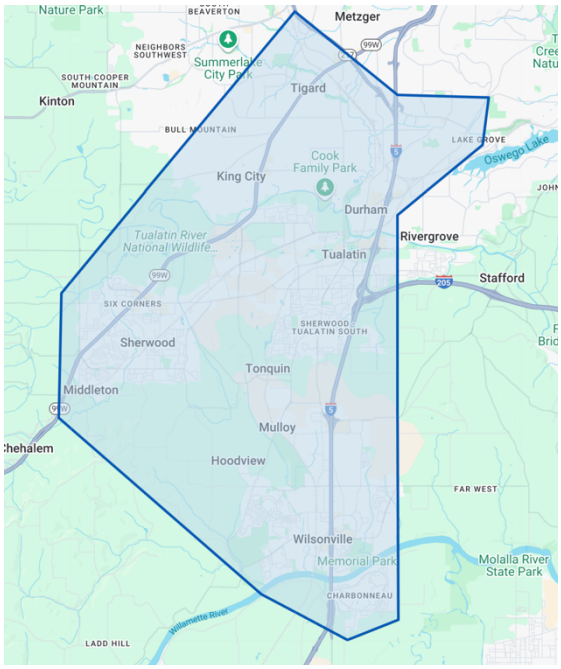
Real Estate Market Trends in Wilsonville and the Broader Portland Region

The real estate market trends in Wilsonville largely reflect broader regional and national trends (outlined in Appendix A), though local conditions, especially land availability, play a significant role in shaping development outcomes. The following trends are based on data from CoStar, a commercial real estate platform that tracks property listings, transactions, and market metrics nationwide. While CoStar offers valuable, up-to-date insights, its coverage is more limited in smaller markets and at the individual property level. It does not capture the entire market and should be viewed as a general indicator of market conditions rather than a complete inventory.

This section provides a summary of market conditions in Wilsonville, which is described in detail in the subsequent sections.

Office: Office demand in Wilsonville is expected to remain limited in the near term. High vacancy rates, ongoing negative absorption[22], and weak investor interest continue to affect both Wilsonville and the broader market. Although Wilsonville's office rents have recovered since 2020, they still lag behind those in the I-5 South submarket (see **Exhibit 10**) and the Portland region (see **Exhibit 11)**, despite briefly matching regional rates in 2024. Over the longer term, demand may grow as the market adjusts to hybrid work and as business formation and headcount increase. However, limited vacant land for commercial use (as shown in Chapter 4. Buildable Lands Inventory) could constrain new office development.

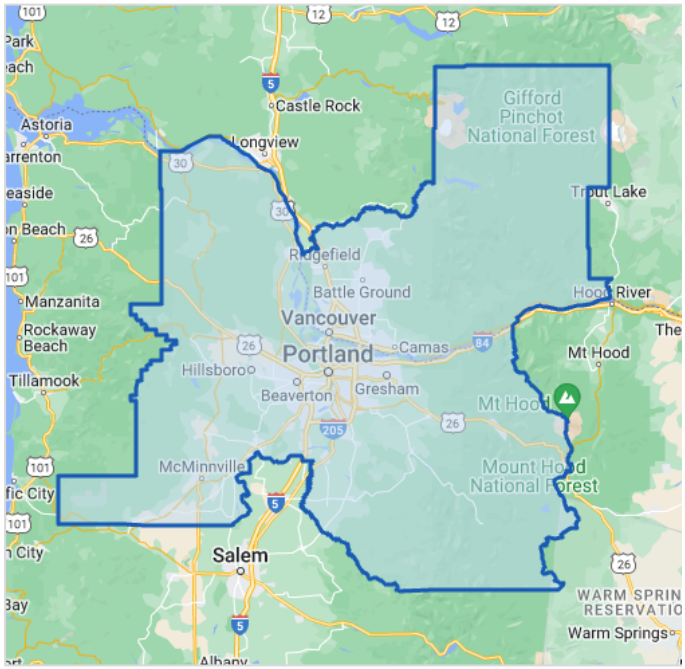
Retail: Demand for existing retail space remains steady in both the broader Portland region and Wilsonville. Relatively low vacancy rates and stable, modest rent growth suggest that Wilsonville could see new retail development in the coming years. However, while consumer demand holds, rising interest rates and higher operating costs have made retailers more cautious about expanding. Combined with Wilsonville's limited supply of vacant commercial land, retail growth is likely to remain modest near-term. Wilsonville has opportunities for retail development in areas like Town Center and other vacant large commercial buildings within the City.



Industrial: Wilsonville's industrial market is strong but faces significant limitations to future growth. The City has very low industrial vacancy rates and higher-than-average rents, showing steady demand. However, very little new space has been built in the past decade, largely due to a shortage of *development-ready* industrial land and large sites. While regional interest in industrial space remains high—particularly in sectors like manufacturing and warehousing—most new development in the I-5 South

[22] Absorption occurs when vacant space is leased up and/or businesses take over existing leases. Negative net absorption means that more space was vacated than leased over a given period.

submarket has occurred in neighboring cities like Sherwood and Tualatin. Without more development-ready land, Wilsonville is likely to continue seeing new industrial investment occur where there are viable development sites.



The remainder of this section provides detailed analysis of real estate trends in Wilsonville, the I-5 South submarket (**Exhibit 10)** and the broader Portland region (**Exhibit 11).**

Commercial Market Trends

Broader Portland Regional Trends[23]

Similar to national trends presented in Appendix A, office spaces in the broader Portland region are experiencing high vacancy rates and lower leasing activity. Work-from-home policies and corporate downsizing have decreased the demand for office space, leading many companies to reassess the long-term space needs. Despite a small uptick in net absorption in Q4, the overall 2024 market posted another year of negative demand. With a limited construction pipeline and companies continuing to shrink footprints, vacancy rates are expected to increase, and growth in rent is projected to remain flat into 2025.

- **Vacancy rates:** Direct vacancy climbed to a record high of 13.5% in Q4 2024, continuing a steady upward trend over the past eight quarters.
- **Absorption:** While Q4 posted positive net absorption of 282,000 square feet, total net absorption for 2024 was negative 964,000 square feet, marking the fifth consecutive year of annual negative absorption in Portland's office market.
- **Leasing activity:** Q4 2024 leasing activity fell to a low of 524,000 square feet, nearly 50% lower year-over-year. Annual leasing volume totaled 3.4 million square feet, an 8.6% decline from 2023.

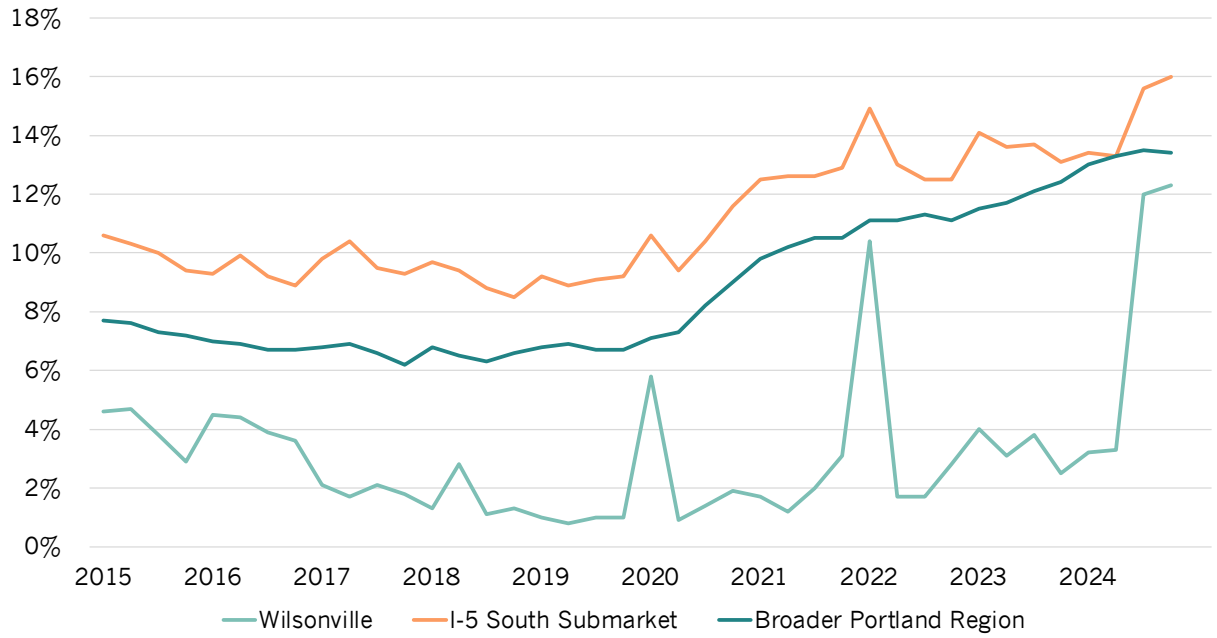
While the overall market remains soft, performance varies across submarkets. Portland's Central Business District continues to struggle, with a direct vacancy rate of 24%. In contrast, suburban markets are generally outperforming the core, with notably lower vacancy rates, ranging from **3% to 17%.** These patterns reflect a broader tenant shift toward decentralized, cost-effective, and flexible office space options outside the downtown core.

[23] Portland Metro Regional trends based on Kidder Matthews, Portland Office Market Report Q4 2024

Wilsonville Office Market

Wilsonville currently has roughly 1.4 million square feet of office space, representing roughly 15% of office space in the I-5 South submarket and 1% in the broader Portland region. According to CoStar, over the past decade, one office building was added to Wilsonville's market in 2020, Eye Health Northwest, located at 29250 Southwest Town Center Loop West. This office building was about 30,000 square feet or roughly 2% of Wilsonville's total office space. Over the same time, the broader Portland region added a greater share (9%) of space to its office market.

Exhibit 12:Office Space Development Trends, 2015 to 2024



GEOGRAPHY	TOTAL BUILDINGS	TOTAL SQUARE FEET	AVERAGE BUILDING SIZE
ALL OFFICE DEVELOPMENT			
Broader Portland Region	6,268	120,279,588	19,199
I-5 South Submarket	484	8,975,567	18,545
Wilsonville	63	1,369,151	21,733
BUILT IN THE LAST 10 YEARS*			
Broader Portland Region	159	10,765,783	67,710
I-5 South Submarket	8	74,590	9,320
Wilsonville	1	30,000	30,000

Source: CoStar, pulled February 2025

*Does not account for removal of office space from the market

Per CoStar, the I-5 South submarket office vacancy rates have been higher than the broader Portland region's vacancy rates since 2015. Both had vacancy rates above 13% at the end of 2024. While Wilsonville office vacancy rates have generally remained much lower, the end of a few leases is reflected in vacancy rate spikes in 2020, 2022, and 2024, when the vacancy rate spiked closer to the broader Portland regional average.

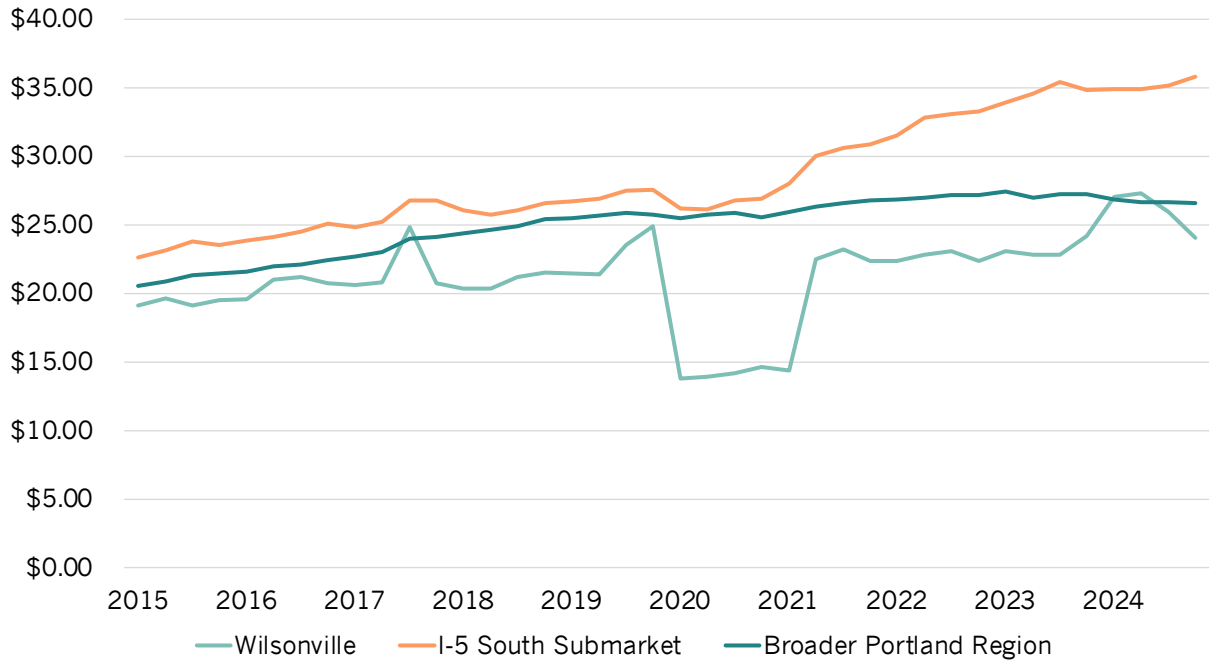


Exhibit 13: Office Vacancy Rate Trends, 2015-2024

Source: CoStar, pulled February 2025

Office rents have increased in the I-5 South submarket despite high vacancies and have been substantially above the broader Portland region's average since 2021, according to CoStar. Historically, office rents in Wilsonville have been lower than in the broader Portland region. Wilsonville's rents have recovered from the pandemic-related drop in 2020, and rents have been on par with the broader Portland region's rents at various points throughout 2024.

Exhibit 14: Office Lease Rate Trends, 2015-2024

Source: CoStar, accessed February 2025

Net absorption and delivery trends also indicate a relatively slow office market. From 2020 to 2024, net absorption was negative in all three areas: negative 4.5 million square feet in the broader Portland region, negative 555,000 square feet in the I-5 South submarket, and negative 124,000 square feet in Wilsonville.

This analysis suggests that **near-term demand for traditional office space in Wilsonville will remain limited.** High vacancy rates, ongoing negative absorption, and weak investor interest continue to affect both Wilsonville and the broader market. Although Wilsonville's office rents have recovered since 2020, they still lag behind those in the I-5 South submarket and the Portland region, despite briefly matching regional rates in 2024. Over the longer term, demand may grow as the market adjusts to hybrid work and as business formation and headcount increase. However, while there is redevelopment potential in Town Center, there is limited vacant land for commercial use (as shown in Chapter 4. Buildable Lands Inventory). Those spaces

currently vacant may fill in time but limited commercial land supply could constrain new office development in Wilsonville in the long term.

Broader Portland Regional Retail Trends[24]

Similar to national trends, development of new retail space in the broader Portland region remains limited. While consumer demand remains relatively stable, economic pressures including rising interest rates, higher operating costs, and concerns about tariffs, have led retailers to adopt more cautious expansion strategies. Vacancy rates have edged up, and leasing activity has slowed, which will place more pressure on landlords moving forward to stay competitive with lease terms, pricing and concessions. Despite these challenges, market rents continued to grow modestly, rising 3.5% year-over-year.

- **Rising vacancy rates:** The retail vacancy rate rose slightly to 3.9% in Q4 2024, up from 3.5% a year earlier.
- **Negative net absorption:** The Portland market had negative net absorption of 437,757 square feet in 2024, a reversal from the positive net absorption of 188,607 square feet in 2023.
- **Slower construction activity:** The under-construction pipeline shrank by nearly 30% year-over-year from Q4 2024.

[24] Broader Portland regional trends based on Kidder Matthews, Portland Retail Market Report Q4 2024

Wilsonville Retail Market

Wilsonville currently has 2.2 million square feet of retail space, representing 32% of all retail space in the I-5 South submarket and 2% of retail space in the broader Portland region. On average, Wilsonville's retail developments are larger with an average of 19,330 square feet, compared to 14,220 square feet in the I-5 South submarket and 10,450 square feet in the broader Portland region.

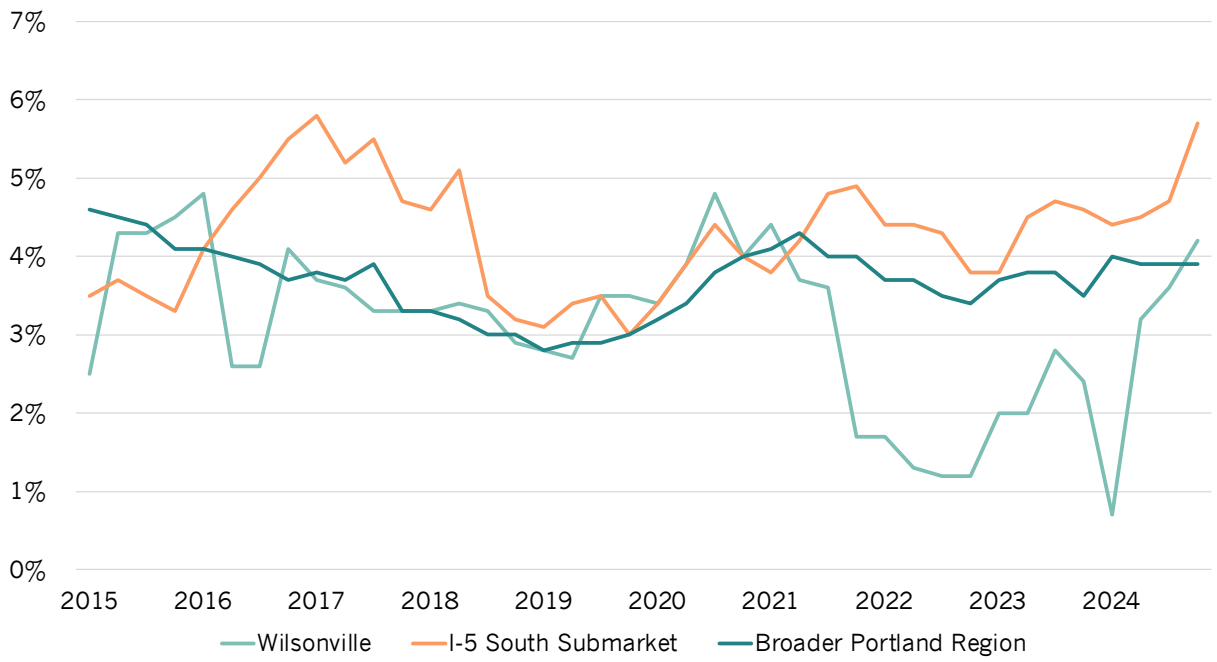

Exhibit 15: Retail Space Development Trends, 2015 - 2024

GEOGRAPHY	TOTAL BUILDINGS	TOTAL SQUARE FEET	AVERAGE BUILDING SIZE
ALL RETAIL DEVELOPMENT			
Broader Portland Region	12,132	126,767,807	10,450
I-5 South Submarket	478	6,797,343	14,220
Wilsonville	112	2,165,439	19,330
BUILT IN THE LAST 10 YEARS*			
Broader Portland Region	441	5,186,720	11,760
I-5 South Submarket	23	229,939	10,000
Wilsonville	2	91,495	45,750

Source: CoStar, pulled February 2025 *Does not account for removal of retail space from the market

According to CoStar, Wilsonville's retail vacancy rates have been lower than the I-5 South Submarket and the broader Portland region since 2021. However, over the course of 2024, Wilsonville's vacancy rate has risen, reaching 4.2% by the end of 2024 similar to the broader Portland region's retail vacancy rate.

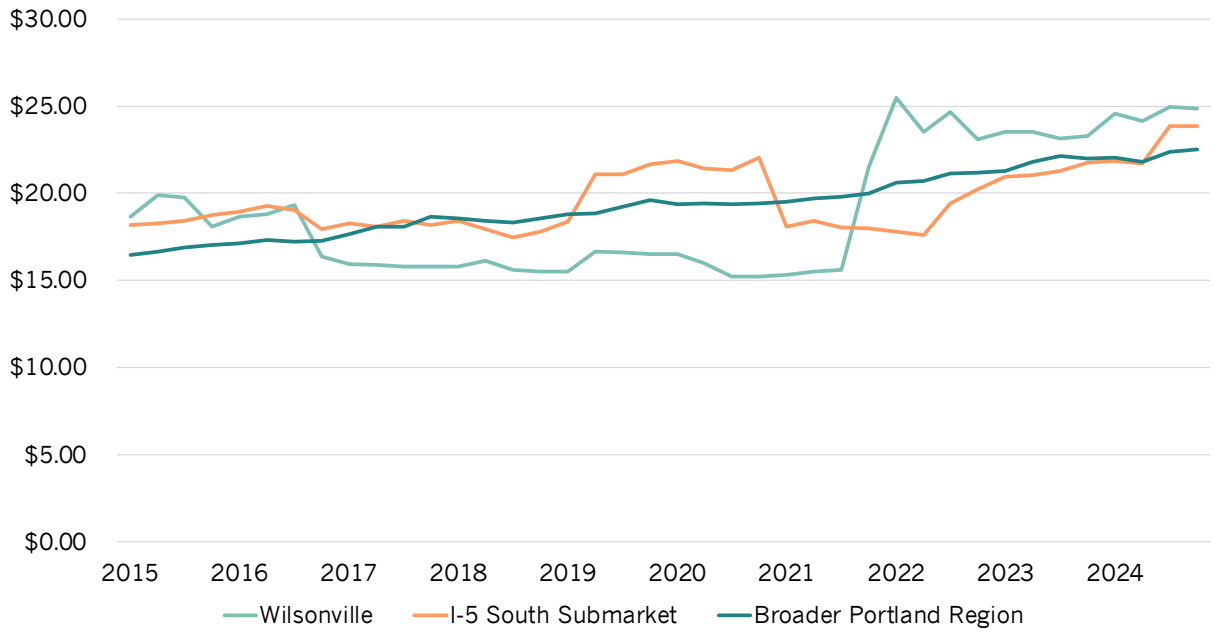

Exhibit 16: Retail Vacancy Rate Trends, 2015 - 2024

Source: CoStar, pulled February 2025

Retail rents are steadily increasing across the region, including within the submarket, and Wilsonville specifically. Wilsonville's rents surpassed and have remained slightly higher than the other markets since 2022. The low vacancy rate during this time likely contributed to the growing lease rates. Wilsonville's rents were about $24.90 by the end of 2024.

Exhibit 17: Retail Lease Rate Trends, 2015 - 2024

Source: CoStar, pulled February 2025

Despite low vacancies and rising rents in Wilsonville, there has been limited new retail development in Wilsonville in the past 10 years, and net absorption of vacant retail space has been negative for the past two years.

The relatively low vacancy rates and stable, modest rent growth suggest that Wilsonville could see new retail development in the coming years. However, while consumer demand holds, rising interest rates and higher operating costs will make retailers more cautious about expanding. While there is limited vacant land for retail development, infill and redevelopment in Town Center provide an opportunity for the new, modest square footage of retail development the market is demanding.

Wilsonville's Comprehensive Plan policy has for decades focused major retail development in commercial centers near the I-5 interchanges rather than in mixed-use centers and corridors. This focus reinforces the expectation of a very limited supply of land for retail growth. Besides the existing commercial centers, only small-scale neighborhood retail is planned within the City's Urban Growth Boundary and adjacent Urban Reserves. Retail growth is designed to occur through redevelopment of existing

commercial uses or underutilized parking areas, thus continuing to mostly limit retail to its current footprint in the City. The highest opportunity for new retail, particularly experience-based smaller-scale retail and food and beverage establishments, is anticipated through redevelopment in Town Center. This would appear to support broader trends in retail where several larger-format national retailers are reducing footprints or being cautious about expansion, while support for more local experience-based retail and food and beverage establishments is increasing.

Industrial Market

Broader Portland Regional Trends

Like the national industrial market overall, the broader Portland region industrial market has been strong in recent years, particularly from 2021 to 2023. However, similar to national trends, a few metrics indicate that demand for industrial space is decelerating in the region:

- **Increasing vacancy rates:** Vacancy for industrial space in the broader Portland region has risen steadily since early 2023, and net absorption was negative in 2023 and 2024. While overall leasing activity for industrial space in the area remained higher than the area's 10-year average, 2024 saw the lowest year-end leasing since 2018. A few large companies downsizing or exiting the market contributed to negative net absorption and vacancy trends.[25]
- **Slow lease-up for new construction:** In 2024, 1.9 million square feet of new industrial space was added to the market, increasing the region's vacant supply. As of year-end, 73% of that new space remained unleased, indicating slower-than-expected tenant demand. [26]
- **Rising unemployment rates:** In 2024, Portland's unemployment rate increased to 4.1% matching and surpassing the national unemployment rate at various points through the year. Layoffs, including the shutdown of a large UPS location in North Portland, which impacted 300 sorting and distribution jobs are impacting the local unemployment rates.[27]

However, investors and leasing professionals are confident in the regional market's long-term health, particularly due to significant investments in the region's semiconductor manufacturing sector.[28] Market strengths include:

[25] CBRE, Q4 2024 Portland Industrial Market Update
[26] CBRE, Q4 2024 Portland Industrial Market Update
[27] CBRE, Q4 2024 Portland Industrial Market Update
[28] Cushman & Wakefield, Industrial Marketbeat Q2 2024 Portland Industrial Report

- **CHIPS Act:** In 2023, the federal government allocated $50 billion as a part of the CHIPS Act to bolster U.S. semiconductor manufacturing, which is expected to create thousands of regional manufacturing and construction jobs.[29] The expansion of the semiconductor industry could also have a ripple effect, creating demand for industrial space for equipment suppliers, supply chain materials manufacturers, and testing facilities.
- **Strong submarkets:** According to market reports from Cushman & Wakefield and CBRE, other strong industrial submarkets include food and beverage warehousing, tech warehousing, and auto part manufacturing.[30] These are some of the most common types of tenants seeking space in the market, although deals are taking longer on average to reach completion.[31] As reported by CBRE, investors and leasing professionals are confident that the Portland market has additional room for growth.

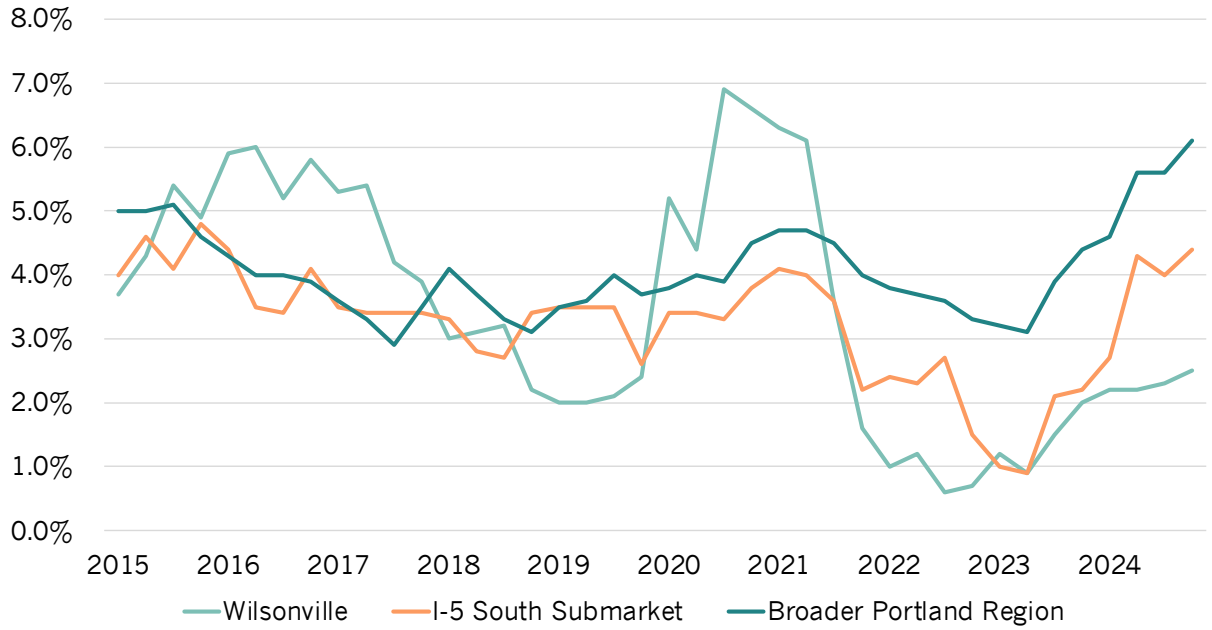
Wilsonville Industrial Market

Wilsonville has about 8.6 million square feet of industrial and flex space, representing roughly 38% of the I-5 South submarket and 3% of the broader Portland region's industrial space. The average size of Wilsonville's industrial building is roughly 63,000 square feet, almost twice as large as the average industrial building in the broader Portland region (34,000 square feet).

Wilsonville has had limited industrial development in the past decade. Only 1.7% of Wilsonville's total industrial space was built in the last 10 years, compared to roughly 9% of the I-5 South submarket industrial space and 13% of the broader Portland region's industrial space. This slow pace of development makes sense given the limited supply of development-ready industrial land in the City.

Exhibit 18: Industrial & Flex Space Development Trends, 2015 to 2024



GEOGRAPHY	TOTAL BUILDINGS	TOTAL SQUARE FEET	AVERAGE BUILDING SIZE
ALL INDUSTRIAL DEVELOPMENT			
Broader Portland Region	7,581	259,657,430	34,250
I-5 South Submarket	671	22,831,304	34,030
Wilsonville	136	8,592,887	63,180
BUILT IN THE LAST 10 YEARS*			
Broader Portland Region	403	33,736,304	83,710
I-5 South Submarket	40	2,096,708	52,420
Wilsonville	2[32]	145,611	72,810

Source: CoStar, pulled February 2025
*Does not account for removal of industrial/flex space from the market

[32] The two buildings listed in CoStar are located at 96500 SW Parkway Ave (2025) and 10680 SW Clutter Road (2023). However, City staff noted three others: the Black Creek development in the Coffee Creek industrial area and two SSI Shredding facilities.

Wilsonville's industrial vacancy rate remained below 6% for most of the past decade. In 2020 and 2021 Wilsonville saw a brief spike in vacancy, likely driven by the COVID-19 pandemic, which quickly dropped to just over 1% in 2023. As of Q4 2024, Wilsonville's combined industrial and flex space vacancy rate was 2.5% (**Exhibit 20).** Wilsonville's industrial vacancy rate has been below the broader Portland region since 2021. As of Q4 2024, the broader Portland region had a vacancy rate of 6.1% and I-5 South submarket had a vacancy rate of 4.4%.

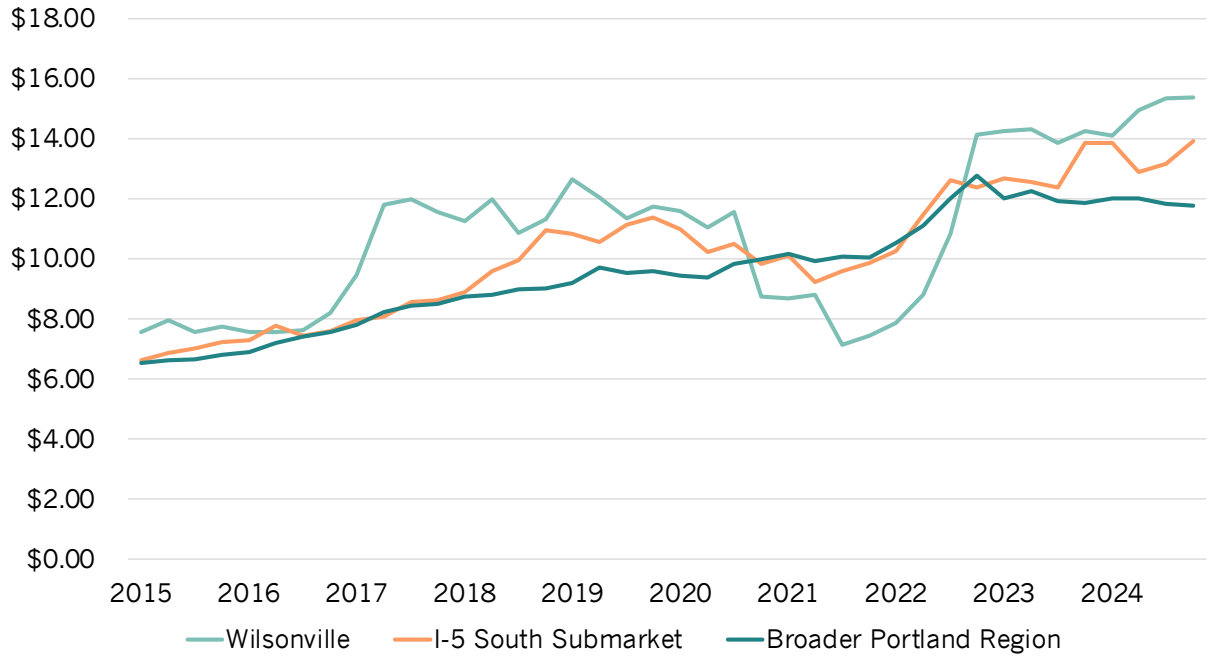


Exhibit 19: Industrial & Flex Vacancy Rate Trends, 2015-2024

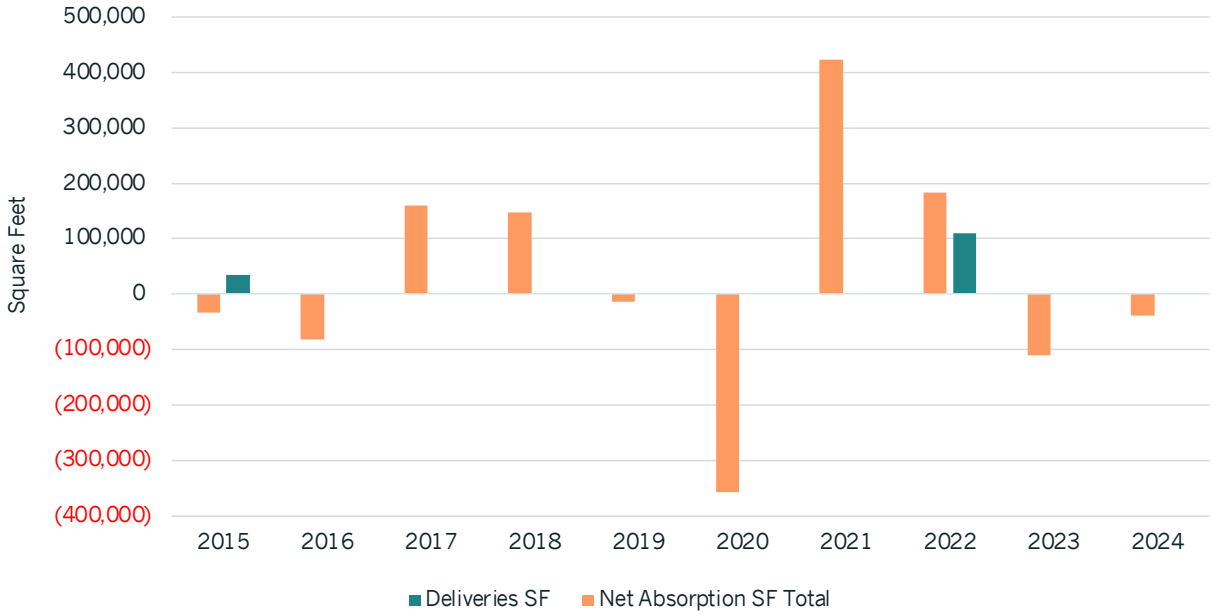
Source: CoStar, pulled February 2025

Industrial/flex rents in Wilsonville increased from 2015 to 2020 and were generally higher than the broader Portland region over the period.[33] Wilsonville shows a drop in lease rates between 2020 and 2021, likely due to COVID-19 impacts. However, rates rebounded in 2023, reaching $15.38 per square foot in Q4 2024, higher than the broader Portland region ($11.77) and I-5 South submarket ($13.93). The combination of rising rents and very low vacancy rates suggests a robust industrial market in Wilsonville, potentially attracting new development, especially speculative development.

Exhibit 20: Industrial & Flex Rents Trends, 2015-2024



Source: CoStar, pulled February 2025

[33] Triple-Net (NNN) rents are annual rents on a per square foot basis. In a NNN lease, expenses such as taxes, insurance, and any utilities or maintenance costs, are also passed on to the tenant and paid separately from rent.

Net absorption has been generally positive for industrial properties over the past decade, with a large vacancy in 2020; however, it was followed by high positive net absorption the following year. Net absorption was negative in 2023 and through 2024, but at a smaller magnitude than in 2020.

Exhibit 21: Net Absorption for Industrial & Flex Space in Wilsonville, 2014 to 2024

Source: CoStar, pulled February 2025

TYPE OF INDUSTRIAL PRODUCT BUILT SINCE 2014

Within the industrial product type, CoStar delineates the properties into a secondary type based on their use, size, and amenities to industrial users. CoStar utilizes the following definitions for the secondary types of industrial space:

- **Distribution:** Spaces used for warehousing and distribution of inventory, that are typically 200,000 square feet or more, have clear heights of at least 28 feet, are less than 5% office space, and have site coverage that can be up to 40%.
- **Warehouse:** Buildings that are 25,000 square feet or greater, are up to 20% office area, have clear heights of 22 feet or greater, and have site coverage up to 50%.
- **Manufacturing:** Buildings that are typically 300,000 square feet or greater with an office area up to 50%.
- **R&D:** Flex space (see below) specifically used for research and development.
- **Flex/Other/Misc.:** A versatile building that may be used with office (corporate headquarters), research and development, mixed-use industrial and retail sales, and includes but is not limited to industrial, warehouse, and distribution uses. At least half of the rentable area of the building must be used as office space. Flex buildings typically have ceiling heights under 18 feet, with light industrial zoning. Flex buildings have also been called Incubator, Tech and Showroom buildings in markets nationwide.

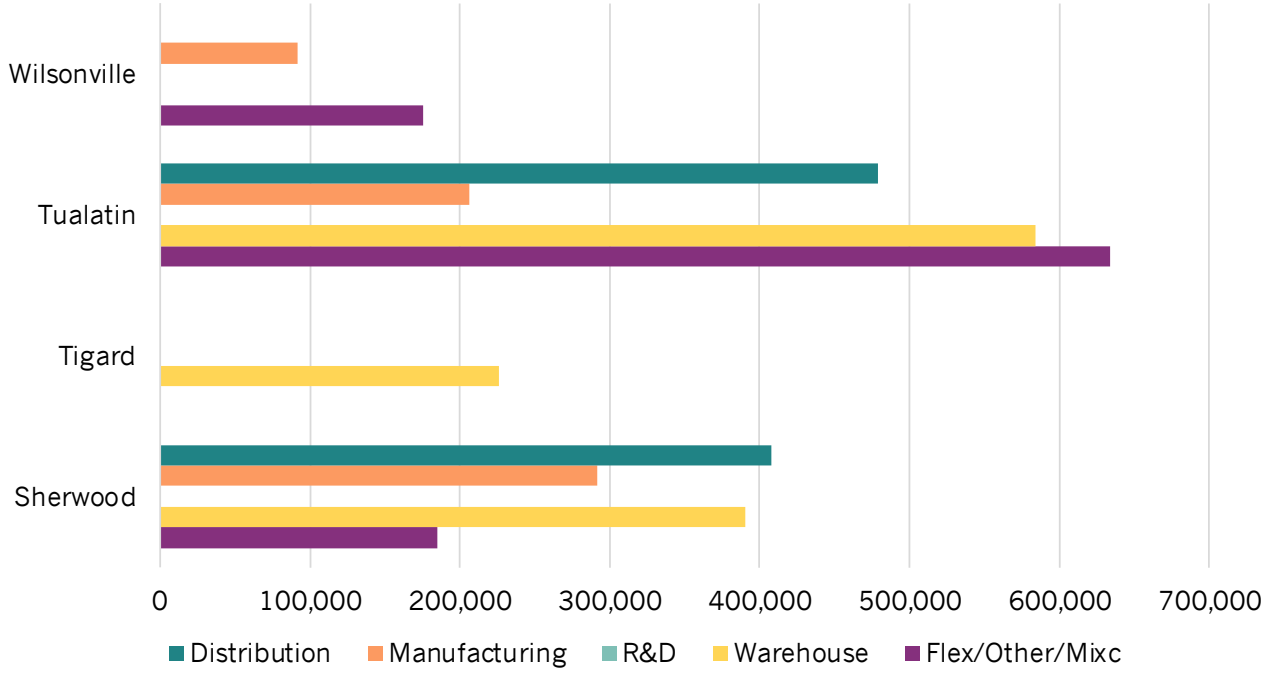
Exhibit 22 shows industrial development by submarket and secondary industrial space types. Historically, the I-5 South submarket has made up about 10.2% of all industrial space in the Portland region. Over the past decade, the I-5 South submarket's share of new construction has been a bit lower. Since 2014, 8.7% of new industrial development in the region occurred in the I-5 South submarket.

The types of industrial space being built in the I-5 South submarket have also shifted:

- Warehouse and R&D space have grown in this area. While the I-5 South submarket holds about 27% of the region's total warehouse and R&D space, it captured around 35% of the new development in these categories over the past decade.
- In contrast, I-5 South has seen less manufacturing and distribution development. It holds 27% of the region's total space for these types but only accounted for 19% of new space built in the past 10 years.

Exhibit 22: Industrial Development Trends by Secondary Market Type, Broader Portland Region and I-5 South Submarket, 2014 to 2024

	ALL DEVELOPMENT		PAST 10 YEARS		I-5 CAPTURE RATES	
	BROADER PORTLAND REGION	I-5 SOUTH	BROADER PORTLAND REGION	I-5 SOUTH	ALL DEV'T	2014-2024
Distribution	49,002,646	5,677,113	16,716,663	1,222,159	11.6%	7.3%
Manufacturing	43,382,806	6,661,789	5,802,456	700,301	15.4%	12.1%
R&D	4,036,770	409,055	514,319	87,476	10.1%	17.0%
Warehouse	116,255,396	19,920,386	11,999,179	2,178,085	17.1%	18.2%
Flex/Other/Misc	156,220,367	4,831,339	24,957,511	1,053,586	3.1%	4.2%
Total	**368,897,985**	**37,499,682**	**59,990,128**	**5,241,607**	**10.2%**	**8.7%**



Source: CoStar, pulled August 2024

Industrial development along the I-5 South submarket has recently concentrated in Tualatin and Sherwood. This trend is likely due to Wilsonville's shortage of development-ready industrial land and large parcels, a view supported by interviews with local developers, brokers, and economic development organizations.

Many speculative industrial developers are seeking large sites, as demonstrated by recent developments in Sherwood and Tualatin on parcels exceeding 10 acres. Notable examples include the recently completed Sherwood Commerce Center on a 30+ acre site and the proposed Rock Creek industrial site development on 25 acres in Sherwood. In Tualatin, the Tualatin Sherwood Corporate Park was completed in 2023 on over 40 acres, while the Hedges Creek Industrial Park is expected to be completed in 2025 on a 20-acre site.

Local developers report that most of the industrial demand is coming from existing regional businesses rather than out-of-state companies. These local industrial users are primarily looking to expand or upgrade their current facilities within the area. Many express a desire to be outside the City of Portland and Multnomah County, citing concerns about public safety and higher rates of taxation.

Exhibit 23. Secondary Industrial Space Recently Built or Proposed in I-5 South Submarket by City, 2019-2026

Source: CoStar, pulled August 2024

Real estate leasing and development data suggest that Wilsonville's industrial market is strong but faces significant limitations to future growth. The City has very low industrial vacancy rates and higher-than-average rents, showing steady demand. However, very little new space has been built in the past decade, largely due to a shortage of development-ready industrial land and large sites. While regional interest in industrial space remains high—particularly in sectors like manufacturing and warehousing—most new development in the I-5 South submarket has occurred in neighboring cities like Sherwood and Tualatin. Without more development-ready land that is ready for construction, Wilsonville is likely to continue to miss out on capturing new industrial investment.

This section provides information about common industrial development types that are tracked by CoStar. They do not include other types of development that commonly occur in on industrial land, such as indoor recreation, medical buildings, religious institutions, and government uses.

Wilsonville's Competitive Advantages and Disadvantages

Wilsonville's economic development potential is influenced by both local factors and the broader state and national economic trends. Economic conditions in Wilsonville relative to these conditions in other portions of the Portland region form Wilsonville's competitive advantage for economic development. Wilsonville's key competitive advantages include its opportune location in the southern Portland region, positioned between Portland and Salem; access to a well-educated workforce from both the Portland region and Mid-Valley labor sheds; and a supply of industrial land for employment growth, including sites near expanding job centers in Tualatin and Sherwood. The City also benefits from strong transportation connections via I-5, I-205, and Highway 217, as well as transit services. These attributes make Wilsonville an attractive choice for businesses and residents seeking a connected, high-quality place to live and work. How the City capitalizes on these strengths will be central to its future economic development.

Wilsonville's advantages for economic development include:

- **Location.** Wilsonville is located at the southern edge of the Portland region, providing excellent access to both Portland and Salem job centers and consumer markets. Its location along the I-5 corridor allows businesses to efficiently serve a broad geographic area that spans the Portland region, Mid-Willamette Valley, and Pacific Northwest. Its proximity to both urban and rural amenities add to its appeal.
- **Transportation Infrastructure.** Wilsonville has strong regional transportation access with I-5, I-205, and Highway 217 facilitating efficient freight and commuter movement. Additional transportation strengths include existing and planned arterial roads as well as local and regional transit service provided by TriMet, WES Commuter Rail, and the South Metro Area Regional Transit (SMART).[34]

  Wilsonville is also 30 miles from the Portland International Airport and 20 from Port of Portland terminal providing connection to air and marine networks supporting container transport.
- **Foreign Trade Zone (FTZ) Access**. Wilsonville is located within Foreign Trade Zone 45 managed by the Port of Portland. Access to FTZ benefits provides advantages for firms engaged in global trade by enabling tariff deferral, duty elimination on re-exports, and logistical efficiencies. This makes Wilsonville

[34] Existing major arterials include SW Grahams Ferry Road, SW Boones Ferry Road, and SW Day Road; the City is also planning the extension of Basalt Creek Parkway.

particularly competitive for advanced manufacturing, semiconductor-related industries, and firms with complex international supply chains.

- **Availability of Industrial Land.** Wilsonville has 353 acres of vacant, buildable industrial land to accommodate employment growth. Much of this land is concentrated in two key employment areas:
  - **Coffee Creek:** Coffee Creek is supported by an active Urban Renewal District that funds critical infrastructure improvements. Coffee Creek's location near I-5 and other industrial areas makes it particularly attractive for industrial development.
  - **Basalt Creek:** Wilsonville's portion of Basalt Creek has a range of parcel sizes suitable for manufacturing, logistics, and supply chain uses.
- **Strong Industrial Base of Employment.** Wilsonville has a diverse and established industrial base. Manufacturing, wholesale trade, and construction account for 43% of total employment in the City, which is double the Portland region average. The City's manufacturing cluster includes high-tech, cleantech, electronics, materials, and food and beverage processing businesses. Wilsonville's industrial sectors support strong wage growth and contribute to economic resilience.
- **Proximity to other Growing Industrial Areas.** Wilsonville's industrial lands are a part of a larger cluster of industrial employment areas extending into Tualatin and Sherwood, offering supply chain efficiencies and complementary industry clustering.
- **Sustainable Water Supply**. Wilsonville has a sustainable water supply sourced from the Willamette River. This provides reliable capacity for industrial users with large water demands, including advanced manufacturing, semiconductor supply chains, cleantech, and food and beverage processors.
- **Business Support Services.** Wilsonville takes an active role in facilitating economic development, with dedicated programs and financing mechanisms that help reduce barriers to development, accelerate project readiness, and support job creation.
  - **Urban Renewal in Coffee Creek:** The Urban Renewal District plays a pivotal role in advancing infrastructure readiness and supporting new industrial development in Coffee Creek. Urban Renewal funds may be used to finance key infrastructure improvements in the Coffee Creek Industrial Area including roads, sewer, water, and stormwater systems helping make sites more marketable and development ready. To date, one infrastructure project has been completed: the construction of

Garden Acres Road to urban industrial standards. The Urban Renewal Plan also authorizes the purchase of land from willing sellers. The potential to buy, aggregate, and prepare land for development is a strategy that will be explored further in the EOA and Economic Development Strategy, and which merits discussion and consideration by policymakers.

- **WIN Program (Wilsonville Investment Now).** The **WIN Program** is a citywide business incentive tool that provides a limited-duration, partial property tax rebate to attract and retain traded-sector employers. The program offers flexible eligibility criteria that align with the City's economic development and industrial land strategies.

- **Proactive City Planning and Policy Alignment**. Wilsonville demonstrates strong leadership in aligning land use, infrastructure, housing, and economic development policy. The City has proactively advanced the Wilsonville Industrial Land Readiness Study, Housing Needs and Capacity Analysis, Housing Production Strategy, and several area-wide master plans, among others. This coordinated planning framework helps provide a predictable environment for business investment. Wilsonville also collaborates closely with regional and statewide partners—including Business Oregon, Greater Portland Inc., Metro, and the Wilsonville Chamber of Commerce—to support economic development and local businesses.
- **Redevelopment Potential in Town Center**. Wilsonville's Town Center offers strong potential for redevelopment into a vibrant mixed-use district. The Town Center Plan envisions a walkable, transit-accessible hub with expanded retail, services, housing, and employment uses. Public realm investments, flexible zoning, and catalytic projects can help drive momentum for redevelopment and create a more active community commercial center. Placemaking is considered one of the best strategies for driving local economic development in the 21st century. **The redevelopment of Town Center represents one of the best opportunities the City has for creating a magnetic force that draws in traded sector and local businesses, as well as talent.**
- **Labor Market.** Wilsonville draws from both the Portland region and Mid-Valley labor sheds, providing access to a large, skilled, and diverse workforce. Thriving residential growth continues to expand the City's labor pool and supports talent retention. The City also benefits from proximity to major higher education institutions that strengthen its workforce pipeline, including local campuses of **Clackamas Community College** and **Oregon Institute of Technology,** as well as regional colleges and universities such as **Portland**

Community College, Chemeketa Community College, Portland State University, **University of Portland**, and **Willamette University**.

- **Quality of Life.** Wilsonville's high quality of life is a key factor in attracting and retaining both businesses and talent. The City offers a balanced living environment with well-planned neighborhoods, a variety of housing options, high-performing K-12 schools, environmental stewardship, high quality urban amenities like its parks and library, and access to outdoor recreation. Its location provides convenient access to both urban amenities in the Portland region and rural amenities in the Willamette Valley and surrounding areas.

Wilsonville's disadvantages for economic development include:

- **Limited Supply of Development-Ready Industrial Sites.** Wilsonville has over 350 acres of vacant industrial land, but much of it in Coffee Creek and Basalt Creek is not ready for development due to the absence of urban-level infrastructure. Ongoing investment is needed to support future industrial growth. In Basalt Creek in particular—especially the West Railroad area—major infrastructure gaps remain. Physical access is also constrained by limited vehicular routes and a low railroad undercrossing on Grahams Ferry Road. Addressing these constraints will require substantial investment and coordination.
- **Small Lot Sizes and Fragmented Ownership Patterns.** The City has a limited inventory of large, contiguous, buildable parcels, which are attractive to large industrial owner-users, as well as speculative developers who need the efficiencies of a large project to make the development financially feasible. Fragmented ownership, small lot sizes, and lack of coordinated property aggregation in key areas create barriers to assembling larger sites suitable for modern industrial uses.
- **Lower-Intensity Existing Uses on Industrial Land.** Many parcels in Coffee Creek and Basalt Creek are used for low-density contractor establishments and outdoor storage. These uses do not align with Wilsonville's vision for higher-intensity, urban-style employment development. Because they generate steady income for property owners, there is little incentive to sell and/or redevelop. This phenomenon has limited industrial growth and development and will continue to do so without intervention.
- **Power Supply Issues.** Some future industrial users may need more than 5 megawatts of power. Meeting this demand will require additional investment in power infrastructure, as well as long lead times. Close coordination with Portland General Electric will be essential to ensure capacity is available.

- **Traffic and Congestion.** The I-5 corridor through Wilsonville experiences congestion from regional traffic, particularly during peak hours, which then backs up onto Wilsonville key arterials. Planned transportation improvements will help but may be years in coming. Ongoing regional growth may continue to pressure transportation infrastructure and increase travel times for both freight and commuters.
- **Regional Housing Affordability Challenges.** Like many parts of the Portland region, Wilsonville faces regional housing affordability pressures that can affect workforce attraction and retention. Although the City has pursued strategies to expand housing options, affordability remains a key issue for both lower- and middle-income workers.
- **Limited Urban Amenities**. Wilsonville's suburban setting and limited mix of local amenities such as restaurants, shopping, and entertainment may make it harder to attract workers, particularly younger professionals in technology, creative, and knowledge-based fields. Strengthening live-work-play environments, like those envisioned in Town Center, will be key to maintaining the City's competitiveness for talent.

Public Facilities and Services

Provision and costs of public facilities and services can impact a firm's decision about expanding or locating in a City. One of the primary considerations about developing a site is whether it has infrastructure to or near the site, including water, wastewater, stormwater, and roads. If infrastructure is not developed to or near the site, the consideration becomes whether infrastructure can be extended in a timely manner and at a financially feasible cost.

This section describes Wilsonville's water system, storm system, wastewater system, and transportation system infrastructure. It answers the question of whether Wilsonville has or is planning to have sufficient capacity to support the amount and types of development proposed in the EOA.

WATER

Wilsonville's primary drinking water source is treated water from the Willamette River. The Willamette River Water Treatment Plant has a total treatment capacity of 20 million gallons per day (mgd). Of that capacity, 13.3 mgd (two-thirds) is owned by the City of Wilsonville, and 6.7 mgd (one-third) is owned by the City of Sherwood. The City of Wilsonville also has eight groundwater wells that serve as a backup supply.

Wilsonville currently has sufficient water supply and treatment capacity to meet existing and future employment needs. The Water Distribution System Master Plan is

being updated to evaluate capacity and distribution improvements that will support continued growth within the Wilsonville. The next major expansion of the treatment plant, which will increase total capacity to 30 mgd, is planned for the 2035 to 2040 timeframe. This expansion will ensure long-term adequacy of the water system to serve both residential and employment growth.

There are no known water capacity limitations that would restrict new industrial or commercial development in the City over the 2026 to 2046 period.

WASTEWATER

Wilsonville's Wastewater Treatment Plant has a total treatment capacity of 4 mgd. The 2023 Wastewater Treatment Plant Master Plan evaluated the capacity of individual unit processes and identified those that may exceed capacity at buildout. Upgrades to those unit processes have been incorporated into the City's capital improvement program. The first phase, improvements to the aeration basins, is currently under design.

The City recently updated its System Development Charges (SDCs) to provide funding for these capacity improvements. A Wastewater Collection System Master Plan update is scheduled for completion by 2028, which will identify additional system improvements needed to serve future development.

There are currently no known wastewater capacity limitations that would prevent new industrial or commercial development. Planned improvements will ensure the system can support anticipated employment growth through 2046.

STORMWATER

The City updated its Stormwater Master Plan in 2024. The plan provides guidance for stormwater management and identifies system improvements to address capacity and conveyance needs. There are no known stormwater capacity issues that would limit employment growth.

TRANSPORTATION

Traffic congestion on the I-5, specifically the Boone Bridge, remains the most significant transportation challenge affecting Wilsonville. The bridge serves as a critical north–south connection between the Portland and Salem metropolitan areas, carrying regional commuter and freight traffic through the City. Peak-hour congestion creates recurring delays that impact both residents and businesses.

The Oregon Department of Transportation (ODOT) is leading the I-5 Boone Bridge Replacement Project to address these issues. The project will replace the existing bridge with a new, seismically resilient structure, add a southbound auxiliary lane

between the Wilsonville Road entrance and the OR 551 exit, make safety improvements at the Charbonneau interchange, and provide new walking and biking connections across the Willamette River. The project has completed the Planning and Environmental Linkages (PEL) study phase, positioning it to move forward once funding becomes available. Because the Boone Bridge is part of the state highway system, project implementation and timing are under ODOT's jurisdiction rather than the City's direct control.

Beyond the Boone Bridge corridor, Wilsonville's local transportation network is functioning well. The City actively monitors system performance and publishes a transportation performance monitoring report every three years to track progress toward its goals. Local facilities identified in the City's Transportation System Plan have adequate capacity to support planned employment and population growth, and improvements are being implemented as needed.

There are no additional transportation limitations currently identified that would restrict employment growth over the planning period.

3. Employment Growth and Site Needs

Statewide Planning Goal 9 requires cities to estimate how much land is needed for commercial and industrial development over a 20-year period. In Wilsonville, that means identifying how much employment growth is expected by 2046 and what kinds of businesses are likely to locate here. This chapter presents an employment forecast and analysis of potential growth industries that build from recent economic trends.

Forecast of Employment Growth and Land Demand

Demand for industrial and commercial land in Wilsonville will be shaped by the expansion and relocation of existing businesses as well as the establishment of new ones. The employment projections in this section build on Wilsonville's current employment base and assume that future growth will align with the Oregon Employment Department's (OED) regional forecasts for the 2026–2046 period.

The employment forecast does not account for a major shift in employment that could occur if one or more large employers were to locate in Wilsonville during the planning period. Such a change would exceed the growth anticipated in the City's employment forecast and the associated land needs. This would be true not only for employment uses but also for housing, parks, and other community needs. While major economic events, such as the successful recruitment of a very larger employer, are difficult to incorporate into an Economic Opportunities Analysis, their implications are relatively predictable: increased demand for land (of all types) and for public services.

ECOnorthwest's approach to projecting demand for industrial and commercial land includes four steps:

1. **Establish base employment** – Begin with the estimate of covered employment in Wilsonville, as shown in **Exhibit 7.** Since covered employment does not include all workers, this number is adjusted to reflect total employment in the City.
2. **Project total employment** – Consider forecasts and other factors that may influence employment growth in Wilsonville over the 20-year planning horizon.
3. **Allocate employment** – Assign projected employment to various land use categories.

4. **Estimate land demand** – Calculate employment land demand based on projected growth and assumptions about future employment densities.

This methodology follows administrative rule requirements and incorporates input the Technical Advisory Committee (TAC) that guided this project.

Employment Base for Projection

To estimate future employment land needs, ECOnorthwest first developed a baseline of current employment in Wilsonville. This baseline provides the foundation for forecasting job growth and associated land needs through 2046.

ECOnorthwest began with covered employment[35] data from the Oregon Employment Department's confidential Quarterly Census of Employment and Wages (QCEW), which includes most wage and salary employment. According to this data, Wilsonville had approximately 22,778 covered employees in 2023 (see Exhibit 6 and Exhibit 24). This is the best and most currently available data for Wilsonville and reflects changes in employment post-COVID.

However, covered employment does not account for all workers in the economy, notably excluding sole proprietors. An analysis of the data shows that *covered* employment reported by the Oregon Employment Department for Clackamas County represents only about 68% of *total* employment reported by the U.S. Bureau of Economic Analysis. This ratio was evaluated for each employment sector in Clackamas County, and the resulting figures were used to estimate the number of noncovered employees.

Based on this methodology, ECOnorthwest estimates that Wilsonville had approximately **32,332 total jobs** in 2023 **(Exhibit 24).** This estimate serves as the starting point for evaluating future employment growth and land needs.

[35] Covered employment includes employment covered by unemployment insurance.

Exhibit 24. Estimated Total Employment by Sector, Wilsonville City Limits and UGB Area*, 2023

Sector	Covered Employment	Estimated Total Employment	Covered % of Total
Agriculture, Forestry, Fishing, and Hunting	17	30	56%
Construction	3,010	3,917	77%
Manufacturing	3,719	4,043	92%
Wholesale Trade	3,318	3,977	83%
Retail Trade	2,125	2,834	75%
Transportation, Warehousing, and Utilities	864	1,965	44%
Information	78	118	66%
Finance and Insurance	172	438	39%
Real Estate and Rental and Leasing	233	1,748	13%
Professional, Scientific, and Technical Services	2,330	4,325	54%
Management of Companies and Enterprises	474	563	84%
Administrative, Support, Waste Management an	2,023	2,763	73%

Health Care and Social Assistance	989	1,187	83%
Arts, Entertainment, and Recreation	188	441	43%
Accommodation and Food Services	1,352	1,503	90%
Other Services and Public Administration	483	902	54%
Government	1,301	1,381	94%
Total	**22,778**	**32,332**	**70%**

Source: 2023 covered employment from confidential Quarterly Census of Employment and Wage (QCEW) provided by the Oregon Employment Department. ECOnorthwest estimate for total employment.
*See Exhibit 37 for a map of the planning area.

Employment Projection

The employment forecast covers the 2026 to 2046 period, requiring an estimate of total employment for Wilsonville in 2026. The base employment starts with the estimate of 32,332 total jobs in Wilsonville in 2023, shown in **Exhibit 24.**

Wilsonville does not have an existing employment forecast, and there is no required method for employment forecasting. OAR 660-024-0040(9)(a) sets out some optional "safe harbors" that allow a City to determine employment land need.

Exhibit 25 presents four employment growth rate scenarios:

- Metro Urban Growth Report regional growth rate: 0.42% annual employment growth.
- Oregon Employment Department's (OED) regional growth rate: 0.85% annual employment growth.
- Wilsonville's historic employment growth rate (2007-2023): 0.86% annual employment growth.
- Wilsonville's Housing Needs and Capacity Analysis projected household growth rate (2024-2044): 1.2% annual growth.

The OED regional growth rate (0.85%) is the safe harbor option identified in OAR 660-024-0040(9)(a)(A).

Exhibit 25. Forecast Rate Options for Employment Growth in Wilsonville, 2026-2046

Year	Jobs grow at the rate of... Urban Growth Report (0.42%)	OED Regional Employment Growth (0.85%)	Historic Employment Growth in Wilsonville (2007-23) (0.86%)	HNCA Household Growth Rate (1.20%)
2026	32,741	33,165	33,168	33,509
2046	35,607	39,297	39,326	42,537
Change 2026 to 2046				
Employees	2,866	6,132	6,158	9,028
Percent	9%	18%	19%	27%
Growth Rate	0.42%	0.85%	0.86%	1.20%

Source: ECOnorthwest

The City selected a forecast based on the regional employment growth rate of 0.85% average annual growth, consistent with the safe harbor in OAR 660-024-0040(9)(a). This safe harbor allows the City to assume that the current number of jobs in Wilsonville will grow at the same rate as the regional employment growth rate from the most recent Oregon Employment Department forecast.[36]

Exhibit 26 shows projected employment growth in Wilsonville from 2026 to 2046, assuming an average annual growth rate of 0.85%. By 2046, Wilsonville is expected to have 39,297 employees which is an increase of 6,132 employees, or 18%, over the 20-year period.

This forecast assumes employment growth is also consistent with Wilsonville's historical rate. It is faster than the regional growth rate in Metro's Urban Growth Report but slower than the City's projected household growth rate. The projection represents a modest and realistic pace of expansion that aligns with statewide and national trends of slower employment growth. It also reflects Wilsonville's role as a regional employment center that may grow faster than the broader Portland region because of its concentration of industrial land.

In the near term, growth over the next five to ten years is expected to occur more gradually as much of Wilsonville's industrial land is not yet development-ready and will require additional infrastructure investment. Commercial growth will depend on redevelopment opportunities in Town Center and the reuse of large vacant commercial properties such as the former Albertsons and Regal Cinema sites. It may also depend on future policy changes that allow underutilized industrial land to support a broader mix of commercial uses.

Exhibit 26. Employment Growth in Wilsonville, 2026-2046

Year	Total Employment
2026	33,165
2046	39,297
Change 2025 to 2045	
Employees	6,132
Percent	18%
Growth Rate	0.85%

Source: ECOnorthwest

[36] During the EOA process, ECOnorthwest used the OED forecast rates for the 2023-2033 period.

Allocate Employment to Different Land Use Types

The next step in forecasting employment is to allocate future employment to broad categories of land use. Firms wanting to expand or locate in Wilsonville will look for a variety of site characteristics, depending on the industry and circumstances. ECOnorthwest grouped employment into four broad categories of land use based on the North American Industrial Classification System (NAICS): industrial, retail commercial, office and commercial services, and government.[37]

Exhibit 27 shows the expected share of employment by land use type in 2026 and the forecast of employment growth by land use type in 2046 in Wilsonville. The results assume that the share of employment in each category will remain the same.

Exhibit 27. Forecast of Employment Growth by Land Use Type, Wilsonville UGB, 2026–2046

Land Use Type	2026		2046		Change
	Employment	% of Total	Employment	% of Total	2026 to 2046
Industrial	14,292	43%	16,934	43%	2,642
Retail Commercial	2,907	9%	3,445	9%	538
Office & Commercial Services	14,549	44%	17,239	44%	2,690
Government	1,417	4%	1,679	4%	262
Total	**33,165**	**100%**	**39,297**	**100%**	**6,132**

Source: ECOnorthwest
Note: The shaded percentages denote an assumption about the future share of employment (as a percent of total) by land use type.

Estimate of Demand for Commercial and Industrial Land

This section shows demand for vacant (including partially vacant) land in Wilsonville over the 20-year period. The assumptions used in this analysis are:

- **Employment density**. Employment density, measured as employees per net acre, reflects the ratio of the number of employees to the amount of developed employment land.

  Based on an empirical evaluation of commercial and industrial zones in the City that are at or near buildout, this study assumes an average of 8.9 employees per acre for industrial land and 33.1 employees per acre for commercial land **(Exhibit 28).** Actual densities vary by specific use; for

[37] Industrial employment includes construction and agriculture; manufacturing; transportation and warehousing; and wholesale trade. Retail commercial is retail trade. Office and commercial includes information; finance and insurance; real estate; professional services; management of companies; administrative support and waste management; educational services; healthcare and social assistance; recreation; accommodation and food services; and other services. Government includes all employment at federal, state, local, and other governmental agencies.

example, a two-story commercial building may have a higher density, while a convenience store with a large parking lot may have a lower density. Using an average helps account for these variations.

- **Conversion from net to gross acres**. Employment density data is expressed in *net* acres, which exclude land for public rights-of-way. Future employment land needs should include both the land within tax lots for employment use and the land required for public rights-of-way. One way to estimate this total is to convert *net* acres to *gross* acres based on assumptions about the share of land dedicated to rights-of-way. [38] This conversion is expressed as the percentage of gross acres occupied by rights-of-way.

  Based on an empirical evaluation of Wilsonville's existing net-to-gross ratios in areas designated for and developed with industrial and commercial uses, ECOnorthwest applied a net-to-gross conversion factor of 8% for industrial land and 13% for commercial land.

Using these assumptions, the forecasted growth of 6,132 new employees will result in the following demand for vacant (and partially vacant) employment land: 321 gross acres of industrial land and 110 gross acres of commercial land.[39]

Exhibit 28. Demand for Vacant Land to Accommodate Employment Growth, Wilsonville, 2026–2046

Land Use Type	New Employment	Employees per Net Acre	Land Demand (Net Acres)	Land Demand (Gross Acres)
Industrial	2,642	8.9	297	321
Commercial and Retail	3,228	33.1	97.5	110
Total	**5,870**	**-**	**395**	**431**

Source: ECOnorthwest

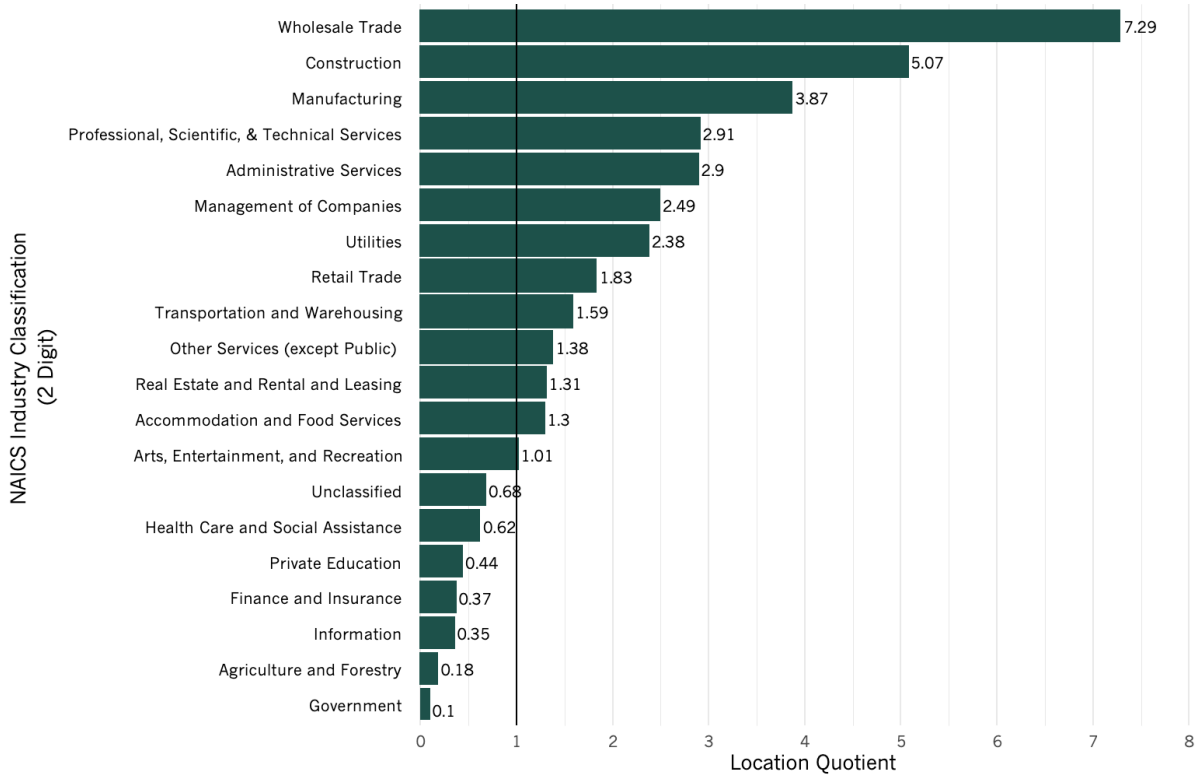
[38] OAR 660-024-0010(6) uses the following definition of net buildable acre. "Net Buildable Acre" consists of 43,560 square feet of residentially designated buildable land after excluding future rights-of-way for streets and roads. While the administrative rule does not include a definition of a gross buildable acre, using the definition above, a gross buildable acre will include areas used for rights-of-way for streets and roads. Areas used for rights-of-way are considered unbuildable.

[39] Government employment is not included when discussing employment land demand since growth in government employment does not result directly in need for more land for public uses. For instance, schools require land based on expected growth of students in the school district or replacement of existing schools, rather than as a result of growth in government employment. Local or regional governments may grow and continue to occupy existing built space or may need land based on factors other than employment growth. In addition, government employment locates in a range of zones, including commercial, residential, public, and other zones.

Target Industries

Wilsonville's economy benefits from several advantages that help attract and support a diverse mix of industries. The City's location along I-5 at the southern edge of the Portland metro area provides easy access to the broader region, Oregon's Mid-Valley, and national and international markets through nearby highway, rail, port, and air connections. Employers can draw from a large and skilled labor force across both regions, offering a strong pool of educated workers.

Wilsonville also has vacant industrial land, including potentially large sites (if aggregated) in Basalt Creek and Coffee Creek that are recognized regionally as key areas for future employment growth. These assets, combined with the City's high quality of life, well-planned neighborhoods, parks, and community amenities, help attract and retain businesses and workers.



Together, these advantages have shaped an employment base with strong concentrations in wholesale trade (LQ 7.29), construction (LQ 5.07), and manufacturing (LQ 3.87), which are industries that provide higher-than-average wages.[40] For example, an LQ of 7.29 indicates that wholesale trade employment in Wilsonville is more than seven times higher than the national average. The City also shows notable specialization in professional services, administrative services, and management services, each with an LQ greater than 2.0.

By contrast, sectors such as healthcare and social assistance (LQ 0.62), educational services (LQ 0.44), finance and insurance (LQ 0.37), and information (LQ 0.35) have much lower concentrations, indicating these sectors are underrepresented in Wilsonville compared to the national average.

Exhibit 29 shows employment concentration by broad industry (2-digit NAICS) in Wilsonville compared with the United States in 2023. **Exhibit 30** provides additional detail at the 3-digit NAICS level, highlighting industries with above-average wages (light green), strong employment levels, and high location quotients that signal competitive advantage. Specialized industries in manufacturing, wholesale trade, and construction stand out as core drivers of the City's economy.

[40] A location quotient (LQ) of 1.0 indicates that the industry's share of local employment matches the U.S. average. Industries with higher concentration have more employment in Wilsonville than the national average, indicating a strength in employment in that industry. Typically, a LQ of 1.25 or greater indicates a specialization within that industry.

Exhibit 29. Employment Concentration by Industry, Wilsonville Compared to the U.S., 2023

Source: Oregon Employment Department and U.S. Bureau of Labor Statistics, Quarterly Census of Employment and Wages, 2023

Exhibit 30. Concentration of Industries and Employment, Wilsonville, 2023

	High Employment (250 employees or more)	Low Employment (at least 50 employees)
▪ High Location Quotient	▪ Computer and Electronic Product Manufacturing ▪ Nonmetallic Mineral Product Manufacturing ▪ Merchant Wholesalers, Nondurable Goods ▪ Electrical Equipment, Appliance, and Component Manufacturing ▪ Machinery Manufacturing ▪ Specialty Trade Contractors ▪ Heavy and Civil Engineering Construction ▪ Motor Vehicle and Parts Dealers ▪ Merchant Wholesalers, Durable Goods ▪ Fabricated Metal Product Manufacturing ▪ Construction of Buildings ▪ Truck Transportation ▪ General Merchandise Retailers ▪ Profession, Scientific, and Technical Services ▪ Administrative and Support Services ▪ Management of Companies and Enterprises ▪ Nursing and Residential Care Facilities ▪ Accommodation	▪ Wholesale Trade Agents and Brokers ▪ Waste Management and Remediation Services ▪ Transit and Ground Passenger Transportation ▪ Plastics and Rubber Products Manufacturing ▪ Utilities ▪ Paper Manufacturing ▪ Rental and Leasing Services ▪ Religious, Grantmaking, Civic, Professional, and Similar Organizations ▪ Miscellaneous Manufacturing ▪ Support Activities for Transportation ▪ Amusement, Gambling, and Recreation Industries ▪ Repair and Maintenance ▪ Sporting Goods, Hobby, Musical Instrument, Book, and Miscellaneous Retailers
Low Location Quotient	▪ Food Services and Drinking Places ▪ Ambulatory Health Care Services	▪ Warehousing and Storage ▪ Food Manufacturing ▪ Real Estate ▪ Health and Personal Care Retailers ▪ Personal and Laundry Services ▪ Food and Beverage Retailers ▪ Gasoline Stations and Fuel =Dealers ▪ Credit Intermediation and Related Activities ▪ Educational Services ▪ Social Assistance

Note: Green highlighting indicates higher than Wilsonville's average wage.

Potential Growth Industries

An analysis of potential growth industries in Wilsonville considers two core questions: (1) *Which industries are most likely to be attracted to Wilsonville?* and (2) *Which industries best support Wilsonville's economic development goals?* The selection of growth industries is informed by the City's economic development objectives, current economic conditions in Wilsonville and the broader Portland Metro region, and Wilsonville's competitive position.

The industries identified as having potential for growth in Wilsonville are:

- **Manufacturing.** Manufacturing is a cornerstone of Wilsonville's economy, accounting for roughly **16% of total covered employment in 2023**, with average annual wages well above the citywide average. The City's location along I-5, access to a skilled regional workforce, and proximity to existing industrial areas create advantages for manufacturers seeking efficient supply chain and distribution connections. Existing manufacturing industries with strong concentrations and high levels of employment include:
  - Computer and electronic products manufacturing
  - Nonmetallic mineral products manufacturing
  - Electrical equipment and components manufacturing
  - Machinery manufacturing
  - Fabricated metal product manufacturing

  Demand for manufacturing is expected to remain strong over the next two decades, driven by national and regional trends such as reshoring of production, growth in advanced manufacturing technologies, and public and private investments in sectors like semiconductors and clean technology. Rising transportation costs, the desire for supply chain resilience, Wilsonville's location at the southern part of the Portland region, Wilsonville's supply of industrial land, and Oregon's skilled labor pool further position Wilsonville to capture a share of this growth.

  The ability to sustain and grow this sector will depend on the City's capacity to assemble large, contiguous parcels and to provide the necessary infrastructure, particularly transportation, water, wastewater, and power, to support high-intensity manufacturing operations. Phase 1 of the Wilsonville Industrial Land Readiness project identified specific growth opportunities in semiconductor supply chain industries, clean technology (cleantech) such as renewable energy and sustainable manufacturing solutions, and other advanced manufacturing niches. These industries align with national and

regional investment trends and can build on Wilsonville's existing industrial base to deliver high-wage, traded-sector jobs.

- **Wholesale Trade.** Wilsonville has an established concentration of wholesale trade businesses, including both durable and nondurable goods. These firms benefit from the City's location along I-5 and its central position between the Portland metro and Mid-Valley regions, allowing efficient service to multiple markets. Wholesale trade in Wilsonville is closely tied to the City's manufacturing base, supplying inputs and moving finished products to market. While population growth in the region may be more limited in the future, demand for wholesale activity is expected to remain stable, supported by business-to-business transactions and regional supply chain needs. Continued success in this sector will depend on the availability of sites that can accommodate operational needs while managing the challenges of congestion on I-5, which affects the efficiency of freight movement.
- **Professional, Scientific, and Technical Services.** Although the office market is adjusting to hybrid work trends, there is ongoing demand for specialized professional and technical services, particularly those that support the City's industrial and traded-sector base. This category encompasses a wide range of activities, including professional consulting, engineering, scientific research, testing, and advanced technology services. In Wilsonville, it includes both traditional office-based firms and innovation-oriented businesses such as life sciences and R&D operations that often locate near industrial clusters. Future growth is most likely in flexible, smaller-scale office or lab-flex spaces located near industrial areas or in mixed-use environments such as Town Center.
- **Local Services and Retail.** As Wilsonville's population and employment base grow, demand will increase for a variety of resident-serving businesses. These include retail stores, restaurants, medical and dental offices, childcare providers, personal services, and other neighborhood-oriented establishments. Such services contribute to quality of life, provide everyday convenience, and support the City's attractiveness as a place to live and work.

  Services for residents also present opportunities for entrepreneurship and small business development. The City has expressed particular interest in attracting small-scale, distinctive retailers and restaurants that can help differentiate Wilsonville's commercial areas, especially in Town Center, from those in surrounding communities. While many of these businesses are locally serving and offer lower average wages than traded-sector industries, they play a vital role in meeting community needs and fostering a vibrant local economy.

Site Needs for Potential Growth Industries

OAR 660-009-0015(2) requires the EOA to "identify the number of sites by type reasonably expected to be needed to accommodate the expected [20-year] employment growth based on the site characteristics typical of expected uses." The Goal 9 rule does not specify how jurisdictions conduct and organize this analysis.

OAR 660-009-0015(2) does state that "industrial or other employment uses with compatible site characteristics may be grouped together into common site categories." The rule suggests, but does not require, that the City "examine existing firms in the planning area to identify the types of sites that may be needed." For example, site types can be described by (1) plan designation (e.g., heavy or light industrial), (2) general size categories that are defined locally (e.g., small, medium, or large sites), or (3) industry or use (e.g., manufacturing sites or distribution sites). For purposes of the EOA, Wilsonville groups its future employment uses into categories based on their need for land with a particular plan designation (i.e., industrial or commercial) and by their need for sites of a particular size.

The potential growth industries described in the prior section are a mixture of business sizes, which will require a mixture of site sizes. **Exhibit 31** shows the typical site needs for industrial businesses in Oregon.

Exhibit 31. Industrial Development Competitiveness Matrix, Business Oregon

INDUSTRY SECTOR	SITE SIZE (ACRES)	SITE TOPOGRAPHY (SLOPE)	TRIP GENERATION (ADT/ACRE)	SITE ACCESS (MAX DISTANCE IN MILES TO INTERSTATE OR MAJOR ARTERIAL)	RAILROAD OR PORT ACCESS	ELECTRICITY REQUIREMENTS
Clean-Tech Manufacturing	5-100+	0-5%	40 to 80	w/in 10	Preferred	4-6 MW
Heavy Industrial/Manufacturing	10-100+	0-5%	40 to 60	w/in 10	Preferred	2 MW
Food Processing	5-25+	0-5%	50 to 65	w/in 30	Preferred	2-6 MW
Advanced Manufacturing & Assembly	5-25+	0-7%	30 to 60	w/in 15	Not Required	1-2 MW
General Manufacturing	5-15+	0-5%	30 to 50	w/in 20	Preferred	0.5 MW
Business Park and R&D Campus	20-100+	0-7%	60 to 150	N/A	Preferred	0.5-1.5 MW
Business Admin Services	5-15+	0-12%	170 to 180	N/A	Not Required	0.5 MW
Regional Warehouse/Distribution	20-100+	0-5%	20 to 80	w/in 5 (only interstate or equivalent)	Preferred	1 MW
Local Warehouse / Distribution	10-25+	0-5%	20 to 80	w/in 5 (only interstate or equivalent)	Preferred	1 MW
UAV Manufacturing/Research	10-25+	0-7%	30 to 50	N/A	Not Required	0.5 MW
Data Center	10-50+	0-7%	20 to 30	w/in 30	Avoid / Not Required	5-100 MW
Rural Industrial	10-50+	0-5%	30 to 50	w/in 60	Preferred	1 MW

Source: Business Oregon, Infrastructure Finance Authority, "Industrial Development Competitiveness Matrix." Note: Items identified as "preferred" are those that increase the feasibility of the subject property and its future reuse. Items identified as "required" are factors seen as mandatory in many cases and have become industry standards.

Potential growth industries in Wilsonville will require a variety of building and site types depending on their operational needs, ranging from existing multi-tenant industrial space to large, development-ready sites for single users or business parks. Manufacturing and other industrial businesses likely to locate in Wilsonville will have diverse space needs, ranging from:

- **Existing industrial and flex space.** Most of the demand is for space in existing industrial or flex buildings that can accommodate immediate occupancy. These spaces typically serve small and mid-sized businesses, such as suppliers, logistics firms, manufacturers, and service providers, that benefit from shared facilities, lower upfront costs, and proximity to arterial corridors and other industrial users.
- **Small-scale development sites (1 to 5 acres).** Small-scale sites are typically occupied by contractors, specialized manufacturers, and service-oriented businesses that want ownership of their building and yard space. Development is usually owner-driven or by small developers constructing single buildings. These projects often feature limited office space with outdoor storage or yard areas and need convenient access to major roads and utilities.
- **Mid-sized development sites (5 to 25 acres).** Mid-sized sites accommodate larger industrial users or single-tenant buildings developed for manufacturing, assembly, or distribution. These sites can also support smaller industrial parks with multiple buildings and tenants. These sites generally require strong highway access and high-capacity infrastructure such as water, wastewater, and power to support a range of business operations.
- **Large industrial or manufacturing sites (25 acres or more).** Large-scale users, including manufacturers, logistics centers, or industrial business park and research campuses, require sites of 25 acres or more that are fully serviced and have direct access to the regional transportation network. These properties are typically developed as single-user, build-to-suit projects or as master-planned business parks designed to accommodate multiple large users. They require substantial infrastructure capacity and strong highway access. Given infrastructure and land-readiness constraints, these sites are limited in Wilsonville and throughout the region.

Commercial development in Wilsonville includes a broad mix of uses such as retail stores, restaurants, entertainment venues, offices, personal and professional services, and hospitality establishments. These businesses depend on locations with convenient access to customers, nearby neighborhoods, and other businesses. Much of Wilsonville's opportunity for new commercial development lies in the redevelopment and reuse of existing commercial properties.

- **Space in existing buildings (multi-tenant and standalone).** Many retail, restaurant, office, and service-oriented businesses prefer space in existing shopping centers, mixed-use developments, or other multi-tenant buildings. Some users, such as grocery stores, fitness centers, offices, and larger restaurants, occupy standalone buildings developed on individual sites or as part of larger centers.
- **Land for custom development (1 to 5 acres).** A smaller number of businesses, including hotels, larger retailers, larger restaurants, medical or professional offices, and auto-related services, require land for a purpose-built facility. These users typically seek one- to five-acre sites in areas with strong transportation access and available infrastructure to support higher customer traffic.

4. Buildable Lands Inventory

The **Buildable Lands Inventory (BLI)** identifies commercial and industrial lands available for employment-related development within the Wilsonville area. This area includes the City limits and Wilsonville's City limits and Wilsonville's portion of the Metro UGB.[41]

The inventory is sometimes characterized as the *supply* of land available to support future employment growth. The amount of land needed to accommodate anticipated growth, often referred to as *demand* for land, depends on the type of employment-related development and other factors.

This section summarizes the results of the commercial and industrial buildable lands inventory for the Wilsonville City limits and UGB area. The analysis, conducted by ECOnorthwest, is based on GIS data from the City of Wilsonville, Metro, and the State of Oregon. City staff reviewed the findings.

The BLI process includes the following steps:

1. Generate Study Area "land base"
2. Classify lands by buildable area status
3. Identify constraints
4. Verify the inventory results
5. Tabulate and map results

The remainder of this section presents the results of the BLI in both tabular and map formats. Appendix A provides a detailed explanation of the inventory methodology.

[41] This area includes the Wilsonville portion of the Basalt Creek Planning Area in the northwest quadrant of the City.

Land Base

The land base for the BLI includes all tax lots within the Wilsonville City limits and UGB area that fall under comprehensive plan designations that allow for employment. **Exhibit 32** provides a breakdown of the land base by Wilsonville Comprehensive Plan designation within Wilsonville.

Exhibit 32. Employment Land Base by Wilsonville Comprehensive Plan Designation, Wilsonville City limits and UGB area, 2025

Plan Designation	Number of Tax Lots	Percent	Total Tax Lot Acreage	Percent (Total Acreage)
Commercial	297	32%	224	8%
Industrial	526	56%	1,819	63%
Town Center	57	6%	136	5%
Public	33	4%	480	17%
Undesignated	24	3%	216	8%
Total	**937**	**100%**	**2,876**	**100%**

Source: ECOnorthwest analysis, City of Wilsonville, Metro

Note: The number of tax lots represented is greater than the actual total number of tax lots in the analysis because several tax lots have multiple plan designations on the tax lot.

Buildable Area Status

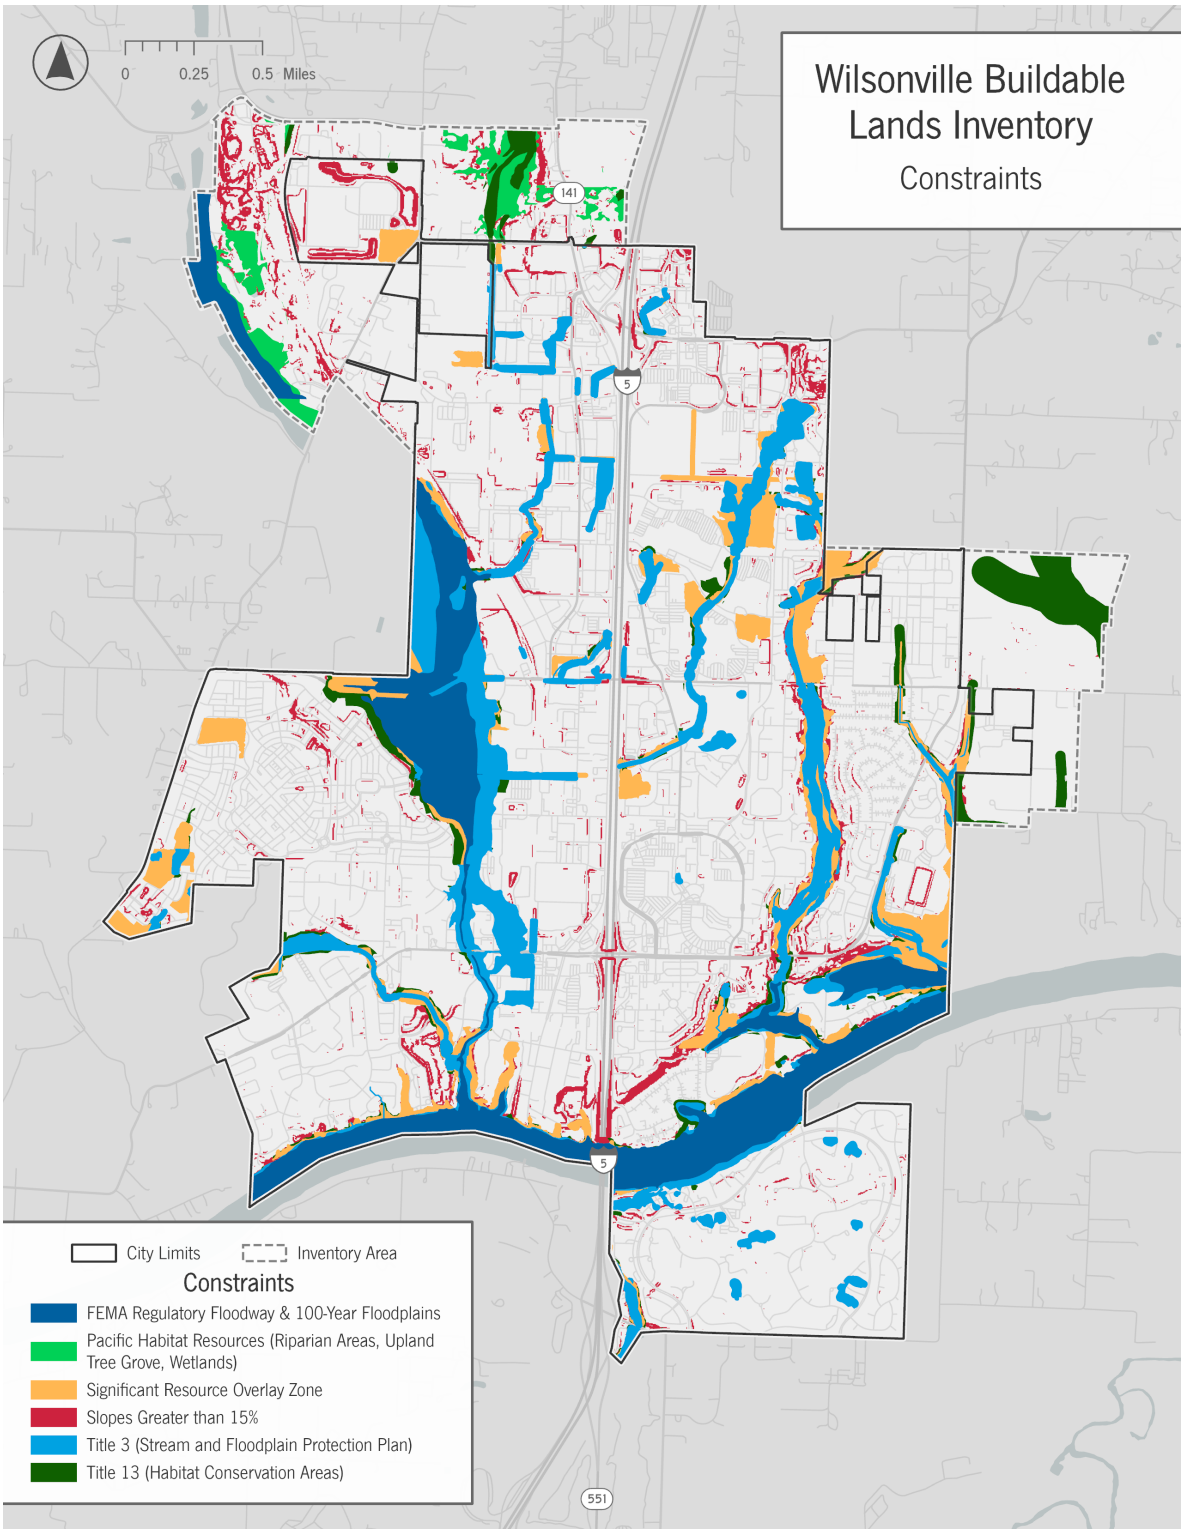
Exhibit 33 summarizes the total acres of commercial and industrial tax lots, classified by buildable area status. ECOnorthwest used a rule-based classification (described in Appendix B) to determine the initial development status. These classifications were then confirmed through a series of reviews by ECOnorthwest and City staff, based on local knowledge and review of aerial maps.

Exhibit 33. Employment Acres by Classification and Wilsonville Comprehensive Plan Designation, Wilsonville City limits and UGB area, 2025

Plan Designation	Total Acres	Developed Acres	Constrained Acres	Buildable Acres
Commercial	224	194	25	4
Industrial	1,819	1,005	506	308
Town Center	136	125	2	9
Public	480	336	144	0.1
Undesignated	216	67	104	45
Total	**2,876**	**1,729**	**782**	**366**

Source: ECOnorthwest analysis, City of Wilsonville, Metro

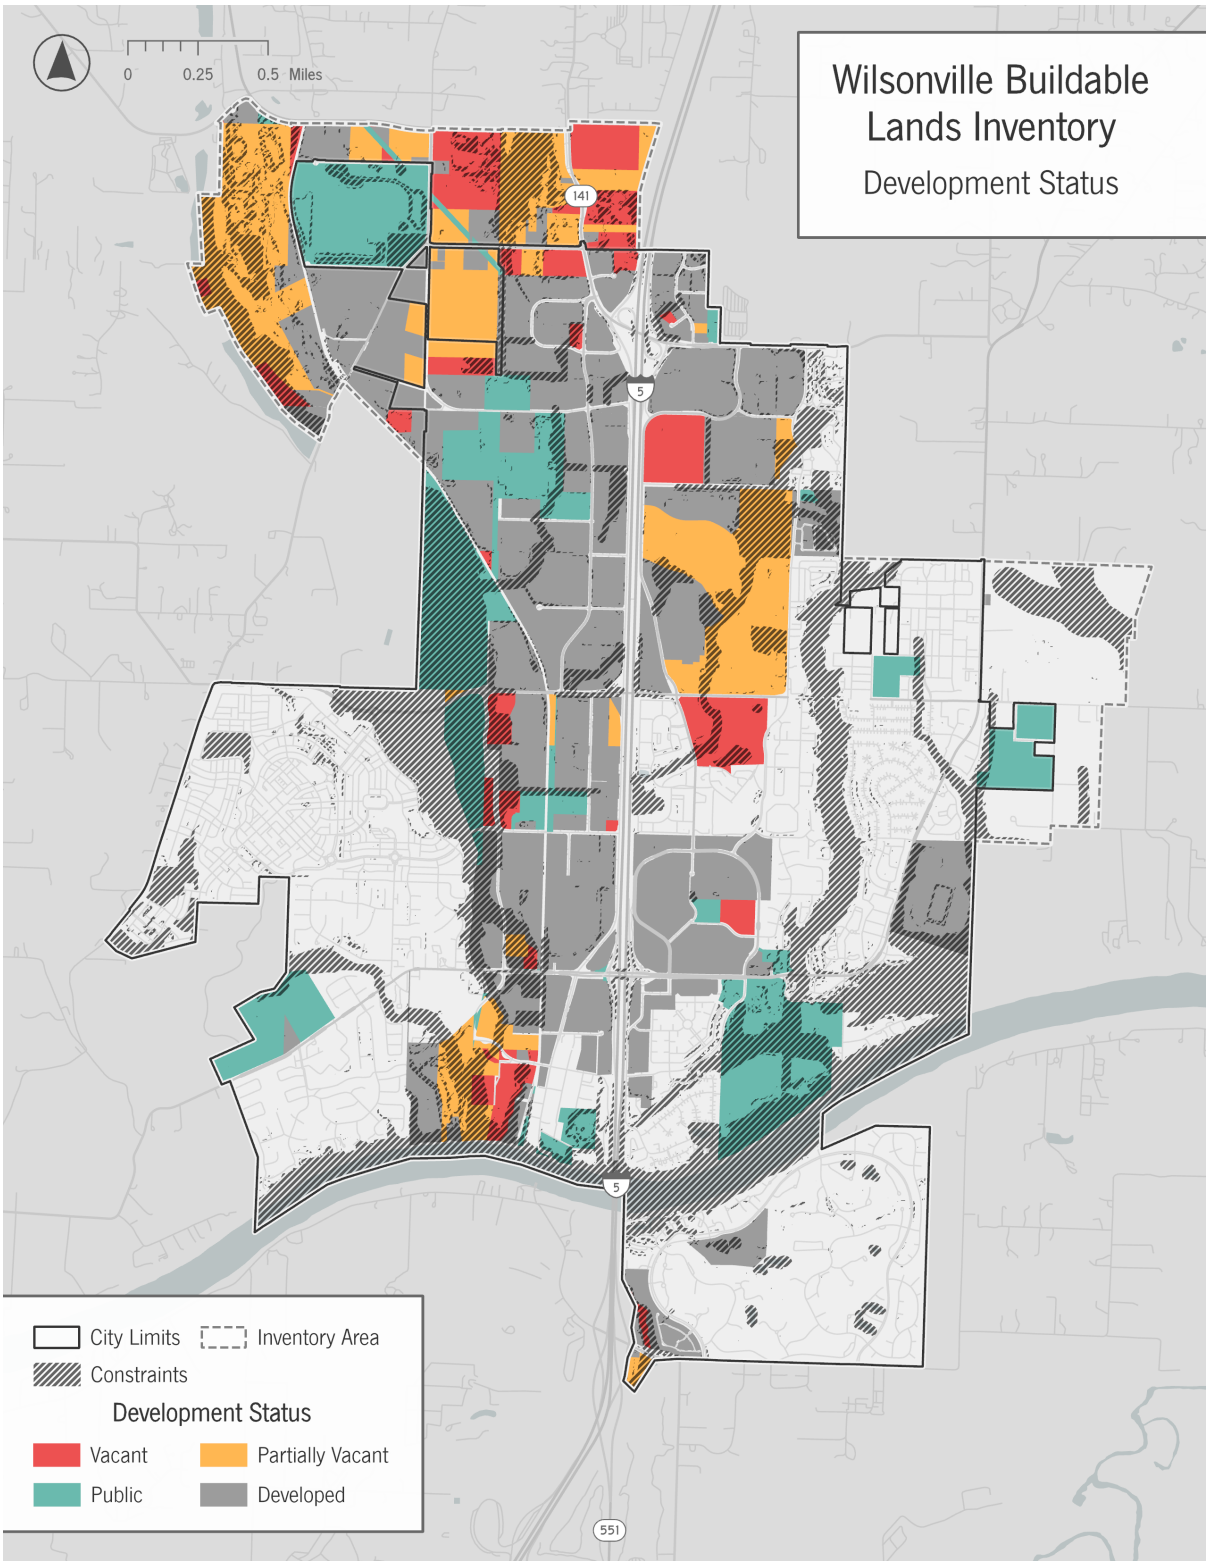
Development Constraints



The BLI identifies the following conditions as constraints that prohibit development. These constraints are shown in Figure 1:

- FEMA 100-Year Floodplains and Regulatory Floodway
- High or very high landslide susceptibility
- Slopes greater than 15%
- Title 3 (Stream and Floodplain Protection Plan)
- Title 13 (Habitat Conservation Areas)
- Significant Resource Overlay Zone (SROZ)
- Natural Resource Areas (riparian areas, upload tree groves, or wetlands) identified by Pacific Habitat Services in the Basalt Creek area

Figure 2 shows buildable area status with constraints applied, resulting in buildable acres. Land classified as vacant or partially vacant and affected by these constraints is deemed unavailable for development and has been excluded from the inventory of buildable land.



It is important to note that tax lots shown as partially vacant in the map do not distinguish the part of the tax lot that is unavailable for development. However, the buildable lands inventory database accounts for these distinctions.

Exhibit 34. Development Constraints, Wilsonville City limits and UGB area, 2025

Exhibit 35. Buildable Area Status with Constraints, Wilsonville City limits and UGB area, 2025

Source: ECOnorthwest analysis, City of Wilsonville, Metro

Vacant Buildable Land

The next step in the BLI involved removing portions of vacant and partially vacant tax lots deemed unsuitable for development. Unsuitable areas fall into two categories:

1. Developed portions of partially vacant tax lots.
2. Areas affected by physical constraints (i.e., areas within wetlands, floodplains, steep slopes, etc.).

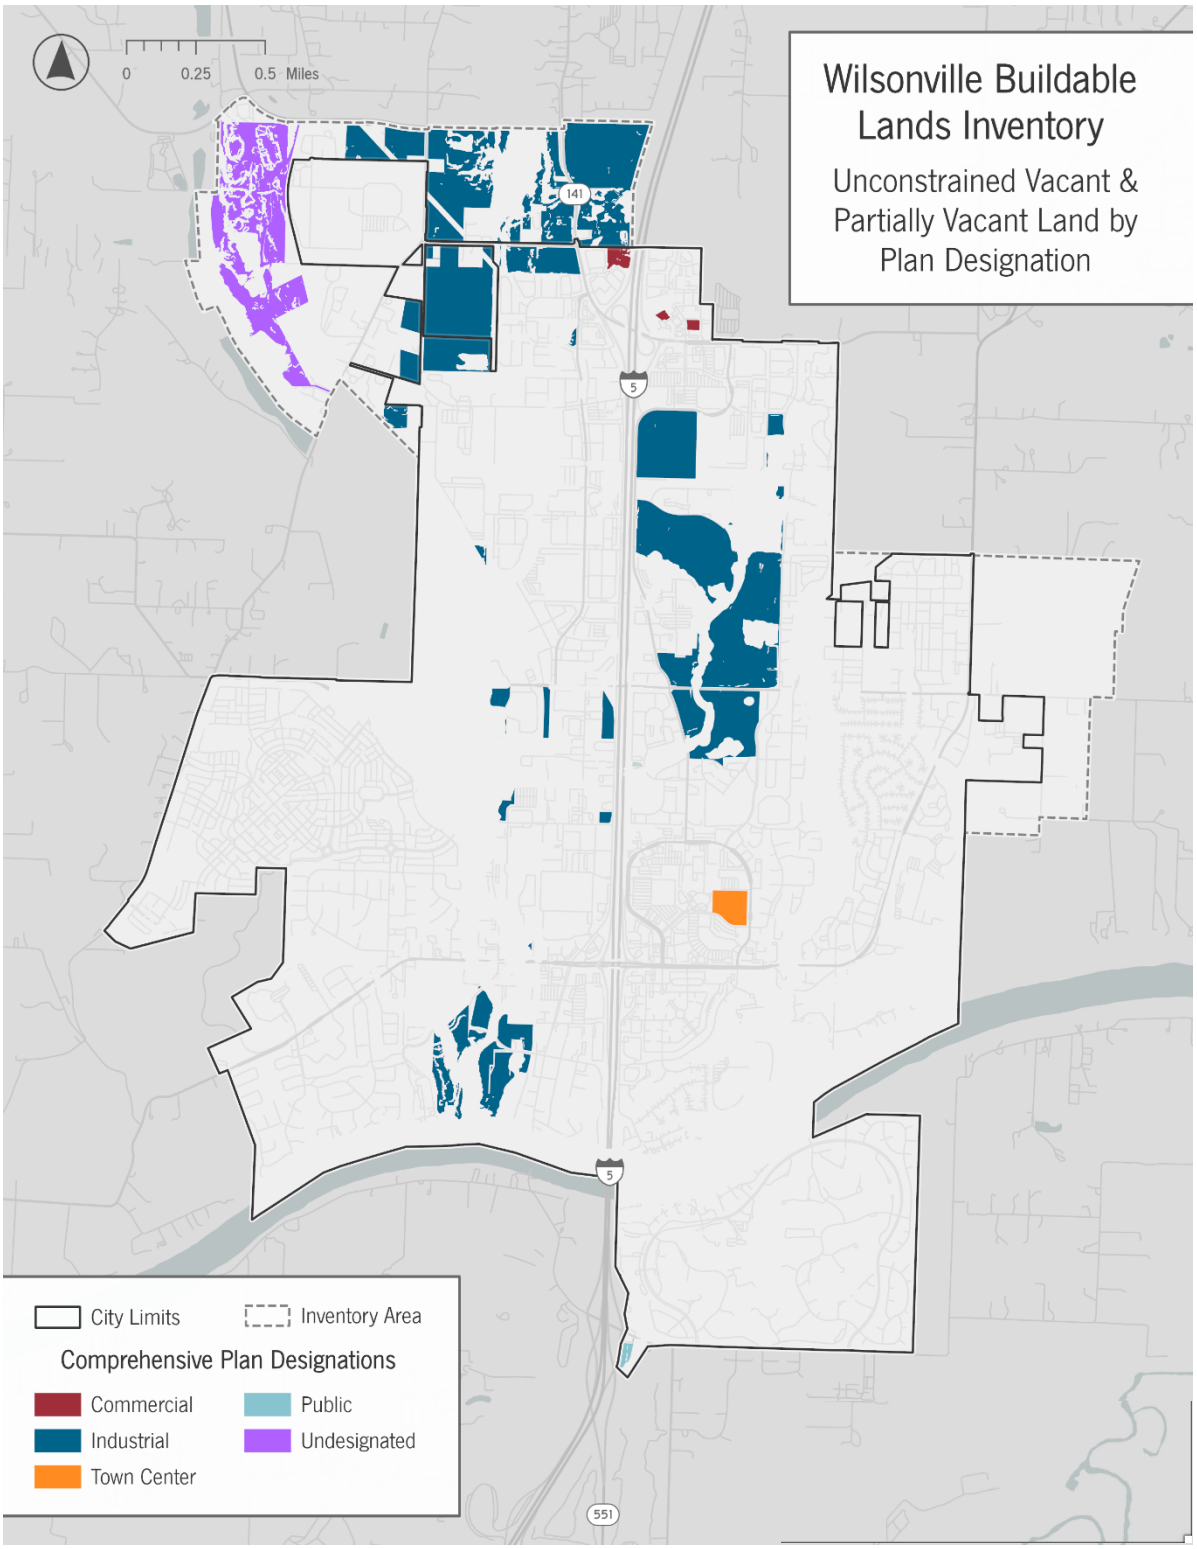

Exhibit 36 presents the total buildable acres by Comprehensive Plan designation after these constraints have been deducted. This includes both vacant and partially vacant lands in the Wilsonville City limits and UGB area. Figure 3 shows a map of the buildable commercial and industrial lands within the Wilsonville City limits and UGB area, also categorized by Comprehensive Plan designation. Overall, the Wilsonville City limits and UGB area contains 366 total buildable acres available for future development.

Exhibit 36. Buildable Acres in Vacant/Partially Vacant Tax Lots by Wilsonville Comprehensive Plan Designation, Wilsonville City limits and UGB area, 2025

Plan Designation	Total Buildable Acres	Buildable Acres on Vacant Lots	Buildable Acres on Partially Vacant Lots
Commercial	4	4	0.3
Industrial	308	178	130

Short-term Land Supply

This section reviews Wilsonville's short-term supply of employment land within the context of state policy requirements.

Policy Context

The Goal 9 Administrative Rule (OAR 660-009) includes provisions that require certain cities to ensure an adequate short-term supply of industrial and other employment lands. OAR 660-009- 005(10) defines short term supply as follows:

> "...means suitable land that is ready for construction within one year of an application for a building permit or request for service extension. Engineering feasibility is sufficient to qualify land for the short-term supply of land. Funding availability is not required. "Competitive Short-term Supply" means the short-term supply of land provides a range of site sizes and locations to accommodate the market needs of a variety of industrial and other employment uses." ∂

The Goal 9 rule also requires cities in a Metropolitan Planning Organization (MPO, which includes Wilsonville) to make a commitment to provide a competitive short-term

supply of land and establishes targets for the short-term supply of land. Specifically, OAR 660-009-0020(1)(b) states:

> "Cities and counties within a Metropolitan Planning Organization must adopt a policy stating that a competitive short-term supply of land as a community economic development objective for the industrial and other employment uses selected through the economic opportunities analysis pursuant to OAR 660-009-0015."

The rule goes on to clarify short-term land supply targets for cities in an MPO (OAR 660-009- 0025):

> (3) Short-Term Supply of Land. Plans for cities and counties within a Metropolitan Planning Organization or cities and counties that adopt policies relating to the short-term supply of land must designate suitable land to respond to economic development opportunities as they arise. Cities and counties may maintain the short-term supply of land according to the strategies adopted pursuant to OAR 660-009-0020(2).
>
> (a) Except as provided for in subsections (b) and (c), cities and counties subject to this section must provide at least 25% of the total land supply within the urban growth boundary designated for industrial and other employment uses as short-term supply.
>
> (b) Affected cities and counties that are unable to achieve the target in subsection (a) above may set an alternative target based on their economic opportunities analysis. ECONorthwest Chapter 2: Buildable Lands Inventory 2–21
>
> (c) A planning area with 10% or more of the total land supply enrolled in Oregon's industrial site certification program pursuant to ORS 284.565 satisfies the requirements of this section.

In summary, the rule requires Wilsonville to assess the short-term supply of employment land based on the criteria that land can be ready for construction within one year. The determination is based on "engineering feasibility."

Analysis of Short-term Supply of Land

City of Wilsonville staff used the results of the buildable lands inventory to identify commercial and industrial sites that meet the definition of short-term supply. Short-term land supply includes all sites within Coffee Creek and all lands located south of SW Day Road and/or within City limits.

In Basalt Creek, the area along and immediately south of SW Day Road represents the primary corridor for near-term development. These properties are considered part of the short-term supply because of their access to existing utilities and proximity to City limits. Sites in the northern portion of Basalt Creek were excluded due to utility constraints that may take longer to address, meaning development could extend beyond one year from the time a building permit is submitted. The West Railroad area of Basalt Creek is not considered short-term.

Overall, Wilsonville has 13 acres of commercial land (across 7 sites) and 200 acres of industrial land (across 59 sites) in the short-term supply. In comparison to all unconstrained vacant and partially vacant commercial and industrial land (from **Exhibit 36**) 100% of Wilsonville's commercial land (including Town Center) is in the short-term supply and 57% of industrial land (including land identified as undesignated) is in the short-term supply.

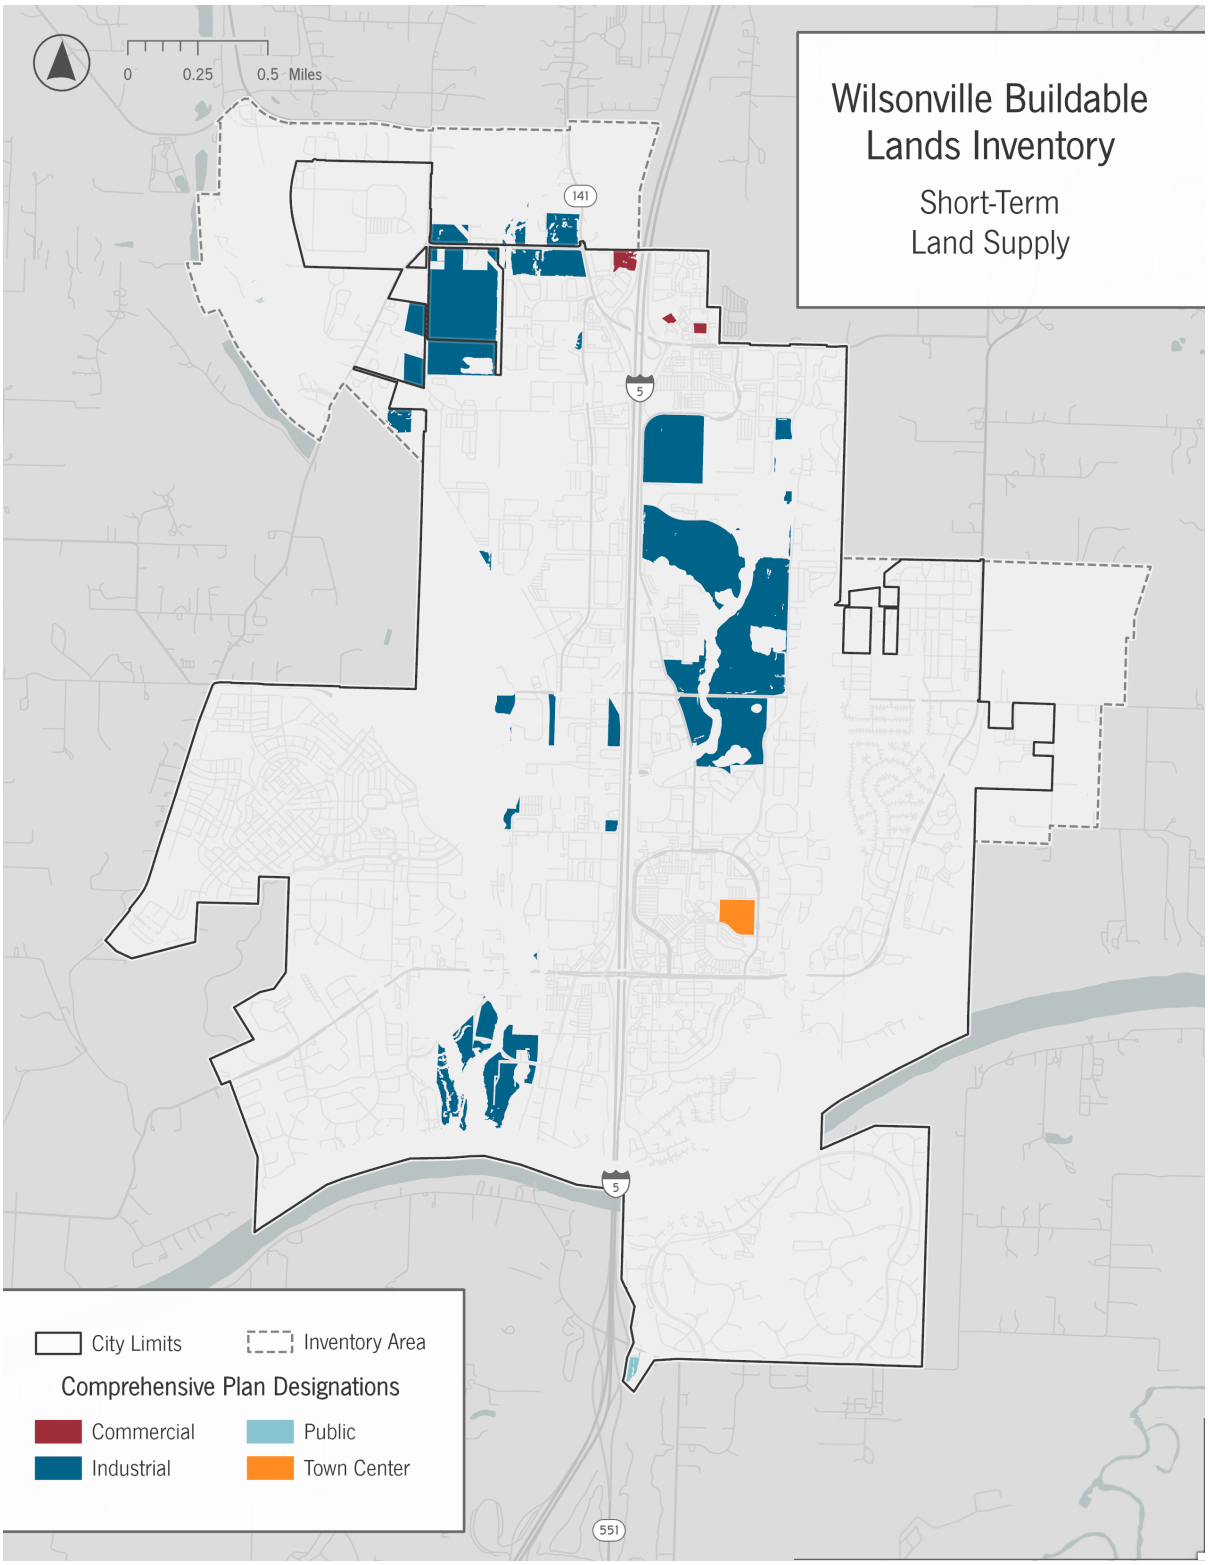

Exhibit 39 shows the short-term supply of employment land by plan designation. **Exhibit 40** shows a map of Wilsonville's short-term land supply.

Exhibit 39. Short-term Supply of Employment Land, Wilsonville City Limits and UGB Area, 2025

Plan Designation	Unconstrained Land		Short-Term Land Supply

5. Land Sufficiency and Conclusions

This chapter presents conclusions about Wilsonville's employment land sufficiency for the 2026–2046 period, as well as recommendations for the City to consider for meeting its economic growth needs throughout the planning period.

Land Sufficiency

Exhibit 41 shows commercial and industrial land sufficiency within Wilsonville. It shows:

- **Vacant unconstrained land within Wilsonville's Planning Area**. This land is identified and discussed in detail in the Vacant Buildable Land section of this report. Using data from that section, **Exhibit 41** shows that Wilsonville has 353 gross acres of vacant industrial land and 13 gross acres of vacant commercial land available for development.
- **Demand for commercial and industrial land.** The Estimate of Demand for Commercial and Industrial Land section of this report describes the methodology used to identify demand. Based on assumptions described in that section, Wilsonville will need a total of 321 gross acres for industrial uses and 110 gross acres for commercial uses over the 2026-2046 period (**Exhibit 28**).
- **Land sufficiency.** When subtracting the demand for land from the supply of vacant unconstrained land, **Exhibit 41** shows that Wilsonville has:
  - A 32-acre surplus of industrial land, and
  - A 47-acre deficit of vacant unconstrained commercial land after accounting for near-term redevelopment and reuse opportunities.

  As described below, Wilsonville has several opportunities to increase the efficiency and intensity of development on existing commercial land, which will help meet the City's projected commercial land needs during the planning period.

Exhibit 41. Comparison of the Capacity of Unconstrained Vacant Land with Employment Land Demand by Land Use Type, Wilsonville, 2026-2046

Comprehensive Plan Designation	Land Supply (Gross Acres)	Land Demand (Gross Acres)	Redevelopment & Reuse Potential (Gross Acres)	Land Sufficiency (Gross Acres)
Industrial & Undesignated	353	321	N/A	32
Commercial & Town Center	13	110	50	(47)

Source: ECOnorthwest
Note: Redevelopment and reuse potential reflect known near-term opportunities in Town Center and reuse of large vacant sites such as the former Rite Aid, Albertsons, Regal Cinema, and Fry's Electronics properties. ECO did not model redevelopment of industrial sites, as the City has a surplus of industrial land within the planning period.

The target industries identified for Wilsonville include a mix of manufacturing, wholesale trade, and construction businesses, along with retail and commercial services that serve residents and employees (see *Potential Growth Industries*). Site needs for these industries range from space in existing buildings and redevelopment opportunities to large industrial sites of 25 acres or more for manufacturing and distribution (see *Site Needs for Potential Growth Industries*).

Exhibit 38 shows the following characteristics of Wilsonville's vacant, buildable employment land supply:

- **80 sites** smaller than 5 acres, including four in the commercial or Town Center designation and the remainder designated for industrial use
- **21 sites** ranging from 5 to 25 acres, with one in the Town Center designation and the rest industrial
- **2 industrial sites** between 25 and 50 acres, totaling 64 acres

Meeting future commercial land needs will depend primarily on redevelopment, particularly within Town Center. Based on this information and the analysis in **Exhibit 41**, Wilsonville has sufficient land to accommodate projected industrial growth but faces a limited supply of vacant commercial land. The City can address this gap through redevelopment, reuse of existing buildings, and targeted policy changes.

Town Center is a key redevelopment area, particularly for smaller, experience-based retail and food and beverage businesses. Several large vacant buildings, including the former Rite Aid, Albertsons, Regal Cinema, and Fry's Electronics, also offer opportunities for reuse to meet commercial needs. In addition, the City is evaluating whether certain industrial areas could support more commercial activity through zoning or policy adjustments.

Although Wilsonville has sufficient industrial land overall, much of it consists of small parcels under five acres. Assembling larger sites, either by the City or by the private sector will be important to meeting the needs of future industrial users and supporting long-term employment growth.

Conclusions

- **Wilsonville is forecasted to grow in both the commercial and industrial employment sectors.** Wilsonville is planning for growth of 6,132 new jobs in the City over the 2026 to 2046 period. About 2,642 of the jobs will be industrial, 2,690 of the jobs will be in office and commercial services, and 538 in retail. Growth of these jobs will result in demand for about 321 gross acres of industrial land and 110 gross acres of commercial land.
- **Wilsonville has a sufficient supply of industrial land to accommodate projected employment growth.** The City has approximately 353 acres of vacant, buildable industrial land compared with a forecasted demand of 321 acres, resulting in a small surplus of 32 acres.
- **Much of Wilsonville's industrial land is not development ready.** Most of the City's industrial supply is concentrated in the Coffee Creek and Basalt Creek planning areas. Coffee Creek benefits from an established Urban Renewal District that funds infrastructure improvements and enhances site readiness. In contrast, Basalt Creek faces similar challenges, including fragmented ownership, smaller parcel sizes, existing contractor establishments, and limited urban infrastructure such as water, sewer, and improved road access, but without the benefit of urban renewal. Wilsonville has about 80 vacant industrial sites that are smaller than five acres, totaling roughly 140 acres. Assembling larger, contiguous parcels and continuing infrastructure investment will be essential to unlocking Wilsonville's full industrial potential and supporting higher-intensity employment uses.
- **Wilsonville has limited vacant commercial land but strong redevelopment potential.** The City currently has about 13 acres of vacant, buildable commercial land compared to a forecasted need of 110 acres, creating a shortfall of about 97 acres. However, much of this future demand can be met through redevelopment and targeted policy adjustments. Town Center is the City's primary opportunity for new commercial and mixed-use growth, particularly for experience-based retail, food, and beverage businesses. Several large vacant buildings, including the former Albertsons, Rite Aid, Regal Cinema, and Fry's Electronics, offer near-term opportunities for reuse or redevelopment. Together, these known sites account for about 50 acres of redevelopment potential. The City is also exploring whether certain industrial

areas could accommodate commercial uses through zoning or policy updates. These strategies will be important for maintaining a balanced employment land supply and supporting Wilsonville's long-term economic growth.

- **Wilsonville's average wages are higher than the regional average.** Wilsonville's average annual wage is approximately $78,235 compared with $76,066 for the Portland region. The City's employment base includes a concentration of higher-wage sectors such as manufacturing, wholesale trade, and construction. This distinguishes Wilsonville from nearby communities, where average wages tend to be lower. Potential growth industries in Wilsonville generally provide above-average wages, except for resident- and visitor-oriented services such as retail, food services, and accommodation.
- **Wilsonville's economic outlook is strong.** The City's opportune location along the I-5 corridor, access to regional labor markets, and industrial land supply provide a solid foundation for continued economic growth. Ongoing investment in site readiness, infrastructure, and redevelopment will be essential to maintaining Wilsonville's position as a leading employment center in the Portland metro region.

Recommendations

1. **Implement the Economic Development Strategy (EDS) as the City's primary action plan for responding to the EOA.** The EDS translates the EOA's findings into coordinated near-term and longer-term actions, including steps to improve industrial site readiness, address infrastructure constraints, and support commercial growth through redevelopment and reuse. Implementing the EDS will help the City prioritize investments and partnerships, track progress over time, and maintain a competitive short-term supply of market-ready employment land.

2. **Update the Comprehensive Plan to align with Goal 9 requirements for maintaining a competitive short-term supply of employment land.** OAR 660-009 requires jurisdictions to translate EOA findings into Comprehensive Plan policies and implementing measures (OAR 660-009-0020 and OAR 660-009-0025). The City is planning a broad update of the Comprehensive Plan in the future. Through that, the City should include a policy (required by Goal 9) to maintain a competitive short-term supply of employment land and adopt implementing measures to maintain and replenish that supply as it is developed.

EOA AND THE EDS: HOW THEY WORK TOGETHER

The EOA provides the required technical foundation for employment land planning, including employment forecasts, land demand, site needs, and an inventory of employment land supply and constraints. The companion EDS builds on the EOA by identifying implementation actions the City can pursue to address key issues such as industrial site readiness and the reliance on redevelopment to meet commercial needs. The EDS is presented in Appendix C.

Appendix A. National, State, and Local Economic Trends

The economic trends discussed in this appendix are based on long-term trends that are generally expected to continue on national, state, and regional scales.

National and State Trends

Economic development in Wilsonville over the next 20 years will occur in the context of long-run national and state trends. The most important of these trends are as follows:

- **Slower labor force growth will be offset by increased productivity gains.** According to the Oregon Office of Economic Analysis (OEA), long-term economic growth is shaped by two primary factors: the number of workers and their productivity. Oregon's labor force growth is slowing due to persistently low birth rates and ongoing shifts in migration trends—factors that have led to downward revisions in the state's population growth outlook. OEA anticipates that economic growth will be increasingly driven by gains in productivity as employers adapt to a tight labor market.

  - Employment is still expected to grow, but at a slower pace than previously forecast. Total nonfarm employment is projected to grow at an average annual rate of 0.6% through 2034, down from higher rates seen in prior decades. Productivity, meanwhile, is expected to rebound, supported by rising capital investment and the adoption of technologies like generative artificial intelligence (AI). These forces are expected to help businesses operate more efficiently and maintain economic momentum despite a slower-growing workforce.[42]

- **Manufacturing remains vital to Oregon's economy but faces near-term employment declines.** Manufacturing accounts for a slightly larger share of employment in Oregon compared to the national average, with 9.9% of jobs in the sector versus 8.4% nationally. [43] Over the long term, Oregon's manufacturing sector has experienced stronger growth than the nation. Since

[42] Oregon Economic Analysis, Oregon Economic and Revenue Forecast, March 2025. Vol. XLV, No. 1. Release date February 2025, https://www.oregon.gov/das/oea/Documents/OEA-Forecast-0325.pdf
[43] Oregon Employment Department, Made in Oregon: A profile of the State's Manufacturing Sector, May 2024.

reaching its lowest employment level in 2010, manufacturing employment in Oregon increased by 15% through 2023, compared to 13% nationally.[44]

Despite this long-term growth, recent trends have been less favorable. While most of the jobs lost during the pandemic were recovered, manufacturing employment in Oregon remains below 2019 levels and declined throughout much of 2023. Since January 2019, Oregon's manufacturing employment has decreased by 6%, while national manufacturing employment has increased by 1%.[45] Rising costs, particularly in housing and taxes, coupled with recent policy shifts, may be outweighing Oregon's traditional quality-of-life benefits for manufacturers. The lack of development-ready land is also frequently cited as a primary obstacle for manufacturers looking to expand in or relocate to Oregon, potentially driving businesses to other states.[46]

These recent setbacks are notable given the state's historical strength in manufacturing and stand in contrast to national trends, where the sector has been more resilient. Although federal investments like the CHIPS Act may offer long-term opportunities, their impacts have yet to materialize in job growth.[47] Overall, Oregon's manufacturing sector continues to reflect a broader statewide shift toward increased productivity and capital investment, rather than labor-driven expansion. It remains an essential part of the economy, but its contribution to short-term job growth is likely to be limited.[48]

- **Rising trade tensions increase risks to Oregon's export-dependent economy.** Oregon's economy is particularly sensitive to changes in national trade policy due to its high reliance on exports and manufacturing, which together account for a significant share of the state's GDP.[49] Core export sectors, including semiconductors, machinery, transportation equipment, and agricultural products, are especially vulnerable to global market disruptions.

  The state's exposure is further heightened by the concentration of its exports. More than 50% are destined for just three countries: Mexico, China, and Canada.[50] This creates a heightened risk that disruptions with any one

[50] Ibid

trading partner could have broad economic impacts. Recent tariff policies introduced by the Trump Administration in early 2025 have added to these concerns.

Oregon's elevated export share of GDP places the state in a vulnerable position should trade tensions escalate. Policymakers often reference the 2018–2019 trade war as a cautionary example. During that period, rising tariffs and retaliatory measures contributed to a 2.5 percentage point decline in state economic growth.[51] A similar slowdown remains a risk if current disputes continue to intensify.

- **Tighter immigration policies may constrain Oregon's labor supply in key industries.** Stricter immigration policies initiated by the Trump Administration are expected to reduce labor availability in several key sectors that rely heavily on foreign-born workers, including construction, agriculture, food processing, and hospitality. The Oregon Office of Economic Analysis notes that immigration policies will remain a critical variable shaping the state's labor market flexibility and long-term growth prospects. Given Oregon's reliance on net in-migration for workforce growth, federal immigration restrictions may exacerbate hiring challenges, limit productivity, and increase wage inflation in affected sectors.[52]
- **Increases in automation across sectors reshapes workforce demands.** Automation has been a long-running trend in employment, leading to productivity gains across sectors. Additionally, the enhancement of artificial intelligence (AI) is expanding automation possibilities beyond routine tasks to jobs previously thought impervious, such as office and cognitive roles. However, complete job replacement due to AI is expected to be minimal with task efficiencies and shifting tasks within jobs as more likely outcomes.[53,54] The U.S. Government Accountability Office (GAO) reports that automation could be widespread, with anywhere from 9% to 47% of jobs being automated in the future according to academic research.[55]

  The GAO identified that jobs requiring a blend of soft skills (management, interpersonal), process skills, and technical expertise face lower automation

[51] Oregon Economic Analysis, Oregon Economic and Revenue Forecast, March 2025. Vol. XLV, No. 1. Release date February 2025, https://www.oregon.gov/das/oea/Documents/OEA-Forecast-0325.pdf

risks. Most of the top 20 in-demand jobs share this mixed skill set trait, including nurse practitioners, statisticians, occupational therapy assistants, home health aides, physical therapist assistants, medical managers, physician assistants, information security analysts, and data scientists, among others.[56] Lower-wage jobs are the most likely to be automated. The GAO reported that over 80% of jobs paying less than $20 per hour are susceptible to automation over the next two decades. About 30% of jobs paying $20 to $40 per hour and 4% of jobs paying $40 or more per hour were also identified as at risk.[57]

Oregon's automation trajectory mirrors national trends, with lower and middle-wage jobs facing higher automation potential. The state's tight labor market may further drive productivity and efficiency gains bolstered by AI's transformative potential.

- **Shifts in the national commercial and industrial real estate markets:** Following the COVID-19 pandemic, commercial and industrial real estate markets continue to face challenging development conditions. The increased cost of capital has made many projects economically infeasible, especially speculative projects that rely on debt financing and those with longer loan payback periods.[58] Higher interest rates have also reduced property valuations, complicating the ability of developers to secure construction financing and attract equity investments.[59] Additionally, rising construction costs—driven by inflation and supply chain disruptions—have further complicated development efforts across these sectors.
  - **Demand for office space remains soft.** The U.S. office market is in decline, driven largely by the shift to remote and hybrid work. The share of employees working from home rose from 24% in 2019 to 33% in 2024.[60] This trend has contributed to ten consecutive quarters of negative net absorption and a national reduction of 18.2 million square feet in occupied office space.[61] Office construction has slowed substantially with the development pipeline down 67% since early 2020.[62] While high-quality office spaces in prime locations continue to

[61] Cushman & Wakefield, U.S. Office Marketbeat Q2 2024
[62] Ibid

attract tenants, older and mid-tier properties face uncertainty, with some being repurposed.

The office sector continues to recalibrate to hybrid work with attendance stabilizing in the 60-70% range on peak attendance days, setting a new baseline for space requirements. Cushman & Wakefield projects that overall occupancy will begin to stabilize in late 2025 as demand gradually returns, supported by headcount growth and new business formation.[63] Investment interest in traditional office properties remains weak, though medical office space shows strong prospects.[64]

- **Demand for retail space remains stable:** The U.S. retail market ended 2024 on a strong note, with 1.4 million square feet of net absorption in Q4 (the highest quarterly total of the year) and a steady shopping center vacancy rate of 5.4%. While total annual absorption declined substantially from 2023, and store closures reached their highest level since 2020, retail fundamentals remain resilient. Limited new construction and solid consumer spending have helped keep vacancy rates and rents stable. Looking ahead, retail growth is expected to continue at a slower, more strategic pace, with demand increasingly concentrated among top-performing brands.[65]
- **Strong and sustained demand for industrial space.** The industrial real estate market experienced strong growth over the past decade, with investment prospects improving significantly between 2014 and 2021. Historically, fulfillment and warehouse space have been the most attractive investment options, outperforming research and development, manufacturing, and flex space. However, in recent years, these distinctions have blurred, with all industrial subtypes now holding similar investment ratings just below "good."[66]

  While the market remained strong in 2022 and 2023, 2024 has seen signs of a slowdown. Vacancy rates have risen to 6.1% but remain below historical averages, with a peak of 6.7% expected in early 2025 before declining.[67] Despite slowing, rent growth continues at 3.7% year-over-year.[68] An increase in new supply (1.2 billion square feet in 2022-2023) has contributed to rising vacancies, but construction has since dropped 46%, tightening future inventory.[69] Looking ahead, the sector is expected

[69] Ibid

to stabilize, with sustained demand driven by reshoring, e-commerce, and evolving supply chain strategies.[70] The impact of recent trade policies and tariffs on industrial real estate demand remains uncertain, as they can both stimulate reshoring and new investment while also increasing costs and risking business contraction.

- **The aging of the baby boomer generation and the need for replacement workers.** As the baby boomer generation continues to retire, the number of Social Security recipients is expected to increase from over 65 million in 2023 to over 86 million in 2045, a 32% increase. In 2023, there were 36 Social Security beneficiaries per 100 covered workers, but by 2045, there is expected to be 45 beneficiaries per 100 covered workers. This will increase the percent of the federal budget dedicated to Social Security and Medicare.[71]

  While the Bureau of Labor Statistics projects total U.S. employment to grow by 4.7 million jobs from 2023 to 2032, this job growth is unlikely to be sufficient to replace all the baby boomer retirees leaving the workforce during that period. The BLS estimates there will be 18.6 million annual job openings arising from the need to replace retiring workers and workers changing occupations, in addition to openings from newly created positions.[72] The sectors expected to grow the fastest are healthcare support, computer and mathematical occupations, healthcare practitioners, and community and social service.[73]

- **Growth of entrepreneurship and small businesses.** The creation of new businesses plays a vital role in driving Oregon's economic growth. Start-ups generate employment opportunities, introduce innovative products and services, and help better serve local communities. According to the 2023 Small Business Profile from the U.S. Small Business Administration Office of Advocacy, small businesses (defined as having between zero and 500 employees) account for 99.9% of total businesses in the United States and employ 46% of the American workforce. Oregon's performance in early-stage

[70] JLL, Q1 2024 Industrial Outlook

[72] Bureau of Labor Force Occupational Separations and Openings, 2023-2032 https://www.bls.gov/emp/tables/occupational-separations-and-openings.htm
[73] Bureau of Labor Statistics Employment Projections – 2023-2032, September 2023 https://www.bls.gov/news.release/pdf/ecopro.pdf

entrepreneurship activity, as measured by the Kauffman Early-Stage Entrepreneurship (KESE) Index, ranked 25th in the country in 2020.[74,75]

Start-up activity had been trending down for decades in Oregon and across the nation leading up to the pandemic, but since the pandemic, new business formation has increased and appears to be maintaining this higher rate.[76] In terms of outlook for start-ups, several key factors are at play. High inflation, rising interest rates, and recession risks, along with tighter venture capital and banking lending conditions, will likely slow new business formation. However, several favorable factors could mitigate these impacts and support continued strength in entrepreneurship and small business formation in Oregon. These include increased personal savings and home equity levels, which are common funding sources for new businesses, along with the shift toward remote work opportunities and the large millennial generation entering their prime entrepreneurial years (late 30s and early 40s, according to Census Bureau research).[77]

- **Continued transformation of retail.** In the last two decades, retail sales by e-commerce and warehouse clubs/supercenters (a lower-cost model to the traditional department store) have increased steadily. Online retail purchases increased from about 6% of all retail purchases in 2014 to about 16% of retail purchases in 2023.[78] Ultimately, the growth in online shopping and the increasing dominance of large supercenters has made it difficult for small and medium-sized retail firms (offering a narrower selection of goods) to compete. Declining net profits and increased competitive pressures have led many well-known retailers (e.g., JCPenney, Macy's, Sears) to declare bankruptcy or to scale back their operations.

  In the future, the importance of e-commerce will likely continue to grow. However, despite the highly publicized closures of brick-and-mortar stores, physical retail is likely to remain an important part of the retail sector as well. Since modern consumers are increasingly price sensitive, less brand loyal, and (since the advent of internet) able to substitute between retailers

[78] U.S. Census Bureau News, Quarterly Retail E-Commerce Sales, 4th Quarter 2023 https://www.census.gov/retail/mrts/www/data/pdf/ec_current.pdf

easily, retailers must be nimble and able to adjust to the changing needs of their customers if they are to remain competitive.

The types of brick-and-mortar retail and related services that are likely to remain viable are those offering goods that consumers prefer to purchase in person or goods that are difficult to ship and return, such as large furniture items. Additionally, retailers specializing in groceries, personal goods that are needed immediately, restaurants, and experiential offerings like entertainment or social activities are expected to maintain their presence. According to the Urban Land Institute, large retailers such as Macy's, Nordstrom, Kohl's, and Ikea are experimenting with downsizing storefronts to operate spaces that can be flexible to changing consumer needs. These locally scaled shops feature in-person merchandise and services that are in demand for modern consumers: curated inventory, tailored services, and e-commerce fulfillment.[79]

- **Changing places where work is being done.** The COVID-19 pandemic accelerated the shift to remote work, with the share of employees working from home increasing from 24% in 2019 to 33% in 2024, according to the Bureau of Labor Statistics' American Time Use Survey.[80] However, the ability to work remotely is not equally distributed. Those most likely to have remote work opportunities tend to have higher educational attainment, be white or Asian, and be over 25 years old.[81] This uneven access to remote work raises equity concerns, as certain demographic groups may be disadvantaged in accessing these flexible work arrangements.

  Remote work trends have consequences for downtown health and recovery. OEA found that downtown recoveries are not driven by regional economic changes but rather are impacted by the strength of three components: workers, residents, and visitors.[82] If a significant portion of previous downtown workers are now working remotely from other locations, downtowns need to capture or bolster resident and visitor spending to counteract this shift.

  In 2025, major employers like Amazon, Dell, Walmart, and federal agencies have issued full-time return-to-office (RTO) mandates to justify office costs, boost perceived productivity, and reassert control—often in response to stock

[81] Ben Casselman, Emma Goldberg, and Ella Koeze. "Who still works from home?" *New York Times,* March 8, 2024.

[82] Oregon Office of Economic Analysis, Downtown Recoveries 2023 Update, https://oregoneconomicanalysis.com/2023/07/18/downtown-recoveries-2023-update/

declines. Yet, remote work remains far more common than before the pandemic, with over one in four U.S. workdays in 2024 done from home, up from one in fourteen pre-pandemic. Remote job postings are down, but demand remains high: just 20% of LinkedIn listings are remote or hybrid, yet they attract 60% of applications. While the current labor market favors employers, experts expect that retirements and an aging workforce will tighten labor supply, prompting a renewed need for flexibility. Smaller firms are already using remote options to attract talent, pointing to a future where workplace flexibility is a competitive necessity.[83]

- **Continued increase in demand for energy even as the sources supplying that energy shifts.** The 2023 Inflation Reduction Act aimed to drive increased investments in climate and energy projects across the United States.[84] As a result of the renewable energy investments and subsidies, the nation's energy consumption pattern is anticipated to undergo a shift over the coming years. There is an expected move away from traditional fossil fuels like crude oil and natural gas toward renewable energy sources.[85]

  However, this shift is not expected to reduce overall energy consumption. From 2023 to 2050, the U.S. Energy Information Administration (EIA) estimates that total energy consumption will rise due to population growth and economic expansion outpacing efficiency gains. This increasing demand is anticipated to be driven primarily by the industrial sector and, to a lesser extent, transportation.

- **Impact of rising energy prices on commuting patterns.** As energy prices increase over the planning period, transportation energy consumption is expected to shift to electric or fuel-efficient vehicles.[86] The share of electric vehicles is expected to grow from less than 6% in 2023 to 19% in 2050.[87] The Energy Information Administration estimates an 8% increase in transportation energy consumption, partially attributable to increasing vehicle miles traveled (VMT) that offset efficiency upgrades. With expected increases in fuel economy, people may commute farther while consuming less energy. VMT for passenger vehicles is forecasted to increase between 12% and 33% through 2050. Lower-income households may face financial

[85] Energy Information Administration, Inflation Reduction Act of 2023

[86] Energy Information Administration, 2023, *Annual Energy Outlook 2023 with Projections to 2050*, U.S. Department of Energy, March 2023.

[87] Energy Information Administration, 2019, *Annual Energy Outlook 2019 with Projections to 2050*, U.S. Department of Energy, January 2019.

barriers to efficiency upgrades and tend to have longer commutes, which may force them to face the brunt of rising energy prices.

- **High rates of inflation.** For the last several decades, inflation rates have generally stayed below 3% in the United States. Inflation started to increase in 2021, reaching 9.1% in June 2022 year-over-year, the largest annual increase in about 40 years.[88] In December 2024 the annual inflation rate was 2.9%, a marked reduction from the 2022 inflation rate.[89] Continued high rates of inflation may slow economic growth, further erode purchasing power, discourage savings, and lead to a national recession. Recent tariff policies and trade tensions may lead to new increases in inflation in 2025 and beyond.
- **Income gains in Oregon.** Oregon's economic growth in the past decade has led to improvements in the state's income and wage levels relative to the rest of the nation. Notably, Oregon's median household income has surpassed the national level for the first time in over 50 years.[90] Higher incomes can have positive impacts on an economy through improved standards of living and higher consumer spending, increased tax revenue potential, and talent attraction and retention, among others.
- **Potential impacts of global climate change**. Oregon and the Pacific Northwest have been experiencing the impacts of global climate change over the past 30 years, exacerbated by extreme events such as the 2020 Labor Day fires that burned over 840,000 acres in Oregon and the June 2021 heat dome that caused temperatures to soar to 111°F in Eugene and 116°F in Portland.[91] According to the National Oceanic and Atmospheric Administration (NOAA), between 1980 and 2023, the U.S. experienced an average of 8.5 weather-related disasters per year where overall damages/costs reached or exceeded $1 billion (adjusted for inflation). However, the number of such events has increased in the last five years, with an average of 20.4 events per year.[92] The Pacific Northwest is not only experiencing an increased frequency and severity of extreme weather events but also long-term climatic changes. These long-term changes include:

[88] Bureau of Labor Statistics, U.S. Department of Labor, *The Economics Daily*, Consumer prices up 9.1% over the year ended June 2023, largest increase in 40 years at https://www.bls.gov/opub/ted/2023/consumer-prices-up-9-1-percent-over-the-year-ended-june-2023-largest-increase-in-40-years.htm (visited *July 25, 2023*).

[92] https://www.ncei.noaa.gov/access/billions/#:~:text=Menu-,Overview,376%20events%20exceeds%20%242.655%20trillion.

- **Increased average annual day and nighttime temperatures.** If greenhouse gas (GHG) emissions continue at the current rate, temperatures in Oregon are projected to rise approximately 5°F by the 2050s and 8.2°F by the 2080s.[93] These higher overall temperatures can have consequences, including increased mortality rates, the spread of diseases, and the forced migration of plants and animals as ecosystems undergo changes. Vegetation may become stressed and die, leading to an accumulation of fuel loads that heighten the risk of wildfires. Some areas that were once forestlands are transitioning into shrublands after being affected by forest fires.
- **Reduced snowpack and increased drought conditions.** As temperatures increase, snowpack is anticipated to decrease, reducing stream levels and water availability in the summer months.[94] Drought conditions can reduce surface water availability, reduce hydropower generation, and reduce recreational activities.[95]
- **Increased risk of high heat events.** Climate change increases the likelihood of experiencing high heat events like the June 2021 extreme heat wave that resulted in temperatures ranging from 110°F to 120°F in Oregon and Washington. This heat event caused approximately 159 deaths in Washington and more than 100 deaths in Oregon.[96,97]
- **Increased risk of wildfire.** Changing precipitation patterns and drought conditions are increasing fuel loads in wildland areas, increasing the risk of wildfires throughout the Pacific Northwest. Wildfire intensity, duration, and size have increased.
- **More days of poor air quality from wildfire smoke.** In 2021, people in Deschutes County, Klamath County, and Jackson County experienced 83

[97] Vital Statistics Report. Oregon: Oregon Health Authority, Public Health Division, Center for Health Statistics. Prepared September 2021; data are preliminary and subject to change.

days of air quality at or above unhealthy levels for sensitive groups due to wildfire smoke.[98]

- **More floods and atmospheric rivers.** The University of Washington's Climate Impact Group forecasts that the Pacific Northwest will experience slightly more precipitation in the fall, winter, and spring and less in the summer.[99] Extreme precipitation events are more likely to produce flooding, erosion, and landslides. These changes can threaten salmon and other species. Adaptation to extreme events could require expensive upgrades to stormwater systems.

Climate change will have a wide range of impacts on industries and communities throughout the Pacific Northwest. While some industries are more resilient to climate change, others that require predictable delivery of water, such as agriculture and hydropower, are more vulnerable to climate change. Climate change and extreme weather events also impact human health and disrupt travel. Land use decisions, in part, determine the risk that homes, businesses, schools, hospitals, and other buildings face from climate change. Development patterns in at-risk areas like tsunami zones, floodplains, wetlands, wildland-urban interfaces, and other hazardous locations will impact the economic vitality and resilience of communities as climate change accelerates.

- **Agriculture.** Climate change impacts the quality and quantity of agricultural products. For example, exposure to cold weather during dormancy is important for fruit set and quality in many perennial crops. Exposure to cold weather may increase in northern areas of the Pacific Northwest and decrease in southern areas.[100] A study by the Washington State Department of Agriculture found that a drought in 2015 caused $633 to $773 million in agricultural losses.[101] Drought and shifting precipitation patterns represent major threats, as drought reduces feed on rangelands for livestock and decreases water available for irrigation.
- **Aquatic/Fishing.** Marine heat waves impact fresh and saltwater habitats and species. In 2021, algal blooms exacerbated by increased temperatures resulted in a $641.1 million (in 2023 dollars) loss of

commercial fishing revenue.[102] Tribes are often disproportionately impacted, accounting for half of fishery loss requests and experiencing losses from Dungeness crab fisheries. [103,104]

- **Forestry.** Forest plants and animals vulnerable to temperature and drought stresses are undergoing climate-induced die-offs. Five fir species in Oregon, Washington, and Northern California are experiencing severe mortality dubbed "Firmageddon."[105] Species at the edges of their ranges are expected to succumb first and may shift to higher elevations or northward. Die-offs include Douglas fir, a primary commercial timber species. Die-offs and stressed trees face higher risks of pest infestations and increase the risk of wildfires.
- **Human health.** With many Pacific Northwest households lacking air conditioning, higher summer temperatures and extreme heat events endanger vulnerable groups like older adults, low-income residents, those with disabilities, and individuals living alone who face heightened risks of heat stroke and death.
- **Tourism, Recreation, and Service Industries.** The Northwest tourism and recreation industry employs about 588,000 people and supports almost $60 billion (in 2023 dollars) in annual expenditures.[106] Climate impacts will vary as decreased snowpack will make trails and camping accessible later in the fall and earlier in the spring, but increased extreme events from atmospheric rivers may increase maintenance costs due to flooding and erosion. Higher temperatures will increase demand for water-based recreation; however, droughts may decrease lake, reservoir, and river levels during peak recreation season.

- **Infrastructure.** Water, sewer, roads, utilities, and other infrastructure face risks if not designed to withstand climate change and extreme events. During the June 2021 heat dome, roads buckled near Everett, Washington, and a Portland streetcar cable melted.[107] Damaged power lines can lead to wildfires (a problem utility companies have started to mitigate by preemptively shutting down power when windy and dry conditions occur).[108] Rural communities relying on single water sources may be in jeopardy as droughts reduce groundwater aquifers or surface water availability. Sea level rise and flooding also threaten septic wastewater treatment systems. Atmospheric rivers and flooding can damage highways and streets through inundation and landslides, temporarily halting travel access to jobs, schools, healthcare, grocery stores, etc., necessitating expensive repairs and long detours. Additionally, the Pacific Northwest's hydropower dependency means the region may see fluctuations in electricity availability and costs as altered snowpack and precipitation patterns make the water supply less predictable.

Regional and Local Trends

Throughout this section, Wilsonville is compared to the Portland region and the State of Oregon. These comparisons are meant to provide context for changes in Wilsonville's socioeconomic characteristics. Additionally, information based on the 2019-2023 ACS is described as 2023 to enhance readability.

Availability of Labor

The availability of trained workers in Wilsonville will impact the development of its economy over the planning period. A skilled and educated populace can attract well-paying businesses and employers and spur the benefits that follow from a growing economy. Key trends that will affect the workforce in Wilsonville over the next 20 years include its growth in its overall population, growth in the senior population, and commuting trends.

POPULATION CHANGE

Population growth in Oregon tends to follow economic cycles. Oregon's population grew from 3.4 million people in 2000 to 4.3 million people in 2023, an increase of 830,000 people or 0.9% each year. Between 2000 and 2023, Wilsonville's population increased by 12,457 people at an average annual rate of 2.8% (**Exhibit 42**), exceeding both the Portland region's and Oregon's growth rates during the same time (1.0% and 0.9%, respectively).

Exhibit 42. Population Growth, Wilsonville, Portland Region, and Oregon, 2000–2023

	Population			Change, 2000 - 2023		
	2000	2010	2023	Number	Percent	AAGR*
Wilsonville	14,365	18,095	26,822	12,457	87%	2.8%
Portland Region	1,444,219	1,644,535	1,830,731	386,512	27%	1.0%
Oregon	3,421,399	3,831,074	4,250,027	828,628	24%	0.9%

Source: U.S. Census Bureau, 2000, and 2010. Portland State University Population Estimates, 2023.

AGE DISTRIBUTION

The number of people ages 65 and older in the United States is projected to increase from 58 million in 2023 to 82 million by 2050 (a 47% increase).[109] The economic effects of this demographic change include a slowdown of labor force growth, the need for workers to replace retirees, an aging workforce as seniors continue working after

[109] Mather, M. & Scommegna, P. (2024). Fact Sheet: Aging in the United States. https://www.prb.org/aging-unitedstates-fact-sheet/

age 65, an increased demand for healthcare services, and a larger portion of the federal budget dedicated to Social Security and Medicare.[110]

Exhibit 43 through **Exhibit 46** show the following trends:

- Wilsonville has a higher proportion of residents aged 20 – 39 compared to the Portland region and the state. While Wilsonville is growing across all age groups 5 years and older, the older age groups are experiencing much faster growth. This growth rate and the 2.5-year increase in median age between 2000 and 2023 suggests that Wilsonville is attracting or retaining older adults.
- Clackamas County's population is aging, with the population aged 60 and over projected to increase from 27% in 2024 to 30% in 2044. Clackamas County may continue to attract those in their late adult years (i.e., 60 years and older) over the planning period. While the share of retirees in these respective areas may increase over the next 20 years, the share of youth (i.e., under 20 years old) or people in their early adult lives (i.e., 20 to 39 years old) is likely to decrease. While this demographic shift can provide a valuable source of skilled labor and experienced mentorship for younger generations entering the workforce, it also raises concerns about a potential labor shortage as a significant portion of the workforce approaches retirement age.

Wilsonville saw an increase in median age between 2010 and 2023.

Wilsonville's median age was 38.7 in 2023, 1.4 years younger than the median age in Oregon and 3.4 years younger than the median age in Clackamas County

Exhibit 43. Median Age, Wilsonville, Clackamas County, Washington County and Oregon, 2010 to 2019–2023

2010	36.2 Wilsonville	40.6 Clackamas County	38.4 Oregon
2023	38.7 Wilsonville	42.1 Clackamas County	40.1 Oregon

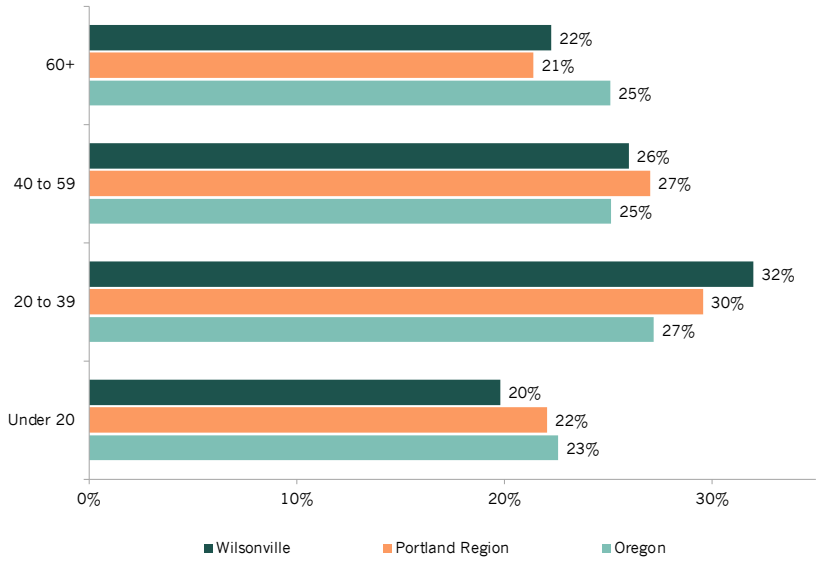
Source: U.S. Census Bureau, 2010 Decennial Census, Table P12; American Community Survey 2019–2023 5-Year Estimates, Table B01002.

[110] The Board of Trustees, Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds, 2023. The Budget and Economic Outlook: Fiscal Years 2024 to 2034, February 2024.

Wilsonville saw substantial growth across all age groups between 2010 and 2023 except for children under 5.

The age group between 25 and 44 remains the largest age group overall.

Exhibit 44. Wilsonville Population Change by Age Group, 2010 to 2019–2023



Source: U.S. Census Bureau, 2010 Summary File P12; American Community Survey 2019-2023 5-Year Estimates, Table B01001.

Nearly one-third of Wilsonville residents were between 20 and 39 years of age.

The proportion of Wilsonville's younger adults was higher than that of both the state and the Portland region.

Conversely, the proportion of Wilsonville residents under 20 years of age was lower relative to the Portland region and Oregon.

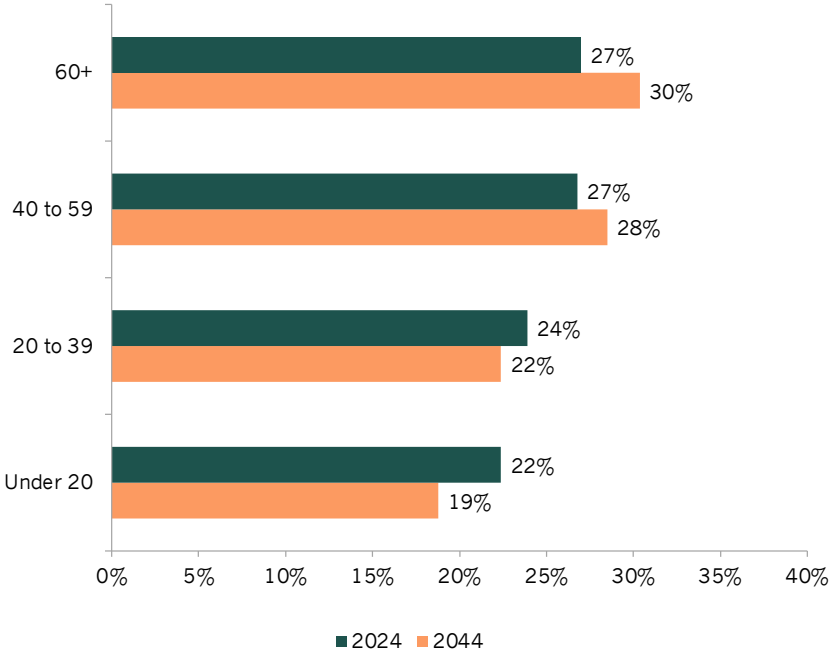


Exhibit 45. Population Distribution by Age, Wilsonville, Portland Region, and Oregon, 2019–2023

Source: U.S. Census Bureau, American Community Survey, 2019–2023 5-Year Estimates, Table B01001.

By 2044, Clackamas County residents age 40 and older will make up 58% of the county's total population, a 4% increase in share from 2024.

Exhibit 46. Population Share by Age Group, Clackamas County, 2024–2044

Source: Portland State University, College of Urban & Public Affairs: Population Research Center, Population Forecast, 2024.

RACE AND ETHNICITY

Wilsonville is becoming more racially and ethnically diverse. From 2000 to 2023, the share of the Hispanic/Latino population in Wilsonville grew from 12% to 16% of the total population, and the share of people of color increased from 15% to 25%. In the Portland region, the share of the Hispanic/Latino population rose from 12% to 14% of the total population, while the share of people of color grew from 21% to 29%.

Statewide, Hispanic and Latino Oregonians have employment rates that are average or slightly above average compared to the overall population in recent decades. However, their higher employment rates are primarily concentrated in low- and middle-wage occupations such as agriculture, building maintenance, production, construction, food preparation, and transportation and material moving.[111] Providing culturally specific services, particularly for Spanish speakers, can help improve workforce participation and economic contribution from these growing demographic groups. Such services may also facilitate the entry of Hispanic and Latino workers into higher-wage industries, enabling greater economic opportunities for these communities (if they wish to pursue them).

The population of people of color is defined as the share of the population that identifies as another race other than "white alone" according to Census definitions. The small population in Wilsonville results in small sample sizes, and thus people of color are combined into one category rather than showing individual races. The margin of error is considerable for the estimate of these populations.

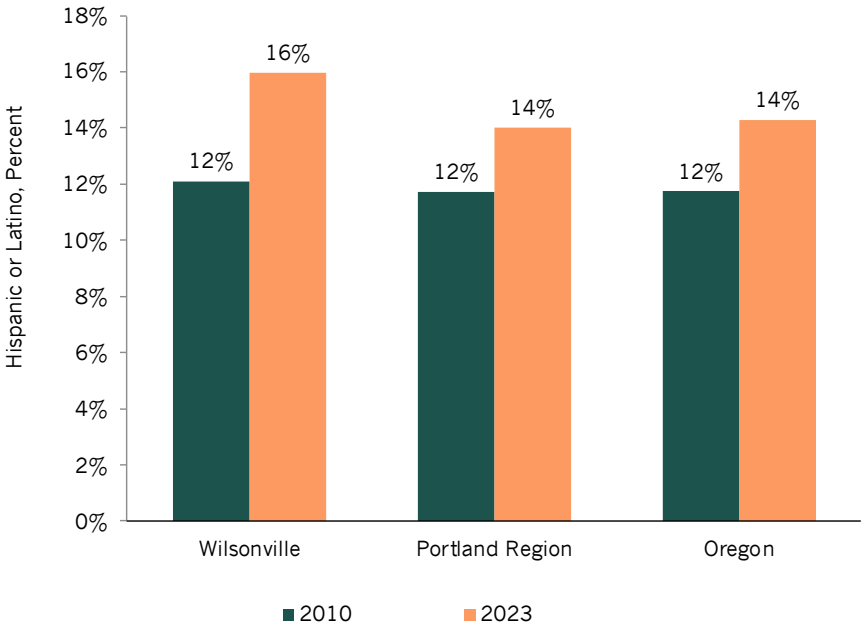

Exhibit 47 and **Exhibit 48** show the change in the share of Hispanic and Latino and people of color in Wilsonville compared to the Portland region and Oregon between 2010 and 2023. The group with the largest share of people of color in 2023 is two or more races, representing 15% and 11% of Wilsonville's and the Portland region's total populations, respectively.

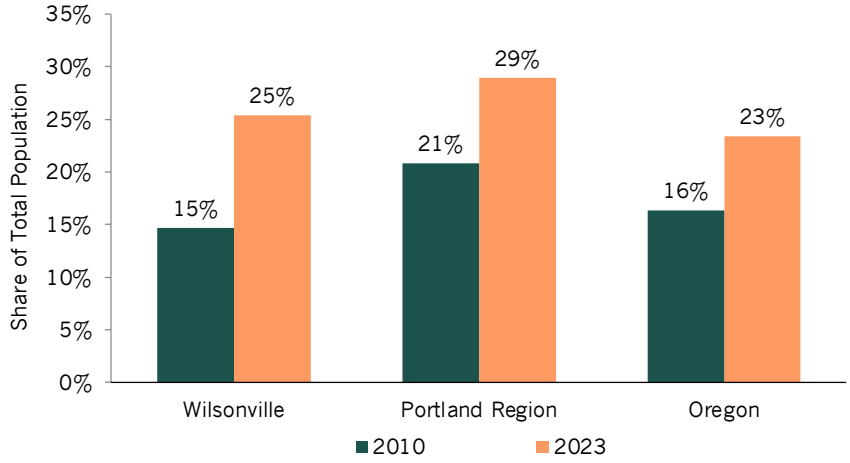
[111] Lehner, Josh. "Oregon's Growing Hispanic and Latino Population." Oregon Office of Economic Analysis, 21 June 2023. https://oregoneconomicanalysis.com/2023/06/21/oregons-growing-hispanic-and-latino-population/

The share of Wilsonville residents that identified as Hispanic/Latino increased between 2010 and 2023 from 12% to 16%.

Wilsonville's growth in residents with Hispanic or Latino ethnicity outpaced the Portland region and Oregon.

Exhibit 47. Hispanic or Latino Population as a Percentage of the Total Population, Wilsonville, Portland Region, and Oregon, 2010, 2019–2023



Source: U.S. Census Bureau, 2010 Decennial Census, Table P0008; 2019–2023 American Community Survey, 5-Year Estimates, Table B03002.

The share of people of color in Wilsonville increased between 2010 and 2023 from 15% to 25%.

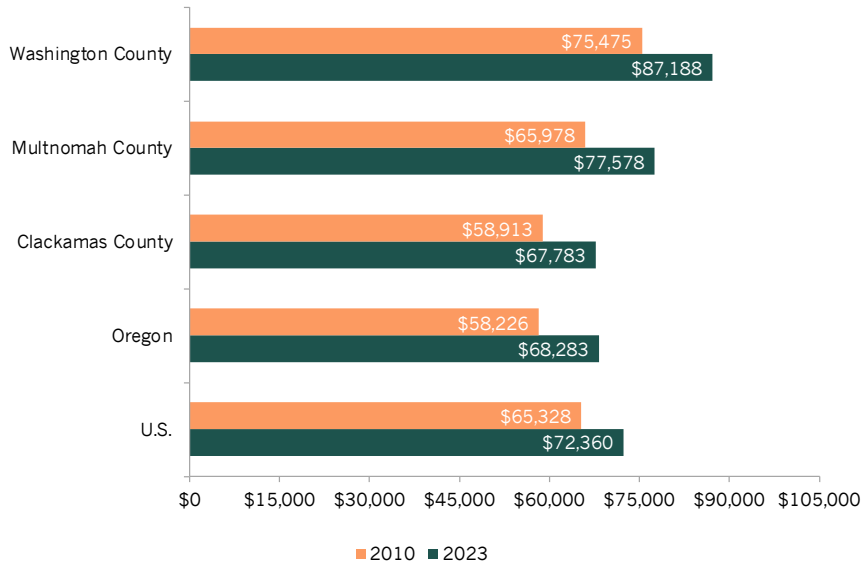
Although Wilsonville's racial diversity increased at the fastest rate, it remains slightly less racially diverse than the Portland region.

Exhibit 48. Population of People of Color as a Percentage of the Total Population, Wilsonville, Portland Region, and Oregon, 2010, 2019–2023

Source: U.S. Census Bureau, 2010 Decennial Census Table P8; 2019–2023 American Community Survey, 5-Year Estimates, Table B02001.

INCOME AND WAGES

Income and wage levels can influence where businesses choose to locate. Industries that depend on lower-wage labor may be less likely to locate in areas with higher wages. In 2023, Wilsonville's median household income was $87,371—lower than Clackamas County's median but higher than the state median.



Average wages at businesses in Washington and Multnomah counties exceeded the Oregon average of $68,283, while Clackamas County's average wage was roughly in line with the state average.

From 2010 to 2023, average annual wages in Oregon and the Portland region grew faster than the national rate.

Oregon's wages rose by 17%, outpacing the 11% growth nationally. Still, Oregon's average wage in 2023 was $68,283, which remained below the U.S. average of $72,360.

Within the Portland region, average wages ranged from $67,783 in Clackamas County to $87,188 in Washington County.

Exhibit 49. Average Annual Wage, Covered Employment, Portland Region, Oregon, and U.S., 2010 to 2023, Inflation-Adjusted 2023 Dollars

Source: Bureau of Labor Statistics, Quarterly Census of Employment and Wages; State of Oregon Employment Department, Employment and Wages by Industry (QCEW).

The median household income in Wilsonville was lower than Clackamas County but higher than the state.

Exhibit 50. Median Household Income (MHI),[112] 2019–2023

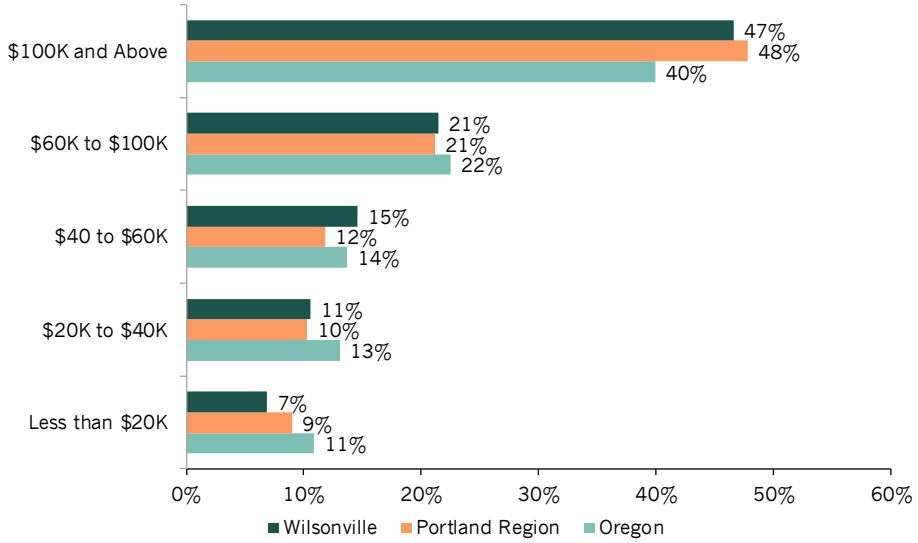
$87,371	$100,360	$80,426
Wilsonville	Clackamas County	Oregon

Source: U.S. Census Bureau, American Community Survey 2019–2023 5-Year Estimates, Table B19013.

[112] The Census calculated household income based on the income of all individuals 15 years old and over in the household, whether they were related or not.

Wilsonville's median family income was similar to Clackamas County and higher than the state overall.

Exhibit 51. Median Family Income,[113] 2019–2023



$115,941	$119,052	$98,832
Wilsonville	Clackamas County	Oregon

Source: U.S. Census Bureau, American Community Survey 2019–2023 5-Year Estimates, Table B19113.

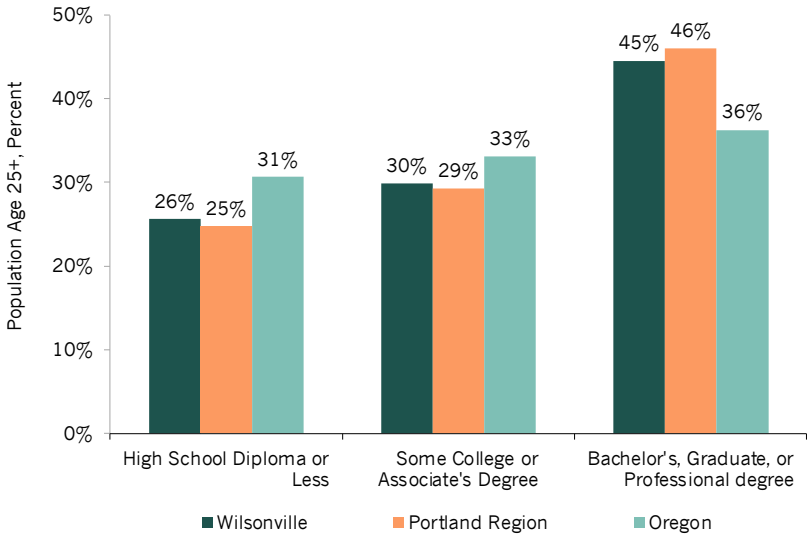
Nearly half of Wilsonville households earned more than $100,000 annually, consistent with Portland region trends.

About 18% of Wilsonville households earned less than $40,000 annually.

Exhibit 52. Household Income by Income Group, Wilsonville, Portland Region, and Oregon, 2019–2023, Inflation-Adjusted 2023 Dollars

Source: U.S. Census Bureau, American Community Survey 2019–2023 5-Year Estimates, Table B19001.

[113] The Census calculated family income based on the income of the head of household, as identified in the response to the Census forms, and income of all individuals 15 years old and over in the household who were related to the head of household by birth, marriage, or adoption.



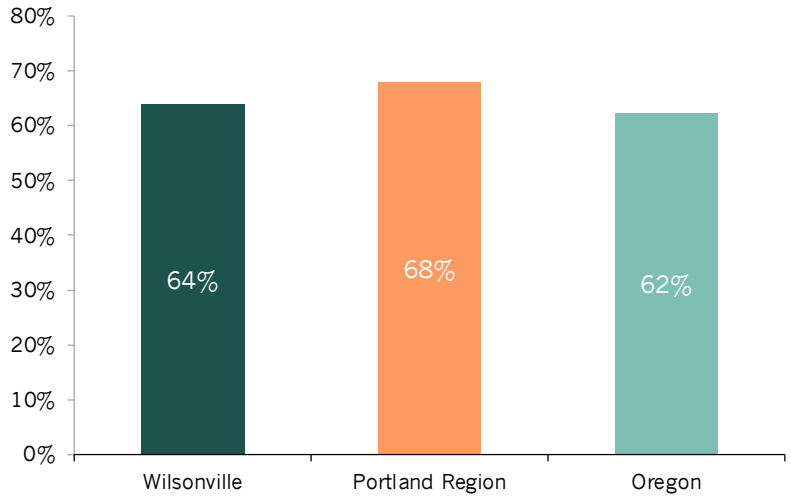
EDUCATIONAL ATTAINMENT

The educational level of a community's workforce is a crucial factor that influences the quality of labor available. Many businesses require access to employees with relevant education and training to meet their staffing needs. A community with a highly educated population is better positioned to attract and retain companies seeking skilled workers.

Wilsonville's educational attainment is higher than the state average and consistent with Portland region trends.

About 45% of Wilsonville residents hold a bachelor's, graduate, or professional degree, compared to 36% of Oregon residents statewide.

Exhibit 53. Educational Attainment for the Population 25 Years and Over, Wilsonville, Portland Region, and Oregon, 2019–2023



Source: U.S. Census Bureau, American Community Survey 2019–2023 5-Year Estimates, Table B15003.

LABOR FORCE PARTICIPATION AND UNEMPLOYMENT

Labor force participation is a key factor in assessing workforce availability. The labor force includes adults aged 16 and older who are either employed or actively seeking work. It does not include children, retirees, students, or others not currently looking for work. According to the 2019–2023 American Community Survey, the labor force included 1,505,127 people in the Portland region and 21,997 people in Wilsonville.

Wilsonville has a slightly lower labor force participation rate (64%) relative to the Portland region (68%).

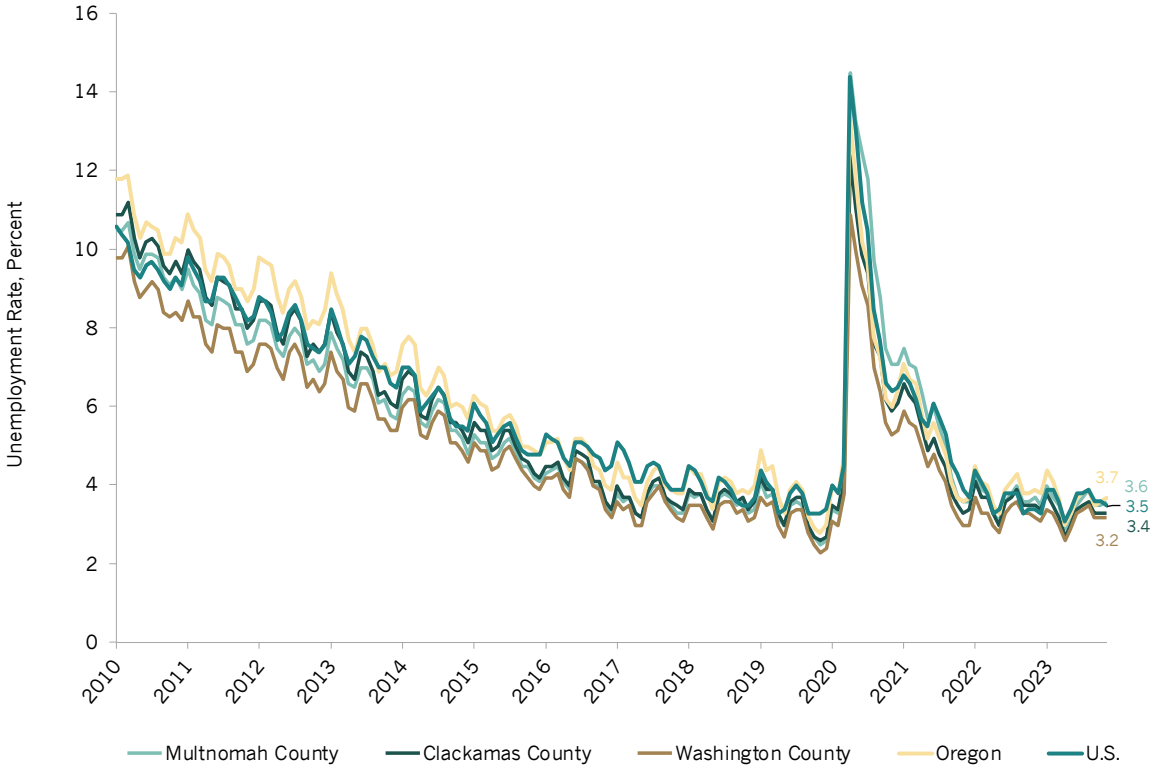


Exhibit 54. Labor Force Participation Rate, Wilsonville, Portland Region, and Oregon, 2019–2023

Source: U.S. Census Bureau, American Community Survey 2019–2023 5-Year Estimates, Table B23001.

In 2023, unemployment rates in the Portland region were similar to state and national averages, in **Exhibit 55.** Rates ranged from 3.2% in Washington County to 3.6% in Multnomah County, compared to 3.7% for Oregon and 3.6% nationally.

Exhibit 55. Unemployment Rate, Multnomah County, Washington County, Clackamas County, Oregon, and the U.S., 2000–2023

COMMUTING PATTERNS

Employers in Wilsonville benefit significantly from access to a labor pool that extends beyond City limits into neighboring areas of the Portland region, as well as Marion County. This access to a broader workforce through commuting allows businesses in Wilsonville to find suitable candidates for available positions, even if the local population alone may not provide enough qualified workers.

Wilsonville is part of an interconnected regional economy.

Nearly 20,000 people commuted into Wilsonville for work while just over 10,000 commuted out of Wilsonville for work. About 1,800 people both lived and worked in Wilsonville.

Exhibit 56. Commuting Flows, Wilsonville, 2022

Tourism in Clackamas County and the Portland Region

Tourism plays a crucial role in local economies by supporting businesses, creating jobs, and generating tax revenue. Dean Runyan Associates, a travel industry research firm, provides tourism data through Travel Oregon's TravelStats dashboard.[114] According to the dashboard, the Clackamas County welcomed about 3.5 million overnight visitors in 2023, representing 28% of overnight travel to the Portland region. Visitors to Clackamas County contributed over $551 million in direct travel spending in 2023, with the largest expenditures in food services, retail, and accommodations.

Direct travel spending in the Portland Region increased 21% from 2014 to 2023.

Clackamas County's tourism spending increased by 8% over the same period.

Exhibit 60. Direct Travel Spending ($ millions), 2014 and 2023 (not inflation adjusted)

2014	**$4,417.9** Portland Region	**$551.6** Clackamas County
2023	**$5,365.9** Portland Region	**$597.6** Clackamas County

Source: Dean Runyan Associates, Oregon Travel Impacts, 2014-2023.

In 2023, the category that saw the highest level of visitor spending in Clackamas County was food services, which includes restaurants, cafés, and other establishments that provide prepared meals and beverages.

Appendix B. Buildable Lands Inventory Methodology

The Buildable Lands Inventory (BLI) identifies commercial and industrial lands that are available for development for employment uses within Wilsonville. This appendix presents methods and definitions used to develop the commercial and industrial buildable lands inventory for Wilsonville.

Methods and Definitions

The BLI for Wilsonville includes all land that allows commercial and industrial uses within the Wilsonville City limits and Wilsonville's portion of the Metro UGB.[115] From a practical perspective, land was included in the BLI if it met all the following criteria:

1. It is inside the Wilsonville City limits and UGB area
2. It is inside a tax lot (as defined by Metro), and
3. Its current zoning/comprehensive plan designation allows employment uses. *Note that tax lots do not generally include roads, railroad rights-of-ways, or water.*

The inventory then builds from the tax lot–level database to estimate buildable land by Comprehensive Plan designation.

Inventory Steps

The five steps in the BLI are:

1. Generate the study area "land base"
2. Classify lands by buildable area status
3. Identify constraints
4. Verify inventory results
5. Tabulate and map results

[115] This area includes the Wilsonville portion of the Basalt Creek Planning Area in the northwest quadrant of the City.

Step 1: Generate Study Area "Land Base"

The commercial and industrial inventory used all tax lots within the Wilsonville City limits and UGB area with the appropriate types of comprehensive plan designations that fall under those land use categories:

- Commercial (C)
- Industrial (I)
- Town Center (TC)
- Public (P)
- Undesignated

Figure 4 (on page 15) shows a map of these designations used in the BLI.

Step 2: Classify Lands by Buildable Area Status

In this step, ECOnorthwest classified each tax lot with an employment plan designation (based on the definitions in Table 5) into one of four mutually exclusive categories based on buildable area status:

- Vacant land
- Partially vacant land
- Public land
- Developed land

ECOnorthwest identified buildable land and classified buildable area status using a rule-based methodology, which identifies that that is buildable (vacant and partially vacant land). The rules are described in Table 5. The buildable area status classifications of the BLI land base are visualized in map format below in Figure 5.

Exhibit 63. Rules for Buildable Area Status Classification

BUILDABLE AREA STATUS	DEFINITION	STATUTORY AUTHORITY
Vacant Land	Tax lots designated as vacant by Metro based on the following criteria: 1. Fully vacant based on Metro aerial photos 2. Tax lots with less than 2,000 square feet developed AND developed area is less than 10% of lot 3. Lots 95% or more vacant from GIS vacant land inventory.	OAR 660-009-0005(5); Oregon Metro BLI Methodology (2024)[116]
Partially Vacant Land	A tax lot: 1) Between one and five acres occupied by a use that could still be further developed based on zoning; or 2) Equal to or larger than five acres where one half-acre or more is occupied by permanent buildings or improvements where excess land that could be further developed is present. This determination was based on a visual assessment and City staff verification.	No statutory definition
Public	Lands in public or semi-public ownership are considered unavailable for commercial or industrial development. This includes lands in Federal, State, County, or City ownership as well as lands owned by churches and other semi-public organizations and properties with conservation easements. These lands are identified using the Metro's definitions and categories.	No statutory definition
Developed Land	Lands not classified as vacant, partially vacant, or public/exempt are considered developed. Developed land includes lots with redevelopment capacity, which are also included in BLI.	OAR 660-009-0005(1)

[116] https://www.oregonmetro.gov/sites/default/files/2024/10/25/2024-UGR-Appendix-2-with-attachments.pdf

Step 3: Identify Constraints

As shown in Table 6, the BLI included development constraints consistent with guidance in OAR 660-009-0005(2) and Metro's 2024 BLI methodology.

Exhibit 64. Constraints Included in BLI

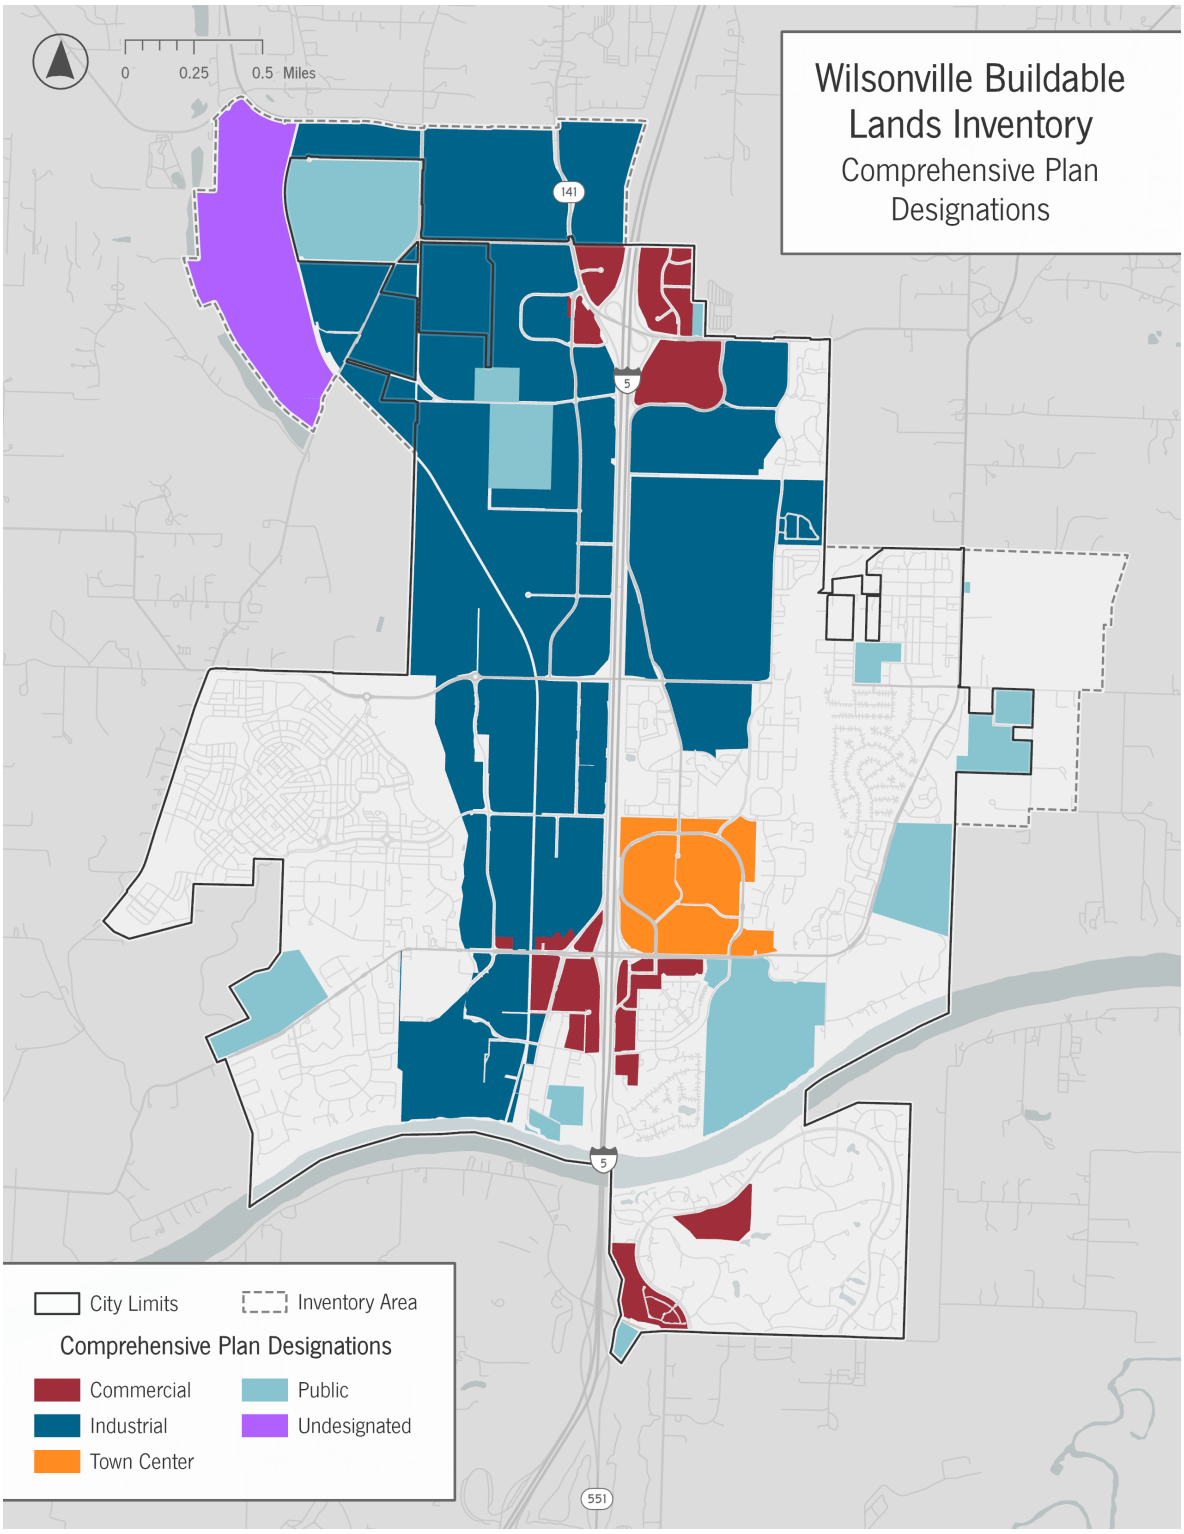
DEVELOPMENT STATUS	STATUTORY AUTHORITY	THRESHOLD	SOURCE
Goal 5 Natural Resource Constraints			
Title 3 (Stream and Floodplain Protection Plan)	OAR 660-009-0005(2)	Lands within Metro-defined Title 3 areas	Metro
Title 13 (Habitat Conservation Areas)	OAR 660-009-0005(2)	Lands within Conservation Areas identified as "High" or "Very High"	Metro
Significant Resource Overlay Zone	OAR 660-009-0005(2)	Lands within the Wilsonville-defined Significant Resource Overlay Zone	City of Wilsonville
Pacific Habitat Services in Basalt Creek	OAR 660-009-0005(2)	Lands within riparian areas, upland tree groves, or wetlands, as identified by Pacific Habitat Services in the Basalt Creek area.	Pacific Habitat Resources
Natural Hazard Constraints			
FEMA Regulatory Floodway and 100-Year Floodplains	OAR 660-009-0005(2)	Lands within FEMA–defined regulatory floodway or 100-year floodplains	FEMA via National Flood Hazard Layer Interactive Viewer
Steep Slopes	OAR 660-009-0005(2)	Slopes greater than 15%	Oregon Department of Geology and Mining Industries

These areas were evaluated as prohibitive constraints (unbuildable). All constraints were merged into a single constraint file, which was then used to identify the area of each tax lot that is constrained. These areas were deducted from lands identified as vacant or partially vacant. Figure 6 (page 17) shows a map of the individual constraints.

Step 4: Verify Inventory Results

ECOnorthwest used a multistep verification process. The first verification step involved a "visual assessment" of land classifications using GIS and recent aerial photos. The visual assessment involves reviewing classifications overlaid on recent aerial photographs to verify uses on the ground. ECOnorthwest reviewed all tax lots included in the inventory using the visual assessment methodology. The second round of verification involved City staff verifying the visual assessment output. ECOnorthwest amended the BLI based on City staff review and a discussion of staff's comments. The final verification included review by stakeholders, including by members of the Technical Advisory Committee.

Step 5: Tabulate and Map Results



The results of the commercial and industrial BLI are presented in tabular form and maps in the remainder of this Appendix. These maps separately show the existing Comprehensive Plan designations, individual constraints used, the land base by buildable area status with aggregated constraints represented, and unconstrained vacant and partially vacant lands by Comprehensive Plan designation.

Exhibit 65. Buildable Acres in Vacant/Partially Vacant Tax Lots by Wilsonville Comprehensive Plan Designation, Wilsonville City limits and UGB area, 2025

Plan Designation	Total Buildable Acres	Buildable Acres on Vacant Lots	Buildable Acres on Partially Vacant Lots
Commercial	4	4	0.3
Industrial	308	178	130
Town Center	9	9	-
Undesignated	45	1	44
Total	**366**	**191**	**175**

Appendix C. Economic Development Strategy

The City of Wilsonville is a leading employment center in the southern Portland metro area. Its location along I-5 and concentration of advanced manufacturing, wholesale trade, and construction industries distinguish it from other communities in the region. Employers located in Wilsonville benefit from access to a large, skilled labor force that extends north into the Portland area and south into Oregon's Mid-Valley.

Looking ahead, Wilsonville faces key decisions about how to sustain economic growth and strengthen its role as a regional employment hub. Industrial development in Coffee Creek and Basalt Creek is constrained by small parcels, fragmented land ownership, existing contractor establishments, and limited urban-level infrastructure. At the same time, limited vacant commercial land means most new commercial growth will rely on redevelopment and reuse of existing buildings. This is particularly relevant in Town Center and within established commercial corridors where large vacant buildings present both challenges and opportunities.

These same conditions affect small businesses across the city. Rising rents and limited access to financial and technical resources make it difficult for some to remain competitive and for others to expand. Many are unaware of existing programs or find it challenging to navigate state and regional systems to access them. Across industries, mismatches between available workforce skills and employer needs also remain a persistent concern for businesses of all sizes.

This **Economic Development Strategy (EDS** or **Strategy)** provides a 10-year roadmap for maintaining and expanding Wilsonville's economic base. It builds on the findings of the Wilsonville Industrial Land Readiness (WILR) project. This work focused on industrial site readiness in Basalt Creek and included the 2025 Economic Opportunities Analysis (EOA), which assessed land capacity, employment trends, and industry strengths. The Strategy also reflects input from local businesses, property owners, developers, and regional economic development partners. It aligns with other key initiatives, such as the Town Center Plan and Tourism Development Strategy, to create a coordinated framework for advancing the City's economic goals.

Desired Outcomes

The Strategy identifies six desired outcomes that define long-term economic success for Wilsonville over the next 10-years:

- **Basalt Creek and Coffee Creek show considerable momentum,** building out with high-quality, high-value development and are home to employers that provide higher-than-average-wage job opportunities.
- **Town Center is redeveloping** with active retail, housing, and civic spaces.
- **Zoning and infrastructure investments balance** the needs of residents and target industries, supporting both community livability and economic growth.
- **Retail and restaurant offerings are expanded**, including more locally owned and experience-oriented businesses.
- **Employment opportunities with higher-than-average wages have expanded,** providing more career options for Wilsonville residents.
- **Wilsonville is recognized regionally** for its advanced industrial employment, quality of life, and high-caliber customer service.

Achieving these outcomes will require coordinated and sustained effort as well as public and private investment.

Summary of Actions

The Strategy organizes implementation work into six focus areas, each with a small set of actions the City can lead, coordinate, or support with partners. Together, the actions address priorities identified through the WILR work and stakeholder engagement, including industrial site readiness, commercial and mixed-use redevelopment, workforce connections, and support for existing and new businesses. Exhibit 70 provides a high-level summary of the actions by focus area. The Timing column indicates whether an action is expected to occur in the near term (1 to 5 years) or the longer term (6 to 10 years). The Resources column indicates whether an action can be advanced with existing staff capacity and funding or will require more staff capacity or a new funding source.

Exhibit 70. Summary of Actions

Focus Areas	Actions	Timing	Resources
Issue #1: Much of Wilsonville's undeveloped industrial land is not development ready	1.1 Launch a land aggregation and resale program in Coffee Creek	Near-term	Existing
	1.2 Conduct a feasibility study for a Basalt Creek URA	Near-term	Existing
	1.3 Coordinate with Washington County on development application review in Basalt Creek and ensure compliance with City Development Code after property annexation	Near-term	Existing
	1.4 Develop a coordinated package of financial and policy tools for overcoming infrastructure barriers	Near-term (design) Longer-term (expand)	May require new funding source
	1.5 Promote Wilsonville's industrial sites for development	Longer-term	Existing
Issue #2: Limited City funds to support economic development outside Coffee Creek Urban Renewal Area	2.1 Explore a dedicated funding source to support commercial and mixed-use redevelopment	Near-term	Exploration with existing staff
Issue #3: Vacant commercial land is limited	3.1 Explore expansion of allowable non-retail commercial uses in select industrial areas	Near-term	Existing
	3.2 Coordinate with other City departments to deliver on Town Center and tourism priorities	Near-term	Some priorities will require new funding source(s)
	3.3 Catalyze redevelopment of key sites in Town Center	Longer-term	New
Issue #4: Lack of unique retail and dining experiences	4.1 Incentivize local dining and retail in Town Center	Near-term (explore) Longer-term (implement)	New *if* providing financial incentives
	4.2 Explore the creation of a food cart incubation program in Town Center	Near-term (explore) Longer-term (implement)	New *if* providing seed funding
	4.3 Explore affordable commercial space models and partnerships	Near-term (explore) Longer-term (implement)	New *if* subsidizing commercial space
	4.4 Recruit unique restaurants and shops to Town Center	Longer-term	New *if* providing financial incentives or placemaking investments
Issue #5: Businesses struggle to find qualified workers	5.1 Facilitate workforce connections and support partner initiatives	Near-term	Existing
Issue #6: Perceived limited supports for small businesses	6.1 Strengthen business communication, customer service, and resource connections	Near-term	Existing
	6.2 Provide small business assistance grants for upgrades	Longer-term	New

Organization of the Economic Development Strategy

This strategy is organized as follows:

- **Framework for Action.** Presents the Strategy's implementation approach and how the City will advance the actions over time.
  - **Implementation Leadership and Partnerships.** Describes City departments' roles and the external partners needed to support delivery.
  - **Strategic Focus Areas and Actions.** Describes each focus area, the underlying issue, and the actions identified to address it.
  - **Resource Needs.** Summarizes staffing and funding considerations and identifies which actions can proceed with existing resources versus those requiring new resources.
  - **Sequencing of Actions.** Outlines near-term priorities (1-5 years) and longer-term steps (6–10 years), including actions that start with exploration and scale later.
- **Detailed Action Sheets.** Provides action-by-action implementation details, including rationale, roles, and implementation steps.

Framework for Action

The Framework for Action translates Wilsonville's desired economic outcomes into a clear plan for implementation. It defines who will lead the work, what actions the City will take and why, and when those actions will occur. This section presents actions to guide the City in managing growth, strengthening its business environment, and promoting long-term economic resilience.

Implementation Leadership and Partnerships

Implementation of the EDS will be led by the City of Wilsonville's Economic Development and Planning departments, with support from Engineering, Parks, and other City departments as needed. Close coordination among departments will be essential to align land use, infrastructure, and economic development priorities.

Success will also depend on collaboration with external partners that bring technical expertise, funding, and regional connections. Key partners include:

- **Business Oregon:** Provides state programs and resources that support infrastructure investment, industrial site development, and business investment and recruitment.
- **Greater Portland Inc. (GPI):** Supports business recruitment, foreign direct investment (FDI), marketing, and traded-sector growth in the region.
- **Metro and Washington County:** Supports coordination of infrastructure, transportation, and land-use planning.
- **Chambers of Commerce:** Provide local business support, networking, and convening to strengthen the business community.
- **Educational and workforce partners** (Clackamas Community College, Oregon Tech, Oregon Manufacturing Extension Partnership, Clackamas Workforce Partnership, Worksystems): Offers workforce training, industry engagement, and alignment of education programs with employer needs.

Note: These partners represent core collaborators but not the full list of organizations that may support implementation of the EDS actions.

Strategic Focus Areas and Actions

The Strategy focuses on six key focus areas that most influence Wilsonville's ability to achieve its desired economic outcomes. Each represents a point of leverage where the City can make measurable progress through investment, policy, and partnership.

Each focus area includes a description of the issue, followed by the specific actions identified to address it. Collectively, these actions provide a framework for the City to manage growth, strengthen its business environment, and promote long-term economic resilience.

Note: Several actions are drawn from the Town Center Plan (TCP) and Tourism Development Strategy (TDS). These existing plans include initiatives that directly advance the outcomes and focus areas identified through the WILR and engagement process. Incorporating them here ensures consistency across adopted plans and avoids duplicating existing work. When an action originates in the TCP or TDS, it is noted for reference.

FOCUS AREA 1: MUCH OF WILSONVILLE'S UNDEVELOPED INDUSTRIAL LAND IS NOT DEVELOPMENT READY

Wilsonville has more than 350 acres of vacant industrial land across the city. However, much of this land is not development ready, with the greatest readiness challenges concentrated in Coffee Creek and Basalt Creek. Many of the sites in these areas are unavailable for development of higher-intensity industrial uses because of infrastructure gaps (e.g., lack of sufficient sewer and water capacity), small parcel sizes and fragmented ownership, and existing low-intensity uses that hinder private investment.

Actions

1.1 Launch a land aggregation and resale program in Coffee Creek

Use Urban Renewal funds to acquire parcels from willing sellers in Coffee Creek, consolidate them into marketable sites, and resell them through an RFP process to industrial developers or owner-users. Land may be sold below acquisition cost (at Fair Reuse Value, as defined by ORS 457) to overcome barriers created by land fragmentation and gaps between seller price expectations and buyers' ability to pay. The price gap would be reimbursed through the Business Oregon Regionally Significant Industrial Site (RSIS) program once job thresholds are met.[117] This approach directly reduces land fragmentation and creates larger, development-ready industrial parcels.

[117] The RSIS program, administered by Business Oregon, helps local governments prepare large industrial sites for traded-sector employers. The program reimburses eligible site-readiness costs, such as land assembly, infrastructure, and environmental mitigation. Local governments fund the initial

City role: Use Urban Renewal funds to acquire and consolidate parcels, manage resale through an RFP and Disposition & Development Agreement (DDA), and pursue RSIS reimbursement for eligible costs once job performance criteria are met.

1.2 Conduct a feasibility study for a Basalt Creek Urban Renewal Area (URA)

Evaluate whether expanding the Coffee Creek URA to include Basalt Creek, or establishing a new URA for Basalt Creek, could generate sufficient tax increment to fund needed infrastructure and site readiness. The study will assess the potential to fund roads, utilities, and other urban infrastructure, as well as opportunities to support land aggregation. It will provide City Council with options and recommendations. This action directly addresses the lack of infrastructure and fragmented sites that currently limit development in Basalt Creek.

City role: Lead the feasibility study, engage with affected taxing districts, and prepare City Council for a decision on whether to expand the Coffee Creek URA or establish a new URA for Basalt Creek

1.3 Coordinate with Washington County on development application review in Basalt Creek and ensure compliance with City Development Code after property annexation

Coordinate with Washington County to review development applications in the Basalt Creek area and advocate for uses that align with the Basalt Creek Concept Plan (BCCP) and the City's long-term industrial goals. Although Washington County maintains permitting authority until annexation, the City should be closely involved in pre-application meetings and development review to encourage land use decisions that support the BCCP. As an alternative approach, the City could work with Washington County to update the Urban Planning Area Agreement (UPAA) to transfer planning authority for Basalt Creek to the City, which would help ensure development approved under Washington County zoning includes required off-site improvements.

If properties are annexed, require new uses and development to comply with the City's Development Code and support the area's intended industrial character. For properties that remain under Washington County jurisdiction, prioritize clear communication with owners and transition planning. Encourage interim site and design improvements that fit the surrounding urban industrial context until such time that annexation and development occur.

City role: Coordinate with Washington County on development review in Basalt Creek, communicate expectations for BCCP-consistent development, lead any discussions about

improvements and receive reimbursement after the site meets job and wage thresholds based on new employment created.

updating the UPAA, and, after annexation, manage City Development Code compliance and provide guidance to property owners on needed changes.

1.4 Develop a coordinated package of financial and policy tools for overcoming infrastructure barriers

Identify, evaluate, and refine a coordinated package of financial and policy tools that reduce high infrastructure costs and support industrial land development in Wilsonville. The work will clarify funding mechanisms, incentives, and partnerships that can help offset or share upfront costs of site readiness and infrastructure delivery, and package them in a way that is predictable and easy for staff and developers to use. The package could include:

- New funding mechanisms, such as Local Improvement Districts (LIDs) or latecomer agreements.
- Promotion and potential refinements to the Wilsonville Investment Now (WIN) program to better support site readiness in areas outside Coffee Creek.
- Public cost-sharing and site preparation support, including development agreements that share infrastructure or site preparation costs on strategic sites. The RSIS program could reimburse qualifying investments in areas such as Coffee Creek, Basalt Creek, and select sites east of I-5.
- State and federal funding through Business Oregon, Metro, and federal/state infrastructure programs to reduce the local funding burden.
- Regional collaboration and advocacy to align Wilsonville's needs with broader regional industrial land readiness goals and increase visibility of local infrastructure challenges in state funding discussions.

City role: Evaluate and, where appropriate, implement new funding tools, pursue state and federal grants to offset infrastructure costs, coordinate advocacy with regional partners, and maintain a clear summary of available tools for use in City discussions with property owners and developers.

1.5 Promote Wilsonville's industrial sites for development

Increase the City's promotion of Wilsonville's industrial sites by clearly communicating site readiness status, available incentives (such as the WIN program), tools developed under Action 1.4, and the City's support for traded-sector employers. Strengthen targeted outreach through regional partnerships and consistent engagement with site selectors, developers, and employers, using tools such as the developer and site selector newsletter with a regular schedule and proactive, site-specific messaging.

City role: Lead marketing of industrial sites through direct communication and outreach, maintain up-to-date information on sites and incentives, and collaborate with Greater

Portland Inc. and Business Oregon to increase the visibility of Wilsonville's opportunities in regional and state recruitment.

FOCUS AREA 2: LIMITED CITY FUNDS TO SUPPORT ECONOMIC DEVELOPMENT OUTSIDE OF COFFEE CREEK URBAN RENEWAL AREA

Wilsonville's capacity to support infrastructure, redevelopment, and business investment is constrained by a limited set of local funding tools. The Coffee Creek Urban Renewal Area (URA) provides dedicated resources for site improvements and infrastructure, but other priority areas, including Basalt Creek and Town Center, do not have comparable funding sources. This gap limits the City's ability to provide infrastructure to support the development and/or redevelopment of priority sites, attract employers, and act on other City priorities.

Actions

2.1 Explore a dedicated funding source to support commercial and mixed-use redevelopment *(Refer to Town Center Plan & Tourism Development Strategy)*

Evaluate options for creating a dedicated funding source to support commercial and mixed-use redevelopment, particularly in Town Center and along key commercial corridors. Potential tools include a Town Center Urban Renewal Area (URA), a Business Improvement District (BID), a Local Improvement District (LID), and adjustments to the Transient Lodging Tax (TLT). This action will assess feasibility, tradeoffs, and community support for these options and identify how a funding package could provide sustained resources for infrastructure, amenities, and redevelopment projects that strengthen Wilsonville as a hub for retail, dining, and tourism.

City role: Lead policy design, financial analysis, and public and stakeholder engagement; coordinate with overlapping taxing districts; and, if a tool is adopted, administer the chosen funding mechanism.

1.2. Conduct a feasibility study for a Basalt Creek URA (See Focus Area 1)

1.4. Develop a coordinated set of financial and policy tools for overcoming infrastructure barriers (See Focus Area 1)

FOCUS AREA 3: VACANT COMMERCIAL LAND IS LIMITED

Wilsonville has a limited supply of vacant commercial land to accommodate future growth. The EOA highlighted that redevelopment and policy changes, such as allowing certain commercial uses in select industrial areas, will be essential to meeting future commercial needs. Town Center represents Wilsonville's primary opportunity for new commercial and mixed-use growth. Several large vacant commercial buildings,

including the former Albertsons, Rite Aid, Regal Cinema, and Fry's Electronics, also offer near-term opportunities for reuse.

Actions

3.1 Explore expansion of allowable non-retail commercial uses in select industrial areas

Explore targeted updates to the Wilsonville Development Code to allow a limited range of non-retail commercial uses in carefully selected industrial areas. Potential uses could include commercial recreation (for example, gyms, climbing facilities, or indoor entertainment) and offices or coworking spaces that are not directly tied to an industrial operation but are compatible with industrial activity. This action is explicitly framed as an exploration exercise and will focus on where and how such uses might be appropriate, whether they should be allowed as conditional uses, and what safeguards are needed to protect traded-sector industrial land.

City role: Lead the exploratory analysis and stakeholder conversations, and, if appropriate, manage the Development Code amendment process.

3.2 Coordinate with other City departments to deliver on Town Center and tourism priorities *(Refer to Town Center Plan & Tourism Development Strategy)*

Work across departments so that Economic Development helps advance key actions from the Town Center Plan and Tourism Development Strategy that align with the desired outcomes identified in this Economic Development Strategy. This includes supporting parking management, shared parking strategies, placemaking, and streetscape or public space improvements that make redevelopment more attractive and feasible.

City role: Coordinate across departments to align Economic Development, Planning, Parks and Recreation, Engineering and Public Works with Town Center and tourism strategies.

3.3 Catalyze redevelopment of key sites in Town Center *(Refer to Town Center Plan)*

Partner on select priority sites where City support could spark reinvestment and create new commercial space on underutilized land. The City could collaborate with property owners and potential developers to facilitate site readiness, assist with predevelopment analysis, and coordinate infrastructure or amenity improvements needed to attract investment. If a Town Center URA is adopted, URA-funded acquisition and disposition, SDC transfer programs, or predevelopment grants (e.g., feasibility studies, site development analysis) could be used to help catalyze projects.

City Role: Facilitate partnerships with property owners and developers, provide technical and policy support for site redevelopment, and coordinate needed infrastructure and public improvements. Offer regulatory or financial incentives, marketing support, or infrastructure cost-sharing; recruit development partners.

FOCUS AREA 4: LACK OF UNIQUE RETAIL AND DINING EXPERIENCES

Wilsonville has few distinctive, locally owned shops and restaurants that help create a strong sense of place and attract workers and visitors. Most retail centers are anchored by national chains, and smaller experience-oriented businesses face barriers such as high rents, limited appropriately sized spaces, and costly tenant improvements. These challenges make it difficult for locally owned restaurants, shops, and personal service businesses to establish and grow. Expanding opportunities for locally owned and experience-driven businesses, particularly in Town Center, would strengthen Wilsonville's identity and support local entrepreneurs. This work also offers an opportunity to broaden access for business owners from all backgrounds, including those from historically underrepresented communities, by reducing barriers to entry and increasing access to space, visibility, and customers.

Actions

4.1 Incentivize local dining and retail in Town Center *(Refer to Town Center Plan & Tourism Development Strategy)*

Design and implement an incentives program to encourage local and experience-oriented dining and retail businesses to locate in Town Center. Incentives may include tenant improvement grants, limited fee reductions, or lease subsidies designed to attract small, locally owned businesses that contribute to Town Center's identity as a vibrant community destination. These incentives are intended to support businesses and entrepreneurs both in and outside of Wilsonville that are seeking to establish or expand in Town Center. This program will be coordinated with the Town Center Plan and Tourism Development Strategy to ensure alignment.

City role: Design and administer incentive programs, coordinate with property owners and tenants, and monitor outcomes to refine the program over time.

4.2 Explore the creation of a food cart incubation program in Town Center *(Refer to Town Center Plan & Tourism Development Strategy)*

Explore the feasibility of a food cart incubation program in Town Center to support small-scale entrepreneurs, activate underused sites, and test market demand. The concept could draw on Tigard's Launch Pod model, which pairs lower rents withs business advising and coaching. Initial rent is low and increases over time. Business advising includes coaching and a defined "graduation" period, after which successful businesses move to other locations. The program would be open to entrepreneurs both in and outside of Wilsonville who are looking for an accessible way to launch or test a concept.

City role: Lead exploration of the concept by identifying potential sites, evaluating feasibility, and defining partner roles. If a viable model and funding source are identified, help secure resources and promote the program.

4.3 Explore affordable commercial space models and partnerships

Evaluate strategies and partnerships to increase the supply of affordable or below-market commercial space for small and locally owned businesses in Town Center and other key commercial areas, and to preserve existing affordable commercial spaces. Potential approaches include City master leasing, where the City leases ground-floor space from a property owner and subleases it to local businesses at reduced rates, and partnerships with developers that reserve a portion of new projects for local tenants. The City could also explore shared incubator spaces or micro-suites that offer low-cost entry points for start-ups. These approaches support small businesses and entrepreneurs operating in Wilsonville, including minority-owned businesses, whether they start here or relocate from elsewhere.

City role: Lead evaluation of options to support affordable commercial space; identify pilot sites and engage property owners.

4.4 Recruit unique restaurants and shops to Town Center *(Refer to Town Center Plan & Tourism Development Strategy)*

Actively recruit distinctive dining and retail tenants to strengthen Town Center as a destination district. Focus recruitment on concepts that fit the Town Center Plan vision and Tourism Development Strategy, using targeted marketing materials, coordination with property owners and brokers, and direct outreach to operators whose offerings match the desired character and tenant mix. Recruitment could be paired with catalytic redevelopment efforts (Action 3.1) to ensure new businesses locate in highly visible, high-impact sites. Recruitment efforts could include outreach to both existing Wilsonville businesses that may want to expand into Town Center, and businesses from outside the city that offer concepts not currently available in Wilsonville. Recruitment should aim to bring a diversity of business types that broaden the mix of experiences, cuisines, and services available in Town Center.

City role: Market Town Center opportunity sites, lead or support outreach to targeted tenants, and coordinate with property owners, brokers, and tourism partners so recruitment is explicitly aligned with the Town Center Plan and Tourism Development Strategy and connected to City incentive tools.

FOCUS AREA 5: BUSINESSES STRUGGLE TO FIND QUALIFIED WORKERS

Employers in Wilsonville face challenges finding and retaining workers with the skills needed for manufacturing and other key industries. During the EOA engagement

process, employers and regional economic development partners also raised concerns about how artificial intelligence (AI) may affect local jobs and emphasized the importance of upskilling workers to meet evolving job requirements. These issues are particularly challenging for smaller employers that have limited resources to dedicate to in-house training. Stronger coordination between businesses, schools, and workforce partners is needed to align training programs with both current and emerging industry needs.

Actions

5.1 Facilitate workforce connections and support partner initiatives

Take a more active coordinating role in workforce efforts by working with employers, education providers, and workforce organizations so Wilsonville's needs are clearly reflected in regional programs and funding decisions. This means not only connecting partners, but also advocating for training, partnerships, and resources that align with local industry priorities.

City role: Facilitate communication between employers and workforce training partners, support partner-led initiatives that address workforce challenges, and elevate Wilsonville's workforce needs with state and regional agencies.

FOCUS AREA 6: PERCEIVED LIMITED SUPPORT FOR SMALL BUSINESSES

During the EOA engagement process, business owners and economic development partners identified several key challenges: difficulty accessing financing for small businesses, limited awareness of available business support resources, and a shortage of affordable space for startups and growing companies. Participants emphasized that developers and business owners value a proactive, service-oriented approach from the City that helps them navigate permitting and regulatory processes, connect with funding or technical assistance, and work collaboratively with staff to find solutions. This work is intended to support the needs of existing Wilsonville businesses as well as new businesses evaluating locations in the city. As part of this work, the City can use inclusive outreach strategies that ensure small businesses and entrepreneurs from a wide range of backgrounds are aware of available resources and able to access support.

Actions

6.1 Strengthen business communication, customer service, and resource connections

Continue and strengthen the City's direct engagement with local businesses by expanding outreach, improving communication, and addressing barriers identified by businesses. By coordinating across departments and maintaining regular contact with

both industrial and commercial businesses, the City can identify challenges early, connect businesses to assistance, and make City processes easier to navigate.

City role: Proactively engage businesses, identify barriers early, provide clear permitting guidance, and connect businesses to resources.

6.2 Provide small business assistance grants for upgrades

Offer small business grants to help industrial and commercial businesses make key investments that support long-term viability. Eligible activities could include energy efficiency and building systems upgrades, technology adoption, tenant improvements and façade enhancements, and technology or equipment investments tied to productivity and job retention. The grants could prioritize small businesses with limited access to capital and those in areas experiencing or anticipating redevelopment such as Town Center.

City role: Design and administer the grant offerings and use outreach from Action 6.1 to build a pipeline of businesses that could benefit.

Resource Needs

The resource needs to implement each action will depend on Council priorities and the desired level of effort. Maintaining current programs may be possible within existing capacity, while expanded outreach, new incentives, or redevelopment programs will require additional funding or staff support. Some actions, such as creating new funding tools or expanding urban renewal areas, are foundational steps that enable broader implementation.

Exhibit 71 summarizes the actions, organized by focus area, and indicates whether they can be advanced with existing staff and funding or will require additional resources.

Exhibit 71. Summary of Focus Areas, Supporting Actions, and Resource Needs

Focus Areas	Actions		Existing or New Resources
Issue #1: Much of Wilsonville's undeveloped industrial land is not development ready	1.1	Launch a land aggregation and resale program in Coffee Creek	Existing
	1.2	Conduct a feasibility study for a Basalt Creek URA	Existing
	1.3	Coordinate with Washington County on development application review in Basalt Creek and ensure compliance with City Development Code after property annexation	Existing

	1.4	Develop a coordinated set of financial and policy tools for overcoming infrastructure barriers	Exploration with existing staff; *may* require establishing new funding source(s)
	1.5	Promote Wilsonville's industrial sites for development	Existing
Issue #2: Limited City funds to support economic development outside Coffee Creek Urban Renewal Area	2.1	Explore a dedicated funding source to support commercial and mixed-use redevelopment *(TCP/TDS)*	Exploration with existing staff
		Conduct a feasibility study for a Basalt Creek URA **(see 1.2)**	
		Create a package of incentives for overcoming infrastructure barriers **(see 1.4)**	
Issue #3: Vacant commercial land is limited	3.1	Explore expansion of allowable non-retail commercial uses in select industrial areas	Existing
	3.2	Coordinate with other City departments to deliver on Town Center and tourism priorities *(TCP/TDS)*	*Some* priorities will require new funding source(s)
	3.3	Catalyze redevelopment of key sites in Town Center (*TCP)*	Requires new funding source
Issue #4: Lack of unique retail and dining experiences	4.1	Incentivize local dining and retail in Town Center *(TCP/ TDS)*	New funding source needed *if* providing financial incentives
	4.2	Explore the creation of a food cart incubation program in Town Center *(TCP/ TDS)*	New funding source needed *if* providing seed funding
	4.3	Explore affordable commercial space models and partnerships	New funding source needed *if* subsidizing commercial space
	4.4	Recruit unique restaurants and shops to Town Center *(TCP/ TDS)*	New funding source needed *if* providing financial incentives or placemaking investments
Issue #5: Businesses struggle to find qualified workers	5.1	Facilitate workforce connections and support partner initiatives	Existing
Issue #6: Perceived limited supports for small businesses	6.1	Strengthen business communication, customer service, and resource connections	Existing
	6.2	Provide small business assistance grants for upgrades	Requires new funding source

Sequencing of Actions

Implementation of the actions will advance in stages based on available resources, partnerships, and logical sequencing rather than fixed timelines. Some actions can begin immediately using existing capacity, while others depend on funding, feasibility studies, or enabling steps.

Dependencies between actions are a key feature of this strategy. For example:

- Developing a **dedicated funding source (2.1)** could enable future redevelopment incentives, retail activation, and small-business grants.
- Completing the **Basalt Creek URA study (1.2)** and launching the **land aggregation program (1.1)** lays the groundwork for infrastructure development and the marketing of industrial land.
- Launching **retail incentive** and **activation programs (4.1, 4.2, 4.3)** can start small with current tools and scale once funding is secured.
- **Business outreach (6.1) and Town Center coordination (3.2)** can proceed now and shape later investment decisions.

The City Council's direction on which actions to elevate (such as prioritizing industrial readiness or small-business support) will guide how staff allocate resources through work plans and budgets.

Exhibit 72 separates actions by near-term priorities, which can be initiated with existing resources, and longer-term priorities that depend on new funding or enabling actions.

Exhibit 72. Sequencing and Dependencies

Focus Area	Near-Term Priorities (Years 1 to 5)	Longer-Term Priorities (Years 6 to 10)
Focus Area 1: Much of Wilsonville's undeveloped industrial land is not development ready	**1.1** Launch land aggregation and resale program in Coffee Creek **1.2** Conduct feasibility study for a Basalt Creek URA **1.3** Coordinate with Washington County on development application review in Basalt Creek and ensure compliance with City Development Code after property annexation **1.4** Evaluate and design a coordinated set of financial and polity tools for overcoming infrastructure barriers	**1.4** Expand the financial tools for overcoming infrastructure barriers if new funding mechanisms are pursued **1.5** Promote Wilsonville's industrial sites for development once incentive package and funding tools are in place
Focus Area 2: Limited City funds to support economic development outside Coffee Creek Urban Renewal Area	**2.1** Explore a dedicated funding source to support commercial and mixed-use redevelopment	—
Focus Area 3: Vacant commercial land is limited	**3.1** Explore expansion of allowable non-retail commercial uses in select industrial areas **3.2** Coordinate with other City departments to deliver on Town Center and tourism priorities	**3.3** Catalyze redevelopment of key Town Center sites once funding and partnerships are secured (such as through funding from 2.1)
Focus Area 4: Lack of unique retail and dining experiences	**4.1** Pursue targeted incentives for local dining and retail in Town Center within existing resources **4.2** Explore creation of a food cart incubation program (may begin with low-cost site prep or partnerships) **4.3** Explore affordable commercial space models and partnerships	**4.1** Expand incentives for local dining and retail in Town Center, supported by new funding source from 2.1 **4.2** and **4.3** Implement full programs once additional funding or partnerships are in place **4.4** Recruit unique restaurants and shops, supported by new funding source from 2.1
Focus Area 5: Businesses struggle to find qualified workers	**5.1** Facilitate workforce connections and support partner initiatives	—
Focus Area 6: Perceived limited supports for small businesses	**6.1** Strengthen business communication, customer service, and resource connections	**6.2** Provide small business assistance grants, enabled by new funding sources such as from 2.1 or 1.2

Detailed Action Sheets

This section includes detailed action sheets for each of the actions laid out in the previous section. These sheets consolidate information on rationale, timeline, City and partner roles, resource considerations and implementation steps. These action sheets are intended to serve as working tools for City staff to guide annual work programs and inform interdepartmental coordination.

1.1 Launch a land aggregation and resale program in Coffee Creek

Description	Timeline
Use Urban Renewal funds to acquire parcels from willing sellers in Coffee Creek, consolidate them into marketable sites, and resell them through an RFP process to industrial developers or owner-users. Land may be sold below acquisition cost (at Fair Reuse Value, as defined by ORS 457) to overcome barriers created by land fragmentation and gaps between seller price expectations and buyers' ability to pay. The price gap would be reimbursed through the Business Oregon Regionally Significant Industrial Site (RSIS) program once job thresholds are met.[118]	**Near-term**

Rationale

Industrial redevelopment in Coffee Creek has been slowed by three related challenges:

- **Parcelization.** Many small, irregularly shaped lots are held by different owners, which makes it difficult to assemble sites large enough for modern industrial buildings, truck circulation, and required buffering.
- **Contractor Establishments.** Many properties are in contractor establishment uses (sites cleared of vegetation and used as outdoor laydown yards for heavy equipment, materials, and other storage) that provide strong returns with minimal management but do not align with the long-term vision for the area.
- **Land Value Discrepancies.** There is also a gap between what current owners expect for their land, often based on income-producing value, and what industrial developers can afford to pay based on project economics.

A City-led aggregation and resale effort addresses these constraints by assembling and repositioning land so that industrial projects can move forward. Similar models in Hillsboro and at the Port of Portland have successfully attracted traded-sector employers, grown the tax base, and leveraged public infrastructure investments.

City Role	Use Urban Renewal funds to acquire and consolidate parcels, manage resale through an RFP and Disposition & Development Agreement (DDA), and pursue RSIS reimbursement for eligible costs once job performance criteria are met. **Department Lead(s):** Economic Development (lead); City Attorney's Office (support)
Partners	Business Oregon; Coffee Creek property owners; industrial brokers; industrial developers and owner-users
Funding/Resource Considerations	Urban Renewal funds will cover initial acquisition and holding costs. RSIS reimbursement can offset the gap between acquisition and resale prices, and

[118] The RSIS program, administered by Business Oregon, helps local governments prepare large industrial sites for traded-sector employers. The program reimburses eligible site-readiness costs, such as land assembly, infrastructure, and environmental mitigation. Local governments fund the initial improvements and receive reimbursement after the site meets job and wage thresholds based on new employment created.

1.1 Launch a land aggregation and resale program in Coffee Creek	
	other eligible costs, once employment thresholds and program requirements are met.
Implementation Steps	• Request and finalize an amendment to the City's RSIS agreement to make land assembly a reimbursable cost. • Draft and adopt an amendment to the Coffee Creek Urban Renewal Plan to add property acquisition and aggregation as eligible projects. • Conduct outreach with brokers and property owners to identify willing sellers and potential assemblies; use mapping and engagement to identify parcels of desirable size and configuration, such as several adjacent parcels. • Option or acquire land using URA funds, with City Council approval. • Issue an RFP and enter into a DDA with a qualified developer, including development standards and use requirements that align with the Coffee Creek Master Plan. • Seek RSIS reimbursement for eligible costs once job thresholds and other program criteria are met.

1.2 Conduct a feasibility study for a Basalt Creek Urban Renewal Area (URA)

Description	Timeline
Evaluate whether expanding the Coffee Creek URA to include Basalt Creek, or establishing a new URA for Basalt Creek, could generate sufficient tax increment to fund needed infrastructure and site readiness. The study will assess the potential to fund roads, utilities, and other urban infrastructure, as well as opportunities to support land aggregation. It will provide City Council with options and recommendations.	**Near-term**

Rationale

Baseline financial analysis provided by Tiberius Solutions indicates that system development charge (SDC) revenues in Basalt Creek are unlikely to cover the full cost of required infrastructure improvements to support industrial development, particularly in the early years, and in certain SDC categories. Without an additional funding tool, the area may remain partially served and less attractive for large-scale industrial development. A URA feasibility study will clarify whether tax increment financing can help close these gaps and, if so, whether that is best achieved by expanding the Coffee Creek URA or by creating a new URA tailored to Basalt Creek.

City Role	Lead the feasibility study, engage with affected taxing districts, and prepare City Council for a decision on whether to expand the Coffee Creek URA or establish a new URA for Basalt Creek **Department Lead(s):** Economic Development (lead); Finance (support)
Partners	Overlapping taxing districts; Urban Renewal Task Force
Funding/Resource Considerations	City General Fund or other one-time funds are needed to cover study costs. If the study supports creation or expansion of a URA, tax increment financing could provide long-term resources to support infrastructure and site readiness in Basalt Creek.
Implementation Steps	• Confirm and document infrastructure funding gaps based on the financial analysis completed by Tiberius Solutions. • Define and test potential URA boundary options, including expansion of the Coffee Creek URA and a standalone Basalt Creek URA. • Prepare revenue projections and assess tax increment potential for each option, including estimated funding capacity for infrastructure and land assembly. • Engage overlapping taxing districts to review findings, evaluate impacts, and identify preferred approach. • Prepare a draft feasibility report summarizing options, tradeoffs, and recommended next steps, and present it to City Council for direction. • If Council determines that a URA is viable, proceed to an advisory vote (if Council so directs) to URA plan development and adoption in coordination with taxing districts. • Engage the Urban Renewal Task Force throughout the steps noted above.

1.3 Coordinate with Washington County on development application review in Basalt Creek and ensure compliance with City Development Code after property annexation

Description	Timeline
Coordinate with Washington County to review development applications in the Basalt Creek area and advocate for uses that align with the Basalt Creek Concept Plan (BCCP) and the City's long-term industrial goals. Although Washington County maintains permitting authority until annexation, the City should be closely involved in pre-application meetings and development review to encourage land use decisions that support the BCCP. As an alternative approach, the City could work with Washington County to update the Urban Planning Area Agreement (UPAA) to transfer planning authority for Basalt Creek to the City, which would help ensure development approved under Washington County zoning includes required off-site improvements. If properties are annexed, require new uses and development to comply with the City's Development Code and support the area's intended industrial character. For properties that remain under Washington County jurisdiction, prioritize clear communication with owners and transition planning. Encourage interim site and design improvements that fit the surrounding urban industrial context until such time that annexation and development occur.	**Near-term**

Rationale

Contractor establishments provide stable jobs, but many occupy parcels intended for higher-intensity industrial development under the BCCP. If new or expanded uses are approved without close coordination, it becomes harder to transition these sites to the long-term industrial vision and may increase pressure to expand the urban growth boundary in the future. Proactively working with Washington County during the application process and clearly communicating expectations before annexation will help ensure that new investment is consistent with the BCCP and make the transition into the City smoother for businesses and property owners.

City Role	Coordinate with Washington County on development review in Basalt Creek, communicate expectations for BCCP-consistent development, lead any discussions about updating the UPAA, and, after annexation, manage City Development Code compliance and provide guidance to property owners on needed changes. **Department Lead(s):** Planning
Partners	Washington County; Basalt Creek property owners; developers; business tenants
Funding/Resource Considerations	Staff time will be required to coordinate with the County, review applications, and manage compliance after annexation. No new funding source is required at this time.

1.3	Coordinate with Washington County on development application review in Basalt Creek and ensure compliance with City Development Code after property annexation
Implementation Steps	• Continue to review and provide comments on all development proposals if processed by Washington County, within the Basalt Creek planning area, and participate in pre-application meetings where possible. • Evaluate whether updating the UPAA to transfer planning authority for Basalt Creek to the City is feasible and mutually beneficial; initiate discussions with Washington County if appropriate. (example: Troutdale has an Intergovernmental Agreement with Multnomah County that transfers planning authority to the City for areas within its UGB). • Regularly communicate the BCCP vision and City expectations for future industrial development with County staff and property owners. • Prior to annexation, communicate annexation and development standards to property owners and business tenants. • Conduct code compliance reviews and provide technical guidance to property owners on required site or building changes.

1.4 Develop a coordinated package of financial and policy tools for overcoming infrastructure barriers

Description	Timeline
Identify, evaluate, and refine a coordinated package of financial and policy tools that reduce high infrastructure costs and support industrial land development in Wilsonville. The work will clarify funding mechanisms, incentives, and partnerships that can help offset or share upfront costs of site readiness and infrastructure delivery, and package them in a way that is predictable and easy for staff and developers to use.	**Near-term**

Rationale

Infrastructure costs remain a barrier to industrial site development and can make otherwise suitable lands financially infeasible to develop. A clear, coordinated package of financial and policy tools will give the City and developers predictable options for addressing financing gaps, improve alignment between public and private investments, and encourage development on industrial sites.

City Role	Evaluate and, where appropriate, implement new funding tools, pursue state and federal grants to offset infrastructure costs, coordinate advocacy with regional partners, and maintain a clear summary of available tools for use in City discussions with property owners and developers. **Department Lead(s):** Economic Development (lead); Finance (support)
Partners	Developers; industrial brokers property owners; Metro, Business Oregon, and other state agencies (grant opportunities)
Funding/Resource Considerations	Initial exploration can occur with existing staff. Some tools may require establishing new funding sources or making long-term financial commitments, which will require City Council direction.

Implementation Steps	• Explore and evaluate potential tools to address high infrastructure costs that limit development, including:
	  ○ New funding mechanisms, such as Local Improvement Districts (LIDs) or latecomer agreements.
	  ○ Promotion and potential refinements to the Wilsonville Investment Now (WIN) program to better support development and redevelopment in areas outside Coffee Creek.
	  ○ Public cost-sharing and site preparation support, including development agreements that share infrastructure or site preparation costs on strategic sites. The RSIS program could reimburse qualifying investments in areas such as Coffee Creek, Basalt Creek, and select sites east of I-5.
	  ○ State and federal funding through Business Oregon, Metro, and federal/state infrastructure programs to reduce the local funding burden.

1.4	Develop a coordinated package of financial and policy tools for overcoming infrastructure barriers
	○ Regional collaboration and advocacy to align Wilsonville's needs with broader regional industrial land readiness goals and increase visibility of local infrastructure challenges in state funding discussions. • Seek City Council direction if implementation of any new tool requires a financial commitment, policy amendment, or adjustment to existing funding programs. • Compile and document recommended tools into a coordinated package that can be shared internally and with developers, brokers, and property owners to improve awareness of available resources and how they can be used together on specific sites.

1.5 Promote Wilsonville's industrial sites for development

Description	Timeline
Increase the City's promotion of Wilsonville's industrial sites by clearly communicating site readiness status, available incentives (such as the WIN program), tools developed under Action 1.4, and the City's support for traded-sector employers. Strengthen targeted outreach through regional partnerships and consistent engagement with site selectors, developers, and employers, using tools such as the developer and site selector newsletter with a regular schedule and proactive, site-specific messaging.	**Longer-term**: After coordinated package of financial and policy tools is in place

Rationale

Wilsonville's strategic location and supply of industrial land position the City to attract traded-sector employers, but these advantages are not always visible in regional marketing and recruitment efforts. A marketing effort that showcases potential development sites, incentives, and readiness can help Wilsonville compete for high-quality projects and increase employment on its industrial lands.

City Role	Lead marketing of industrial sites through direct communication and outreach, maintain up-to-date information on sites and incentives, and collaborate with Greater Portland Inc. and Business Oregon to increase the visibility of Wilsonville's opportunities in regional and state recruitment. **Department Lead(s):** Economic Development
Partners	Greater Portland Inc.; Business Oregon; industrial brokers; developers; site selectors; property owners; traded-sector employers
Funding/Resource Considerations	Primarily staff time for outreach and materials development, supported by existing communications and technology resources. No new funding source is required at this time.
Implementation Steps	• Develop and maintain a marketing toolkit and inventory of available industrial sites, including GIS mapping, photos, zoning details, development-readiness, infrastructure, and incentive information for Coffee Creek and Basalt Creek. The toolkit should include ready-to-use materials such as one-page site sheets, maps, and standard talking points for staff and partners. • Strengthen direct outreach by maintaining a regular developer, broker, and site selector newsletter, update real estate and program information on the City's website, and regularly connect with local brokers, developers, and employers. • Share updated information and promotional materials with Greater Portland Inc. and Business Oregon so Wilsonville's opportunities are visible in regional and state recruitment efforts. • Track leads, site tours, and responses to evaluate the effectiveness of outreach and adjust messaging and tactics as needed.

2.1 Explore a dedicated funding source to support commercial and mixed-use redevelopment

Description	Timeline
Evaluate options for creating a dedicated funding source to support commercial and mixed-use redevelopment, particularly in Town Center and along key commercial corridors. Potential tools include a Town Center Urban Renewal Area (URA), a Business Improvement District (BID), a Local Improvement District (LID), and adjustments to the Transient Lodging Tax (TLT). This action will assess feasibility, tradeoffs, and community support for these options and identify how a funding package could provide sustained resources for infrastructure, amenities, and redevelopment projects that strengthen Wilsonville as a hub for retail, dining, and tourism.	**Near-term**

Rationale

The City has limited discretionary funds for commercial revitalization, which constrains its ability to implement the Town Center Plan and Tourism Development Strategy. Key projects such as streetscape improvements, public space investments, and redevelopment partnerships require a predictable local funding source to be competitive for outside grants and private investment. Establishing one or more dedicated funding tools would allow the City to make more strategic, long-term investments in Town Center and other commercial nodes. Without this, the scope and pace of City support for redevelopment in commercial areas will remain highly constrained and progress on adopted plans will depend on scattered, one-time funding.

The need for dedicated funding sources was elevated in the Town Center Plan and Tourism Development Strategy.

City Role	Lead policy design, financial analysis, and public and stakeholder engagement; coordinate with overlapping taxing districts; and, if a tool is adopted, administer the chosen funding mechanism. **Department Lead(s):** Economic Development with support from Finance
Partners	Town Center and commercial corridor property owners; business owners and tenants; residents; Chambers of Commerce; tourism partners (e.g., regional destination marketing organizations); overlapping taxing districts
Funding/Resource Considerations	Initial exploration can begin with existing staff time and may require consultant support for financial feasibility, revenue projections, and public process design. If Council adopts a tool such as a URA, BID, LID, or TLT adjustment, it will create an ongoing revenue source for Town Center and commercial corridor projects but will also require sustained staff and legal capacity to administer.
Implementation Steps	• Evaluate potential funding mechanisms, which could include:

2.1	Explore a dedicated funding source to support commercial and mixed-use redevelopment

  - A Town Center URA, which could provide the largest and most flexible funding source for a range of Town Center projects.
  - TLT adjustments, which could provide additional resources for amenity and tourism-related investments.
  - A BID, which could create a special assessment to fund ongoing services and small-scale improvements in a defined district.
  - A LID, which could provide a time-limited assessment to help fund specific infrastructure or streetscape projects.
- Engage property owners, business owners, residents, and overlapping taxing districts to gauge interest, concerns, and feasibility for each option.
- Prepare a comparative financial and policy analysis of preferred options.
- Present findings and a recommended path, which may include a preferred tool or a phased combination of tools, to City Council for direction.
- If directed by Council, initiate the formal process to create the preferred mechanism or mechanisms, such as URA plan development, BID or LID formation, or TLT code changes, including required public hearings and outreach.

3.1 Explore expansion of allowable non-retail commercial uses in select industrial areas

Description	Timeline
Explore targeted updates to the Wilsonville Development Code to allow a limited range of non-retail commercial uses in carefully selected industrial areas. Potential uses could include commercial recreation (for example, gyms, climbing facilities, or indoor entertainment) and offices or coworking spaces that are not directly tied to an industrial operation but are compatible with industrial activity. This action is explicitly framed as an exploration exercise and will focus on where and how such uses might be appropriate, whether they should be allowed as conditional uses, and what safeguards are needed to protect prime industrial land.	**Near-term**

Rationale

Wilsonville has a limited supply of vacant commercial land, and the 2025 Economic Opportunities Analysis found that most future commercial growth will depend on redevelopment and reuse rather than new greenfield sites. At the same time, some uses, such as certain commercial recreation or indoor entertainment, are not a good fit for Town Center or neighborhood commercial locations but can function well in certain industrial settings without conflicting with industrial activity. Carefully exploring expanded allowances in select industrial areas can relieve pressure on scarce commercial sites, activate underutilized industrial property, and support a more diverse employment base while preserving industrial competitiveness.

City Role	Lead the exploratory analysis and stakeholder conversations and, if appropriate, manage the Development Code amendment process **Department Lead(s):** Planning (lead); Economic Development (support)
Partners	**Industrial property owners; developers; businesses**
Funding/Resource Considerations	This action can be implemented with existing staff resources.
Implementation Steps	• Identify “candidate” areas where additional non-retail uses might be appropriate based on existing and planned industrial uses; access, visibility, and potential for conflicts (traffic, noise, parking); and long-term industrial land readiness goals. • Evaluate whether additional uses should be allowed outright, allowed as conditional uses, or limited to specific sub-areas to preserve core industrial districts. • Conduct stakeholder outreach to test these options, understand potential benefits and concerns, and refine location and approval criteria. • If warranted, draft Development Code amendments and bring them through Planning Commission and City Council for consideration. • Monitor development patterns to ensure that expanded uses complement, rather than displace, industrial employment.

3.2 Coordinate with other City departments to deliver on Town Center and tourism priorities

Description	Timeline
Work across departments so that Economic Development helps advance key actions from the Town Center Plan and Tourism Development Strategy that align with the desired outcomes identified in this Economic Development Strategy. This includes supporting parking management, shared parking strategies, placemaking, and streetscape or public space improvements that make redevelopment more attractive and feasible.	**Near-term**

Rationale

The Town Center Plan and Tourism Development Strategy already identify projects and policy changes to support business activity and visitor spending. Whether those benefits are realized will depend on future City decisions about capital investments, street design, public space programming, parking, and signage. More fully integrating Economic Development into these decisions helps ensure that project scoping and prioritization reflect business and property-owner perspectives and that Town Center and tourism investments advance the City's broader economic development strategy.

City Role	Coordinate across departments to align Economic Development, Planning, Parks and Recreation, Engineering and Public Works with Town Center and tourism strategies. **Department Lead(s):** Economic Development as it relates to priorities that overlap with this Strategy
Partners	**Refer to Town Center Plan and Tourism Development Strategy**
Funding/Resource Considerations	Some priorities will require new funding source(s) and/or additional staff capacity. Refer to Town Center Plan and Tourism Development Strategy for actions and funding needs.
Implementation Steps	**Refer to Town Center Plan and Tourism Development Strategy**

3.3 Catalyze redevelopment of key sites in Town Center

Description	Timeline
Partner on select priority sites where City support could spark reinvestment and create new commercial space on underutilized land. The City could collaborate with property owners and potential developers to facilitate site readiness, assist with predevelopment analysis, and coordinate infrastructure or amenity improvements needed to attract investment. If a Town Center URA is adopted, URA-funded acquisition and disposition, SDC transfer programs, or predevelopment grants (e.g., feasibility studies, site development analysis) could be used to help catalyze projects.	**Longer-term**: Once funding and partnerships are secured

Rationale

Town Center provides a strong opportunity for higher-intensity mixed-use and commercial redevelopment, but property owners may face feasibility challenges, high infrastructure costs, or limited capacity to move projects forward. Concentrating effort on a small number of catalyst sites can create momentum, demonstrate visible progress on the Town Center vision, and deliver benefits such as public space, housing, and small-business opportunities. Without a new funding source, the City's role will remain limited to coordination and light-touch support; with a Town Center URA or similar tool, the City will have more ability to move priority projects forward.

City Role	Establish and maintain partnerships with property owners and developers, provide technical and policy support for site redevelopment, and coordinate needed infrastructure and public improvements. Offer regulatory or financial incentives, marketing support, or infrastructure cost-sharing; recruit development partners. **Department Lead(s):** Economic Development and Planning
Partners	Town Center property owners; developers; brokers; Chambers of Commerce; tourism partners; residents and neighborhood representatives
Funding/Resource Considerations	Requires a new funding source to move beyond light-touch predevelopment support. If a Town Center URA or similar tool is adopted through Action 2.1, URA-funded land acquisition and disposition, SDC transfer programs, or predevelopment grants could be used to help advance projects.
Implementation Steps	• Identify potential priority catalyst sites for redevelopment consistent with the Town Center Plan. • Engage property owners and potential development partners to assess interest, constraints, and redevelopment potential. • Identify financial and policy tools, including those implemented in Action 2.1, that the City can utilize to support site redevelopment. • Develop site-specific implementation strategies and bring them to City Council for direction, including any proposed public-private partnership structures and funding commitments. See Town Center Plan for ideas. • Apply the Town Center Plan's business retention and location strategies when advancing catalyst projects to support existing businesses.

4.1 Incentivize local dining and retail in Town Center

Description	Timeline
Design and implement an incentives program to encourage local and experience-oriented dining and retail businesses to locate in Town Center. Incentives may include tenant improvement grants, limited fee reductions, or lease subsidies designed to attract small, locally owned businesses that contribute to Town Center's identity as a vibrant community destination. These incentives are intended to support businesses and entrepreneurs both in and outside of Wilsonville that are seeking to establish or expand in Town Center. This program will be coordinated with the Town Center Plan and Tourism Development Strategy to ensure alignment.	**Near-term:** Pursue targeted incentives within existing resources **Longer-term:** Expand incentives, dependent on new funding

Rationale

Town Center does not have enough unique, locally owned restaurants and shops to draw regular foot traffic or create a strong sense of place. National chains add stability, but small local businesses bring character and reinforce community identity. Because high startup costs and rising rents make it hard for smaller businesses to locate here, the City can use targeted incentives to help close modest feasibility gaps. A clear, predictable incentives program would support tenants that advance Town Center and tourism goals, improve the local business mix, and keep more spending in Wilsonville.

City Role	Design and administer the incentives program, coordinate with property owners and tenants, and monitor outcomes to refine the program over time. **Department Lead(s):** Economic Development
Partners	Chambers of Commerce; property owners; business owners and tenants; business support organizations, including those serving minority-owned businesses
Funding/Resource Considerations	Program design and limited incentives could move forward with existing resources. Full-scale incentives will depend on creation of a sustainable funding mechanism through Action 2.1.
Implementation Steps	• Define program goals and target tenants focusing on locally-owned restaurants and specialty retail that align with Town Center and tourism priorities • Select a small set of tools to support the desired types of business growth and set clear eligibility and evaluation criteria. • Promote the incentives program widely, including outreach to minority-owned businesses and business support organizations as well as existing Wilsonville businesses who may want to locate in Town Center. • Track funded projects and early outcomes, and refine the program based on what works. • As funding tools from Action 2.1 are clarified, decide how to scale and sustain the program and coordinate it with other Town Center investments.

4.2 Explore the creation of a food cart incubation program in Town Center

Description	Timeline
Explore the feasibility of a food cart incubation program in Town Center to support small-scale entrepreneurs, activate underused sites, and test market demand. The concept could draw on Tigard's Launch Pod model, which pairs lower rents with business advising and coaching. Initial rent is low and increases over time. Business advising includes coaching and a defined "graduation" period, after which successful businesses move to other locations. The program would be open to entrepreneurs both within and outside of Wilsonville who are looking for an accessible way to launch or test a concept.	**Near-term**: Concept development, site and regulatory analysis **Longer-term:** Implementation, dependent on funding and capacity

Rationale

Food carts can lower the cost-of-entry for new food businesses, generate immediate activity, and provide a pathway for restaurants to brick-and-mortar locations. A well-located pod in Town Center could complement existing businesses, support diverse and minority-owned entrepreneurs, and help establish Town Center as a dining destination.

City Role	Lead exploration of the concept by identifying potential sites, evaluating feasibility, and defining partner roles. If a viable model and funding source are identified, help secure resources and promote the program. **Department Lead(s):** Economic Development
Partners	Property owners of strategic, underutilized sites; Chambers of Commerce; Small Business Development Center and other business support providers; lenders and potential grant funders; food entrepreneurs.
Funding/Resource Considerations	Staff can complete planning and coordination with existing resources. Any direct City investment in site improvements, food carts, or business services would require a dedicated funding source (e.g., URA funds or grants).
Implementation Steps	• Review Tigard's Launch Pod and similar food-business accelerator models to identify key elements that could work in Wilsonville (cohort size, rent structure, term length, coaching model, equity goals). • Identify one or more candidate sites in Town Center focusing on visibility, access, utilities, and consistency with the Town Center Plan and Tourism Development Strategy. • Assess zoning and other requirements for a pod and determine whether any code updates or clarifications are needed. • Engage property owners, business support partners and entrepreneurs to gauge interest. • Outline a preferred concept including target entrepreneurs, rent and "graduation" structure, expected costs, and basic partner roles. • Identify potential funding pathways and partner contributions and, if feasibility looks promising, prepare a concept package for City Council.

4.3 Explore affordable commercial space models and partnerships

Description	Timeline
Evaluate strategies and partnerships to increase the supply of affordable or below-market commercial space for small and locally owned businesses in Town Center and other key commercial areas, and to preserve existing affordable commercial spaces. Potential approaches include City master leasing, where the City leases ground-floor space from a property owner and subleases it to local businesses at reduced rates, and partnerships with developers that reserve a portion of new projects for local tenants. The City could also explore shared incubator spaces or micro-suites that offer low-cost entry points for start-ups. These approaches support small businesses and entrepreneurs operating in Wilsonville, including minority-owned businesses, whether they start here or relocate from elsewhere.	**Near term:** Concept development and partnership discussions **Longer term:** Implementation as funding and opportunities arise

Rationale

High rents and limited availability of small, flexible commercial spaces create barriers for small, local, and startup businesses. Increasing access to more affordable space would support entrepreneurship, strengthen the local retail and dining scene, and reinforce Town Center's role as a vibrant, experience-driven destination. This strategy aligns with the Town Center Plan's and Tourism Development Strategy's goals to increase local business diversity and help retain businesses that contribute to Wilsonville's identity and economy.

City Role	Lead evaluation of options to support affordable commercial space; identify pilot sites and engage property owners. **Department Lead(s):** Economic Development
Partners	Property owners and developers; business support organizations; lenders and potential grant funders; prospective small businesses and entrepreneurs
Funding/Resource Considerations	Initial exploration and partner outreach can occur with existing staff resources. Implementing a pilot that includes rent subsidies, buildout support, or master leasing will require a new funding source and could be coordinated with tools developed under Action 2.1.
Implementation Steps	• Assess demand and space needs for small and locally-owned businesses. • Review affordable commercial space models from other communities, including incubators, shared spaces, master leases, and set-aside agreements, and identify which are most applicable in Wilsonville. • Identify candidate sites and partners. • Outline pilot concepts, including roles, eligibility, lease terms, and how affordability would be maintained. • Evaluate potential funding tools, including those developed through Action 2.1, to support any required public contribution. • If a viable pilot emerges, prepare a concept and funding strategy for City Council review and direction on whether/how the City should participate.

4.4 Recruit unique restaurants and shops to Town Center

Description	Timeline
Actively recruit distinctive dining and retail tenants to strengthen Town Center as a destination district. Focus recruitment on concepts that fit the Town Center Plan vision and Tourism Development Strategy, using targeted marketing materials, coordination with property owners and brokers, and direct outreach to operators whose offerings match the desired character and tenant mix. Recruitment could be paired with catalytic redevelopment efforts (Action 3.1) to ensure new businesses locate in highly visible, high-impact sites. Recruitment efforts could include outreach to both existing Wilsonville businesses that may want to expand into Town Center, and businesses from outside the city that offer concepts not currently available in Wilsonville. Recruitment should aim to bring a diversity of business types that broaden the mix of experiences, cuisines, and services available in Town Center.	**Longer-term**: Enabled by new funding source from 2.1

Rationale

The Town Center Plan calls for a stronger cluster of destination dining and retail, active storefronts, and a mix of local and regional tenants. The Tourism Development Strategy emphasizes experiences that give residents and visitors a reason to choose Wilsonville and stay longer. A focused, plan-driven recruitment effort can strengthen Town Center as Wilsonville's primary dining and activity hub, complement planned public investments, and create opportunities for local and minority-owned businesses that reinforce the City's identity and visitor appeal.

City Role	Market Town Center opportunity sites, lead or support outreach to targeted tenants, and coordinate with property owners, brokers, and tourism partners so recruitment is explicitly aligned with the Town Center Plan and Tourism Development Strategy and connected to City incentive tools. **Department Lead(s):** Economic Development
Partners	Town Center property owners and brokers; developers; Chambers of Commerce; tourism partners; business support organizations; prospective tenants, including local and minority-owned businesses
Funding/Resource Considerations	Primarily staff time for outreach and marketing. Recruitment efforts will be more effective if paired with incentives, which could be supported by funding tools identified in Action 2.1.
Implementation Steps	• Develop concise recruitment materials that summarize the Town Center vision, highlight tourism-related strengths, and showcase opportunity sites and available incentives. • Coordinate with property owners and brokers to identify current and future spaces best suited for destination dining and retail. • Maintain a list of priority tenant types and target operators (local, regional, and minority-owned) and conduct proactive outreach to them.

4.4 Recruit unique restaurants and shops to Town Center

- Use recruitment conversations to understand what tenants need to make a Town Center location feasible and coordinate that information with Actions 3.1 and 4.1.
- Integrate recruitment with Town Center and tourism activation efforts, such as events and promotions (see Town Center Plan and Tourism Development Strategy), so prospective tenants can see how the district is evolving.
- Track leads, new leases, and openings influenced by City outreach and periodically report progress to City Council.

5.1 Facilitate workforce connections and support partner initiatives

Description	Timeline
Take a more active coordinating role in workforce efforts by working with employers, education providers, and workforce organizations so Wilsonville's needs are clearly reflected in regional programs and funding decisions. This means not only connecting partners, but also advocating for training, partnerships, and resources that align with local industry priorities.	**Near-term**

Rationale

Through engagement, businesses reported difficulty finding qualified workers, a problem that is not unique to Wilsonville. City Council has emphasized workforce support as a priority, while recognizing that workforce funding and program design are largely controlled by regional and state entities. The City cannot close workforce gaps on its own, but the City can *add value* by convening employers and partners, communicating local needs, and advocating for programs that fit Wilsonville's key sectors (for example, advanced manufacturing and construction). A more deliberate coordination role will help partners tailor programs to local needs and give Wilsonville a stronger voice in regional workforce conversations and funding decisions.

City Role	Facilitate communication between employers and workforce partners, support partner-led initiatives that address workforce challenges, and elevate Wilsonville's workforce needs with regional and state agencies. **Department Lead(s):** Economic Development
Partners	Clackamas Workforce Partnership; Worksystems; Clackamas Community College; Oregon Tech; OMEP; Chambers of Commerce; major employers; small and locally owned businesses
Funding/Resource Considerations	Primarily staff time for outreach, coordination, and communication. Staff could spend more time on this work if it remains a City Council priority.
Implementation Steps	Work with employers and partners to identify what level of workforce coordination makes sense for Wilsonville and execute on that approach. This could include: • Developing an employer listening framework (e.g., annual survey, sector roundtables, or one-on-one visits) to ensure the City understands the workforce development needs of businesses. Make sure to engage a range of business sizes and owners, including minority-owned businesses. • Creating and maintaining a directory of workforce partners and programs relevant to Wilsonville employers. • Convening sector-focused conversations (e.g., advanced manufacturing) with employers and training providers to identify shared priorities. • Sharing employer feedback with partners and tracking follow-up where feasible (e.g., new course offerings, apprenticeships). • Coordinating with workforce partners to elevate Wilsonville-specific needs in regional workforce plans and funding proposals.

6.1 Strengthen business communication, customer service, and resource connections

Description	Timeline
Continue and strengthen the City's direct engagement with local businesses by expanding outreach, improving communication, and addressing barriers identified by businesses. By coordinating across departments and maintaining regular contact with both industrial and commercial businesses, the City can identify challenges early, connect businesses to assistance, and make City processes easier to navigate.	**Near-term**

Rationale

Businesses and developers consistently asked for a more proactive partnership with the City, especially around navigating regulations, accessing resources, and finding a clear path to "yes." Wilsonville already connects with a variety of businesses, but it is not always systematic. Clarifying priorities, ensuring small and minority-owned businesses are included, and establishing a feedback loop from business outreach to process and policy changes will help the City respond more consistently and make it easier to do business in Wilsonville.

City Role	Proactively engage businesses, identify barriers early, provide clear permitting guidance, and connect businesses to resources. **Department Lead(s):** Economic Development
Partners	Chambers of Commerce; Small Business Development Center and other business support organizations; workforce development partners; capital providers and lenders; property owners and brokers
Funding/Resource Considerations	Primarily existing staff time. The City could place more emphasis on this work if it remains a Council priority.
Implementation Steps	Develop an Economic Development business engagement workplan that: • Sets a cadence for proactive outreach (for example, business visits, roundtables, and/or surveys), with intentional outreach to small and minority-owned businesses. • Assigns responsibility for keeping the City's business resource hub (primarily the website and any printed materials) current and easy to use, consolidating key City and partner programs in one place. • Establishes basic coordination practices between Economic Development, Planning, and other departments (for example, warm hand-offs, shared notes, and internal check-ins on active projects). • Specifies how recurring issues raised by businesses and by developers will be tracked and fed into process or policy review. • Includes a simple reporting schedule to City Council on outreach activities, common themes, and resulting changes or follow-up actions. • Review and update the workplan annually based on what staff are hearing from businesses, available capacity, and City Council priorities.

6.2 Provide small business assistance grants for upgrades

Description	Timeline
Offer small business grants to help industrial and commercial businesses make key investments that support long-term viability. Eligible activities could include energy efficiency and building systems upgrades, technology adoption, tenant improvements and façade enhancements, and technology or equipment investments tied to productivity and job retention. The grants could prioritize small businesses with limited access to capital and those in areas experiencing or anticipating redevelopment such as Town Center.	**Longer-term**: Once funding is secured

Rationale

Many small businesses struggle to pay for modest but critical upgrades, especially in older industrial and commercial buildings or when owners have limited access to traditional financing. This can make it harder for them to stay competitive or remain in place as nearby investment occurs. Targeted grants for building or facility upgrades would build on the City's outreach and problem-solving (Action 6.1) by filling specific capital gaps for firms the City wants to retain and grow. Well-designed grants can stabilize and modernize existing businesses, support visible improvements that complement public investments, and advance equity by prioritizing businesses that struggle to access to capital and City incentives, including minority-owned businesses.

City Role	Design and administer the grant offerings and use outreach from Action 6.1 to build a pipeline of businesses that could benefit. **Department Lead(s):** Economic Development
Partners	Chambers of Commerce; Small Business Development Center and other business support organizations (including minority-business organizations); property owners
Funding/Resource Considerations	Implementation will require a **dedicated funding source to support grants**, potentially through a Town Center URA or other mechanisms evaluated under Actions 2.1 and 1.4.
Implementation Steps	• Identify and secure a funding source (for example, URA revenues, state or federal grants, or other local tools) and set an overall budget and timeline for grant offerings. • Define clear goals, eligibility criteria, and basic grant structure, including typical award size, eligible upgrade types, and any match expectations. • Prepare simple program guidelines and an application process. • Use existing business outreach (Action 6.1) and partner networks—including the Chamber, Small Business Development Center, minority business organizations, and property owners—to identify candidate businesses and invite them to apply. • Collect light follow-up information from recipients on key outcomes and periodically summarize results for presentation to decision makers.

Appendix I: West Railroad Water and Sewer Evaluation

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Technical Memorandum

Date:	6/5/2026
To:	Chris Meyers, City of Wilsonville Senior Planner
CC:	Amy Magg, City of Wilsonville Development Engineering Manager
Prepared By:	Jason Rice, PE and Olivia Burke, EIT of Water Systems Consulting Inc.
Reviewed By:	Scott Duren, PE of Water Systems Consulting, Inc.
Subject:	Basalt Creek - West Railroad Water and Sewer Evaluation

Executive Summary

The City of Wilsonville commissioned this planning-level study to evaluate sanitary sewer and drinking water infrastructure needed to serve the West Railroad Area, a future industrial development area within the Basalt Creek Planning Area. This study developed conceptual utility layouts, estimated future wastewater and water demands, identified key constraints, and prepared AACE Class 5 planning-level cost estimates.

The proposed sanitary sewer system consists of a 10-inch gravity trunk sewer located along the eastern portion of the site to avoid environmentally sensitive areas, with 8-inch extensions serving future development. Due to site topography and existing system elevations, a lift station and force main are proposed to convey flows to the City's existing collection system. Projected peak wastewater flow is approximately 553,000 gallons per day. The total estimated construction cost for the sanitary sewer system is approximately $5.3 million, including engineering and administrative costs.

The proposed water system consists of a looped 12-inch distribution main connected to the existing City system at the north and south ends of the study area. The system is sized to meet projected industrial demands and required fire flows while maintaining City pressure standards. Maximum day demand is estimated at approximately 240,000 gallons per day, with peak hour demand of approximately 338,000 gallons per day. Total estimated construction cost for the water system is approximately $8.3 million, including engineering and administrative costs.

Key project constraints include lack of existing right-of-way, environmental resources, future development uncertainty. Overall, the study concludes that the recommended sewer and water improvements can adequately serve anticipated industrial development within the West Railroad Area and provide a foundation for future detailed design and implementation.

1.0 Introduction

The City of Wilsonville (City) has requested a planning level study to determine the feasibility of providing City sanitary sewer and drinking water to a sub-section of the Basalt Creek Planning Area referred to as the West Railroad Area. This technical memorandum describes the West Railroad Area, estimates wastewater collection flows and water use demand, provides preliminary sizing, proposes locations for each facility, and provides AACE Class 5 planning level cost estimates for planning purposes. Detailed modeling or design was not completed as a part of this task.

The West Railroad Area is considered a sub-area to the larger Basalt Creek Planning Area, which is a tract of land located between the cities of Tualatin and Wilsonville. More specifically, the West Railroad Area is bound to the north by SW Tonquin Rd and SW Basalt Creek Parkway, to the east by the Portland & Western Railroad, to the south by SW Grahams Ferry Rd, and to the west by the City's urban growth boundary (UGB). Subsequently, this area is planned to be zoned as Industrial once annexed.

Figure 1 on the following page depicts the study area in relation to the City's current limits, Urban Growth Boundary (UGB), and treatment plants.

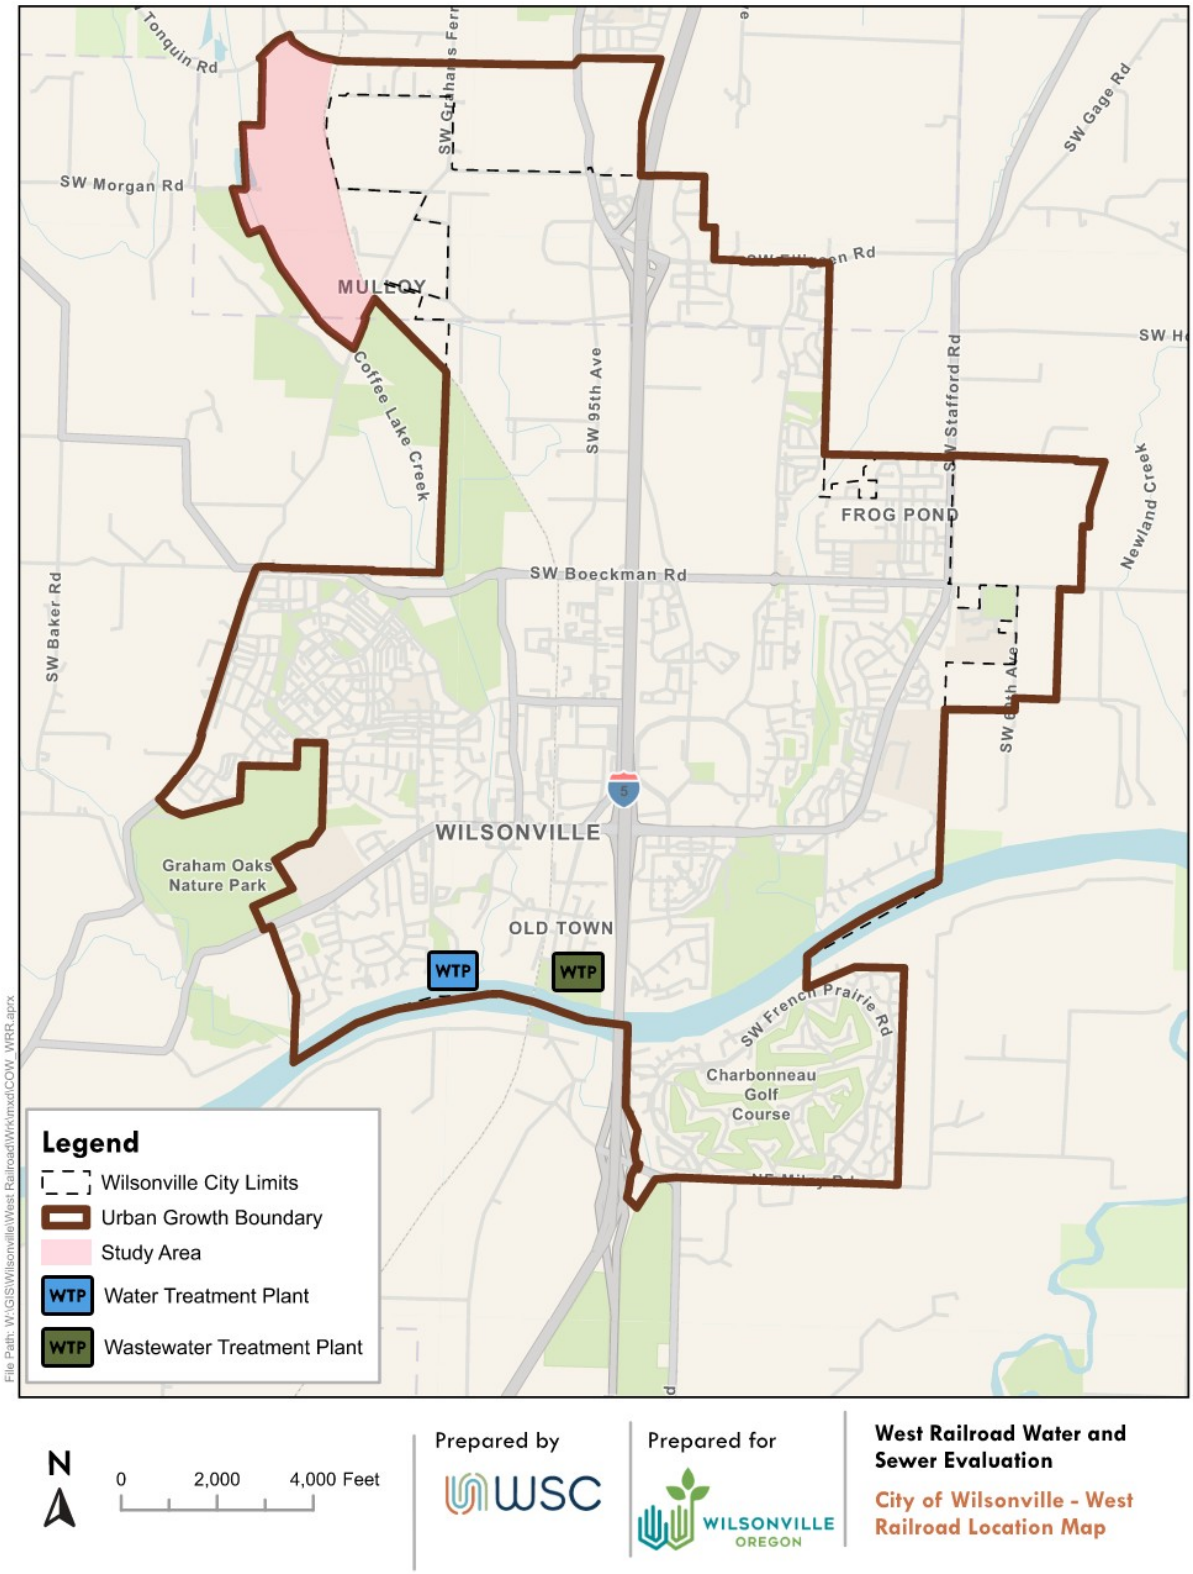

Figure 1: West Railroad Area Location Map

2.0 Overview of Conceptual Utility Designs

2.1 Sanitary Sewer System

The City's sanitary sewer system is conveyed and treated at the Wilsonville Wastewater Treatment Plant (WWTP) located at 9275 SW Tauchman Street, approximately three miles south of this planning area.

The conceptual sanitary sewer system prioritizes gravity collection and avoids sensitive areas by locating the sanitary sewer trunk line along an existing private driveway flowing southward. The planned sanitary sewer main is located on the eastern edge of the West Railroad Area to avoid Coffee Lake Creek, North Coffee Lake Creek Wetlands, and other natural areas. This eastern alignment avoids the need for more than one City maintained sanitary lift station because of variable contours throughout the site traveling North to South. The proposed sanitary sewer main trunk reaches its lowest elevation in the southeastern corner of the West Railroad Area, lower than the City's adjacent existing sanitary system on SW Clutter Street. A sanitary sewer lift station is proposed at SW Grahams Ferry Road to lift collected flows into the existing City system on SW Clutter Street. In the proposed configuration, some properties within the West Railroad Area may need to install privately maintained pump systems to lift sewage to the proposed public sanitary system.

The sanitary sewer concept is divided into segments that can be built as development occurs in the West Railroad Area. The Main Sanitary Sewer Trunkline conveys sanitary sewer flows from the entire area and is sized at 10-inch diameter. The concept for the Main Trunkline includes a lift station and force-main that crosses the railroad. The Northern, Western, and Southern Sanitary Sewer Extensions are sized at 8-inches to convey sanitary sewer flows from parcels throughout the area. The proposed sanitary sewer system is shown on the next page on Figure 2.

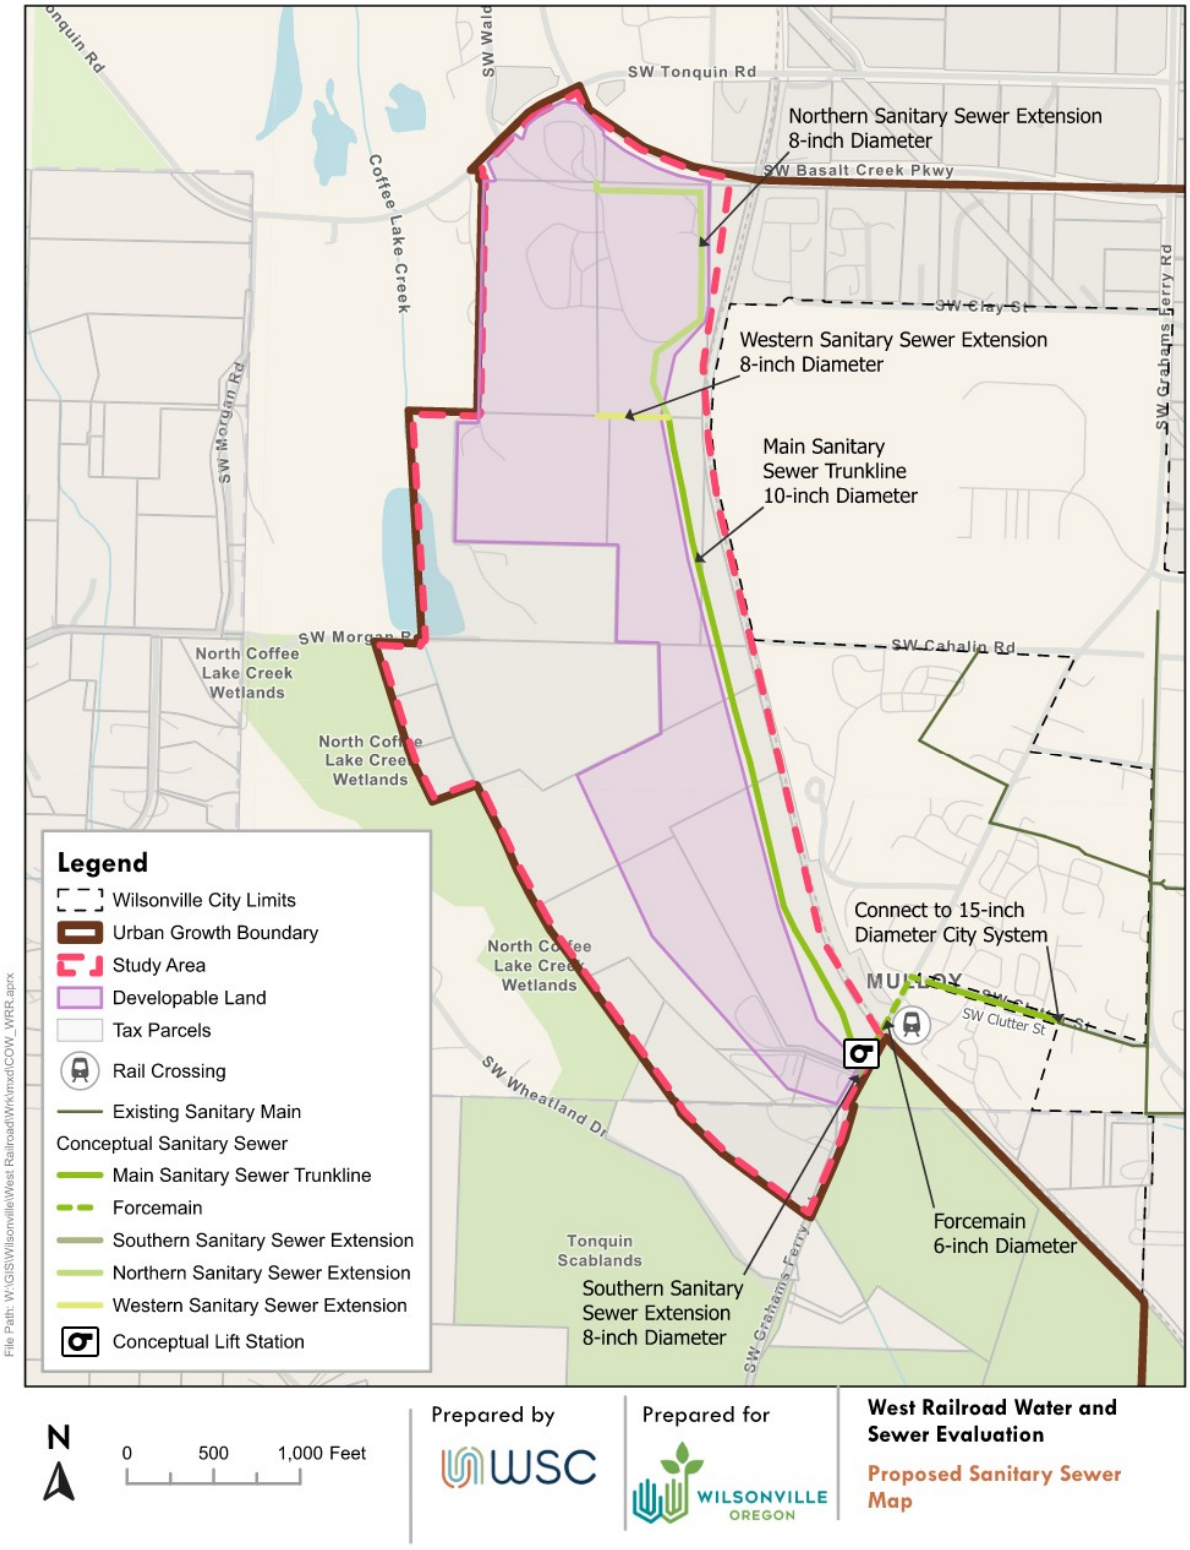

Figure 2: West Railroad Proposed Sanitary Sewer Map

2.1.1 Sanitary Sewer Design Assumptions and Principles

The following design assumptions were applied in the sanitary system design and obtained the City of Wilsonville Public Work Standards (2017). While specific lateral locations are not identified, careful layout of main lines provides service at each property within the West Railroad Area along existing driveways. Sanitary sewer mains are below the minimum 8 feet of cover, with minimum sanitary pipe grades as defined in Table 1.

Table 1: Minimum Sanitary Pipe Grades

Inside Pipe Diameter (inches)	Grade (%) (feet per 100 feet)
Sanitary Laterals	
4	2.00
6	2.00
Sanitary Mains	
8	0.40
10	0.28
12	0.22
15	0.15
18	0.12
21	0.10
24	0.08
27	0.07
30	0.06

Source: 2017 Public Works Standards Table 4.1

The sanitary system design followed these guiding principles for the layout:

- Use gravity as much as possible to reduce initial construction costs and ongoing operational costs
- Attempts to follow previously identified routes by the City
- Follows land use boundaries (not serving Undeveloped Natural Area land use areas)
- Avoid streams and significant natural areas
- Siting pump stations as far as practical from present or proposed built-up residential areas and off the traffic way of streets and alleys. (Wilsonville Public Works Standards: Section 401.3.02)

2.1.2 Sanitary Sewer Flow Calculations

Estimation of sanitary sewer collection flows was based on flow factors from the City's 2014 Wastewater Collection System Master Plan (CSMP).

Dry weather flows were calculated using the high-density industrial unit loading factor developed in the CSMP of 1,000 gallons per acre per day (gpad) (Table 5-10, CSMP (2014)). A peaking factor of 2.3 was used, and is consistent with wastewater meter data reviewed in the CSMP for the Canyon Creek basin, which is located in the upper sub-basins of the City similar to the West Railroad Area where the flow pattern is less affected by travel time and flow attenuation (Table 5-5, CSMP (2014)).

$$Peak\ Dry\ Weather\ Flow\ (DWF) = \ Developed\ area\ (ac) * 1{,}000 \frac{gal}{ac * day} * 2.3\ peak\ factor$$

Wet weather flows were calculated using an inflow and infiltration rate of 2,500 gpad, which was the maximum value computed in the CSMP (Table 5-8, CSMP (2014)). The wet weather flows were calculated using the following equation.

$$Wet\ Weather\ Flow\ (WWF) = Developed\ area\ (ac) * 2{,}500 \frac{gal}{ac\ * day}$$

The total peak flow was calculated by adding wet and dry weather flows together.

$$Peak\ Sanitary\ Sewer\ Flow = Dry\ Weather\ Flow\ (DWF) + Wet\ Weather\ Flow\ (WWF)$$

The total calculated peak sanitary sewer flow is 552,764 gallons per day (gpd). Calculations are provided in Appendix A.

2.1.3 Sanitary Sewer Concept Design and Cost Estimate

A surface profile was developed using Google Earth along the sanitary sewer alignment to evaluate sanitary sewer depth and is provided in Appendix B. The profile assumed a minimum depth from surface to pipe invert of 10 feet and used the minimum pipe slope for 10-inch pipe of 0.28 feet/feet wherever possible. To maintain gravity flow within the trunkline, some sections may be up to 30 feet deep. The lift station wet well depth was estimated at 20 feet deep to accommodate laterals connecting from the southeast properties.

The cost estimate for each segment of the proposed sanitary sewer system is provided in Table 2 through Table 5. Project costs include pipe material based on pipe bury depth, and lift station capital costs. While it is not anticipated that development within this area would require additional upgrades to the existing downstream sewer system, estimates for this work are not included in this analysis. A detailed design fee of 20% of total project cost and City engineering/admin/finance/legal fee of 15% of total project cost was applied. Because this is a planning level study, a Level 5 Association for the Advancement of Cost Engineering (AACE) estimate was performed; providing a range of total cost of construction from -50% to 100%. All cost totals are rounded up to the nearest hundred thousand.

Table 2. Main Sanitary Sewer Trunkline Estimated Cost

Item	Quantity	Unit	Unit Cost	Cost
10-inch PVC SDR 35 (8'-10' bury)	970	LF	$275	$266,750
10-inch PVC SDR 35 (10'-20' bury)	2640	LF	$330	$871,200
10-inch PVC SDR 35 (20'-30' bury)	1010	LF	$385	$388,850
6-inch DIP Sanitary Force Main (3' bury)	740	LF	$350	$259,000

Table 5: Western Sanitary Sewer Extension Estimated Cost

Item	Quantity	Unit	Unit Cost	Cost
8-inch PVC SDR 35 (10'-20' bury)	410	LF	$300	$123,000
		Subtotal		**$123,000**
		Detailed Design	20%	$25,000
		Wilsonville Engineering/Admin/Finance/Legal	15%	$18,000
		Total Estimated Cost of Construction		**$166,000**
		Lower AACE Level 5 Estimate for Total Cost of Construction	-50%	**$83,000**
		Upper AACE Level 5 Estimate for Total Cost of Construction	100%	**$332,000**

2.2 Water System

The City's primary water supply comes from the Willamette River and is treated at the Willamette River Water Treatment Plant (WRWTP). Treated water is conveyed from the WRWTP to the distribution system. The West Railroad area is located within the existing pressure zone B. Zone B is the main pressure zone in the City and is served by Elligsen Reservoirs 1 and 2 and Westside. A comparison of City pressure data for Zone B and elevations within the study area confirmed that Zone B can provide the hydraulic pressure necessary to serve the West Railroad Area. A detailed water model was not developed for the Study.

The proposed water system is a looped system within the West Railroad Area using existing private driveways, connecting to the existing distribution system along SW Grahams Ferry Rd in the north and along SW Clutter St in the south. The proposed water system concept is divided into segments that can be built as development occurs in the West Railroad Area. The Main Water Loop delivers water for much of the area and includes two railroad crossings. The Northern and Southern Water Extensions deliver water to parcels that do not have access to the main loop and may need to loop back to the Main Water Loop when development occurs. The proposed water system is shown on the next page on Figure 3.

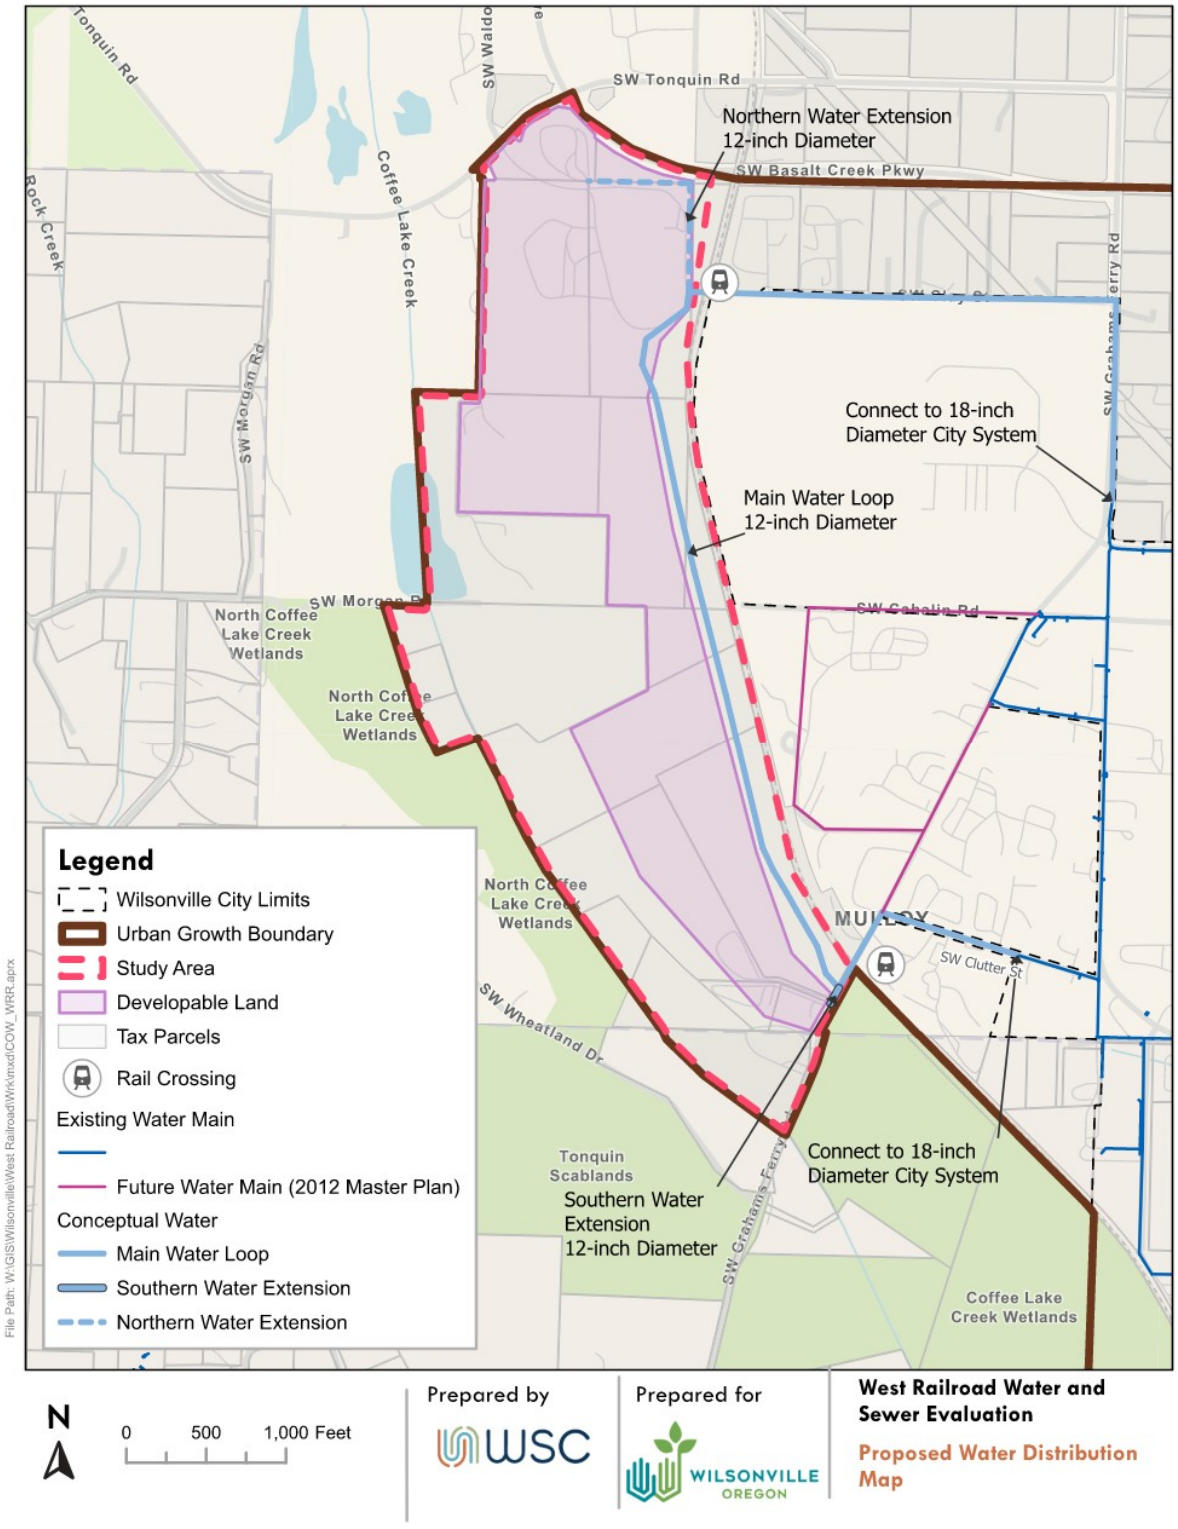

Figure 3: West Railroad Proposed Water Distribution Map

2.2.1 Water Design Assumptions and Principles

The following level of service requirements presented in Table 6 were evaluated for the proposed water system were obtained from the City's 2012 Water Distribution System Plan (WDSP) developed by Keller and Associates and cross referenced to the City's Updated Water Master Plan (WMP), currently being developed by Water Systems Consulting, Inc. Service connections are not included in the conceptual layout.

Table 6: Water Level of Service Requirements

Statement/Measure	Goal/Target	Units
Fire Flow Requirement for Industrial Areas	3,000	gpm
Minimum Pressure while delivering MDD + Fire	20	psi
Minimum Pressure while delivering PHD	40	psi
Maximum Pressure without pressure regulator	80	psi
Maximum Velocity for pipes under 12-inches under PHD or MDD + Fire	10	feet/sec

MDD = max day demand, PHD = peak hour demand

2.2.2 Water Demand Calculations

Estimation of water use demand was based on land use information provided by the City and factors developed in the WMP.

An industrial demand of 977 gpad[1] is consistent with the WMP based on historical meter usage (Table 2-9, WMP, in-progress). A conservative peaking factor of 2.13 for maximum day demand (MDD) and 3.0 for peak hour demand (PHD) was used as are consistent with the historical systemwide peaking factors (Table 2-4, WMP, in-progress).

Peak demand was calculated using the equation below.

$$MDD = Ind.Land\ Area\ (ac) * 977 \frac{gal}{ac * day} * 2.13\ peak\ factor$$

$$PHD = Ind.Land\ Area\ (ac) * 977 \frac{gal}{ac * day} * 3.0\ peak\ factor$$

[1] The industrial water demand of 977 gpad was calculated as a part of the City's Water Master Plan Update (in-progress) using the last 5 years of City water meter data. This is slightly lower than the industrial sewer discharge of 1,000 gpad as recommended in the City's 2014 Sanitary Master Plan.

The estimated demand is summarized in Table 7.

Table 7. Estimated Water Demand

Demand	gpd	Gpm
MDD	239,647	166
PHD	337,532	234

MDD = max day demand, PHD = peak hour demand

2.2.3 Water Concept Design and Cost Estimate

AFT Fathom software was used to evaluate the conceptual water system's static pressures and residual pressures at MDD + Fire Flow (MDD + FF). To evaluate static pressures, the analysis first assumed the reservoirs feeding Zone B were at their minimum operating level. Static pressure at the highest water main elevation within the Study area was above 40 psi. Static pressure was then evaluated if the reservoirs feeding Zone B were at their maximum operating level. Static pressure at the lowest water main elevation within the Study area was greater than 80 psi.

The analysis then evaluated the system's performance to convey MDD + FF. A pipe size of 12-inches was identified as the minimum pipe size to deliver MDD + FF while meeting minimum residual pressures in the system. The analysis then evaluated the 12-inch pipe at PHD. Results of the analysis are included in Table 8.

Table 8: Water Level of Service at PHD

Parameter	Value	Units
Static Pressure at Highest Elevation in Study Area, assuming Lowest Reservoir Levels	50	psi
Static Pressure at Lowest Elevation in Study Area, assuming Highest Reservoir Levels	101	psi
PHD	234	gpm
Velocity at PHD	0.66	ft/s
MDD + FF	3,166	gpm
Velocity at MDD + FF	9.7	ft/s
Residual Pressure at Highest Elevation in Study Area at MDD + FF	30	psi

MDD = max day demand, PHD = peak hour demand, FF = fire flow

The cost estimate for the water system is provided in Table 9 through Table 11. Because this is a conceptual level study, a Level 5 Association for the Advancement of Cost Engineering (AACE) estimate was performed; providing a range of total cost of construction from -50% to 100%. All cost totals are rounded up to the nearest hundred thousand.

3.0 Challenges and Constraints

Area Topography

The planning area's topography ranges from approximately 229 feet in elevation at the northern boundary to 169 feet at the southern boundary, providing favorable conditions for the proposed sanitary sewer gravity main. The site also slopes downward from east to west, with an average elevation change of approximately 25 feet toward the wetlands located along Coffee Creek. To avoid impacts to these environmentally sensitive areas and existing structures, the proposed sanitary sewer main has been routed along the eastern side of the planning area. As development arises, the City may wish to evaluate locating the main further west to reduce the number of private pumping systems.

Right-of-Way and Easements

Because the planning area has no available right-of-way or existing sanitary sewer or water easements in which the City can utilize, in any alignment scenario a combination of Easements and Right-of-Way placement will need to be considered.

Maximum EDU's Under Recommended Scenario

Section 2.4.1 of the WMP established a demand per equivalent dwelling unit (EDU) of 178 gpd/EDU. The proposed 10-inch sewer main serves flow equivalent to 647 EDUs and has the capacity to serve 2,320 EDUs.

The proposed 12-inch water main serves a demand equivalent to 632 EDUs. The water main is sized to meet fire flow requirements and has capacity to serve the maximum number of EDUs the proposed 10-inch sanitary sewer can support.

Water scouring velocity due to fire flow requirements

The diameter of the water main is driven by the requirement to meet fire flow demand. Under average system demands, water velocity in the 12-inch pipe is very low. Until demand becomes higher and the water “turn-over” rate increases, the City may schedule flushing as a part of their ongoing water system maintenance program.

Sanitary Sewer Velocities for section with minimum grade

One item that should be given consideration is lower sanitary sewer scouring velocities in the upstream sections of the sewer main due to fewer connections. Some sections of the sanitary sewer main are at the City’s minimum slope to meet cover requirements. Until there are enough connections to the sewer main where there are constant flows, the City may schedule flushing to eliminate odor concerns.

4.0 Summary

This technical memorandum evaluated projected sanitary sewer flows and water demands, site constraints, and connection to existing utilities to evaluate a conceptual layout for sanitary sewer and water in the West Railroad Area. Flow and demand calculations indicate that a 10-inch sanitary sewer trunk main along with 8-inch extensions and 12-inch water main are sufficient to serve the area while meeting City Standards. Conceptual cost estimates were developed for both systems, however more detailed modeling and final design will need to be performed prior to construction.

Summary

This document provides an Infrastructure Funding Analysis for Basalt Creek. The purpose of the Infrastructure Funding Analysis is to identify infrastructure challenges that could hinder development within the Basalt Creek Study Area (Study Area), and to suggest approaches for overcoming those challenges. This analysis focused on two primary sources of infrastructure funding: system development charges (SDCs) and tax increment financing (TIF).

This analysis was originally conducted in 2025, with the draft report completed in December of 2025. Subsequently, in July of 2026, additional analysis was completed to examine the possibility of funding infrastructure in the West Railroad area, adjacent to Basalt Creek. This updated financial analysis is described in Appendix B. The main body of the report, however, remains limited to the original analysis of Basalt Creek.

City engineering staff provided a list of necessary infrastructure projects to support development within the Study Area. Total project costs are estimated to be $61.8 million in constant 2025 dollars, with the City's share of those costs estimated to be $24.5 million. The majority of the City's share of costs, $18.5 million, are estimated to be eligible for SDC funds.

Projected cash flows were analyzed that show the combined revenues and expenditures for the Study Area over time. Four different scenarios were evaluated that considered full buildout versus 50% buildout of the Study Area, and whether the Grahams Ferry Assemblage or Greenhill opportunity sites would be first to develop. We draw the following conclusions from this analysis:

- SDCs alone are insufficient to fund the necessary infrastructure in the Study Area. The City is estimated to have over $6.0 million in project costs that are the City's responsibility but are not SDC eligible. Additionally, water and parks SDC revenue projected in the area are less than the SDC eligible share of project costs in the area at full buildout.
- Transportation SDCs are an anomaly, as all transportation infrastructure projects in the Study Area are estimated to be responsibility of developers.
- A funding strategy that includes both TIF and SDCs generates sufficient revenue long-term, but still results in temporary funding shortfalls that would need to be addressed. There are multiple strategies that the City could consider to address these shortfalls, including delaying projects, relying on developer-led construction, using alternative financing options, or obtaining other funding sources.
- The biggest funding challenges are early on. The City will need to carefully coordinate early phases of development with private development partners.
- Developer-led construction of public infrastructure projects is an advantageous strategy to resolve the City's short-term funding gaps.
- Funding capacity for TIF is greater than the infrastructure funding gaps that have been identified in the area.
- The finance scenarios that assumed full buildout of the Study Area resulted in significantly better cash flows than scenarios assuming only 50 percent buildout over the same timeframe.
- All things being equal, the Greenhill opportunity site is less challenging to fund upfront than the Grahams Ferry Assemblage opportunity site.

- State funding through RSIS is uncertain but worth pursuing. Because Wilsonville has already been accepted into the RSIS program, it seems likely that infrastructure projects in the Study Area could receive State funding through the program.
- TIF also involves uncertainty. Because the City typically seeks an advisory vote before creating a new TIF district, any funding strategy that relies on TIF revenues is contingent on public approval. [1]

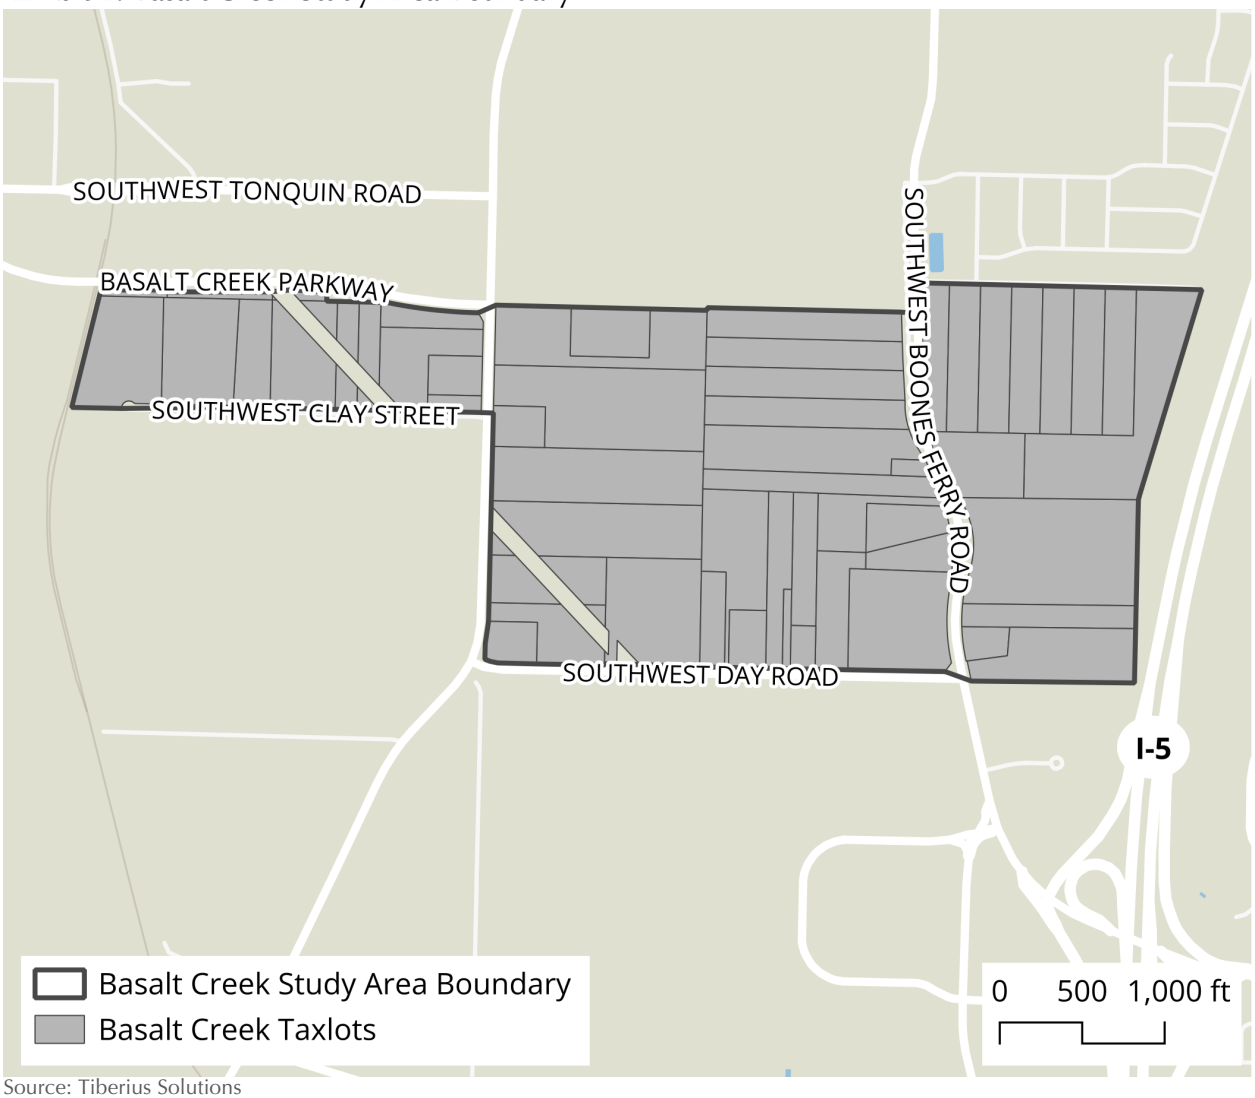
[1] Subsequent to the completion of this draft report, the City Charter was amended to require voter approval of any new TIF district, specifically requiring the public votes to occur in a Primary or General election during even numbered years.

1 Framework for the Evaluation

1.1 Background and Purpose

The Basalt Creek Planning Area (BCPA) includes 847 acres of unincorporated land in Washington County between the Cities of Wilsonville and Tualatin. The BCPA was added to the urban growth boundary (UGB) by Metro in 2004. In 2011, both cities, Metro, and Washington County entered into an intergovernmental agreement to coordinate planning efforts for the BCPA. These efforts culminated in a Basalt Creek Concept Plan, adopted by the Cities of Wilsonville and Tualatin in August 2018. The City of Wilsonville is now working to prepare a Basalt Creek Master Plan and Code amendments to adopt zoning for the Wilsonville portion of the planning area, which will allow for development to occur. For that development to be successful, however, significant infrastructure improvements are necessary.

This document provides an Infrastructure Funding Analysis for Basalt Creek. This Infrastructure Funding Analysis:



- Defines a subarea of the BCPA as the Basalt Creek Study Area ("Study Area") to be used for the analysis,
- Estimates future development activity within that Study Area,
- Forecasts likely sources of City infrastructure funding that would be generated by future development,
- Estimates the cost of infrastructure projects needed for development to occur, and
- Conducts a cash flow analysis to show the timing of infrastructure investments relative to the timing of revenue generated by development in the Study Area.

The purpose of the Infrastructure Funding Analysis is to identify infrastructure challenges that could hinder development within the Study Area, and to suggest approaches for overcoming those challenges.

1.2 Study Area Boundary

The Study Area used for this analysis is a subarea within the larger BCPA, limited to the portion of the BCPA within the City of Wilsonville's urban growth management area, and excluding the West Railroad subarea, which is being treated separately. The Study Area is generally bound by the City of Wilsonville urban growth management boundary to the North, Interstate 5 to the East, SW Day Road, and SW Clay Street on the South, and the Portland and Western Railroad to the West. The Study Area boundary encompasses 247 acres and is shown in Exhibit 1.

Exhibit 1. Basalt Creek Study Area Boundary

Source: Tiberius Solutions

1.3 Public Services Included in the Analysis

The costs of infrastructure included in the analysis was limited to services provided by the City of Wilsonville that require additional improvements for development within the Study Area to occur. The analysis included:

- Stormwater
- Trails (Parks and Recreation)
- Transportation
- Wastewater
- Water

Other City services, such as library and police, were excluded from the analysis, as no new public infrastructure investments are planned to specifically serve this Study Area. Additionally, services provided by other government partners, such as schools, fire and emergency response, are excluded from

the analysis, as they are not funded directly by the City of Wilsonville, and there are no plans to make additional infrastructure investments in this area by those service providers.

1.4 Funding Sources Included in the Analysis

This analysis focused on two primary sources of infrastructure funding: system development charges (SDCs) and tax increment financing (TIF). SDCs are an existing funding source imposed by the City on new construction with revenue restricted to pay for infrastructure improvements that serve new development. In some situations, SDCs may be sufficient to cover the entire cost of infrastructure related to new development. But in many cases, SDCs are insufficient, and additional funding sources are needed. For this analysis, we examined the potential use of TIF to augment SDC revenues. TIF was selected because of its local control, flexibility of use, and ability to generate revenue through the division of taxes, rather than by imposing additional taxes.

1.4.1 Systems Development Charges

SDCs are one-time charges imposed on new development. SDC revenues are used to fund capacity-increasing utility infrastructure in the City. Each new development must pay SDCs for Parks, Sewer/Wastewater, Water, Transportation, and Stormwater, based on their calculated impact on the City's utility capacity.

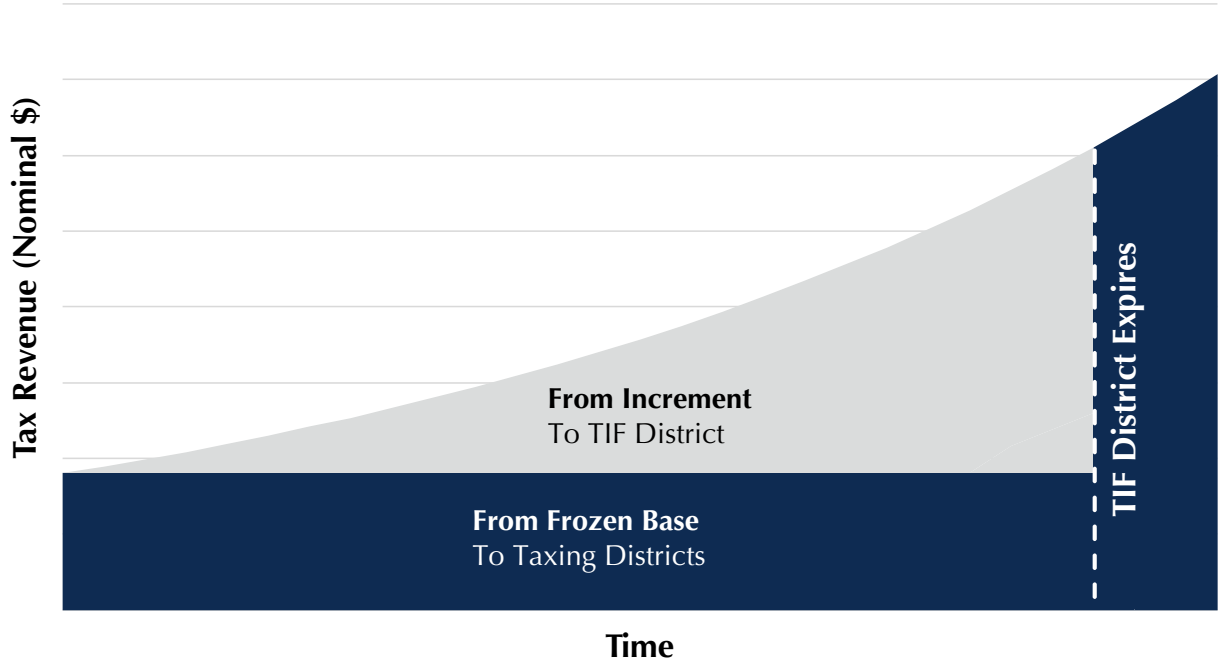
Allowed and regulated by Oregon Revised Statutes (ORS) 223, SDCs can only be used to fund capital projects that add capacity to accommodate new development, and must be on an adopted SDC project list. Collected SDCs are deposited into individual SDC funds, which can be spent citywide on eligible projects as needed. SDC funds are utility-specific. For example, water SDCs can only be used on water projects, and transportation SDCs can only be used on transportation projects.

1.4.2 Tax Increment Financing

Urban Renewal, also known as Tax Increment Financing (TIF), is an economic development and redevelopment financing tool permitted by ORS 457. TIF allows municipalities across Oregon to collect the incremental property tax revenues in an urban renewal area (URA), also known as a TIF district, and spend that revenue on infrastructure and economic development projects and programs within the TIF district. The City has two TIF districts that currently collect revenue, the Coffee Creek TIF district adopted in 2016, and the Twist Bioscience TIF District, which was adopted in 2021 as part of the City's site-specific urban renewal program, WIN, or "Wilsonville Investment Now."

Urban Renewal Plans

To establish a TIF district, a municipality must adopt an Urban Renewal Plan. ORS 457 defines the specific requirements of Urban Renewal Plans. Key elements of Urban Renewal Plans include:



- Boundary of the TIF district, including a map and legal description
- Goals and objectives for the TIF district
- Eligible projects to be funded in the TIF district
- Findings of "Blight" within the TIF district as defined in ORS 457.010
- The dollar limit on the cumulative amount of indebtedness that the TIF district may incur, known as "Maximum Indebtedness"

ORS also limits the cumulative acreage and value that may be included in TIF districts to no more than 25% of the citywide total. Additionally, once a TIF district is established, future amendments may not add acreage equal to more than 20% of the original boundary area.

Tax Increment Financing

Urban renewal allows municipalities to use TIF revenue to service debt incurred to fund projects and programs within a TIF district. When a TIF district is established, the existing assessed value in the TIF district is certified as the "Frozen Base" value. As assessed value in the TIF district increases over time, the difference between the frozen base and the growing total assessed value is considered "Increment" assessed value. Each year, property tax revenue generated by the frozen base of the TIF district is distributed normally to all overlapping taxing districts, and the URA receives all the property tax revenue generated from the increment, called TIF revenue. Exhibit 2 illustrates the general tax revenue distribution within a TIF district boundary over the life of the URA.

Exhibit 2. Example Tax Revenue Distribution in a TIF District

Source: Tiberius Solutions

Maximum Indebtedness

Each TIF District must establish a maximum indebtedness amount when adopted. Once a TIF district has incurred the full amount of maximum indebtedness, it cannot incur additional debt, and once a TIF district has collected sufficient TIF revenue to fully repay the maximum indebtedness, the TIF district loses its authority to collect TIF revenue, effectively resulting in the termination of the TIF district.

Consolidated Tax Rate

Oregon statutes governing TIF have been amended over time, resulting in different types of Urban Renewal Plans. A key difference is the determination of which tax rates are included in the calculation of TIF revenue. All new Urban Renewal Plans established after September 29, 2019 are "permanent rate" plans. The consolidated tax rate is equal to the sum of all permanent tax rates. Local option levies and

general obligation bond levies are not permanent rates, and thus are not impacted by new Urban Renewal Plans.

Revenue Sharing

Plans initially approved or substantially amended to increase maximum indebtedness on or after January 1, 2010 are subject to additional provisions in ORS regarding revenue sharing. Revenue sharing, when a TIF district shares a portion of its TIF revenue with other "overlapping" taxing districts, is required when a plan achieves certain thresholds of annual TIF revenue, relative to the maximum indebtedness of the plan.[2]

[2]Formulas for calculating required Revenue Sharing are defined in ORS 457.470. For most Urban Renewal Plans in Oregon, the formulas refer to the initial Maximum Indebtedness of a Plan.

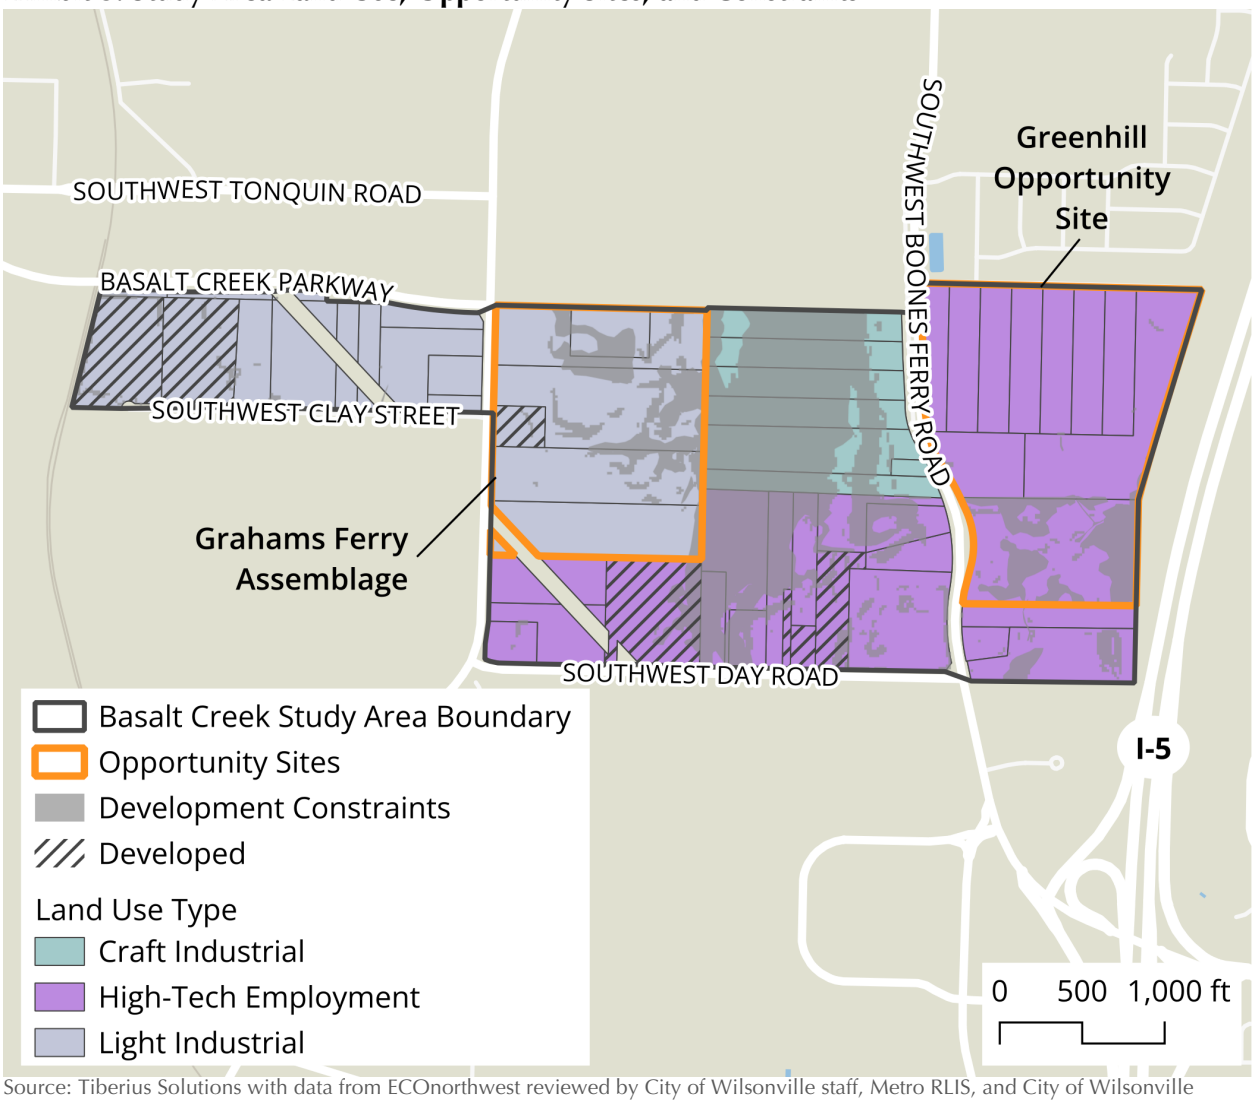
2 Analysis

This section describes the methods, assumptions, and results of the analysis, organized into five main tasks:

- Development capacity
- SDC revenue
- TIF revenue
- Infrastructure needs
- Cash flow

2.1 Development Capacity

A forecast of future development capacity was essential for understanding what infrastructure improvements are needed in the Study Area, when those improvements would be needed, and how much revenue would be generated from SDCs and TIF.



The analysis first identified the number of developable acres. Total acreage of all tax accounts in the Study Area was reduced to account for already developed tax lots that are unlikely to redevelop in the foreseeable future, and for constrained land, such as wetlands, riparian areas, steep slopes, and other constraints.[3]

The developable acres were then separated by assumed future land use, based on the Land Use Concept Map included in the Basalt Creek Concept Plan, and as refined by more recent land use planning work. Furthermore, City staff identified two "opportunity sites" within the Study Area, where collections of tax lots are expected to develop before the remainder of the area, due to existing uses and the interests of property owners. This resulted in estimates of the total developable acreage by land use and by opportunity site.

Exhibit 3 shows a breakdown of the Study Area by land use, opportunity sites, and site constraints.

[3]Data on development constraints was obtained from the Wilsonville Industrial Land Readiness Phase 1: Basalt Creek Recommendations Report, completed by ECOnorthwest.

Exhibit 3. Study Area Land Use, Opportunity Sites, and Constraints

Source: Tiberius Solutions with data from ECOnorthwest reviewed by City of Wilsonville staff, Metro RLIS, and City of Wilsonville

Exhibit 4 summarizes the developable acres in the Study Area by land use type. The opportunity sites, most primed for development, are composed of 31.8 acres of light industrial property and 50.4 acres of high-tech employment property for a total of 82.2 acres. The other developable land in the Study Area, which is likely to develop after the opportunity sites, is composed of 7.8 acres of craft industrial property, 20.8 acres of light industrial property, and 33.7 acres of high-tech employment property, for a total of 85.9 acres. Overall, 144.6 acres of land is considered developable in the Study Area.

Exhibit 4. Developable Acres

	Opportunity Sites	Other Sites	Total	Percent
Craft Industrial	0.0	7.8	**7.8**	**5%**
Light Industrial	31.8	20.8	**52.6**	**36%**
High-Tech Employment	50.4	33.7	**84.1**	**58%**
Total	**82.2**	**62.4**	**144.6**	**100%**

Source: Tiberius Solutions

Through conversations with City staff, assumptions were made on the likely timing of development in the area, including the number of acres of development by land use by year. This assumes that the opportunity sites develop first, from 2028 through 2037. Once the opportunity sites are fully built out, the analysis assumes the remaining light industrial and high-tech employment sites will begin to develop over the next 18 years, reaching full buildout by 2055. The craft industrial parcels are forecast to take 10 years to develop, beginning in 2046, also reaching full buildout by 2055.

The forecast of developed acres per year were translated into the number of individual buildings and the number of built square feet per year for each land use type. Assumptions on the number of buildings were informed by the Basalt Creek Concept Plan development scenarios. This previous analysis showed the hypothetical building footprints of assumed future development, overlayed on a map of tax lots within the Study Area, providing data on both the number and size of buildings within each opportunity site and within each assumed future land use. Comparing the total estimated built square footage to the total estimated developable acres within each assumed land use resulted in an estimated floor-to-area (FAR) ratio for each land use, which was applied to the forecast of acres of development each year to estimate the square footage of development each year.

The forecast of developed acres per year were also translated into new impervious surface area, assuming 85% of each developed acre would be impervious. This assumption was based on conversations with City staff, recognizing applicable zoning for the area is likely to require a minimum of 15% of each site to be dedicated to landscaping.

Exhibit 5 shows the resulting acres developed, built square feet of development, impervious square feet of development, and number of buildings developed each year by land use type, assuming the area is fully built out by 2055. In total, the 144.6 developable acres resulted in 2.3 million of built square feet over 28 buildings, with 5.4 million square feet of impervious surface area.

These development assumptions result in projections for the average number of buildings and average built square feet per year over the time horizons. These assumptions result in fractions of a building being completed each year, and a steady level of development activity. In reality, the pace of development is likely to be much more volatile, including some years with large amounts of development, and some years with no development. These even assumptions are for planning purposes, to broadly estimate the revenue generated by potential development in the Study Area, in the absence of specific assumptions on the exact size and timing of future construction.

An alternative more conservative analysis was also conducted, assuming *only 50%* of the full buildout is achieved through 2055, with half of the number of acres of development assumed for each year of the forecast period as compared to the full buildout scenario. Exhibit 6 shows the resulting acres developed, built square feet of development, impervious square feet of development, and number of buildings developed each year by land use type, assuming the area is 50% built out by 2055. This scenario results in 1.2 million built square feet in 14 buildings, with 2.7 million square feet of impervious surface area by 2055.

2.2 SDC Revenue

This analysis forecasts future SDC revenue generated by development in the Study Area from 2026 through 2055. The analysis included results in both 2025 constant dollars and nominal (i.e., "future") dollars, based on assumed 3.0 percent annual inflation. The City provided information on current rates for all relevant SDCs for FYE 2026. The basis of the charge varies by type of SDC. Assumptions on each SDC rate are described in this section.

2.2.1 Parks

Parks SDCs are imposed on a rate per thousand gross square feet of development. That rate varies by land use type. The list of land uses in the parks SDC rate table is more detailed than the broad land use categories assumed in this analysis. We identified 19 employment land use categories on the parks SDC rate table, and applied the average rate of those 19 categories to all development within the Study Area. This resulted in an assumed average rate of $490 per 1,000 built square feet. The full list of development types included in the calculation of average parks SDC rate is shown in Exhibit 7.

Exhibit 8 and Exhibit 9 show the forecast of parks SDC revenue in the Study Area through 2055 in 2025 dollars and nominal dollars under the full buildout and 50% buildout scenarios. At full buildout, development in the Study Area is forecast to generate $1.1 million of parks SDCs in 2025 dollars and $1.7 million in nominal dollars. At 50% buildout, the Study Area is forecast to generate $570,000 of parks SDCs in 2025 dollars and $860,000 in nominal dollars.

2.2.2 Transportation

Transportation SDCs are imposed on a rate per thousand gross square feet of development. That rate varies by land use type. The list of land uses in the transportation SDC rate table is more detailed than the broad land use categories assumed in this analysis. This analysis used the following assumptions for transportation SDC rates by land use category:

- For high-tech employment development, we assumed the "Industrial Parks" land use would apply, with a rate of $12,523 per thousand gross square feet.

- For craft industrial and light industrial development, we assumed an average of the rates for "Industrial Parks" ($12,523) and "Manufacturing" ($7,004), resulting in a rate of $9,764 per thousand gross square feet.

Exhibit 10 and Exhibit 11 show the forecast of Transportation SDC revenue in the Study Area through 2055 in 2025 dollars and nominal dollars under the full buildout and 50% buildout scenarios. At full buildout, development in the Study Area is forecast to generate $27.1 million of transportation SDCs in 2025 dollars and $40.6 million in nominal dollars. At 50% buildout, the Study Area is forecast to generate $13.5 million of transportation SDCs in 2025 dollars and $20.3 million in nominal dollars.

2.2.3 Stormwater

Stormwater SDCs are imposed on a rate of $1.28 per impervious square foot. Exhibit 12 and Exhibit 13 show the forecast of Stormwater SDC revenue in the Study Area through 2055 in 2025 dollars and nominal dollars under the full buildout and 50% buildout scenarios. At full buildout, development in the Study Area is forecast to generate $6.9 million of stormwater SDCs in 2025 dollars and $10.3 million in nominal dollars. At 50% buildout, the Study Area is forecast to generate $3.4 million of stormwater SDCs in 2025 dollars and $5.2 million in nominal dollars.

2.2.4 Water

Water SDCs are imposed based on the number and size of water meters installed with the development. Based on assumptions provided by City staff, this analysis assumes each craft industrial building would have a 1" water meter installed, and each high-tech employment or light industrial building would have a 1.5" water meter installed. In addition, all buildings would have another 1" water meter installed for irrigation purposes. The applicable water SDC rates for each water meter size are:

- 1" meter: $31,101
- 1.5" meter: $62,203

Exhibit 14 and Exhibit 15 show the forecast of water SDC revenue in the Study Area through 2055. At full buildout, development in the Study Area is forecast to generate $2.5 million of water SDCs in 2025

dollars and $3.8 million in nominal dollars. At 50% buildout, the Study Area is forecast to generate $1.2 million of water SDCs in 2025 dollars and $1.9 million in nominal dollars.

2.2.5 Wastewater/Sewer

Wastewater SDCs are imposed based on the number and size of water meters installed with the development, excluding water meters installed for irrigation. This analysis again assumes each Craft Industrial building would have a 1" water meter installed, and each high-tech employment or light industrial building would have a 1.5" water meter installed.

The applicable Wastewater SDC rates for each water meter size are:

- 1" meter: $38,396
- 1.5" meter: $76,792

Exhibit 16 shows the forecast of Wastewater SDC revenue in the Study Area through 2055. At full buildout, development in the Study Area is forecast to generate $2.0 million of wastewater SDCs in 2025 dollars and $3.0 million in nominal dollars. At 50% buildout, the Study Area is forecast to generate $1.0 million of wastewater SDCs in 2025 dollars and $1.5 million in nominal dollars.

2.3 TIF Revenue

This analysis forecasts future TIF revenue generated by the Study Area for 30 years, from FYE 2029 through FYE 2058. This time-frame was selected because FYE 2029 is assumed to be the first year that new construction activity inside the Study Area would come on the tax rolls, and 30-years is a common duration for TIF districts in Oregon. The analysis included results in both 2025 dollars and nominal (i.e., "future") dollars, based on assumed 3.0 percent annual inflation.

2.3.1 Evaluating Boundary Options

The analysis initially considered two potential approaches for using TIF to fund infrastructure in the Study Area: (1) amending the nearby Coffee Creek TIF District to expand the boundary into the Basalt Creek Study Area, and (2) adopting a new TIF district focused on Basalt Creek.

Amending the Coffee Creek TIF District Boundary

The Study Area is directly adjacent to the existing Coffee Creek TIF district, with Day Road serving as the dividing line. The Coffee Creek Urban Renewal Plan was adopted in 2016, establishing the 258.3-

acre TIF District with a $67 million maximum indebtedness amount. In theory, the existing plan could be amended to expand the boundary to include a portion of the Basalt Creek Study Area.

Expanding an existing TIF district boundary has advantages compared to establishing a new TIF district. TIF districts typically take a long time to begin generating revenue. The process to adopt a new TIF district may take a year or more, depending on stakeholder involvement and public outreach efforts. Once a TIF district is established, it then takes another year or more before it receives its first allocation of TIF revenue, as the County Assessor must first establish the frozen base value of the TIF district, and then calculate increment value in the following fiscal year. The initial tax increment value is often low when there is not already substantial development occurring in the area before the TIF district is created. In the Coffee Creek TIF District, for example, there was little development in place when it was adopted in 2016, and nearly a decade later it still has not generated more than $1 million in revenue in any given year.

Expanding the Coffee Creek TIF District to encompass the Study Area would effectively "jump start" the financial capacity of the Study Area. This would allow the existing Coffee Creek cash flow to be used to finance infrastructure investments in Basalt Creek immediately, without waiting years for the increment value of a new TIF District to slowly build up.

This approach does have drawbacks. Redirecting the Coffee Creek financial capacity to support Basalt Creek projects would diminish the City's ability to invest in Coffee Creek. Additionally, the Coffee Creek TIF district has an established maximum indebtedness limit. This means that any dollar spent on a Basalt Creek project would directly reduce the amount of funding capacity for Coffee Creek projects. The Coffee Creek Urban Renewal Plan could be amended to increase the maximum indebtedness. However, State Statutes limit the amount of any maximum indebtedness increase to no more than 20 percent of the original amount (adjusted for inflation). Exceeding this limit on the maximum indebtedness can only be done with "concurrence," meaning the official approval of 75 percent of the impacted taxing districts, as measured by permanent rate levies.

The most significant drawback to this approach is the statutory limit on the amount of acreage that can be added to an existing TIF district boundary. ORS 457.220(3) limits the cumulative amount of land that can be added to a TIF district boundary to no more than 20 percent of the original acreage. This calculation cannot take into account any reductions of the original boundary, so removing acreage does not free up additional capacity to add more. ORS provides no exceptions to this limitation on expanding TIF district boundaries.

The original acreage of the Coffee Creek TIF District is 258.3 acres, and thus the 20-percent limit would restrict any boundary expansion to only 51.7 acres. The Basalt Creek Study Area is 247 acres in size. Therefore, only about 20 percent of the Study Area could be included in an expanded version of the Coffee Creek TIF District. Given the inability to include a significant portion of the Study Area in an expanded Coffee Creek TIF District boundary, no further analysis was conducted on this approach.

Adopting a New Basalt Creek TIF District

To form a TIF district, the City must follow a series of steps required by ORS 457. These include drafting an urban renewal plan and report accompanying the urban renewal plan, presenting the plan to the Urban Renewal Agency, Planning Commission, County Commission, and City Council, completing additional public involvement, and consulting and conferring with impacted taxing districts. Although not required by statute, the City of Wilsonville has historically sought input from key stakeholders on an Urban Renewal Task Force and has sought approval from all City voters via an advisory vote.

The new TIF district would need to comply with ORS restrictions on the total acreage and assessed value that can be included in TIF districts citywide. For cities with a population under 50,000, like the City of Wilsonville, total acreage in TIF districts cannot exceed 25% of total city acreage and total frozen base assessed value in TIF districts cannot exceed 25% of city assessed value (less increment value in TIF districts). A new TIF district that encompasses the Study Area would be well within these limits, bringing the total percentages to 10.1% of City acreage and 2.6% of City assessed value, shown in Exhibit 18.

Source: Tiberius Solutions with data from City of Wilsonville and Washington County and Clackamas County Departments of Assessment and Taxation

Although TIF districts do not raise taxes, it is a complicated financing tool that is not well understood by the public. Additionally, the tool redirects tax revenues. For these reasons, there can be general public skepticism towards the use of the tool. Community support is generally tied to enthusiasm for the vision and projects that would be implemented with TIF. In May 2024, the City held an advisory vote on whether to implement a TIF district for the Town Center area. The vote was narrowly defeated by just 54 votes citywide, with a final margin of 49.6% in favor and 50.4% opposed. That recent history demonstrates the challenge that the City faces in pursuing a new TIF district.

2.3.2 Revenue Projections

To forecast TIF revenue, the consolidated tax rate is multiplied by the increment assessed value of the TIF district.

Consolidated Tax Rate

As described earlier in this report, the consolidated tax rate of a new TIF district is equal to the sum of all permanent tax levy rates that overlap the boundary. Local option levies and general obligation bond levies are not impacted by new urban renewal plans. The Study Area, currently outside City limits, would be

located in two tax code areas: 088.13 and 088.14. However, properties are anticipated to annex into the City upon development. Exhibit 19 shows the consolidated tax rate for the two current Study Area TCAs in FYE 2026, along with the new consolidated tax rate for annexed properties.

Assessed Value Growth

The forecast of assessed value within the Area includes increases from appreciation of existing real property value (limited by the Oregon Constitution to a maximum of 3% annually)[4], and from new construction (not subject to the 3% limit). The estimates of developed acreage in the Study Area were translated into estimates of the real market value of improvements in the area. City staff identified a list of 29 comparable properties from elsewhere in the region, reflecting the range of land use types anticipated in the Study Area. For each comparable property, the total acreage and improvement value were documented from the applicable county's assessment data. Outliers with abnormally high or low improvement values per acre were excluded from the dataset, and the remaining 22 comparable properties were used to estimate the average improvement value per acre for each land use category. Exhibit 20 and Exhibit 21 show the total improvement value of the forecast development in the full buildout and 50% buildout scenarios. In the full buildout scenario, total improvement value totals $338.5 million, and in the 50% buildout scenario, improvement value totals $169.4 million.

[4] This forecast conservatively assumes existing personal property accounts experience a 0% growth rate, and there is no utility value in the Study Area.

There is a delay between when a development receives its certificate of occupancy and when the value is reflected on the tax roll. For the purposes of this analysis, we assume the full amount of assessed value from new construction is added to the tax roll in the next fiscal year following the calendar year in which construction is completed.

TIF Forecast

Exhibit 22 and Exhibit 23 show the forecast of TIF revenues for the Study Area under full buildout and 50% buildout scenarios. The analysis assumes the effective date of the proposed Study Area would be between January 1, 2027 and October 1, 2027. Therefore, the frozen base would be calculated using the FYE 2027 tax roll, and the first year that the potential TIF district would collect TIF would be FYE 2029. This analysis assumes the potential TIF district would collect revenue for 30 years, through FYE 2058. Assuming full buildout, a TIF district in the Study Area could collect $152.6 million in TIF revenue. Assuming 50% buildout, a TIF district in the Study Area could collect $78.4 million in TIF revenue.

Notes: The blended tax rate increases over time as more property annexes into the City and therefore is subject to a higher consolidated tax rate; adjustments include prior year taxes and losses from delinquent taxes, discounts from early payment, compression, and truncation.

Notes: The blended tax rate increases over time as more property annexes into the City and therefore is subject to a higher consolidated tax rate; adjustments include prior year taxes and losses from delinquent taxes, discounts from early payment, compression, and truncation.

2.4 Infrastructure Needs

City engineering staff provided a list of necessary infrastructure projects to support development within the Study Area. For each project, the City provided a brief description, cost estimate, determination of City versus developer share of funding responsibility, and share of project costs that are eligible for SDC funding. Additionally, City staff specified whether the improvements would be necessary for development of the Grahams Ferry Assemblage or Greenhill opportunity sites. The list of necessary infrastructure projects is shown in Exhibit 24. Total project costs are estimated to be $61.8 million in constant 2025 dollars, with the City's share of those costs estimated to be $24.5 million. The majority of the City's share of costs, $17.8 million, are estimated to be eligible for SDC funds.

2.5 Cash Flow

The final step in the analysis was to prepare cash flows that show the combined revenues and expenditures for the Study Area over time. Four different cash flow scenarios were prepared:

- Full buildout, Grahams Ferry Assemblage opportunity site develops first
- Full buildout, Greenhill opportunity site develops first
- 50% buildout, Grahams Ferry Assemblage opportunity site develops first
- 50% buildout, Greenhill opportunity site develops first

2.5.1 Key Assumptions

Although each cash flow scenario is unique, they share a common set of key assumptions:

- To facilitate the assumed timeline of private development, it is assumed infrastructure for one opportunity site would need to be in place in FYE 2027, and infrastructure for the second opportunity site would need to be in place by FYE 2032. For infrastructure projects that were not deemed critical for opportunity site development to occur, the timing is more flexible, with projects receiving funding when resources are available.
- When possible, the timing of public improvements should coincide with sufficient SDC revenues being generated within the Study Area. This approach generally assumes that projects within the Study Area cannot rely on SDC fund balances generated by development elsewhere in the City, and that TIF should not be used to fund project costs, if that share of project costs are SDC eligible. However, each scenario faced challenges that required exceptions to this approach. In particular, early infrastructure investments to facilitate opportunity site development must occur prior to the receipt of significant SDC revenues. Thus, in some situations, TIF is assumed to be used to pay for SDC eligible project costs, and in other situations we assume citywide SDC funds would be necessary to pay for specific projects.
- When necessary to achieve the desired timing of public improvement, it is assumed the City would incur debt backed by TIF revenue. The assumed terms of indebtedness include:
  - Level debt service payments that are the same each year of the amortization period.
  - Amortization period as long as possible (not-to-exceed 20 years) to reduce the size of annual payments.
  - Interest rate of 5.0 percent.
  - Financing fees for each borrowing are assumed to be equal to 2 percent of the principal amount of indebtedness.
- The TIF district is assumed to incur administrative costs of $100,000 per year (adjusted 3.0 percent annually for inflation) for the duration of the TIF district.

2.5.2 Cash Flow Projections

This section summarizes the cash flow projection results for each scenario, excluding projects not funded by SDC or TIF revenues generated in the Study Area. Appendix A shows the detailed sources, uses, and fund balances for each revenue source and project for each scenario.

Scenario 1: Full Buildout, Grahams Ferry Assemblage Opportunity Site Develops First

In Scenario 1, summarized in Exhibit 25, the cash flow encounters financial shortfalls in the early years, followed by surpluses long-term. To fund the initial infrastructure investments to support the Grahams Ferry Assemblage opportunity site, it is assumed that the TIF district would incur $10 million of indebtedness in FYE 2027, prior to collecting any TIF revenue to repay the debt. Annual debt service payments in excess of annual TIF revenues results in a sustained deficit of TIF resources through FYE 2035, with a maximum deficit of $2.3 million (2025 dollars) estimated to occur in FYE 2031. Long-term, TIF revenues are expected to exceed obligations by $54.1 million (2025 dollars) over the forecast period. These surplus funds suggest that the TIF district could fund additional capital projects beyond those identified in this Infrastructure Funding Analysis, or could be used for other economic development activities, such as land assembly (acquisition and aggregation). Alternatively, the duration of the proposed TIF district could be reduced to bring the projected revenues in line with the estimated infrastructure costs.

The cash flow projection also shows there would be a temporary deficit of water SDC revenues. This would require the City to fund early water infrastructure projects in the Study Area with SDC funds generated elsewhere in the City. This results in a maximum deficit of $900,000 (2025 dollars) projected to occur in FYE 2032 to allow for development of the opportunity sites. Long-term, it is projected that water SDC revenues generated in the Study Area would be sufficient to repay this deficit, resulting in a surplus of $190,000 (2025 dollars) revenue over the forecast period.

No other categories of SDCs are anticipated to have a shortfall in this cash flow scenario, though water and stormwater projects are funded by TIF revenue in 2027, avoiding shortfalls in these SDC categories.

Transportation SDCs are an anomaly, as all transportation infrastructure projects in the Study Area are expected to be the responsibility of developers, and transportation SDC revenues are anticipated to be substantial, totaling $27.1 million over the forecast period. These transportation SDC revenues would be available for the City to spend on eligible transportation improvements elsewhere in the City. This is true for transportation SDCs across all four cash flow scenarios.

Exhibit 25. Cash Flow Summary, Full Buildout, Grahams Ferry Assemblage Opportunity Site Develops First

Scenario 2: Full Buildout, Greenhill Opportunity Site Develops First

In Scenario 2, summarized in Exhibit 26, the cash flow encounters financial shortfalls in the early years, followed by surpluses long-term. To fund the initial infrastructure investments to support the Greenhill opportunity site, it is assumed that the TIF district would incur $1.9 million of indebtedness in FYE 2027, prior to collecting any TIF revenue to repay the debt. Annual debt service payments in excess of annual TIF revenues results in a temporary deficit of TIF resources through FYE 2030, with a maximum deficit of $300,000 (2025 dollars) estimated to occur in FYE 2039. Long-term, TIF revenues are expected to

exceed obligations by $52.5 million (2025 dollars) over the forecast period. This fund surplus suggests that the TIF district could fund additional capital projects beyond those identified in this Infrastructure Funding Analysis, or could be used for other economic development activities, such as land assembly (acquisition and aggregation). Alternatively, the duration of the proposed TIF district could be reduced, to bring the projected revenues in line with the estimated infrastructure costs.

Unlike Scenario 1, Scenario 2 does not predict a temporary deficit of water SDC revenues. In this scenario, the City would not be required to fund early water infrastructure projects in the Study Area with SDC funds generated elsewhere in the City. No other categories of SDCs are anticipated to have a shortfall in this cash flow scenario. Surplus transportation SDCs are estimated to total $27.1 million (2025 dollars) over the forecast period.

Exhibit 26. Cash Flow Summary, Full Buildout, Greenhill Opportunity Site Develops First

	Project Category	Project Name	Opportunity Sites	Year of Funding	SDC Funding	TIF Funding

Scenario 3: 50% Buildout, Grahams Ferry Assemblage Opportunity Site Develops First

In Scenario 3, summarized in Exhibit 27, the cash flow encounters financial shortfalls in the early years, followed by surpluses long-term. To fund the initial infrastructure investments to support the Grahams Ferry Assemblage opportunity site, it is assumed that the TIF district would incur $8 million of indebtedness in FYE 2027, prior to collecting any TIF revenue to repay the debt. Annual debt service payments in excess of annual TIF revenues results in a sustained deficit of TIF resources through FYE 2038, with a maximum deficit of $2.3 million (2025 dollars) estimated to occur in FYE 2032. Long-term,

TIF revenues are expected to exceed obligations by $12.6 million (2025 dollars) over the forecast period. These surplus funds suggest that the TIF district could fund additional capital projects beyond those identified in this Infrastructure Funding Analysis, or could be used for other economic development activities, such as land assembly (acquisition and aggregation). Alternatively, the duration of the proposed TIF district could be reduced, to bring the projected revenues in line with the estimated infrastructure costs.

No categories of SDCs are anticipated to have a shortfall in this cash flow scenario. This is achieved by relying on TIF revenues when SDC funds are insufficient and delaying funding for projects later than in the full buildout scenario. In particular, the Basalt Creek Regional Trail is identified as a project that should be constructed prior to development of the Grahams Ferry Assemblage opportunity site. However, given the lack of funding in the early years, it is not feasible to fund this project on that timeline with SDC and TIF dollars. Instead, this scenario pushes the Basalt Creek Regional Trail project out until FYE 2050 as one of the final projects to receive funding in the Study Area.

Surplus transportation SDCs are estimated to total $13.5 million (2025 dollars) over the forecast period.

Source: Tiberius Solutions

Scenario 4: 50% Buildout, Greenhill Opportunity Site Develops First

In Scenario 4, summarized in Exhibit 28, the cash flow encounters financial shortfalls in the early years, followed by surpluses long-term. To fund the initial infrastructure investments to support the Greenhill

opportunity site, it is assumed that the TIF district would incur $1.9 million of indebtedness in FYE 2027, prior to collecting any TIF revenue to repay the debt. Annual debt service payments in excess of annual TIF revenues results in a sustained deficit of TIF resources through FYE 2039, with a maximum deficit of $1.0 million (2025 dollars) estimated to occur in FYE 2035. Long-term, TIF revenues are expected to exceed obligations by $12.2 million (2025 dollars) over the forecast period. These surplus funds suggest that the TIF district could fund additional capital projects beyond those identified in this Infrastructure Funding Analysis, or could be used for other economic development activities, such as land assembly (acquisition and aggregation). Alternatively, the duration of the proposed TIF district could be reduced, to bring the projected revenues in line with the estimated infrastructure costs.

No categories of SDCs are anticipated to have a shortfall in this cash flow scenario. This is achieved by relying on TIF revenues when SDC funds are insufficient, and delaying funding for projects later than in the full buildout scenario, at the time of TIF district borrowings. Surplus transportation SDCs are estimated to total $13.5 million (2025 dollars) over the forecast period.

2.5.3 Options for Addressing Funding Shortfalls

Each of the four cash flow scenarios included in the analysis demonstrate some level of funding shortfall, particularly in the early years. There are several strategies the City could employ to address these shortfalls:

- Delaying the timing of public improvements
- Relying on developer-led construction of public improvements
- Using creative financing options
- Obtaining other funding sources

Delaying Public Improvements

Most of the funding shortfalls observed in the cash flow analysis are due to the timing of projects, rather than the long-term financial capacity of the Study Area. Thus, a potential option for addressing funding shortfalls is to delay certain projects until more funding is available. However, this approach has its limits. Some projects are required to be in place for private development to occur. Delaying a critical public infrastructure project may result in a lack of future development activity that would translate to lower SDC and TIF revenue projections. In the worst-case scenario, a "chicken and the egg" situation occurs, where no infrastructure can be funded due to a lack of development-derived funding sources, and no development can occur due to a lack of infrastructure.

Developer-Led Construction

Many of the infrastructure projects needed in the Study Area could be developer led. Even though a large share of certain project costs may be the City's responsibility, it is common for developers to build infrastructure themselves, obtaining SDC credits for the portion of the project above and beyond their legal responsibility. If the City lacks upfront funding for a certain project that a developer is willing to take the lead on, that solves the funding gap for the City. This approach does result in less SDC revenue being collected over time, as the SDC credits are used to offset the developer's SDC obligations, or may even be sold to neighboring developers to offset the obligations of others.

This approach can be challenging for higher cost projects that may be too costly for a private development project to absorb, and for projects where the SDC credits are substantially more than a developer is obligated to pay. This approach also has challenges for infrastructure improvements on frontages of properties that are not expected to develop in the near future, which can result in gaps in the infrastructure, and an inefficient, piece-meal approach to infrastructure construction.

Alternative Financing Options

Financing allows the City to shift the timing of when the costs of infrastructure need to be paid. The financing assumptions used in this analysis are fairly standard, but there are other alternative financing terms that could be used to mitigate the funding shortfalls seen in the cash flow analysis. However, borrowing strategies that result in lower annual debt service obligations early on, ultimately result in greater risk to the City or higher long-term costs of debt service. Some alternative finance options include:

- Longer amortization period. This analysis capped all assumed borrowings to an amortization period of 20 years or less. However, it may be possible to incur debt with a 25 or 30-year amortization period. Generally speaking, the longer the term of the loan, the lower than annual payments. Though these annual savings are offset by higher total costs long-term.

- Capitalized interest. It may be possible to increase size of a borrowing to include extra debt proceeds that are used to pay the cost of interest in the early years. This results in higher annual debt service payments, but also a dedicated source of funds to make those payments in the early years.
- Interest only payments. Some lenders may structure loans so that payments in the early years are interest-only, with amortized principal repayment beginning several years later. This can significantly reduce debt service payments at the outset, while having little effect on the total long-term cost of the loan.
- Escalating payments. Not all debt is structured with level debt service payments (i.e., paying the same amount each year). The debt could be structured with escalating payment amounts, so that the payments increase over time, to better align with the expected growth in TIF revenues. However, an escalating payment structure results in greater risk to the City, as speculative future revenue growth is necessary for revenues to keep up with the growing payments.
- Balloon payments. A particular form of escalating payments is a balloon payment, where the annual debt service payments are decreased over the life of the borrowing, in exchange for a very large final payment. Balloon payments also result in greater risk to the City, as revenue must be carefully planned for and set aside to ensure sufficient funds available for the balloon payment (or potentially refinanced at a later date).
- Lower interest rates. This is not as much an "alternative" financing approach, as it is a different financing assumption that could significantly improve the financial feasibility of the cash flows. The analysis in this document assumes any debt incurred would have a 5.0 percent interest rate. But if actual interest rates are lower, it would result in lower annual debt service payments.

Ultimately the City finance staff will want to collaborate with financial advisors to evaluate different borrowing options and to select the borrowing option that best helps the City achieve its goals.

Other Funding Sources

The City could pursue additional funding sources either directly under the City's control or from outside funding partners, such as the State or Federal government. There are several local funding tools the City could consider to augment SDCs and TIF funding. When it comes to State and Federal funds, the most likely program is the State of Oregon's Regionally Significant Industrial Sites (RSIS) program.

REGIONALLY SIGNIFICANT INDUSTRIAL SITES PROGRAM

RSIS is managed by Business Oregon, in accordance with ORS 285B.626 and OAR 123-097, and provides tax reimbursements to assist local jurisdictions with costs to develop industrial land. Broadly, sponsoring jurisdictions (e.g., local governments) must provide characteristics of the site, demonstrate the projected costs that would qualify for tax reimbursements, as well as estimate jobs that will be created as part of new development in the RSIS area in their application for RSIS designation (a full description of the criteria is provided in OAR 123-097). Additionally, as part of the qualifications for the program, cities within Metro are required to identify land within Metro's definition for regionally significant industrial areas. Business Oregon lists the types of projects that qualify for RSIS to include: "land assembly, site preparation, utility and transportation improvements, environmental remediation and mitigation, and financing costs."[5]

The City of Wilsonville previously applied for, and was accepted into, the RSIS program with a 809.13 acre "site" comprised of the Coffee Creek and Basalt Creek industrial areas, as well as select industrial

[5] https://www.oregon.gov/biz/programs/RSIS/Pages/default.aspx

sites east of Interstate 5. The projected costs requested for tax reimbursement through the program are $299,240,000, and the area is projected to create 5,609 jobs.

Unless or until Business Oregon provides for an 'upfront' funding mechanism, which does not currently exist, sponsoring jurisdictions such as Wilsonville must expend local funds first in order to spur development and job creation within the site area, through eligible activities such as land assembly, utility and infrastructure improvements. Then, when development occurs and jobs are created within the site area, the costs of the completed site improvement activities become eligible for reimbursement. In short, the City could recover up to 100% of its costs to construct the projects identified in Exhibit 24, but such cost recovery would occur piecemeal annually, with a significant timing delay, and would be contingent upon the specifics of the jobs created within the site area. The City would need to provide for near-term debt-service (through SDCs and TIF). Reimbursement revenue through RSIS could be a source of funds to service debt years after infrastructure is complete and the site is generating development (property tax) and jobs (income tax).

LOCAL FUNDING TOOLS

Although there are dozens of funding tools used by municipalities in Oregon, most are ill-suited for the purpose of funding specific infrastructure projects in an area like the Basalt Creek Study Area. The four tools with the most promise are:

- Supplemental SDCs: An additional SDC imposed on a specific subarea on top of the citywide SDC. These funds would be restricted to a specific project list adopted by the City, and the eligible portion of project costs cannot already be included in the calculation of the citywide SDC rate.
- Local Improvement District (LID): An additional assessment on specific properties that benefit from a specified infrastructure project. The City could provide financing options for property owners subject to the LID.
- Public Service Fee: A recurring fee (typically billed monthly or quarterly) like a utility bill, with funding to pay for a specific list of projects or services. The rate of the fee must be tied in some way to the benefits received by each property owner subject to the fee.
- General Obligation Bond: A temporary increase in property tax levy to pay for a specified list of projects. GO bonds must be enacted citywide, and must be approved by a public vote.

Many jurisdictions across Oregon have used each of these tools to fund infrastructure projects. However, the challenge with each of these tools is that they increase costs, either on new development, or on taxpayers citywide. That can make these tools an impediment to the development they are trying to encourage, and politically unpopular with voters. TIF is a unique local tool, in that it does not increase costs on developers or taxpayers.

3 Conclusions

We draw the following conclusions from this analysis:

- SDCs alone are insufficient to fund the necessary infrastructure in the Study Area. The City is estimated to have over $6.0 million in project costs that are the City's responsibility but are not SDC eligible. Additionally, water and parks SDC revenue projected in the area are less than the SDC eligible share of project costs in the area at full buildout. Even for wastewater and stormwater infrastructure, where total SDC revenue is expected to exceed the SDC eligible share of project costs, there may be timing constraints that prevent projects from being completed.
- Transportation SDCs are an anomaly, as all transportation infrastructure projects in the Study Area are estimated to be responsibility of developers, and transportation SDC revenues are anticipated to be substantial, totaling $27.1 million (2025 dollars) at full buildout over the forecast period. These transportation SDC revenues would be available for the City to spend on eligible transportation improvements elsewhere in the City, for example on projects that serve industrial traffic in the northwest area of the City.
- A funding strategy that includes both TIF and SDCs generates sufficient revenue long-term, but still results in temporary funding shortfalls that would need to be addressed. There are multiple strategies that the City could consider to address these shortfalls, including delaying projects, relying on developer-led construction, using alternative financing options, or obtaining other funding sources.
- As is common with urbanizing areas that lack infrastructure, the biggest funding challenges are early on. The City will need to carefully coordinate early phases of development with private development partners to ensure the City will receive adequate resources to pay for the upfront infrastructure investments, and that private developers will have the infrastructure in place to allow for private development to occur.
- Developer-led construction of public infrastructure projects is an advantageous strategy to resolve the City's short-term funding gaps. To the extent that private developers are willing to pay for these early projects in exchange for SDC credits, it would greatly improve the financial feasibility of the cash flow. Understanding which projects that developers of key opportunity sites would be willing and able to build themselves will be helpful to finalizing an infrastructure funding plan.
- Funding capacity for TIF is greater than the infrastructure funding gaps that have been identified in the area. The amount of surplus TIF capacity is estimated to range from $12.2 million to $54.1 million across the different cash flow scenarios. These funds could be used to pay for other economic development activities in the area, such as land assembly. Alternatively, the City could potentially terminate the proposed TIF district in a shorter timeframe than the 30-years assumed in this analysis.
- The finance scenarios that assumed full buildout of the Study Area resulted in significantly better cash flows than scenarios assuming only 50 percent buildout over the same timeframe. This is expected as the funding scenario relies entirely on development derived resources. Actions the City can take to ensure faster absorption will payoff through accelerated revenues (both SDCs and TIF).
- All things being equal, the Greenhill opportunity site is less challenging to fund upfront than the Grahams Ferry Assemblage opportunity site. The specific package of infrastructure projects needed for the Greenhill opportunity site costs less than the necessary package for Grahams Ferry Assemblage. However, all things may not be equal, and the development readiness of property

owners may play a large role in which opportunity site is ready to advance first. If both opportunity sites were ready to develop simultaneously, it would present greater financial challenges, but also more rapid revenue generation in the early years.

- State funding through RSIS is uncertain but worth pursuing. Because Wilsonville has already been accepted into the RSIS program, it seems likely that infrastructure projects in the Study Area could receive State funding through the program. Actually receiving RSIS funds, however, will depend upon the specifics of the jobs created by private development in the area, which makes the funding source difficult to count on at this stage of the planning process.
- TIF also involves uncertainty. Because the City typically seeks an advisory vote before creating a new TIF district, any funding strategy that relies on TIF revenues is contingent on public approval.[6] The recent narrow defeat of the proposed Town Center TIF district demonstrates how challenging it can be to secure sufficient voter support for this tool. If TIF is intended to be a major component of the final Basalt Creek infrastructure funding plan, substantial public outreach and education will likely be required.

[6] Subsequent to the completion of this draft report, the City Charter was amended to require voter approval of any new TIF district, specifically requiring the public votes to occur in a Primary or General election during even numbered years.

Attachment B: August 2026 Update

After completing the Basalt Creek Infrastructure Funding Analysis in December 2025, the City requested additional analysis of scenarios that included a larger boundary, encompassing the West Railroad subarea. This memorandum summarizes the results of the additional analysis. It includes the same four basic scenarios:

1. Full buildout, Grahams Ferry Assemblage opportunity site develops first
2. Full buildout, Greenhill opportunity site develops first
3. 50% buildout, Grahams Ferry Assemblage opportunity site develops first
4. 50% buildout, Greenhill opportunity site develops first

Each of these scenarios have been updated to account for additional private development potential within the West Railroad subarea, as well as an additional list of public improvements necessary for the West Railroad area to develop.

Exhibit 33. Updated Boundary Map

Exhibit 34. Updated TIF District Acreage and Assessed Value Statutory Limit Calculations

Statutory Limit Verification	
Acreage Calculation	
A. City of Wilsonville Total Acreage	5,051
B. Total Frozen Base of all TIF Districts	
Coffee Creek	258
Twist Bioscience WIN Zone	4
Total	*263*
C. Study Area Acreage	463
D. TIF District Acreage as % of City Acreage	14.4%
Assessed Value Calculation	
A. City of Wilsonville Total Assessed Value	$ 5,220,493,688
B. Total Frozen Base of Existing TIF Districts	
Coffee Creek	$ 99,003,704
Twist Bioscience WIN Zone	$ 3,661,005
Total	*$ 102,664,709*
C. Assessed Value of Study Area	$ 41,231,497
D. Total Increment of Existing TIF Districts	
Coffee Creek	$ 70,627,749
Twist Bioscience WIN Zone	$ 71,814,162
Total	*$ 142,441,911*
E. Frozen Base as % of City AV: (B+C)/(A-C)	2.8%

Conclusions

We draw the following conclusions from this analysis:

- SDC revenues remain insufficient to fund the necessary infrastructure in the Study Area. In all scenarios, SDC revenue projected to be generated in the area for water and parks projects are less than the SDC-eligible share of project costs in the area. The same is true for wastewater SDCs in the 50% buildout scenarios (though wastewater SDC funding is projected to be sufficient in full buildout scenarios). Although stormwater SDCs are expected to be sufficient in all scenarios, there may still be timing constraints that prevent projects from being completed on the desired schedule.
- Transportation SDCs remain an anomaly; at full buildout, the area is estimated to generate $39.4 million in transportation SDC revenues, while only requiring $2.7 million of SDC-eligible project costs. Only one transportation project in the boundary (the West Railroad undercrossing) is expected to be partially eligible for SDC funding, and only a small share of that project cost is expected to be eligible for SDC funds.
- For scenarios that assume full buildout of the area, the biggest financial challenges remain early in the development timeline. However, the West Railroad area is not expected to experience private development for at least the next 10 years (until 2036 or beyond). Additionally, the West Railroad area does not require expensive, City-funded capital projects prior to development occurring. A wastewater pump station and force main is the only capital project that must occur prior to development, and this project is anticipated to be the responsibility of private developers to fund. This means the inclusion of West Railroad in the infrastructure funding plan does not exacerbate the early year funding challenges of Basalt Creek.
- For scenarios that assume only 50% buildout of the area, the biggest challenge now becomes insufficient resources for major capital projects in the West Railroad area. In particular, the West Railroad undercrossing project has a total estimated project cost of $38.2 million in 2025 dollars. This is also assumed to be one of the last projects to receive funding in the area. The long delay before the project receives funding will result in significant cost increases from inflation. In the 50% buildout scenarios, the railroad undercrossing project is forecast to have a funding gap of $17.5 to $17.8 million dollars (2025 dollars).
- There are several potential strategies the City could pursue to close the potential funding gap:
  - Encouraging full buildout within Basalt Creek and West Railroad. In scenarios where full buildout occurs, there is no projected funding gap. The more the City can do to encourage private development to occur, the more SDC and TIF revenue will be generated, minimizing or eliminating the potential funding gap.
  - Pursuing State and Federal grants. This analysis assumed all projects rely on local funding. To the extent that the City is successful at securing external grants, it can free up local resources to help fill the potential funding gap.
  - Pursuing a TIF District with a larger maximum indebtedness (and likely a longer duration), would result in additional financial capacity that could be devoted to the railroad undercrossing project. The financial capacity of the TIF District in this analysis was limited by an assumed 30-year duration. If the City is comfortable with a longer duration, the TIF District could generate significantly more financial capacity.
- Ultimately, including the West Railroad area in a potential new TIF District is likely the best chance that the City has to generate funding for the railroad undercrossing project. The project is too expensive for private development to pay for, and does not qualify for a significant amount of

transportation SDC funding. While it is possible that State and Federal grants may contribute to the project, any such grants are likely to require a substantial match of local funding. A TIF District can provide that local funding. Urban renewal also works best for projects that have a long timeline for implementation, as it can take decades for a TIF District to reach its full financial capacity. The railroad undercrossing project aligns well with a TIF District, given there is relatively little urgency in completing the undercrossing project, although it is an important long-term priority for the City.

Basalt Creek Master Plan – Proposed Development Code Edits – Draft June 2026

Proposed added language ***bold italics underline.*** Proposed removed language ~~struck through.~~

ADMINISTRATION

Section 4.001. Definitions

The following definitions will be added or amended to this section. All subsequent definitions will be renumbered

Accessory Retail Sales. Retail sales that are incidental and subordinate to a permitted primary use and are conducted on the same site. Accessory retail sales shall be limited primarily to goods or products manufactured, fabricated, assembled, processed, crafted, repaired, or substantially modified on the premises, and may include merchandise directly related to the primary use. Accessory retail sales are not intended to function as a stand-alone retail establishment.

Addressing street*:* A major existing or planned street within the ~~Coffee Creek~~ ***Northwest Industrial (NWI)*** ~~Design Overlay District~~ ***Zone*** as defined in Section 4.134.

Artisan Food and Beverage Production: A craft industrial use involving the small-scale production, processing, preparation, packaging, or distribution of food and beverage products. These uses are characterized by limited-batch production, specialty or handcrafted products, and may incorporate customer-oriented activities such as tasting rooms, retail sales, demonstrations, classes, tours, and similar experiences that support the primary production use. Artisan Food and Beverage Production does not include large-scale food processing, regional distribution centers, or industrial-scale manufacturing operations.

Contractor Establishment: A site used for the storage, maintenance, dispatch, and staging of equipment, vehicles, tools, and materials associated with construction and contracting activities. Such uses are characterized by the active deployment of personnel, equipment, and materials to off-site work locations and may include offices, workshops, maintenance facilities, storage buildings, and outdoor storage yards.

Craft Studio. A facility used for the creation, production, fabrication, assembly, repair, or finishing of handcrafted or small-batch goods by artists, artisans, designers, or skilled tradespersons. Uses may include studios, workshops, demonstration areas, classrooms, and limited accessory retail sales of goods produced on-site.

Direct-to-Consumer (DTC) E-commerce Fulfillment or Logistics: A light industrial use involving the receipt, storage, sorting, packaging, and shipment of goods directly to individual consumers, typically in response to online, catalog, or similar retail purchases. Such uses are characterized by high volumes of small-package outbound deliveries and frequent last-mile distribution activity and are distinct from traditional wholesale warehousing and distribution facilities that primarily serve commercial customers or retail establishments.

Home Business*:* A business operating from a dwelling unit that does not meet the definition of a "Home Occupation" listed below. Short-term rental of a dwelling unit or portion thereof where the operator does not live on the same lot is a home business. A home business requires a conditional use permit,

except in the Craft Industrial (CI) Zone which allows a home business outright as a typically permitted use (see Section 4.137(.03)A.).

Incubator. A building or portion of a building that provides flexible workspace, shared facilities, and common support services for multiple startup or early-stage businesses. Incubators may include offices, workshops, laboratories, production areas, shared equipment, meeting rooms, and similar spaces intended to support entrepreneurship, product development, innovation, fabrication, or small-scale manufacturing.

Industrial Services: Establishments that provide repair, maintenance, testing, fabrication, installation, technical support, or other services for industrial equipment, products, facilities, or operations.

Innovation Hub. A facility that brings together businesses, entrepreneurs, researchers, educational institutions, investors, or other organizations to support collaboration, research, product development, technology commercialization, workforce development, or entrepreneurial activities. Innovation hubs may include offices, laboratories, meeting spaces, classrooms, collaborative workspaces, and shared support facilities.

Light Manufacturing*:* ~~Low- to moderate-impact industrial, manufacturing, processing, and assembly uses that exhibit benign external characteristics compatible with the character and overall design of a Residential Village environment.~~

A manufacturing, processing, fabrication, assembly, and/or packaging, that occurs primarily within enclosed buildings where the primary activity is the conversion of raw materials or parts into finished products and produces minimal noise, vibration, dust, odor, glare, hazardous materials, or other off-site impacts. Typical uses may include the production of consumer goods, electronics, food products, apparel, furniture, and similar products. In Residential Village, exhibits benign external characteristics compatible with the character and overall design of the Village zone.

Master Plan: A plan with a series of detailed components covering one or more distinct areas. ***For example see:***

- ~~See~~ Villebois Village Master Plan.
- ~~See~~ Coffee Cree~~k Design Overlay District~~***Master Plan***.

Maker Space. A shared workspace that provides access to tools, equipment, technology, and work areas for individuals or businesses engaged in designing, prototyping, fabricating, repairing, or producing products. Maker spaces may include workshops, fabrication equipment, digital manufacturing technologies, classrooms, and collaborative work areas.

Micro-Mobility Vehicle. A small, lightweight vehicle designed for individual transportation that is powered by human power, electric power, or a combination of both, and is intended for use on streets, bicycle facilities, shared-use paths, or other designated transportation facilities. Micro-mobility vehicles include, but are not limited to, bicycles, electric bicycles, electric scooters, cargo bicycles, and similar devices intended for short-distance travel.

Parcel: (1) A unit of land resulting from a partition and (2) Within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial Zone,*** areas bounded by addressing streets, supporting streets and/or through connections are defined as a parcel.

Pattern Book: An illustrative document that depicts the site development, landscaped design, and/ or architectural character of a proposed development. ***For example see:***

- ~~See~~ Section 4.125.15, Pattern Book for projects in Villebois.
- ~~See~~ Section 4.134(.06) ~~F~~***D***., Pattern Book for projects in the ***Northwest Industrial (NWI) Zone.*** ~~Coffee Creek Design Overlay District~~.

Professional—~~Type~~ Services: ***Services catering to daily customers in an office setting*** ~~A "professional type service" shall include activities~~ such as those offered by a physician, surgeon, dentist, lawyer, architect, engineer, accountant, artist, teacher, real estate and insurance sales.

Regulating Plan: A plan that organizes the system of existing and future streets and multi-use paths within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone.***

Retail. A commercial use engaged primarily in selling, leasing, renting, displaying, or distributing goods, merchandise, or products directly to consumers or end users. Retail uses may include customer service, product demonstration, order pickup, and other activities customarily associated with the direct sale of goods, but do not include manufacturing, fabrication, processing, warehousing, or wholesale distribution as the primary use.

Service Commercial: – Establishments providing commercial services catering to daily customers, such as automobile service stations, automobile repair, salons, banking, dry cleaners, laundromats, studios, pet services, equipment rental, and self-storage.

Supporting streets: New streets within the ~~Coffee Creek~~ ***Northwest Industrial*** ~~Design Overlay District~~***(NWI) Zone,*** which may be located within public rights-of-way or public easements.

Through connections*:* New streets, multi-use paths, or streets that combine characteristics of local streets and multi-use paths. They are located within the ~~Coffee Creek~~ ***Northwest Industrial*** ~~Design Overlay District~~***(NWI) Zone*** and may be located within public rights-of-way or public easements.

No additional changes proposed in this section

Section 4.030. Jurisdiction and Powers of Planning Director and Community Development Director.

(.01) *Authority of Planning Director.* The Planning Director shall have authority over the daily administration and enforcement of the provisions of this Chapter, including dealing with non-discretionary matters, and shall have specific authority as follows:

A. A Class I application shall be processed as a ministerial action without public hearing, shall not require public notice, and shall not be subject to appeal by anyone other than the applicant or call-up, except as noted below. Pursuant to Class I procedures set forth in Section 4.035, and upon finding that a proposal is consistent with the provisions of this Code and any applicable Conditions of Approval, shall approve the following, with or without conditions:

1. Minor site clearing and grading, prior to the approval of a Site Development Plan, provided that:

   a. No clearing or grading occurs within the Significant Resource Overlay Zone. Clearing or grading in the Significant Resource Overlay Zone shall require, at a minimum, approval of a Class II permit through the procedures specified below;

   b. No clearing or grading occurs within 25 feet of an area that has been identified by the City as a wetland;

   c. Not more than three trees are proposed to be removed;

   d. No fill or removal is proposed;

   e. Adequate measures are utilized to control erosion and runoff from the site and that the applicant will submit a final Site Development application within seven days of submitting the minor site grading application. All grading activities require compliance with the requirements of the applicable building code and City Public Works standards.

2. Class I Sign Permits, and Temporary Sign Permits for 30 days or less.

3. Architectural, landscape, tree removal, grading and building plans that substantially conform to the plans approved by the Development Review Board and/or City Council. The Planning Director's approval of such plans shall apply only to Development Code requirements and shall not alter the authority of the Building Official or City Engineer on these matters.

4. Building permits for single family dwellings, middle housing, and in the Village zone, row houses or apartments, meeting zoning requirements and located on lots that have been legally created. The Planning Director's approval of such plans shall apply only to Development Code requirements and shall not alter the authority of the Building Official or City Engineer on these matters.

5. Lot line adjustments, where none of the lots increase in area by 50 percent or more, subject to the standards specified in Section 4.233.

6. A temporary use permit for not more than 30 days. Permitted days may or may not be consecutive, but shall not exceed 30 days within the calendar year for which the permit was applied. Temporary use permits are subject to the following standards:

    a. The applicant has the written permission of the property owner to use the site;

    b. The proposed use will not create an obstruction within a sight vision clearance area that would impair the vision of motorists entering onto or passing by the property;

    c. Adequate parking is provided;

    d. Signs shall meet the standards of Section 4.156.09; and

    e. The proposed use has the approval of the Fire Marshal.

7. Determination that an existing use or structure is a non-conforming use or non-conforming structure, as defined in this Code. Except, however, that the Planning Director may, in cases where there is any uncertainty as to the history of the property, choose to process such determinations through the Class II procedures below.

8. Actions taken subject to Site Development Permits which have been approved by the appropriate decision-making body of the City.

9. Final plats for condominiums, subdivisions, or partitions that are substantially the same as tentative plats approved by the City and which are submitted for review and signature prior to recordation with the appropriate county.

10. Type A tree removal permits as provided in Section 4.600.

11. Determination, based upon consultation with the City Attorney, whether a given development application is quasi-judicial or legislative. Except, however, that the Planning Director may, in cases where there is any uncertainty as to the nature of the application, choose to process such determinations through the Class II procedures below.

12. Expedited land divisions and middle housing land divisions requiring expedited review under state law. Applications for expedited land divisions and middle housing land divisions requiring expedited review under state law, as provided for in Section 4.232 of this Code and ORS Chapter 197 shall be processed without public hearing, and shall be subject to appeal through the special appeal procedures specified in Section 4.232.

    a. Authority of Planning Director. The Planning Director shall have authority to review applications for expedited land divisions and middle housing land divisions requiring expedited review under state law and to take action approving, approving with conditions, or denying such applications, based on findings of fact.

    b. Tentative Plat Requirements for Expedited Land Divisions and middle housing land divisions requiring expedited review under state law. Tentative plats and all other application

requirements for expedited land divisions and middle housing land divisions requiring expedited review under state law shall be the same as for other forms of land divisions, except as those requirements are specifically altered by the Oregon Revised Statutes.

c. Administrative Relief Not Available. In taking action on an application for an expedited land division or middle housing land divisions requiring expedited review under state law, the Planning Director is not authorized to grant Variances or waivers from the requirements of the Code.

d. Residential Areas Only. As specified in ORS 197, expedited land divisions shall only be approved in areas zoned for residential use.

13. Development approval extensions as provided in Section 4.023.

B. A Class II application shall be processed as an administrative action, with or without a public hearing, shall require public notice, and shall be subject to appeal or call-up, as specified in Section 4.022 and noted below. Class II residential development applications shall be processed without a public hearing. Pursuant to Class II procedures set forth in Section 4.035, the Director shall approve, approve with conditions, deny, or refer the application to the Development Review Board (as applicable) for a hearing:

1. Minor alterations to existing buildings or site improvements of less than 25 percent of the previous floor area of a building, but not to exceed 10,000 square feet. Minor modifications to approved Architectural and Site Development Plans may also be approved, subject to the same standards.

2. Residential accessory buildings or structures with less than 120 square feet of floor area located within the Willamette River Greenway Boundary pursuant to Section 4.500 and subject to the flood plain development standards of Section 4.172. Approval of such accessory structures in the Greenway shall be based on all of the following findings of fact:

a. The building or structure is located so that the maximum amount of landscape area, open space and/or vegetation is provided between the river and the building;

b. Public access to the river is preserved or is provided in accordance with an approved and adopted plan; and

c. That the change of use, intensification of use, or development will be directed away from the river to the greatest possible degree while allowing a reasonable use of the property.

3. Written interpretations of the text or maps of this Code, the Comprehensive Plan or sub elements of the Comprehensive Plan, subject to appeal as provided in Section 4.022. The Planning Director may review and interpret the provisions and standards of Chapter 4 (Planning) of the Wilsonville Code upon receiving the required filing fee along with a specific written request. The Director shall publish and mail notice to affected parties and shall inform the Planning Commission and City Attorney prior to making a final written decision. The Director's letter and notice of decision shall be provided to the applicant, the Planning Commission, the City Council, and City Attorney and the notice shall clearly state that the decision may be appealed in accordance with Section 4.022 (Appeal Procedures). A log of such interpretations shall be kept in the office of the Planning Department for public review.

4. A permit to locate an accessory use on a lot adjacent to the site of the principal use.

5. Residential subdivisions, subdivisions located within the ***Northwest Industrial Zone*** ~~Coffee Creek Industrial Design Overlay District~~, and land partitions, other than expedited land divisions, pursuant to Section 4.210. Approval shall be based on all of the following findings of fact:

a. The applicant has made a complete submittal of materials for the Director to review, as required in Section 4.210;

b. The proposed plan meets the requirements of the Code regarding minimum lot size and yard setbacks;

c. The approval will not block the orderly development of any adjoining property or access thereto;

d. The public right-of-way bordering the lots or parcels will meet City standards;

e. Any required public dedications of land have been approved for acceptance by the City and will be recorded with the County at the time of final plat approval;

f. Adequate easements are proposed where an existing utility line crosses or encroaches upon any other parcel to be created by the partition;

g. All public utilities and facilities are available or can be provided prior to the issuance of any development permit for any lot or parcel; and

h. Roads extended or created as a result of the land division will meet City standards.

6. Decisions on the following:

a. Lot line adjustments, where any of the lots increase by more than 50 percent in area, subject to the provisions of Section 4.233.

b. Temporary use permits for periods exceeding 30 days but not more than 120 days. Permitted days may or may not be consecutive, but shall not exceed 120 days within the calendar year for which the permit was applied. Temporary use permits may allow specific activities associated with the primary use or business located on the property for up to 120 days provided that:

i. the property owners have given written permission;

ii. no structure, sign or any other object shall exceed 20 feet in height;

iii. adequate parking is provided in designated spaces;

iv. signs shall meet the standards of Section 4.156.09;

v. electrical and building permits are obtained as required;

vi. undue traffic congestion will not result and, if traffic congestion is expected, a traffic control plan is submitted along with the application that identifies the traffic control procedures that will be used;

vii. the activity and/or use shall not unduly interfere with motorists driving on adjacent roads and streets, including I-5; and

viii. public notice has been provided and the comments of interested parties have been considered in the action that has been taken;

ix. the proposed use will not create an obstruction within a sight vision clearance area that would impair the vision of motorists entering onto or passing by the property; and

x. the proposed use has the approval of the Fire Marshal.

7. Solar access permits, as specified in Section 4.137.3.

8. Class II Sign Permits.

9. Site design review, as authorized in Section 4.400 for residential development or properties located within the ***Northwest Industrial (NWI) Zone***, ~~Coffee Creek Design Overlay District,~~ which satisfy all applicable standards and adjustment criteria in Section 4.134~~.10~~.

10. Review of Stage I and Stage II Planned Development applications for properties located within the NWI Zone, which satisfy all applicable standards and adjustment criteria in Section 4.134.

11. Review of Stage I and Stage II Planned Development applications for residential development which satisfy all applicable standards.

12. ~~11.~~ Type B tree removal permits as provided in Section 4.600.

13. ~~12.~~ Type C tree removal permits as provided in Section 4.600 for properties located within the ***Northwest Industrial Zone*** ~~Coffee Creek Industrial Design Overlay District~~ or associated with applications for residential development.

14. ~~13.~~ Architectural and site plans, including modifications and remodels, for multi-family residential structures in residential zones with seven or more units not subject to Site Design Review, meeting clear and objective zoning, siting, and design standards, and located on lots that have previously been legally created.

15. ~~14.~~ ***Waivers, refinements, and variances for residential development subject to the criteria in Sections 4.119, 4.125, and 4.196.***

16. ~~15.~~ **Zone Map Amendments that increase density for residential development.**

No additional changes proposed in this section

Section 4.110. Zoning—Zones.

(.01) The following Base Zones are established by this Code:

A. Residential Agricultural H Holding, which shall be designated "RA-H".

B. Residential, which shall be designated "R".

C. Planned Development Residential, which shall be designated "PDR," and further divided into:

PDR-1

PDR-2

PDR-3

PDR-4

PDR-5

PDR-6

PDR-7

D. Planned Development Commercial, which shall be designated "PDC."

E. Planned Development Industrial, which shall be designated "PDI."

F. Public Facility, which shall be designated "PF."

G. Public Facility - Corrections, which shall be designated "PF-C."

H. Village, which shall be designated "V".

I. Residential Neighborhood, which shall be designated "RN". The RN ~~zone~~ ***Zone*** is a Planned Development Residential zone.

J. Town Center, which shall be designated "TC". The TC ~~zone~~ ***Zone*** is a Planned Development zone.

K. Craft Industrial (CI), which shall be designated "CI". The CI Zone is a Planned Development zone.

L. Northwest Industrial (NWI), which shall be designated "NWI". The NWI Zone is a Planned Development zone.

(.02) The following Overlay Zones, to be used in combination with the underlying base zones, are established by this Code.

A. Solar-Friendly (S) overlay zone;

B. Screening and Buffering (SB) overlay zone; ***and***

C. Old Town (O) overlay zone~~.; and~~

~~D. Coffee Creek Industrial Design Overlay District (CCDOD).~~

(.03) The use of any building or premises or the construction of any development shall be in conformity with the regulations set forth in this Code for each Zoning District in which it is located, except as provided in Sections 4.189 through 4.192.

(.04) The General Regulations listed in Sections 4.150 through 4.199 shall apply to all zones unless the text indicates otherwise.

(Ord. No. 557, 9-5-2003; Ord. No. 806, 7-17-2017; Ord. No. 812, 2-22-2018; Ord. No. 835, 6-5-2019)

No additional changes proposed in this section

Section 4.117. Standards Applying to Industrial Developments in any Zone.

(.01) ~~All industrial developments, uses, or activities are subject to performance standards. If not otherwise specified in the Planning and Development Code, industrial developments, uses, and activities shall be subject to the performance standards specified in Section 4. 135 (.05) (PDI Zone).~~

(.01) Performance Standards. If not otherwise specified in the Planning and Development Code, all industrial developments, uses, or activities are subject to the following performance standards. These standards are intended to minimize the potential adverse impacts of industrial activities on the general public and on other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property or site.

A. All uses and operations except storage, off-street parking, loading and unloading shall be confined, contained, and conducted wholly within completely enclosed buildings, unless outdoor activities have been approved as part of Stage II, Site Design Review, or Administrative Review.

B. Vibration. Every use shall be so operated that the ground vibration inherently and recurrently generated from equipment other than vehicles is not perceptible without instruments at any boundary line of the property or site on which the use is located.

C. Emission of odorous gases or other odorous matter in quantities detectable at any time and at any point on any boundary line of the property or site on which the use is located are prohibited.

D. Any open storage shall comply with the provisions of Section 4.176, and this Section.

E. No building customarily used for night operation, such as a baker, bottling and distribution plant or other similar use, shall have any opening, other than stationary windows or required fire exits, within 100 feet of any residential district and any space used for loading or unloading commercial vehicles in connection with such an operation shall not be within 100 feet of any residential district.

F. Heat and Glare:

1. Operations producing heat or glare shall be conducted entirely within an enclosed building.

2. Exterior lighting on private property shall be screened, baffled, or otherwise directed away from adjacent residential properties. This is not intended to apply to street lighting.

G. Dangerous Substances. Any use which involves the presence, storage or handling of any explosive, nuclear waste product, or any other substance in a manner which would cause a health or safety hazard for any adjacent land use or site shall be prohibited.

H. Liquid and Solid Wastes:

1. Any storage of wastes which would attract insects or rodents or otherwise create a health hazard shall be prohibited.

2. Waste products which are stored outside shall be concealed from view from any property line by a sight-obscuring fence or planting as required in Section 4.176.

3. No connection with any public sewer or public stormwater system shall be made or maintained in violation of applicable City or State standards.

4. No wastes conveyed shall be allowed to or permitted, caused to enter, or allowed to flow into any public sewer or public stormwater system in violation of applicable City or State standards.

5. ~~All drainage permitted to discharge int a street gutter, caused to enter or allowed to flow into any pond, lake, stream, or other natural water course shall be limited to surface waters or waters having similar characteristics as determined by the City, County, and State Department of Environmental Quality.~~

6. All operations shall be conducted in conformance with the City's standards and ordinances applying to sanitary public sewer and stormwater sewer discharges.

I. Noise. Noise generated by the use, with the exception of traffic noises from automobiles, trucks, and trains, shall not violate any applicable standards adopted by the Oregon Department of Environmental Quality and W.C. 6.204 governing noise control in the same or similar locations.

J. Electrical Disturbances. Except for electrical facilities wherein the City is pre-empted by other governmental entities, electrical disturbances generated by uses within the PDI zone which interfere with the normal operation of equipment or instruments within the PDI Zone are prohibited. Electrical disturbances which routinely cause interference with normal activity in abutting residential use areas are also prohibited.

K. Discharge Standards. There shall be no emission of smoke, fallout, fly ash, dust, vapor, gases, or other forms of air pollution that may cause a nuisance or injury to human, plant, or animal life, or to property. Plans of construction and operation shall be subject to the recommendations and regulations of the State Department of Environmental Quality. All measurements of air pollution shall be by the procedures and with equipment approved by the State Department of Environmental Quality or equivalent and acceptable methods of measurement approved by the City. Persons responsible for a suspected source of air pollution upon the request of the City shall provide quantitative and qualitative information regarding the discharge that will adequately and accurately describe operation conditions.

L. Open burning is prohibited.

M. ~~Material~~ ***Outdoor Storage:***

1. Outdoor ~~material~~***l storage must be maintained in an orderly manner at all times.***

2. Outdoor storage area shall be gravel surface or better and shall be suitable for the materials being handled and stored. If a gravel surface is not sufficient to meet the performance standards for the use, the area shall be suitably paved.

3. Any open storage that would otherwise be visible at the property line shall be concealed from view at the abutting property line by a sight obscuring fence or planting not less than six feet in height.

N. Landscaping:

1. ***Unused property, or property designated for expansion or other future use, shall be landscaped and maintained as approved by the Development Review Board. Landscaping for unused property disturbed during construction shall include such things as plantings of ornamental shrubs, lawns, native plants, and mowed, seeded fieldgrass.***

2. ***Contiguous unused areas of undisturbed fieldgrass may be maintained in their existing state. Large stands of invasive weeds such as Himalayan blackberries, English ivy, cherry Laurel, reed canary grass or other identified invasive plants shall be removed and/or mowed at least annually to reduce fire hazard. These unused areas, located within a phased development project or a future expansion, cannot be included in the area calculated to meet the landscape requirements for the initial phase(s) of the development.***

3. ***Unused property shall not be left with disturbed soils that are subject to siltation and erosion. Any disturbed soil shall be seeded for complete erosion cover germination and shall be subject to applicable erosion control standards.***

No additional changes proposed in this section

Section 4.130 CI—Craft Industrial Zone.

(.01) Purpose. The purpose of the Craft Industrial (CI) Zone is to support a diverse range of small-scale industrial and creative enterprises such as incubators, craft and artisan studios, innovation hubs, and maker spaces. It may also include limited residential and commercial uses accessory to the typically permitted uses that serve as a transition to and support more intense urban uses nearby.

(.02) The CI Zone is a Planned Development Zone, subject to applicable Planned Development regulations (see Sections 4.118 and 4.140). Where conflicts occur between these standards and other Development Code regulations or other ordinances, the provisions of this Section shall apply.

(.03) Uses that are typically permitted:

- ***A. Home Businesses that include any of the uses listed below.***
- ***B. Business-Integrated Dwelling Units (BIDU) and Live-Work Dwelling Units (LWDU).***
- ***C. Studios and Creative Workspaces.***
- ***D. Artisan Food and Beverage Production and Food-Related Businesses, with or without accessory on-site tasting rooms or eateries subject to the limitations for Retail and Service Commercial Uses of Subsection 4.130.***
- ***E. Craft and Specialty Manufacturing, including the processing, packaging, and/or assembly of artisan goods and handcrafted items.***
- ***F. Custom Fabrication and Printing Services, including sign fabrication.***
- ***G. Small-scale Light Manufacturing and Assembly of small machinery and appliances, micro-mobility vehicles, precision tools, or other electrical or mechanical items.***
- ***H. Industrial Office and Laboratory Uses, including research, development, testing, or product training and support.***
- ***I. Repair, Finishing, and Testing Services of products manufactured or assembled within the zone.***
- ***J. Service Commercial and Professional Services uses shall not exceed 5,000 square feet of floor space in a single building or 20,000 square feet of combined floor area within a multiple building development.***
- ***K. Retail and Service Commercial Uses, limited to 5,000 square feet of indoor and outdoor sales, service or inventory storage area.***

L. Accessory Uses, including buildings and structures customarily incidental and subordinate to any permitted use.

M. Other Similar Uses, as determined by the Planning Director to be consistent with the purpose of the CI Zone.

(.04) Performance Standards. The performance standards of Section 4.117(.01) apply to all industrial properties and sites within the CI Zone, and are intended to minimize the potential adverse impacts of industrial activities on the general public and on other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property or site.

(.05) Design and Development Standards:

A. The standards of Section 4.134(.11), Development Standards Table, excepting the front yard setback provisions, for properties with frontage on SW Boones Ferry Road located north of SW Day Road, where the setback standards of Section 4.130(08) shall apply; or

B. The standards of the PDC zone, Section 4.131(.03), for all other properties.

(.07) Block and access standards. The CI zone shall be subject to:

A. The block and access standards of Section 4.134(.10), Development Standards Table, for properties with frontage on SW Boones Ferry Road located north of SW Day Road; or

B. The block and access standards of the PDC zone, Section 4.131(.03), for all other properties.

(.08) Other Standards:

A. Minimum Individual Lot Size. No limit save and except as shall be consistent with the other provisions of this Code (e.g., landscaping, parking, etc.).

B. Maximum Lot Coverage. No limit save and except as shall be consistent with the other provisions of this Code (e.g., landscaping, parking, etc.).

C. Minimum Front Yard Setback. None required except when front yard abuts a more restrictive district, in which case the front yard setback shall be a minimum of half the same and a maximum of the same as the abutting district. Except as otherwise provided for properties with frontage on SW Boones Ferry Road located north of SW Day Road, structures on corner or through lots shall observe the minimum front yard setback on both streets. Setbacks shall also be maintained from the planned rights-of-way shown on any adopted City Transportation System Plan (TSP).

D. Minimum Rear and Side Yard Setback. None required except when rear and side yards abut a more restrictive district, in which case setbacks shall be the same as the abutting district. Except as otherwise provided for properties with frontage on SW Boones Ferry Road located north of SW Day Road, structures on corner or through lots shall observe the minimum rear and side yard setbacks on both streets. Setbacks shall also be maintained from the planned rights-of-way shown on any adopted City TSP.

E. No setback is required when side or rear yards abut a railroad siding.

F. Corner Vision. Corner lots shall have no sight obstruction to exceed the vision clearance standards of Section 4.177.

No additional changes proposed in this section

Section 4.134. ~~Coffee Creek Industrial Design Overlay District~~ *Northwest Industrial (NWI) Zone.*

(.01) *Purpose.* ~~The Coffee Creek Industrial Design Overlay District (Coffee Creek DOD)~~ is an overlay district within the Planned Development Industrial - Regionally Significant Industrial Area (RSIA) Zone ~~Section 4.135.5.~~ The purpose of ~~this Coffee Creek DOD~~ ***the Northwest Industrial (NWI) Zone*** is to implement the Coffee Creek Industrial Area Master Plan (2007) ***and Basalt Creek Master Plan (2026) by establishing standards for street design and connectivity, site design and circulation, building form, and building architecture and landscape for all development located within the master planned areas. These standards are intended to result in:***

A. An industrial district featuring cohesive and high-quality site, landscape, and building design that is well integrated with adjacent streetscapes and other public spaces.

B. A multi-modal transportation network accommodating pedestrians, bicyclists, transit riders, motorists, and freight in the context of a modern industrial district.

C. Preservation of trees and natural features.

D. Minimization of adverse impacts to adjacent properties from development that detracts from the character and appearance of the area.

E. Minimization of the off-site visibility of vehicular parking, circulation and loading areas.

F. Creation of a pleasant and functional industrial district for employees and visitors.

G. A predictable and timely process for reviewing industrial development applications.

(.02) *Applicability.* ~~The Coffee Creek DOD shall apply to all properties within the Coffee Creek Industrial Area Master Plan as shown in the Regulating Plan (Figure CC-1). The provisions of this section shall apply to~~: ***The NWI Zone shall apply to all properties within the Coffee Creek Industrial Area Master Plan and Basalt Creek Master Plan areas as shown in the Regulating Plan (Figure NWI-2).***

A. All new building construction.

B. Any exterior modifications to ***or expansions of*** existing, non-residential buildings~~, subject to Section 4.134(.03)~~.

C. All development of site improvements, including but not limited to, new paved parking lots, outdoor storage, display areas, signs, and landscaping.

~~D. All building expansions greater than 1,250 square feet.~~

(.03) ***Subdistricts. The NWI Zone includes four subdistricts (Figure NWI-1):*** ~~*Exceptions.* This section does not apply to the following:~~

~~A. Maintenance of the exterior of an existing industrial/employment structure, such as painting to an approved color palette, reroofing, or residing with the same or similar materials.~~

~~B. Interior remodeling.~~

~~C. Maintenance of existing dwellings and accessory buildings.~~

~~D. Maintenance of agricultural buildings.~~

A. Coffee Creek. Properties in the Coffee Creek Master Plan area located south of SW Day Road.

B. High-Tech Employment. Properties located in the Basalt Creek Master Plan area north of SW Day Road south of the Light Industrial subdistrict, and east of SW Boones Ferry Road.

C. Light Industrial. Properties located in the Basalt Creek Master Plan area north of SW Clay Street west of SW Grahams Ferry Road, and north of the High-Tech Employment subdistrict east of SW Grahams

Ferry Road to the western boundary of properties along Boones Ferry Road in the Craft Industrial (CI) Zone.

D. West Railroad. Properties located in the Basalt Creek Master Plan area west of the Portland and Western Railroad tracks and south of Tonquin Road and the Basalt Creek Parkway.

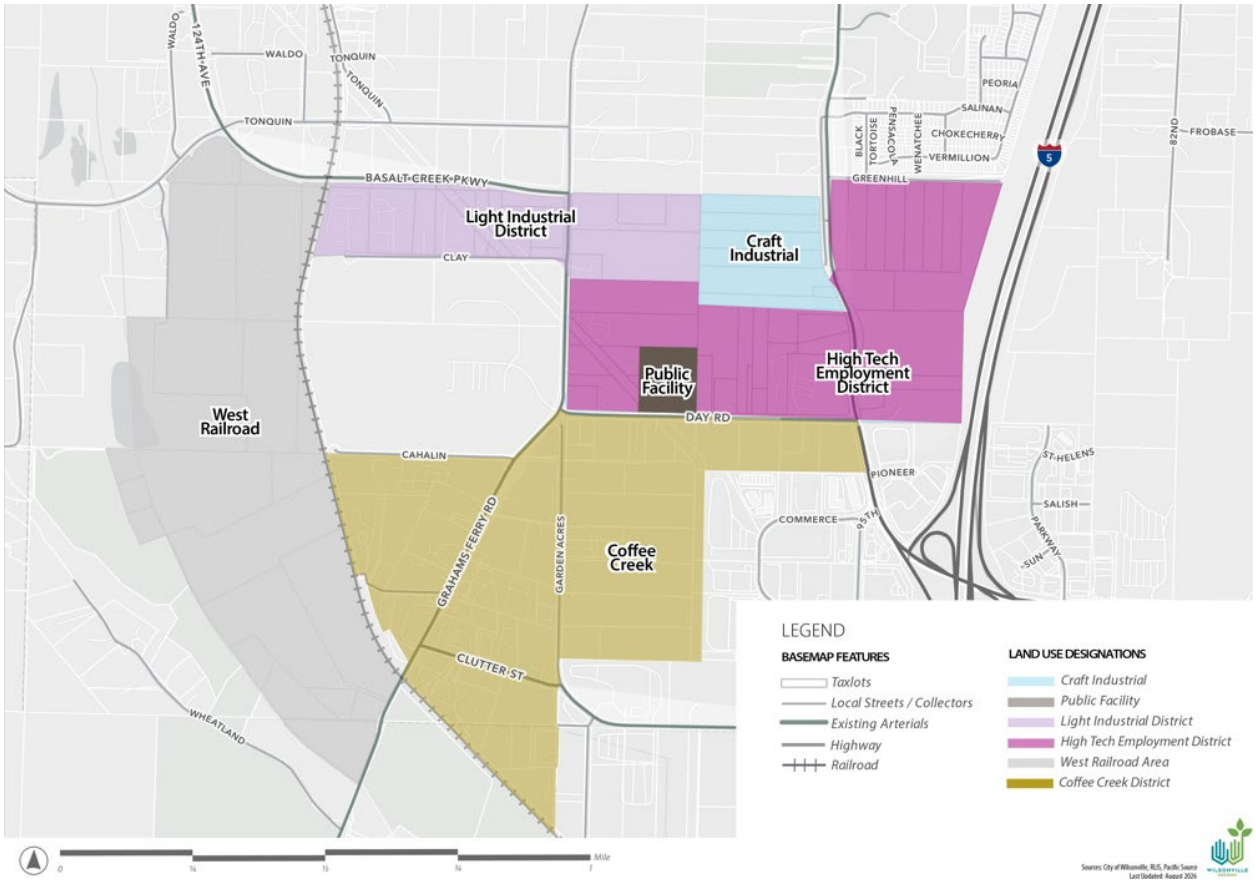

Figure ~~CC-1~~ ***NWI-1.*** Subdistricts

(.04) *Uses that are Allowed:* ~~The uses permitted shall be governed by Section 4.135.5(.03).~~

Table NWI-1. Allowed Uses				
Abbreviations:				
A	Allowed			
R	Allowed with Restrictions			
C	Conditional			
P	Prohibited			
Subdistricts:	**Coffee Creek Subdistrict**	**High-Tech Employment Subdistrict**	**Light Industrial Subdistrict**	**West Railroad Subdistrict**
See Figure NWI-1	Properties in the Coffee Creek Master Plan area located south of SW Day Road	North of SW Day Road, south of the Light Industrial subdistrict, and east of SW Boones Ferry Road	North of SW Clay Street, west of SW Grahams Ferry Road, and north of the High-Tech Employment subdistrict east of SW Grahams Ferry Road to the western boundary of the Craft Industrial (CI) Zone	West of the Portland and Western Railroad tracks and south of Tonquin Road and the Basalt Creek Parkway.
Use	**Coffee Creek Subdistrict**	**High-Tech Employment Subdistrict**	**Light Industrial Subdistrict**	**West Railroad Subdistrict**
Manufacturing, Processing, Assembly, and Packaging of products.	A	A	A	A
Fabrication.	P	A	A	A
Repair, Finishing, and Testing of products manufactured or fabricated within the zone.	A	A	A	A
Research and Development.	R No single building on a site dedicated to this use may be less than 75,000 square feet in size. This use is also allowed as an accessory use to a primary use without the same minimum size requirement.	A	A	A
Laboratories.	A	A	A	A
Residential Hospital: A live-in healthcare facility where patients stay full-time to receive medical care, or similar hospital uses, where daily trips to and from the facility are almost entirely caused by employees.	C	C	A	A
Warehousing and Distribution, except Direct to Consumer (DTC) E-commerce Fulfillment or Logistics.	A	A	A	A
Direct-to-Consumer (DTC) E-commerce Fulfillment or Logistics.	P	P	R On-site customers limited to 5% of trips. No more than 5,000 square feet may be dedicated to daily consumer pick-up including the area dedicated to inventory storage for customer pick-up. No in-store shopping. No grocery or fresh goods. No single building on a site may exceed 150,000 square feet in size. Any delivery vehicles, including light-duty vehicles, shall be kept in a screened storage area.	R On-site customers limited to 5% of trips. No more than 5,000 square feet may be dedicated to daily consumer pick-up including the area dedicated to inventory storage for customer pick-up. No in-store shopping. No grocery or fresh goods. No single building on a site may exceed 150,000 square feet in size. Any delivery vehicles, including light-duty vehicles, shall be kept in a screened storage area.
Industrial Services.	P	P	A	A
Motor Vehicle Services, or other services complementary or incidental to primary uses, and which support the primary uses by allowing more efficient or cost-effective operations.	A	A	A	A

Use	Coffee Creek Subdistrict	High-Tech Employment Subdistrict	Light Industrial Subdistrict	West Railroad Subdistrict
Specialty Automotive Services.	P	P	R Limited to processing that generally takes more than 48 hours and customer interaction area of not more than 5,000 square feet. Does not include typical maintenance or mechanical repair of light-duty vehicles done at quick lube, auto mechanics, or similar commercial service facilities catering to motor vehicles. All equipment or vehicles being processed and waiting for processing or pickup shall be kept inside a building or in screened storage areas.	R Limited to processing that generally takes more than 48 hours and customer interaction area of not more than 5,000 square feet. Does not include typical maintenance or mechanical repair of light-duty vehicles done at quick lube, auto mechanics, or similar commercial service facilities catering to motor vehicles. All equipment or vehicles being processed and waiting for processing or pickup shall be kept inside a building or in screened storage areas.
Corporate Headquarters.	R Must have more than 20 employees.	A	A	A
Office Complex-Technology, other than Call Center or Data Center.	A	A	A	A
Call Center.	R Must have more than 20 employees.	R Must have more than 20 employees.	A	A
Data Center.	R Only allowed as an accessory use and limited to maximum of 25,000 square feet on a site.	R Only allowed as an accessory use and limited to maximum of 25,000 square feet on a site.	R Only allowed as an accessory use and limited to maximum of 25,000 square feet on a site.	R Only allowed as an accessory use and limited to maximum of 25,000 square feet on a site.
Training Facilities and Vocational Schools providing education to meet industrial workforce needs.	A	A	A	A
Public Facilities.	A	A	A	A
Residential use.	R Shall not exceed 10 percent of total floor area.	P	P	P
Accessory Uses, Buildings and Structures customarily inciental to any permitted use.	A	A	A	A
Temporary Buildings or Structures for uses incidential to construction work.	R Structures shall be removed within 30 days of completion or abandonment of construction work.	R Structures shall be removed within 30 days of completion or abandonment of construction work.	R Structures shall be removed within 30 days of completion or abandonment of construction work.	R Structures shall be removed within 30 days of completion or abandonment of construction work.
Expansion of a Building, Structure or Use approved prior to October 25, 2004 of up to 20 percent additional floor area and/or ten percent additional land area.	A	P	P	P
Similar Uses to those listed as typically allowed.	R Must be substantially similar as determined by the Planning Director and meet any restrictions of similar uses.	R Must be substantially similar as determined by the Planning Director and meet any restrictions of similar uses.	R Must be substantially similar as determined by the Planning Director and meet any restrictions of similar uses.	R Must be substantially similar as determined by the Planning Director and meet any restrictions of similar uses.
Any use allowed in the PDC Zone or any other light industrial uses provided that any such use is compatible with industrial use, planned and developed in a manner consistent with the purposes and objectives of Section 4.130 to 4.140, and subject to the follwoing criteria:				
Professional Office accessory to and occupying a smaller square footage than the primary use.	R Not to exceed 20 percent of total floor area within a site.	R Not to exceed 30 percent of total floor area within a site.	R Not to exceed 30 percent of total floor area within a site.	R Not to exceed 30 percent of total floor area within a site.
Professional Services or Service Commercial with regular customers (daily or more than 3 per week) including small medical/dental offices.	R Not to exceed 3,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.	R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.	R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.	R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.

Use	*Coffee Creek Subdistrict*	*High-Tech Employment Subdistrict*	*Light Industrial Subdistrict*	*West Railroad Subdistrict*
Retail use including indoor and outdoor sales, service or inventory storage area	*R Not to exceed 3,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*	*R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*	*R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*	*R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*
Combined Professional Services, Service Commercial, and Retail uses including indoor and outdoor sales, service or inventory storage area	*R Not to exceed 3,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*	*R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*	*R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*	*R Not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.*

(.05) *Prohibited Uses:* The uses prohibited shall be governed ***by Table NWI-1*** and Section 4.135.5(.04).

(.06) ~~*Overview of Coffee Creek DOD Standards:*~~ ***Overview of Northwest Industrial Zone Standards:***

A. *Section 4.134(.09) Regulating Plan.* The Regulating Plan organizes all existing and future streets, drives, and shared-use paths within the ~~Coffee Creek Industrial Area~~ ***NWI Zone*** into a hierarchy of Addressing Streets, Supporting Streets and Through Connections.

B. *Section 4.134(.10) Connectivity Standards:*

1. New Supporting Streets and Through Connections are required within the ~~Coffee Creek DOD~~ ***NWI Zone*** to meet Connectivity Requirements as shown on Figure ~~CC-4~~ ***NWI-5.***

2. The Street Types specify the cross sections for each of the street and shared-use path types within the Regulating Plan. These cross section specifications apply to both existing and proposed new streets. A range of cross sections for Supporting Streets and Through Connections is permitted and detailed in Figures ~~CC-2 and CC-3~~ ***NWI-3 and NWI-4.***

C. *Section 4.134(.11) Development Standards Table:*

1. The Development Standards Table provides an overview of all applicable development standards. The development standards for any given parcel are determined by the existing or future street or shared-use path type on which the parcel fronts, as detailed in Table ~~CC-1~~ ***NWI-2.***

2. Areas bounded by new Supporting Streets and Through Connections are designated as Parcels and are required to comply with Development Standards governing site design, building orientation and frontage. The development standards for site design, building façade and landscape design are intended to work in tandem with the street types to create a cohesive and unified public realm.

3. Adjustments to Development Standards may be granted by the Planning Director for quantifiable provisions, as noted in Tables ~~CC-1 through CC-4~~ ***NWI-2 through NWI-5***, if the Planning Director finds that the adjusted Development Standard will perform as well as the Development Standard.

D. ~~Coffee Creek DOD Pattern Book~~ ***NWI Zone Pattern Book.*** ~~The Coffee Creek DOD Pattern Book.~~***The NWI Zone Pattern Book*** provides supplemental design guidelines, which are intended to allow more flexibility in design than the Development Standards while satisfying the purpose of the ~~Coffee Creek DOD~~ ***NWI Zone.***

(.07) *Review Process.* Development applications shall follow the application review process described in:

A. Section 4.197 Zone Changes and Amendments.

~~B. Section 4.198 Comprehensive Plan Changes.~~

~~C~~***B.*** Section 4.700 Annexation and Urban Growth Boundary Amendments.

~~D~~***C.*** Section 4.140 Planned Development Regulations.

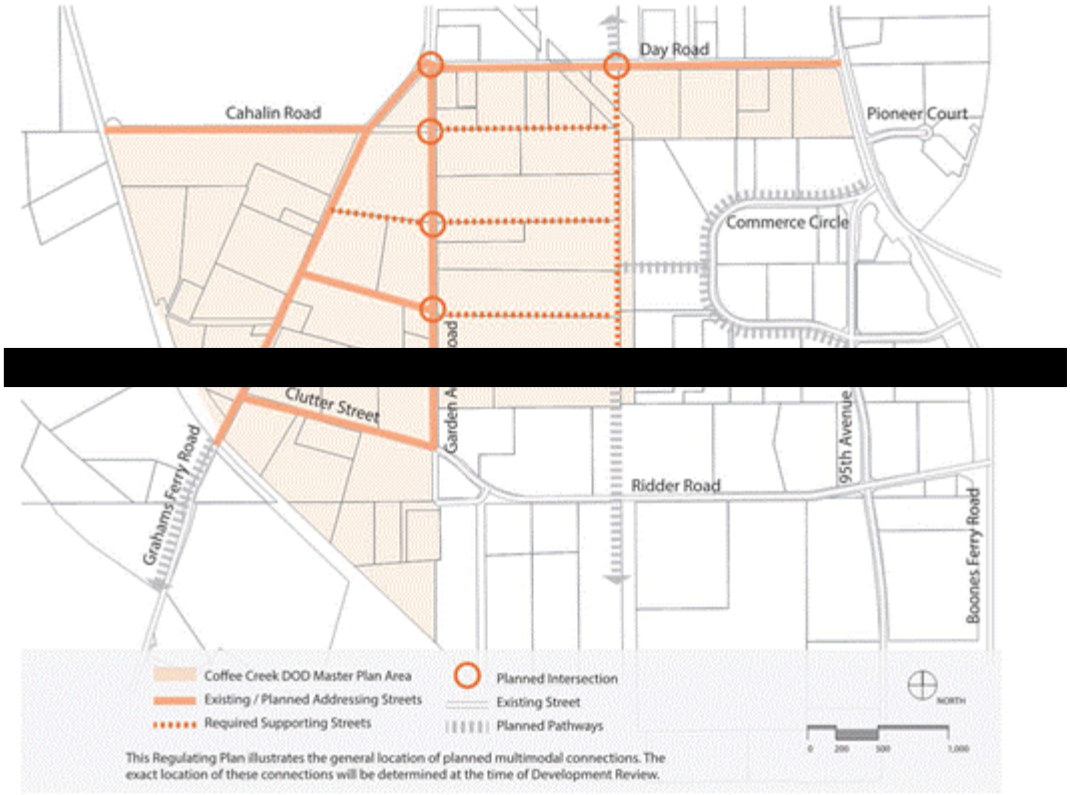
(.08) *Waivers.* The Development Review Board may waive standards as listed in Section 4.134(.11), consistent with the provisions of Section 4.119.

A. The following standards shall not be waived, unless there is substantial evidence in the whole record to support a finding that the intent and purpose of the standards will be met in alternative ways:

1. Required minimum building height as provided in Section 4.134(.11) Table ~~CC-4~~ ***NWI-5;***

2. Parking location and design along Addressing Streets in Section 4.134(.11) Table ~~CC-3~~ ***NWI-4***; and

3. Parcel pedestrian access as listed in Section 4.134(.11) Table ~~CC-3~~ ***NWI-4***.



B. In addition to meeting the purposes and objectives of Section 4.140, any waivers granted in the NWI Zone must be found to be consistent with the intent of the ~~Coffee Creek DOD~~ ***NWI Zone*** Pattern Book.

(.09) ~~*Coffee Creek DOD*~~ ***NWI Zone*** *Regulating Plan, Figure* ~~*CC-1*~~ ***NWI-2:***

A. *Components of the Regulating Plan Map:*

1. *Addressing Streets.* Existing and planned streets within the Regulating Plan Area are called Addressing Streets and include ***Boones Ferry Road***, Cahalin Road, ***Clay Street***, Day Road, Clutter Street, Grahams Ferry Road, ***and*** Garden Acres Road~~, and "Future" Street"~~. ***For the purposes of this Subsection, the Basalt Creek Parkway and SW Greenhill Lane are existing or planned streets, but not Addressing Streets as referred to in Tables NWI-2 through NWI-5.***

2. ~~*Overlay District.* Land area identified within the Coffee Creek DOD on Figure CC-1 is subject to additional Connectivity Standards as detailed in Figure CC-4 and Table CC-1.~~ **Regulating Plan Area. Land area identified within the NWI Zone on Figure NWI-2 is subject to additional Connectivity Standards as detailed in Figure NWI-5 and Table NWI-2.**

~~Figure CC-1 - Regulating Plan~~

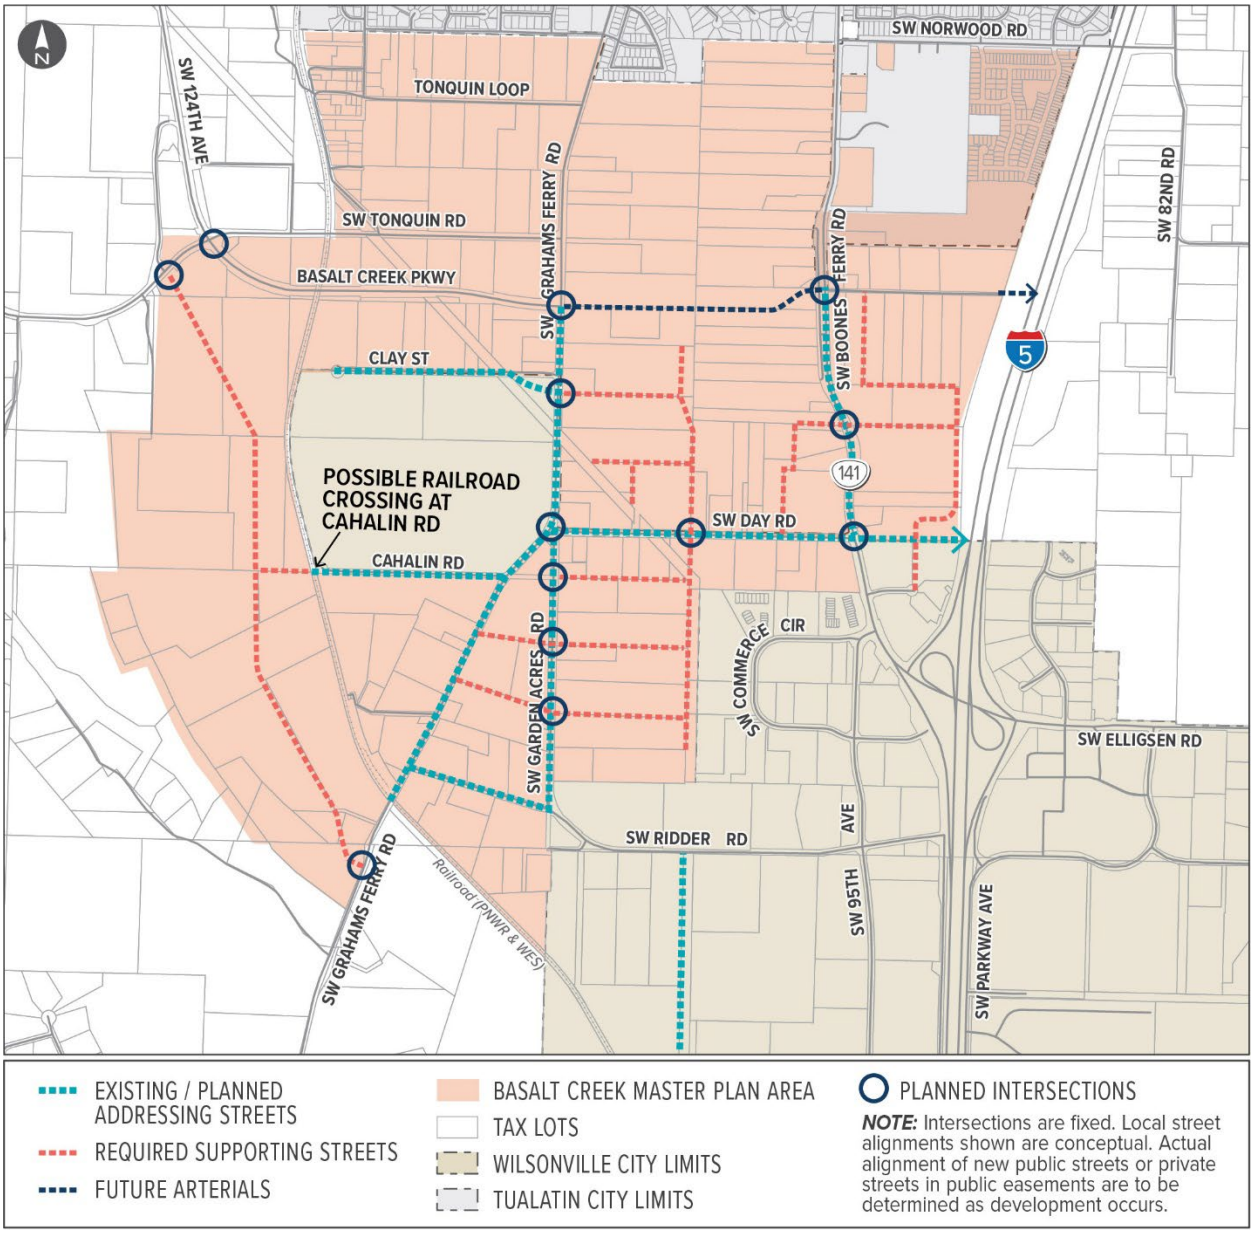


Figure ~~CC-1~~ ***NWI-2.*** Regulating Plan

(.10) ~~Coffee Creek Connectivity Standards:~~ ***NWI Zone Connectivity Standards:***

A. *Street Types, ~~Figure CC-1~~ **NWI-2***. Within the land area bounded by Addressing Streets, connectivity shall be provided through new streets or private drives and shared use paths. The location, alignment, and cross-section of required streets or private drives and shared-use paths is flexible, as long as they comply with spacing and minimum cross-section standards. New connections may be one of the following types:

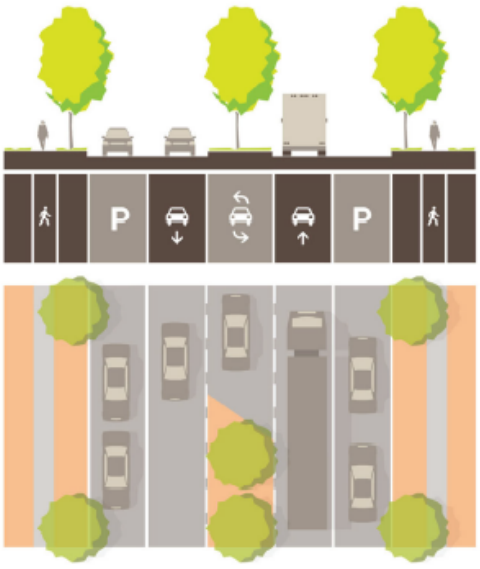
1. *Supporting Streets.* Supporting Streets are new public streets or private streets in public easements. They shall meet the development standards set out in Figure ~~CC-2~~ ***NWI-3.***

a. A Required Supporting Street is one that intersects with an Addressing Street as shown on Figure ~~CC-1~~ ***NWI-2.*** The exact location and design of these connections will be determined at the time of development review.

b. Planned Intersections are locations where Existing and Planned Addressing Streets intersect with required Supporting Streets and Planned Pathways, as generally shown in Figure ~~CC-1~~ ***NWI-2.***

2. *Through Connections.* Through Connections are new public streets or private streets in public easements with multi-use paths, or streets or public easements that combine characteristics of streets and multi-use paths. They shall meet the Development Standards set out in Figure ~~CC-3~~ ***NWI-4.***

B. Planned Pathways are multi-use paths or pedestrian connections that are planned in the Transportation Systems Plan to occur in the location generally shown in Figure ~~CC-1~~ ***NWI-2***. A Planned Pathway may be employed to meet required connectivity, if it complies with Through Connection Standards for Connection Spacing and Connection Type, see Figure ~~CC-6~~ ***NWI-4.***



C. *Maximum Connection Spacing:*

1. Addressing Streets. When intersecting with an Addressing Street, new Supporting Streets and Through Connections shall meet maximum spacing standards as set out in Table ~~CC-1~~ ***NWI-2.***

2. Internal Supporting Streets and Through Connections. See Figures ~~CC-4 and Table CC-1.~~***NWI-3 and NWI-4 and Table NWI-2.***

D. *Required Connectivity Master Plan.* Connectivity Master Plans are required for all development within the ~~Coffee Creek DOD~~ ***NWI Zone***. Development proposals shall show conceptually how the Connectivity Requirements will be met. In addition, the Connectivity Master Plan should generally indicate how parking, driveways, walkways, waysides, etc., will relate or connect to adjacent parcels.

Specifications for Supporting Streets	
Type	Multimodal Connection*
Aesthetic Character / Identity	Minor Addressing Street
Role in Network	Bike, Pedestrian and Local Vehicular Connectivity
Design Speed	under 20 mph
Right-of-Way / Easement	Varies
Curb-to-Curb Width	24-54 feet
Travel Lanes (number)	2
Travel Lane Width	10-12 feet
Center Turn Lane Width	14 feet, max. (optional)
Parking Lane Width	8 feet (optional)
Bike Facilities	Shared Street
Sidewalk Width	6 feet (minimum)
Planting Strip Width	6 feet (minimum)
Planted Median Width	14 (minimum, optional)

~~NWI-2~~

*The Regulating Plan (Figure ~~CC-1~~) illustrates the general location of planned multimodal connections. These are labeled as *Required Supporting Streets*. Within 300 feet of an Addressing Street, the exact location and design of these connections will be determined at the time of development review.

Figure ~~CC-2~~ ***NWI-3*** – Supporting Streets Standards

Specifications for Through Connections	
Type	Local Street
Aesthetic Character / Identity	
Role in Network	Bike, Pedestrian, Local Vehicular Connectivity
Design Speed	under 20 mph
Right-of-Way / Ease-ment	Varies
Curb-to-Curb Width	Varies
Travel Lanes (number)	Optional
Travel Lane Width	12 feet (maximum)
Center Turn Lane Width	NA
Parking Lane Width	8-30 feet (optional; head-in, diagonal or parallel parking, or a combination, permit-ted,)
Bike Facilities	Shared Street or Shared-Use Path
Sidewalk Width	5 feet (minimum) each side or 10 feet (minimum) one side or 10 feet (minimum) no travel lane
Planting Strip Width	6 feet (minimum)
Planted Median Width	NA

	Addressing Streets	**Supporting Streets**	**Through Connections**
General	Development Standards within this table are not adjustable.		
Connection Spacing	Not applicable, Addressing Streets exist or are planned	600 feet, maximum, centerline to centerline. Supporting Streets and Through Connections shall intersect with Garden Acres Road***, Boones Ferry Road, and Grahams Ferry Road Addressing Streets*** as shown on Figure ~~CC 1~~ ***NWI-2***, Regulating Plan; or if the Addressing Street is Day Road, no less than 1,000 feet apart, centerline to centerline.	
Connection Type	Addressing Streets are Day Road, Grahams Ferry Road, ***Boones Ferry Road,*** Cahalin Road, ***Clay Street,*** Garden Acres Road, ***and*** Clutter Street***.*** ~~and "Future" Street.~~	Supporting Streets are those meeting Specifications, Figure ~~CC 2~~ ***NWI-3***. A Required Supporting Street is one that intersects with an Addressing Street. The exact location and design of these connections will be determined at the time of development review.	Through Connections are those meeting Specifications, Figure ~~CC 3~~ ***NWI-4***. Through Connections may be multimodal or used exclusively for bicycle and pedestrian access.
Connection Hierarchy and Primary Frontage	If one of the streets or connections bounding a parcel is an Addressing Street, the Addressing Street shall be the Primary Frontage. If none of the bounding streets or connections is an Addressing Street, a Supporting Street shall be the Primary Frontage. See Figure ~~CC 5~~ ***NWI-6***.		

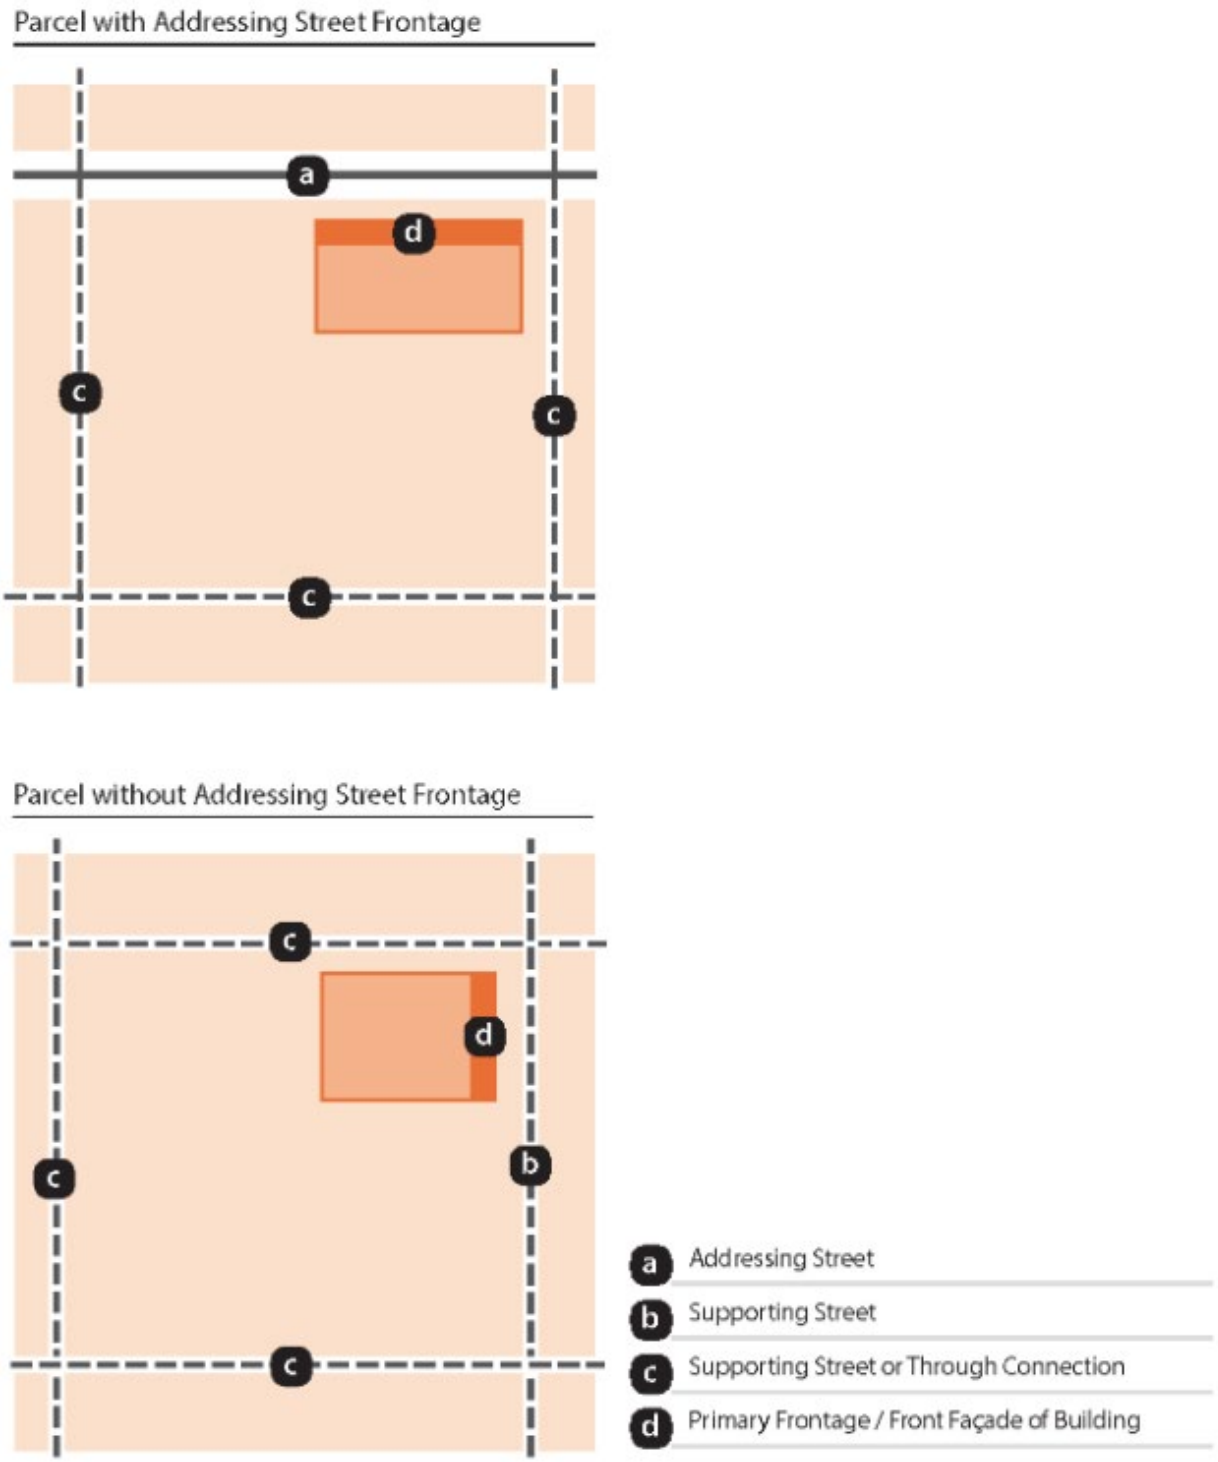

Figure ~~CC-5~~ ***NWI-6*** – Connection Hierarchy and Primary Frontage

Table ~~CC-2~~ ***NWI-3***: District-Wide Planning and Landscaping			
	Addressing Streets	**Supporting Streets**	**Through Connections**
General	The following provisions apply: • Section 4.176 for landscaping standards • Section 4.610.10 for tree removal, relocation or replacement. • Section 4.610.10(.01)C. for consideration of development alternatives to preserve wooded areas & trees.		

Table ~~CC-3~~***NWI-4:*** Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
1. Parcel Access			
General	Unless noted otherwise below, the following provisions apply: • Section 4.177(.02) for street design; • Section 4.177(.03) to (.10) for sidewalks, bike facilities, pathways, transit improvements, access drives & intersection spacing. The following Development Standards are adjustable: • Parcel Driveway Spacing: 20% • Parcel Driveway Width: 10%		
Parcel Driveway Access	Not applicable	Limited by connection spacing standards Parcel Driveway Access may be employed to meet required connectivity, if it complies with Supporting Street Standards for Connection Spacing and Connection Type, see Figure ~~CC-6~~ ***NWI-7***. Subject to approval by City Engineer	Limited by connection standards for motorized vehicle access. Parcel Driveway Access may be employed to meet required connectivity, if it complies with Through Connection Standards for Connection Spacing and Connection Type, see Figure ~~CC-6~~ ***NWI-7***. Subject to approval by City Engineer
Parcel Driveway Spacing	Not applicable	150 feet, minimum See Figure ~~CC-6~~ ***NWI-7***	150 feet, minimum See Figure ~~CC-6~~ ***NWI-7***

Table ~~CC-3~~*NWI-4:* Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
Parcel Driveway Width	Not applicable	24 feet, maximum or complies with Supporting Street Standards for primary driveway providing access for passenger vehicles, light delivery, etc. 40 feet, maximum for secondary driveway providing access for heavy delivery vehicles, large trucks, etc.	24 feet, maximum or complies with Through Connection Standards for primary driveway providing access for passenger vehicles, light delivery, etc. 40 feet, maximum for secondary driveway providing access for heavy delivery vehicles, large trucks, etc.
2. Parcel Pedestrian Access			
General	Unless noted otherwise below, the following provisions apply: • Section 4.154 (.01) for separated & direct pedestrian connections between parking, entrances, street right-of-way & open space • Section 4.167 (.01) for points of access		
Parcel Pedestrian Access Spacing	No restriction		
Parcel Pedestrian Access Width	8 feet wide, minimum for pedestrian connections between the primary street frontage and Primary Building Entrance(s).		
Parcel Pedestrian Access to Transit	Provide separated & direct pedestrian connections between transit stops and parking, entrances, street right-of-way & open space.		
3. Parcel Frontage			
Parcel Frontage, Defined	Parcel Frontage shall be defined by the linear distance between centerlines of the perpendicular Supporting Streets and Through-Parcel Connections. Where Parcel Frontage occurs on a curved segment of a street, Parcel Frontage shall be defined as the linear dimension of the Chord.		
Primary Frontage, Defined	The Primary Frontage is the Parcel Frontage on an Addressing Street. If the parcel is not bounded by Addressing Streets, it is the Parcel Frontage on a Supporting Street. See Figure ~~CC-5~~ ***NWI-6***.		
Parcel Frontage Occupied by a Building	A minimum of 100 feet of the Primary Frontage shall be occupied by a building. The maximum Primary	No minimum	

Table ~~CC-3~~*NWI-4:* Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
	Frontage occupied by a building shall be limited only by required side yard setbacks.		
4. Parking Location and Design			
General	Unless noted otherwise below, the following provisions apply: • Section 4.155 (03) Off-Street Parking Requirements • Section 4.155 (04) Bicycle Parking • Section 4.155 (06) Carpool and Vanpool Parking Requirements • Section 4.176 for Parking Perimeter Screening and Landscaping—permits the parking landscaping and screening standards as multiple options The following Development Standards are adjustable: • Parking Location and Extent: up to 20 spaces permitted on an Addressing Street		
Parking Location and Extent	Limited to 16 spaces, maximum. 50% of spaces designated for short-term (1 hour or less), visitor, and disabled parking only between right-of-way of Addressing Street and building.	Parking is permitted between right-of-way of Supporting Street and building.	Parking is permitted between right-of-way of Through Connection and building.
Parking Setback	20 feet minimum from the right-of-way of an Addressing Street.	15 feet minimum from the right-of-way of a Supporting Street.	10 feet minimum from the right-of-way of a Through Connection.
Parking Lot Sidewalks	Where off-street parking areas are designed for motor vehicles to overhang beyond curbs, sidewalks adjacent to the curbs shall be increased to a minimum of seven (7) feet in depth.	Where off-street parking areas are designed for motor vehicles to overhang beyond curbs, planted areas adjacent to the curbs shall be increased to a minimum of nine (9) feet in depth.	
Parking Perimeter Screening and Landscaping	Screen parking area from view from Addressing Streets and Supporting Streets by means of one or more of the following: a. General Landscape Standard, Section 4.176 (.02) C. b. Low Berm Standard, Section 4.176 (.02) E., except within 50 feet of a perpendicular Supporting Street or Through Connection as measured from the centerline.		Screen parking area from view from Through Connections by means of a. Low Screen Landscape Standard, Section 4.176(.02) D., or b. High Screen

Table ~~CC-3~~*NWI-4:* Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
			Landscaping Standard, Section 4.176(.02)F., or c. High Wall Standard, Section 4.176(.02)G., or d. Partially Sight-obscuring Fence Standard, Section 4.176(.02)I.
Off-Street Loading Berth	One loading berth is permitted on the front façade of a building facing an Addressing Street. The maximum dimensions for a loading are 16 feet wide and 18 feet tall. A clear space 35 feet, minimum is required in front of the loading berth. The floor level of the loading berth shall match the main floor level of the primary building. No elevated loading docks or recessed truck wells are permitted. Access to a Loading Berth facing an Addressing Street may cross over, but shall not interrupt or alter, a required pedestrian path or sidewalk. All transitions necessary to accommodate changes in grade between access aisles and the loading berth shall be integrated into adjacent site or landscape areas. Architectural design of a loading berth on an Addressing Street shall be visually integrated with the scale, materials, colors, and other design elements of the building.	No limitation. Shall meet minimum standards in Section 4.155(.05).	
Carpool and Vanpool Parking	No limitation		

Table ~~CC-3~~*NWI-4:* Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
5. Grading and Retaining Walls			
General	The following Development Standards are adjustable: • Retaining Wall Design: 20%		
Maximum height	Where site topography requires adjustments to natural grades, landscape retaining walls shall be ~~48 inches tall maximum when visible from adjacent streets and~~ 60 inches tall maximum ~~when visible only to users from within a site~~. Where the grade differential is greater than 30 inches, retaining walls may be stepped.		
Required Materials	Materials for retaining walls shall be unpainted cast-in-place, exposed-aggregate, or board-formed concrete; brick masonry; stone masonry; or industrial-grade, weathering steel plate.		
Retaining Wall Design	Retaining walls longer than 50 linear feet shall be tiered, introducing a 5-foot, minimum horizontal offset between the lowest part and upper part(s) of the wall to reduce their apparent mass.		
6. Planting			
General	Unless noted otherwise below, the following provisions apply: • Section 4.176 Landscaping and Screening Standards		
Landscaping Standards Permitted	General Landscape Standard, Section 4.176(.02 C. Low Berm Standard, Section 4.176(.02)E., except within 50 feet of a perpendicular Supporting Street or Through Connection as measured from the centerline	General Landscape Standard, Section 4.176(.02)C. Low Screen Landscape Standard, Section 4.176(.02)D. Screen loading areas with High Screen Landscaping Standard, Section 4.176(.02)F., and High Wall Standard, Section 4.176(.02)G.	
7. Location and Screening of Utilities and Services			
General	Unless noted otherwise below, the following provisions apply: • Sections 4.179 and 4.430. Mixed Solid Waste and Recyclables Storage in New Multi-Unit Residential and Non-Residential Buildings		
Location and Visibility	Site and building service, equipment, and outdoor	Site and building service, utility equipment, and	No limitation

Table ~~CC 3~~*NWI-4:* Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
	storage of garbage, recycling, or landscape maintenance tools and equipment is not permitted	outdoor storage of garbage, recycling, or landscape maintenance tools and equipment is not permitted within the setback	
Required Screening	Not permitted	High Screen Landscaping Standard, Section 4.176(.02)F. and/or High Wall Standard, Section 4.176 (.02) G.	

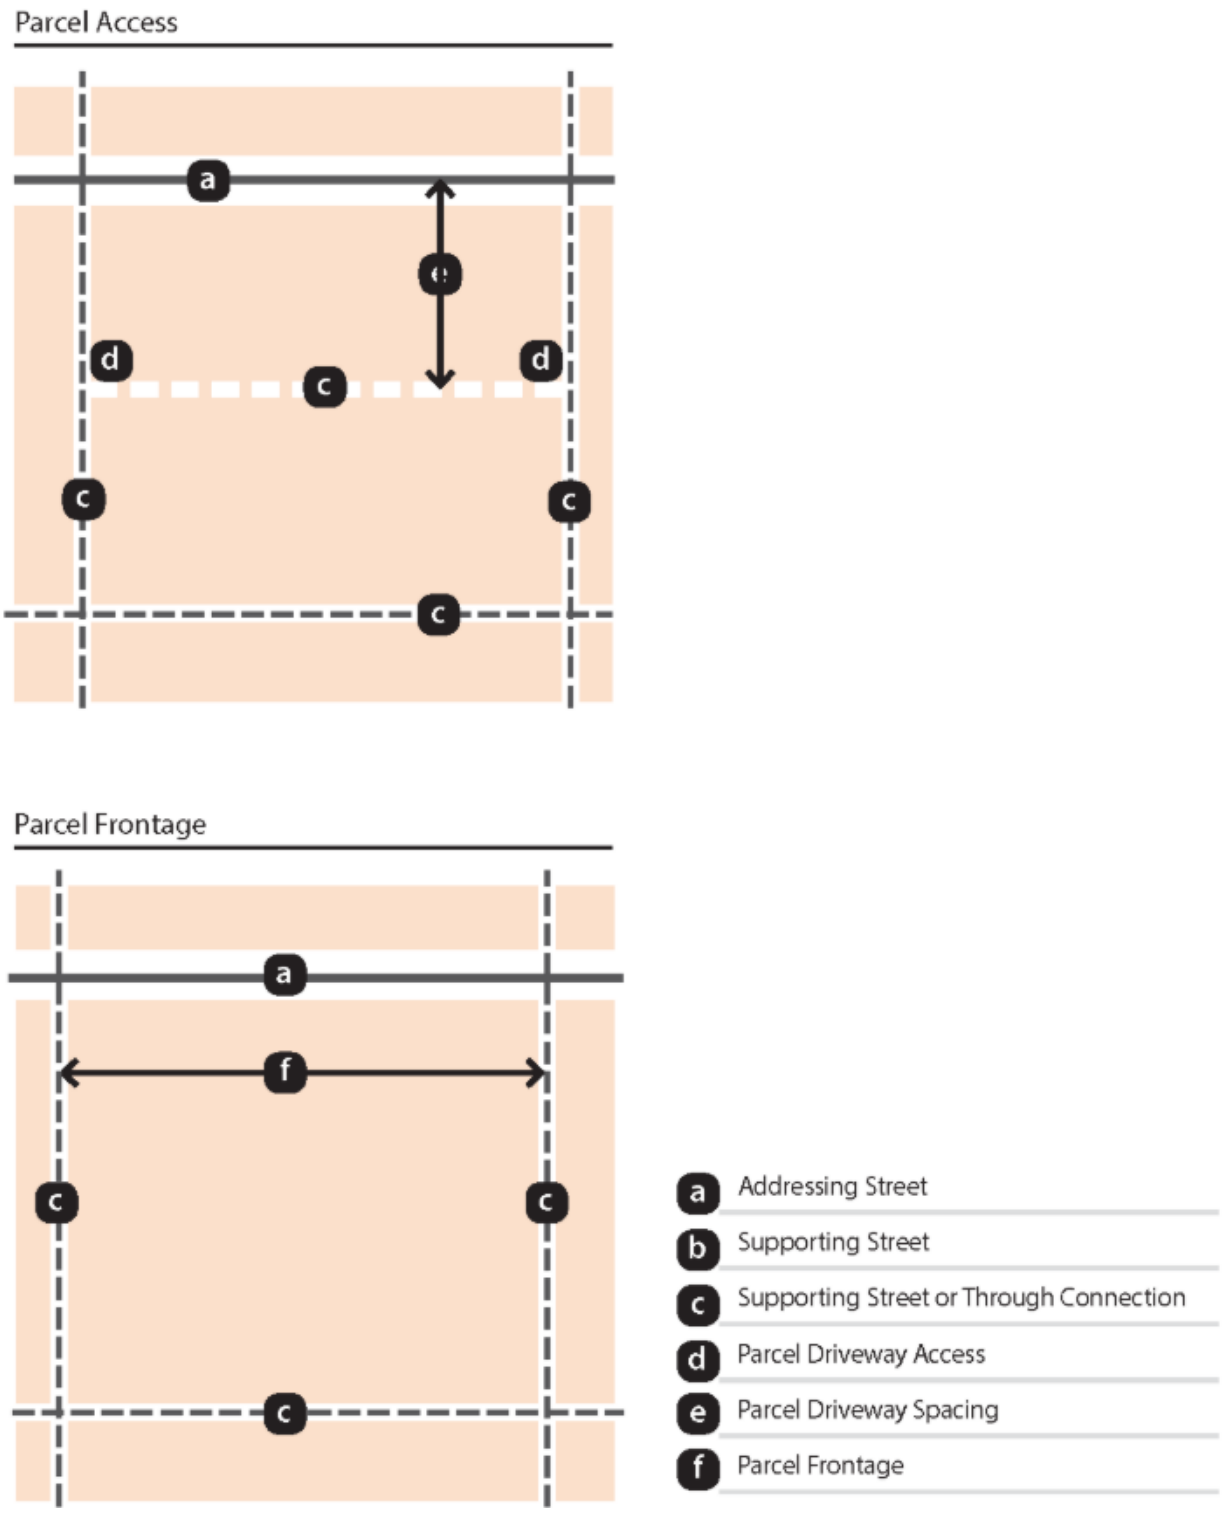

Figure ~~CC-6~~ ***NWI-7***-Site Design – Parcel Access

Table ~~CC-4~~ *NWI-5*: Building Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
1. Building Orientation			
Front Façade	Buildings shall have one designated front façade and two designated side façades. If one of the streets or connections bounding a parcel is an Addressing Street, the front façade of the building shall face the Addressing Street. If two of the streets or connections bounding a parcel are Addressing Streets, the front façade of the building may face either Addressing Street, except when one of the Addressing Streets is Day Road. In that case, the front façade must face Day Road. If none of the bounding streets or connections is an Addressing Street, the front façade of the building shall face a Supporting Street. See Figure ~~CC-5~~ ***NWI-8***.		
Length of Front Façade	A minimum of 100 feet of the Primary Frontage shall be occupied by a building. The maximum Primary Frontage occupied by a building shall be limited only by required side yard setbacks.		
Articulation of Front Façade	Applies to a Front Façade longer than 175 feet that has more than 5,250 square feet of street-facing façade area: At least 10% of the street-facing façade of a building facing an Addressing Street must be divided into façade planes that are offset by at least 2 feet from the rest of the façade. Façade area used to meet this standard may be recessed behind, or project out from, the primary façade plane.		
2. Primary Building Entrance			
General	The following Development Standards are adjustable: • Required Canopy: 20% • Transparency: 20%		
Accessible Entrance *	The Primary Building Entrance shall be visible from, and accessible to, an Addressing Street (or a Supporting Street if there is no Addressing Street frontage). A continuous pedestrian pathway shall connect from the sidewalk of an Addressing Street to the Primary Building Entrance with a safe, direct and convenient path of travel that is free from hazards and provides a reasonably smooth and consistent surface consistent with the requirements of Americans with Disabilities Act (ADA). The Primary Building Entrance shall be 15 feet wide, minimum and 15 feet tall, minimum.		
Location	150 feet, maximum from right-of-way of an Addressing Street, see Figure ~~CC-7~~ ***NWI-8***.	150 feet, maximum from right-of-way of a Supporting Street, if there is no Addressing Street Frontage, see Figure ~~CC-7~~ ***NWI-8***.	

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Table ~~CC-4~~ *NWI-5*: Building Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
Visibility	Direct line of sight from an Addressing Street to the Primary Building Entrance.		
Accessibility	Safe, direct, and convenient path from adjacent public sidewalk.		
Required Canopy *	Protect the Primary Building Entrance with a canopy with a minimum vertical clearance of 15 feet and an all-weather protection zone that is 8 feet deep, minimum and 15 feet wide, minimum.		
Transparency	Walls and doors of the Primary Building Entrance shall be a minimum of 65% transparent.		
Lighting	The interior and exterior of the Primary Building Entrance shall be illuminated to extend the visual connection between the sidewalk and the building interior from day to night. Pathway lighting connecting the Primary Building Entrance to the adjacent sidewalk on an Addressing Street shall be scaled to the needs of the pedestrian. Comply with Outdoor Lighting, Section 4.199		
3. Overall Building Massing			
General	The following Development Standards are adjustable: • Required Minimum Height: 10% • Ground Floor Height: 10% • Base, Body, and Top Dimensions: 10% • Base Design: 10% • Top Design: 10%		
Front Setback	30 feet, minimum, except as provided below	30 feet maximum	30 feet maximum
Allowance of Primary Building Entrance *	Where the Primary Building Entrance is located on an Addressing Street it may extend into the required front yard setback by 15 feet maximum provided that: a. It has a two-story massing with a minimum height of 24 feet; b. The Parcel Frontage on the Addressing Street is limited to 100 feet; c. The building extension is 65% transparent, minimum; d. The entrance is protected with a weather-protecting canopy with a minimum vertical clearance of 15 feet; and e. The standards for site design and accessibility are met.	Not applicable	Not applicable

Table ~~CC-4~~ ***NWI-5***: Building Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
Required Minimum Height	30 feet minimum.		
Ground Floor Height *	The Ground Floor height shall measure 15 feet, minimum from finished floor to finished ceiling (or 17.5 feet from finished floor to any exposed structural member).		
Base, Body, and Top Dimensions	Buildings elevations shall be composed of a clearly demarcated base, body and top. a. For Buildings 30 feet in height (unless lower by adjustment): i. The base shall be 30 inches, minimum. ii. The body shall be equal to or greater than 75% of the overall height of the building. iii. The top of the building shall be 18 inches, minimum. b. For Buildings between 30 feet and 5 stories in height: i. The base shall be 30 inches, minimum; 2 stories, maximum. ii. The body shall be equal to or greater than 75% of the overall height of the building. iii. The top of the building shall be 18 inches, minimum. c. For Buildings greater than 6 stories in height: i. The base shall be 1 story, minimum, 3 stories, maximum. ii. The body shall be equal to or greater than 75% of the overall height of the building. iii. The top of the building shall be 18 inches, minimum.		
Base Design	The design of the building Base shall: a. Use a material with a distinctive appearance, easily distinguished from the building Body expressed by a change in material, a change in texture, a change in color or finish; and/or b. Create a change in surface position where the Base projects beyond the Body of the building by 1½ inches, minimum; and/or c. Low Berm Landscape Standard, Section 4.176(.02)E.		
Top Design	Building Tops define the skyline. The design of the Building Top shall: a. Use a material with a distinctive appearance, easily distinguished from the building Body expressed by a change in material, a change in texture, a change in color or finish; and/or b. Create a change in surface position where the Top projects beyond, or recesses behind, the Body of the building by 1½ inches, minimum.		
Required Screening of Roof-mounted Equipment	Screen roof-mounted equipment with architectural enclosures using the materials and design of the building Body and/ or the building Top. No roof-mounted equipment shall be visible from an Addressing Street or Supporting Street.		

* When an applicant elects to use the allowed adjustment to reduce Required Canopy height to less than 15 feet, corresponding reduction in minimum height is allowed for Accessible Entrance, Allowance of Primary Building Entrance, and Ground Floor Height.

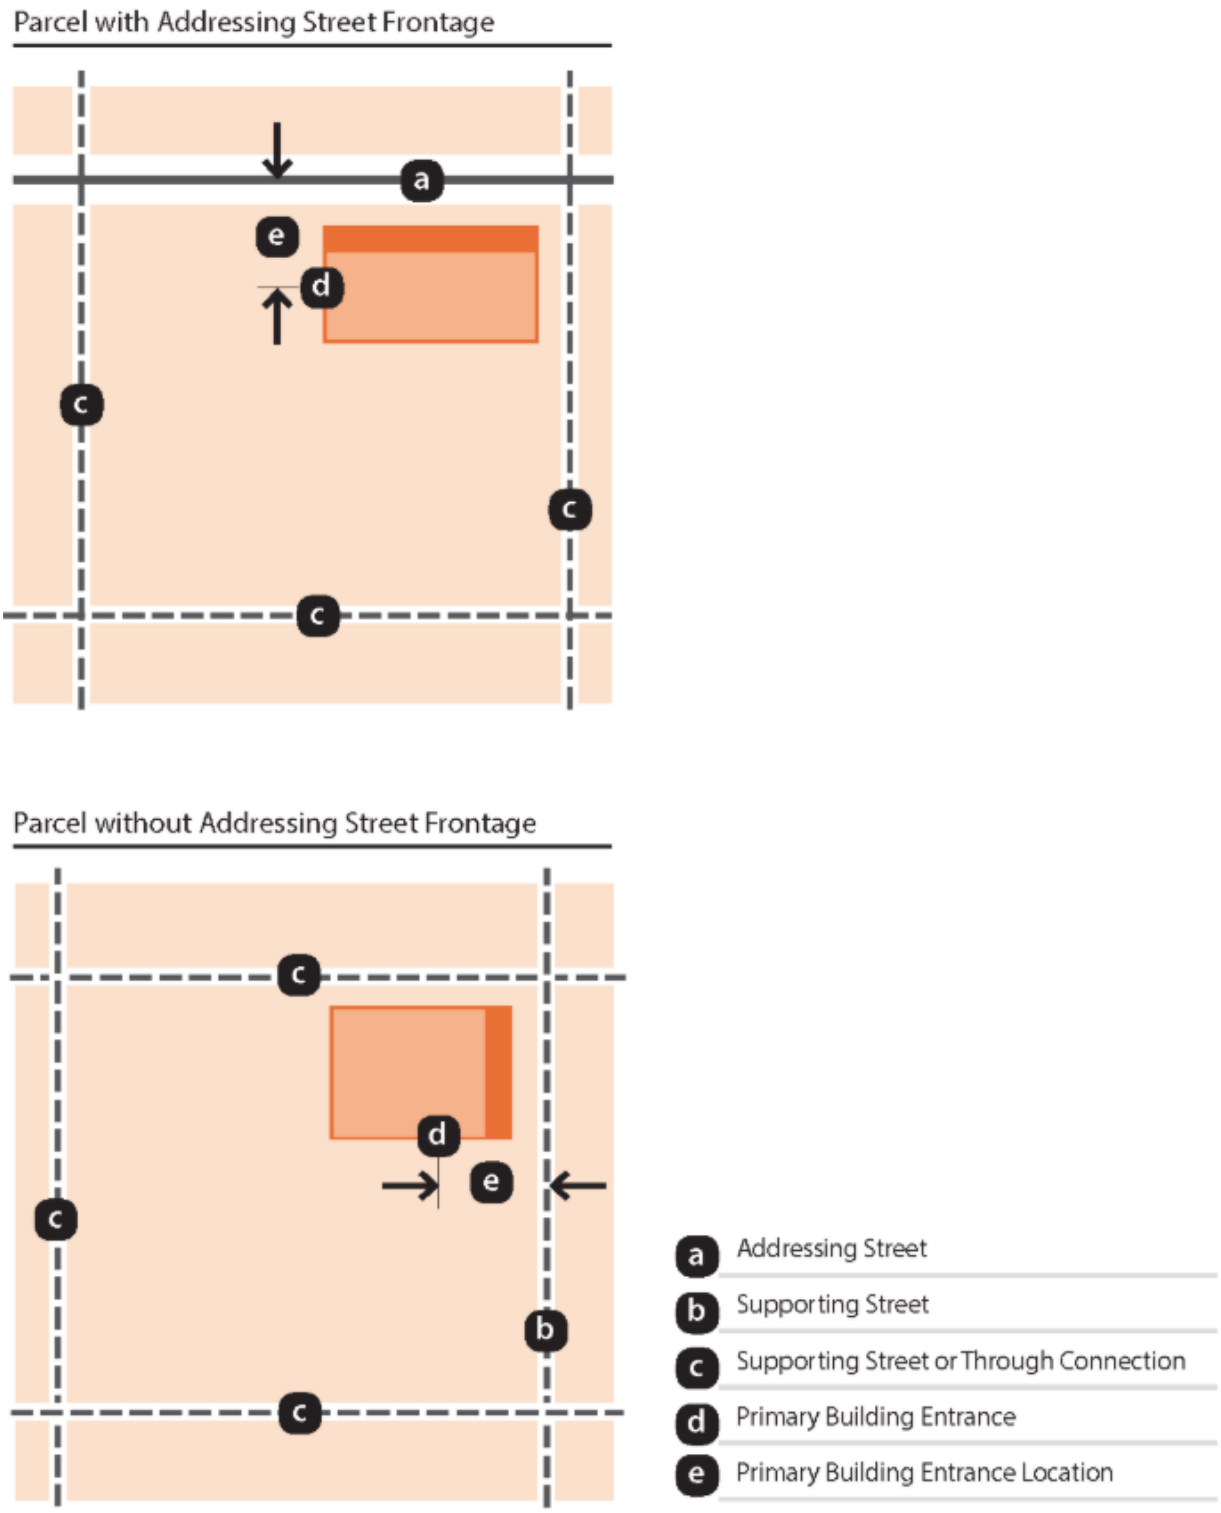

Figure ~~CC-7~~ ***NWI-8*** – Building Design – Primary Building Entrance

(.12) *Waysides*:

A. *Purpose*. This section consists of standards and regulations for use throughout the ***Northwest Industrial Zone*** ~~Coffee Creek Design Overlay District~~. The regulations address materials, placement, layout, installation, and maintenance of Industrial Waysides. The City recognizes the need to:

1. Provide multiple, distributed destinations for passive and active recreation for the public and employees along a network of streets and trails;
2. Be convenient, usable and accessible. Industrial Waysides should be physically and visually accessible from the adjacent Addressing Street, Supporting Street or Through Connection;
3. Connect Industrial Waysides to transit;
4. Be inviting. Inviting open spaces feature designs that encourage users to explore the Industrial Wayside and design elements that support a sense of the human scale. These elements include landscaping, benches and other seating areas, and pedestrian-scaled lighting;
5. Provide access. Provide access to the employees and the public between the hours of 6:00 a.m. and 8:00 p.m.;
6. Be safe. Safe open spaces incorporate principles of natural surveillance, lighting, and prominent entrances;
7. Provide facilities appropriate for the scale of the proposed development; and
8. Be easy to maintain. Industrial Waysides should be constructed of commercial grade materials that will endure and are readily maintainable.

B. *Applicability.* All projects in the ***Northwest Industrial Zone*** ~~Coffee Creek Master Plan Area~~ shall provide waysides according to the standards in Table ~~CC-5~~ ***NWI-6***

C. General. The following development standards apply to all Waysides:

1. Required Wayside Area is exclusive of required landscape screening.
2. Required Minimum Dimension of 20 feet (either width or depth).

D. *Criteria.* Waysides shall meet the following criteria:

1. *Perimeter Landscaping.* In addition to the minimum size and dimensions, landscape three sides of the Industrial Wayside to a depth of 20 feet, minimum according to Section 4.176(.02). Permitted screening includes: Section 4.176(.02)D. Low Screen Landscaping Standard; Section 4.176(.02)E. Low Berm Standard; or Section 4.176(.02)F. High Screen Landscaping Standard. Perimeter landscaping shall not obscure visual access to the Industrial Wayside. Unscreened surface parking lots, chain link fencing, or service yards are prohibited adjacent to Industrial Waysides.
2. *Visibility.* Industrial Waysides shall be visible from and accessible to Addressing Streets.
3. *Accessible Pathway.* A paved walking surface, width: Five feet, minimum, meeting ADA standards is required to connect Industrial Wayside with Addressing Street.
4. *Accessible Surface.* Industrial Waysides shall have an accessible surface, 100 square feet, minimum; dimensions ten feet, minimum meeting ADA standards.
5. *Required Amenities:*
    a. *Seating.* Outdoor seating shall be provided. Publicly accessible plazas, courtyards, and pocket parks shall include at least one linear foot of seating per each 40 square feet of plaza, courtyard or pocket park space on site. Outdoor seating shall be in the form of:
        i. Free standing outdoor benches consistent with the standards; or
        ii. Seating incorporated into low walls, berms, or raised planters.

b. *Landscaping.* The landscaping must be planted and maintained according to Section 4.176(.02)

c. *Lighting.*

d. *Recycling/ Waste Receptacle.* Locate waste and recycling stations nearest to the accessible path and away from stormwater facilities.

6. *Installation and Maintenance.* Industrial Waysides shall be programmed, planned, constructed, and maintained at the expense of the applicant. The landscaping must be planted and maintained according to Section 4.176(.07). Recycling, waste receptacles, and pet waste stations shall be serviced at an acceptable professional interval to prevent being over filled or creating unsanitary or visually messy appearances.

7. *Solar Access.* Exposure to sunlight. Southern exposure is encouraged. Design facilities to permit direct sunlight to enter the Industrial Wayside and strike the required accessible surface between the hours of 10:00 a.m. and 2:00 p.m. local time.

8. *Lighting.* Lighting for Industrial Waysides is required to permit reasonable use, utility, security, and nighttime safety. Lighting installed in Industrial Waysides shall conform to the requirements of Section 4.199. All outside lighting shall be so arranged and shielded so as not to shine into adjacent areas and to prevent any undue glare or reflection and any nuisance, inconvenience, and hazardous interference of any kind on adjoining streets or property.

E. *Optional Amenities include the following:*

1. Picnic tables and benches. Locate picnic tables and benches on the Accessible Surface;
2. Arbors or trellises;
3. Drinking Fountains. Locate drinking fountains and benches on the Accessible Surface;
4. Sculpture and other works of art;
5. Bicycle repair stations;
6. Exercise stations; or
7. Pet waste stations. Locate pet waste stations nearest to the accessible path and away from stormwater facilities.

Table ~~CC-5~~ *NWI-6*: Waysides

Parcel Area	**Required Wayside Area**	**Number of Waysides**	**Enhanced Transit Plaza ‡**
Less than or equal to 5.0 acres	Not required	n/a	n/a
Greater than 5.0 acres, less than or equal to 8.0 acres	400 square feet, minimum	One	Not permitted
Greater than 8.0 acres, less than or equal to 13.0 acres	600 square feet, minimum	One	Not permitted
Greater than 13.0 acres, less than or equal to 23.0 acres	800 square feet, minimum	One, minimum	Permitted*. Up to 400 square feet.

Table ~~CC-5~~ *NWI-6*: Waysides			
Parcel Area	**Required Wayside Area**	**Number of Waysides**	**Enhanced Transit Plaza ‡**
Greater than 23.0 acres, less than or equal to 36.0 acres	1,600 square feet, minimum	One, minimum	Permitted*. Up to 400 square feet.
Greater than 36.0 acres, less than or equal to 51.0 acres	3,200 square feet, minimum	Two, minimum	Permitted*. Up to 400 square feet.
*** Greater than 51.0 acres, less than or equal to 70.0 acres	6,400 square feet, minimum	Two, minimum	Permitted**. Up to 800 square feet.
*** Greater than 70.0 acres, less than or equal to 92.0 acres	12,800 square feet, minimum	Two, minimum	Permitted**. Up to 800 square feet.

*‡ In the future when SMART serves **Northwest Industrial Zone** ~~Coffee Creek~~, Industrial Waysides may comply with the standards for Enhanced Transit Plazas, as follows:*

**Up to 400 square feet of the space requirement for Industrial Waysides may be satisfied by installation of an enhanced transit stop. An enhanced transit stop must provide weather protection, paved surface, and seating, as approved by SMART Transit.*

***Up to 800 square feet of the space requirement for Industrial Waysides may be satisfied by installation of an enhanced transit stop, provided parcel fronts on two or more Addressing Streets. An enhanced transit stop must provide weather protection, paved surface, and seating, as approved by SMART Transit.*

****For Parcel Frontage greater than 1,500 feet, and area greater than 51.0 acres, up to 50 percent of the space requirement for Industrial Waysides may be satisfied by restoration of wetlands, riparian zones, or other habitat because of the significant passive recreation opportunities provided.*

(.13) *Signs:*

A. *Applicability.* PDI Zone requirements of Section 4.156.01 through 4.156.11 apply to the ***Northwest Industrial Zone*** ~~Coffee Creek~~ ~~DOD~~ with the following modifications and adjustments.

B. *General:*

1. Site Frontage as described in Section 4.156.08 is the Primary Frontage.
2. Monument-style signs are required. Pole-style freestanding signs are not permitted.
3. Maximum area for signs on buildings is based on linear length (in feet) of the façade adjacent to the Primary Frontage.
4. Directional and Wayfinding Signs shall be placed at the intersection of Supporting Streets and Through Connections.

No additional changes proposed in this section

Section 4.135. PDI—Planned Development Industrial Zone.

(.01) *Purpose.* The purpose of the PDI zone is to provide opportunities for a variety of industrial operations and associated uses.

(.02) The PDI Zone shall be governed by Section 4.140, Planned Development Regulations, and as otherwise set forth in this Code.

(.03) *Uses that are typically permitted:*

A. Warehouses and other buildings for storage of wholesale goods, including cold storage plants.

B. Storage and wholesale distribution of agricultural and other bulk products, provided that dust and odors are effectively contained within the site.

C. Assembly and packing of products for wholesale shipment.

D. Manufacturing and processing.

E. Motor vehicle services, or other services complementary or incidental to primary uses, and which support the primary uses by allowing more efficient or cost-effective operations.

F. Manufacturing and processing of electronics, technical instrumentation components and health care equipment.

G. Fabrication.

H. Office complexes—Technology.

I. Corporate headquarters.

J. Call centers.

K. Research and development.

L. Laboratories.

M. Repair, finishing and testing of product types manufactured or fabricated within the zone.

N. Industrial services.

O. Any use allowed in a PDC Zone, subject to the following limitations:

1. Service Commercial **and Professional Services** uses ~~(defined as professional services that cater to daily customers such as financial, insurance, real estate, legal, medical or dental offices)~~ not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.

2. Office Complex Use (as defined in Section 4.001) shall not exceed 30 percent of total floor area within a project site.

3. Retail uses, not to exceed 5,000 square feet of indoor and outdoor sales, service or inventory storage area for a single building and 20,000 square feet of indoor and outdoor sales, service or inventory storage area for multiple buildings.

4. Combined uses under Subsections 4.135(.03)(O.)(1.) and (3.) shall not exceed a total of 5,000 square feet of floor area in a single building or 20,000 square feet of combined floor area within a multi-building development.

P. Training facilities whose primary purpose is to provide training to meet industrial needs.

Q. *Public facilities.*

R. Accessory uses, buildings and structures customarily incidental to any permitted uses.

S. Temporary buildings or structures for uses incidental to construction work. Such structures to be removed within 30 days of completion or abandonment of the construction work.

T. Other similar uses, which in the judgment of the Planning Director, are consistent with the purpose of the PDI Zone.

(.04) *Block and access standards.* The PDI zone shall be subject to the same block and access standards as the PDC zone, Section 4.131(.02) and (.03).

(.05) *Performance Standards.* The ~~following~~ performance standards ***of Section 4.117(.01) shall*** apply to all industrial properties and sites within the PDI Zone, and are intended to minimize the potential adverse impacts of industrial activities on the general public and on other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property.

~~A. All uses and operations except storage, off-street parking, loading and unloading shall be confined, contained, and conducted wholly within completely enclosed buildings, unless outdoor activities have been approved as part of Stage II, Site Design or Administrative Review.~~

~~B. *Vibration.* Every use shall be so operated that the ground vibration inherently and recurrently generated from equipment other than vehicles is not perceptible without instruments at any boundary line of the property on which the use is located.~~

~~C. Emission of odorous gases or other odorous matter in quantities as detectable at any point on any boundary line of the property on which the use is located shall be prohibited.~~

~~D. Any open storage shall comply with the provisions of Section 4.176, and this Section.~~

~~E. No building customarily used for night operation, such as a baker or bottling and distribution station, shall have any opening, other than stationary windows or required fire exits, within 100 feet of any residential district and any space used for loading or unloading commercial vehicles in connection with such an operation shall not be within 100 feet of any residential district.~~

~~F. *Heat and Glare:*~~

~~1. Operations producing heat or glare shall be conducted entirely within an enclosed building.~~

~~2. Exterior lighting on private property shall be screened, baffled, or directed away from adjacent residential properties. This is not intended to apply to street lighting.~~

~~G. *Dangerous Substances.* Any use which involves the presence, storage or handling of any explosive, nuclear waste product, or any other substance in a manner which would cause a health or safety hazard for any adjacent land use or site shall be prohibited.~~

~~H. *Liquid and Solid Wastes:*~~

~~1. Any storage of wastes which would attract insects or rodents or otherwise create a health hazard shall be prohibited.~~

~~2. Waste products which are stored outside shall be concealed from view from any property line by a sight-obscuring fence or planting as required in Section 4.176.~~

~~3. No connection with any public sewer shall be made or maintained in violation of applicable City or State standards.~~

~~4. No wastes conveyed shall be allowed to or permitted, caused to enter, or allowed to flow into any public sewer in violation of applicable City or State standards.~~

~~5. All drainage permitted to discharge into a street gutter, caused to enter or allowed to flow into any pond, lake, stream, or other natural water course shall be limited to surface waters or waters having~~

~~similar characteristics as determined by the City, County, and State Department of Environmental Quality.~~

~~6. All operations shall be conducted in conformance with the City's standards and ordinances applying to sanitary and storm sewer discharges.~~

~~I. *Noise.* Noise generated by the use, with the exception of traffic noises from automobiles, trucks, and trains, shall not violate any applicable standards adopted by the Oregon Department of Environmental Quality and W.C. 6.204 governing noise control in the same or similar locations.~~

~~J. *Electrical Disturbances.* Except for electrical facilities wherein the City is preempted by other governmental entities, electrical disturbances generated by uses within the PDI zone which interfere with the normal operation of equipment or instruments within the PDI Zone are prohibited. Electrical disturbances which routinely cause interference with normal activity in abutting residential use areas are also prohibited.~~

~~K. *Discharge Standards.* There shall be no emission of smoke, fallout, fly ash, dust, vapor, gases, or other forms of air pollution that may cause a nuisance or injury to human, plant, or animal life, or to property. Plans of construction and operation shall be subject to the recommendations and regulations of the State Department of Environmental Quality. All measurements of air pollution shall be by the procedures and with equipment approved by the State Department of Environmental Quality or equivalent and acceptable methods of measurement approved by the City. Persons responsible for a suspected source of air pollution upon the request of the City shall provide quantitative and qualitative information regarding the discharge that will adequately and accurately describe operation conditions.~~

~~L. Open burning is prohibited.~~

~~M. *Storage:*~~

~~1. Outdoor storage must be maintained in an orderly manner at all times.~~

~~2. Outdoor storage area shall be gravel surface or better and shall be suitable for the materials being handled and stored. If a gravel surface is not sufficient to meet the performance standards for the use, the area shall be suitably paved.~~

~~3. Any open storage that would otherwise be visible at the property line shall be concealed from view at the abutting property line by a sight obscuring fence or planting not less than six feet in height.~~

~~N. *Landscaping:*~~

~~1. Unused property, or property designated for expansion or other future use, shall be landscaped and maintained as approved by the Development Review Board. Landscaping for unused property disturbed during construction shall include such things as plantings of ornamental shrubs, lawns, native plants, and mowed, seeded fieldgrass.~~

~~2. Contiguous unused areas of undisturbed fieldgrass may be maintained in their existing state. Large stands of invasive weeds such as Himalayan blackberries, English ivy, cherry Laurel, reed canary grass or other identified invasive plants shall be removed and/or mowed at least annually to reduce fire hazard. These unused areas, located within a phased development project or a future expansion cannot be included in the area calculated to meet the landscape requirements for the initial phase(s) of the development.~~

~~3. Unused property shall not be left with disturbed soils that are subject to siltation and erosion. Any disturbed soil shall be seeded for complete erosion cover germination and shall be subject to applicable erosion control standards.~~

No additional changes proposed in this section

Section 4.135.5. Planned Development Industrial—Regionally Significant Industrial Area.

No prior changes proposed in this section

(.03) *Uses that are typically permitted:*

A. Wholesale houses, storage units, and warehouses.

B. Laboratories, storage buildings, warehouses, and cold storage plants.

C. Assembly of electrical equipment, including the manufacture of small parts.

D. The light manufacturing, simple compounding or processing packaging, assembling and/or treatment of products, cosmetics, drugs, and food products, unless such use is inconsistent with air pollution, excess noise, or water pollution standards.

E. Office Complexes-Technology (as defined in Section 4.001).

F. Experimental, film or testing laboratories.

G. Storage and distribution of grain, livestock feed, provided dust and smell is effectively controlled.

H. Motor vehicle service facilities complementary or incidental to permitted uses.

I. Any use allowed in a PDC Zone or any other light industrial uses provided that any such use is compatible with industrial use and is planned and developed in a manner consistent with the purposes and objectives of Sections 4.130 to 4.140 and is subject to the following criteria:

1. Service Commercial **and Professional Services uses** ~~(defined as professional services that cater to daily customers such as financial, insurance, real estate, legal, medical or dental offices)~~ shall not exceed 3,000 square feet of floor space in a single building or 20,000 square feet of combined floor area within a multiple building development.

2. Office Use (as defined in Section 4.001) shall not exceed 20 percent of total floor area within a project site.

3. Retail uses not to exceed 3,000 square feet of indoor and outdoor sales, service, or inventory storage area for a single building or 20,000 square feet of indoor and outdoor sales, service or inventory storage area for multiple buildings.

4. Combined uses under I.1 and 3. above shall not exceed a total of 3,000 square feet of floor area in a single building or 20,000 square feet of combined floor area within a multi-building development.

J. Residential uses shall not exceed ten percent of total floor area.

K. Accessory uses, buildings and structures customarily incidental to any of the aforesaid principal permitted uses.

L. Temporary buildings or structures for uses incidental to construction work, which buildings or structures shall be removed upon completion or abandonment of the construction work.

M. Expansion of a building, structure or use approved prior to October 25, 2004 of up to 20 percent additional floor area and/or ten percent additional land area.

N. Other similar uses which in the judgment of the Planning Director are consistent with the purpose of the PDI-RSIA Zone.

(.04) *Prohibited uses:*

A. Retail operations exceeding 3,000 square feet of area for sales, service area or storage area for retail inventory in a single building, or 20,000 square feet of sales, service or storage area for multiple

buildings, except training facilities whose primary purpose is to provide training to meet industrial needs.

B. Any use or activity that violates the performance standards specified in Subsection 4.135.5(.06), below.

(.05) *Block and Access Standards.* The PDI-RSIA Zone shall be subject to:

A. The same block and access standards as the PDC Zone [Section 4.131(.02) and (.03)] ~~for properties located outside of the Coffee Creek Industrial Design Overlay District; or~~

B. ~~The access and block size standards in Section 4.134 for those properties located within the Coffee Creek Industrial Design Overlay District.~~

(.06) *Performance Standards.* The ~~following~~ performance standards ***of Section 4.117(.01)*** apply to all industrial properties and sites within the PDI-RSIA Zone, and are intended to minimize the potential adverse impacts of industrial activities on the general public and on other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property or site.

~~A. All uses and operations except storage, off-street parking, loading and unloading shall be confined, contained and conducted wholly within completely enclosed buildings, unless outdoor activities have been approved as part of Stage II, Site Design or Administrative Review.~~

~~B. *Vibration:* Every use shall be so operated that the ground vibration inherently and recurrently generated from equipment other than vehicles is not perceptible without instruments at any boundary line of the property or site on which the use is located.~~

~~C. Emission of odorous gases or other odorous matter in quantities detectable at any time and at any point on any boundary line of the property or site on which the use is located are prohibited.~~

~~D. Any open storage shall comply with the provisions of Section 4.176 and this Section.~~

~~E. No building customarily used for night operation, such as a bakery, bottling and distribution plant or other similar use, shall have any opening, other than stationary windows or required fire exits, within 100 feet of any residential district and any space used for loading or unloading commercial vehicles in connection with such an operation shall not be within 100 feet of any residential district.~~

~~F. *Heat and Glare:*~~

~~1. Operations producing heat or glare shall be conducted entirely within an enclosed building.~~

~~2. Exterior lighting on private property shall be screened, baffled, or otherwise directed away from adjacent residential properties. This is not intended to apply to street lighting.~~

~~G. *Dangerous Substances:* Any use which involves the presence, storage or handling of any explosive, nuclear waste product or any other substance in a manner which would cause a health or safety hazard on any adjacent land use or site shall be prohibited.~~

~~H. *Liquid and Solid Wastes:*~~

~~1. Any storage of wastes which would attract rodents or insects or otherwise create a health hazard shall be prohibited.~~

~~2. Waste products which are stored outside shall be concealed from view from any property line by a sight-obscuring fence or planting as required by Section 4.176.~~

~~3. No connection with any public sewer shall be made or maintained in violation of applicable City or State standards.~~

~~4. No wastes conveyed shall be allowed to or permitted, caused to enter, or allowed to flow into any public sewer in violation of applicable City or State standards.~~

~~5. All drainage permitted to discharge into a street gutter, caused to enter or allowed to flow into any pond, lake, stream or other natural water course shall be limited to surface waters or waters having similar characteristics as determined by the City, County, and State Department of Environmental Quality.~~

~~6. All operations shall be conducted in conformance with the City's standards and ordinances applying to sanitary and storm sewer discharges.~~

~~I. *Noise:* Noise generated by the use, with the exception of traffic uses from automobiles, trucks and trains, shall not violate any applicable standards adopted by the Oregon Department of Environmental Quality and W.C. 6.204 governing noise control in the same or similar locations. [Amended by Ord. 631, 7-16-2007]~~

~~J. *Electrical Disturbances.* Except for electrical facilities wherein the City is pre-empted by other governmental entities, electrical disturbances generated by uses within the PDI-RSIA Zone which interfere with the normal operation of equipment or instruments within the PDI-RSIA Zone are prohibited. Electrical disturbances which routinely cause interference with normal activity in abutting residential uses are also prohibited.~~

~~K. *Discharge Standards.* There shall be no emission of smoke, fallout, fly ash, dust, vapors, gases or other forms of air pollution that may cause a nuisance or injury to human, plant or animal life or to property. Plans for construction and operation shall be subject to the recommendations and regulations of the State Department of Environmental Quality. All measurements of air pollution shall be by the procedures and with equipment approved by the State Department of Environmental Quality or equivalent and acceptable methods of measurement approved by the City. Persons responsible for a suspected source of air pollution upon request of the City shall provide quantitative and qualitative information regarding the discharge that will adequately and accurately describe operation conditions.~~

~~L. Open burning is prohibited.~~

~~M. *Storage.*~~

~~1. Outdoor storage must be maintained in an orderly manner at all times.~~

~~2. Outdoor storage areas shall be gravel surfaced or better and shall be sufficient for the materials being handled and stored. If a gravel surface is not sufficient to meet the performance standards for the use, the area shall be suitably paved.~~

~~3. Any open storage that would otherwise be visible at the property line shall be concealed from view at the abutting property line by a sight obscuring fence or planting not less than six feet in height.~~

~~N. *Landscaping.*~~

~~1. Unused property, or property designated for expansion or other future use shall be landscaped and maintained as approved by the Development Review Board. Landscaping for unused property disturbed during construction shall include such materials as plantings of ornamental shrubs, lawns, native plants, and mowed, seeded fieldgrass.~~

~~2. Contiguous unused areas of undisturbed fieldgrass may be maintained in their existing state. Large stands of invasive weeds such as Himalayan blackberry, English ivy, cherry laurel, reed canary grass or other identified invasive species shall be removed and/or mowed at least annually to reduce fire hazard. These unused areas, located with a phased development project or a future expansion cannot be included in the area calculated to meet the landscape requirements for the initial phase(s) of the development.~~

~~3. Unused property shall not be left with disturbed soils that are subject to siltation and erosion. Any disturbed soil shall be seeded for complete erosion cover germination and shall be subject to applicable erosion control standards.~~

No additional changes proposed in this section

Section 4.140. Planned Development Regulations.

No prior changes proposed in this section

(.05) *Planned Development Permit Process:*

A. All parcels of land exceeding two acres in size that are to be used for residential, commercial or industrial development, shall, prior to the issuance of any building permit:

1. Be zoned for planned development;

2. Obtain a planned development permit; and

3. Obtain Planning Director, Development Review Board, or, on appeal, City Council approval.

B. Zone change and amendment to the zoning map are governed by the applicable provisions of the Zoning Sections, inclusive of Section 4.197.

C. Site Design Review approval is governed by Sections 4.400 to 4.450.

D. All planned developments require a planned development permit. The planned development permit review and approval process consists of the following multiple stages, the last two or three of which can be combined at the request of the applicant:

1. Pre-application conference with Planning Department;

2. Preliminary (Stage I) review by the review authority. When a zone change is necessary, application for such change shall be made simultaneously with an application for preliminary approval; and

3. Final (Stage II) review by the review authority.

4. In the case of a zone change and zone boundary amendment, City Council approval is required to authorize a Stage I preliminary plan except for residential development or properties within the ~~Coffee Creek Industrial Design Overlay District~~ ***NWI Zone***, which may receive separate zone map amendment approvals.

(.06) *Staff Report:*

A. The planning staff shall prepare a report of its findings and conclusions as to whether the use contemplated is consistent with the land use designated on the Comprehensive Plan. If there is a disagreement as to whether the use contemplated is consistent, the applicant, by request, or the staff, may take the preliminary information provided to the Development Review Board for a use interpretation.

B. The applicant may proceed to apply for Stage I—Preliminary Approval - upon determination by the review authority that the use contemplated is consistent with the Comprehensive Plan.

(.07) *Preliminary Approval (Stage One):*

A. Applications for preliminary approval for planned developments shall:

1. Be made by the owner of all affected property or the owner's authorized agent; and

2. Be filed on a form prescribed by the City Planning Department and filed with said Department.

3. Set forth the professional coordinator and professional design team as provided in subsection (.04), above.

4. State whether the development will include mixed land uses, and if so, what uses and in what proportions and locations.

B. The application shall include conceptual and quantitatively accurate representations of the entire development sufficient to judge the scope, size, and impact of the development on the community; and, in addition to the requirements set forth in Section 4.035, shall be accompanied by the following information:

1. A boundary survey or a certified boundary description by a registered engineer or licensed surveyor.

2. Topographic information as set forth in Section 4.035.

3. A tabulation of the land area to be devoted to various uses, and a calculation of the average residential density per net acre. Developments within the RN zone shall show how the proposed number of units complies with the applicable maximum and minimum provisions of the RN zone.

4. A stage development schedule demonstrating that the developer intends receive Stage II approval within two years of receiving Stage I approval, and to commence construction within two years after the approval of the final development plan, and will proceed diligently to completion; unless a phased development schedule has been approved; in which case adherence to that schedule shall be considered to constitute diligent pursuit of project completion.

5. A commitment by the applicant to provide in the Final Approval (Stage II) a performance bond or other acceptable security for the capital improvements required by the project.

6. If it is proposed that the final development plan will be executed in stages, a schedule thereof shall be provided.

7. Statement of anticipated waivers from any of the applicable site development standards.

C. An application for a Stage I approval shall be considered by the Development Review Board as follows:

1. A public hearing as provided in Section 4.013.

2. After such hearing, the Board shall determine whether the proposal conforms to the permit criteria set forth in this Code, and may approve or disapprove the application and the accompanying preliminary development plan or require such changes therein or impose such conditions of approval as are in its judgment, necessary to ensure conformity to said criteria and regulations. In so doing, the Board may, in its discretion, authorize submission of the final development plan in stages, corresponding to different units or elements of the development. It shall do so only upon evidence assuring completion of the entire development in accordance with the preliminary development plan and stage development schedule.

3. A final decision on a complete application and preliminary plan shall be rendered within 120 days after the application is deemed complete unless a continuance is agreed upon by the applicant and the appropriate City decision-making body.

4. The determination of the Development Review Board shall become final at the end of the appeal period for the decision, unless appealed to the City Council in accordance with Section 4.022 of this Code.

D. As provided in Section 4.134, an application for a Stage I approval within the ~~Coffee Creek Industrial Design Overlay District~~ ***NWI Zone*** may be considered by the Planning Director as follows:

1. A Class II—Administrative Review as provided in Section 4.035(.03).

2. After considering available information, the Planning Director shall determine whether the proposal conforms to the permit criteria set forth in this Code and may approve or disapprove the application and the accompanying preliminary development plan or require such changes therein or impose such conditions of approval as are in his or her judgment, necessary to ensure conformity to said criteria and regulations. In so doing, the Planning Director may, in his or her discretion, authorize submission of the final development plan in stages, corresponding to

different units or elements of the development. The Planning Director shall do so only upon receiving evidence assuring completion of the entire development in accordance with the preliminary development plan and stage development schedule.

3. A final decision on a complete application and preliminary plan shall be rendered within 12 days after the application is deemed complete unless a continuance is agreed upon by the applicant and the Planning Director.

4. The determination of the Planning Director shall become final at the end of the appeal period for the decision, unless appealed to the Development Review Board in accordance with Section 4.022 of this Code.

E. An application for a Stage I approval for residential development shall be considered by the Planning Director as follows:

1. A Class II—Administrative Review as provided in Section 4.035(.03).

2. After considering available information, the Planning Director shall determine whether the proposal conforms to the permit criteria set forth in this Code and may approve or disapprove the application and the accompanying preliminary development plan or require such changes therein or impose such conditions of approval as are in their judgment, necessary to ensure conformity to said criteria and regulations. In so doing, the Planning Director may, in their discretion, authorize submission of the final development plan in stages, corresponding to different units or elements of the development. The Planning Director shall do so only upon receiving evidence assuring completion of the entire development in accordance with the preliminary development plan and stage development schedule.

3. Unless otherwise specified by State law, a final decision on a complete application and preliminary plan shall be rendered within 120 days after the application is deemed complete unless a continuance is agreed upon by the applicant and the Planning Director.

4. The determination of the Planning Director shall become final at the end of the appeal period for the decision, unless appealed to the Development Review Board in accordance with Section 4.022 of this Code.

(.09) *Final Approval (Stage Two):*

A. Unless an extension has been granted by the Planning Director, not later than two years after the approval or modified approval of a preliminary development plan (Stage I), the applicant shall file with the City Planning Department a final plan for the entire development or when submission in stages has been authorized pursuant to Section 4.035 for the first unit of the development, a public hearing shall be held on each such application as provided in Section 4.013, except that an application for a Stage II approval for residential development, or within the ~~Coffee Creek Industrial Design Overlay District~~***NWI Zone as provided in Section 4.134,*** must be considered by the Planning Director without a public hearing as a Class II Administrative Review as provided in Section 4.035(.03).

No additional changes proposed in this section

Section 4.156.02. Sign Review Process and General Requirements

No prior changes proposed in this section

(.05) *Class II Sign Permit.* Sign permit requests for meeting one or more of the descriptions listed in A. through C. below shall be processed as a Class II Sign Permit when the request does not conform with a Master Sign Plan or other previous sign approval but meets the requirements of the applicable sign regulations, unless the request would modify a condition of approval specifically imposed by the DRB or City Council:

A. Existing residential development;

B. Existing non-residential development with less than three tenants unless the request involves a freestanding or ground mounted sign greater than eight feet in height in a new location;

C. New development or redevelopment in the ~~Coffee Creek~~ ***Northwest*** Industrial ***(NWI)*** ~~Design Overlay District~~ ***Zone*** subject to a Class II administrative review process;

D. Major Adjustments to a Master Sign Plan when all of the following criteria are met:

1. The request is compatible with the pattern of signage established in the sign plan in terms of locations, placement on buildings, proportionality to fascia and building facade, architectural design, and materials used;

2. The request is due to special conditions or circumstances that make it difficult to comply with the established Master Sign Plan;

3. The request involves signs for a single tenant, a single multi-tenant freestanding or ground mounted sign, or a series of similar related multi-tenant freestanding or ground mounted signs in the same development; and

4. The request does not involve a freestanding or ground mounted sign greater than eight feet in height at a new location.

E. *Class II Sign Permit Submission Requirements:* Application for a Class II Sign Permit shall include two paper copies and one electronic copy of the following in addition to all required fees:

1. Completed application form prescribed by the City and signed by the property owner or their authorized representative;

2. Sign drawings or descriptions of all materials, sign area and dimensions used to calculate areas, lighting methods, and other details sufficient to judge the full scale of the signs and related improvements;

3. Documentation of the lengths of building or tenant space facades used in calculating maximum allowed sign area;

4. Drawings of all building facades on which signs are proposed indicating the areas of the facades on which signs will be allowed; and

5. Narrative describing the scope of the project, including written findings addressing all applicable review criteria, along with any other information showing how the proposed signage conforms with requirements for the applicable zone.

F. *Class II Sign Permit Review Criteria.* Class II Sign Permits shall satisfy the sign regulations for the applicable zoning district and the Site Design Review Criteria in Sections 4.400 through 4.421, as well as the following criteria:

1. The proposed signage is compatible with developments or uses permitted in the zone in terms of design, materials used, color schemes, proportionality, and location, so that it does not interfere with or detract from the visual appearance of surrounding development;

2. The proposed signage will not create a nuisance or result in a significant reduction in the value or usefulness of surrounding development; and

3. Special attention is paid to the interface between signs and other site elements including building architecture and landscaping, including trees.

No additional changes proposed in this section*

Section 4.180. Exceptions and Modifications - Projections into Required Yards.

(.01) Certain non-structural architectural features are permitted to project into required yards or courts, without requiring the approval of a Variance or Reduced Setback Agreement, as follows:

A. Into any required yard:

1. Architectural features may project into the required yard not more than two inches for each foot of required setback.

2. Architectural features on buildings within the ~~Coffee Creek Industrial Design Overlay District~~***Northwest Industrial (NWI) Zone*** shall be subject to the applicable requirements in Section 4.134.

3. Open, unenclosed fire escapes may project a distance not exceeding 48 inches.

B. Into any required yard, adjoining a street or tract with a private drive:

1. Architectural features may project a distance not exceeding 40 inches.

2. An uncovered porch, terrace, or patio extending no more than two and one-half feet above the finished elevation may extend within three feet of an interior side lot line, or within ten feet of a front lot line or of an exterior side lot line.

No additional changes proposed in this section

Section 4.197. Zone Changes and Amendments to This Code—Procedures.

No prior changes proposed in this section

(.02) The following procedures shall be followed for zone map amendments.

A. When a requested quasi-judicial zone map amendment within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** is consistent with the adopted or concurrently proposed Comprehensive Plan Map designation and only one option exists for a zone map amendment consistent with the Comprehensive Plan Map the amendment shall be reviewed by the City Council without prior review or recommendation by the Development Review Board or Planning Commission.

1. The Zoning Order adopting such zone map amendments shall state the zone map amendment expires 120 days from Council adoption unless a Stage II Final Plan receives final local approval for the area subject to the zone map amendment. In the event of a LUBA appeal of the final local approval, the 120-day expiration period will be tolled pending completion of the appeal process.

2. Notwithstanding the process described above an applicant may elect to have the zone map amendment reviewed by the Development Review Board for a recommendation to City Council concurrently with other land use applications for the subject property.

3. If the Planning Director anticipates that individuals other than the applicant can be expected to question the requested zone map amendment's compliance with the Comprehensive Plan the Planning Director may require the zone map amendment be first reviewed by the Development Review Board to make a recommendation to City Council.

B. When a requested quasi-judicial zone map amendment will increase residential density, the amendment shall be reviewed by the Planning Director in a Class II administrative review process without a public hearing.

C. All other quasi-judicial zone map amendments shall be reviewed by the Development Review Board to make a recommendation to City Council and all legislative zone map amendments shall be reviewed by the Planning Commission to make a recommendation to City Council.

D. In recommending approval or denial of a proposed zone map amendment, the review authority shall at a minimum, adopt findings addressing the following criteria:

1. That the application before the Commission or Board was submitted in accordance with the procedures set forth in Section 4.008, Section 4.125 (.18)(B)(2) or, in the case of a Planned Development, Section 4.140; and

2. That the proposed amendment is consistent with the Comprehensive Plan map designation and substantially complies with the applicable goals, policies and objectives, set forth in the Comprehensive Plan text; and

3. In the event that the subject property, or any portion thereof, is designated as "Residential" on the City's Comprehensive Plan Map; specific findings shall be made addressing substantial compliance with Implementation Measures 4.1.4.b, d, e, q, and x of Wilsonville's Comprehensive Plan text; and

4. That the existing primary public facilities, including roads and sidewalks, water, sewer and storm sewer are available and are of adequate size to serve the proposed development; or, that adequate facilities can be provided in conjunction with project development. The review authority shall utilize adopted City Standards to ensure that all facilities are available and are adequately sized; and

5. That the proposed development does not have a significant adverse effect upon Significant Resource Overlay Zone areas, an identified natural hazard, or an identified geologic hazard. When Significant Resource Overlay Zone areas or natural hazard, and/or geologic hazard are located on or abut the proposed development, the review authority shall apply conditions pursuant to Sections 4.139.00 through 4.139.11 and 4.171 to mitigate and significantly reduce conflicts between the development and identified hazard or Significant Resource Overlay Zone; and

6. That the application includes a development schedule demonstrating that development of the property is reasonably expected to commence within two years of the initial approval of the zone change; and

7. That the proposed development and use(s) can be developed in compliance with the applicable development standards or appropriate conditions are attached that insure that the project development substantially conforms to the applicable development standards; and

8. Adequate public facilities, services, and transportation networks are in place, or are planned to be provided concurrently with the development of the property. The applicant shall demonstrate compliance with the Transportation Planning Rule, specifically by addressing whether the proposed amendment has a significant effect on the transportation system pursuant to OAR 660-012-0060. A Traffic Impact Analysis (TIA) shall be prepared pursuant to the requirements in Section 4.133.05.(01).

No additional changes proposed in this section

Section 4.198. Comprehensive Plan Changes—Adoption by the City Council.

No prior changes proposed in this section

(.02) When a requested quasi-judicial Comprehensive Plan Map amendment within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** is consistent with an adopted master plan that is a sub-element of the Comprehensive Plan and only one option exists for a Comprehensive Plan Map amendment consistent with the adopted area plan the amendment shall be reviewed by the City Council without prior review or recommendation by the Development Review Board or Planning Commission.

A. The ordinance adopting such Comprehensive Plan Map amendments shall state the Comprehensive Plan Map amendment expires 120 days from Council adoption unless a Stage II Final Plan receives final local approval for the area subject to the Comprehensive Plan Map amendment. In the event of a LUBA appeal of the final local approval, the 120-day expiration period will be tolled pending completion of the appeal process.

B. Notwithstanding the process described above an applicant may elect to have the Comprehensive Plan Map amendment reviewed by the Development Review Board for a recommendation to City Council concurrently with other land use applications for the subject property.

C. If the Planning Director anticipates that individuals other than the applicant can be expected to question the requested Comprehensive Plan Map amendment's compliance with the adopted master plan the Planning Director may require the Comprehensive Plan Map amendment be first reviewed by the Development Review Board to make a recommendation to City Council.

No additional changes proposed in this section

Section 4.610.00. Application Review Procedure.

No prior changes proposed in this section

(.03) *Review Authority.*

A. *Type A or B.* Where site plan review or plat approval by the Development Review Board is not required by City ordinance, the grant or denial of the Tree Removal Permit application shall be the responsibility of the Planning Director. The Planning Director has the authority to refer a Type B permit application to the DRB under the Class II administrative review procedures of this Chapter. The decision to grant or deny a permit shall be governed by the applicable review standards enumerated in WC 4.610.10.

B. *Type C.* Where the site is proposed for development necessitating site plan review or plat approval by the Development Review Board, the Development Review Board shall be responsible for granting or denying the application for a Tree Removal Permit, and that decision may be subject to affirmance, reversal or modification by the City Council, if subsequently reviewed by the Council. For site development applications subject to a Class II administrative review process in the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** or for residential development, the Planning Director shall be responsible for the granting or denial of the Tree Removal Permit application.

C. *Type D.* Type D permit applications shall be subject to the standards and procedures of Class I administrative review and shall be reviewed for compliance with the Oregon Forest Practice Rules and Statutes. The Planning Director shall make the decision to grant or deny an application for a Type D permit.

No additional changes proposed in this section

Section 4.610.40. Type C Permit.

(.01) Approval to remove any trees on property as part of a site development application may be granted in a Type C permit. A Type C permit application shall be reviewed by the standards of this subchapter and all applicable review criteria of Chapter 4. Application of the standards of this section shall not result in a reduction of square footage or loss of density, but may require an applicant to modify plans to allow for buildings of greater height. If an applicant proposes to remove trees and submits a landscaping plan as part of a site development application, an application for a Tree Removal Permit shall be included. The Tree Removal Permit application will be reviewed in the Stage II development review process. The DRB shall review all Type C permits, with the exception of Class II development review applications located within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** or for residential

development, where the Planning Director shall have review authority. Any plan changes made that affect trees after Stage II review of a development application shall be subject to review by the original approval authority. Where mitigation is required for tree removal, such mitigation may be considered as part of the landscaping requirements as set forth in this Chapter. Tree removal shall not commence until approval of the required Stage II application and the expiration of the appeal period following that decision. If a decision approving a Type C permit is appealed, no trees shall be removed until the appeal has been settled.

No additional changes proposed in this section

Section 4.700. Procedures Relating to the Processing of Requests for Annexation and Urban Growth Boundary Amendments.

No prior changes proposed in this section

(.02) Each quasi-judicial request shall be reviewed by the Development Review Board, which shall make a recommendation to the City Council after concluding a public hearing on the proposal, except in the following circumstances:

A. When an annexation in the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** is requested concurrent with a quasi-judicial Comprehensive Plan Map amendment and/or zone map amendment as specified in Section 4.197 (.02)A. and Section 4.198(.02), or when an annexation is for residential development consistent with an adopted Legislative Master Plan, the annexation shall be reviewed by the City Council without prior review or recommendation by the Development Review Board.

a. The ordinance adopting such annexation request shall state the annexation expires 120 days from Council adoption unless a Stage II Final Plan receives final local approval for the area subject to the annexation. In the event of a LUBA appeal of the final local approval, the 120-day expiration period will be tolled pending completion of the appeal process.

b. Notwithstanding the process described above an applicant in the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial Zone*** may elect to have the annexation reviewed by the Development Review Board for a recommendation to City Council concurrently with other land use applications for the subject property.

c. If the Planning Director anticipates that individuals other than the applicant can be expected to question the requested annexation's compliance with the applicable criteria the Planning Director may require the annexation be first reviewed by the Development Review Board to make a recommendation to City Council.

No additional changes proposed in this section

Note: Any section references affected by the proposed amendments throughout the Development Code will be renumbered accordingly.

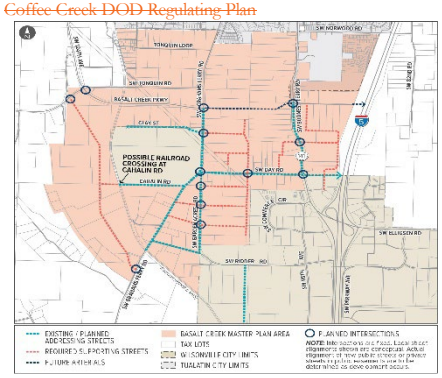
INTRODUCTION



Industrial (NWI) Zone

Introduction

Rendering of the Coffee Creek Master Plan area

~~Coffee Creek DOD Regulating Plan~~

Regulating Plan from Section 4.134 ~~Coffee Creek Industrial Design Overlay District~~***Northwest***

GOALS OF THE PATTERN BOOK

~~The Coffee Creek Industrial Design Overlay District (Coffee Creek DOD) is an overlay district within the Planned Development Industrial - Regionally Significant Industrial Area (RSIA) Zone Section 4.135.5 of the Wilsonville Code.~~ It is the purpose of the ~~Coffee Creek DOD~~ ***Northwest Industrial (NWI) Zone is*** to implement the Coffee Creek Industrial Area Master Plan (2007) ***and the Basalt Creek Master Plan (2026)*** by establishing standards and guidelines for development. Wilsonville Code Section 4.134 (~~Form-based Code, or FBC~~) ***NWI Zone*** and the Pattern Book together establish regulations and guidelines for ***allowed uses,*** street design and connectivity, site design and circulation, building form, and building architecture and landscape of all development ~~located~~ within the ~~Coffee Creek Industrial Area Master Plan area~~ ***NWI Zone***. Together, or separately, the clear and objective standards of the ~~FBC~~***NWI Zone*** and the Pattern Book (Design Guidelines) are intended to result in:

- A multi-modal transportation network that accommodates pedestrians, bicyclists, transit riders, motorists, and freight in the context of a modern light industrial district;
- A complete network of existing and new streets, paths, and trails that will support a sense of place and identity within the City of Wilsonville;
- An industrial district featuring cohesive and high-quality site, landscape, and building design through a de-emphasis on building design and more appropriate emphasis on the design of the public realm;
- Minimization of the visibility of vehicular parking, circulation, and loading areas;
- Public realm design that considers the contribution that landscape design has made to the design quality of other industrial lands in Wilsonville, where landscaping is effective at breaking down the scale of industrial development and providing a human scale to the public realm;
- Preservation of trees and natural features, which supports the creation of a special place with a distinctive image and identity;
- Minimization of adverse impacts on adjacent properties from development that detracts from the character and appearance of the area; and
- Connectivity requirements that achieve City policy objectives but are appropriate for industrial scale sites and buildings, establish connectivity between parcels, and address challenges of shared site access between landlocked parcels.

RELATIONSHIP TO THE WILSONVILLE CODE

The ~~Form-based Code~~ ***design and development standards (form-based code) in Section 4.134 NWI Zone*** ~~for industrial areas~~ set the standards for development and define~~s~~ the essential determinants for design that are critical to development. These standards are clear, objective, and represent a baseline minimum for the sound development of employment uses in industrial areas. Because the community standards for design are high, the expectation for the design for all new development is correspondingly high. The design guidelines in this Pattern Book encourage and promote the design of buildings and landscapes that exceed the minimum functional standards established in the Wilsonville Code. The design guidelines illustrate how the provisions of the ~~Form-based~~ Code can be practically applied with examples from specific context zones. However, no single guideline or illustration is capable of representing the full, complete, and exhaustive range of possible design solutions. Rather than representing an ultimate design, the design guidelines and their illustrative examples are intended to promote a creative response to the development regulations and foster a collaborative discussion of design that includes City staff and members of the Development Review Board.

The City of Wilsonville expects new development in industrial areas to be successful contributors to the quality of life in the city by:

- Constructing well-designed, high-quality buildings that serve current needs and are adaptable to future uses;
- Integrating industrial land uses with all modes of transportation including active modes of transportation of walking, biking, and transit;
- Preserving existing trees and natural features and enhancing the character and qualities of a unique landscape with a distinctive image and identity;
- Preserving existing jobs and creating new ones; and
- Creating a quality workplace for employees.

OVERVIEW OF THE DESIGN GUIDELINES

~~Coffee Creek~~***Northwest*** Industrial ~~Design Overlay District~~ ***Zone*** **Design Guidelines**

Pattern Book Chapter	Design Guideline Section	Design Guidelines
A | Street Design and Connectivity	1. Network	1.1 Connection spacing 1.2 Large parcels
	2. Addressing Streets	2.1 Park-like character 2.2 Serving multiple modes 2.3 Prominent address 2.4 Enclosed public realm
	3. Supporting Streets	3.1 Role of Supporting Streets. 3.2 High-quality Supporting Streets 3.3 Extension of the public realm 3.4 Supporting Street as the primary access 3.5 Supporting Street as the secondary access
	4. Through Connections	4.1 Balancing extension of the public realm with flexible design 4.2 Serving pedestrians 4.3 Serving bicyclists 4.4 Wayfinding 4.5 Flexible alignment 4.6 Flexible width

OVERVIEW OF THE TWO TRACK SYSTEM

The Two Tracks

TRACK ONE
The Planning Director determines your project complies with all Development Standards, or ~~***that***~~

Your project complies with all Development Standards and all needed Adjustment Allowances.

Your project will be approved by the Planning Director.

TRACK TWO
Your project does not comply with all Development Standards.

Your project must comply with some or all Design Guidelines in the Pattern Book.

Your project is reviewed and may be approved by the Development Review Board.

Track One: Reduced timeline, approval certainty

Track Two: Design flexibility

HOW THE DEVELOPMENT STANDARDS AND DESIGN GUIDELINES ARE INTENDED TO BE USED

The clear and objective standards in Section 4.134, found within Chapter 4 of the Wilsonville Planning and Land Development Code, are written to allow streamlined development approval. As long as a proposed development meets the numerical standards it will be approved.

The Design Guidelines within this Pattern Book provide the basis for an optional "waiver track." An applicant may elect to apply for the waiver track, instead of the clear and objective track. In this case, the Design Guidelines, including the Intent Statements and other contents of this Pattern Book, will guide approval of the project.

TRACK ONE: CLEAR AND OBJECTIVE TRACK (SECTION 4.134)

~~Track One is a ministerial review process, intended to result in automatic project approval if all criteria are met.~~
~~The development applicant must meet Development Standards (numerical standards) for Connectivity, District-wide Planning, Site Design, Building Design, Waysides and Signage. Limited adjustments are permitted, as noted in Section 4.134.~~

Track One provides an administrative approval process for projects that comply with the clear and objective standards of Section 4.134. If an application meets all applicable development standards, the project is approved without discretionary design review.

Applicable standards include requirements for connectivity, site planning, building design, landscaping, waysides, and signage. Limited adjustments to specific numerical standards may be granted where authorized by Section 4.134.

TRACK TWO: WAIVER TRACK

~~Track Two is a discretionary review process for projects not meeting all of the clear and objective standards of Section 4.134.~~

~~When choosing this track, applicants must meet Design Guidelines within the Pattern Book for development standards to be waived. Clear and objective standards eligible for the waiver track are found in subsections~~
~~2) District-wide Planning and Landscaping, 3) Site Design, and 4) Building Design.~~

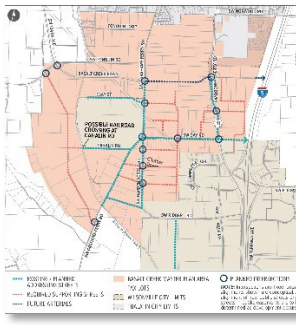
~~The clear and objective standards of subsection 1) Street Design and Connectivity, may elect to use the waiver track by providing a Connectivity Master Plan that complies with the Design Guidelines and the Pattern Book.~~***Track Two is a discretionary review process available to applicants proposing development that does not meet all of the clear and objective standards contained in Section 4.134. Under this track, applicants must demonstrate that the proposed alternative design satisfies the intent and objectives of the Northwest Industrial Zone through compliance with the applicable Design Guidelines contained in the NWI Pattern Book.***

Standards eligible for waiver review include selected provisions within District-wide Planning and Landscaping, Site Design, and Building Design, as specifically identified in Section 4.134. Standards that are not identified as adjustable or eligible for waiver review shall remain applicable.

Applicants seeking flexibility from Street Design and Connectivity standards may utilize Track Two by submitting a Connectivity Master Plan that demonstrates how the proposed development will achieve the connectivity, circulation, and public realm objectives of the Northwest Industrial Zone and is consistent with the Design Guidelines and recommendations contained in the NWI Pattern Book.

Approval of a waiver request is discretionary and requires a finding that the proposed alternative design meets or exceeds the intent of the applicable standards and contributes to the overall vision and objectives of the Northwest Industrial Zone.

Projects are reviewed and may be approved by the Development Review Board.



RELATIONSHIP OF THE DESIGN GUIDELINES TO SECTION 4.134 DEVELOPMENT STANDARDS

TRACK ONE: CLEAR AND OBJECTIVE TRACK (SECTION 4.134)

Track One is a***n*** ~~ministerial~~ ***administrative*** review process, intended to result in automatic project approval if all criteria are met. The development applicant must meet **Development Standards** (numerical standards) for Connectivity, District-wide Planning, Site Design, and Building Design. Projects will be approved by the **Planning Director.**

TRACK TWO: WAIVER TRACK

Track Two is a discretionary review process for projects not meeting all of the clear and objective standards of Section 4.134. The development applicant must meet **Design Guidelines** for the applicable waiver track section. Projects are reviewed and may be approved by the **Development Review Board.**

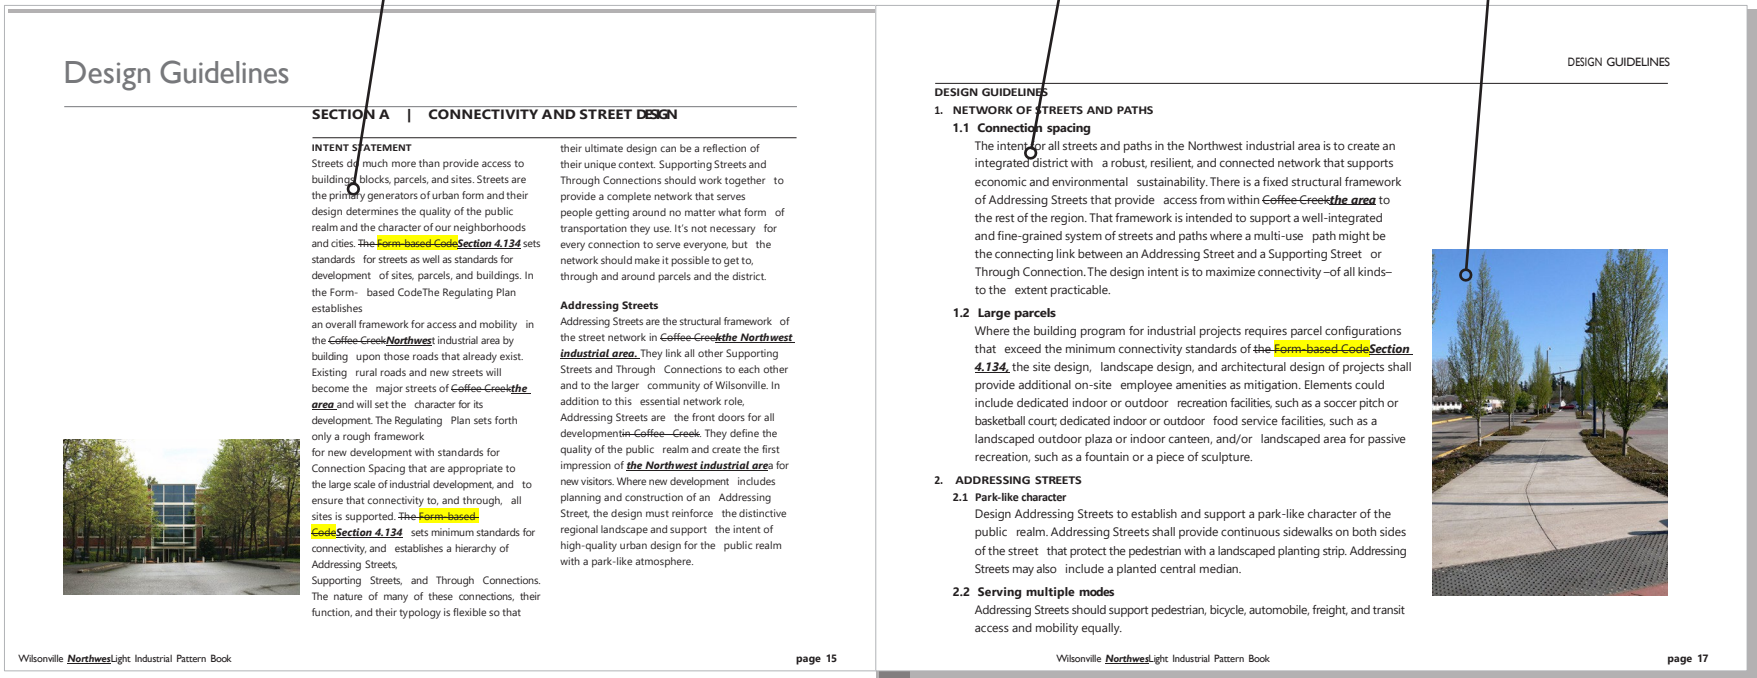
HOW TO USE THE PATTERN BOOK

This Pattern Book ~~for Coffee Creek~~uses design guidelines and prototypes to illustrate the principles that inform the ~~Coffee Creek Industrial Design Overlay District~~***Northwest Industrial Zone.*** For those projects where the clear and objective standards of the Form- based Code***Section 4.134*** do not provide sufficient flexibility to address specific issues for site design, landscape design, or building design the Pattern Book provides guidance to the applicant and the Development Review Board.

What is an Intent Statement? Intent statements summarize the fundamental principles for the four primary patterns and their typologies that guide development in ~~Coffee Creek~~***the Northwest Industrial Zone.***



What is a Design Guideline? Every design guideline is intended to promote a carefully articulated and well-crafted design response that is consistent with the principles of the Intent Statement.

What is a Precedent Photo? Each image is intended to provide a visual reference to the text that represents a level of quality and aesthetics appropriate to the industrial context of ~~Coffee Creek~~***the Northwest Industrial Zone.*** They are intended to inspire creativity and a thoughtful, considered design response to addressing the unique conditions of street, site, building, and landscape design.

Intent Statement

Design Guideline

Precedent photo

Design Guidelines

SECTION A | CONNECTIVITY AND STREET DESIGN

INTENT STATEMENT

Streets do much more than provide access to buildings, blocks, parcels, and sites. Streets are the primary generators of urban form and their design determines the quality of the public realm and the character of our neighborhoods and cities. ~~The Form- based Code~~***Section 4.134*** sets standards for streets as well as standards for development of sites, parcels, and buildings. In the Form- based CodeThe Regulating Plan establishes an overall framework for access and mobility in the ~~Coffee Creek~~***Northwes***t industrial area by building upon those roads that already exist. Existing rural roads and new streets will become the major streets of ~~Coffee Creek~~***the area*** and will set the character for its development. The Regulating Plan sets forth only a rough framework for new development with standards for Connection Spacing that are appropriate to the large scale of industrial development, and to ensure that connectivity to, and through, all sites is supported. ~~The Form- based Code~~***Section 4.134*** sets minimum standards for connectivity, and establishes a hierarchy of Addressing Streets, Supporting Streets, and Through Connections. The nature of many of these connections, their function, and their typology is flexible so that their ultimate design can be a reflection of their unique context. Supporting Streets and Through Connections should work together to provide a complete network that serves people getting around no matter what form of transportation they use. It's not necessary for every connection to serve everyone, but the network should make it possible to get to, through and around parcels and the district.

Addressing Streets

Addressing Streets are the structural framework of the street network in ~~Coffee Creek~~***the Northwest industrial area.*** They link all other Supporting Streets and Through Connections to each other and to the larger community of Wilsonville. In addition to this essential network role, Addressing Streets are the front doors for all development~~in Coffee Creek~~. They define the quality of the public realm and create the first impression of ***the Northwest industrial are***a for new visitors. Where new development includes planning and construction of an Addressing Street, the design must reinforce the distinctive regional landscape and support the intent of high-quality urban design for the public realm with a park-like atmosphere.

Wilsonville ***Northwes***t Industrial Pattern Book page 15

DESIGN GUIDELINES

DESIGN GUIDELINES

1. NETWORK OF STREETS AND PATHS

1.1 Connection spacing

The intent for all streets and paths in the Northwest industrial area is to create an integrated district with a robust, resilient, and connected network that supports economic and environmental sustainability. There is a fixed structural framework of Addressing Streets that provide access from within ~~Coffee Creek~~***the area*** to the rest of the region. That framework is intended to support a well-integrated and fine-grained system of streets and paths where a multi-use path might be the connecting link between an Addressing Street and a Supporting Street or Through Connection. The design intent is to maximize connectivity –of all kinds– to the extent practicable.

1.2 Large parcels

Where the building program for industrial projects requires parcel configurations that exceed the minimum connectivity standards of ~~the Form- based Code~~***Section 4.134,*** the site design, landscape design, and architectural design of projects shall provide additional on-site employee amenities as mitigation. Elements could include dedicated indoor or outdoor recreation facilities, such as a soccer pitch or basketball court; dedicated indoor or outdoor food service facilities, such as a landscaped outdoor plaza or indoor canteen, and/or landscaped area for passive recreation, such as a fountain or a piece of sculpture.

2. ADDRESSING STREETS

2.1 Park-like character

Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a landscaped planting strip. Addressing Streets may also include a planted central median.

2.2 Serving multiple modes

Addressing Streets should support pedestrian, bicycle, automobile, freight, and transit access and mobility equally.

Wilsonville ***Northwes***t Industrial Pattern Book page 17

INTRODUCTION

Example projects, or Prototypes—representing a range of possible building and development typologies—are modeled in dimensionally accurate illustrations. Each of the prototypes illustrates how a development may comply with the Design Guidelines and Intent Statements.

In the Patterns and Prototypes section starting on page 33, Prototypes and Design Guidelines are arrayed side-by-side to demonstrate different ways that a project may comply with the Design Guidelines.

What is a Prototype? Prototypes are models of possible development, designed to-scale for a particular context. Development prototypes are used in a wide variety of applications—to illustrate design objectives, to test development capacity for a specific site, to model a real estate development proforma, or to test proposed
zoning designations and development standards. Prototypes provide an easy-to-understand visual representation of complex spatial information and are often drawn in three dimensions to help users visualize results. The ~~Coffee Creek~~***Northwest***

Industrial prototypes are aimed at City staff, the Development Review Board, developers who want clear guidance about the type of development that is permitted by the ~~Coffee Creek~~***Northwest*** Industrial ~~Design Overlay District~~ ***Zone,*** and neighborhood representatives trying to visualize the effect of the zoning.

Excerpts from Design Guidelines

PATTERNS AND TYPOLOGIES

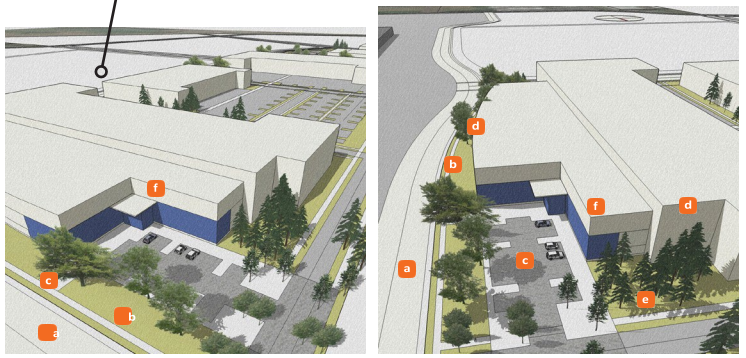
Prototype 2

A. 2.1 PARK-LIKE CHARACTER
Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a landscaped planting strip. Addressing Streets may also include a planted central median.

A. 2.3 PROMINENT ADDRESS
Design Addressing Streets to serve as the "front door" or "address" for new buildings and development. New Addressing Streets shall include sidewalks on both sides that provide safe, continuous access for pedestrians to all abutting sections of the primary street network of Addressing Streets. Unless interrupted another Addressing Street or a Supporting Street, the sidewalks shall be protected by a continuous planted landscape strip.

A. 2.4 ENCLOSE THE PUBLIC REALM
Orient building massing, form, architecture, and programmatic function along Addressing Streets to help define the public realm, create a distinctive frame for the streets, and support the sense of place in ***the area.***

A. 3.3 EXTENSION OF PUBLIC REALM
Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.



SECTION C. INTENT STATEMENT
Trees help to define place. Whether individually, or in groves of native species, trees enhance the public realm by giving context and scale to the ~~Coffee Creek~~***Northwest*** Industrial Area. Landscape planting in front, side, and rear yards and as screening for parking lots, service drives, and service enclosures gives form and defines the public realm and parcels. The landscape design, installation, and maintenance help to define the ~~Coffee Creek~~***Northwest*** industrial ~~district~~ ***area*** and to diminish the large-scale industrial buildings. It also helps
to define and direct people to building entries. The native plant material are climate adaptive, have low water and maintenance requirements, and visually blend with adjacent, undisturbed landscapes. Native trees should be preserved and employed as the visual anchors of new landscapes.

D. 1.3 VISUAL INTEREST AND HUMAN SCALE
Locate the office and support spaces for warehouse and industrial buildings on the Addressing Street or Supporting Street instead of burying these functions in the interior of a large monolithic structure. The smaller-scale first floor can help soften the bulk of large buildings and add visual interest and a human scale to the public realm. This guideline may be accomplished by wrapping the high-bay industrial form with lower-scaled structures on the street; extending a discrete element of the building that contains these functions and giving this element a distinctive, contrasting architectural expression; or providing a visual break in the building mass and structure that creates an impression of two separate buildings.

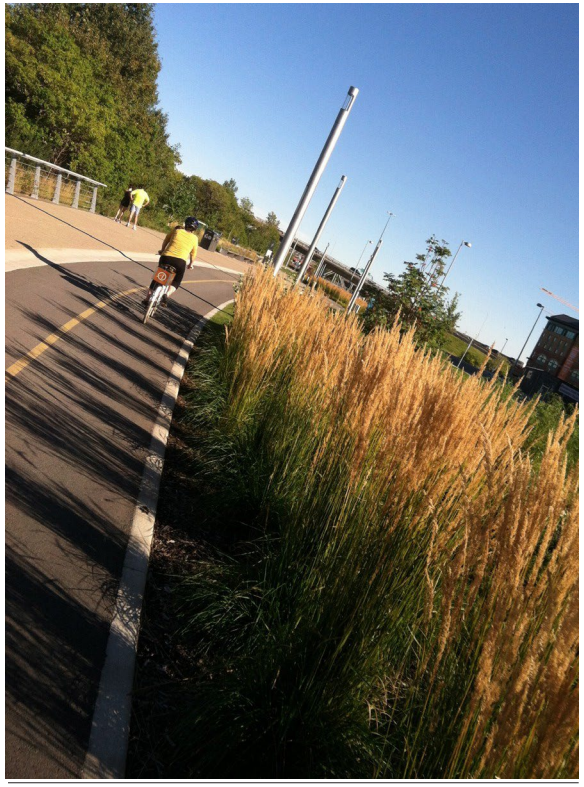
Design Guidelines

SECTION A | STREET DESIGN AND CONNECTIVITY

INTENT STATEMENT



Streets do much more than provide access to buildings, blocks, parcels, and sites. Streets are the primary generators of urban form and their design determines the quality of the public realm and the character of our neighborhoods and cities. ~~The Form-based Code~~***Section 4.134*** sets standards for streets as well as standards for development of sites, parcels, and buildings. In the Form- based Code, the Regulating Plan establishes
an overall framework for access and mobility in the ~~Coffee Creek~~***Northwest*** Industrial ***a***~~A~~rea by building upon those roads that already exist. Existing rural roads and new streets will become the major streets of ***the area*** ~~Coffee Creek~~ and will set the character for its development. The Regulating Plan sets forth only a rough framework
for new development with standards for Connection Spacing that are appropriate to the large scale of industrial development, and to ensure that connectivity to, and through, all sites is supported. The Form-based Code sets minimum standards for connectivity, and establishes a hierarchy of Addressing Streets, Supporting Streets, and Through Connections. The nature of many of these connections, their function, and their typology is flexible so that their ultimate design can be a reflection of their unique context. Supporting Streets and Through Connections should work together to provide a complete network that serves people getting around no matter what form of transportation they use. It is not necessary for every connection to serve everyone, but the network should make it possible to get to, through and around parcels and the district.

Example of a Supporting Street
On the largest sites in ~~Coffee Creek~~***the Northwest Industrial area*** where multiple buildings are developed, Supporting Streets may share the same function of defining the public realm as Addressing Streets: they may provide the "address" and "front door" for a building located on the interior of a parcel.

Addressing Streets

Addressing Streets are the structural framework of the street network in ~~Coffee Creek~~***the Northwest industrial area***. They link Supporting Streets and Through Connections to each other and to the larger community of Wilsonville. In addition to this essential network role, Addressing Streets are the front doors for all development in ~~Coffee Creek~~***the area.*** They define the quality of the public realm and create the first impression of ~~Coffee Creek~~***the industrial area*** for new visitors. Where new development includes planning and construction of an Addressing Street, the design must reinforce the distinctive regional landscape and support the intent of high-quality urban design for the public realm with a park-like atmosphere.

Example of a Through Connection
Through Connections may serve as a multi-use path ~~bicycles~~***for bicycles*** and pedestrians.

Supporting Streets

Supporting Streets are primarily intended to be the flexible links between Addressing Streets and destinations. They play a significant role in supporting freight and automobile access, but they also connect people on foot or bike to transit. They have a fundamental role in providing fine-grained connectivity within the large scale of industrial blocks. On the largest sites in ~~Coffee Creek~~***the Northwest Industrial area*** where multiple buildings are developed, Supporting Streets may share the same function of defining the public realm as Addressing Streets: they may provide the "address" and "front door" for a building located on the interior of a parcel. Where they do, Supporting Streets should contribute to the overall urban design quality of ~~Coffee Creek~~***the area.*** Design elements of Supporting Streets may share many of the same characteristics as Addressing Streets: continuous sidewalks on both sides of the street protected by landscaped park strips.

In other contexts Supporting Streets may be more utilitarian in service to the nature of their program and function. Supporting Streets can provide access to services and utilities. Their design expression may be simple and functional.

Through Connections

Through Connections offer a broad range of design possibilities that support specific needs for access and mobility. Through Connections may look like Addressing Streets or Supporting Streets and function like any other street; they may look like a street and at the same time function as access to parking within a surface parking lot. They may serve as a multi-use path for bicycles and pedestrians; or they may look and function like a sidewalk. Regardless of their ultimate appearance or configuration, Through Connections are intended to link ***the*** ~~the Coffee Creek~~***Northwest*** Industrial ***a***~~A~~rea together as a network of streets, routes, and paths that support multi-modal transportation. Through Connections are also intended to link ~~Coffee Creek~~***the area*** to other local and regional destinations, such as the Ice Age Tonquin Trail or Coffee Lake Creek Natural Area.

The design of the landscape along Through Connections is intended primarily as a visual relief from the large-scale industrial development. A simple, natural landscape of native plant materials will result in an attractive contribution to the quality of this limited part of the public realm.

DESIGN GUIDELINES

1. NETWORK OF STREETS AND PATHS

1.1 Connection spacing

The intent for all streets and paths in ~~Coffee Creek~~ ***the Northwest Industrial area*** is to create an integrated district with a robust, resilient, and connected network that supports economic and environmental sustainability. There is a fixed structural framework of Addressing Streets that provide access from within ~~Coffee Creek~~***the area*** to the rest of the region. That framework is intended to support a well-integrated and fine-grained system of streets and paths where a multi-use path might be the connecting link between an Addressing Street and a Supporting Street or Through Connection. The design intent is to maximize connectivity of all kinds to the extent feasible.

1.2 Large parcels

Where the building program for industrial projects requires parcel configurations that exceed the minimum connectivity standards of the Form-based Code, the site design, landscape design, and architectural design of projects shall provide additional on-site employee amenities as mitigation. Elements could include dedicated indoor or outdoor recreation facilities, such as a soccer field or basketball court; dedicated indoor or outdoor food service facilities, such as a landscaped outdoor plaza or indoor canteen, and/or landscaped area for passive recreation, such as a fountain or a piece of sculpture.

2. ADDRESSING STREETS

2.1 Park-like character

Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a planting strip landscaped with shade trees. Addressing Streets may also include a planted central median.

2.2 Serving multiple modes

Addressing Streets should support pedestrian, bicycle, automobile, freight, and transit access and mobility equally.

Example of a Through Connection
Through Connections may function as access to parking within a surface parking lot.

2.3 Prominent address

Design Addressing Streets to serve as the "front door" or "address" for new buildings and development. New Addressing Streets shall include sidewalks on both sides that provide safe, continuous access for pedestrians to all abutting sections of the primary street network of Addressing Streets. Unless interrupted by another Addressing Street or a Supporting Street, the sidewalks shall be protected by a continuous landscape strip planted with shade trees.

2.4 Enclosed public realm

Orient building massing, form, architecture, and programmatic function along Addressing Streets to help define the public realm, create a distinctive enclosure of the public realm, and support the sense of place in ~~Coffee Creek~~***the Northwest Industrial area.***

3. SUPPORTING STREETS

3.1 Role of Supporting Streets

Supporting Streets are the flexible links between Addressing Streets and destinations throughout the ~~Coffee Creek~~ area. Supporting Streets may sometimes function as the "front door" or "address for new buildings and development. In other contexts Supporting Streets may be more utilitarian in service to the nature of their program and function. Supporting Streets can provide access to services and utilities. Their design expression may be simple and functional.

3.2 High-quality Supporting Streets

Where appropriate to the master plan for large development sites, design Supporting Streets to the same standards as Addressing Streets. Match street design standards for Addressing Streets, including street profiles, street trees, and sidewalks.

3.3 Extension of the public realm

Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.

3.4 Supporting Street as the primary access

If the Supporting Street serves as the development's primary access street, it should be developed to the same standards as Addressing Streets and serve as the "front door" or "address" for new buildings and development.

Extension of public realm
Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.

3.5 Supporting Street as the secondary access

If the Supporting Streets does not serve as the development's primary access street, it should be developed as a secondary service connection from the designated Addressing Streets.

4. THROUGH CONNECTIONS

4.1 Balancing extension of the public realm with flexible design

Design Through Connections to fully support the extension of the public realm while responding to a wide range of functions.

4.2 Serving pedestrians

Through Connections must serve pedestrians and function as an extension of the sidewalk network in ~~Coffee Creek~~***the Northwest Industrial area.***

4.3 Serving bicyclists

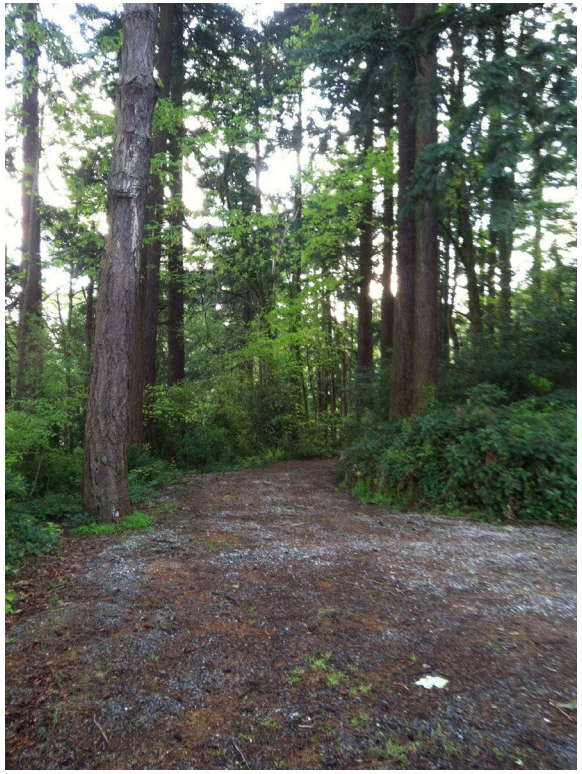
Through Connections must serve as multi-use paths and support the effective use of bicycles for transportation

4.4 Wayfinding

Install a system of signage that serves to orient people to their location and assist them in wayfinding to their destination.

4.5 Flexible alignment

Adjust the alignment of Through Connections to accommodate natural features and resources.



4.6 Flexible width

Increase the width of a Through Connection designed as a multi-use path to incorporate amenities such as benches, lighting, or trash receptacles, and to create visual interest.

Serving pedestrians
Through Connections must serve pedestrians and function as an extension of the sidewalk network in ***the Northwest Industrial area***~~Coffee Creek.~~

DESIGN GUIDELINES

Naturalistic landscape, native planting
Promote a landscape that supports ecological function and habitat by using native species in a naturalized manner

SECTION B | DISTRICT-WIDE SITE PLANNING AND LANDSCAPING

INTENT STATEMENT

The impact of the Ice Age floods on the Willamette Valley defies the imagination. The cataclysmic effects of the Missoula Floods created the modern-day landscape that includes ***the Basalt Creek Canyon, Tonquin Scablands***, Coffee Lake Wetlands and Coffee Lake Creek. These remnants of the geologic events of 12,000 years ago and the landscape that has emerged since that time are authentic elements that establish our sense of place and contribute to creating a distinctive image and identity that is unique to the City of Wilsonville. In ~~Coffee Creek~~***the Northwest Industrial area,*** the oak savanna is the most distinctive and significant landscape feature visible today that emerged as a result of the Missoula Floods. The effects of settlement have diminished the extent of this oak forest and groves of fir trees are now a distinctive part of the skyline. There may well be elements of the floods still to be discovered; the glacial erratics of the Willamette Valley were scattered here as the ice rafts that they arrived with melted.

The City's commitment to preserving and enhancing the heritage of this distinctive landscape is reflected in several of the patterns and guidelines. At the scale of the district, the City expects development to promote visual and physical connections from the industrial district to the ***Basalt Creek Canyon, Tonquin Scablands,*** Coffee Lake Creek Natural Area and the future Tonquin Ice Age Trail.

The themes that express the unique character, quality, and culture of ~~Coffee Creek~~***the area*** are still emerging as the ***Northwest Industrial*** district becomes fully integrated with the larger, more established city. Existing stands of Douglas Fir acknowledge both the city's status as a Tree City USA and its commitment to maintaining its natural beauty. The city is also home to three water features by the celebrated Pacific Northwest landscape architect Bob Murase: water features are ~~strongly~~encouraged as part of the ***Coffee Creek Industrial Master Plan and Basalt Creek Master Plan, particularly in future industrial waysides.***

Within the ~~Coffee Creek~~***Northwest*** Industrial Area the design of individual buildings should be linked by unifying elements. The public realm of Addressing Streets provides unity to the district by establishing a pastoral character of place with the regular planting of street trees, sidewalks, and front yard setbacks. Trees help to define place, and enhance the public realm by giving context and scale to the ~~Coffee Creek~~***Northwest*** Industrial Area.

Improving existing and providing new pedestrian and bicycle connections to and through natural areas strengthens the sense of place by developing the character of place.

Gateways reinforce a sense of arrival or departure and mark the transition from one precinct of the city to another.

Trees

Trees help to define place and enhance the public realm by giving context and scale to the ~~Coffee Creek~~***Northwest*** Industrial ***a***~~A~~rea.

GUIDELINES

1. THE NATURAL LANDSCAPE

1.1 Water flow to Coffee Lake Creek

Design landscapes to acknowledge the Ice Age heritage of ~~Coffee Creek~~***the Northwest Industrial area*** by orienting patterns of new landscape plantings reflecting the natural flows of water from the industrial district to Coffee Lake Creek ***and Basalt Creek.***

1.2 Natural landscape as visual unifier

Use the unifying elements of the natural landscape to visually connect and functionally integrate the industrial district.

1.3 Naturalistic landscape, native planting

Promote a landscape that supports ecological function and habitat by using native species in a naturalized manner.

1.4 Access to nature

Pedestrian and bicycle connection is critical and incorporating public connections through large-scale industrial sites is encouraged. Access connections to the creeks, natural areas, and greenway trails should be clearly marked and provide safe and convenient passage.

1.5 Ice Age artifacts

Identify, preserve, and enhance any Ice Age elements found on site, such as erratics the foreign boulders carried to the site on ice rafts, as elements that influence site design and development.

1.6 Tree preservation within setbacks

Whether individually or in groves of native species, preserve trees within the setbacks of the development, particularly when they occur within the setback of an Addressing Street, or a Supporting Street that serves as the development's primary access street.

1.7 Informal park-like landscaping

The park-like character of the design of the Addressing Streets should be complemented by landscaping around buildings, parking lots, and open space that reflects the informal,

Tree preservation within setbacks
Whether individually or in groves of native species, preserve trees within the setbacks of the development, particularly when they occur within the setback of an Addressing Street, or a Supporting Street that serves as the development's primary access street.

natural, and original landscape that preceded development and persists in places across the site.

2. SPECIAL LANDSCAPE FEATURES

2.1 City of Wilsonville themes

Integrate the themes related to the City of Wilsonville as unifying elements in the conceptual design for new development, and into the landscape design.

2.2 Existing tree groves at points of access

Incorporate elements such as existing stands of native trees to emphasize points of site access and/ or building access.

2.3 Water features

Integrate fountains and water features to emphasize important places, such as parcel access, building entries, and employee amenities.

2.4 Selective use of non-native plants

Non-native, ornamental plants, shrubs, and trees should be used sparingly and strategically as elements that accent special elements of the site or building, such as entries.

2.5 Intentional aesthetic use of industrial materials

Integrate the materials of industry at an industrial scale. This guideline may be accomplished by designing buildings, enclosures, and retaining walls with the simple, natural, unembellished materials common to industry. Use unfinished steel, raw aluminum, and plain concrete as the finish materials for the construction of site and building elements.

3. STRENGTHEN GATEWAYS

3.1 ~~Coffee Creek~~*Northwest Industrial* gateways

Design gateway locations to promote a sense of place and to reinforce the distinct identity of ~~Coffee Creek~~***the Northwest Industrial area.*** This guideline may be accomplished by placing new buildings strategically at areas that define boundaries and edges to create gateways in conjunction with other buildings or with significant landscape features.

Existing tree groves at points of access
Incorporate elements such as existing stands of native trees to emphasize points of site access and/ or building access.

Informal park-like landscaping
The park-like character of the design of the Addressing Streets should be complemented by landscaping around buildings, parking lots, and open space that reflects the informal, natural, and original landscape that preceded development and persists in places across the site.

3.2 Buildings as gateway markers

Develop gateway buildings at strategic intersections.

3.3 Monument signs

Use freestanding monument signs to mark gateways.

3.4 Iconic elements

Install iconic elements within the right-of-way, such as signs, monuments, or art, that help identify a specific address as a district-wide or site-specific gateway to ~~Coffee Creek~~***the area.***

Natural landscape as visual unifier
Use the unifying elements of the natural landscape to visually connect and functionally integrate the industrial district.

SECTION C | SITE DESIGN

INTENT STATEMENT

Access and mobility

Access and mobility are essential elements of successful industrial development. We tend to think of tractor-trailer rigs as essential to industry, and they are, but equally essential to industry is an educated work force that can get to their shifts with a full range of transportation options: options that offer employees real choices that include driving alone, but also support and encourage transit, walking, and biking.

Automobile and freight access from Addressing Streets and Supporting Streets to a parcel should be obvious, clear, simple, and safe. Parcel access provides an opportunity to create a gateway and reinforce a strong sense of place.

Bicycle and pedestrian access to a parcel from Addressing Streets and Supporting Streets can also reinforce the sense of place ~~in Coffee Creek.~~ Bicycle and pedestrian access from an Addressing Street to a parcel should be convenient, direct, and complete. Cyclists and walkers should be able to clearly perceive their ultimate destination from the Addressing Street.

Access and mobility are for all people. The pedestrian system is successful only when all people can conveniently reach their destinations. Universal and equitable barrier- free design is most successful when designed and developed systematically from initial site design through final building design and construction.

Access from an Addressing Street
Walkers should be able to clearly perceive their ultimate destination from the Addressing Street.

Parking Design

Surface parking is permitted in the front yard setback for development along Addressing Streets with limitations. Surface parking lots are limited in scale and designated for short-term parking for visitors, people with disabilities, and deliveries. The design guidelines are intended to establish the character for surface parking lots in a manner that supports the City's goals for pedestrian convenience, comfort, and safety.

Ensure that the parking lot landscape is planned, installed, and maintained to promote the informal design character associated with each landscape frontage type.

Design that Contributes to the Site Minimize site grading to preserve the natural character of the site. Contoured slopes are generally preferred to the installation of retaining walls. Where retaining walls are necessary to support site development, ensure that they facilitate surface drainage, limit soil erosion, and avoid increasing instability of

Planning Commission Meeting - August 12, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

native soils. Integrate retaining walls with other site design features, such as stairs, ramps, and planters wherever possible.

To the extent possible, site development should maintain and enhance natural drainage patterns. Incorporate features for the storage, cleaning, transport, and re-infiltration of stormwater into site design and landscaping. Stormwater facilities such as swales should be designed to reinforce the natural quality and visual continuity of the landscape at the scale of the site and the district.

Trees help to define place. Whether individually, or in groves of native species, trees enhance the public realm by giving context and scale to the ***Northwest*** ~~Coffee Creek~~ Industrial ***Zone*** ~~Area~~. Landscape planting in front, side, and rear yards and as screening for parking lots, service drives, and service enclosures gives form and defines the public realm and parcels. Landscape design, installation, and maintenance helps to define the ***Northwest*** ~~Coffee Creek~~ Industrial ***Zone*** ~~District~~ and to diminish the large scale of industrial buildings. Landscaping also helps direct people to building entries. The native plant materials
are climate adaptive, have low water and maintenance requirements, and visually blend with adjacent, undisturbed landscapes. Native trees should be preserved and employed as the visual anchors of new landscapes.

Industrial building types typically need extensive, relatively flat surfaces for buildings, parking lots, service yards, access lanes, and truck maneuvering areas. It may still be possible to fit a multistory building into the terrain of Coffee Creek. Integrating buildings with their sites is strongly encouraged.

Landscape that Contributes to the Building
Building designs should acknowledge and respect the natural character of their
sites. The ***Northwest Industria Zone*** ~~Coffee Creek Industrial Area~~ has a strong character that derives from context, topography, and native vegetation. New site development, landscaping, and building design can reinforce this distinctive character.

Provide a consistent and high-quality environment for the ***Northwest*** ~~Coffee Creek~~ ***Industrial Zone*** ~~Area~~ by obscuring views of loading areas, work yards, above-grade utilities and services, and recycling and refuse areas from Addressing Streets, Supporting Streets and Through Connections. Whenever possible, group utilities and services to minimize visual clutter.

The primary building entry is a significant element of building design in the ***Northwest Industrial Zone***. ~~Coffee Creek.~~ The design guidelines recommend that the primary entrance for all buildings front on an Addressing Street. This is not a requirement of the Form-based Code; an entrance on a Supporting Street or Through Connection is acceptable provided the entry is clearly visible from the Addressing Street and a clear public route to the entry is provided. Emphasize the importance of the primary building entry with glass, canopies, signage, public art, landscaping, and lighting.

GUIDELINES

1. PARCEL ACCESS

1.1 Distinctive identity of visitor arrival point

Where parcel access is also the primary automobile access to a building for visitors, use landscaping and signage to create a distinctive sense of arrival.

1.2 Converging parcel access points

Use routes providing parcel access to build active intersections where pedestrians, bicyclists, and motorists have access to site amenities.

1.3 Formal landscape design that contrasts

Design guidelines for the landscape of front yards along Addressing Streets encourage a natural, irregular pattern of native plant materials. Along parcel access routes consider breaking this informal character of the landscape frontage with design and plant materials that are more formal, regular, and ornamental.

1.4 Parcel access from an Addressing Street

Where parcel access connects the primary building entrance to the Addressing Street extend the design, character, scale, and materials of the entry to the public sidewalk.

1.5 Parcel access from a Supporting Street

Where parcel access from a Supporting Street is the primary automobile access to a building for visitors use landscaping and signage to create a distinctive sense of arrival.

1.6 Parcel access from a Through Connection

Where parcel access connects only with a pedestrian walkway or multi-use path with the ~~Coffee Creek~~ pedestrian and bicycle network, design the walkway or multi-use path for safety, comfort, and convenience of pedestrians and cyclists.

1.7 Pedestrian and bicycle access network

Develop an integrated system for pedestrians and bicycles that includes good connections to other parts of the ~~Coffee Creek~~ Industrial Area and to the larger city beyond.

1.8 Accessible paths

Make paths accessible for all.

1.9 Adjust paths to incorporate site features

Add character and interest to the path by adjusting its direction and/ or width to incorporate unique natural features of the site, such as streams, pools, or rock outcroppings.

1.10 Front yards that contribute to the public realm

Design the landscape in front yards along Addressing Streets to result in an attractive contribution to the quality of the public realm.

1.11 Signs

Plan the size and location of signs and their structure so that they do not detract from the natural quality of the native landscape.

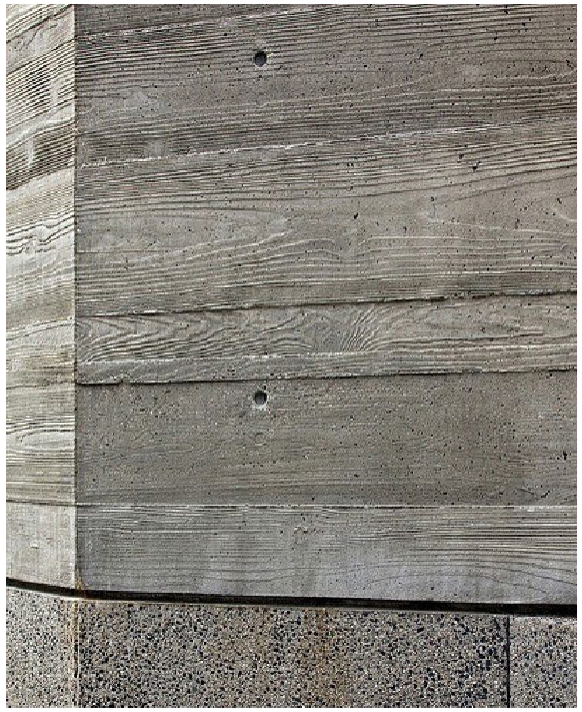
1.12 Outdoor rooms

Establish and maintain a sense of the public realm as an outdoor room where building elevations serve as walls and the streets, sidewalks, and landscape serve as the floor. Use buildings to create and maintain a sense of urban enclosure.

2. PARKING LOCATION AND DESIGN

2.1 Front yard surface parking on an Addressing Street

Surface parking is permitted in the front yard setback for development along Addressing Streets and Supporting Streets with limitations. Design parking lots to result in an attractive and functional experience for staff and visitors arriving by car. To enhance the design quality of parking lots in front yards along Addressing Streets, consider increasing the quality of the materials used and treating the surface of the parking lot and walkway system as a plaza that connects to, and integrates with, the primary building entrance.



2.2 Through Connections that provide parking

Through Connections can support a wide range of on street parking options including parallel, diagonal, or perpendicular parking. Choose the type of parking most appropriate to the context: consider natural features and resources as well as programmatic needs associated with building use. Adjust the layout of parking lots to accommodate natural features and resources.

2.3 Surface parking

Vary the scale of parking lots, the pattern of landscape elements and lighting to add visual

Screening materials
Walls used for screening may be constructed from stone, self-weathering sheet steel, or smooth-finished cast-in- place or board-formed concrete.

interest and reduce the monotonous effect of large extents of surface parking.

2.4 From the parking spot to the primary entry

Design parking lots for the comfort and convenience of visitors and the disabled. The accessible route from one's parking spot to the primary building entrances should be clear, obvious, and unobstructed.

2.5 Stormwater run-off

Consider the integration of permeable paving to reduce stormwater run-off.

2.6 Planting

Design and install new landscapes with plantings grouped in natural, irregular masses to establish and support a continuous, integrated, and natural district-wide appearance. Landscapes and plant materials shall be maintained throughout the year.

3. LOCATION AND SCREENING OF UTILITIES AND SERVICES

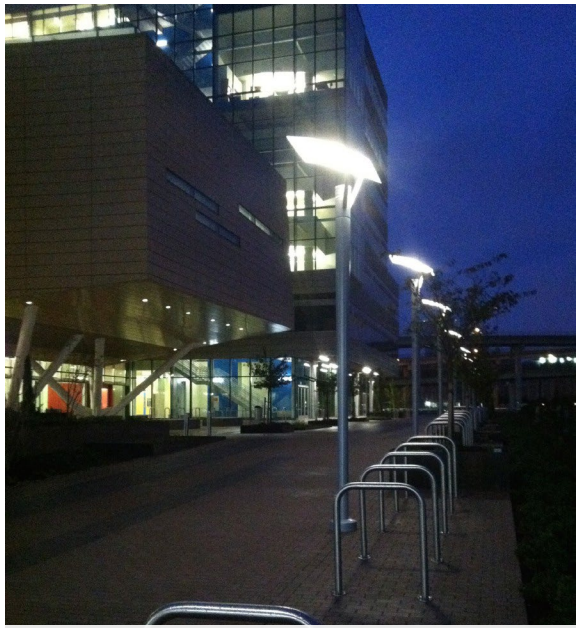
3.1 Geometry

Organize above-grade services elements, such as transformers, with the geometry of the adjacent streets or nearby site elements and buildings.

3.2 Screening materials

Walls used for screening may be constructed from stone, self-weathering sheet steel, or smooth-finished cast-in-place or board-formed concrete. Long extents of fencing should be modulated with the use of reveals and other techniques. Where required, service access gates and doors should be constructed of high-quality, durable materials that complement the design of screening walls and receive regular maintenance.

3.3 Native plant material



Where appropriate, screening walls should be enhanced with native plant material to diminish the visual mass and integrate with the landscape.

4. EXTERIOR LIGHTING

4.1 Nighttime safety

Exterior lighting should support safe access and use of sites in the evening and nighttime.

Nighttime safety
Exterior lighting should support safe access and use of sites in the evening and nighttime.

4.2 Highlighting

The selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements such as sculpture or other featured elements in the landscape will contribute to the high-quality design of the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area.~~

4.3 Flood lighting

Surface parking lots, building entries and courtyards, and loading areas and service yards should be illuminated, but the use of flood lighting is discouraged.

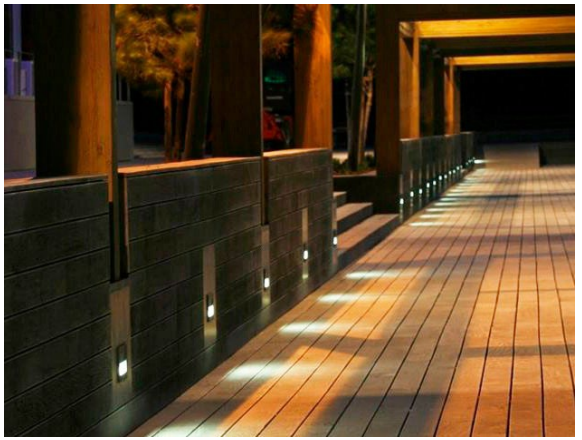
4.4 Sustainable lighting

Exterior lighting should be selected for maximum energy-efficiency, durability, and maintainability.

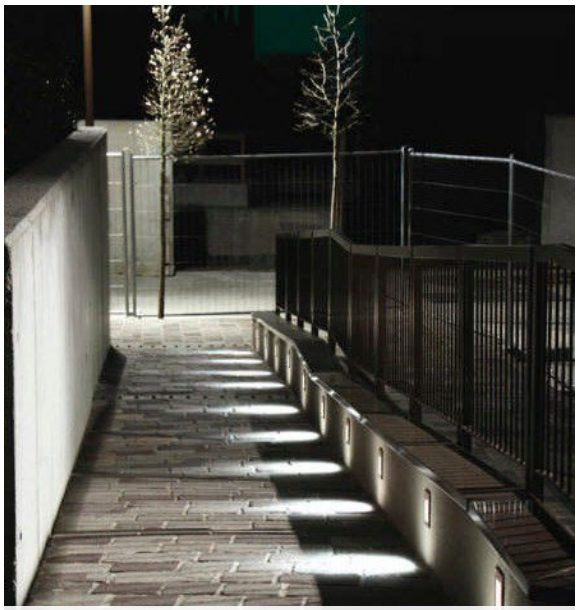
4.5 Addressing and Supporting Streets at night

Lighting plays a significant role in supporting the design character of Addressing Streets and Supporting Streets in the evening and nighttime by encouraging the selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements such as sculpture or other featured elements in the landscape frontages required along Addressing Streets.

4.6 Through Connections at night



Lighting plays a supporting role in the design character of Through Connections in the evening and nighttime by promoting safety and security along routes of pedestrian access as well as the selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements.



4.7 Fixture heights

Fixture heights of 15-20' are preferred for surface parking lots and loading areas and service yards. Through Connections, internal walks, courtyards, and paths should be illuminated with pedestrian-scaled lighting.

4.8 Night sky

Lighting shall protect night skies, and not extend beyond site boundaries. Light fixtures shall be cast downward with full cut-off shades. In-ground up-lighting should be avoided.

Highlighting
The selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements such as sculpture or other featured elements in the landscape will contribute to the high-quality design of the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area.~~

SECTION D | BUILDING DESIGN

INTENT STATEMENT

Building massing and the architectural expression of building design elements define the scale, quality, and character of the built environment. The design guidelines for buildings focus on the following elements:

- Prominent building entrance visible from an Addressing Street
- Overall building mass and bulk
- Composition of building elevations
- Roof forms
- Materials and colors
- Sustainable building design

The massive size, enormous bulk, and large surface areas of many industrial buildings represent design challenges and opportunities. Not all of the buildings developed in the ***Northwest Industrial Zone*** ~~Coffee Creek~~ will be warehouses or factories. Some will be office buildings or industrial hybrid buildings that incorporate office, research, assembly, manufacturing, distribution or warehousing. Buildings designed to support industrial or warehouse functions should have strong, simple forms and use windows and doors to create visual interest. Office buildings may have more varied forms that emphasize windows into, and views from, the office floors. While methods for reducing building bulk, mass, and scale will differ, the design for all buildings should consider architectural techniques that reduce their perceived scale along streets and adjacent to public spaces and help them blend into the district-wide landscape context for the aesthetic benefit of motorists, bicyclists, and pedestrians.

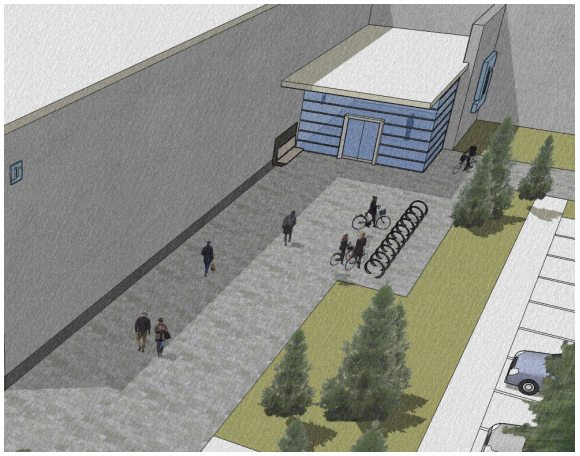
Interaction between the private enterprise inside of a building and the public contributes to the vitality of the streets in the ***Northwest Industrial Zone***. ~~Coffee Creek Industrial Area.~~ Transparency in front façade of buildings adds a subtle message that behavior in the public realm is being observed which contributes to the overall safety of the neighborhood. When passersby can sense activity that occurs inside of a building, they get a sense of people participating in their community.

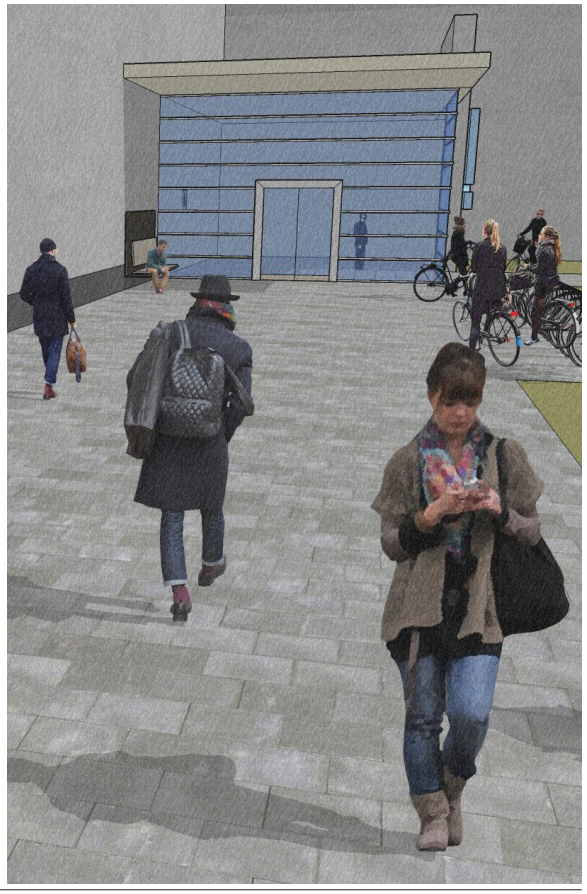
Many types of businesses incorporate programmatic functions that require and benefit from daylighting. These functions include dining areas, lobbies, lounges, fitness centers, waiting rooms, conference rooms, lunch/break rooms, as well as related outdoor seating areas. Placing these types of rooms within view of Addressing and Supporting Streets and Through Connections enhances safety of the public realm and creates a sense of connection.

Visual connection to the public realm
Many types of businesses incorporate programmatic functions that require and benefit from daylighting. These functions include dining areas, lobbies, lounges, fitness centers, waiting rooms, conference rooms, lunch/ break rooms, as well as related outdoor seating areas. Placing these types of rooms within view of Addressing and Supporting Streets and Through Connections enhances safety of the public realm and creates a sense of connection.

DESIGN GUIDELINES

Every address, business, and destination in the ***Northwest Industrial Zone*** ~~Coffee Creek~~ deserves a good entrance. Every destination is ultimately reached on foot, so making every building entrance clearly visible and fully accessible is fundamental. The intent of the design guidelines is that every primary entrance of every building will contribute to the quality and vitality of the public realm by creating a clear sense of entry.





Primary entry as significant building feature
Make the primary building entry a significant element of building design in the ***Northwest Industrial Zone*** ~~Coffee Creek.~~ Emphasize the importance of the primary building entry with elements that could include a landscaped forecourt; a wide pedestrian path from the sidewalk with special paving; accent and pathway lighting; special plantings and landscape; a prominent roof form at the building's entrance; a generous canopy of metal or glass that offers protection from the elements; a major recess in the façade; seating elements such as benches, ledges, and movable chairs; or an open, transparent building lobby or vestibule that projects beyond the body of the building. Place these functional elements on an Addressing Street or Supporting Street and make their function visible from the streets and sidewalks.

Primary entry as significant building feature
Example of prominent entrance that is visible from Addressing Street, sidewalks and parking areas. Entrance is human-scaled with transparent vestibule, weather protection and a generous pedestrian walkway.

GUIDELINES

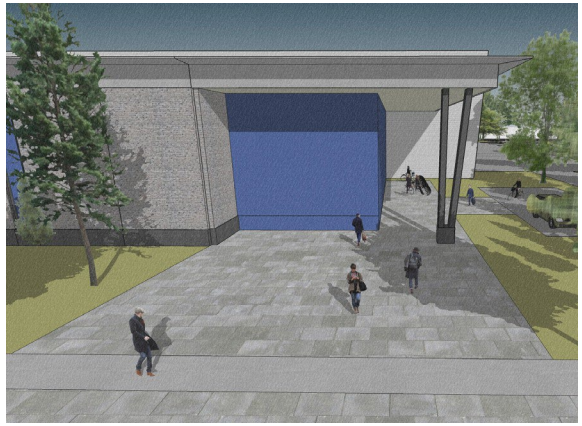
1. BUILDING ORIENTATION AND ENTRIES

1.1 Primary building entry relationship to Addressing Street

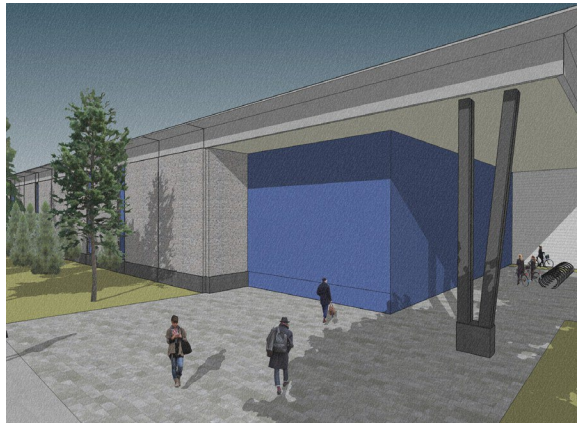
The primary building entrance shall be visible to and accessible from an Addressing Street.

1.2 Primary entry as significant building feature

Make the primary building entry a significant element of building design in the ***Northwest Industrial Zone*** ~~Coffee Creek.~~ Emphasize the importance of the primary building entry with elements that could include a landscaped forecourt; a wide pedestrian path from the sidewalk with special paving; accent and pathway lighting; special plantings and landscape; a prominent roof form at the building's entrance; a generous canopy of metal or glass that offers protection from the elements; a major recess in the façade; seating elements such as benches, ledges, and movable chairs; or an open, transparent building lobby or vestibule that projects beyond the body of the building. Place these functional elements on an Addressing Street or Supporting Street and make their function visible from the streets and sidewalks.



1.3 Visual interest and human scale



Locate the office and support spaces for warehouse and industrial buildings on the Addressing Street or Supporting Street instead of burying these functions in the interior of a large monolithic structure. The smaller-scale first floor can help soften the bulk of large buildings and add visual interest and a human scale to the public realm. This guideline may be accomplished by wrapping the high-bay industrial form with lower-scaled structures on the street; extending a discrete element of the building that contains these functions and giving this element a distinctive, contrasting architectural expression; or providing a visual break in the building mass and structure that creates an impression of two separate buildings.

2. BUILDING FAÇADES

2.1 Façade articulation

Articulate façades with a sense of depth by including design elements that create shadow lines, change color or materials, or incorporate other details that together with the required landscape breakdown large expanses of flat, unembellished surfaces.

Building entrance
Every destination is ultimately reached on foot, so making every building entrance clearly visible and fully accessible is fundamental. The intent of the design guidelines is that every primary entrance of every building will contribute to the quality and vitality of the public realm by creating a clear sense of entry.

2.2 Office building façades

Office building windows and doors offer opportunities to decrease apparent building mass and promote a sense of the human scale. Express the programmatic elements of office buildings including lobbies, conference rooms, lunch rooms, and fitness centers as distinct elements on the building exterior, especially the front façade.

2.3 Multi-story building façades

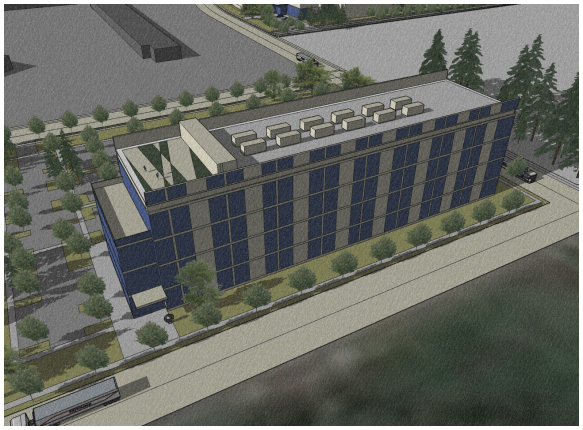
Because their building program is more flexible than industrial or warehouse projects, multi-story office buildings in the ***Northwest Industrial Zone*** ~~Coffee Creek~~ should incorporate elements such as jogs or offsets in street-facing building elevations, building step-backs at upper floor levels,
projections that create shadow lines, deep roof overhangs, major recesses in the building elevation to mark entries, or the bold expression of the building's structural system.

2.4 Addressing Street façades

Building elevations fronting Addressing Streets offer an initial impression of design quality and deserve special design attention. The design for all elevations for all buildings facing an Addressing Street shall clearly delineate a distinctive three-part design of base, body, and top. The intent of this guideline is to visually ground all buildings in the ~~Coffee Creek~~ landscape and provide a distinctive silhouette of each building against the skyline.

2.5 Addressing Street enclosure and street wall

Site and building design shall support a uniform street wall of buildings along Addressing Streets that frames the public realm and supports a unified streetscape.



3. ROOF FORMS

3.1 Fifth elevation

The roof forms of office buildings and industrial buildings in the ~~Coffee Creek~~ Industrial Area should be considered as the "fifth elevation" of the building and their design should be fully considered as one element in the overall design of any building.

3.2 Natural light

For manufacturing or warehousing facilities, the design guidelines strongly encourage the historic "saw tooth" roof form with integrated north-facing clerestory windows.

Roof forms
The roof forms of buildings should be considered as the "fifth elevation" and their design should be fully considered as one element in the overall design.
Collection, storage, and discharge of stormwater should be expressed as architectural features.

3.3 Roof edge

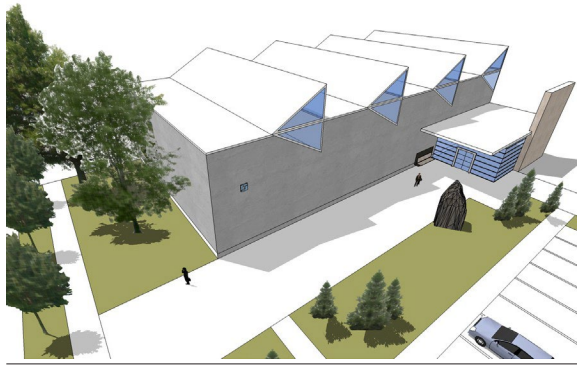
At a minimum, the roof edge of all buildings will create a distinctive profile against the sky when seen from the public realm. In the case of warehouse or factory buildings with large floor plates, the roof may not be visible from grade and other elements of the building –the primary building entry, landscape plantings, signage, or elements of the building façade will be the prominent design features.

3.4 Roof forms

Buildings in the ~~Coffee Creek~~***Northwest*** Industrial ***Zone*** ~~Area~~ are encouraged to include prominent roof forms. This guideline may be accomplished by accentuating the required building top with upturned eaves or projections, using sloped roofs, extending roofs beyond the building elevation to create deep overhangs, adding architectural elements like braces or brackets, and prominent vertical features such as towers or vertical circulation.

3.5 Incorporation of mechanical systems

Design roof forms to incorporate a building's mechanical systems and fully screen roof-mounted equipment from view from the public realm. Minimize any visual clutter of multiple, isolated roof-top equipment by grouping such elements and screening them from view with architectural elements.



3.6 Roof stormwater

Collection, storage, and discharge of stormwater from building roofs should be expressed as distinct architectural features, integrated into building design using the design of sloping roofs, gutters, scuppers, downspouts, and cisterns that collect and store rain water. Green roof technologies could be appropriate in new buildings in ~~Coffee Creek~~ ***the NWI Zone*** as an integrated element in stormwater management.

4. MATERIALS AND COLORS

4.1 ~~Coffee Creek~~*Northwest* Industrial *Zone*~~Area~~ colors

Use of authentic, durable, and sustainable materials that derive their color from the natural setting of ~~Coffee Creek~~***the Northwest*** Industrial ***Zone*** ~~Area~~ support a consistent image and identity of the industrial area as a high-quality employment hub of the City of Wilsonville. Simple, basic, industrial materials, such as board-formed or cast-in-place concrete, architectural metal panels, corrugated steel, brick masonry, and architecturally-finished concrete masonry units are encouraged.

Natural light
For manufacturing or warehousing facilities, the design guidelines strongly encourage the historic "saw tooth" roof form with integrated north-facing clerestory windows.

Roof edge
At a minimum, the roof edge of all buildings will create a distinctive profile against the sky when seen from the public realm.

4.2 Emphasize base, body, and top

Materials should be organized on each building elevation to emphasize the three zones of base, body, and top and to highlight important features such as entrances.

4.3 Muted color palette

Site features and buildings should incorporate the subtle color palette derived from the natural landscape. Larger building forms can be made less prominent by employing a muted color palette drawn from the colors prevalent on the site.

5. SUSTAINABLE BUILDING DESIGN

5.1 Solar advantage and daylight

Sustainable building practices help to create healthy communities and ecosystems. To the extent possible, building orientation should consider solar exposure and capture the energy of the sun in a passive manner. Entries and public spaces should be sited where they can benefit from daylight.

5.2 Shading

Building elevations facing south and west should incorporate deep roof overhangs, projections, or sun shading devices.

5.3 Non-mechanical light and ventilation

Introduce natural light into buildings using clerestory windows and skylights. In those areas, such as offices, operable windows, and natural ventilation is encouraged.

5.4 Minimal site alteration

Where possible, buildings, surface parking lots, drive aisles, service yards, and loading areas should merge with the existing grades, rather than significantly altering them.

Base, body, and top
Materials should be organized on each building elevation to emphasize the three zones of base, body, and top and to highlight important features such as entrances.

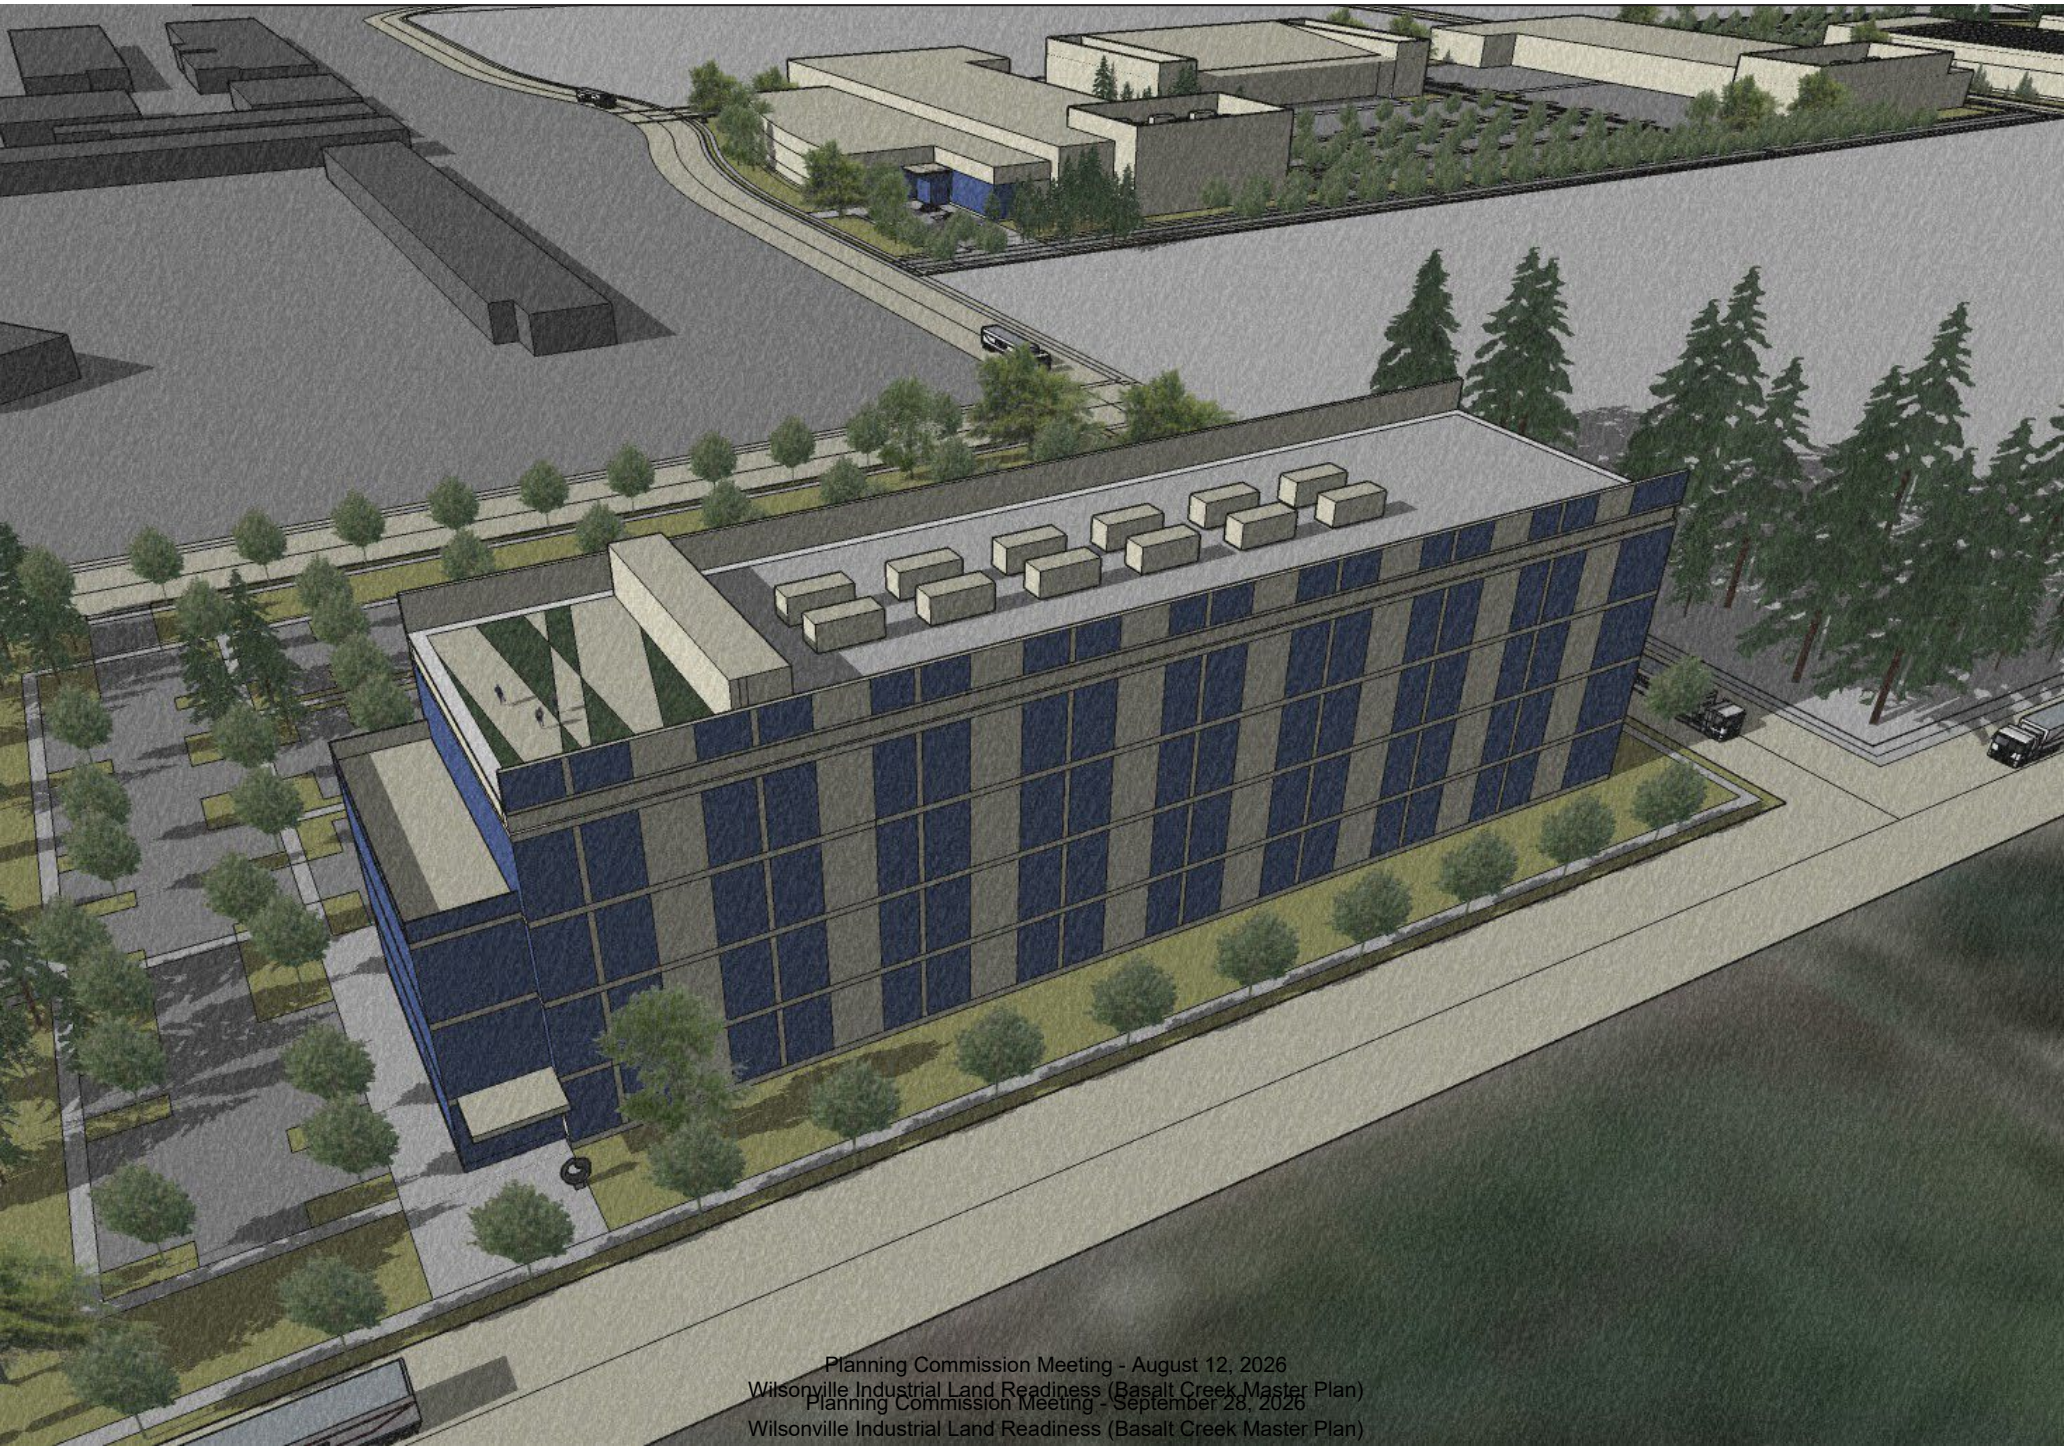
Prototypes



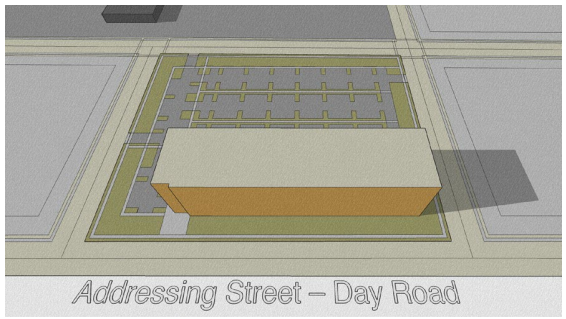
Connectivity and Street Design Patterns

Street and Path Typology

Site Design Patterns

Building Design Patterns

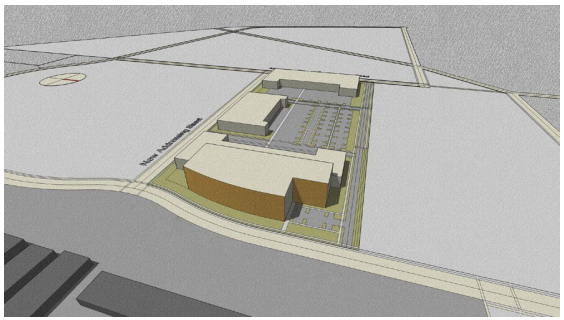
PATTERNS AND TYPOLOGIES



Overview of the Prototypes

Prototype 1

HYPOTHETICAL SITE AND BUILDING PROGRAM



- 142,000 square feet located on Day Road
- Multi-story office building
- 40,000 square feet for office, research, lab, fabrication
- Building footprint of 20,000 square feet

Prototype 2

HYPOTHETICAL SITE AND BUILDING PROGRAM

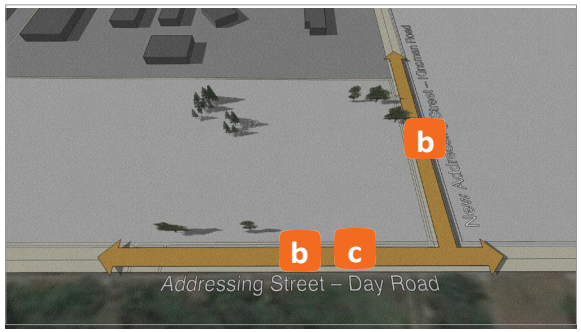
- 700,000 square feet located on Garden Acres Road
- Industrial / warehouse building with loading docks and service bays
- 400,000 square feet for warehouse, office

Prototype 3

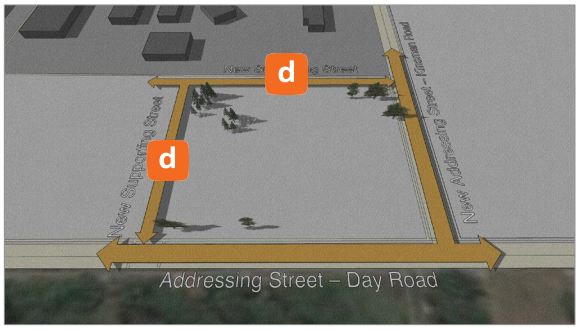
HYPOTHETICAL SITE AND BUILDING PROGRAM

- Existing 525,000 square foot industrial site on Grahams Ferry Road
- Combines existing structures with new development
- Hypothetical: 261,000 square feet for industrial fabrication and office

Planning Commission Meeting - August 12, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)



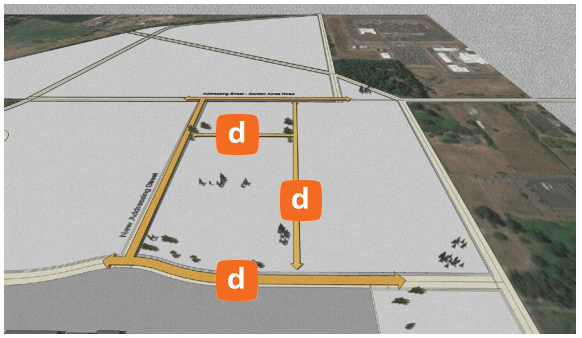
Connectivity and Street Design Patterns



A.1.1 CONNECTION SPACING

The intent for all streets and paths in the ***Northwest Industrial Zone*** ~~Coffee Creek~~ is to create an integrated district with a robust, resilient, and connected network that supports economic and environmental sustainability. There is a fixed structural framework of Addressing Streets that provides access from within Coffee Creek to the rest of the region. That framework is intended to support a well-integrated and fine-grained system of streets and paths where a multi-use path might be the connecting link between an Addressing Street and a Supporting Street or Through Connection. The design intent is to maximize connectivity –of all kinds– to the extent feasible.

- Potential ~~industrial~~ development site
- b Location of nearest existing or planned Addressing Street
- c Priority Addressing Street
- d Location of Through Connections



Prototype 1

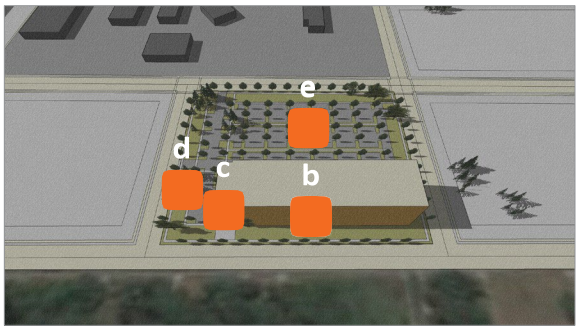
Site Design Patterns



SECTION C. INTENT STATEMENT

The primary building entry is a significant element of building design in the ***Northwest Industrial Zone*** ~~Coffee Creek.~~ The design guidelines recommend that the primary entrance for all buildings front on an Addressing Street. This is not a requirement of the Form-based Code; an entrance on a Supporting Street or Through Connection is acceptable provided the entry is clearly visible from the Addressing Street and a clear public route to the entry is provided. Emphasize the importance of the primary building entry with glass, canopies, signage, public art, landscaping, and lighting.

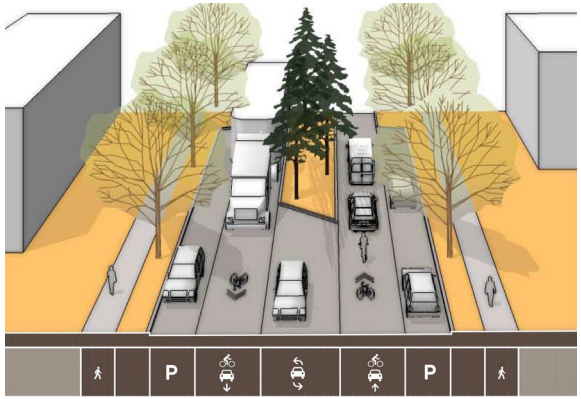
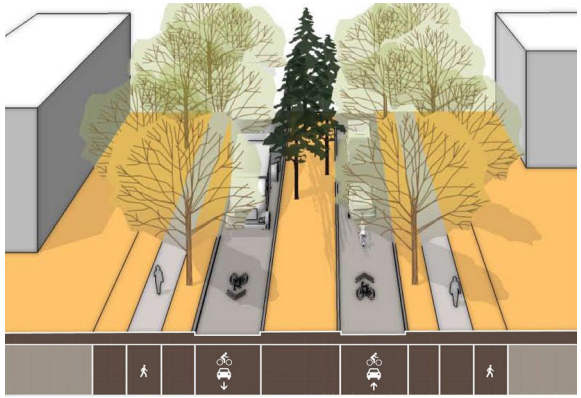
Supporting Street Typology

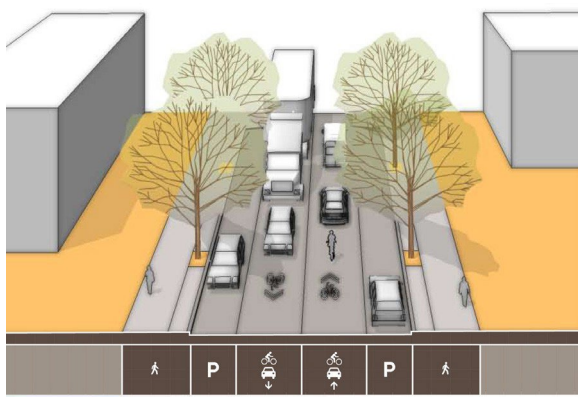


Supporting Street—Possible street section and plan



Minimal

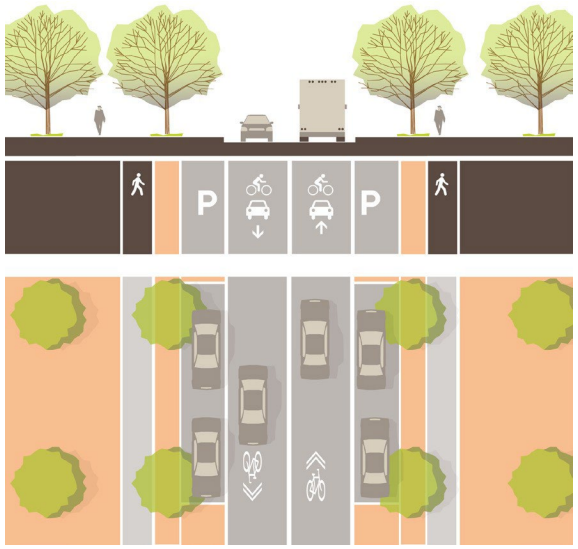
- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in continuous planted park strip
- ☐ Planted median
- ☐ Left turn lane
- ☐ On-street parking



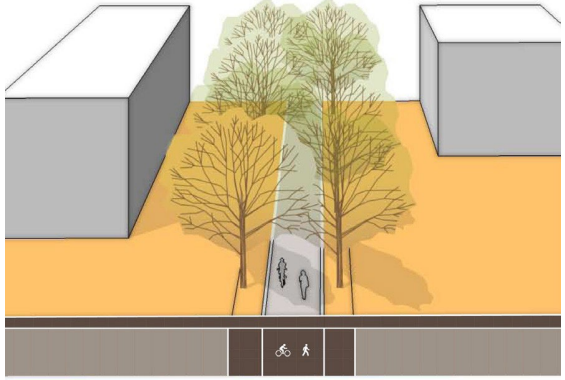
Monumental

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in continuous planted park strip
- ☑ Planted median
- ☑ Left turn lane
- ☑ On-street parking

Park-like character



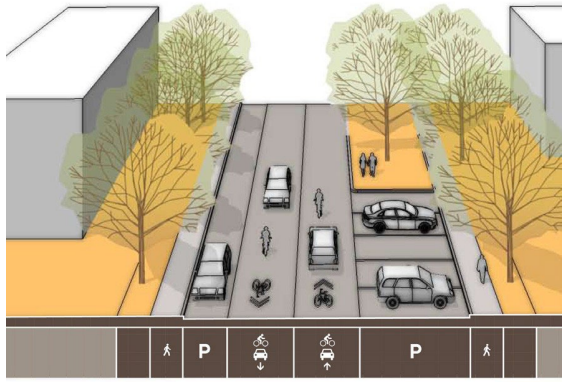
- ☑ Vehicular access
- ☑ Pedestrian access—sidewalks
- ☑ Bicycle access—shared lane
- ☑ Street trees—in continuous planted park strip
- ☑ Planted median
- ☐ Left turn lane
- ☐ On-street parking



Urban character

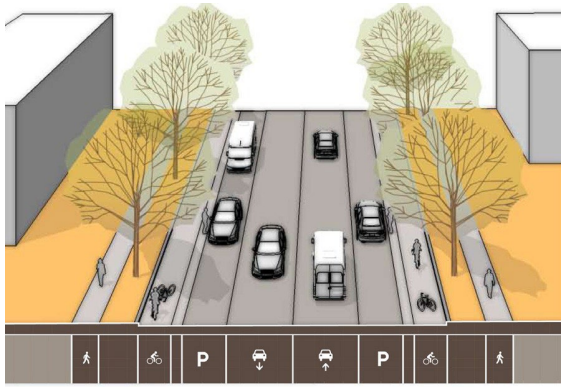
- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in tree wells
- ☐ Planted median
- ☐ Left turn lane
- ☑ On-street parking

Through Connection Typology



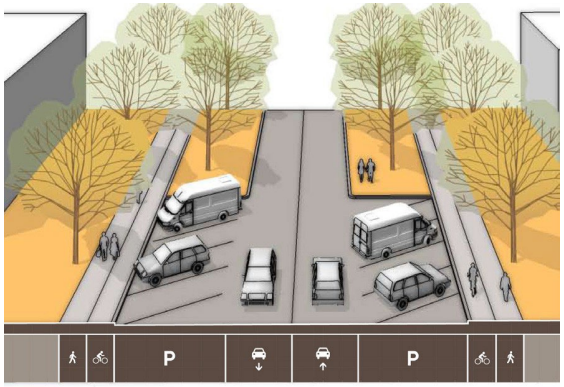
Through Connection—Possible street section and plan

Minimal bike-ped



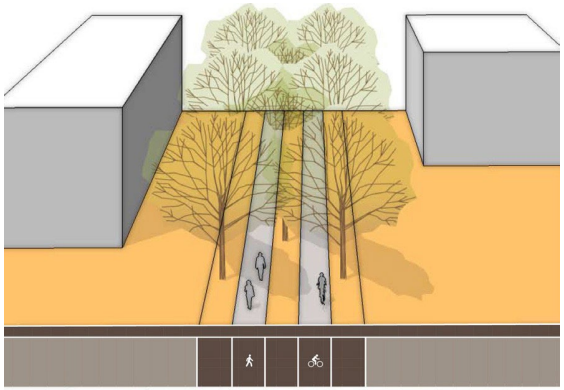
- ☐ Vehicular access
- ☑ Pedestrian access—in multi-use path
- ☑ Bicycle access—in multi-use path
- ☑ Street trees—in continuous planted park strip
- ☐ Pocket parks
- ☐ Planted median
- ☐ On-street parking

Park-like



- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in continuous planted park strip
- ☑ Pocket parks—in parklets*
- ☐ Planted median
- ☐ On-street parking—head-in

*A "parklet" is a pocket park within the parking width



Bike priority

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalk
- ☑ Bicycle access—in buffered bike lane
- ☑ Street trees—in continuous planted park strip
- ☐ Pocket parks
- ☐ Planted median
- ☑ On-street parking—parallel

Maximum parking

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks

Addressing Streets

Existing and planned public streets within the Regulating Plan Area are called Addressing Streets and include Boones Ferry Road, Cahalin Road, Clay Street, Day Road, Clutter Street, Grahams Ferry Road, and Garden Acres Road. Supporting Streets and Through Connections have design options and flexibility as depicted above. Addressing Street cross-sections will be designed consistent with the Wilsonville Transportation System Plan and Public Works Standards. The Basalt Creek Parkway and SW Greenhill Lane are existing or planned streets, but not Addressing Streets.

Prototype 1

B. 2.2 EXISTING TREE GROVES AT POINTS OF ACCESS

Incorporate elements such as existing stands of native trees to emphasize points of site access and building access.

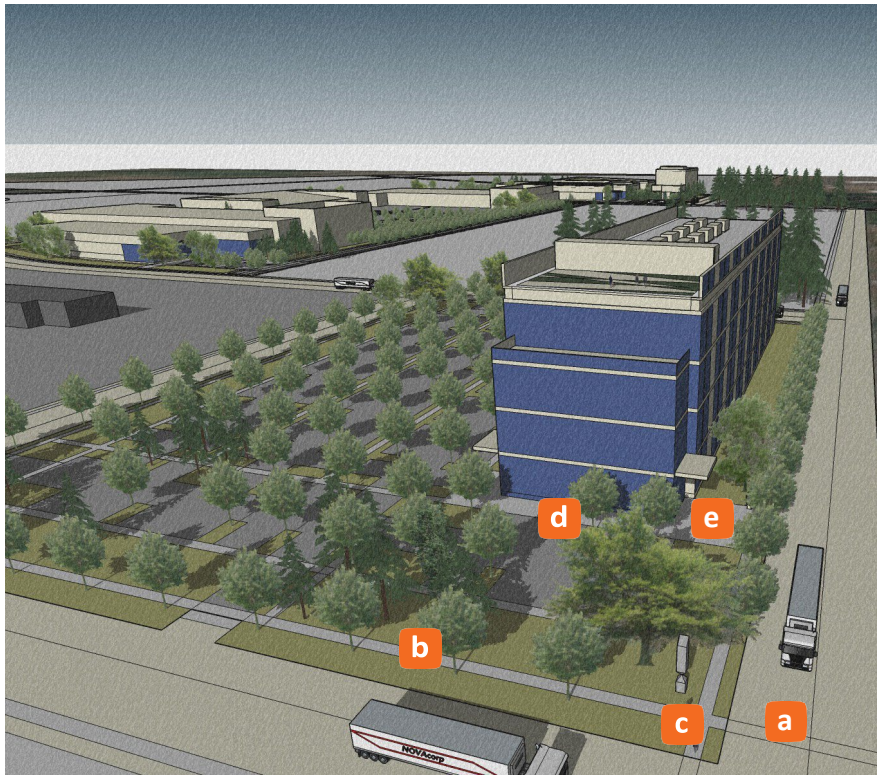
C. 1.4 PARCEL ACCESS FROM AN ADDRESSING STREET

Where parcel access connects the primary building entrance to the Addressing Street extend the design, character, scale, and materials of the entry to the public sidewalk.

C. 1.10 FRONT YARDS THAT CONTRIBUTE TO THE PUBLIC REALM

Design the landscape in front yards along Addressing Streets to result in an attractive contribution to the quality of the public realm.

SECTION D. INTENT STATEMENT



Interaction between the private enterprise inside of a building and the public contributes to the vitality of the streets in the ***Northwest Industrial area.*** ~~Coffee Creek Industrial Area.~~ Transparency in front façade of buildings adds a subtle message that behavior in the public realm is being observed which contributes to the overall safety of the neighborhood. When passersby can sense activity that occurs inside of a building, they get a sense of people participating in their community.

D. 1.2 PRIMARY ENTRY AS SIGNIFICANT BUILDING FEATURE

Make the primary building entry a significant element of building design in ***the Northwest Industrial Zone.*** ~~Coffee Creek~~. Emphasize the importance of the primary building entry with elements that could include a landscaped forecourt; a wide pedestrian path from the sidewalk with special paving; accent and pathway lighting; special plantings and landscape; a prominent roof form at the building's entrance; a generous canopy of metal or glass that offers protection from the elements; a major recess in the façade; seating elements such as benches, ledges, and movable chairs; or an open, transparent building lobby or vestibule that projects beyond the body of the building. Place these functional elements on an Addressing Street or Supporting Street and make their function visible from the streets and sidewalks.

D. 2.5 ADDRESSING STREET ENCLOSURE AND STREET WALL

Site and building design shall support a uniform street wall of buildings along Addressing Streets that frames the public realm and supports a unified streetscape.

a Primary Addressing Street

b Existing tree groves at points of access

c Front yards that contribute to the public realm

d Enhanced public realm safety through interaction of public and private spaces

e Primary building entry relationship to Addressing Street

f Primary entrance

Prototype 2

A. 2.1 PARK-LIKE CHARACTER

Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a planting strip landscaped with shade trees. Addressing Streets may also include a planted central median.

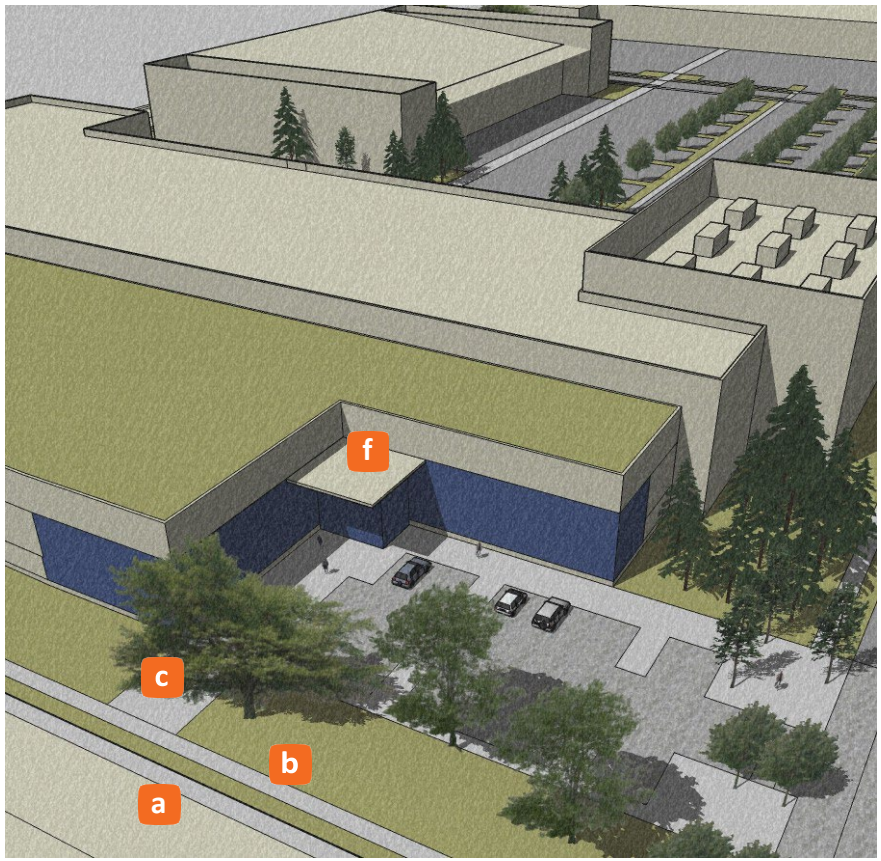
A. 2.3 PROMINENT ADDRESS

Design Addressing Streets to serve as the "front door" or "address" for new buildings and development. New Addressing Streets shall include sidewalks on both sides that provide safe, continuous access for pedestrians to all abutting sections of the primary street network of Addressing Streets. Unless interrupted by another Addressing Street or a Supporting Street, the sidewalks shall be protected by a continuous landscape strip planted with shade trees.

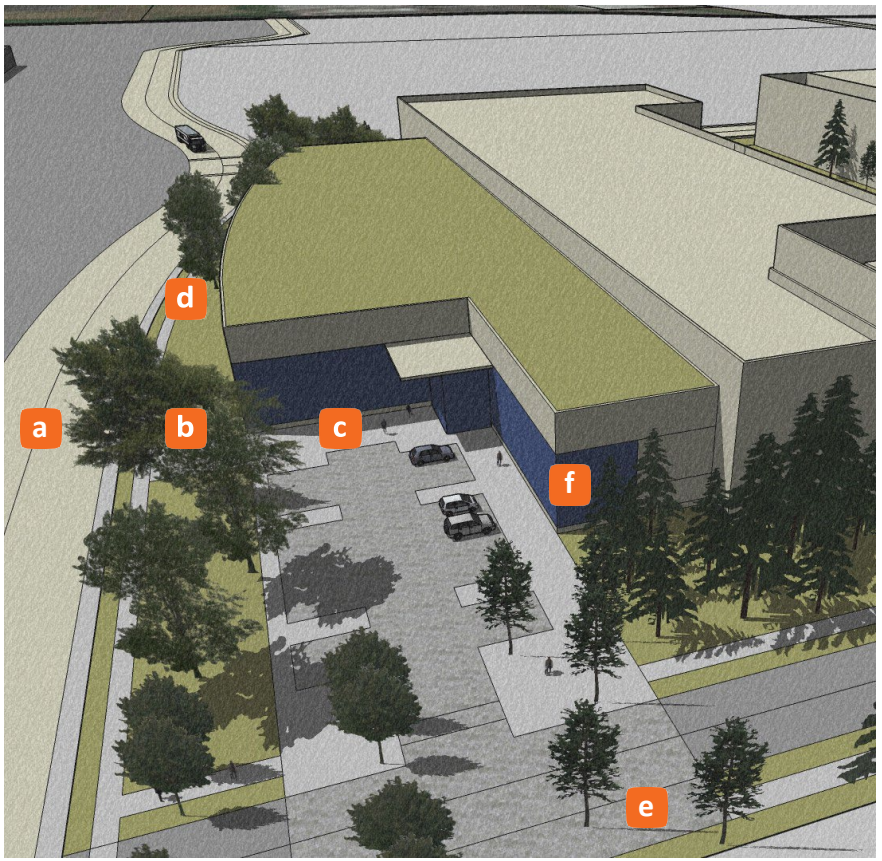
A. 2.4 ENCLOSED PUBLIC REALM

Orient building massing, form, architecture, and programmatic function along Addressing Streets to help define the public realm, create a distinctive enclosure of the public realm, and support the sense of place in the ***Northwest Industrial Zone.*** ~~Coffee Creek.~~

A. 3.3 EXTENSION OF PUBLIC REALM



Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.



SECTION C. INTENT STATEMENT

Trees help to define place. Whether individually, or in groves of native species, trees enhance the public realm by giving context and scale to the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area.~~ Landscape planting in front, side, and rear yards and as screening for parking lots, service drives, and service enclosures gives form and defines the public realm and parcels. Landscape design, installation, and maintenance helps to define the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area~~ and to diminish the large scale of industrial buildings. Landscaping also helps direct people to building entries. The native plant materials are climate adaptive, have low water and maintenance requirements, and visually blend with adjacent, undisturbed landscapes. Native trees should be preserved and employed as the visual anchors of new landscapes.

D. 1.3 VISUAL INTEREST AND HUMAN SCALE

Locate the office and support spaces for warehouse and industrial buildings on the Addressing Street or Supporting Street instead of burying these functions in the interior of a large monolithic structure. Expressing the smaller-scale of these programmatic functions on the ground floor can help soften the bulk of large buildings and add visual interest and a human scale to the public realm. This guideline may be accomplished by wrapping the high-bay industrial form with lower-scaled structures on the street; extending a discrete element of the building that contains these functions and giving this element a distinctive, contrasting architectural expression; or providing a visual break in the building mass and structure that creates an impression of two separate buildings.

a Primary Addressing Street

b Addressing Street park-like character

c Addressing Street as front door

d Enclosed public realm

e Native trees in the setback

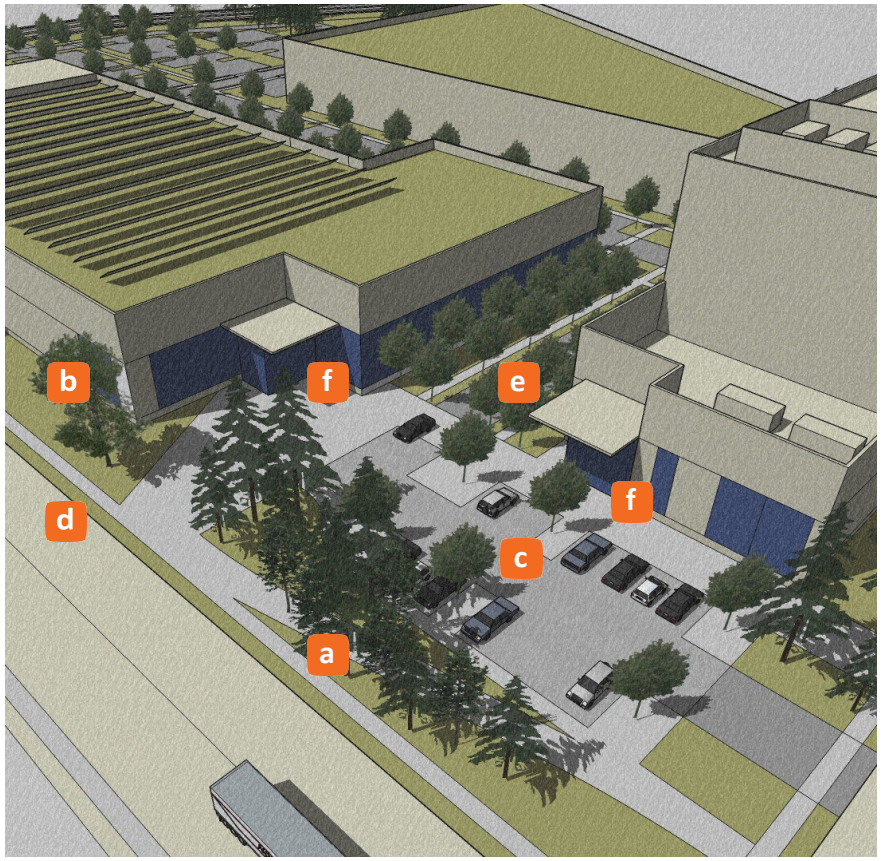
f Visual interest and human scale

Prototype 3

B. 1.6 TREE PRESERVATION WITHIN SETBACKS

Whether individually or in groves of native species, preserve trees within the setbacks of the development, particularly when they occur within the setback of an Addressing Street, or a Supporting Street that serves as the development's primary access street.

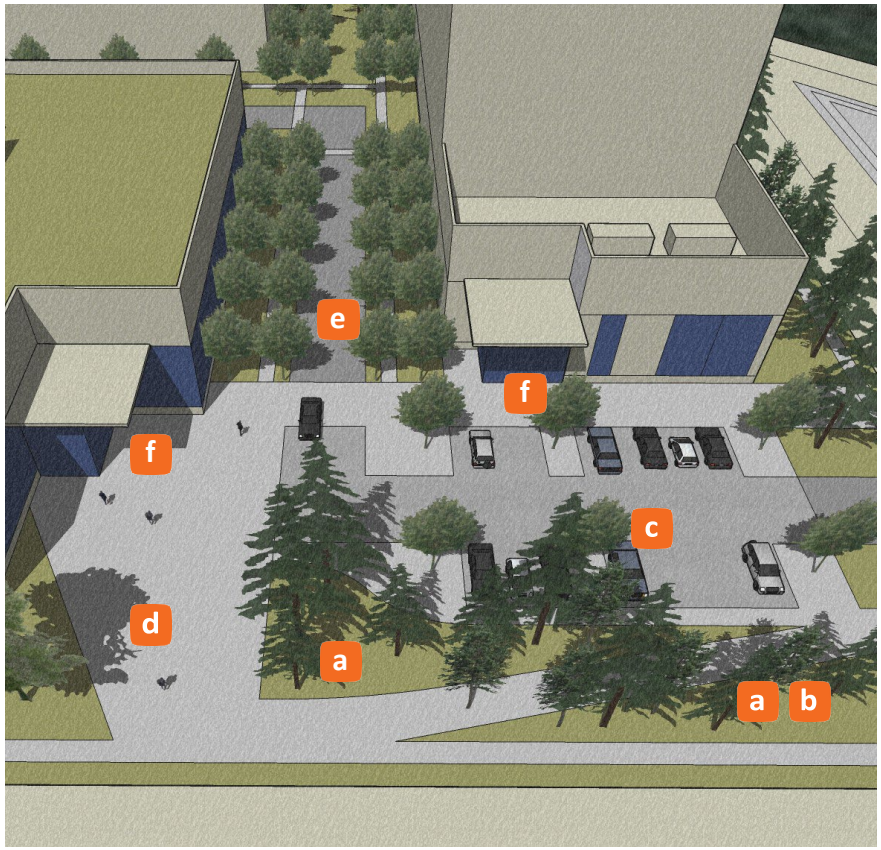
B. 1.7 INFORMAL PARK-LIKE LANDSCAPING



The park-like character of the design of the Addressing Streets should be complemented by landscaping around buildings, parking lots, and open space that reflects the informal, natural, and original landscape that preceded development and persists in places across the site.

SECTION C. INTENT STATEMENT

Surface parking is permitted in the front yard setback for development along Addressing Streets with limitations. Surface parking lots are limited in scale and designated for short-term parking for visitors, people with disabilities, and deliveries only. The design guidelines are intended to establish the character for surface parking lots in a manner that supports the City's goals for pedestrian convenience, comfort, and safety.



C. 1.1 DISTINCTIVE IDENTITY OF VISITOR ARRIVAL POINT

Where parcel access is also the primary automobile access to a building for visitors, use landscaping and signage to create a distinctive sense of arrival.

C. 1.3 FORMAL LANDSCAPE DESIGN THAT CONTRASTS

Design guidelines for the landscape of front yards along Addressing Streets encourage a natural, irregular pattern of native plant materials. Along parcel access routes consider breaking this informal character of the landscape frontage with design and plant materials that are more formal, regular, and ornamental.

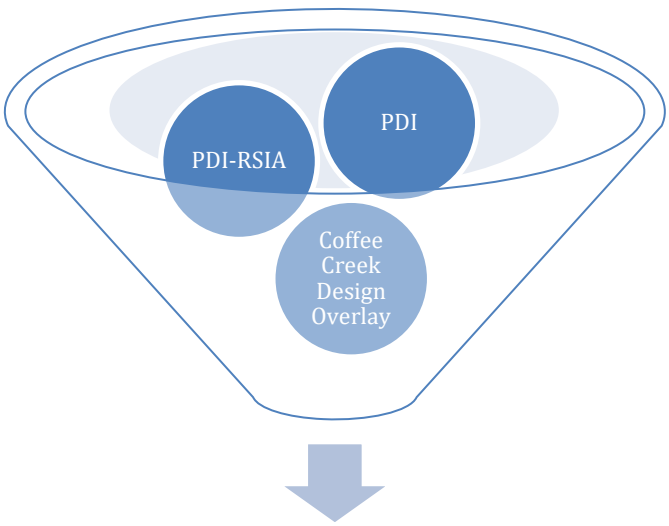
D. 1.1 PRIMARY BUILDING ENTRY RELATIONSHIP TO ADDRESSING STREET

The primary building entrance shall be visible to and accessible from an Addressing Street.

- **a** Tree preservation within setbacks
- **b** Informal park-like landscaping
- **c** Limited surface parking in the front setback
- **d** Distinctive identity of visitor arrival point
- **e** Formal landscaping that contrasts
- **f** Primary entrance

WILSONVILLE OREGON

Attachment 4



Planning Division Memorandum

From:	Chris Myers, Senior Planner; Amy Maag, Development Engineering Manager
To:	Wilsonville Planning Commission
Cc:	Miranda Bateschell, Planning Director; Zach Weigel, City Engineer
Date:	August 5, 2026
RE:	Response to Schnitzer Properties Comments Re: NWI Code Amendments

The Northwest Industrial (NWI) Zone standards are the product of the Coffee Creek and Basalt Creek planning processes and reflect policy direction provided by the Planning Commission and City Council for more than a decade, including most recently through the Economic Development Strategy and Basalt Creek Master Plan processes conducted over the past year and a half. The standards are intended to support a well-designed and uniquely attractive business community characterized by cohesive, high-quality development, a consistent design character, and a range of industrial and employment opportunities. Applying these standards consistently throughout the district is essential to carrying out the long-term vision for the northwest Wilsonville industrial area (Basalt Creek, West Railroad, and Coffee Creek industrial areas). This memorandum provides context regarding the differences between the amendments requested to the NWI Zone by Schnitzer Properties and the foundation and rationale underlying the City's existing policies.

What is the NWI Zone?

It is important to emphasize that the proposed NWI Zone does not represent a fundamental change in the City's approach to industrial development. The NWI Zone is not a set of new standards. At its core, the Coffee Creek Design Overlay District (CCDOD) has been renamed the NWI Zone to reflect its application to both the Coffee Creek Industrial Area and the Basalt Creek Planning Area. Planning Commission and City Council feedback last year was clear: development in Basalt Creek should be consistent with development across Day Road in Coffee Creek.

Although limited updates are proposed to incorporate modern industrial uses (e.g. fulfillment centers) and distinguish use allowances among the subdistricts, the underlying development standards remain the same. The NWI Zone combines three well-established, and highly successful, portions of City Code - Planned Industrial Development (PDI), PDI-RSIA (Regionally Significant Industrial Area), and the CCDOD - consistent with the direction provided by the Planning Commission and City Council over the past two years.

Policy Foundation & Purpose

When the CCDOD was established, the intent was to mimic well-designed, highly successful industrial areas in the City (e.g. 95th Avenue). Where a broad range of employment uses are allowed, but an overall sense of a business district is formed by good design. There is flexibility for each business as it relates to business needs and site layout, but there are also design standards that ensure an overall positive experience in the public realm rather than having this differentiate from property to property. When Wilsonville adopted the CCDOD, it also put itself in a unique position among cities by providing a streamlined clear and objective administrative review process for industrial development. Clear and objective standards are not required in the State of Oregon for commercial and industrial development. The City wanted to be business friendly by providing a faster, more certain process for projects that met the desired vision for development in the area.

The purpose of clear and objective standards is not to establish criteria for all developments a city may consider or approve. The intent of creating clear and objective standards is to set the ideal for development the city wants, and then to streamline the process into an administrative review, because it is ideal. When it is not the ideal and needs further assessment, then it goes through a different process. In Wilsonville's case, to the Development Review Board. For example, ideally the city wants freight and vehicle traffic separated for safety and circulation reasons. Thus, the clear and objective standards require freight and vehicle traffic to be separated. However, if an applicant wants to combine access, they can seek a waiver. This is the purpose of a two-path review process.

Role of the Two-Path Review Process

The availability of an alternative design or waiver process is important to the NWI framework. It allows the City to consider legitimate site-specific constraints and opportunities without converting one applicant's preferred site plan into the standard for the entire district. Where a site's size, topography, operations, or configuration warrants a different design response than what is required by clear and objective code, the proposed, alternative design can receive approval through the waiver process (e.g. a large site under single ownership, which can propose alternatives to internal connectivity). This is determined at the time a development proposal is reviewed. As long as the applicant can provide findings that the alternative does not supersede the broader public objectives established through the City's legislative planning process, but rather meets them through a different approach.

In reviewing any such request, the City's DRB considers whether the alternative:

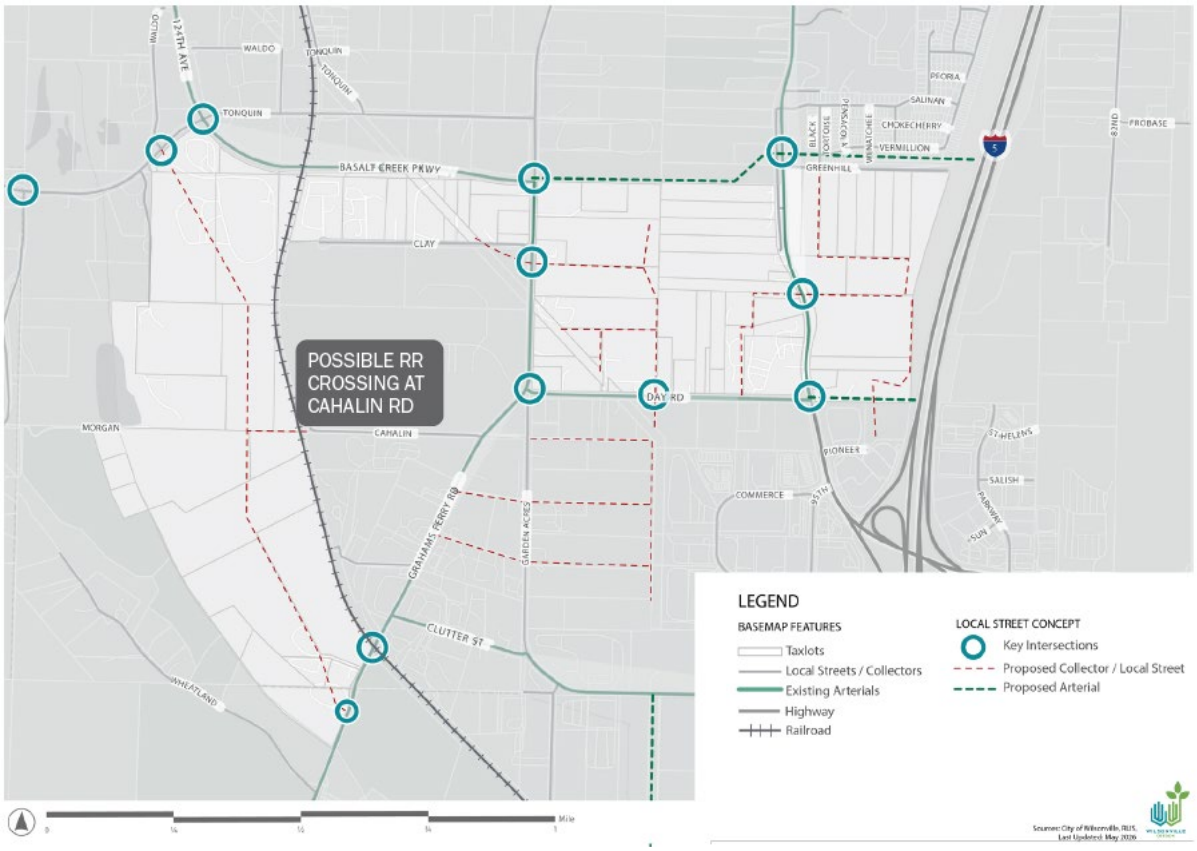
- meets the purpose of the standard to an equal or better degree;
- preserves multimodal connectivity and access to surrounding properties;
- supports safe and functional freight, employee, and visitor circulation;
- maintains the intended relationship among buildings, entrances, parking, landscaping, and the public street; and
- is supported by evidence specific to the site and proposed use.

Successful Application of the Policies

After the construction of Garden Acres Road, four development projects are now built or underway in the Coffee Creek Industrial Area under the existing code standards of the CCDOD (the same as the proposed NWI Zone). All four previously approved projects received land use approval through a combination of administrative review for elements meeting clear and objective standards and DRB review for requested waivers.

In 2024, staff conducted a comprehensive review of the CCDOD and made updates recommended by the Planning Commission and City Council. This modified several clear and objective standards that previously would have required a waiver. In March 2026, the City Council adopted a new Economic Opportunities Analysis and Economic Development Strategy, which reaffirmed the City's existing policies as supporting successful employment opportunities and business growth, and reaffirmed the desire to apply the CCDOD in Basalt Creek. The result is the proposed NWI Zone. Over the course of 2025 and 2026, the Council, informed by the Planning Commission, held multiple work sessions, including a joint work session in October 2025. Through this process, Council provided direction on a preferred master planning concept and the NWI zoning approach (in particular: October 6 and November 17, 2025, and April 20, 2026, for West Railroad; May 19, June 2, and August 4, 2025, and December 2, 2024 for BCPA).

Relevant Policy Objectives

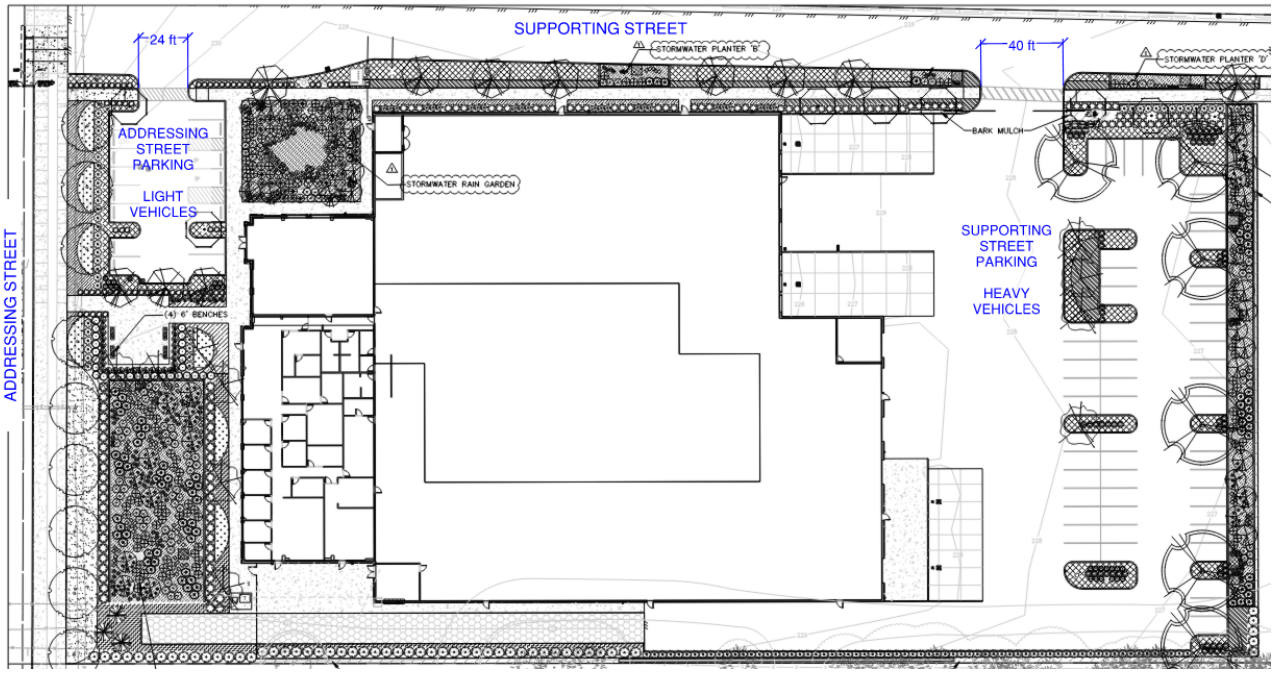


The principal policy objectives relevant to the Schnitzer requests are:

- A connected street and pathway network that supports freight, automobiles, transit, bicycling, and walking while maintaining access to adjacent and future development.
- An identifiable public realm in which buildings, primary entrances, landscaping, and pedestrian routes help shape the street edge.
- Parking and circulation standards that support industrial operations without allowing surface parking and truck functions to dominate addressing streets.
- Cohesive, high-quality site, landscape, and building design implemented through standards that can be administered consistently.Responses to Requested Amendments

Responses to Requested Amendments

Connectivity and connection spacing *(Proposals 1 and 14)*
The adopted standard is for 600 feet maximum between internal connections, or 1,000 feet maximum if located along Day Road. These requirements are consistent with transportation network planning standards utilized by jurisdictions across the country and match access spacing requirements applied to all roadways within Wilsonville as identified in the Wilsonville Public Works Standards. These access standards help ensure that vehicle capacity along the City's major roadways is maintained and vehicle travel delay is minimized, while maintaining internal site access and circulation via the minor streets.



Per the Local Street Concept Map (Figure 13 of the Basalt Creek Master Plan) shown below, the access spacing requirements ensure that each existing tax lot is provided internal access and circulation through the supporting streets, limiting access to the City's major streets at specific intersections preserving roadway capacity and minimizing vehicle delay. Comparing Highway 99 through Tigard, where access on the major street is not limited and very little internal circulation is provided to that of the Basalt Creek Parkway, and it is easy to see the effect access spacing has on vehicle travel time and capacity. These access spacing requirements implement the City's direction for a connected industrial district and continued access to adjacent and future development.

A 1,400-foot spacing standard or developer determined connectivity standard, as requested by Schnitzer Properties, would substantially weaken that framework. This modified standard would result in elimination of some of the internal supporting streets and require the City to authorize direct access to major streets, such as Day Road, Graham's Ferry, and Boones Ferry, as the City cannot deny access to a public street as part of a development. These additional access points along major streets decrease roadway capacity and increase vehicle delay, impacting the City's ability to move traffic efficiently through the City.

However, a site-specific alternative may be considered through the waiver process if the applicant demonstrates that the proposal for greater block lengths still maintains safe and efficient freight and vehicle circulation, pedestrian and bicycle connectivity, emergency access, access to transit, and connections to adjacent properties and the surrounding transportation network.

Driveway widths *(Proposal 2)*
Prior revisions to the proposed NWI standards largely address the operational concern by allowing driveways up to 40 feet wide on Supporting Streets where needed to accommodate freight and other heavy-vehicle movements. Consistent with direction from the Planning Commission and City Council, the street hierarchy is intended to minimize freight ingress and egress on Addressing Streets, which serve as the district's primary building frontages and pedestrian-oriented streets, and instead direct those movements to Supporting Streets designed to accommodate wider driveways and service access. The present framework can therefore accommodate necessary freight movements without making a 40-foot driveway the standard for combined access points.

Example site plan to illustrate driveway width standard, Precision Countertops

Pedestrian connection width *(Proposal 3)*
The eight-foot width is an intentional multimodal design standard that provides a clear, comfortable connection from the street to the primary building entrance and bike parking area. A reduction to six feet, as requested by Schnitzer Properties, is not supported as a district-wide change; unusual site conditions may be considered through the waiver process.

Parking along Addressing Streets *(Proposals 4 and 5)*
Limiting parking between an Addressing Street and a building, and locating buildings closer to the street, were central policy objectives to the original CCDOD design standards and recently

confirmed by the Planning Commission and City Council. Parking location and design was discussed substantially during the CCDOD evaluation in 2023-2024 with policymakers deciding to eliminate the parking bay limitations and require 50% of spaces to be designated for short-term uses. It was decided at that time not to increase the number of spaces allowed by-right so that larger parking areas are reviewed through a waiver process to ensure additional design or landscaping can mitigate the impact of the larger parking area fronting the primary addressing street. Increasing the allowance to 28 spaces per entrance, or up to 120 spaces, as requested by Schnitzer Properties, would materially change the intended public realm and divert substantially from the direction of policymakers from 2014 to present. Alternatives are reviewed through the waiver process. A project in Coffee Creek received a waiver to locate all parking along the frontage of an addressing street under conditions of approval requiring additional landscaping and design.

Retaining-wall height, materials, and design *(Proposals 6, 7 and 8)*
The current Development Code limits landscape retaining walls visible from adjacent streets to 48 inches in height. In 2024, the Code was amended to allow retaining walls up to 60 inches when they are visible only from within the development site and not from adjacent streets. Schnitzer Properties proposes allowing retaining walls up to 60 inches more broadly and expressly authorizing modular or ultra-block wall systems and unspecified “other techniques.”

In response to the topographic conditions found throughout the Basalt Creek Planning Area, staff has revised the proposed NWI standards to allow retaining walls up to 60 inches in height, including when visible from adjacent streets. This district-wide revision addresses Schnitzer Properties’ requested height increase while maintaining a clear and objective standard applicable to all NWI properties. Staff does not support expressly authorizing modular or ultra-block systems or using open-ended phrases such as “other techniques” without corresponding, measurable design standards that are clear and objective. These additions could result in retaining walls that do not support the cohesive, high-quality development character intended for the district.

Primary entrances and visibility *(Proposals 9 and 10)*
The requirement that primary entrances relate visibly and directly to an Addressing Street is fundamental to the form-based design approach and pedestrian-oriented public realm. The requested language by Schnitzer Properties would weaken that relationship and create uncertainty for buildings with multiple entrances.

Front, side, and rear setbacks *(Proposals 11, 12 and 13)*
The adopted setback standards are consistent with the long-established policies in the PDI and PDI-RSIA Zones and those established in the form-based design approach of the CCDOD. These regulations are consistent with industry standards for industrial development. Site-specific designs, buildings, or operational constraints that justify reduced setbacks, as requested by Schnitzer Properties, are more appropriately evaluated through the alternative, waiver process.

Permitted uses and use restrictions *(Proposal 15)*
Under the proposed NWI Zone, fabrication, industrial services, outdoor storage, general storage, and cold storage are allowed only in the subdistricts and under the limitations identified in the use table. These distinctions are intended to maintain the specific employment and development character established for the Coffee Creek, High-Tech Employment, and Light Industrial subdistricts. Schnitzer Properties proposes allowing these uses outright throughout the NWI Zone without the proposed subdistrict specific restrictions. Applying the same permissions across all subdistricts would eliminate important distinctions among them, confirmed as desired by Council over the past eighteen months, and could allow storage-oriented and other lower employment uses in areas intended for higher density employment and higher quality development. Staff recommend retaining the proposed use framework established through this planning process.

Building orientation on shorter frontages *(Proposal 16)*
The request by Schnitzer Properties is to allow buildings with frontages under 650 linear feet on Addressing Street to face any direction. This would undercut the primary-frontage and building-orientation standards, which encourage a more visible, inviting, and attractive employment district. Having consistent design standards throughout the district promotes the identity and long-term performance of the industrial area.

Summary
Staff has met with representatives of Schnitzer Properties several times, including twice in 2026, to discuss the concerns presented to the Planning Commission. Staff recognize Schnitzer Properties' interest in maximizing usable industrial land and accommodating contemporary, large-format industrial buildings. Large-format industrial development is not prohibited by the City's Development Code. However, the scale and configuration presented in Schnitzer Properties proposal exceed the limitations established by the clear and objective (ideal) standards and therefore would not qualify for the administrative staff review process.

The Council's vision in the northwest Wilsonville industrial area is for a connected, multimodal employment district characterized by a range of industrial uses, and an interconnected street and block network based on industry standards. Because the proposal departs from the clear and objective standards that policymakers feel comfortable being approved through an administrative review process, it would require review through the waiver process by the Development Review Board. That process provides an appropriate mechanism for considering greater flexibility based on site-specific evidence while preserving the district-wide standards and broader policy objectives established for the planning area.

Stakeholder Engagement

The Basalt Creek Concept Plan review process (2014-2019) included comprehensive community involvement to gather input. The CCDOD (2014-2017) engagement process included an Open House and Technical Advisory Committee, which included developers, brokers, and industry professionals. Review of the CCDOD (2023-2024) included interviews and focus groups with recent

applicants and their consultant teams to inform the evaluation and provide input on the CCDOD process and standards to inform the Code amendments. During the current project (2025-2026), ECONorthwest focused on gathering input from Business Oregon, Greater Portland Inc., property owners, and developers (including Schnitzer Properties and Johnson Economics), to understand demand for industrial land in Wilsonville as well as property owners' current and future plans for their property, to inform the market and site suitability analyses and determine appropriate zoning standards. Staff also mailed letters to property owners with limited, supportive feedback.

Conclusion

Staff therefore recommend retaining the proposed NWI connectivity, site-design, building-design, setback, and orientation clear and objective standards. The standards being pulled into the NWI Zone have been reviewed and confirmed twice in the past three years by Council's specific direction and feedback on the desired outcomes for employment and industrial growth. The only limited refinement supported is consideration of a 60-inch retaining wall height where it can be written as a clear, objective, and generally applicable response to district topography. All other site-specific concerns included in their requests should be evaluated through the alternative design and waiver process during development review.

The proposed NWI Zone and associated Basalt Creek Master Plan (BCMP) materials will return to the Planning Commission for a work session on August 12, 2026, followed by a City Council work session on August 17. The Planning Commission public hearing is scheduled for September 9, with the City Council public hearing scheduled for October 5. The purpose of the BCMP is to outline desired land uses, necessary infrastructure, and apply the necessary zoning to make the area ready for development. Council has directed staff to develop the BCMP over the past two years. The project scope, budget, and grant timeline are nearing completion. The BCMP must be adopted this fall, along with Comprehensive Plan and Zone Map designations to make properties development-ready from a land use perspective. Given the consistent support and direction for applying the existing code, and its success in being applied historically, staff recommends adoption of the NWI Zone for the BCMP area. If there is a desire to change the clear and objective standards to reflect a different ideal, staff recommend that as a future, follow-on project.

Basalt Creek Master Plan

Planning Commission Work Session #3

Accessory Use

Accessory Building or Use: A subordinate building or use, the function of which is clearly incidental to that of the main building or use on the same lot. For non-residential uses, an accessory use may be located on a lot adjoining that of the main use if approved for this purpose through the Administrative Review procedures of Section 4.030.

- **Ms. Bogert** explained that the updated report would probably include crash data through 2024 because statewide crash data typically lagged approximately two years due to the reporting and public-release process. Notable, more recent crashes known through news reports or City knowledge could be documented and discussed unofficially despite not yet being included in the statewide data.
- **Mr. Mansur** explained that the approximately 24-month lag resulted from Oregon's paper-based crash-reporting process, which required information from police crash reports to be manually entered and could result in information being lost. ODOT had received a grant to transition the process to electronic reporting, which was intended to improve the process.

Planning Director Bateschell offered to check with Staff working with the Tourism Committee about bicycle tourism and designated scenic cycling area and share the information with the Commission by email.

4. Wilsonville Industrial Land Readiness (Basalt Creek Master Plan) (Myers)

Senior Planner Myers introduced the Commission's third and final work session on the draft Basalt Creek Master Plan before the September 9 public hearing. The Commission had reviewed most major plan elements and supporting analysis during the June and July work sessions, so the presentation would focus on revisions made in response to Commission comments and elements not previously presented.

Lauren Scott, MIG, reviewed the draft Master Plan via PowerPoint. The five-chapter structure remained unchanged, with the stormwater evaluation and funding analysis remaining outstanding. The stormwater evaluation was nearly complete, and its major recommended facilities had been incorporated into the draft plan. Revisions since June included expanded treatment of natural resources, including Tapman Creek and Coffee Lake Creek; adjusted Chapter 5 implementation timing to better reflect Staff capacity; and refinements addressing transportation planning, wildlife crossings, planning history, infrastructure, and master planning. Sanitary sewer and stormwater planning were incorporated at a high level, and most placeholder text and figures had been resolved.

Senior Planner Myers continued, reviewing changes following the prior work session. Data centers were changed to a restricted use in all four subdistricts, required to be accessory rather than primary uses, and remained limited to 25,000 sq ft. An industrial services definition was added, and the Northwest Industrial Pattern Book was clarified regarding streets and the multimodal design framework.

- A recent meeting with Ryan Schera and Schnitzer Properties clarified the Track 1 administrative and Track 2 Development Review Board (DRB) pathways available to the property. The City would retain the design standard limiting parking between an addressing street and building frontage to 16 spaces per structure, reflecting the longstanding principle

ABC Transcription DRAFT

of avoiding large expanses of parking in front of buildings. Staff continued working with Schnitzer Properties on other concerns, including connectivity, with additional information provided in Attachment 4.

Development Engineering Manager Maag continued the PowerPoint, reviewing the infrastructure planning for future development. Planned water extensions would generally follow the transportation network, with the system looped for reliability and fire service and line sizing coordinated with development needs. Sanitary sewer would primarily use gravity service following road alignments and terrain, with a lift station anticipated near Grahams Ferry Road to serve the West Railroad area.

Commissioner comments were as follows with questions addressed by Staff as noted:

- **Senior Planner Myers** explained that the regulating Master Plan and Pattern Book identify addressing streets within the Basalt Creek Master Plan area, generally corresponding to the higher-volume or larger street fronting a site.
- The memo summarizing the Schnitzer Properties discussions and Staff's work navigating those meetings were appreciated.
- The Commission's prior comments, including those regarding data centers, had been well addressed.
- **Development Engineering Manager Maag** explained that the master plan includes a funding plan for infrastructure, with much of the infrastructure expected to be funded and installed through private development. Much of the stormwater system would also be privately owned and maintained. The City would own and maintain the water and sewer systems to meet State law and public health requirements, with new development paying its proportional share through rates. Although development would initially construct new infrastructure, its ongoing monthly fees would also help offset the cost of aging infrastructure throughout the city.
- **Commissioner Candrian** raised concerns about allowing data centers. Exhibit 31 showed data centers' electricity demand of 5 to 100 megawatts (MW) far exceeding the maximum 6 MW of other potential uses listed. The proposed accessory-use definition could contain a loophole that would allow a company to structure its operations to effectively make the data center a primary use. Having data centers as a permitted or acceptable use was dangerous, especially with regard to water and electricity consumption. Data centers also employed relatively few people compared to the employment envisioned for Basalt Creek. He preferred prohibiting data centers altogether, but if he was in the minority, accessory uses should be more strictly defined; perhaps even with regard to the amount of power that could be used in specific locations to ensure loopholes could not be exploited if data centers are allowed.
    - **Planning Director Bateschell** read the existing Accessory Use definition (Slide 15) and noted additional restrictions could be considered if the Commission did not want to prohibit data centers entirely. Rather than relying only on the existing square-footage limit, the City could limit an accessory data center to a percentage of the primary building or use, such as a maximum of 10 percent of the main use on site. Data centers

ARC Transcription DRAFT

could also be changed from a restricted use to a Conditional Use Permit (CUP) only, requiring review by the DRB even if the proposal otherwise met the Track 1 process criteria.

- **Chair Semenova** questioned if data centers were allowed, whether a study or other review should determine whether a proposed data center could constrain other development by consuming available electricity or water system resources. While existing infrastructure might have capacity for the data center, subsequent development could become substantially more expensive if additional transmission or water-system capacity was then required. She also asked whether the sewer and water infrastructure presented for Basalt Creek could support the resource demands of a data center.
  - **Development Engineering Manager Maag** explained that data centers varied widely in their power and water usage, largely depending on how the facility was cooled; some used more power while others used more water. The Governor had convened a task force that spring to examine data centers, including their power and water usage, and Maag offered to provide links to the task force discussions for additional information. If a large water user impacted the City's water system, the developer would be responsible for contributing to the necessary system upgrades. Power infrastructure was under Portland General Electric's (PGE) control, and existing standards limited PGE's ability to extend new transmission routes through the city. A data center requiring significant power might be possible along Grahams Ferry Road near existing transmission routes, while other areas, such as Clay Street, might not be able to accommodate one. PGE understood the amount of power available for Wilsonville and continued to track that capacity. Given the wide variation in water and power consumption, she recommended limiting data centers by square footage rather than attempting to limit resource consumption. She confirmed that square footage would be the more effective approach for restricting data centers and preventing a loophole.
- **City Attorney Guile-Hinman** explained that regulating data centers based on usage could be challenging if usage increased over time. From a Code enforcement perspective, square footage was much easier to regulate than resource usage, particularly because the City would not have access to power-usage data. She supported considering both size limitations and the review process, noting that a CUP provided more than a simple discretionary review path.
- **Planning Director Bateschell** explained that data centers were currently proposed as a restricted use in all four subdistricts, meaning they could not exceed 25,000 sq ft and had to be an accessory use. A standalone 25,000-sq-ft data center would not qualify; an applicant would have to demonstrate a primary building and primary use, with the data center incidental and in addition to that use. However, as a restricted use, a qualifying data center would be allowed by right. Whether reviewed through the DRB or the Track 1 administrative process, the clear and objective standards could be reviewed and approved by Staff. If the Commission wanted to further limit data centers, they could instead be designated as a CUP, while retaining a size limitation based on square footage or a percentage of the primary use. A CUP would require DRB review through a discretionary process, providing an opportunity to determine whether the use was appropriate in the

ADC Transcription DRAFT

particular circumstances and consistent with surrounding development, and to condition the use accordingly. The Commission could determine the appropriate level of oversight by subdistrict, including retaining data centers as a restricted use in the High-Tech subdistrict with a CUP in the other subdistricts, requiring a CUP in all subdistricts, or prohibiting data centers outside the High-Tech subdistrict and requiring a CUP within High-Tech.

- **Planning Director Bateschell** believed 15 percent or less seemed reasonable as an accessory use when the primary use occupied the remaining 85 percent. Staff could also assess the existing data center in Wilsonville to determine what percentage of the total square footage of the use on the entire site was occupied by the data center. Because the existing data center was clearly permitted as an accessory use, that percentage could provide a reference point and, if consistent with the percentage range identified by the Commission, could be incorporated into the use table.
- **Commissioner Candrian** favored allowing data centers only in the High-Tech subdistrict, questioning the need for data centers in the other subdistricts, such as Craft Industrial. Within High-Tech, he supported requiring data centers to be an accessory use limited to a percentage of the primary building square footage and also requiring a CUP. He questioned whether the regulations could prevent one company from purchasing multiple lots and using the allowable percentage on each property to create a much larger data center. He also questioned how relevant the existing Siemens data center should be as a precedent because it was already approved in a separate area, while acknowledging that it could provide a basis for determining a reasonable percentage for an accessory use.
- **Planning Director Bateschell** confirmed that the existing Siemens data center solely met Siemens' business needs and was not leased to another company. Staff could determine the data center's percentage based on the square footage of Siemens' uses rather than the square footage of the property. The resulting percentage could provide an informative data point for the Commission when considering an appropriate accessory-use limitation, although the Commission would not be required to use it.
- **Commissioner Zundel** questioned what would happen to an accessory data center over time if the circumstances under which it was originally approved changed. Siemens, for example, built a data center as a genuine accessory to its primary business, but what if it later contracted, sold portions of its property, or eventually left Wilsonville, potentially leaving the data center without the primary use upon which its accessory status was based? Perhaps the Commission was focusing on the wrong mechanism. If the underlying concerns were water and power usage, could those impacts be restricted, more meaningfully outside the land-use process, such as through a City license to operate a data center that would be renewed regularly and tied to resource usage.
    - **Planning Director Bateschell** stated she could not identify a clear path for restricting a data center's water or power consumption once the use had been entitled and allowed, noting the Code enforcement challenges associated with obtaining and monitoring resource-usage data or regulating the use through a business-license process. The Commission could combine restrictions, such as limiting a data center to 10 percent of the primary use while also retaining the maximum 25,000-sq-ft cap. The purpose of the square-footage limitation was, to some degree, to limit power consumption because

ADU Transcription DRAFT

smaller data centers supporting the business conducted on site generally did not have the water or power demands associated with massive data-center facilities. Data centers could also be prohibited across all subdistricts and reconsidered in 5 to 10 years as conditions evolved. She summarized the Commission's remaining policy choices: whether to allow data centers in all or only some subdistricts, what limitations to impose, and what level of review to require. Based on the discussion and Commissioners' responses, she heard interest in limiting or potentially prohibiting data centers, along with considerable support for requiring a CUP and public review.

- **Commissioner Karr** believed the Commission generally wanted to discourage large data centers and identified a percentage of building square footage combined with an overall square-footage limit and CUP process as potential mechanisms. He questioned whether data centers should be allowed only in the High-Tech subdistrict and prohibited in others, such as Craft Industrial. He distinguished between discouraging large data centers and allowing a high-tech company to have a data center that fit its own business needs.
- **Commissioner Candrian** suggested the City might need to better define a data center, distinguishing between a company hosting servers internally for its own business needs and an external-facing data center providing services to outside users. He reiterated that based on what he had read about other jurisdictions, companies had identified loopholes that resulted in uses that were not originally intended. If that trend could not be prevented, he preferred prohibiting data centers altogether. Rather than having a blanket data-center category, he suggested defining what a company could have to host servers internally solely for its own benefit and not for external-facing operations.
- **Commissioner Karr** agreed with distinguishing internal from external data centers, noting Siemens was likely using its data center for internal proprietary storage rather than e-commerce or providing server capacity to external users. Drawing from his experience working for a large high-tech company, he noted that such companies could have sizable internal servers behind their firewalls that were proprietary and solely for the company's own use. He suggested the definition could potentially distinguish between an internal and an external data center.
  - **Senior Planner Myers** reported that the State was currently working on an official data center definition, which could provide additional guidance for the City. He noted regulating data centers was more complicated than initially anticipated, with the discussion raising numerous issues that would require substantial research to answer accurately because the topic was new and evolving quickly. He suggested the Master Plan might need some type of interim or "stopgap" approach, with the regulations revisited in the future with City Council direction as more information became available.
- Discussion followed about establishing interim data center restrictions that could be revisited as technology and development conditions changed. For example, data centers could initially be prohibited and reconsidered in approximately 10 years if technological advances reduced impacts on the power grid or if Basalt Creek had not fully developed and additional tenants were needed.
  - **Senior Planner Myers** confirmed this was an available approach that Staff could present to City Council as the Planning Commission's current position, recognizing Council could

Action Transcription DRAFT

provide different direction. A Commissioner asked whether the initial regulations should instead include a percentage limitation, square-footage limit, and CUP.

- **Commissioner Zundel** asked how robust the CUP process was and how well it positioned the City to make a defensible decision to deny a data center application, including what could occur if the decision was challenged.
  - **Planning Director Bateschell** explained that the CUP process was fairly discretionary and allowed the City to determine whether a proposed use was suitable for a particular area. An allowed use would be very difficult for the City to deny, and a data center designated as a restricted use would likewise be difficult to further limit if it met the accessory-use definition and applicable size limitation. A CUP, however, would allow the City to determine whether a data center could or could not be suitable for a particular parcel or area and provided the ability to deny the use when supported by evidence. For example, evidence that a proposed data center would draw substantial power or water in an area already approaching maximum capacity could provide a basis for denial.
  - **City Attorney Guile-Hinman** read the general CUP standard, Section 4.184.1, which stated that a conditional use was generally not compatible with surrounding uses unless mitigating conditions of approval were established and allowed the DRB, following a public hearing, to establish conditions necessary to implement the Comprehensive Plan or ensure compliance with Code standards based on the record. In addition to the general standards, the City could establish specific considerations for data centers that the DRB would confirm had been adequately addressed during CUP review.
    - Another regulatory option related to properties being sold or divided over time was requiring an accessory data center to be located on the same site as the primary use rather than on an adjacent property. This would prevent a company with multiple properties from consolidating the allowable data-center space from those properties into one location and creating a substantially larger data center.
- **Commissioner Hendrix** supported a CUP because it would keep options open while maintaining City control. Given the number of potential regulatory mechanisms being discussed, she was not ready to commit to one approach but supported combining a CUP with a square-footage limitation. The Siemens data point would help visualize or understand an appropriate limitation. In response to Staff's clarification, she was comfortable prohibiting data centers in all subdistricts except High-Tech.
- **Commissioner Zundel** believed the Commission was speculating about technology and uses that could not yet be anticipated, noting that even Craft Industrial might have a need for a data center as technology evolved. Rather than prohibiting data centers in certain subdistricts, he favored allowing them as a Conditional Use in all subdistricts to leave the door open for future development that could not be anticipated today. This would allow proposed data centers to be evaluated on a case-by-case basis and provide a more defensible position for the City.
- **Commissioner Karr** questioned whether prohibiting data centers outside High-Tech would provide greater specificity while still allowing the regulations to be changed later. He agreed that the issue also depended on how a data center was defined, questioning whether something as small as a laptop used within a craft business could meet the definition.

ADOPTION DRAFT

- **Chair Semenova** did not support prohibiting data centers, noting they could bring tax revenue, investment, and development that benefited the community despite providing relatively few jobs. She supported keeping options open given how quickly technology, data storage, and computing could change, while ensuring data centers did not consume resources needed for further development. She favored a CUP with criteria addressing those concerns.
  - Commissioners noted that tax benefits could depend on whether incentives were provided and that, if a data center was limited to an accessory use, the primary use could provide much of the taxable value.
  - **Senior Planner Myers** noted that, based on those concerns, the safest approach might be to allow data centers conditionally in all four subdistricts, subject to further City review, while also limiting them to a percentage of the total structure and a maximum of 25,000 sq ft.
- Commissioners reiterated the need to refine the data center definition and supported developing an interim City definition rather than waiting for the State's definition.
- **Planning Director Bateschell** summarized the regulatory tools identified by the Commission, including restrictions on accessory-use size, requiring the data center to be on the same property as the primary use, requiring all data centers to go through the CUP process, and adding review criteria addressing infrastructure usage. Staff would advise City Council that the Commission was split on whether data centers should be allowed only in the High-Tech subdistrict or in all subdistricts. The use table would be refined accordingly.

5. Chapter 4 Code Enforcement (Guile-Hinman)

City Attorney Guile-Hinman introduced the City's Code Enforcement Update via PowerPoint, an approximately 18-month effort implementing 2025–2027 City Council Goal 2, Strategy 2.2. The City's general enforcement regulations in Chapter 1 dated largely from the 1980s and lacked specificity, consistency, and effective tools. The City followed a compliance-first approach, but that approach was not codified. Most substantive changes would occur in Chapter 1, with the Planning Commission responsible for recommending related Chapter 4 amendments.

- The proposed Chapter 1 update would establish a standardized administrative process for civil Code violations, formally incorporate compliance agreements, provide a broader fine structure and administrative appeal process, and add enforcement tools such as stop-work orders and withholding permits. Processes governed by other laws would remain separate. Chapter 4 amendments would generally conform to the new Chapter 1 process while retaining necessary exceptions, such as tree-preservation mitigation, and clarifying enforcement responsibilities.
- The Planning Commission would review the Chapter 4 amendments in September, followed by a public hearing in October. City Council consideration of the full Code package was planned for November, with an anticipated effective date of January 1, 2027.

City Attorney Guile-Hinman addressed questions as follows:

ARC Transcription DRAFT

PLANNING COMMISSION

WEDNESDAY, JULY 8, 2026

WORK SESSION

2. Wilsonville Industrial Land Readiness (Basalt Creek Master Plan) (Myers/Lorenzen)(60 minutes)

PLANNING COMMISSION MEETING
STAFF REPORT

Meeting Date: July 8, 2026	**Subject: Proposed Code Amendments and Pattern Book Edits as part of the Basalt Creek Master Plan** **Staff Members:** Chris Myers, Senior Planner; Matt Lorenzen, Economic Development Manager; Amy Maag, Engineering **Department:** Community Development
Action Required	**Advisory Board/Commission Recommendation**
☐ Motion ☐ Public Hearing Date: ☐ Ordinance 1st Reading Date: ☐ Ordinance 2nd Reading Date: ☐ Resolution ☒ Information or Direction ☐ Information Only ☐ Council Direction ☐ Consent Agenda	☐ Approval ☐ Denial ☐ None Forwarded ☒ Not Applicable **Comments:**
Staff Recommendation: Provide feedback on Proposed BCMP Code Amendments and Northwest Industrial Zone Pattern Book.	
Recommended Language for Motion: N/A	
Project / Issue Relates To:	

☒Council Goals/Priorities: Attract high-quality industry and support economic opportunity for all in Wilsonville	☒Adopted Master Plan(s): Wilsonville Economic Development Strategy; Wilsonville Comprehensive Plan; Basalt Creek Concept Plan	☐Not Applicable

ISSUE BEFORE COMMISSION:
Staff seeks feedback from the Planning Commission regarding the Development Code edits and BCMP Pattern Book (street cross sections and Regulating Plan graphics to be updated prior to public hearing) as part of the Basalt Creek Master Plan.

BACKGROUND
In 2018, the City of Wilsonville and City of Tualatin jointly adopted the Basalt Creek Concept Plan (BCCP), which established a long-term vision and conceptual framework for future urbanization of the Basalt Creek Planning Area (BCPA). The BCCP identified preferred land uses, transportation and infrastructure systems, natural resource considerations, and implementation strategies intended to guide future development within the area.

Since adoption of the BCCP, the City of Wilsonville has completed several key implementation actions, including amendments to the Urban Planning Area Agreement, Comprehensive Plan, and Transportation System Plan to support coordinated future development.

While the BCCP was prepared jointly by Wilsonville and Tualatin, the Basalt Creek Master Plan (BCMP) focuses specifically on Wilsonville's portion of the BCPA. The BCMP builds upon the vision established in the BCCP while providing a more refined and updated framework informed by additional technical analysis, infrastructure planning, environmental review, and stakeholder coordination. Stated differently, the BCCP was a joint planning effort, high level, and conceptual in nature, while the BCMP is the document that will guide and regulate actual development exclusively in the City of Wilsonville. The BCMP is by Wilsonville, for Wilsonville.

EXECUTIVE SUMMARY:
This Basalt Creek Master Plan represents the next step in advancing the BCPA from a long-range concept toward a long-term framework for future employment and industrial development that can help meet Wilsonville's economic development goals. As one of the City's last major industrial growth areas within the Urban Growth Boundary, the BCPA plays an important role in expanding Wilsonville's supply of land for future manufacturing, logistics, and employment uses. The Master Plan further refines the 2018 BCCP by identifying more detailed land use patterns, infrastructure needs, transportation improvements, funding strategies, and implementing policies intended to guide development over the next 10–20 years.

The BCMP builds upon the City's recently adopted Economic Opportunities Analysis (EOA) and Economic Development Strategy (EDS), which were reviewed by the Planning Commission during a work session on November 12, 2025, and a public hearing on February 11, 2026, before being adopted by the City Council following a public hearing on March 2, 2026. Those planning efforts identified Basalt Creek as one of Wilsonville's most significant long-term employment growth areas and established the economic development priorities that help guide the BCMP. While the BCMP represents another important step toward realizing Wilsonville's long-term vision for industrial and employment growth within the BCPA, future development will depend on the

continued alignment of infrastructure funding, market demand, environmental permitting, property owner participation, utility coordination, and regional transportation improvements over time.

Summary of Proposed Development Code Amendments

The proposed Development Code amendments implement the Basalt Creek Master Plan by updating existing industrial development regulations, modernizing outdated code language, establishing the Northwest Industrial (NWI) Zone as a standalone zoning district, and providing clear standards for future industrial and employment development. The amendments build upon the framework established by the Coffee Creek Master Plan while incorporating new planning concepts, contemporary industrial land uses, and design standards developed through the Basalt Creek Master Plan process. The Planning Commission first reviewed the proposed code amendments during a work session on September 10, 2025, with subsequent revisions informed by additional work sessions, technical analysis, consultant recommendations, and public feedback. Collectively, the proposed amendments improve code clarity, provide greater flexibility for high-quality industrial development, and ensure consistency with the proposed Comprehensive Plan amendments.

- New definitions for (see Attachment 1):
    - Accessory Retail Sales
    - Artisan Food and Beverage Production
    - Contractor Establishment
    - Craft and Artisan Studio
    - Direct-to-Consumer (DTC) E-commerce Fulfillment or Logistics
    - Home Business
    - Incubator
    - Innovation Hub
    - Light Manufacturing
    - Maker Space
    - Micro-Mobility Vehicle
    - Regulating Plan
    - Retail
    - Supporting Street
    - Through Connection

The proposed Development Code amendments establish the Northwest Industrial (NWI) Zone as a standalone Planned Development zoning district and create a new industrial use matrix that organizes permitted uses by four planning subdistricts, modernizes industrial use classifications, establishes standards for emerging industrial uses, and ensures that supporting commercial uses remain subordinate to primary employment-generating activities. The amendments also modernize industrial performance standards related to hazardous materials, air quality, waste management, outdoor storage, landscaping, erosion control, and other operational characteristics while expanding the applicability of the NWI standards to new development, exterior building modifications, site improvements, and larger building additions.

The amendments further clarify the NWI review process, including implementation of the Pattern Book and Regulating Plan, update connectivity standards to implement the Basalt Creek Master Plan street network and multimodal transportation framework, and ensure consistency across the NWI, Planned Development Industrial (PDI), and Planned Development Industrial–Regionally Significant Industrial Area (PDI-RSIA) zones. Additional amendments add Artisan Food and Beverage Production as a permitted use within the Craft Industrial (CI) Zone, modernize the Planned Development Regulations to support coordinated planning and high-quality development, and update architectural encroachment standards to provide clear and consistent setback regulations.

On June 10, 2026, the Planning Commission held a work session to review the Draft Basalt Creek Master Plan, Draft Comprehensive Plan Amendments, Transportation Analysis, and supporting technical materials. During the work session, project consultants and staff presented the proposed land use framework, transportation network, economic development strategy, infrastructure concepts, and implementation approach for the Basalt Creek Planning Area. Planning Commissioners provided feedback and raised several questions regarding the proposed transportation network and long-term infrastructure planning.

In several meetings during the development of the EOA, EDS, and BCMP, the Planning Commission has discussed the appropriateness of allowing Contractor Establishments within the proposed industrial zoning districts and expressed interest in further evaluating the use and potential operational standards that would improve these sites from their current conditions. Recently, Washington County has initiated a policy review of Contractor Establishments and is evaluating potential amendments to its development code. In light of the County's ongoing work, staff recommends removing Contractor Establishments from the proposed use matrix at this time. Staff will monitor and participate in the County's policy process and will return to the Planning Commission and City Council with a separate policy discussion and recommendation regarding whether and how Contractor Establishments should be incorporated into Wilsonville's Development Code.

DISCUSSION QUESTIONS:

Staff is seeking Planning Commission (PC) feedback on the following questions:

1. Does the Planning Commission have any remaining questions or concerns regarding the proposed Development Code amendments as presented?
2. Having reviewed the supporting technical memoranda, does the Planning Commission have any questions or policy concerns regarding the proposed transportation and utility infrastructure framework for the Basalt Creek Planning Area?
3. Having reviewed the draft Basalt Creek Master Plan, technical memoranda, and proposed code amendments, are there any additional issues the Planning Commission would like staff to address prior to the public hearing?

EXPECTED RESULTS:
Feedback from the Planning Commission during this work session will help guide refinement of the final draft of the BCMP.

TIMELINE:
Next steps in the project include a Planning Commission public hearing on September 9, 2026. We will also hold a work session with City Council on July 20, 2026, and public hearing on October 5, 2026 (first reading) and October 19, 2026 (second reading).

CURRENT YEAR BUDGET IMPACTS:
Work on the Basalt Creek Master Plan is funded through a Community Planning and Development Grant from Metro and the Planning Division budget's previously authorized project funding. Additional analysis related to water and stormwater infrastructure will be conducted utilizing the City's on-call consultant contracts using a combination of Metro grant funds, Planning Division professional services funds, and CIP 3000 funds.

COMMUNITY INVOLVEMENT PROCESS:
The Basalt Creek Master Plan project was preceded by the preparation of an Economic Opportunities Analysis (EOA) and Economic Development Strategy (EDS) to evaluate whether Wilsonville has sufficient employment land capacity to support anticipated business and job growth between 2026 and 2046. The project also identified strategies intended to support long-term economic growth, infrastructure planning, and employment opportunities aligned with community priorities that would inform the BCMP. To help inform the analysis and recommendations, the City conducted a public engagement process throughout 2025 and 2026 that included Technical Advisory Committee (TAC) meetings, stakeholder interviews, property owner outreach, Planning Commission work sessions and public hearings, and City Council work sessions and hearings.

The TAC included representatives from the City of Wilsonville, Business Oregon, Greater Portland Inc. (GPI), Metro, and the Wilsonville Chamber of Commerce. Stakeholder interviews included representatives from small businesses, manufacturing, redevelopment interests, and business-support organizations. Key themes identified through engagement included workforce development challenges, land and space constraints, high development and operating costs, demand for additional local-serving retail and services, and the importance of maintaining a proactive and collaborative City-business relationship. The City also conducted outreach to property owners within the West Railroad area of the Basalt Creek Planning Area regarding future development opportunities, Comprehensive Plan amendments, and proposed Development Code changes.

Overall, the BCMP engagement process provided numerous opportunities for coordination, stakeholder input, and public review. Feedback received from agencies, businesses, developers, property owners, and community members helped inform the City's understanding of local economic conditions, infrastructure needs, and long-term employment opportunities. The

engagement process ultimately supported development of policies and implementation strategies intended to promote economic competitiveness, employment growth, and high-quality industrial and employment districts consistent with the long-term vision for Wilsonville and the Basalt Creek Planning Area.

POTENTIAL IMPACTS OR BENEFIT TO THE COMMUNITY:
The Basalt Creek Master Plan provides the Wilsonville community with a long-term framework for coordinated economic growth, infrastructure investment, and land use planning. By identifying appropriate locations for industrial and employment uses, a master plan helps ensure that transportation systems, utilities, stormwater infrastructure, and public services are designed efficiently and strategically rather than through piecemeal development. The BCMP will provide future job creation, strengthen the local tax base, diversify employment opportunities, and improve economic resilience by attracting a range of businesses such as advanced manufacturing, logistics, research and development, and technology industries. When thoughtfully designed, industrial employment districts can incorporate high-quality site design, multimodal transportation networks, open spaces, and environmental protections that improve functionality and compatibility with surrounding areas.

The BCMP establishes the policies, land use framework, transportation network, infrastructure strategy, development standards, and environmental protections necessary to guide future urbanization of the Basalt Creek area. Together, these elements provide a coordinated and predictable approach to development that balances economic opportunity with infrastructure capacity, natural resource stewardship, and long-term community objectives.

ALTERNATIVES:
As the concept plan was refined, alternative approaches to land use configuration, transportation access, zoning, and infrastructure planning were considered in collaboration with the Planning Commission and City Council. Additional refinements to the BCMP and implementing policies may also be considered.

ATTACHMENTS:
1. Proposed BCMP Development Code Edits (June 2026)
2. Northwest Industrial Zone Pattern Book (June 2026)

Attachment 1

Basalt Creek Master Plan – Proposed Development Code Edits – Draft June 2026

Proposed added language ***bold italics underline.*** Proposed removed language ~~struck through.~~

ADMINISTRATION

Section 4.001. Definitions

The following definitions will be added to this section. All subsequent definitions will be renumbered

Addressing street*:* A major existing or planned street within the ~~Coffee Creek~~ ***Northwest Industrial (NWI)*** ~~Design Overlay District~~ Z***one*** as defined in Section 4.134.

Accessory Retail Sales. Retail sales that are incidental and subordinate to a permitted primary use and are conducted on the same site. Accessory retail sales shall be limited primarily to goods or products manufactured, fabricated, assembled, processed, crafted, repaired, or substantially modified on the premises, and may include merchandise directly related to the primary use. Accessory retail sales are not intended to function as a stand-alone retail establishment.

Artisan Food and Beverage Production: A craft industrial use involving the small-scale production, processing, preparation, packaging, or distribution of food and beverage products. These uses are characterized by limited-batch production, specialty or handcrafted products, and may incorporate customer-oriented activities such as tasting rooms, retail sales, demonstrations, classes, tours, and similar experiences that support the primary production use. Artisan Food and Beverage Production does not include large-scale food processing, regional distribution centers, or industrial-scale manufacturing operations.

Contractor Establishment: A site used for the storage, maintenance, dispatch, and staging of equipment, vehicles, tools, and materials associated with construction and contracting activities. Such uses are characterized by the active deployment of personnel, equipment, and materials to off-site work locations and may include offices, workshops, maintenance facilities, storage buildings, and outdoor storage yards.

Craft Studio. A facility used for the creation, production, fabrication, assembly, repair, or finishing of handcrafted or small-batch goods by artists, artisans, designers, or skilled tradespersons. Uses may include studios, workshops, demonstration areas, classrooms, and limited accessory retail sales of goods produced on-site.

Direct-to-Consumer (DTC) E-commerce Fulfillment or Logistics: A light industrial use involving the receipt, storage, sorting, packaging, and shipment of goods directly to individual consumers, typically in response to online, catalog, or similar retail purchases. Such uses are characterized by high volumes of small-package outbound deliveries and frequent last-mile distribution activity and are distinct from traditional wholesale warehousing and distribution facilities that primarily serve commercial customers or retail establishments.

Home Business: A business operating from a dwelling unit that does not meet the definition of a "Home Occupation" listed below. Short-term rental of a dwelling unit or portion thereof where the operator does not live on the same lot is a home business. A home business requires a conditional use permit, except in the Craft Industrial (CI) Zone which allows a home business outright as a typically permitted use (see Section 4.130).

Incubator. A building or portion of a building that provides flexible workspace, shared facilities, and common support services for multiple startup or early-stage businesses. Incubators may include offices, workshops, laboratories, production areas, shared equipment, meeting rooms, and similar spaces intended to support entrepreneurship, product development, innovation, fabrication, or small-scale manufacturing.

Innovation Hub. A facility that brings together businesses, entrepreneurs, researchers, educational institutions, investors, or other organizations to support collaboration, research, product development, technology commercialization, workforce development, or entrepreneurial activities. Innovation hubs may include offices, laboratories, meeting spaces, classrooms, collaborative workspaces, and shared support facilities.

Light Manufacturing*:* ~~Low- to moderate-impact industrial, manufacturing, processing, and assembly uses that exhibit benign external characteristics compatible with the character and overall design of a Residential Village environment.~~

A manufacturing, processing, fabrication, assembly, packaging, that occurs primarily within enclosed buildings where the primary activity is the conversion of raw materials or parts into finished products and produces minimal noise, vibration, dust, odor, glare, hazardous materials, or other off-site impacts. Typical uses may include the production of consumer goods, electronics, food products, apparel, furniture, and similar products.

Maker Space. A shared workspace that provides access to tools, equipment, technology, and work areas for individuals or businesses engaged in designing, prototyping, fabricating, repairing, or producing products. Maker spaces may include workshops, fabrication equipment, digital manufacturing technologies, classrooms, and collaborative work areas.

Micro-Mobility Vehicle. A small, lightweight vehicle designed for individual transportation that is powered by human power, electric power, or a combination of both, and is intended for use on streets, bicycle facilities, shared-use paths, or other designated transportation facilities. Micro-mobility vehicles include, but are not limited to, bicycles, electric bicycles, electric scooters, cargo bicycles, and similar devices intended for short-distance travel.

Regulating Plan: A plan that organizes the system of existing and future streets and multi-use paths within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone.***

Retail. A commercial use engaged primarily in selling, leasing, renting, displaying, or distributing goods, merchandise, or products directly to consumers or end users. Retail uses may include customer service, product demonstration, order pickup, and other activities customarily associated with the direct sale of goods, but do not include manufacturing, fabrication, processing, warehousing, or wholesale distribution as the primary use.

Supporting streets: New streets within the ~~Coffee Creek~~ ***Northwest Industrial*** Design Overlay District***(NWI) Zone,*** which may be located within public rights-of-way or public easements.

Through connections*:* New streets, multi-use paths, or streets that combine characteristics of local streets and multi-use paths. They are located within the ~~Coffee Creek~~ ***Northwest*** Industrial ~~Design Overlay District~~***(NWI) Zone*** and may be located within public rights-of-way or public easements.

No additional changes proposed in this section

Section 4.030. Jurisdiction and Powers of Planning Director and Community Development Director.

(.01) *Authority of Planning Director.* The Planning Director shall have authority over the daily administration and enforcement of the provisions of this Chapter, including dealing with non-discretionary matters, and shall have specific authority as follows:

A. A Class I application shall be processed as a ministerial action without public hearing, shall not require public notice, and shall not be subject to appeal ***by anyone other than the applicant*** or call-up, except as noted below. Pursuant to Class I procedures set forth in Section 4.035, and upon finding that a proposal is consistent with the provisions of this Code and any applicable Conditions of Approval, shall approve the following, with or without conditions:

1. Minor site clearing and grading, prior to the approval of a Site Development Plan, provided that:
    a. No clearing or grading occurs within the Significant Resource Overlay Zone. Clearing or grading in the Significant Resource Overlay Zone shall require, at a minimum, approval of a Class II permit through the procedures specified below;
    b. No clearing or grading occurs within 25 feet of an area that has been identified by the City as a wetland;
    c. Not more than three trees are proposed to be removed;
    d. No fill or removal is proposed;
    e. Adequate measures are utilized to control erosion and runoff from the site and that the applicant will submit a final Site Development application within seven days of submitting the minor site grading application. All grading activities require compliance with the requirements of the applicable building code and City Public Works standards.
2. Class I Sign Permits, and Temporary Sign Permits for 30 days or less.
3. Architectural, landscape, tree removal, grading and building plans that substantially conform to the plans approved by the Development Review Board and/or City Council. The Planning Director's approval of such plans shall apply only to Development Code requirements and shall not alter the authority of the Building Official or City Engineer on these matters.
4. Building permits for single family dwellings, middle housing, and in the Village zone, row houses or apartments, meeting zoning requirements and located on lots that have been legally created. The Planning Director's approval of such plans shall apply only to Development Code requirements and shall not alter the authority of the Building Official or City Engineer on these matters.
5. Lot line adjustments, where none of the lots increase in area by 50 percent or more, subject to the standards specified in Section 4.233.
6. A temporary use permit for not more than 30 days. Permitted days may or may not be consecutive, but shall not exceed 30 days within the calendar year for which the permit was applied. Temporary use permits are subject to the following standards:
    a. The applicant has the written permission of the property owner to use the site;
    b. The proposed use will not create an obstruction within a sight vision clearance area that would impair the vision of motorists entering onto or passing by the property;
    c. Adequate parking is provided;
    d. Signs shall meet the standards of Section 4.156.09; and
    e. The proposed use has the approval of the Fire Marshal.
7. Determination that an existing use or structure is a non-conforming use or non-conforming structure, as defined in this Code. Except, however, that the Planning Director may, in cases where there is any uncertainty as to the history of the property, choose to process such determinations through the Class II procedures below.
8. Actions taken subject to Site Development Permits which have been approved by the appropriate decision-making body of the City.

9. Final plats for condominiums, subdivisions, or partitions that are substantially the same as tentative plats approved by the City and which are submitted for review and signature prior to recordation with the appropriate county.

10. Type A tree removal permits as provided in Section 4.600.

11. Determination, based upon consultation with the City Attorney, whether a given development application is quasi-judicial or legislative. Except, however, that the Planning Director may, in cases where there is any uncertainty as to the nature of the application, choose to process such determinations through the Class II procedures below.

12. Expedited land divisions and middle housing land divisions requiring expedited review under state law. Applications for expedited land divisions and middle housing land divisions requiring expedited review under state law, as provided for in Section 4.232 of this Code and ORS Chapter 197 shall be processed without public hearing, and shall be subject to appeal through the special appeal procedures specified in Section 4.232.

    a. Authority of Planning Director. The Planning Director shall have authority to review applications for expedited land divisions and middle housing land divisions requiring expedited review under state law and to take action approving, approving with conditions, or denying such applications, based on findings of fact.

    b. Tentative Plat Requirements for Expedited Land Divisions and middle housing land divisions requiring expedited review under state law. Tentative plats and all other application requirements for expedited land divisions and middle housing land divisions requiring expedited review under state law shall be the same as for other forms of land divisions, except as those requirements are specifically altered by the Oregon Revised Statutes.

    c. Administrative Relief Not Available. In taking action on an application for an expedited land division or middle housing land divisions requiring expedited review under state law, the Planning Director is not authorized to grant Variances or waivers from the requirements of the Code.

    d. Residential Areas Only. As specified in ORS 197, expedited land divisions shall only be approved in areas zoned for residential use.

13. Development approval extensions as provided in Section 4.023.

B. A Class II application shall be processed as an administrative action, with or without a public hearing, shall require public notice, and shall be subject to appeal or call-up, as ***specified in Section 4.022 and*** noted below. ***Class II residential development applications shall be processed without a public hearing.*** Pursuant to Class II procedures set forth in Section 4.035, the Director shall approve, approve with conditions, deny, or refer the application to the Development Review Board ***(as applicable***) for a hearing:

1. Minor alterations to existing buildings or site improvements of less than 25 percent of the previous floor area of a building, but not to exceed ~~1250~~ ***10,000*** square feet, ~~or including the addition or removal of not more than ten parking spaces.~~ Minor modifications to approved Architectural and Site Development Plans may also be approved, subject to the same standards.

2. Residential accessory buildings or structures with less than 120 square feet of floor area located within the Willamette River Greenway Boundary pursuant to Section 4.500 and subject to the flood plain development standards of Section 4.172. Approval of such accessory structures in the Greenway shall be based on all of the following findings of fact:

    a. The building or structure is located so that the maximum amount of landscape area, open space and/or vegetation is provided between the river and the building;

b. Public access to the river is preserved or is provided in accordance with an approved and adopted plan; and

c. That the change of use, intensification of use, or development will be directed away from the river to the greatest possible degree while allowing a reasonable use of the property.

3. Written interpretations of the text or maps of this Code, the Comprehensive Plan or subelements of the Comprehensive Plan, subject to appeal as provided in Section 4.022. The Planning Director may review and interpret the provisions and standards of Chapter 4 (Planning) of the Wilsonville Code upon receiving the required filing fee along with a specific written request. The Director shall publish and mail notice to affected parties and shall inform the Planning Commission and City Attorney prior to making a final written decision. The Director's letter and notice of decision shall be provided to the applicant, the Planning Commission, the City Council, and City Attorney and the notice shall clearly state that the decision may be appealed in accordance with Section 4.022 (Appeal Procedures). A log of such interpretations shall be kept in the office of the Planning Department for public review.

4. A permit to locate an accessory use on a lot adjacent to the site of the principal use.

5. ***Residential subdivisions***, ***s***~~S~~ubdivisions located within the ***Northwest Industrial Zone*** ~~Coffee Creek Industrial Design Overlay District~~**,** and land partitions, other than expedited land divisions, pursuant to Section 4.210. Approval shall be based on all of the following findings of fact:

a. The applicant has made a complete submittal of materials for the Director to review, as required in Section 4.210;

b. The proposed plan meets the requirements of the Code regarding minimum lot size and yard setbacks;

c. The approval will not ***block*** ~~impede or adversely affet~~ the orderly development of any adjoining property or access thereto;

d. The public right-of-way bordering the lots or parcels will meet City standards;

e. Any required public dedications of land have been approved for acceptance by the City and will be recorded with the County ~~prior to~~ ***at the time of*** final plat approval;

f. Adequate easements are proposed where an existing utility line crosses or encroaches upon any other parcel to be created by the partition;

g. All public utilities and facilities are available or can be provided prior to the issuance of any development permit for any lot or parcel; and

h. Roads extended or created as a result of the land division will meet City standards.

6. Decisions on the following:

a. Lot line adjustments, where any of the lots increase by more than 50 percent in area, subject to the provisions of Section 4.233.

b. Temporary use permits for periods exceeding 30 days but not more than 120 days. Permitted days may or may not be consecutive, but shall not exceed 120 days within the calendar year for which the permit was applied. Temporary use permits may allow specific activities associated with the primary use or business located on the property for up to 120 days provided that:

i. the property owners have given written permission;

ii. no structure, sign or any other object shall exceed 20 feet in height;

iii. adequate parking is provided in designated spaces;

iv. signs shall meet the standards of Section 4.156.09;

v. electrical and building permits are obtained as required;

vi. undue traffic congestion will not result and, if traffic congestion is expected, a traffic control plan is submitted along with the application that identifies the traffic control procedures that will be used;

vii. the activity and/or use shall not unduly interfere with motorists driving on adjacent roads and streets, including I-5; and

viii. public notice has been provided and the comments of interested parties have been considered in the action that has been taken;

ix. the proposed use will not create an obstruction within a sight vision clearance area that would impair the vision of motorists entering onto or passing by the property; and

x. the proposed use has the approval of the Fire Marshal.

7. Solar access permits, as specified in Section 4.137.3.

8. Class II Sign Permits.

9. Site design review, as authorized in Section 4.400 for ***residential development*** or properties located within the Northwest Industrial (NWI) Zone, which satisfy all applicable standards and adjustment criteria in Section 4.134.10.

10. Review of Stage I and Stage II Planned Development applications for properties located within the NWI Zone, which satisfy all applicable standards and adjustment criteria in Section 4.134.

11. Review of Stage I and Stage II Planned Development applications for residential development which satisfy all applicable standards.

12. Type B tree removal permits as provided in Section 4.600.

13. Type C tree removal permits as provided in Section 4.600 for properties located within the ***Northwest Industrial Zone*** ~~Coffee Creek Industrial Design Overlay District~~ ***or associated with applications for residential development.***

14. Architectural and site plans, including modifications and remodels, for multi-family residential structures in residential zones with seven or more units not subject to Site Design Review, meeting clear and objective zoning, siting, and design standards, and located on lots that have previously been legally created. ~~This does not include review of Stage I and Stage II Planned Development Master Plans and Site Design Review of open space and other common improvements, which are subject to review by the Development Review Board.~~

15. Waivers, refinements, and variances for residential development subject to the criteria in Sections 4.119, 4.125, and 4.196.

16. Zone Map Amendments that increase density for residential development.

No additional changes proposed in this section

Section 4.110. Zoning—Zones.

(.01) The following Base Zones are established by this Code:

A. ***Future Development Agricultural-Holding***

B. Residential, which shall be designated "R".

C. Planned Development Residential, which shall be designated "PDR," and further divided into:

PDR-1

PDR-2

PDR-3

PDR-4

PDR-5

PDR-6

PDR-7

D. Planned Development Commercial, which shall be designated "PDC."

E. Planned Development Industrial, which shall be designated "PDI."

F. Public Facility, which shall be designated "PF."

G. Public Facility - Corrections, which shall be designated "PF-C."

H. Village, which shall be designated "V".

I. Residential Neighborhood, which shall be designated "RN". The RN ~~zone~~ ***Zone*** is a Planned Development Residential zone.

J. Town Center, which shall be designated "TC". The TC ~~zone~~ ***Zone*** is a Planned Development zone.

K. Craft Industrial (CI), which shall be designated "CI". The CI Zone is a Planned Development zone.

L. ***Northwest Industrial (NWI), which shall be designated "NWI". The NWI Zone is a Planned Development zone.***

(.02) The following Overlay Zones, to be used in combination with the underlying base zones, are established by this Code.

A. Solar-Friendly (S) overlay zone;

B. Screening and Buffering (SB) overlay zone; ***and***

C. Old Town (O) overlay zone~~.; and~~

~~D. Coffee Creek Industrial Design Overlay District (CCDOD).~~

(.03) The use of any building or premises or the construction of any development shall be in conformity with the regulations set forth in this Code for each Zoning District in which it is located, except as provided in Sections 4.189 through 4.192.

(.04) The General Regulations listed in Sections 4.150 through 4.199 shall apply to all zones unless the text indicates otherwise.

(Ord. No. 557, 9-5-2003; Ord. No. 806, 7-17-2017; Ord. No. 812, 2-22-2018; Ord. No. 835, 6-5-2019)

No additional changes proposed in this section

Section 4.117. Standards Applying to Industrial Developments in any Zone.

(.01) ~~All industrial developments, uses, or activities are subject to performance standards. If not otherwise specified in the Planning and Development Code, industrial developments, uses, and activities shall be subject to the performance standards specified in Section 4. 135 (.05) (PDI Zone).~~

(.01) Performance Standards. If not otherwise specified in the Planning and Development Code, all industrial developments, uses, or activities are subject to the following performance standards. These standards are intended to minimize the potential adverse impacts of industrial activities on the general public and on

other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property or site.

A. All uses and operations except storage, off-street parking, loading and unloading shall be confined, contained, and conducted wholly within completely enclosed buildings, unless outdoor activities have been approved as part of Stage II, Site Design Review, or Administrative Review.

B. Vibration. Every use shall be so operated that the ground vibration inherently and recurrently generated from equipment other than vehicles is not perceptible without instruments at any boundary line of the property or site on which the use is located.

C. Emission of odorous gases or other odorous matter in quantities detectable at any time and at any point on any boundary line of the property or site on which the use is located are prohibited.

D. Any open storage shall comply with the provisions of Section 4.176, and this Section.

E. No building customarily used for night operation, such as a baker, bottling and distribution plant or other similar use, shall have any opening, other than stationary windows or required fire exits, within 100 feet of any residential district and any space used for loading or unloading commercial vehicles in connection with such an operation shall not be within 100 feet of any residential district.

F. Heat and Glare:

1. Operations producing heat or glare shall be conducted entirely within an enclosed building.

2. Exterior lighting on private property shall be screened, baffled, or otherwise directed away from adjacent residential properties. This is not intended to apply to street lighting.

G. Dangerous Substances. Any use which involves the presence, storage or handling of any explosive, nuclear waste product, or any other substance in a manner which would cause a health or safety hazard for any adjacent land use or site shall be prohibited.

H. Liquid and Solid Wastes:

1. Any storage of wastes which would attract insects or rodents or otherwise create a health hazard shall be prohibited.

2. Waste products which are stored outside shall be concealed from view from any property line by a sight-obscuring fence or planting as required in Section 4.176.

3. No connection with any public sewer or public stormwater system shall be made or maintained in violation of applicable City or State standards.

4. No wastes conveyed shall be allowed to or permitted, caused to enter, or allowed to flow into any public sewer or public stormwater system in violation of applicable City or State standards.

5. ~~All drainage permitted to discharge int a street gutter, caused to enter or allowed to flow into any pond, lake, stream, or other natural water course shall be limited to surface waters or waters having similar characteristics as determined by the City, County, and State Department of Environmental Quality.~~

6. All operations shall be conducted in conformance with the City's standards and ordinances applying to sanitary public sewer and stormwater sewer discharges.

I. Noise. Noise generated by the use, with the exception of traffic noises from automobiles, trucks, and trains, shall not violate any applicable standards adopted by the Oregon Department of Environmental Quality and W.C. 6.204 governing noise control in the same or similar locations.

J. Electrical Disturbances. Except for electrical facilities wherein the City is pre-empted by other governmental entities, electrical disturbances generated by uses within the PDI zone which interfere with the normal operation of equipment or instruments within the PDI Zone are prohibited. Electrical

disturbances which routinely cause interference with normal activity in abutting residential use areas are also prohibited.

K. Discharge Standards. There shall be no emission of smoke, fallout, fly ash, dust, vapor, gases, or other forms of air pollution that may cause a nuisance or injury to human, plant, or animal life, or to property. Plans of construction and operation shall be subject to the recommendations and regulations of the State Department of Environmental Quality. All measurements of air pollution shall be by the procedures and with equipment approved by the State Department of Environmental Quality or equivalent and acceptable methods of measurement approved by the City. Persons responsible for a suspected source of air pollution upon the request of the City shall provide quantitative and qualitative information regarding the discharge that will adequately and accurately describe operation conditions.

L. Open burning is prohibited.

M. ~~Material~~ ***Outdoor Storage:***

1. Outdoor ~~material~~ ***storage must be maintained in an orderly manner at all times.***

2. Outdoor storage area shall be gravel surface or better and shall be suitable for the materials being handled and stored. If a gravel surface is not sufficient to meet the performance standards for the use, the area shall be suitably paved.

3. Any open storage that would otherwise be visible at the property line shall be concealed from view at the abutting property line by a sight obscuring fence or planting not less than six feet in height.

N. Landscaping:

1. Unused property, or property designated for expansion or other future use, shall be landscaped and maintained as approved by the Development Review Board. Landscaping for unused property disturbed during construction shall include such things as plantings of ornamental shrubs, lawns, native plants, and mowed, seeded fieldgrass.

2. Contiguous unused areas of undisturbed fieldgrass may be maintained in their existing state. Large stands of invasive weeds such as Himalayan blackberries, English ivy, cherry Laurel, reed canary grass or other identified invasive plants shall be removed and/or mowed at least annually to reduce fire hazard. These unused areas, located within a phased development project or a future expansion, cannot be included in the area calculated to meet the landscape requirements for the initial phase(s) of the development.

3. Unused property shall not be left with disturbed soils that are subject to siltation and erosion. Any disturbed soil shall be seeded for complete erosion cover germination and shall be subject to applicable erosion control standards.

No additional changes proposed in this section

Section 4.1307. CI—Craft Industrial Zone.

(.01) Purpose. The purpose of the Craft Industrial (CI) Zone is to support a diverse range of small-scale industrial and creative enterprises such as incubators, craft and artisan studios, innovation hubs, and maker spaces. It may also include limited residential and commercial uses accessory to the typically permitted uses that serve as a transition to and support more intense urban uses nearby.

(.02) The CI Zone is a Planned Development Zone, subject to applicable Planned Development regulations (see Sections 4.118 and 4.140). Where conflicts occur between these standards and other Development Code regulations or other ordinances, the provisions of this Chapter shall apply.

(.03) Uses that are typically permitted:

- ***A. Home Businesses that include any of the uses listed below.***
- ***B. Business-Integrated Dwelling Units (BIDU) and Live-Work Dwelling Units (LWDU).***
- ***C. Studios and Creative Workspaces.***
- ***D. Artisan Food and Beverage Production and Food-Related ~~Micro-~~Businesses, with or without accessory on-site tasting rooms or eateries subject to the limitations for Retail and Service Commercial Uses of Subsection 4.130.***
- ***E. Craft and Specialty Manufacturing, including the processing, packaging, and/or assembly of artisan goods and handcrafted items.***
- ***F. Custom Fabrication and Printing Services, including sign fabrication.***
- ***G. Light Manufacturing and Assembly of small machinery and appliances, micro-mobility vehicles, precision tools, or other electrical or mechanical items.***
- ***H. Industrial Office and Laboratory Uses, including research, development, testing, or product training and support.***
- ***I. Repair, Finishing, and Testing Services of products manufactured or assembled within the zone.***
- ***J. Service Commercial and Professional Services uses shall not exceed 3,000 square feet of floor space in a single building or 20,000 square feet of combined floor area within a multiple building development.***
- ***K. Retail and Service Commercial Uses, limited to 5,000 square feet of indoor and outdoor sales, service or inventory storage area.***
- ***L. Accessory Uses, including buildings and structures customarily incidental and subordinate to any permitted use.***
- ***M. Other Similar Uses, as determined by the Planning Director to be consistent with the purpose of the CI Zone.***

(.04) Performance Standards. The performance standards of Section 4.117(.01) apply to all industrial properties and sites within the CI Zone, and are intended to minimize the potential adverse impacts of industrial activities on the general public and on other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property or site.

(.05) Design and Development Standards:

- ***A. The standards of Section 4.134(.10), Development Standards Table, excepting the front yard setback provisions, for properties with frontage on SW Boones Ferry Road located north of SW Day Road, where the setback standards of Section 4.137(08) shall apply; or***
- ***B. The standards of the PDC zone, Section 4.131(.03), for all other properties.***

(.07) Block and access standards. The CI zone shall be subject to:

- ***A. The block and access standards of Section 4.134(.10), Development Standards Table, for properties with frontage on SW Boones Ferry Road located north of SW Day Road; or***
- ***B. The block and access standards of the PDC zone, Section 4.131(.03), for all other properties.***

(.08) Other Standards:

- ***A. Minimum Individual Lot Size. No limit save and except as shall be consistent with the other provisions of this Code (e.g., landscaping, parking, etc.).***
- ***B. Maximum Lot Coverage. No limit save and except as shall be consistent with the other provisions of this Code (e.g., landscaping, parking, etc.).***

C. Minimum Front Yard Setback. None required except when front yard abuts a more restrictive district, in which case the front yard setback shall be a minimum of half the same and a maximum of the same as the abutting district. Except as otherwise provided for properties with frontage on SW Boones Ferry Road located north of SW Day Road, structures on corner or through lots shall observe the minimum front yard setback on both streets. Setbacks shall also be maintained from the planned rights-of-way shown on any adopted City Transportation System Plan (TSP).

D. Minimum Rear and Side Yard Setback. None required except when rear and side yards abut a more restrictive district, in which case setbacks shall be the same as the abutting district. Except as otherwise provided for properties with frontage on SW Boones Ferry Road located north of SW Day Road, structures on corner or through lots shall observe the minimum rear and side yard setbacks on both streets. Setbacks shall also be maintained from the planned rights-of-way shown on any adopted City TSP.

E. No setback is required when side or rear yards abut a railroad siding.

F. Corner Vision. Corner lots shall have no sight obstruction to exceed the vision clearance standards of Section 4.177.

No additional changes proposed in this section

Section 4.134. Northwest Industrial (NWI) Zone.

(.01) *Purpose.* ~~The Coffee Creek Industrial Design Overlay District (Coffee Creek DOD) is an overlay district within the Planned Development Industrial - Regionally Significant Industrial Area (RSIA) Zone Section 4.135.5. The purpose of this Coffee Creek DOD is to implement the Coffee Creek Industrial Area Master Plan (2007)~~ ***The purpose of the Northwest Industrial (NWI) Zone is to implement the Coffee Creek Industrial Area Master Plan (2007) and Basalt Creek Master Plan (2026) by establishing standards for street design and connectivity, site design and circulation, building form, and building architecture and landscape for all development located within the master plan area. These standards are intended to result in:***

A. An industrial district featuring cohesive and high-quality site, landscape, and building design that is well integrated with adjacent streetscapes and other public spaces.

B. A multi-modal transportation network accommodating pedestrians, bicyclists, transit riders, motorists, and freight in the context of a modern industrial district.

C. Preservation of trees and natural features.

D. Minimization of adverse impacts to adjacent properties from development that detracts from the character and appearance of the area.

E. Minimization of the off-site visibility of vehicular parking, circulation and loading areas.

F. Creation of a pleasant and functional industrial district for employees and visitors.

G. A predictable and timely process for reviewing industrial development applications.

(.02) *Applicability.* ~~The Coffee Creek DOD shall apply to all properties within the Coffee Creek Industrial Area Master Plan as shown in the Regulating Plan (Figure CC-1). The provisions of this section shall apply to~~: ***The NWI Zone shall apply to all properties within the Coffee Creek Master Plan and Basalt Creek Master Plan areas as shown in the Regulating Plan (Figure NWI-2).***

A. Subdistricts. The NWI Zone includes four subdistricts (Figure NWI-1):

1. Coffee Creek. Properties in the Coffee Creek Master Plan area located south of SW Day Road.

2. High-Tech Employment. Properties located in the Basalt Creek Master Plan area north of SW Day Road south of the Light Industrial subdistrict, and east of SW Boones Ferry Road.

3. Light Industrial. Properties located in the Basalt Creek Master Plan area north of SW Clay Street west of SW Grahams Ferry Road, and north of the High-Tech Employment subdistrict east of SW Grahams Ferry Road to the western boundary of Craft Industrial (CI) Zone.

4. West Railroad. Properties located in the Basalt Creek Master Plan area west of the Portland and Western Railroad tracks.

B. The provisions of this section shall apply to:

1. All new building construction.
2. Any exterior modifications to ***or expansions of*** existing, non-residential buildings, subject to Section 4.134(.03).
3. All development of site improvements, including but not limited to, new paved parking lots, outdoor storage, display areas, signs, and landscaping.
4. All building expansions greater than 1,250 square feet.

(.03) *Exceptions.* This section does not apply to the following:

A. Maintenance of the exterior of an existing industrial/employment structure, such as painting to an approved color palette, reroofing, or residing with the same or similar materials.

B. Interior remodeling.

C. Maintenance of existing dwellings and accessory buildings.

D. Maintenance of agricultural buildings.

(.04) *Uses that are Typically Permitted:*

(.05) *Prohibited Uses:* The uses prohibited shall be governed by Section 4.135.5(.04).

(.06) ~~*Overview of Coffee Creek DOD Standards:*~~ ***Overview of Northwest Industrial Zone Standards:***

A. *Section 4.134(.08) Regulating Plan.* The Regulating Plan organizes all existing and future streets, drives, and shared-use paths within the ~~Coffee Creek Industrial Area~~ ***NWI Zone*** into a hierarchy of Addressing Streets, Supporting Streets and Through Connections.

B. *Section 4.134(.09) Connectivity Standards:*

1. New Supporting Streets and Through Connections are required within the ~~Coffee Creek DOD~~ ***NWI Zone*** to meet Connectivity Requirements as shown on Figure ~~CC-4~~ ***NWI-5.***

2. The Street Types specify the cross sections for each of the street and shared-use path types within the Regulating Plan. These cross section specifications apply to both existing and proposed

new streets. A range of cross sections for Supporting Streets and Through Connections is permitted and detailed in Figures ~~CC-2 and CC-3~~ ***NWI-3 and NWI-4.***

C. *Section 4.134(.10) Development Standards Table:*

1. The Development Standards Table provides an overview of all applicable development standards. The development standards for any given parcel are determined by the existing or future street or shared-use path type on which the parcel fronts, as detailed in Table ~~CC-1~~ ***NWI-2.***

2. Areas bounded by new Supporting Streets and Through Connections are designated as Parcels and are required to comply with Development Standards governing site design, building orientation and frontage. The development standards for site design, building façade and landscape design are intended to work in tandem with the street types to create a cohesive and unified public realm.

3. Adjustments to Development Standards may be granted by the Planning Director for quantifiable provisions, as noted in Tables ~~CC-1 through CC-4~~ ***NWI-2 through NWI-5***, if the Planning Director finds that the adjusted Development Standard will perform as well as the Development Standard.

D. ~~Coffee Creek DOD Pattern Book~~ **NWI Zone Pattern Book. The NWI Zone Pattern Book** provides supplemental design guidelines, which are intended to allow more flexibility in design than the Development Standards while satisfying the purpose of the ~~Coffee Creek DOD~~ ***NWI Zone.***

(.06) *Review Process.* Development applications shall follow the application review process described in:

A. Section 4.197 Zone Changes and Amendments.

B. ~~Section 4.198 Comprehensive Plan Changes.~~

C. Section 4.700 Annexation and Urban Growth Boundary Amendments.

D. Section 4.140 Planned Development Regulations.

(.07) *Waivers.* The Development Review Board may waive standards as listed in Section 4.134(.10), consistent with the provisions of Section ~~4.118(.03)~~***4.119.***

A. The following standards shall not be waived, unless there is substantial evidence in the whole record to support a finding that the intent and purpose of the standards will be met in alternative ways:

1. Required minimum building height as provided in Section 4.134(.10) Table NWI-5;

2. Parking location and design along Addressing Streets in Section 4.134(.10) Table NWI-4; and

3. Parcel pedestrian access as listed in Section 4.134(.10) Table NWI-4.

B. In addition to meeting the purposes and objectives of Section 4.140, any waivers granted in the NWI Zone must be found to be consistent with the intent of the ~~Coffee Creek DOD~~ ***NWI Zone*** Pattern Book.

(.08) ~~*Coffee Creek DOD*~~ ***NWI Zone Regulating Plan****, Figure* ~~*CC-1*~~ ***NWI-2:***

A. *Components of the Regulating Plan Map:*

1. *Addressing Streets.* Existing and planned streets within the Regulating Plan Area are called Addressing Streets and include Boones Ferry Road, Cahalin Road, Clay Street, Clutter Street, Day Road, Garden Acres Road, and Grahams Ferry Road.~~and "Future" Street.~~ ***For the purposes of this Subsection, the Basalt Creek Parkway and SW Greenhill Lane are existing or planned streets, but not Addressing Streets as referred to in Tables NWI-2 through NWI-5.***

2. ~~*Overlay District.* Land area identified within the Coffee Creek DOD on Figure CC-1 is subject to additional Connectivity Standards as detailed in Figure CC-4 and Table CC-1.~~ **Regulating Plan Area. Land area identified within the NWI Zone on Figure NWI-2 is subject to additional Connectivity Standards as detailed in Figure NWI-5 and Table NWI-2.**

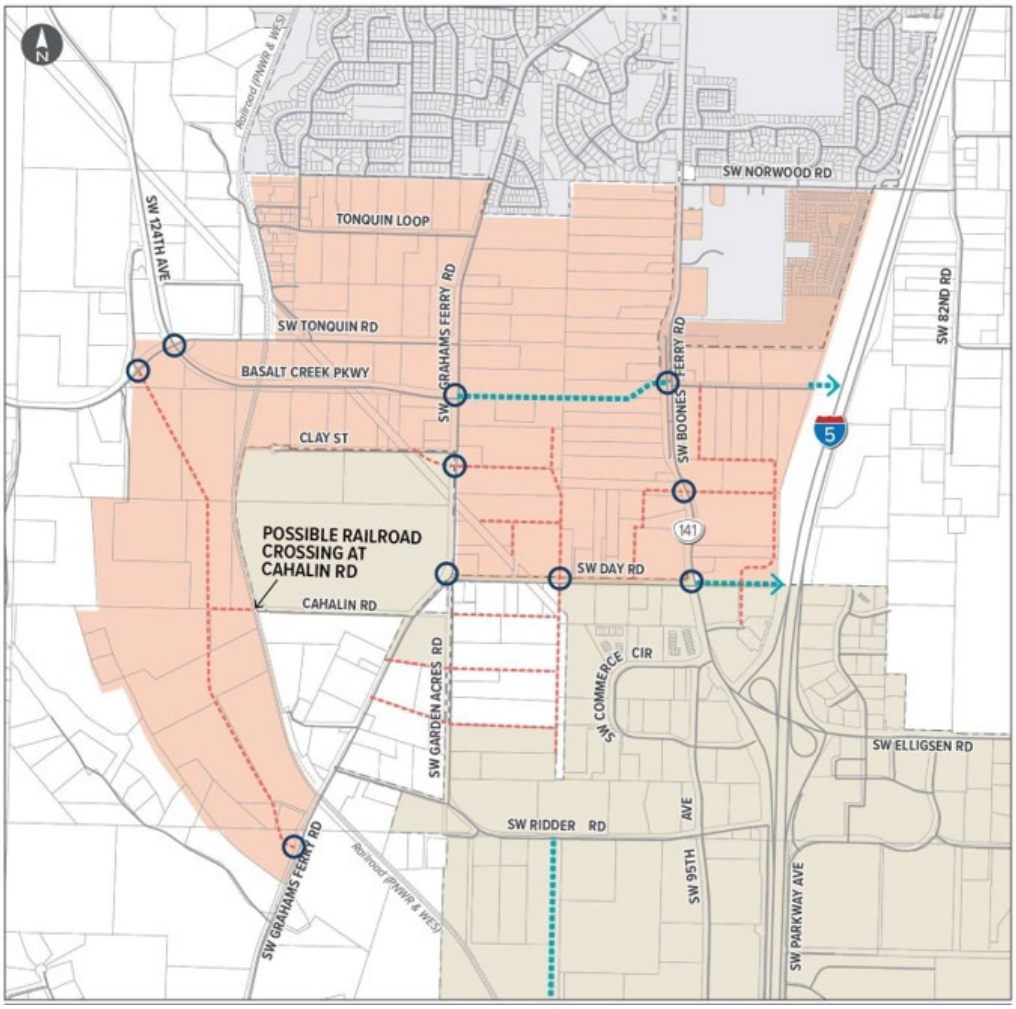

Figure NWI-2. Regulating Plan

(.09) ~~Coffee Creek Connectivity Standards:~~ ***NWI Zone Connectivity Standards:***

A. *Street Types, ~~Figure CC-1~~* ***NWI-2***. Within the land area bounded by Addressing Streets, connectivity shall be provided through new streets or private drives and shared use paths. The location, alignment, and cross-section of required streets or private drives and shared-use paths is flexible, as long as they comply with spacing and minimum cross-section standards. New connections may be one of the following types:

1. *Supporting Streets.* Supporting Streets are new public streets or private streets in public easements. They shall meet the development standards set out in Figure ~~CC-2~~ ***NWI-3.***

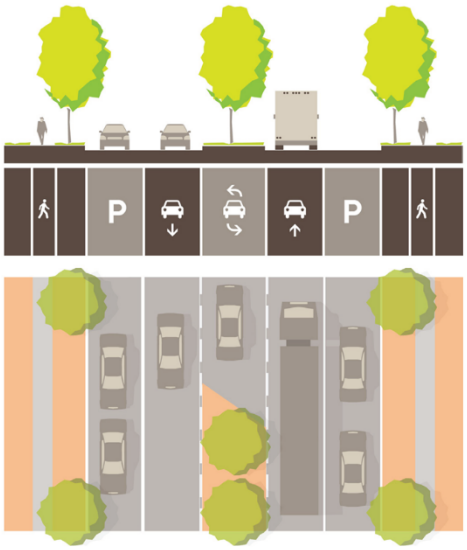
   a. A Required Supporting Street is one that intersects with an Addressing Street as shown on Figure ~~CC-1~~ ***NWI-2.*** The exact location and design of these connections will be determined at the time of development review.

   b. Planned Intersections are locations where Existing and Planned Addressing Streets intersect with required Supporting Streets and Planned Pathways, as generally shown in Figure ~~CC-1~~ ***NWI-2.***

2. *Through Connections.* Through Connections are new public streets or private streets in public easements with multi-use paths, or streets or public easements that combine characteristics of

streets and multi-use paths. They shall meet the Development Standards set out in Figure ~~CC-3~~ ***NWI-4.***

B. Planned Pathways are multi-use paths or pedestrian connections that are planned in the Transportation Systems Plan to occur in the location generally shown in Figure ~~CC-1~~ ***NWI-2***. A Planned Pathway may be employed to meet required connectivity, if it complies with Through Connection Standards for Connection Spacing and Connection Type, see Figure ~~CC-6~~ ***NWI-7.***



C. *Maximum Connection Spacing:*

1. Addressing Streets. When intersecting with an Addressing Street, new Supporting Streets and Through Connections shall meet maximum spacing standards as set out in Table ~~CC-1~~ ***NWI-2.***

2. Internal Supporting Streets and Through Connections. See Figures ~~CC-4 and Table CC-1~~ ***NWI-5 and Table NWI-2.***

D. *Required Connectivity Master Plan.* Connectivity Master Plans are required for all development within the ~~Coffee Creek DOD~~ ***NWI Zone***. Development proposals shall show conceptually how the Connectivity Requirements will be met. In addition, the Connectivity Master Plan should generally indicate how parking, driveways, walkways, waysides, etc., will relate or connect to adjacent parcels.

Specifications for Supporting Streets	
Type	Multimodal Connection*
Aesthetic Character / Identity	Minor Addressing Street
Role in Network	Bike, Pedestrian and Local Vehicular Connectivity
Design Speed	under 20 mph
Right-of-Way / Easement	Varies
Curb-to-Curb Width	24-54 feet
Travel Lanes (number)	2
Travel Lane Width	10-12 feet
Center Turn Lane Width	14 feet, max. (optional)
Parking Lane Width	8 feet (optional)
Bike Facilities	Shared Street
Sidewalk Width	6 feet (minimum)
Planting Strip Width	6 feet (minimum)
Planted Median Width	14 (minimum, optional)

*The Regulating Plan (Figure CC-1) illustrates the general location of planned multimodal connections. These are labeled as *Required Supporting Streets*. Within 300 feet of an Addressing Street, the exact location and design of these connections will be determined at the time of development review.

Figure NWI-3 - Supporting Streets Standards

Specifications for Through Connections	
Type	Local Street
Aesthetic Character / Identity	
Role in Network	Bike, Pedestrian, Local Vehicular Connectivity
Design Speed	under 20 mph
Right-of-Way / Ease-ment	Varies
Curb-to-Curb Width	Varies
Travel Lanes (number)	Optional
Travel Lane Width	12 feet (maximum)
Center Turn Lane Width	NA
Parking Lane Width	8-30 feet (optional; head-in, diagonal or parallel parking, or a combination, permit-ted,)
Bike Facilities	Shared Street or Shared-Use Path
Sidewalk Width	5 feet (minimum) each side or 10 feet (minimum) one side or 10 feet (minimum) no travel lane
Planting Strip Width	6 feet (minimum)
Planted Median Width	NA

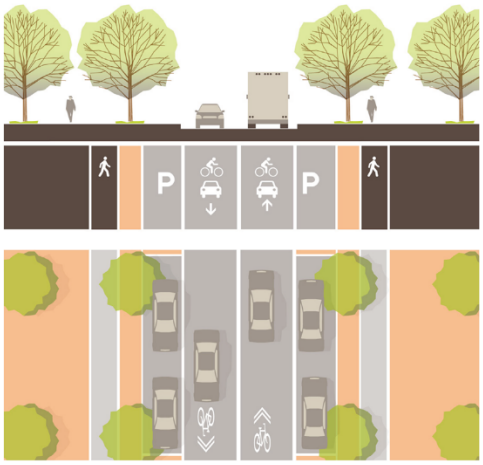


Figure NWI-4 - Through Connections Standards

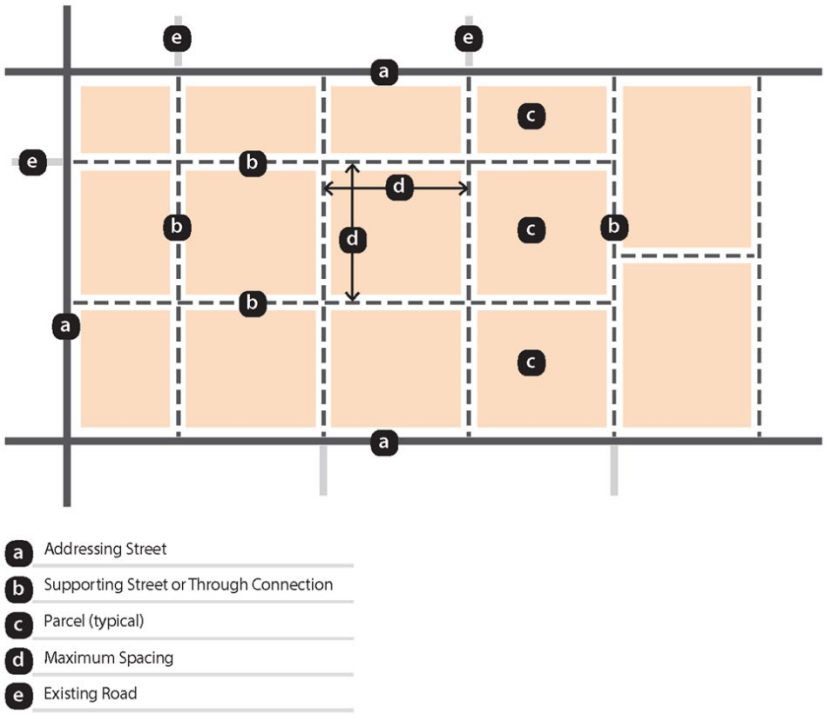

Figure NWI-5 - Connectivity Standards

(.10) *Development Standards Table.* Areas bounded by Addressing Streets, Supporting Streets and Through Connections shall be designated as a Parcel and subject to the Development Standards in Tables ~~CC-1 through CC-4~~ ***NWI-2 through NWI-5.***

Table ~~CC-1~~ *NWI-2*: Street Design and Connectivity			
	Addressing Streets	**Supporting Streets**	**Through Connections**
General	Development Standards within this table are not adjustable.		
Connection Spacing	Not applicable, Addressing Streets exist or are planned	600 feet, maximum, centerline to centerline. Supporting Streets and Through Connections shall intersect with Addressing Streets; or if the Addressing Street is Boones Ferry Road, Garden Acres Road, or Grahams Ferry Road, as shown on Figure NWI-2, Regulating Plan; or if the Addressing Street is Day Road, no less than 1,000 feet apart, centerline to centerline.	
co	Addressing Streets are Boones Ferry Road, Cahalin Road, Clay Street, Clutter Street, Day Road, Garden Acres Road, ***and*** Grahams Ferry Road, ~~and "Future" Street.~~	Supporting Streets are those meeting Specifications, Figure NWI-3. A Required Supporting Street is one that intersects with an Addressing Street. The exact location and design of these connections will be determined at the time of development review.	Through Connections are those meeting Specifications, Figure NWI-4. Through Connections may be multimodal or used exclusively for bicycle and pedestrian access.
Connection Hierarchy and Primary Frontage	If one of the streets or connections bounding a parcel is an Addressing Street, the Addressing Street shall be the Primary Frontage. If none of the bounding streets or connections is an Addressing Street, a Supporting Street shall be the Primary Frontage. See Figure NWI-6.

Table ~~CC-2~~ *NWI-3*: District-Wide Planning and Landscaping			
	Addressing Streets	**Supporting Streets**	**Through Connections**
General	The following provisions apply: • Section 4.176 for landscaping standards • Section 4.610.10 for tree removal, relocation or replacement. • Section 4.610.10(.01)C. for consideration of development alternatives to preserve wooded areas & trees.		

Table ~~CC-3~~NWI-4: Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
1. Parcel Access			
General	Unless noted otherwise below, the following provisions apply: • Section 4.177(.02) for street design; • Section 4.177(.03) to (.10) for sidewalks, bike facilities, pathways, transit improvements, access drives & intersection spacing. The following Development Standards are adjustable: • Parcel Driveway Spacing: 20% • Parcel Driveway Width: 10%		
Parcel Driveway Access	Not applicable	Limited by connection spacing standards Parcel Driveway Access may be employed to meet required connectivity, if it complies with Supporting Street Standards for Connection Spacing and Connection Type, see Figure CC-6.	Limited by connection standards for motorized vehicle access. Parcel Driveway Access may be employed to meet required connectivity, if it complies with Through Connection Standards for Connection Spacing and Connection Type, see Figure CC-6.

Table ~~CC-3~~NWI-4: Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
		Subject to approval by City Engineer	Subject to approval by City Engineer
Parcel Driveway Spacing	Not applicable	150 feet, minimum See Figure CC-6	150 feet, minimum See Figure CC-6
Parcel Driveway Width	Not applicable	24 feet, maximum or complies with Supporting Street Standards for primary driveway providing access for passenger vehicles, light delivery, etc. 40 feet, maximum for secondary driveway providing access for heavy delivery vehicles, large trucks, etc.	24 feet, maximum or complies with Through Connection Standards for primary driveway providing access for passenger vehicles, light delivery, etc. 40 feet, maximum for secondary driveway providing access for heavy delivery vehicles, large trucks, etc.
2. Parcel Pedestrian Access			
General	Unless noted otherwise below, the following provisions apply: • Section 4.154 (.01) for separated & direct pedestrian connections between parking, entrances, street right-of-way & open space • Section 4.167 (.01) for points of access		
Parcel Pedestrian Access Spacing	No restriction		
Parcel Pedestrian Access Width	8 feet wide, minimum for pedestrian connections between the primary street frontage and Primary Building Entrance(s).		
Parcel Pedestrian	Provide separated & direct pedestrian connections between transit stops and parking, entrances, street right-of-way & open space.		

Table ~~CC-3~~NWI-4: Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
Access to Transit			
3. Parcel Frontage			
Parcel Frontage, Defined	Parcel Frontage shall be defined by the linear distance between centerlines of the perpendicular Supporting Streets and Through-Parcel Connections. Where Parcel Frontage occurs on a curved segment of a street, Parcel Frontage shall be defined as the linear dimension of the Chord.		
Primary Frontage, Defined	The Primary Frontage is the Parcel Frontage on an Addressing Street. If the parcel is not bounded by Addressing Streets, it is the Parcel Frontage on a Supporting Street. See Figure CC-5.		
Parcel Frontage Occupied by a Building	A minimum of 100 feet of the Primary Frontage shall be occupied by a building. The maximum Primary Frontage occupied by a building shall be limited only by required side yard setbacks.	No minimum	
4. Parking Location and Design			
General	Unless noted otherwise below, the following provisions apply: • Section 4.155 (03) Off-Street Parking Requirements • Section 4.155 (04) Bicycle Parking • Section 4.155 (06) Carpool and Vanpool Parking Requirements • Section 4.176 for Parking Perimeter Screening and Landscaping—permits the parking landscaping and screening standards as multiple options The following Development Standards are adjustable: • Parking Location and Extent: up to 20 spaces permitted on an Addressing Street		
Parking Location and Extent	Limited to 16 spaces, maximum. 50% of spaces designated for	Parking is permitted between right-of-way	Parking is permitted between right-of-way

Table ~~CC-3~~NWI-4: Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
	short-term (1 hour or less), visitor, and disabled parking only between right-of-way of Addressing Street and building.	of Supporting Street and building.	of Through Connection and building.
Parking Setback	20 feet minimum from the right-of-way of an Addressing Street.	15 feet minimum from the right-of-way of a Supporting Street.	10 feet minimum from the right-of-way of a Through Connection.
Parking Lot Sidewalks	Where off-street parking areas are designed for motor vehicles to overhang beyond curbs, sidewalks adjacent to the curbs shall be increased to a minimum of seven (7) feet in depth.	Where off-street parking areas are designed for motor vehicles to overhang beyond curbs, planted areas adjacent to the curbs shall be increased to a minimum of nine (9) feet in depth.	
Parking Perimeter Screening and Landscaping	Screen parking area from view from Addressing Streets and Supporting Streets by means of one or more of the following: a. General Landscape Standard, Section 4.176 (.02) C. b. Low Berm Standard, Section 4.176 (.02) E., except within 50 feet of a perpendicular Supporting Street or Through Connection as measured from the centerline.		Screen parking area from view from Through Connections by means of a. Low Screen Landscape Standard, Section 4.176(.02) D., or b. High Screen Landscaping Standard, Section 4.176(.02)F., or c. High Wall Standard, Section 4.176(.02)G., or d. Partially Sight-obscuring Fence Standard, Section 4.176(.02)I.

Table ~~CC-3~~NWI-4: Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
Off-Street Loading Berth	One loading berth is permitted on the front façade of a building facing an Addressing Street. The maximum dimensions for a loading are 16 feet wide and 18 feet tall. A clear space 35 feet, minimum is required in front of the loading berth. The floor level of the loading berth shall match the main floor level of the primary building. No elevated loading docks or recessed truck wells are permitted. Access to a Loading Berth facing an Addressing Street may cross over, but shall not interrupt or alter, a required pedestrian path or sidewalk. All transitions necessary to accommodate changes in grade between access aisles and the loading berth shall be integrated into adjacent site or landscape areas. Architectural design of a loading berth on an Addressing Street shall be visually integrated with the scale, materials, colors, and other design elements of the building.	No limitation. Shall meet minimum standards in Section 4.155(.05).	

Table ~~CC-3~~NWI-4: Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
Carpool and Vanpool Parking	No limitation		
5. Grading and Retaining Walls			
General	The following Development Standards are adjustable: • Retaining Wall Design: 20%		
Maximum height	Where site topography requires adjustments to natural grades, landscape retaining walls shall be 48 inches tall maximum when visible from adjacent streets and 60 inches tall maximum when visible only to users from within a site. Where the grade differential is greater than 30 inches, retaining walls may be stepped.		
Required Materials	Materials for retaining walls shall be unpainted cast-in-place, exposed-aggregate, or board-formed concrete; brick masonry; stone masonry; or industrial-grade, weathering steel plate.		
Retaining Wall Design	Retaining walls longer than 50 linear feet shall be tiered, introducing a 5-foot, minimum horizontal offset between the lowest part and upper part(s) of the wall to reduce their apparent mass.		
6. Planting			
General	Unless noted otherwise below, the following provisions apply: • Section 4.176 Landscaping and Screening Standards		
Landscaping Standards Permitted	General Landscape Standard, Section 4.176(.02 C. Low Berm Standard, Section 4.176(.02)E., except within 50 feet of a perpendicular Supporting Street or Through Connection as	General Landscape Standard, Section 4.176(.02)C. Low Screen Landscape Standard, Section 4.176(.02)D. Screen loading areas with High Screen Landscaping Standard, Section	

Table ~~CC-3~~NWI-4: Site Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
	measured from the centerline	4.176(.02)F., and High Wall Standard, Section 4.176(.02)G.	
7. Location and Screening of Utilities and Services			
General	Unless noted otherwise below, the following provisions apply: • Sections 4.179 and 4.430. Mixed Solid Waste and Recyclables Storage in New Multi-Unit Residential and Non-Residential Buildings		
Location and Visibility	Site and building service, equipment, and outdoor storage of garbage, recycling, or landscape maintenance tools and equipment is not permitted	Site and building service, utility equipment, and outdoor storage of garbage, recycling, or landscape maintenance tools and equipment is not permitted within the setback	No limitation
Required Screening	Not permitted	High Screen Landscaping Standard, Section 4.176(.02)F. and/or High Wall Standard, Section 4.176 (.02) G.	

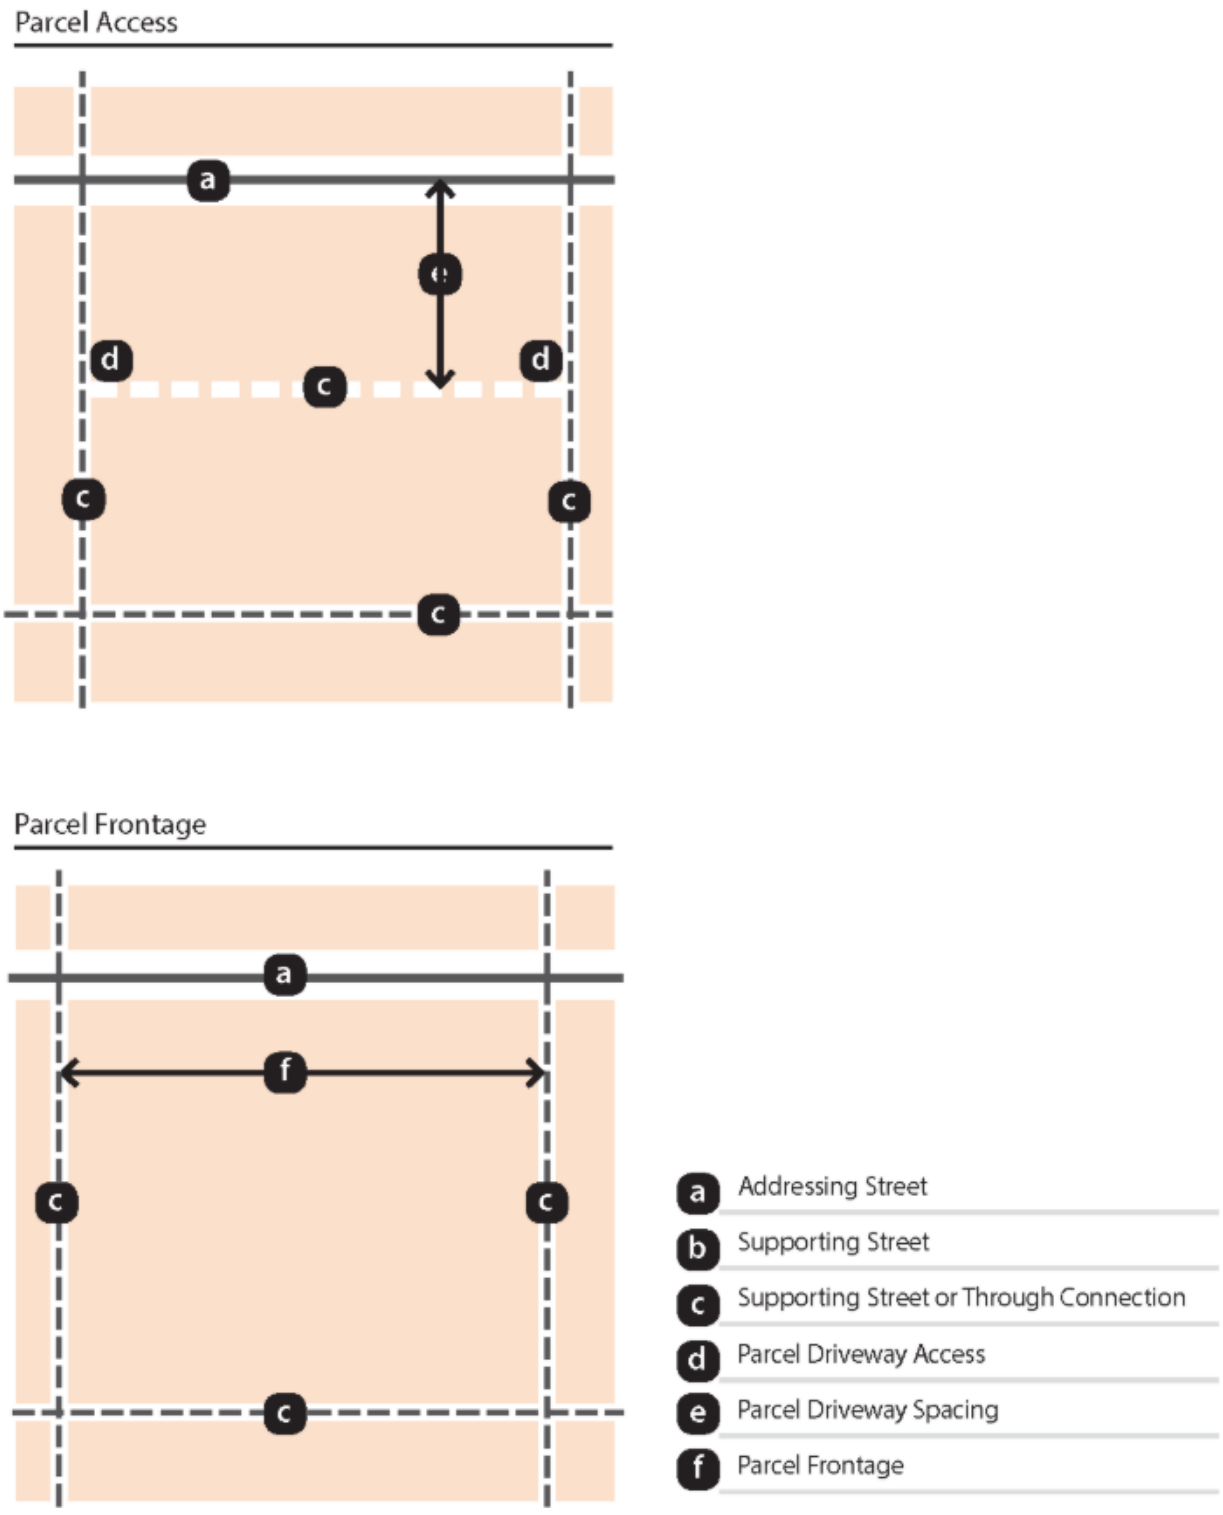

Figure NWI-7-Site Design – Parcel Access

Table NWI-5: Building Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
1. Building Orientation			
Front Façade	Buildings shall have one designated front façade and two designated side façades. If one of the streets or connections bounding a parcel is an Addressing Street, the front façade of the building shall face the Addressing Street. If two of the streets or connections bounding a parcel are Addressing Streets, the front façade of the building may face either Addressing Street, except when one of the Addressing Streets is Day Road. In that case, the front façade must face Day Road. If none of the bounding streets or connections is an Addressing Street, the front façade of the building shall face a Supporting Street. See Figure CC-5.		
Length of Front Façade	A minimum of 100 feet of the Primary Frontage shall be occupied by a building. The maximum Primary Frontage occupied by a building shall be limited only by required side yard setbacks.		
Articulation of Front Façade	Applies to a Front Façade longer than 175 feet that has more than 5,250 square feet of street-facing façade area: At least 10% of the street-facing façade of a building facing an Addressing Street must be divided into façade planes that are offset by at least 2 feet from the rest of the façade. Façade area used to meet this standard may be recessed behind, or project out from, the primary façade plane.		
2. Primary Building Entrance			
General	The following Development Standards are adjustable: • Required Canopy: 20% • Transparency: 20%		
Accessible Entrance *	The Primary Building Entrance shall be visible from, and accessible to, an Addressing Street (or a Supporting Street if there is no Addressing Street frontage). A continuous pedestrian pathway shall connect from the sidewalk of an Addressing Street to the Primary Building Entrance with a safe, direct and convenient path of travel that is free from hazards and provides a		

Table NWI-5: Building Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
	reasonably smooth and consistent surface consistent with the requirements of Americans with Disabilities Act (ADA). The Primary Building Entrance shall be 15 feet wide, minimum and 15 feet tall, minimum.		
Location	150 feet, maximum from right-of-way of an Addressing Street, see Figure CC-7.	150 feet, maximum from right-of-way of a Supporting Street, if there is no Addressing Street Frontage, see Figure CC-7.	
Visibility	Direct line of sight from an Addressing Street to the Primary Building Entrance.		
Accessibility	Safe, direct, and convenient path from adjacent public sidewalk.		
Required Canopy *	Protect the Primary Building Entrance with a canopy with a minimum vertical clearance of 15 feet and an all-weather protection zone that is 8 feet deep, minimum and 15 feet wide, minimum.		
Transparency	Walls and doors of the Primary Building Entrance shall be a minimum of 65% transparent.		
Lighting	The interior and exterior of the Primary Building Entrance shall be illuminated to extend the visual connection between the sidewalk and the building interior from day to night. Pathway lighting connecting the Primary Building Entrance to the adjacent sidewalk on an Addressing Street shall be scaled to the needs of the pedestrian. Comply with Outdoor Lighting, Section 4.199		
3. Overall Building Massing			
General	The following Development Standards are adjustable: • Required Minimum Height: 10% • Ground Floor Height: 10% • Base, Body, and Top Dimensions: 10% • Base Design: 10% • Top Design: 10%		

Table NWI-5: Building Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
Front Setback	30 feet, minimum, except as provided below	30 feet maximum	30 feet maximum
Allowance of Primary Building Entrance *	Where the Primary Building Entrance is located on an Addressing Street it may extend into the required front yard setback by 15 feet maximum provided that: a. It has a two-story massing with a minimum height of 24 feet; b. The Parcel Frontage on the Addressing Street is limited to 100 feet; c. The building extension is 65% transparent, minimum; d. The entrance is protected with a weather-protecting canopy with a minimum vertical clearance of 15 feet; and e. The standards for site design and accessibility are met.	Not applicable	Not applicable
Required Minimum Height	30 feet minimum.		
Ground Floor Height *	The Ground Floor height shall measure 15 feet, minimum from finished floor to finished ceiling (or 17.5 feet from finished floor to any exposed structural member).		
Base, Body, and Top Dimensions	Buildings elevations shall be composed of a clearly demarcated base, body and top. a. For Buildings 30 feet in height (unless lower by adjustment): i. The base shall be 30 inches, minimum. ii. The body shall be equal to or greater than 75% of the overall height of the building. iii. The top of the building shall be 18 inches, minimum. b. For Buildings between 30 feet and 5 stories in height: i. The base shall be 30 inches, minimum; 2 stories, maximum. ii. The body shall be equal to or greater than 75% of the overall height of		

Table NWI-5: Building Design			
	Addressing Streets	**Supporting Streets**	**Through Connections**
	the building. iii. The top of the building shall be 18 inches, minimum. c. For Buildings greater than 6 stories in height: i. The base shall be 1 story, minimum, 3 stories, maximum. ii. The body shall be equal to or greater than 75% of the overall height of the building. iii. The top of the building shall be 18 inches, minimum.		
Base Design	The design of the building Base shall: a. Use a material with a distinctive appearance, easily distinguished from the building Body expressed by a change in material, a change in texture, a change in color or finish; and/or b. Create a change in surface position where the Base projects beyond the Body of the building by 1½ inches, minimum; and/or c. Low Berm Landscape Standard, Section 4.176(.02)E.		
Top Design	Building Tops define the skyline. The design of the Building Top shall: a. Use a material with a distinctive appearance, easily distinguished from the building Body expressed by a change in material, a change in texture, a change in color or finish; and/or b. Create a change in surface position where the Top projects beyond, or recesses behind, the Body of the building by 1½ inches, minimum.		
Required Screening of Roof-mounted Equipment	Screen roof-mounted equipment with architectural enclosures using the materials and design of the building Body and/ or the building Top. No roof-mounted equipment shall be visible from an Addressing Street or Supporting Street.		

* When an applicant elects to use the allowed adjustment to reduce Required Canopy height to less than 15 feet, corresponding reduction in minimum height is allowed for Accessible Entrance, Allowance of Primary Building Entrance, and Ground Floor Height.

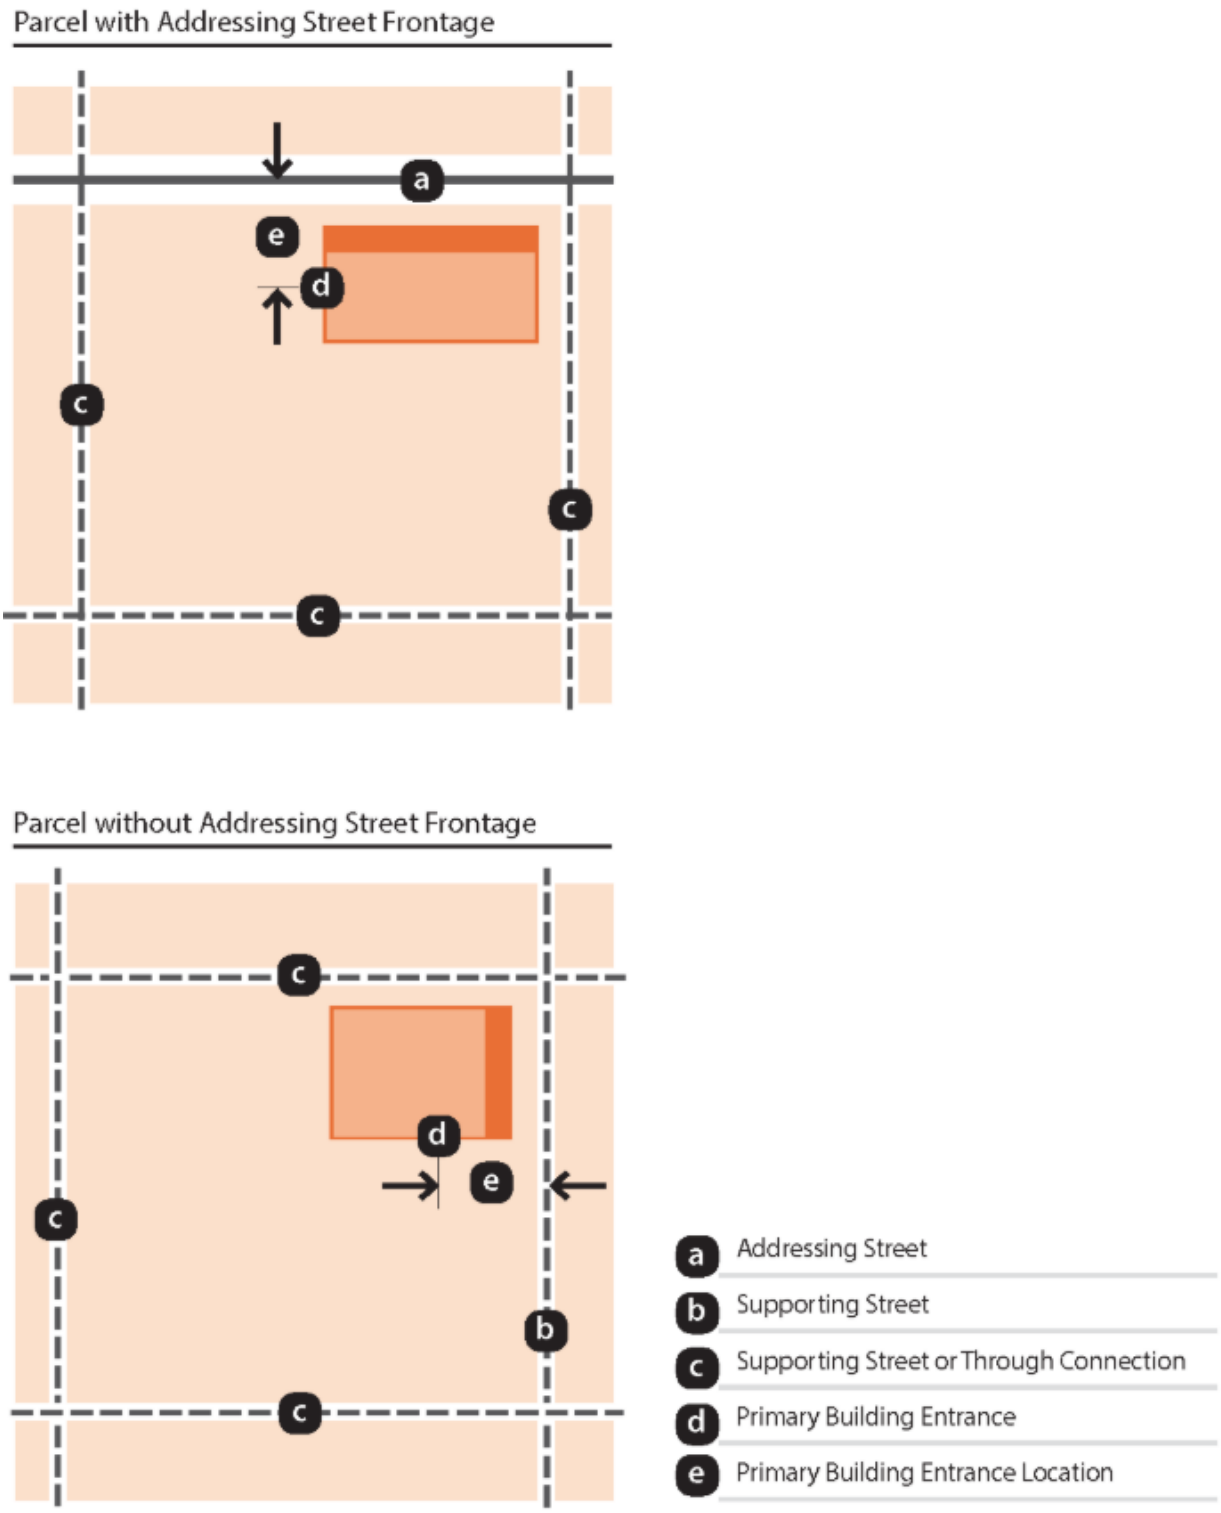

Figure NWI-8 – Building Design – Primary Building Entrance

(.12)Waysides:

A.Purpose. This section consists of standards and regulations for use throughout the ***Northwest Industrial Zone*** ~~Coffee Creek Design Overlay District~~. The regulations address materials, placement, layout, installation, and maintenance of Industrial Waysides. The City recognizes the need to:

1.Provide multiple, distributed destinations for passive and active recreation for the public and employees along a network of streets and trails;

2.Be convenient, usable and accessible. Industrial Waysides should be physically and visually accessible from the adjacent Addressing Street, Supporting Street or Through Connection;

3.Connect Industrial Waysides to transit;

4.Be inviting. Inviting open spaces feature designs that encourage users to explore the Industrial Wayside and design elements that support a sense of the human scale. These elements include landscaping, benches and other seating areas, and pedestrian-scaled lighting;

5.Provide access. Provide access to the employees and the public between the hours of 6:00 a.m. and 8:00 p.m.;

6.Be safe. Safe open spaces incorporate principles of natural surveillance, lighting, and prominent entrances;

7.Provide facilities appropriate for the scale of the proposed development; and

8.Be easy to maintain. Industrial Waysides should be constructed of commercial grade materials that will endure and are readily maintainable.

B.Applicability. All projects in the ***Northwest Industrial Zone*** ~~Coffee Creek Master Plan Area~~ shall provide waysides according to the standards in Table CC-5

C.General. The following development standards apply to all Waysides:

1.Required Wayside Area is exclusive of required landscape screening.

2.Required Minimum Dimension of 20 feet (either width or depth).

D.Criteria. Waysides shall meet the following criteria:

1.Perimeter Landscaping. In addition to the minimum size and dimensions, landscape three sides of the Industrial Wayside to a depth of 20 feet, minimum according to Section 4.176(.02). Permitted screening includes: Section 4.176(.02)D. Low Screen Landscaping Standard; Section 4.176(.02)E. Low Berm Standard; or Section 4.176(.02)F. High Screen Landscaping Standard. Perimeter landscaping shall not obscure visual access to the Industrial Wayside. Unscreened surface parking lots, chain link fencing, or service yards are prohibited adjacent to Industrial Waysides.

2.Visibility. Industrial Waysides shall be visible from and accessible to Addressing Streets.

3.Accessible Pathway. A paved walking surface, width: Five feet, minimum, meeting ADA standards is required to connect Industrial Wayside with Addressing Street.

4.Accessible Surface. Industrial Waysides shall have an accessible surface, 100 square feet, minimum; dimensions ten feet, minimum meeting ADA standards.

5.Required Amenities:

a.Seating. Outdoor seating shall be provided. Publicly accessible plazas, courtyards, and pocket parks shall include at least one linear foot of seating per each 40 square feet of plaza, courtyard or pocket park space on site. Outdoor seating shall be in the form of:

i.Free standing outdoor benches consistent with the standards; or

ii.Seating incorporated into low walls, berms, or raised planters.

b. Landscaping. The landscaping must be planted and maintained according to Section 4.176(.02)

c. Lighting.

d. Recycling/ Waste Receptacle. Locate waste and recycling stations nearest to the accessible path and away from stormwater facilities.

6.Installation and Maintenance. Industrial Waysides shall be programmed, planned, constructed, and maintained at the expense of the applicant. The landscaping must be planted and maintained according to Section 4.176(.07). Recycling, waste receptacles, and pet waste stations shall be serviced at an acceptable professional interval to prevent being over filled or creating unsanitary or visually messy appearances.

7.Solar Access. Exposure to sunlight. Southern exposure is encouraged. Design facilities to permit direct sunlight to enter the Industrial Wayside and strike the required accessible surface between the hours of 10:00 a.m. and 2:00 p.m. local time.

8.Lighting. Lighting for Industrial Waysides is required to permit reasonable use, utility, security, and nighttime safety. Lighting installed in Industrial Waysides shall conform to the requirements of Section 4.199. All outside lighting shall be so arranged and shielded so as not to shine into adjacent areas and to prevent any undue glare or reflection and any nuisance, inconvenience, and hazardous interference of any kind on adjoining streets or property.

E. Optional Amenities include the following:

1.Picnic tables and benches. Locate picnic tables and benches on the Accessible Surface;

2.Arbors or trellises;

3.Drinking Fountains. Locate drinking fountains and benches on the Accessible Surface;

4.Sculpture and other works of art;

5.Bicycle repair stations;

6.Exercise stations; or

7.Pet waste stations. Locate pet waste stations nearest to the accessible path and away from stormwater facilities.

Table NWI-6: Waysides			
Parcel Area	**Required Wayside Area**	**Number of Waysides**	**Enhanced Transit Plaza ‡**
Less than or equal to 5.0 acres	Not required	n/a	n/a
Greater than 5.0 acres, less than or equal to 8.0 acres	400 square feet, minimum	One	Not permitted
Greater than 8.0 acres, less than or equal to 13.0 acres	600 square feet, minimum	One	Not permitted
Greater than 13.0 acres, less than or equal to 23.0 acres	800 square feet, minimum	One, minimum	Permitted*. Up to 400 square feet.
Greater than 23.0 acres, less than or equal to 36.0 acres	1,600 square feet, minimum	One, minimum	Permitted*. Up to 400 square feet.
Greater than 36.0 acres, less than or equal to 51.0 acres	3,200 square feet, minimum	Two, minimum	Permitted*. Up to 400 square feet.
*** Greater than 51.0 acres, less than or equal to 70.0 acres	6,400 square feet, minimum	Two, minimum	Permitted**. Up to 800 square feet.
*** Greater than 70.0 acres, less than or equal to 92.0 acres	12,800 square feet, minimum	Two, minimum	Permitted**. Up to 800 square feet.

*‡ In the future when SMART serves **Northwest Industrial Zone** ~~Coffee Creek~~, Industrial Waysides may comply with the standards for Enhanced Transit Plazas, as follows:*

**Up to 400 square feet of the space requirement for Industrial Waysides may be satisfied by installation of an enhanced transit stop. An enhanced transit stop must provide weather protection, paved surface, and seating, as approved by SMART Transit.*

***Up to 800 square feet of the space requirement for Industrial Waysides may be satisfied by installation of an enhanced transit stop, provided parcel fronts on two or more Addressing Streets. An enhanced transit stop must provide weather protection, paved surface, and seating, as approved by SMART Transit.*

****For Parcel Frontage greater than 1,500 feet, and area greater than 51.0 acres, up to 50 percent of the space requirement for Industrial Waysides may be satisfied by restoration of wetlands, riparian zones, or other habitat because of the significant passive recreation opportunities provided.*

(.13)Signs:

A.Applicability. PDI Zone requirements of Section 4.156.01 through 4.156.11 apply to the ***Northwest Industrial Zon****e* ~~*Coffee Creek*~~ *DOD with the following modifications and adjustments.*

B.General:

1.Site Frontage as described in Section 4.156.08 is the Primary Frontage.
2.Monument-style signs are required. Pole-style freestanding signs are not permitted.
3.Maximum area for signs on buildings is based on linear length (in feet) of the façade adjacent to the Primary Frontage.
4.Directional and Wayfinding Signs shall be placed at the intersection of Supporting Streets and Through Connections.

No additional changes proposed in this section

Section 4.135. PDI—Planned Development Industrial Zone.

(.01) *Purpose.* The purpose of the PDI zone is to provide opportunities for a variety of industrial operations and associated uses.

(.02) The PDI Zone shall be governed by Section 4.140, Planned Development Regulations, and as otherwise set forth in this Code.

(.03) *Uses that are typically permitted:*

A. Warehouses and other buildings for storage of wholesale goods, including cold storage plants.

B. Storage and wholesale distribution of agricultural and other bulk products, provided that dust and odors are effectively contained within the site.

C. Assembly and packing of products for wholesale shipment.

D. Manufacturing and processing.

E. Motor vehicle services, or other services complementary or incidental to primary uses, and which support the primary uses by allowing more efficient or cost-effective operations.

F. Manufacturing and processing of electronics, technical instrumentation components and health care equipment.

G. Fabrication.

H. Office complexes—Technology.

I. Corporate headquarters.

J. Call centers.

K. Research and development.

L. Laboratories.

M. Repair, finishing and testing of product types manufactured or fabricated within the zone.

N. Industrial services.

O. Any use allowed in a PDC Zone, subject to the following limitations:

1. Service Commercial **and Professional Services** uses ~~(defined as professional services that cater to daily customers such as financial, insurance, real estate, legal, medical or dental offices)~~ not to exceed 5,000 square feet of floor area in a single building, or 20,000 square feet of combined floor area within a multi-building development.

2. Office Complex Use (as defined in Section 4.001) shall not exceed 30 percent of total floor area within a project site.

3. Retail uses, not to exceed 5,000 square feet of indoor and outdoor sales, service or inventory storage area for a single building and 20,000 square feet of indoor and outdoor sales, service or inventory storage area for multiple buildings.

4. Combined uses under Subsections 4.135(.03)(O.)(1.) and (3.) shall not exceed a total of 5,000 square feet of floor area in a single building or 20,000 square feet of combined floor area within a multi-building development.

P. Training facilities whose primary purpose is to provide training to meet industrial needs.

Q. *Public facilities.*

R. Accessory uses, buildings and structures customarily incidental to any permitted uses.

S. Temporary buildings or structures for uses incidental to construction work. Such structures to be removed within 30 days of completion or abandonment of the construction work.

T. Other similar uses, which in the judgment of the Planning Director, are consistent with the purpose of the PDI Zone.

(.04) *Block and access standards.* The PDI zone shall be subject to the same block and access standards as the PDC zone, Section 4.131(.02) and (.03).

(.05) *Performance Standards.* The ~~following~~ performance standards ***of Section 4.117(.01) shall*** apply to all industrial properties and sites within the PDI Zone, and are intended to minimize the potential adverse impacts of industrial activities on the general public and on other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property.

~~A. All uses and operations except storage, off-street parking, loading and unloading shall be confined, contained, and conducted wholly within completely enclosed buildings, unless outdoor activities have been approved as part of Stage II, Site Design or Administrative Review.~~

~~B. *Vibration.* Every use shall be so operated that the ground vibration inherently and recurrently generated from equipment other than vehicles is not perceptible without instruments at any boundary line of the property on which the use is located.~~

~~C. Emission of odorous gases or other odorous matter in quantities as detectable at any point on any boundary line of the property on which the use is located shall be prohibited.~~

~~D. Any open storage shall comply with the provisions of Section 4.176, and this Section.~~

~~E. No building customarily used for night operation, such as a baker or bottling and distribution station, shall have any opening, other than stationary windows or required fire exits, within 100 feet of any residential district and any space used for loading or unloading commercial vehicles in connection with such an operation shall not be within 100 feet of any residential district.~~

F. *Heat and Glare:*

1. Operations producing heat or glare shall be conducted entirely within an enclosed building.

2. Exterior lighting on private property shall be screened, baffled, or directed away from adjacent residential properties. This is not intended to apply to street lighting.

G. *Dangerous Substances.* Any use which involves the presence, storage or handling of any explosive, nuclear waste product, or any other substance in a manner which would cause a health or safety hazard for any adjacent land use or site shall be prohibited.

H. *Liquid and Solid Wastes:*

1. Any storage of wastes which would attract insects or rodents or otherwise create a health hazard shall be prohibited.

2. Waste products which are stored outside shall be concealed from view from any property line by a sight-obscuring fence or planting as required in Section 4.176.

3. No connection with any public sewer shall be made or maintained in violation of applicable City or State standards.

4. No wastes conveyed shall be allowed to or permitted, caused to enter, or allowed to flow into any public sewer in violation of applicable City or State standards.

5. All drainage permitted to discharge into a street gutter, caused to enter or allowed to flow into any pond, lake, stream, or other natural water course shall be limited to surface waters or waters having similar characteristics as determined by the City, County, and State Department of Environmental Quality.

6. All operations shall be conducted in conformance with the City's standards and ordinances applying to sanitary and storm sewer discharges.

I. *Noise.* Noise generated by the use, with the exception of traffic noises from automobiles, trucks, and trains, shall not violate any applicable standards adopted by the Oregon Department of Environmental Quality and W.C. 6.204 governing noise control in the same or similar locations.

J. *Electrical Disturbances.* Except for electrical facilities wherein the City is preempted by other governmental entities, electrical disturbances generated by uses within the PDI zone which interfere with the normal operation of equipment or instruments within the PDI Zone are prohibited. Electrical disturbances which routinely cause interference with normal activity in abutting residential use areas are also prohibited.

K. *Discharge Standards.* There shall be no emission of smoke, fallout, fly ash, dust, vapor, gases, or other forms of air pollution that may cause a nuisance or injury to human, plant, or animal life, or to property. Plans of construction and operation shall be subject to the recommendations and regulations of the State Department of Environmental Quality. All measurements of air pollution shall be by the procedures and with equipment approved by the State Department of Environmental Quality or equivalent and acceptable methods of measurement approved by the City. Persons responsible for a suspected source of air pollution upon the request of the City shall provide quantitative and qualitative information regarding the discharge that will adequately and accurately describe operation conditions.

L. Open burning is prohibited.

M. *Storage:*

1. Outdoor storage must be maintained in an orderly manner at all times.

2. Outdoor storage area shall be gravel surface or better and shall be suitable for the materials being handled and stored. If a gravel surface is not sufficient to meet the performance standards for the use, the area shall be suitably paved.

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

~~3. Any open storage that would otherwise be visible at the property line shall be concealed from view at the abutting property line by a sight obscuring fence or planting not less than six feet in height.~~

~~N. *Landscaping:*~~

~~1. Unused property, or property designated for expansion or other future use, shall be landscaped and maintained as approved by the Development Review Board. Landscaping for unused property disturbed during construction shall include such things as plantings of ornamental shrubs, lawns, native plants, and mowed, seeded fieldgrass.~~

~~2. Contiguous unused areas of undisturbed fieldgrass may be maintained in their existing state. Large stands of invasive weeds such as Himalayan blackberries, English ivy, cherry Laurel, reed canary grass or other identified invasive plants shall be removed and/or mowed at least annually to reduce fire hazard. These unused areas, located within a phased development project or a future expansion cannot be included in the area calculated to meet the landscape requirements for the initial phase(s) of the development.~~

~~3. Unused property shall not be left with disturbed soils that are subject to siltation and erosion. Any disturbed soil shall be seeded for complete erosion cover germination and shall be subject to applicable erosion control standards.~~

No additional changes proposed in this section

Section 4.135.5. Planned Development Industrial—Regionally Significant Industrial Area.

No prior changes proposed in this section

(.03) *Uses that are typically permitted:*

A. Wholesale houses, storage units, and warehouses.

B. Laboratories, storage buildings, warehouses, and cold storage plants.

C. Assembly of electrical equipment, including the manufacture of small parts.

D. The light manufacturing, simple compounding or processing packaging, assembling and/or treatment of products, cosmetics, drugs, and food products, unless such use is inconsistent with air pollution, excess noise, or water pollution standards.

E. Office Complexes-Technology (as defined in Section 4.001).

F. Experimental, film or testing laboratories.

G. Storage and distribution of grain, livestock feed, provided dust and smell is effectively controlled.

H. Motor vehicle service facilities complementary or incidental to permitted uses.

I. Any use allowed in a PDC Zone or any other light industrial uses provided that any such use is compatible with industrial use and is planned and developed in a manner consistent with the purposes and objectives of Sections 4.130 to 4.140 and is subject to the following criteria:

1. Service Commercial **and Professional Services** **uses** ~~(defined as professional services that cater to daily customers such as financial, insurance, real estate, legal, medical or dental offices)~~ shall not exceed 3,000 square feet of floor space in a single building or 20,000 square feet of combined floor area within a multiple building development.

2. Office Use (as defined in Section 4.001) shall not exceed 20 percent of total floor area within a project site.

3. Retail uses not to exceed 3,000 square feet of indoor and outdoor sales, service, or inventory storage area for a single building or 20,000 square feet of indoor and outdoor sales, service or inventory storage area for multiple buildings.

4. Combined uses under I.1 and 3. above shall not exceed a total of 3,000 square feet of floor area in a single building or 20,000 square feet of combined floor area within a multi-building development.

J. Residential uses shall not exceed ten percent of total floor area.

K. Accessory uses, buildings and structures customarily incidental to any of the aforesaid principal permitted uses.

L. Temporary buildings or structures for uses incidental to construction work, which buildings or structures shall be removed upon completion or abandonment of the construction work.

M. Expansion of a building, structure or use approved prior to October 25, 2004 of up to 20 percent additional floor area and/or ten percent additional land area.

N. Other similar uses which in the judgment of the Planning Director are consistent with the purpose of the PDI-RSIA Zone.

(.04) *Prohibited uses:*

A. Retail operations exceeding 3,000 square feet of area for sales, service area or storage area for retail inventory in a single building, or 20,000 square feet of sales, service or storage area for multiple buildings, except training facilities whose primary purpose is to provide training to meet industrial needs.

B. Any use or activity that violates the performance standards specified in Subsection 4.135.5(.06), below.

(.05) *Block and Access Standards.* The PDI-RSIA Zone shall be subject to:

A. The same block and access standards as the PDC Zone [Section 4.131(.02) and (.03)] for properties located outside of ***Northwest Industrial (NWI) Zone.*** ~~the Coffee Creek Industrial Design Overlay District;~~ or

B. The access and block size standards in Section 4.134 for those properties located within the ~~Coffee Creek Industrial Design Overlay District~~***Northwest Industrial (NWI) Zone.***

(.06) *Performance Standards.* The ~~following~~ performance standards ***of Section 4.117(.01)*** apply to all industrial properties and sites within the PDI-RSIA Zone, and are intended to minimize the potential adverse impacts of industrial activities on the general public and on other land uses or activities. They are not intended to prevent conflicts between different uses or activities that may occur on the same property or site.

~~A. All uses and operations except storage, off-street parking, loading and unloading shall be confined, contained and conducted wholly within completely enclosed buildings, unless outdoor activities have been approved as part of Stage II, Site Design or Administrative Review.~~

~~B. *Vibration:* Every use shall be so operated that the ground vibration inherently and recurrently generated from equipment other than vehicles is not perceptible without instruments at any boundary line of the property or site on which the use is located.~~

~~C. Emission of odorous gases or other odorous matter in quantities detectable at any time and at any point on any boundary line of the property or site on which the use is located are prohibited.~~

~~D. Any open storage shall comply with the provisions of Section 4.176 and this Section.~~

~~E. No building customarily used for night operation, such as a bakery, bottling and distribution plant or other similar use, shall have any opening, other than stationary windows or required fire exits, within 100 feet of~~

~~any residential district and any space used for loading or unloading commercial vehicles in connection with such an operation shall not be within 100 feet of any residential district.~~

~~F. *Heat and Glare:*~~

~~1. Operations producing heat or glare shall be conducted entirely within an enclosed building.~~

~~2. Exterior lighting on private property shall be screened, baffled, or otherwise directed away from adjacent residential properties. This is not intended to apply to street lighting.~~

~~G. *Dangerous Substances:* Any use which involves the presence, storage or handling of any explosive, nuclear waste product or any other substance in a manner which would cause a health or safety hazard on any adjacent land use or site shall be prohibited.~~

~~H. *Liquid and Solid Wastes:*~~

~~1. Any storage of wastes which would attract rodents or insects or otherwise create a health hazard shall be prohibited.~~

~~2. Waste products which are stored outside shall be concealed from view from any property line by a sight-obscuring fence or planting as required by Section 4.176.~~

~~3. No connection with any public sewer shall be made or maintained in violation of applicable City or State standards.~~

~~4. No wastes conveyed shall be allowed to or permitted, caused to enter, or allowed to flow into any public sewer in violation of applicable City or State standards.~~

~~5. All drainage permitted to discharge into a street gutter, caused to enter or allowed to flow into any pond, lake, stream or other natural water course shall be limited to surface waters or waters having similar characteristics as determined by the City, County, and State Department of Environmental Quality.~~

~~6. All operations shall be conducted in conformance with the City's standards and ordinances applying to sanitary and storm sewer discharges.~~

~~I. *Noise:* Noise generated by the use, with the exception of traffic uses from automobiles, trucks and trains, shall not violate any applicable standards adopted by the Oregon Department of Environmental Quality and W.C. 6.204 governing noise control in the same or similar locations. [Amended by Ord. 631, 7-16-2007]~~

~~J. *Electrical Disturbances.* Except for electrical facilities wherein the City is pre-empted by other governmental entities, electrical disturbances generated by uses within the PDI-RSIA Zone which interfere with the normal operation of equipment or instruments within the PDI-RSIA Zone are prohibited. Electrical disturbances which routinely cause interference with normal activity in abutting residential uses are also prohibited.~~

~~K. *Discharge Standards.* There shall be no emission of smoke, fallout, fly ash, dust, vapors, gases or other forms of air pollution that may cause a nuisance or injury to human, plant or animal life or to property. Plans for construction and operation shall be subject to the recommendations and regulations of the State Department of Environmental Quality. All measurements of air pollution shall be by the procedures and with equipment approved by the State Department of Environmental Quality or equivalent and acceptable methods of measurement approved by the City. Persons responsible for a suspected source of air pollution upon request of the City shall provide quantitative and qualitative information regarding the discharge that will adequately and accurately describe operation conditions.~~

~~L. Open burning is prohibited.~~

~~M. *Storage.*~~

~~1. Outdoor storage must be maintained in an orderly manner at all times.~~

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

~~2. Outdoor storage areas shall be gravel surfaced or better and shall be sufficient for the materials being handled and stored. If a gravel surface is not sufficient to meet the performance standards for the use, the area shall be suitably paved.~~

~~3. Any open storage that would otherwise be visible at the property line shall be concealed from view at the abutting property line by a sight obscuring fence or planting not less than six feet in height.~~

~~N. *Landscaping.*~~

~~1. Unused property, or property designated for expansion or other future use shall be landscaped and maintained as approved by the Development Review Board. Landscaping for unused property disturbed during construction shall include such materials as plantings of ornamental shrubs, lawns, native plants, and mowed, seeded fieldgrass.~~

~~2. Contiguous unused areas of undisturbed fieldgrass may be maintained in their existing state. Large stands of invasive weeds such as Himalayan blackberry, English ivy, cherry laurel, reed canary grass or other identified invasive species shall be removed and/or mowed at least annually to reduce fire hazard. These unused areas, located with a phased development project or a future expansion cannot be included in the area calculated to meet the landscape requirements for the initial phase(s) of the development.~~

~~3. Unused property shall not be left with disturbed soils that are subject to siltation and erosion. Any disturbed soil shall be seeded for complete erosion cover germination and shall be subject to applicable erosion control standards.~~

No additional changes proposed in this section

Section 4.140. Planned Development Regulations.

No prior changes proposed in this section

(.05) *Planned Development Permit Process:*

A. All parcels of land exceeding two acres in size that are to be used for residential, commercial or industrial development, shall, prior to the issuance of any building permit:

1. Be zoned for planned development;

2. Obtain a planned development permit; and

3. Obtain Planning Director, Development Review Board, or, on appeal, City Council approval.

B. Zone change and amendment to the zoning map are governed by the applicable provisions of the Zoning Sections, inclusive of Section 4.197.

C. Site Design Review approval is governed by Sections 4.400 to 4.450.

D. All planned developments require a planned development permit. The planned development permit review and approval process consists of the following multiple stages, the last two or three of which can be combined at the request of the applicant:

1. Pre-application conference with Planning Department;

2. Preliminary (Stage I) review by the~~ Development Review Board or the Planning Director for properties within the Coffee Creek Industrial Design Overlay District~~. When a zone change is necessary, application for such change shall be made simultaneously with an application for preliminary approval; and

3. Final (Stage II) review by the ~~Development Review Board or the Planning Director for properties within the Coffee Creek Industrial Design Overlay DistrictNWI Zone~~ ***review authority.***

4. In the case of a zone change and zone boundary amendment, City Council approval is required to authorize a Stage I preliminary plan except for ***residential development or*** properties within the ~~Coffee Creek Industrial Design Overlay District~~ ***NWI Zone,*** which may receive separate zone map amendment approvals.

(.06) *Staff Report:*

A. The planning staff shall prepare a report of its findings and conclusions as to whether the use contemplated is consistent with the land use designated on the Comprehensive Plan. If there is a disagreement as to whether the use contemplated is consistent, the applicant, by request, or the staff, may take the preliminary information provided to the Development Review Board for a use interpretation.

B. The applicant may proceed to apply for Stage I—Preliminary Approval - upon determination ~~by either staff or the Development Review Board~~ ***the review authority*** that the use contemplated is consistent with the Comprehensive Plan.

(.07) *Preliminary Approval (Stage One):*

A. Applications for preliminary approval for planned developments shall:

1. Be made by the owner of all affected property or the owner's authorized agent; and

2. Be filed on a form prescribed by the City Planning Department and filed with said Department.

3. Set forth the professional coordinator and professional design team as provided in subsection (.04), above.

4. State whether the development will include mixed land uses, and if so, what uses and in what proportions and locations.

B. The application shall include conceptual and quantitatively accurate representations of the entire development sufficient to judge the scope, size, and impact of the development on the community; and, in addition to the requirements set forth in Section 4.035, shall be accompanied by the following information:

1. A boundary survey or a certified boundary description by a registered engineer or licensed surveyor.

2. Topographic information as set forth in Section 4.035.

3. A tabulation of the land area to be devoted to various uses, and a calculation of the average residential density per net acre. Developments within the RN zone shall show how the proposed number of units complies with the applicable maximum and minimum provisions of the RN zone.

4. A stage development schedule demonstrating that the developer intends receive Stage II approval within two years of receiving Stage I approval, and to commence construction within two years after the approval of the final development plan, and will proceed diligently to completion; unless a phased development schedule has been approved; in which case adherence to that schedule shall be considered to constitute diligent pursuit of project completion.

5. A commitment by the applicant to provide in the Final Approval (Stage II) a performance bond or other acceptable security for the capital improvements required by the project.

6. If it is proposed that the final development plan will be executed in stages, a schedule thereof shall be provided.

7. Statement of anticipated waivers from any of the applicable site development standards.

C. An application for a Stage I approval shall be considered by the Development Review Board as follows:

1. A public hearing as provided in Section 4.013.

2. After such hearing, the Board shall determine whether the proposal conforms to the permit criteria set forth in this Code, and may approve or disapprove the application and the accompanying preliminary development plan or require such changes therein or impose such conditions of approval as are in its judgment, necessary to ensure conformity to said criteria and regulations. In so doing, the Board may, in its discretion, authorize submission of the final development plan in stages, corresponding to different units or elements of the development. It shall do so only upon evidence assuring completion of the entire development in accordance with the preliminary development plan and stage development schedule.

3. A final decision on a complete application and preliminary plan shall be rendered within 120 days after the application is deemed complete unless a continuance is agreed upon by the applicant and the appropriate City decision-making body.

4. The determination of the Development Review Board shall become final at the end of the appeal period for the decision, unless appealed to the City Council in accordance with Section 4.022 of this Code.

D. As provided in Section 4.134, an application for a Stage I approval within the ~~Coffee Creek Industrial Design Overlay District~~ ***NWI Zone*** may be considered by the Planning Director as follows:

1. A Class II—Administrative Review as provided in Section 4.035(.03).

2. After considering available information, the Planning Director shall determine whether the proposal conforms to the permit criteria set forth in this Code and may approve or disapprove the application and the accompanying preliminary development plan or require such changes therein or impose such conditions of approval as are in his or her judgment, necessary to ensure conformity to said criteria and regulations. In so doing, the Planning Director may, in his or her discretion, authorize submission of the final development plan in stages, corresponding to different units or elements of the development. The Planning Director shall do so only upon receiving evidence assuring completion of the entire development in accordance with the preliminary development plan and stage development schedule.

3. A final decision on a complete application and preliminary plan shall be rendered within 12 days after the application is deemed complete unless a continuance is agreed upon by the applicant and the Planning Director.

4. The determination of the Planning Director shall become final at the end of the appeal period for the decision, unless appealed to the Development Review Board in accordance with Section 4.022 of this Code.

E. An application for a Stage I approval for residential development shall be considered by the Planning Director as follows:

1. A Class II—Administrative Review as provided in Section 4.035(.03).

2. After considering available information, the Planning Director shall determine whether the proposal conforms to the permit criteria set forth in this Code and may approve or disapprove the application and the accompanying preliminary development plan or require such changes therein or impose such conditions of approval as are in their judgment, necessary to ensure conformity to said criteria and regulations. In so doing, the Planning Director may, in their discretion, authorize submission of the final development plan in stages, corresponding to different units or elements of the development. The Planning Director shall do so only upon receiving evidence assuring completion of the entire development in accordance with the preliminary development plan and stage development schedule.

3. Unless otherwise specified by State law, a final decision on a complete application and preliminary plan shall be rendered within 120 days after the application is deemed complete unless a continuance is agreed upon by the applicant and the Planning Director.

4. The determination of the Planning Director shall become final at the end of the appeal period for the decision, unless appealed to the Development Review Board in accordance with Section 4.022 of this Code.

(.09) *Final Approval (Stage Two):*

A. Unless an extension has been granted by the Planning Director, ~~within~~ ***not later than*** two years after the approval or modified approval of a preliminary development plan (Stage I), the applicant shall file with the City Planning Department a final plan for the entire development or when submission in stages has been authorized pursuant to Section 4.035 for the first unit of the development, a public hearing shall be held on each such application as provided in Section 4.013***, except that*** ~~As provided in Section 4.134,~~ an application for a Stage II approval ***for residential development, or*** within the ~~Coffee Creek Industrial Design Overlay District~~***NWI Zone as provided in Section 4.134, must*** ~~***may***~~ be considered by the Planning Director without a public hearing as a Class II Administrative Review as provided in Section 4.035(.03).

No additional changes proposed in this section

Section 4.156.02. Sign Review Process and General Requirements

No prior changes proposed in this section

(.05) *Class II Sign Permit.* Sign permit requests for meeting one or more of the descriptions listed in A. through C. below shall be processed as a Class II Sign Permit when the request does not conform with a Master Sign Plan or other previous sign approval but meets the requirements of the applicable sign regulations, unless the request would modify a condition of approval specifically imposed by the DRB or City Council:

A. Existing residential development;

B. Existing non-residential development with less than three tenants unless the request involves a freestanding or ground mounted sign greater than eight feet in height in a new location;

C. New development or redevelopment in the ~~Coffee Creek~~ ***Northwest*** Industrial ***(NWI) Design Overlay District Zone*** subject to a Class II administrative review process;

D. Major Adjustments to a Master Sign Plan when all of the following criteria are met:

1. The request is compatible with the pattern of signage established in the sign plan in terms of locations, placement on buildings, proportionality to fascia and building facade, architectural design, and materials used;

2. The request is due to special conditions or circumstances that make it difficult to comply with the established Master Sign Plan;

3. The request involves signs for a single tenant, a single multi-tenant freestanding or ground mounted sign, or a series of similar related multi-tenant freestanding or ground mounted signs in the same development; and

4. The request does not involve a freestanding or ground mounted sign greater than eight feet in height at a new location.

E. *Class II Sign Permit Submission Requirements:* Application for a Class II Sign Permit shall include two paper copies and one electronic copy of the following in addition to all required fees:

1. Completed application form prescribed by the City and signed by the property owner or their authorized representative;

2. Sign drawings or descriptions of all materials, sign area and dimensions used to calculate areas, lighting methods, and other details sufficient to judge the full scale of the signs and related improvements;

3. Documentation of the lengths of building or tenant space facades used in calculating maximum allowed sign area;

4. Drawings of all building facades on which signs are proposed indicating the areas of the facades on which signs will be allowed; and

5. Narrative describing the scope of the project, including written findings addressing all applicable review criteria, along with any other information showing how the proposed signage conforms with requirements for the applicable zone.

F. *Class II Sign Permit Review Criteria.* Class II Sign Permits shall satisfy the sign regulations for the applicable zoning district and the Site Design Review Criteria in Sections 4.400 through 4.421, as well as the following criteria:

1. The proposed signage is compatible with developments or uses permitted in the zone in terms of design, materials used, color schemes, proportionality, and location, so that it does not interfere with or detract from the visual appearance of surrounding development;

2. The proposed signage will not create a nuisance or result in a significant reduction in the value or usefulness of surrounding development; and

3. Special attention is paid to the interface between signs and other site elements including building architecture and landscaping, including trees.

No additional changes proposed in this section

Section 4.180. Exceptions and Modifications - Projections into Required Yards.

(.01) Certain non-structural architectural features are permitted to project into required yards or courts, without requiring the approval of a Variance or Reduced Setback Agreement, as follows:

A. Into any required yard:

1. Architectural features may project into the required yard not more than two inches for each foot of required setback.

2. Architectural features on buildings within the ~~Coffee Creek Industrial Design Overlay District~~***Northwest Industrial (NWI) Zone*** shall be subject to the applicable requirements in Section 4.134.

3. Open, unenclosed fire escapes may project a distance not exceeding 48 inches.

B. Into any required yard, adjoining a street or tract with a private drive:

1. Architectural features may project a distance not exceeding 40 inches.

2. An uncovered porch, terrace, or patio extending no more than two and one-half feet above the finished elevation may extend within three feet of an interior side lot line, or within ten feet of a front lot line or of an exterior side lot line.

No additional changes proposed in this section

Section 4.197. Zone Changes and Amendments to This Code—Procedures.

No prior changes proposed in this section

(.02) The following procedures shall be followed for zone map amendments.

A. When a requested quasi-judicial zone map amendment within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** is consistent with the adopted or concurrently proposed Comprehensive Plan Map designation and only one option exists for a zone map amendment

consistent with the Comprehensive Plan Map the amendment shall be reviewed by the City Council without prior review or recommendation by the Development Review Board or Planning Commission.

1. The Zoning Order adopting such zone map amendments shall state the zone map amendment expires 120 days from Council adoption unless a Stage II Final Plan receives final local approval for the area subject to the zone map amendment. In the event of a LUBA appeal of the final local approval, the 120-day expiration period will be tolled pending completion of the appeal process.

2. Notwithstanding the process described above an applicant may elect to have the zone map amendment reviewed by the Development Review Board for a recommendation to City Council concurrently with other land use applications for the subject property.

3. If the Planning Director anticipates that individuals other than the applicant can be expected to question the requested zone map amendment's compliance with the Comprehensive Plan the Planning Director may require the zone map amendment be first reviewed by the Development Review Board to make a recommendation to City Council.

B. All other quasi-judicial zone map amendments shall be reviewed by the Development Review Board to make a recommendation to City Council and all legislative zone map amendments shall be reviewed by the Planning Commission to make a recommendation to City Council.

C. In recommending approval or denial of a proposed zone map amendment, the Planning Commission or Development Review Board shall at a minimum, adopt findings addressing the following criteria:

1. That the application before the Commission or Board was submitted in accordance with the procedures set forth in Section 4.008, Section 4.125 (.18)(B)(2) or, in the case of a Planned Development, Section 4.140; and

2. That the proposed amendment is consistent with the Comprehensive Plan map designation and substantially complies with the applicable goals, policies and objectives, set forth in the Comprehensive Plan text; and

3. In the event that the subject property, or any portion thereof, is designated as "Residential" on the City's Comprehensive Plan Map; specific findings shall be made addressing substantial compliance with Implementation Measures 4.1.4.b, d, e, q, and x of Wilsonville's Comprehensive Plan text; and

4. That the existing primary public facilities, i.e., roads and sidewalks, water, sewer and storm sewer are available and are of adequate size to serve the proposed development; or, that adequate facilities can be provided in conjunction with project development. The Planning Commission and Development Review Board shall utilize any and all means to insure that all primary facilities are available and are adequately sized; and

5. That the proposed development does not have a significant adverse effect upon Significant Resource Overlay Zone areas, an identified natural hazard, or an identified geologic hazard. When Significant Resource Overlay Zone areas or natural hazard, and/or geologic hazard are located on or abut the proposed development, the Planning Commission or Development Review Board shall use appropriate measures to mitigate and significantly reduce conflicts between the development and identified hazard or Significant Resource Overlay Zone; and

6. That the applicant is committed to a development schedule demonstrating that development of the property is reasonably expected to commence within two years of the initial approval of the zone change; and

7. That the proposed development and use(s) can be developed in compliance with the applicable development standards or appropriate conditions are attached that insure that the project development substantially conforms to the applicable development standards; and

8. Adequate public facilities, services, and transportation networks are in place, or are planned to be provided concurrently with the development of the property. The applicant shall demonstrate compliance with the Transportation Planning Rule, specifically by addressing whether the proposed amendment has a significant effect on the transportation system pursuant to OAR 660-012-0060. A Traffic Impact Analysis (TIA) shall be prepared pursuant to the requirements in Section 4.133.05.(01).

No additional changes proposed in this section

Section 4.198. Comprehensive Plan Changes—Adoption by the City Council.

No prior changes proposed in this section

(.02) When a requested quasi-judicial Comprehensive Plan Map amendment within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** is consistent with an adopted master plan that is a sub-element of the Comprehensive Plan and only one option exists for a Comprehensive Plan Map amendment consistent with the adopted area plan the amendment shall be reviewed by the City Council without prior review or recommendation by the Development Review Board or Planning Commission.

A. The ordinance adopting such Comprehensive Plan Map amendments shall state the Comprehensive Plan Map amendment expires 120 days from Council adoption unless a Stage II Final Plan receives final local approval for the area subject to the Comprehensive Plan Map amendment. In the event of a LUBA appeal of the final local approval, the 120-day expiration period will be tolled pending completion of the appeal process.

B. Notwithstanding the process described above an applicant may elect to have the Comprehensive Plan Map amendment reviewed by the Development Review Board for a recommendation to City Council concurrently with other land use applications for the subject property.

C. If the Planning Director anticipates that individuals other than the applicant can be expected to question the requested Comprehensive Plan Map amendment's compliance with the adopted master plan the Planning Director may require the Comprehensive Plan Map amendment be first reviewed by the Development Review Board to make a recommendation to City Council.

No additional changes proposed in this section

Section 4.610.00. Application Review Procedure.

No prior changes proposed in this section

(.03) *Review~~ing~~ Authority.*

A. *Type A or B.* Where site plan review or plat approval by the Development Review Board is not required by City ordinance, the grant or denial of the Tree Removal Permit application shall be the responsibility of the Planning Director. The Planning Director has the authority to refer a Type B permit application to the DRB under the Class II administrative review procedures of this Chapter. The decision to grant or deny a permit shall be governed by the applicable review standards enumerated in WC 4.610.10.

B. *Type C.* Where the site is proposed for development necessitating site plan review or plat approval by the Development Review Board, the Development Review Board shall be responsible for granting or denying the application for a Tree Removal Permit, and that decision may be subject to affirmance, reversal or modification by the City Council, if subsequently reviewed by the Council. For site development applications subject to a Class II administrative review process in the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone or for residential development***, the Planning Director shall be responsible for the granting or denial of the Tree Removal Permit application.

C. *Type D.* Type D permit applications shall be subject to the standards and procedures of Class I administrative review and shall be reviewed for compliance with the Oregon Forest Practice Rules and Statutes. The Planning Director shall make the decision to grant or deny an application for a Type D permit.

~~D. *Review period for complete applications.* Type A permit applications shall be reviewed within ten working days. Type B permit applications shall be reviewed by the Planning Director within 30 calendar days, except that the DRB shall review any referred application within 60 calendar days. Type C permit applications shall be reviewed within the time frame established by this Chapter. Type D permit applications shall be reviewed within 15 calendar days.~~

No additional changes proposed in this section

Section 4.610.40. Type C Permit.

(.01) Approval to remove any trees on property as part of a site development application may be granted in a Type C permit. A Type C permit application shall be reviewed by the standards of this subchapter and all applicable review criteria of Chapter 4. Application of the standards of this section shall not result in a reduction of square footage or loss of density, but may require an applicant to modify plans to allow for buildings of greater height. If an applicant proposes to remove trees and submits a landscaping plan as part of a site development application, an application for a Tree Removal Permit shall be included. The Tree Removal Permit application will be reviewed in the Stage II development review process. The DRB shall review all Type C permits, with the exception of Class II development review applications located within the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone or for residential development,*** where the Planning Director shall have review authority. Any plan changes made that affect trees after Stage II review of a development application shall be subject to review by the original approval authority. Where mitigation is required for tree removal, such mitigation may be considered as part of the landscaping requirements as set forth in this Chapter. Tree removal shall not commence until approval of the required Stage II application and the expiration of the appeal period following that decision. If a decision approving a Type C permit is appealed, no trees shall be removed until the appeal has been settled.

No additional changes proposed in this section

Section 4.700. Procedures Relating to the Processing of Requests for Annexation and Urban Growth Boundary Amendments.

No prior changes proposed in this section

(.02) Each quasi-judicial request shall be reviewed by the Development Review Board, which shall make a recommendation to the City Council after concluding a public hearing on the proposal, except in the following circumstance:

A. When an annexation in the ~~Coffee Creek Industrial Design Overlay District~~ ***Northwest Industrial (NWI) Zone*** is requested concurrent with a quasi-judicial Comprehensive Plan Map amendment and/or zone map amendment as specified in Section 4.197 (.02)A. and Section 4.198(.02), ***or when an annexation is for residential development consistent with an adopted Legislative Master Plan,*** the annexation shall be reviewed by the City Council without prior review or recommendation by the Development Review Board.

a. The ordinance adopting such annexation request shall state the annexation expires 120 days from Council adoption unless a Stage II Final Plan receives final local approval for the area subject to the annexation. In the event of a LUBA appeal of the final local approval, the 120-day expiration period will be tolled pending completion of the appeal process.

b. Notwithstanding the process described above an applicant may elect to have the annexation reviewed by the Development Review Board for a recommendation to City Council concurrently with other land use applications for the subject property.

c. If the Planning Director anticipates that individuals other than the applicant can be expected to question the requested annexation's compliance with the applicable criteria the Planning Director may require the annexation be first reviewed by the Development Review Board to make a recommendation to City Council.

INTRODUCTION

Introduction

Rendering of the Coffee Creek Master Plan area

Regulating Plan from Section 4.134 ~~Coffee Creek Industrial Design Overlay District~~***Northwest Industrial (NWI) Zone***

GOALS OF THE PATTERN BOOK

~~The Coffee Creek Industrial Design Overlay District (Coffee Creek DOD) is an overlay district within the Planned Development Industrial - Regionally Significant Industrial Area (RSIA) Zone Section 4.135.5 of the Wilsonville Code.~~ It is the purpose of the ~~Coffee Creek DOD~~ ***Northwest Industrial (NWI) Zone is*** to implement the Coffee Creek Industrial Area Master Plan (2007) ***and the Basalt Creek Master Plan (20256)*** by establishing standards and guidelines for development. Wilsonville Code Section 4.134 (~~Form-based Code, or FBC~~) ***NWI Zone*** and the Pattern Book together establish regulations and guidelines for ***allowed uses,*** street design and connectivity, site design and circulation, building form, and building architecture and landscape of all development ~~located~~ within the ~~Coffee Creek Industrial Area Master Plan area~~ ***NWI Zone***. Together, or separately, the clear and objective standards of the ~~FBC~~***NWI Zone*** and the Pattern Book (Design Guidelines) are intended to result in:

- A multi-modal transportation network that accommodates pedestrians, bicyclists, transit riders, motorists, and freight in the context of a modern light industrial district;
- A complete network of existing and new streets, paths, and trails that will support a sense of place and identity within the City of Wilsonville;
- An industrial district featuring cohesive and high-quality site, landscape, and building design through a de-emphasis on building design and more appropriate emphasis on the design of the public realm;
- Minimization of the visibility of vehicular parking, circulation, and loading areas;
- Public realm design that considers the contribution that landscape design has made to the design quality of other industrial lands in Wilsonville, where landscaping is effective at breaking down the scale of industrial development and providing a human scale to the public realm;
- Preservation of trees and natural features, which supports the creation of a special place with a distinctive image and identity;
- Minimization of adverse impacts on adjacent properties from development that detracts from the character and appearance of the area; and
- Connectivity requirements that achieve City policy objectives but are appropriate for industrial scale sites and buildings, establish connectivity between parcels, and address challenges of shared site access between landlocked parcels.

RELATIONSHIP TO THE WILSONVILLE CODE

The ~~Form-based Code~~ ***design and development standards (form-based code) in Section 4.134 NWI Zone*** ~~for industrial areas~~ set the standards for development and define~~s~~ the essential determinants for design that are critical to development. These standards are clear, objective, and represent a baseline minimum for the sound development of employment uses in industrial areas. Because the community standards for design are high, the expectation for the design for all new development is correspondingly high. The design guidelines in this Pattern Book encourage and promote the design of buildings and landscapes that exceed the minimum functional standards established in the Wilsonville Code. The design guidelines illustrate how the provisions of the ~~Form-based~~ Code can be practically applied with examples from specific context zones. However, no single guideline or illustration is capable of representing the full, complete, and exhaustive range of possible design solutions. Rather than representing an ultimate design, the design guidelines and their illustrative examples are intended to promote a creative response to the development regulations and foster a collaborative discussion of design that includes City staff and members of the Development Review Board.

The City of Wilsonville expects new development in industrial areas to be successful contributors to the quality of life in the city by:

- Constructing well-designed, high-quality buildings that serve current needs and are adaptable to future uses;
- Integrating industrial land uses with all modes of transportation including active modes of transportation of walking, biking, and transit;
- Preserving existing trees and natural features and enhancing the character and qualities of a unique landscape with a distinctive image and identity;
- Preserving existing jobs and creating new ones; and
- Creating a quality workplace for employees.

OVERVIEW OF THE TWO TRACK SYSTEM

The Two Tracks

TRACK ONE
The Planning Director determines your project complies with all Development Standards, or ~~***that***~~

Your project complies with all Development Standards and all needed Adjustment Allowances.

Your project will be approved by the Planning Director.

TRACK TWO
Your project does not comply with all Development Standards.

Your project must comply with some or all Design Guidelines in the Pattern Book.

Your project is reviewed and may be approved by the Development Review Board.

Track One: Reduced timeline, approval certainty Track Two: Design flexibility

HOW THE DEVELOPMENT STANDARDS AND DESIGN GUIDELINES ARE INTENDED TO BE USED

The clear and objective standards in Section 4.134, found within Chapter 4 of the Wilsonville Planning and Land Development Code, are written to allow streamlined development approval. As long as a proposed development meets the numerical standards it will be approved.

The Design Guidelines within this Pattern Book provide the basis for an optional "waiver track." An applicant may elect to apply for the waiver track, instead of the clear and objective track. In this case, the Design Guidelines, including the Intent Statements and other contents of this Pattern Book, will guide approval of the project.

TRACK ONE: CLEAR AND OBJECTIVE TRACK (SECTION 4.134)

~~Track One is a ministerial review process, intended to result in automatic project approval if all criteria are met.~~
~~The development applicant must meet Development Standards (numerical standards) for Connectivity, District-wide Planning, Site Design, Building Design, Waysides and Signage. Limited adjustments are permitted, as noted in Section 4.134.~~

Track One provides an administrative approval process for projects that comply with the clear and objective standards of Section 4.134. If an application meets all applicable development standards, the project is approved without discretionary design review.

Applicable standards include requirements for connectivity, site planning, building design, landscaping, waysides, and signage. Limited adjustments to specific numerical standards may be granted where authorized by Section 4.134.

TRACK TWO: WAIVER TRACK

~~Track Two is a discretionary review process for projects not meeting all of the clear and objective standards of Section 4.134.~~

~~When choosing this track, applicants must meet Design Guidelines within the Pattern Book for development standards to be waived. Clear and objective standards eligible for the waiver track are found in subsections~~
~~2) District-wide Planning and Landscaping, 3) Site Design, and 4) Building Design.~~

~~The clear and objective standards of subsection 1) Street Design and Connectivity, may elect to use the waiver track by providing a Connectivity Master Plan that complies with the Design Guidelines and the Pattern Book.~~***Track Two is a discretionary review process available to applicants proposing development that does not meet all of the clear and objective standards contained in Section 4.134. Under this track, applicants must demonstrate that the proposed alternative design satisfies the intent and objectives of the Northwest Industrial Zone through compliance with the applicable Design Guidelines contained in the NWI Pattern Book.***

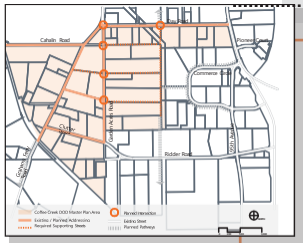
Standards eligible for waiver review include selected provisions within District-wide Planning and Landscaping, Site Design, and Building Design, as specifically identified in Section 4.134. Standards that are not identified as adjustable or eligible for waiver review shall remain applicable.

Applicants seeking flexibility from Street Design and Connectivity standards may utilize Track Two by submitting a Connectivity Master Plan that demonstrates how the proposed development will achieve the connectivity, circulation, and public realm objectives of the Northwest Industrial Zone and is consistent with the Design Guidelines and recommendations contained in the NWI Pattern Book.

Approval of a waiver request is discretionary and requires a finding that the proposed alternative design meets or exceeds the intent of the applicable standards and contributes to the overall vision and objectives of the Northwest Industrial Zone.

Projects are reviewed and may be approved by the Development Review Board.

RELATIONSHIP OF THE DESIGN GUIDELINES TO SECTION 4.134 DEVELOPMENT STANDARDS



TRACK ONE: CLEAR AND OBJECTIVE TRACK (SECTION 4.134)

Track One is a***n*** ~~ministerial~~ ***administrative*** review process, intended to result in automatic project approval if all criteria are met. The development applicant must meet **Development Standards** (numerical standards) for Connectivity, District-wide Planning, Site Design, and Building Design. Projects will be approved by the **Planning Director.**

TRACK TWO: WAIVER TRACK

Track Two is a discretionary review process for projects not meeting all of the clear and objective standards of Section 4.134. The development applicant must meet **Design Guidelines** for the applicable waiver track section. Projects are reviewed and may be approved by the **Development Review Board.**

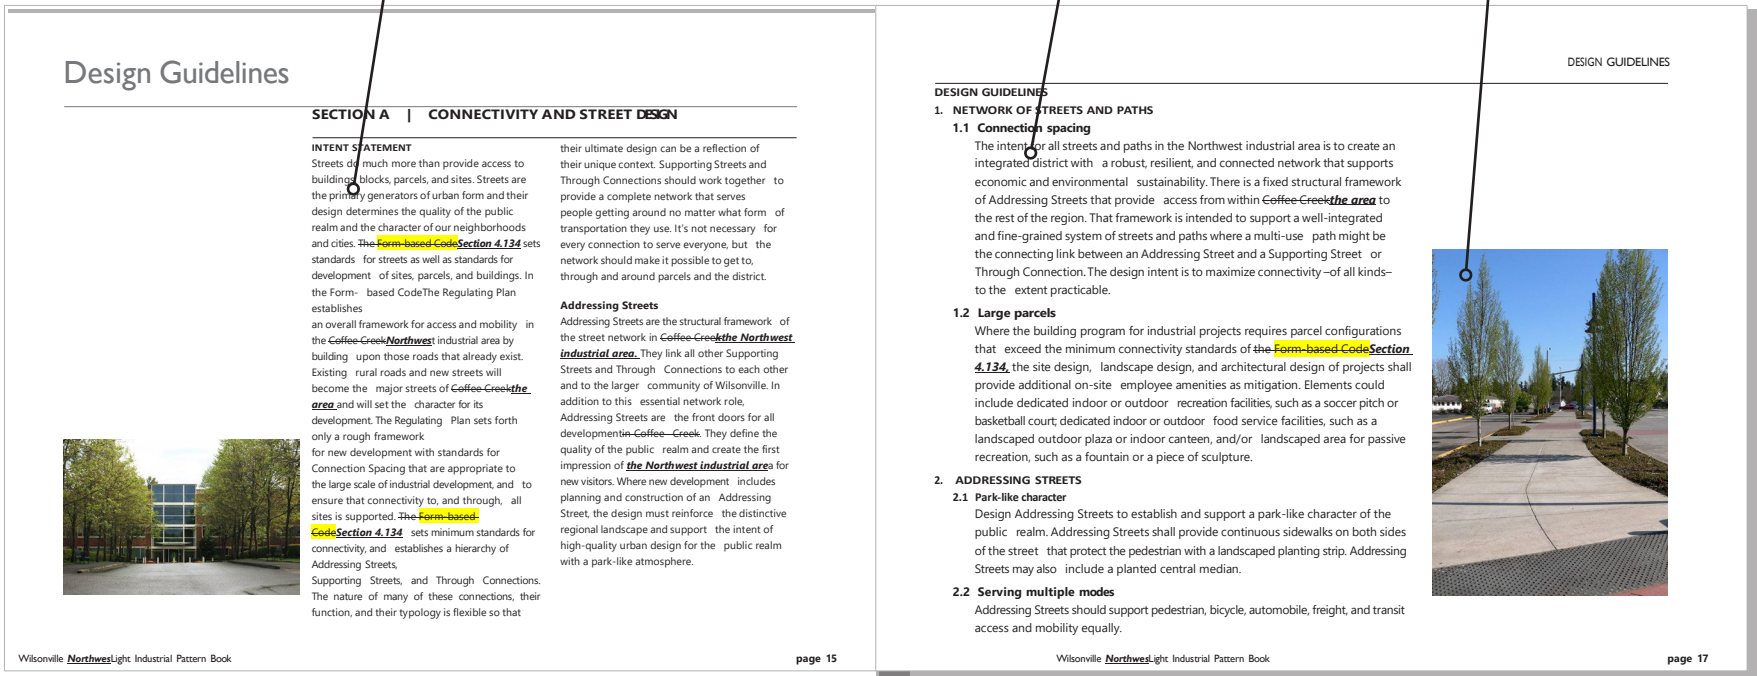
HOW TO USE THE PATTERN BOOK

This Pattern Book ~~for Coffee Creek~~uses design guidelines and prototypes to illustrate the principles that inform the ~~Coffee Creek Industrial Design Overlay District~~***Northwest Industrial Zone.*** For those projects where the clear and objective standards of the Form- based Code***Section 4.134*** do not provide sufficient flexibility to address specific issues for site design, landscape design, or building design the Pattern Book provides guidance to the applicant and the Development Review Board.

What is an Intent Statement? Intent statements summarize the fundamental principles for the four primary patterns and their typologies that guide development in ~~Coffee Creek~~***the Northwest Industrial Zone.***



What is a Design Guideline? Every design guideline is intended to promote a carefully articulated and well-crafted design response that is consistent with the principles of the Intent Statement.

What is a Precedent Photo? Each image is intended to provide a visual reference to the text that represents a level of quality and aesthetics appropriate to the industrial context of ~~Coffee Creek~~***the Northwest Industrial Zone.*** They are intended to inspire creativity and a thoughtful, considered design response to addressing the unique conditions of street, site, building, and landscape design.

Intent Statement

Design Guideline

Design Guidelines

SECTION A | CONNECTIVITY AND STREET DESIGN

INTENT STATEMENT

Streets do much more than provide access to building blocks, parcels, and sites. Streets are the primary generators of urban form and their design determines the quality of the public realm and the character of our neighborhoods and cities. ~~The Form- based Code~~***Section 4.134*** sets standards for streets as well as standards for development of sites, parcels, and buildings. In the Form- based CodeThe Regulating Plan establishes an overall framework for access and mobility in the ~~Coffee Creek~~***Northwes***t industrial area by building upon those roads that already exist. Existing rural roads and new streets will become the major streets of ~~Coffee Creek~~***the area*** and will set the character for its development. The Regulating Plan sets forth only a rough framework for new development with standards for Connection Spacing that are appropriate to the large scale of industrial development, and to ensure that connectivity to, and through, all sites is supported. ~~The Form- based Code~~***Section 4.134*** sets minimum standards for connectivity, and establishes a hierarchy of Addressing Streets, Supporting Streets, and Through Connections. The nature of many of these connections, their function, and their typology is flexible so that their ultimate design can be a reflection of their unique context. Supporting Streets and Through Connections should work together to provide a complete network that serves people getting around no matter what form of transportation they use. It's not necessary for every connection to serve everyone, but the network should make it possible to get to, through and around parcels and the district.

Addressing Streets

Addressing Streets are the structural framework of the street network in ~~Coffee Creek~~***the Northwest industrial area.*** They link all other Supporting Streets and Through Connections to each other and to the larger community of Wilsonville. In addition to this essential network role, Addressing Streets are the front doors for all development~~in Coffee Creek~~. They define the quality of the public realm and create the first impression of ***the Northwest industrial area*** for new visitors. Where new development includes planning and construction of an Addressing Street, the design must reinforce the distinctive regional landscape and support the intent of high-quality urban design for the public realm with a park-like atmosphere.

Wilsonville ***Northwes***t Industrial Pattern Book page 15

DESIGN GUIDELINES

DESIGN GUIDELINES

1. NETWORK OF STREETS AND PATHS

1.1 Connection spacing

The intent for all streets and paths in the Northwest industrial area is to create an integrated district with a robust, resilient, and connected network that supports economic and environmental sustainability. There is a fixed structural framework of Addressing Streets that provide access from within ~~Coffee Creek~~***the area*** to the rest of the region. That framework is intended to support a well-integrated and fine-grained system of streets and paths where a multi-use path might be the connecting link between an Addressing Street and a Supporting Street or Through Connection. The design intent is to maximize connectivity –of all kinds– to the extent practicable.

1.2 Large parcels

Where the building program for industrial projects requires parcel configurations that exceed the minimum connectivity standards of ~~the Form- based Code~~***Section 4.134,*** the site design, landscape design, and architectural design of projects shall provide additional on-site employee amenities as mitigation. Elements could include dedicated indoor or outdoor recreation facilities, such as a soccer pitch or basketball court; dedicated indoor or outdoor food service facilities, such as a landscaped outdoor plaza or indoor canteen, and/or landscaped area for passive recreation, such as a fountain or a piece of sculpture.

2. ADDRESSING STREETS

2.1 Park-like character

Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a landscaped planting strip. Addressing Streets may also include a planted central median.

2.2 Serving multiple modes

Addressing Streets should support pedestrian, bicycle, automobile, freight, and transit access and mobility equally.

Wilsonville ***Northwes***t Industrial Pattern Book page 17

INTRODUCTION

Example projects, or Prototypes—representing a range of possible building and development typologies—are modeled in dimensionally accurate illustrations. Each of the prototypes illustrates how a development may comply with the Design Guidelines and Intent Statements.

In the Patterns and Prototypes section starting on page 33, Prototypes and Design Guidelines are arrayed side-by-side to demonstrate different ways that a project may comply with the Design Guidelines.

What is a Prototype? Prototypes are models of possible development, designed to-scale for a particular context. Development prototypes are used in a wide variety of applications—to illustrate design objectives, to test development capacity for a specific site, to model a real estate development proforma, or to test proposed
zoning designations and development standards. Prototypes provide an easy-to-understand visual representation of complex spatial information and are often drawn in three dimensions to help users visualize results. The ~~Coffee Creek~~***Northwest***

Industrial prototypes are aimed at City staff, the Development Review Board, developers who want clear guidance about the type of development that is permitted by the ~~Coffee Creek~~***Northwest*** Industrial ~~Design Overlay District~~ ***Zone,*** and neighborhood representatives trying to visualize the effect of the zoning.

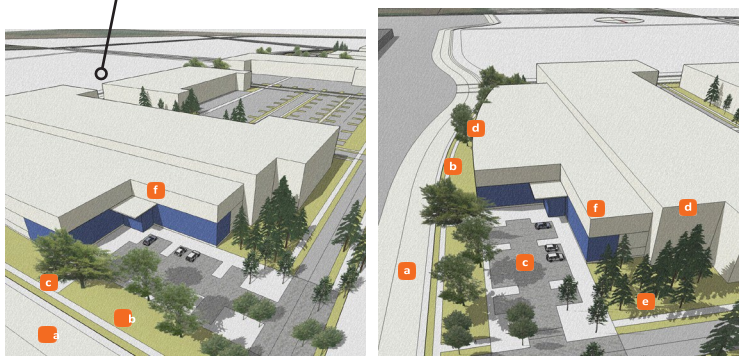
Excerpts from Design Guidelines

PATTERNS AND TYPOLOGIES

Prototype 2

A. 2.1 PARK-LIKE CHARACTER
Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a landscaped planting strip. Addressing Streets may also include a planted central median.

A. 2.3 PROMINENT ADDRESS
Design Addressing Streets to serve as the "front door" or "address" for new buildings and development. New Addressing Streets shall include sidewalks on both sides that provide safe, continuous access for pedestrians to all abutting sections of the primary street network of Addressing Streets. Unless interrupted another Addressing Street or a Supporting Street, the sidewalks shall be protected by a continuous planted landscape strip.



A. 2.4 ENCLOSE THE PUBLIC REALM
Orient building massing, form, architecture, and programmatic function along Addressing Streets to help define the public realm, create a distinctive frame for the streets, and support the sense of place in ***the area.***

A. 3.3 EXTENSION OF PUBLIC REALM
Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.

SECTION C. INTENT STATEMENT
Trees help to define place. Whether individually, or in groves of native species, trees enhance the public realm by giving context and scale to the ~~Coffee Creek~~***Northwest*** Industrial Area. Landscape planting in front, side, and rear yards and as screening for parking lots, service drives, and service enclosures gives form and defines the public realm and parcels. The landscape design, installation, and maintenance help to define the ~~Coffee Creek~~***Northwest*** industrial ~~district~~ ***area*** and to diminish the large-scale industrial buildings. It also helps
to define and direct people to building entries. The native plant material are climate adaptive, have low water and maintenance requirements, and visually blend with adjacent, undisturbed landscapes. Native trees should be preserved and employed as the visual anchors of new landscapes.

D. 1.3 VISUAL INTEREST AND HUMAN SCALE
Locate the office and support spaces for warehouse and industrial buildings on the Addressing Street or Supporting Street instead of burying these functions in the interior of a large monolithic structure. The smaller-scale first floor can help soften the bulk of large buildings and add visual interest and a human scale to the public realm. This guideline may be accomplished by wrapping the high-bay industrial form with lower-scaled structures on the street; extending a discrete element of the building that contains these functions and giving this element a distinctive, contrasting architectural expression; or providing a visual break in the building mass and structure that creates an impression of two separate buildings.

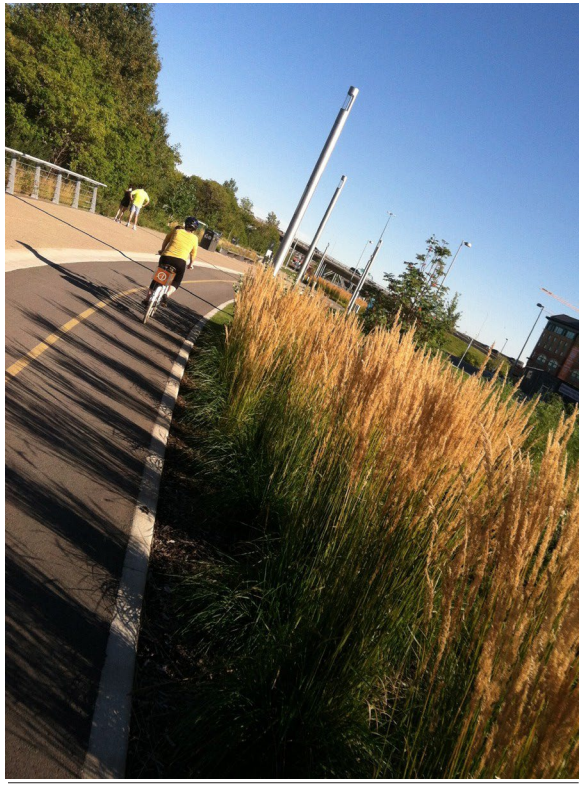
Design Guidelines

SECTION A | STREET DESIGN AND CONNECTIVITY

INTENT STATEMENT

Streets do much more than provide access to buildings, blocks, parcels, and sites. Streets are the primary generators of urban form and their design determines the quality of the public realm and the character of our neighborhoods and cities. ~~The Form-based Code~~***Section 4.134*** sets standards for streets as well as standards for development of sites, parcels, and buildings. In the Form- based Code, the Regulating Plan establishes
an overall framework for access and mobility in the ~~Coffee Creek~~***Northwest*** Industrial ***a***~~A~~rea by building upon those roads that already exist. Existing rural roads and new streets will become the major streets of ***the area***~~Coffee Creek~~ and will set the character for its development. The Regulating Plan sets forth only a rough framework
for new development with standards for Connection Spacing that are appropriate to the large scale of industrial development, and to ensure that connectivity to, and through, all sites is supported. The Form-based Code sets minimum standards for connectivity, and establishes a hierarchy of Addressing Streets, Supporting Streets, and Through Connections. The nature of many of these connections, their function, and their typology is flexible so that their ultimate design can be a reflection of their unique context. Supporting Streets and Through Connections should work together to provide a complete network that serves people getting around no matter what form of transportation they use. It is not necessary for every connection to serve everyone, but the network should make it possible to get to, through and around parcels and the district.



Example of a Supporting Street
On the largest sites in ~~Coffee Creek~~***the Northwest Industrial area*** where multiple buildings are developed, Supporting Streets may share the same function of defining the public realm as Addressing Streets: they may provide the "address" and "front door" for a building located on the interior of a parcel.

Addressing Streets

Addressing Streets are the structural framework of the street network in ~~Coffee Creek~~***the Northwest industrial area***. They link Supporting Streets and Through Connections to each other and to the larger community of Wilsonville. In addition to this essential network role, Addressing Streets are the front doors for all development in ~~Coffee Creek~~***the area.*** They define the quality of the public realm and create the first impression of ~~Coffee Creek~~***the industrial area*** for new visitors. Where new development includes planning and construction of an Addressing Street, the design must reinforce the distinctive regional landscape and support the intent of high-quality urban design for the public realm with a park-like atmosphere.

Planning Commission Meeting - July 8, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Example of a Through Connection
Through Connections may serve as a multi-use path ~~bicyclesf~~***or bicycles*** and pedestrians.

Supporting Streets

Supporting Streets are primarily intended to be the flexible links between Addressing Streets and destinations. They play a significant role in supporting freight and automobile access, but they also connect people on foot or bike to transit. They have a fundamental role in providing fine-grained connectivity within the large scale of industrial blocks. On the largest sites in ~~Coffee Creek~~***the Northwest Industrial area*** where multiple buildings are developed, Supporting Streets may share the same function of defining the public realm as Addressing Streets: they may provide the "address" and "front door" for a building located on the interior of a parcel. Where they do, Supporting Streets should contribute to the overall urban design quality of ~~Coffee Creek~~***the area.*** Design elements of Supporting Streets may share many of the same characteristics as Addressing Streets: continuous sidewalks on both sides of the street protected by landscaped park strips.

In other contexts Supporting Streets may be more utilitarian in service to the nature of their program and function. Supporting Streets can provide access to services and utilities. Their design expression may be simple and functional.

Through Connections

Through Connections offer a broad range of design possibilities that support specific needs for access and mobility. Through Connections may look like Addressing Streets or Supporting Streets and function like any other street; they may look like a street and at the same time function as access to parking within a surface parking lot. They may serve as a multi-use path for bicycles and pedestrians; or they may look and function like a sidewalk. Regardless of their ultimate appearance or configuration, Through Connections are intended to link ***the*** ~~the Coffee Creek~~***Northwest*** Industrial ***a***~~A~~rea together as a network of streets, routes, and paths that support multi-modal transportation. Through Connections are also intended to link ~~Coffee Creek~~***the area*** to other local and regional destinations, such as the Ice Age Tonquin Trail or Coffee Lake Creek Natural Area.

The design of the landscape along Through Connections is intended primarily as a visual relief from the large-scale industrial development. A simple, natural landscape of native plant materials will result in an attractive contribution to the quality of this limited part of the public realm.

DESIGN GUIDELINES

1. NETWORK OF STREETS AND PATHS

1.1 Connection spacing

The intent for all streets and paths in ~~Coffee Creek~~ ***the Northwest Industrial area*** is to create an integrated district with a robust, resilient, and connected network that supports economic and environmental sustainability. There is a fixed structural framework of Addressing Streets that provide access from within ~~Coffee Creek~~***the area*** to the rest of the region. That framework is intended to support a well-integrated and fine-grained system of streets and paths where a multi-use path might be the connecting link between an Addressing Street and a Supporting Street or Through Connection. The design intent is to maximize connectivity of all kinds to the extent feasible.

1.2 Large parcels

Where the building program for industrial projects requires parcel configurations that exceed the minimum connectivity standards of the Form-based Code, the site design, landscape design, and architectural design of projects shall provide additional on-site employee amenities as mitigation. Elements could include dedicated indoor or outdoor recreation facilities, such as a soccer field or basketball court; dedicated indoor or outdoor food service facilities, such as a landscaped outdoor plaza or indoor canteen, and/or landscaped area for passive recreation, such as a fountain or a piece of sculpture.

2. ADDRESSING STREETS

2.1 Park-like character

Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a planting strip landscaped with shade trees. Addressing Streets may also include a planted central median.

2.2 Serving multiple modes

Addressing Streets should support pedestrian, bicycle, automobile, freight, and transit access and mobility equally.

Example of a Through Connection
Through Connections may function as access to parking within a surface parking lot.

Planning Commission Meeting - July 8, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

2.3 Prominent address

Design Addressing Streets to serve as the "front door" or "address" for new buildings and development. New Addressing Streets shall include sidewalks on both sides that provide safe, continuous access for pedestrians to all abutting sections of the primary street network of Addressing Streets. Unless interrupted by another Addressing Street or a Supporting Street, the sidewalks shall be protected by a continuous landscape strip planted with shade trees.

2.4 Enclosed public realm

Orient building massing, form, architecture, and programmatic function along Addressing Streets to help define the public realm, create a distinctive enclosure of the public realm, and support the sense of place in ~~Coffee Creek~~***the Northwest Industrial area.***

3. SUPPORTING STREETS

3.1 Role of Supporting Streets

Supporting Streets are the flexible links between Addressing Streets and destinations throughout the ~~Coffee Creek~~ area. Supporting Streets may sometimes function as the "front door" or "address for new buildings and development. In other contexts Supporting Streets may be more utilitarian in service to the nature of their program and function. Supporting Streets can provide access to services and utilities. Their design expression may be simple and functional.

3.2 High-quality Supporting Streets

Where appropriate to the master plan for large development sites, design Supporting Streets to the same standards as Addressing Streets. Match street design standards for Addressing Streets, including street profiles, street trees, and sidewalks.

3.3 Extension of the public realm

Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.

3.4 Supporting Street as the primary access

If the Supporting Street serves as the development's primary access street, it should be developed to the same standards as Addressing Streets and serve as the "front door" or "address" for new buildings and development.

Extension of public realm
Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.

3.5 Supporting Street as the secondary access

If the Supporting Streets does not serve as the development's primary access street, it should be developed as a secondary service connection from the designated Addressing Streets.

4. THROUGH CONNECTIONS

4.1 Balancing extension of the public realm with flexible design

Design Through Connections to fully support the extension of the public realm while responding to a wide range of functions.

4.2 Serving pedestrians

Through Connections must serve pedestrians and function as an extension of the sidewalk network in ~~Coffee Creek~~***the Northwest Industrial area.***

4.3 Serving bicyclists

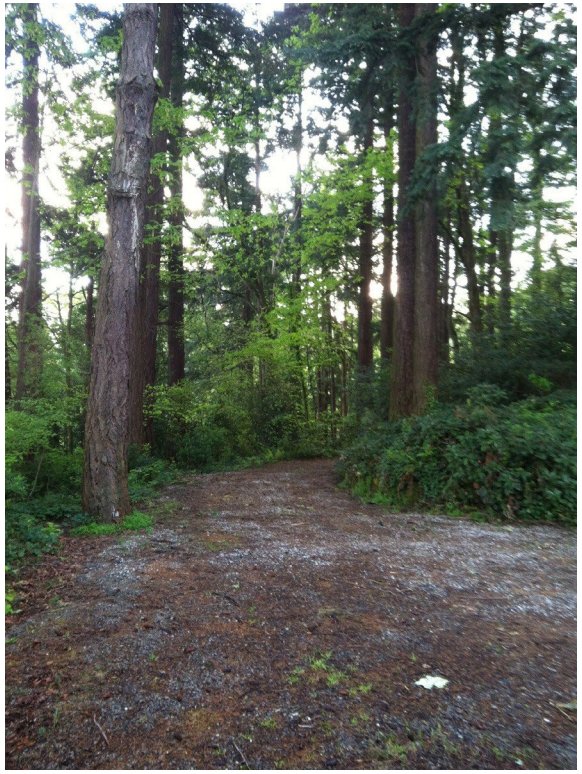
Through Connections must serve as multi-use paths and support the effective use of bicycles for transportation

4.4 Wayfinding

Install a system of signage that serves to orient people to their location and assist them in wayfinding to their destination.

4.5 Flexible alignment

Adjust the alignment of Through Connections to accommodate natural features and resources.



4.6 Flexible width

Increase the width of a Through Connection designed as a multi-use path to incorporate amenities such as benches, lighting, or trash receptacles, and to create visual interest.

Serving pedestrians
Through Connections must serve pedestrians and function as an extension of the sidewalk network in ***the Northwest Industrial area***~~Coffee Creek.~~

DESIGN GUIDELINES

Naturalistic landscape, native planting
Promote a landscape that supports ecological function and habitat by using native species in a naturalized manner

SECTION B | DISTRICT-WIDE SITE PLANNING AND LANDSCAPING

INTENT STATEMENT

The impact of the Ice Age floods on the Willamette Valley defies the imagination. The cataclysmic effects of the Missoula Floods created the modern-day landscape that includes ***the Basalt Creek Canyon, Tonquin Scablands***, Coffee Lake Wetlands and Coffee Lake Creek. These remnants of the geologic events of 12,000 years ago and the landscape that has emerged since that time are authentic elements that establish our sense of place and contribute to creating a distinctive image and identity that is unique to the City of Wilsonville. In ~~Coffee Creek~~***the Northwest Industrial area,*** the oak savanna is the most distinctive and significant landscape feature visible today that emerged as a result of the Missoula Floods. The effects of settlement have diminished the extent of this oak forest and groves of fir trees are now a distinctive part of the skyline. There may well be elements of the floods still to be discovered; the glacial erratics of the Willamette Valley were scattered here as the ice rafts that they arrived with melted.

The City's commitment to preserving and enhancing the heritage of this distinctive landscape is reflected in several of the patterns and guidelines. At the scale of the district, the City expects development to promote visual and physical connections from the industrial district to the ***Basalt Creek Canyon, Tonquin Scablands,*** Coffee Lake Creek Natural Area and the future Tonquin Ice Age Trail.

The themes that express the unique character, quality, and culture of ~~Coffee Creek~~***the area*** are still emerging as the ***Northwest Industrial*** district becomes fully integrated with the larger, more established city. Existing stands of Douglas Fir acknowledge both the city's status as a Tree City USA and its commitment to maintaining its natural beauty. The city is also home to three water features by the celebrated Pacific Northwest landscape architect Bob Murase: water features are ~~strongly~~encouraged as part of the ***Coffee Creek Industrial Master Plan and Basalt Creek Master Plan, particularly in future industrial waysides.***

Within the ~~Coffee Creek~~***Northwest*** Industrial Area the design of individual buildings should be linked by unifying elements. The public realm of Addressing Streets provides unity to the district by establishing a pastoral character of place with the regular planting of street trees, sidewalks, and front yard setbacks. Trees help to define place, and enhance the public realm by giving context and scale to the ~~Coffee Creek~~***Northwest*** Industrial Area.

Improving existing and providing new pedestrian and bicycle connections to and through natural areas strengthens the sense of place by developing the character of place.

Gateways reinforce a sense of arrival or departure and mark the transition from one precinct of the city to another.

Trees

Trees help to define place and enhance the public realm by giving context and scale to the ~~Coffee Creek~~***Northwest*** Industrial ***a***~~A~~rea.

Planning Commission Meeting - July 8, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

GUIDELINES

1. THE NATURAL LANDSCAPE

1.1 Water flow to Coffee Lake Creek

Design landscapes to acknowledge the Ice Age heritage of ~~Coffee Creek~~***the Northwest Industrial area*** by orienting patterns of new landscape plantings reflecting the natural flows of water from the industrial district to Coffee Lake Creek ***and Basalt Creek.***

1.2 Natural landscape as visual unifier

Use the unifying elements of the natural landscape to visually connect and functionally integrate the industrial district.

1.3 Naturalistic landscape, native planting

Promote a landscape that supports ecological function and habitat by using native species in a naturalized manner.

1.4 Access to nature

Pedestrian and bicycle connection is critical and incorporating public connections through large-scale industrial sites is encouraged. Access connections to the creeks, natural areas, and greenway trails should be clearly marked and provide safe and convenient passage.

1.5 Ice Age artifacts

Identify, preserve, and enhance any Ice Age elements found on site, such as erratics the foreign boulders carried to the site on ice rafts, as elements that influence site design and development.

1.6 Tree preservation within setbacks

Whether individually or in groves of native species, preserve trees within the setbacks of the development, particularly when they occur within the setback of an Addressing Street, or a Supporting Street that serves as the development's primary access street.

1.7 Informal park-like landscaping

The park-like character of the design of the Addressing Streets should be complemented by landscaping around buildings, parking lots, and open space that reflects the informal,

Tree preservation within setbacks
Whether individually or in groves of native species, preserve trees within the setbacks of the development, particularly when they occur within the setback of an Addressing Street, or a Supporting Street that serves as the development's primary access street.

natural, and original landscape that preceded development and persists in places across the site.

2. SPECIAL LANDSCAPE FEATURES

2.1 City of Wilsonville themes

Integrate the themes related to the City of Wilsonville as unifying elements in the conceptual design for new development, and into the landscape design.

2.2 Existing tree groves at points of access

Incorporate elements such as existing stands of native trees to emphasize points of site access and/ or building access.

2.3 Water features

Integrate fountains and water features to emphasize important places, such as parcel access, building entries, and employee amenities.

2.4 Selective use of non-native plants

Non-native, ornamental plants, shrubs, and trees should be used sparingly and strategically as elements that accent special elements of the site or building, such as entries.

2.5 Intentional aesthetic use of industrial materials

Integrate the materials of industry at an industrial scale. This guideline may be accomplished by designing buildings, enclosures, and retaining walls with the simple, natural, unembellished materials common to industry. Use unfinished steel, raw aluminum, and plain concrete as the finish materials for the construction of site and building elements.

3. STRENGTHEN GATEWAYS

3.1 ~~Coffee Creek~~*Northwest Industrial* gateways

Design gateway locations to promote a sense of place and to reinforce the distinct identity of ~~Coffee Creek~~***the Northwest Industrial area.*** This guideline may be accomplished by placing new buildings strategically at areas that define boundaries and edges to create gateways in conjunction with other buildings or with significant landscape features.

Existing tree groves at points of access
Incorporate elements such as existing stands of native trees to emphasize points of site access and/ or building access.

Informal park-like landscaping
The park-like character of the design of the Addressing Streets should be complemented by landscaping around buildings, parking lots, and open space that reflects the informal, natural, and original landscape that preceded development and persists in places across the site.

3.2 Buildings as gateway markers

Develop gateway buildings at strategic intersections.

3.3 Monument signs

Use freestanding monument signs to mark gateways.

3.4 Iconic elements

Install iconic elements within the right-of-way, such as signs, monuments, or art, that help identify a specific address as a district-wide or site-specific gateway to ~~Coffee Creek~~***the area.***

Natural landscape as visual unifier
Use the unifying elements of the natural landscape to visually connect and functionally integrate the industrial district.

SECTION C | SITE DESIGN

INTENT STATEMENT

Access and mobility

Access and mobility are essential elements of successful industrial development. We tend to think of tractor-trailer rigs as essential to industry, and they are, but equally essential to industry is an educated work force that can get to their shifts with a full range of transportation options: options that offer employees real choices that include driving alone, but also support and encourage transit, walking, and biking.

Automobile and freight access from Addressing Streets and Supporting Streets to a parcel should be obvious, clear, simple, and safe. Parcel access provides an opportunity to create a gateway and reinforce a strong sense of place.

Bicycle and pedestrian access to a parcel from Addressing Streets and Supporting Streets can also reinforce the sense of place ~~in Coffee Creek.~~ Bicycle and pedestrian access from an Addressing Street to a parcel should be convenient, direct, and complete. Cyclists and walkers should be able to clearly perceive their ultimate destination from the Addressing Street.

Access and mobility are for all people. The pedestrian system is successful only when all people can conveniently reach their destinations. Universal and equitable barrier- free design is most successful when designed and developed systematically from initial site design through final building design and construction.

Access from an Addressing Street
Walkers should be able to clearly perceive their ultimate destination from the Addressing Street.

Parking Design

Surface parking is permitted in the front yard setback for development along Addressing Streets with limitations. Surface parking lots are limited in scale and designated for short-term parking for visitors, people with disabilities, and deliveries. The design guidelines are intended to establish the character for surface parking lots in a manner that supports the City's goals for pedestrian convenience, comfort, and safety.

Ensure that the parking lot landscape is planned, installed, and maintained to promote the informal design character associated with each landscape frontage type.

Design that Contributes to the Site Minimize site grading to preserve the natural character of the site. Contoured slopes are generally preferred to the installation of retaining walls. Where retaining walls are necessary to support site development, ensure that they facilitate surface drainage, limit soil erosion, and avoid increasing instability of

native soils. Integrate retaining walls with other site design features, such as stairs, ramps, and planters wherever possible.

To the extent possible, site development should maintain and enhance natural drainage patterns. Incorporate features for the storage, cleaning, transport, and re-infiltration of stormwater into site design and landscaping. Stormwater facilities such as swales should be designed to reinforce the natural quality and visual continuity of the landscape at the scale of the site and the district.

Trees help to define place. Whether individually, or in groves of native species, trees enhance the public realm by giving context and scale to the ***Northwest*** ~~Coffee Creek~~ Industrial ***Zone*** ~~Area~~. Landscape planting in front, side, and rear yards and as screening for parking lots, service drives, and service enclosures gives form and defines the public realm and parcels. Landscape design, installation, and maintenance helps to define the ***Northwest*** ~~Coffee Creek~~ Industrial ***Zone*** ~~District~~ and to diminish the large scale of industrial buildings. Landscaping also helps direct people to building entries. The native plant materials
are climate adaptive, have low water and maintenance requirements, and visually blend with adjacent, undisturbed landscapes. Native trees should be preserved and employed as the visual anchors of new landscapes.

Industrial building types typically need extensive, relatively flat surfaces for buildings, parking lots, service yards, access lanes, and truck maneuvering areas. It may still be possible to fit a multistory building into the terrain of Coffee Creek. Integrating buildings with their sites is strongly encouraged.

Landscape that Contributes to the Building
Building designs should acknowledge and respect the natural character of their
sites. The ***Northwest Industria Zone*** ~~Coffee Creek Industrial Area~~ has a strong character that derives from context, topography, and native vegetation. New site development, landscaping, and building design can reinforce this distinctive character.

Provide a consistent and high-quality environment for the ***Northwest*** ~~Coffee Creek~~ ***Industrial Zone*** ~~Area~~ by obscuring views of loading areas, work yards, above-grade utilities and services, and recycling and refuse areas from Addressing Streets, Supporting Streets and Through Connections. Whenever possible, group utilities and services to minimize visual clutter.

The primary building entry is a significant element of building design in the ***Northwest Industrial Zone***. ~~Coffee Creek.~~ The design guidelines recommend that the primary entrance for all buildings front on an Addressing Street. This is not a requirement of the Form-based Code; an entrance on a Supporting Street or Through Connection is acceptable provided the entry is clearly visible from the Addressing Street and a clear public route to the entry is provided. Emphasize the importance of the primary building entry with glass, canopies, signage, public art, landscaping, and lighting.

GUIDELINES

1. PARCEL ACCESS

1.1 Distinctive identity of visitor arrival point

Where parcel access is also the primary automobile access to a building for visitors, use landscaping and signage to create a distinctive sense of arrival.

1.2 Converging parcel access points

Use routes providing parcel access to build active intersections where pedestrians, bicyclists, and motorists have access to site amenities.

1.3 Formal landscape design that contrasts

Design guidelines for the landscape of front yards along Addressing Streets encourage a natural, irregular pattern of native plant materials. Along parcel access routes consider breaking this informal character of the landscape frontage with design and plant materials that are more formal, regular, and ornamental.

1.4 Parcel access from an Addressing Street

Where parcel access connects the primary building entrance to the Addressing Street extend the design, character, scale, and materials of the entry to the public sidewalk.

1.5 Parcel access from a Supporting Street

Where parcel access from a Supporting Street is the primary automobile access to a building for visitors use landscaping and signage to create a distinctive sense of arrival.

1.6 Parcel access from a Through Connection

Where parcel access connects only with a pedestrian walkway or multi-use path with the Coffee Creek pedestrian and bicycle network, design the walkway or multi-use path for safety, comfort, and convenience of pedestrians and cyclists.

1.7 Pedestrian and bicycle access network

Develop an integrated system for pedestrians and bicycles that includes good connections to other parts of the Coffee Creek Industrial Area and to the larger city beyond.

1.8 Accessible paths

Make paths accessible for all.

1.9 Adjust paths to incorporate site features

Add character and interest to the path by adjusting its direction and/ or width to incorporate unique natural features of the site, such as streams, pools, or rock outcroppings.

1.10 Front yards that contribute to the public realm

Design the landscape in front yards along Addressing Streets to result in an attractive contribution to the quality of the public realm.

1.11 Signs

Plan the size and location of signs and their structure so that they do not detract from the natural quality of the native landscape.

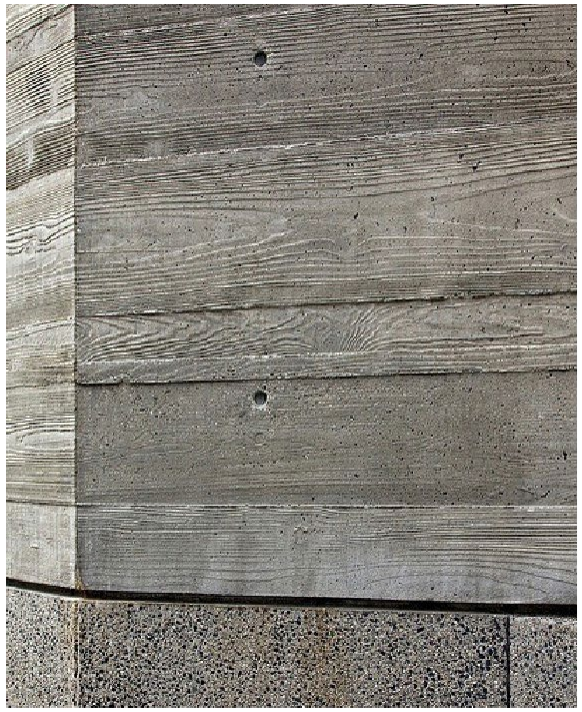
1.12 Outdoor rooms

Establish and maintain a sense of the public realm as an outdoor room where building elevations serve as walls and the streets, sidewalks, and landscape serve as the floor. Use buildings to create and maintain a sense of urban enclosure.

2. PARKING LOCATION AND DESIGN

2.1 Front yard surface parking on an Addressing Street

Surface parking is permitted in the front yard setback for development along Addressing Streets and Supporting Streets with limitations. Design parking lots to result in an attractive and functional experience for staff and visitors arriving by car. To enhance the design quality of parking lots in front yards along Addressing Streets, consider increasing the quality of the materials used and treating the surface of the parking lot and walkway system as a plaza that connects to, and integrates with, the primary building entrance.



2.2 Through Connections that provide parking

Through Connections can support a wide range of on street parking options including parallel, diagonal, or perpendicular parking. Choose the type of parking most appropriate to the context: consider natural features and resources as well as programmatic needs associated with building use. Adjust the layout of parking lots to accommodate natural features and resources.

2.3 Surface parking

Vary the scale of parking lots, the pattern of landscape elements and lighting to add visual

Screening materials
Walls used for screening may be constructed from stone, self-weathering sheet steel, or smooth-finished cast-in- place or board-formed concrete.

interest and reduce the monotonous effect of large extents of surface parking.

2.4 From the parking spot to the primary entry

Design parking lots for the comfort and convenience of visitors and the disabled. The accessible route from one's parking spot to the primary building entrances should be clear, obvious, and unobstructed.

2.5 Stormwater run-off

Consider the integration of permeable paving to reduce stormwater run-off.

2.6 Planting

Design and install new landscapes with plantings grouped in natural, irregular masses to establish and support a continuous, integrated, and natural district-wide appearance. Landscapes and plant materials shall be maintained throughout the year.

3. LOCATION AND SCREENING OF UTILITIES AND SERVICES

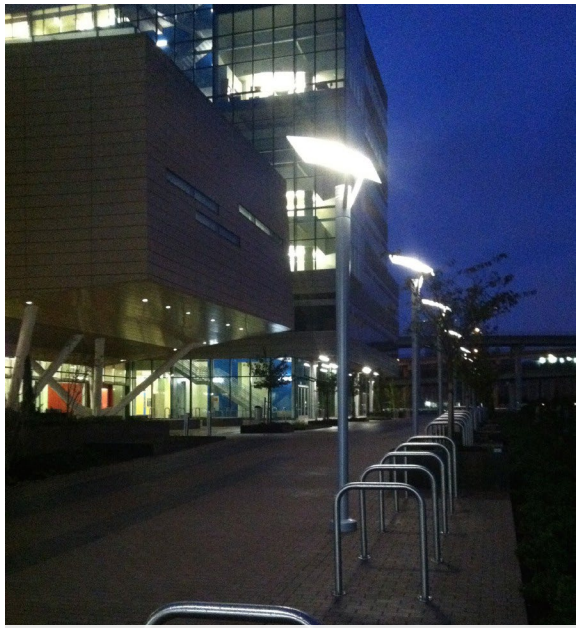
3.1 Geometry

Organize above-grade services elements, such as transformers, with the geometry of the adjacent streets or nearby site elements and buildings.

3.2 Screening materials

Walls used for screening may be constructed from stone, self-weathering sheet steel, or smooth-finished cast-in-place or board-formed concrete. Long extents of fencing should be modulated with the use of reveals and other techniques. Where required, service access gates and doors should be constructed of high-quality, durable materials that complement the design of screening walls and receive regular maintenance.

3.3 Native plant material



Where appropriate, screening walls should be enhanced with native plant material to diminish the visual mass and integrate with the landscape.

4. EXTERIOR LIGHTING

4.1 Nighttime safety

Exterior lighting should support safe access and use of sites in the evening and nighttime.

Nighttime safety
Exterior lighting should support safe access and use of sites in the evening and nighttime.

4.2 Highlighting

The selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements such as sculpture or other featured elements in the landscape will contribute to the high-quality design of the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area.~~

4.3 Flood lighting

Surface parking lots, building entries and courtyards, and loading areas and service yards should be illuminated, but the use of flood lighting is discouraged.

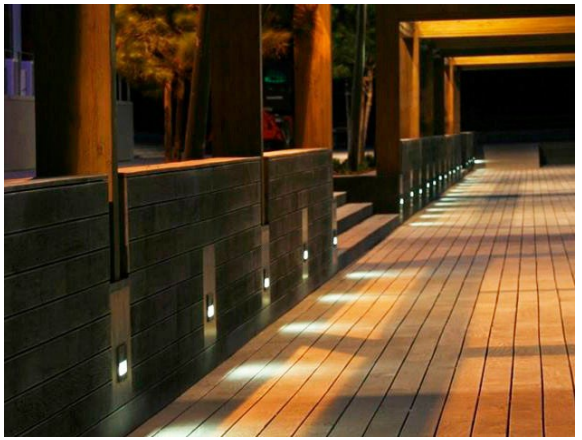
4.4 Sustainable lighting

Exterior lighting should be selected for maximum energy-efficiency, durability, and maintainability.

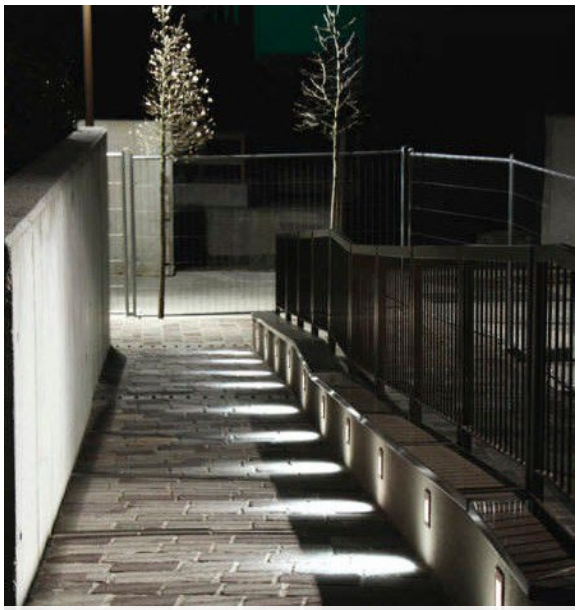
4.5 Addressing and Supporting Streets at night

Lighting plays a significant role in supporting the design character of Addressing Streets and Supporting Streets in the evening and nighttime by encouraging the selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements such as sculpture or other featured elements in the landscape frontages required along Addressing Streets.

4.6 Through Connections at night



Lighting plays a supporting role in the design character of Through Connections in the evening and nighttime by promoting safety and security along routes of pedestrian access as well as the selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements.



4.7 Fixture heights

Fixture heights of 15-20' are preferred for surface parking lots and loading areas and service yards. Through Connections, internal walks, courtyards, and paths should be illuminated with pedestrian-scaled lighting.

4.8 Night sky

Lighting shall protect night skies, and not extend beyond site boundaries. Light fixtures shall be cast downward with full cut-off shades. In-ground up-lighting should be avoided.

Highlighting
The selective highlighting of significant architectural elements, such as building entries and circulation to those entries from the street and landscape elements such as sculpture or other featured elements in the landscape will contribute to the high-quality design of the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area.~~

SECTION D | BUILDING DESIGN

INTENT STATEMENT

Building massing and the architectural expression of building design elements define the scale, quality, and character of the built environment. The design guidelines for buildings focus on the following elements:

- Prominent building entrance visible from an Addressing Street
- Overall building mass and bulk
- Composition of building elevations
- Roof forms
- Materials and colors
- Sustainable building design

The massive size, enormous bulk, and large surface areas of many industrial buildings represent design challenges and opportunities. Not all of the buildings developed in the ***Northwest Industrial Zone*** ~~Coffee Creek~~ will be warehouses or factories. Some will be office buildings or industrial hybrid buildings that incorporate office, research, assembly, manufacturing, distribution or warehousing. Buildings designed to support industrial or warehouse functions should have strong, simple forms and use windows and doors to create visual interest. Office buildings may have more varied forms that emphasize windows into, and views from, the office floors. While methods for reducing building bulk, mass, and scale will differ, the design for all buildings should consider architectural techniques that reduce their perceived scale along streets and adjacent to public spaces and help them blend into the district-wide landscape context for the aesthetic benefit of motorists, bicyclists, and pedestrians.

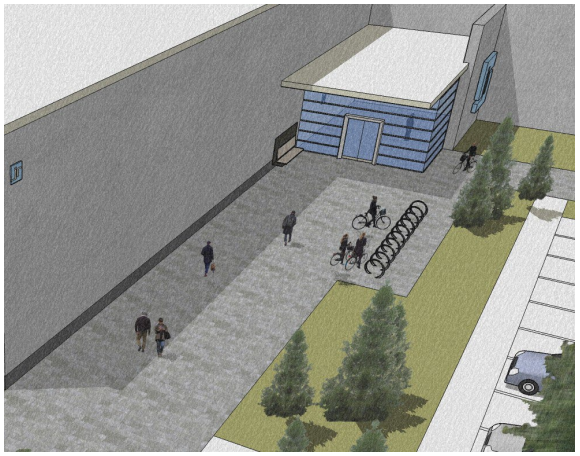
Interaction between the private enterprise inside of a building and the public contributes to the vitality of the streets in the ***Northwest Industrial Zone***. ~~Coffee Creek Industrial Area.~~ Transparency in front façade of buildings adds a subtle message that behavior in the public realm is being observed which contributes to the overall safety of the neighborhood. When passersby can sense activity that occurs inside of a building, they get a sense of people participating in their community.

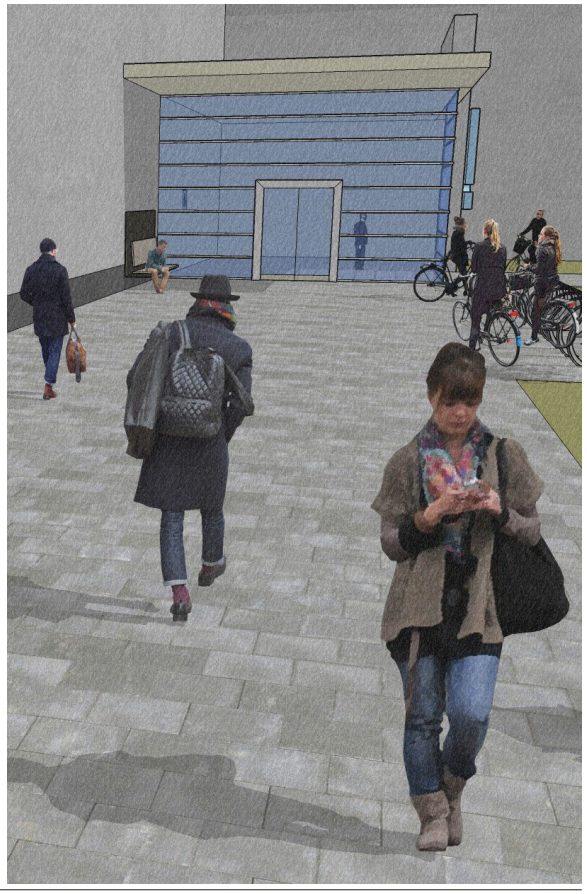
Many types of businesses incorporate programmatic functions that require and benefit from daylighting. These functions include dining areas, lobbies, lounges, fitness centers, waiting rooms, conference rooms, lunch/break rooms, as well as related outdoor seating areas. Placing these types of rooms within view of Addressing and Supporting Streets and Through Connections enhances safety of the public realm and creates a sense of connection.

Visual connection to the public realm
Many types of businesses incorporate programmatic functions that require and benefit from daylighting. These functions include dining areas, lobbies, lounges, fitness centers, waiting rooms, conference rooms, lunch/ break rooms, as well as related outdoor seating areas.
Placing these types of rooms within view of Addressing and Supporting Streets and Through Connections enhances safety of the public realm and creates a sense of connection.

DESIGN GUIDELINES

Every address, business, and destination in the ***Northwest Industrial Zone*** ~~Coffee Creek~~ deserves a good entrance. Every destination is ultimately reached on foot, so making every building entrance clearly visible and fully accessible is fundamental. The intent of the design guidelines is that every primary entrance of every building will contribute to the quality and vitality of the public realm by creating a clear sense of entry.





Primary entry as significant building feature

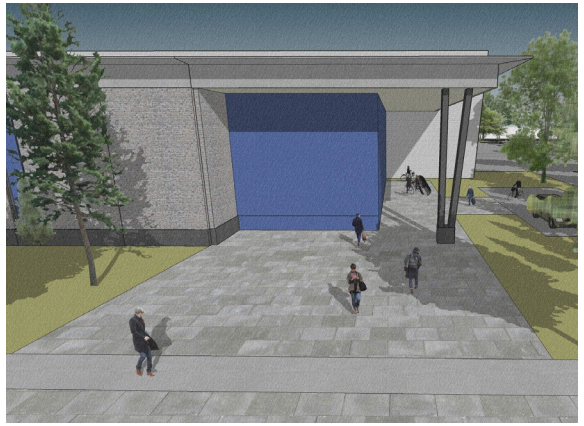
Make the primary building entry a significant element of building design in the ***Northwest Industrial Zone*** ~~Coffee Creek.~~ Emphasize the importance of the primary building entry with elements that could include a landscaped forecourt; a wide pedestrian path from the sidewalk with special paving; accent and pathway lighting; special plantings and landscape; a prominent roof form at the building's entrance; a generous canopy of metal or glass that offers protection from the elements; a major recess in the façade; seating elements such as benches, ledges, and movable chairs; or an open, transparent building lobby or vestibule that projects beyond the body of the building. Place these functional elements on an Addressing Street or Supporting Street and make their function visible from the streets and sidewalks.

Primary entry as significant building feature
Example of prominent entrance that is visible from Addressing Street, sidewalks and parking areas. Entrance is human-scaled with transparent vestibule, weather protection and a generous pedestrian walkway.

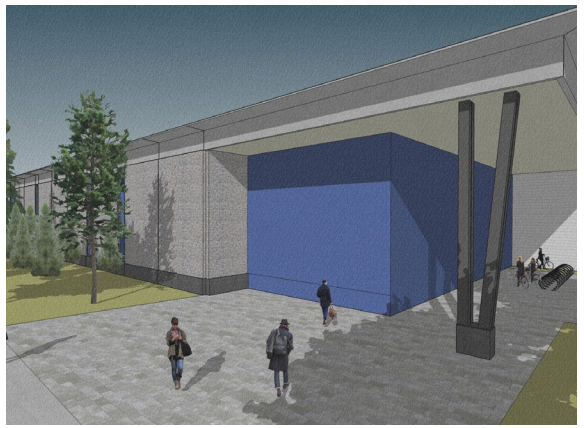
GUIDELINES

1. BUILDING ORIENTATION AND ENTRIES

1.1 Primary building entry relationship to Addressing Street



The primary building entrance shall be visible to and accessible from an Addressing Street.



1.2 Primary entry as significant building feature

Make the primary building entry a significant element of building design in the ***Northwest Industrial Zone*** ~~Coffee Creek.~~ Emphasize the importance of the primary building entry with elements that could include a landscaped forecourt; a wide pedestrian path from the sidewalk with special paving; accent and pathway lighting; special plantings and landscape; a prominent roof form at the building's entrance; a generous canopy of metal or glass that offers protection from the elements; a major recess in the façade; seating elements such as benches, ledges, and movable chairs; or an open, transparent building lobby or vestibule that projects beyond the body of the building. Place these functional elements on an Addressing Street or Supporting Street and make their function visible from the streets and sidewalks.

1.3 Visual interest and human scale

Locate the office and support spaces for warehouse and industrial buildings on the Addressing Street or Supporting Street instead of burying these functions in the interior of a large monolithic structure. The smaller-scale first floor can help soften the bulk of large buildings and add visual interest and a human scale to the public realm. This guideline may be accomplished by wrapping the high-bay industrial form with lower-scaled structures on the street; extending a discrete element of the building that contains these functions and giving this element a distinctive, contrasting architectural expression; or providing a visual break in the building mass and structure that creates an impression of two separate buildings.

Building entrance
Every destination is ultimately reached on foot, so making every building entrance clearly visible and fully accessible is fundamental. The intent of the design guidelines is that every primary entrance of every building will contribute to the quality and vitality of the public realm by creating a clear sense of entry.

2. BUILDING FAÇADES

2.1 Façade articulation

Articulate façades with a sense of depth by including design elements that create shadow lines, change color or materials, or incorporate other details that together with the required landscape breakdown large expanses of flat, unembellished surfaces.

2.2 Office building façades

Office building windows and doors offer opportunities to decrease apparent building mass and promote a sense of the human scale. Express the programmatic elements of office buildings including lobbies, conference rooms, lunch rooms, and fitness centers as distinct elements on the building exterior, especially the front façade.

2.3 Multi-story building façades

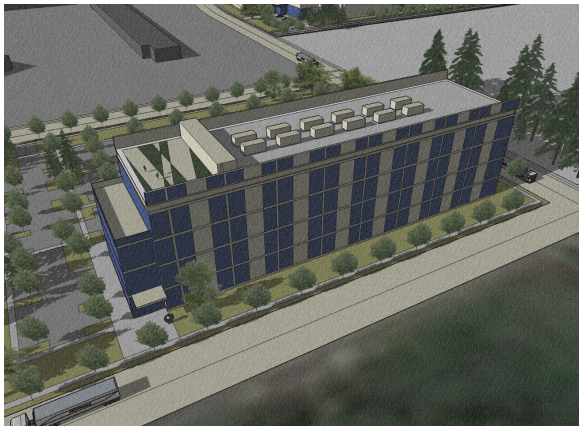
Because their building program is more flexible than industrial or warehouse projects, multi-story office buildings in the ***Northwest Industrial zone*** ~~Coffee Creek~~ should incorporate elements such as jogs or offsets in street-facing building elevations, building step-backs at upper floor levels,
projections that create shadow lines, deep roof overhangs, major recesses in the building elevation to mark entries, or the bold expression of the building's structural system.

2.4 Addressing Street façades

Building elevations fronting Addressing Streets offer an initial impression of design quality and deserve special design attention. The design for all elevations for all buildings facing an Addressing Street shall clearly delineate a distinctive three-part design of base, body, and top. The intent of this guideline is to visually ground all buildings in the Coffee Creek landscape and provide a distinctive silhouette of each building against the skyline.

2.5 Addressing Street enclosure and street wall

Site and building design shall support a uniform street wall of buildings along Addressing Streets that frames the public realm and supports a unified streetscape.



3. ROOF FORMS

3.1 Fifth elevation

The roof forms of office buildings and industrial buildings in the Coffee Creek Industrial Area should be considered as the "fifth elevation" of the building and their design should be fully considered as one element in the overall design of any building.

3.2 Natural light

For manufacturing or warehousing facilities, the design guidelines strongly encourage the historic "saw tooth" roof form with integrated north-facing clerestory windows.

Roof forms
The roof forms of buildings should be considered as the "fifth elevation" and their design should be fully considered as one element in the overall design.
Collection, storage, and discharge of stormwater should be expressed as architectural features.

Planning Commission Meeting - July 8, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

3.3 Roof edge

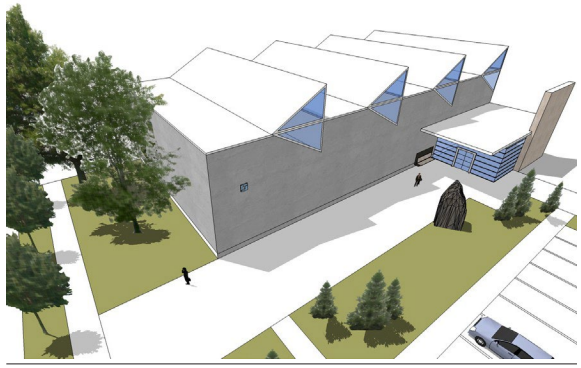
At a minimum, the roof edge of all buildings will create a distinctive profile against the sky when seen from the public realm. In the case of warehouse or factory buildings with large floor plates, the roof may not be visible from grade and other elements of the building –the primary building entry, landscape plantings, signage, or elements of the building façade will be the prominent design features.

3.4 Roof forms

Buildings in the Coffee Creek Industrial Area are encouraged to include prominent roof forms. This guideline may be accomplished by accentuating the required building top with upturned eaves or projections, using sloped roofs, extending roofs beyond the building elevation to create deep overhangs, adding architectural elements like braces or brackets, and prominent vertical features such as towers or vertical circulation.

3.5 Incorporation of mechanical systems

Design roof forms to incorporate a building's mechanical systems and fully screen roof-mounted equipment from view from the public realm. Minimize any visual clutter of multiple, isolated roof-top equipment by grouping such elements and screening them from view with architectural elements.



3.6 Roof stormwater

Collection, storage, and discharge of stormwater from building roofs should be expressed as distinct architectural features, integrated into building design using the design of sloping roofs, gutters, scuppers, downspouts, and cisterns that collect and store rain water. Green roof technologies could be appropriate in new buildings in Coffee Creek as an integrated element in stormwater management.

4. MATERIALS AND COLORS

4.1 Coffee Creek colors

Use of authentic, durable, and sustainable materials that derive their color from the natural setting of Coffee Creek support a consistent image and identity of the industrial area as a high-quality employment hub of the City of Wilsonville. Simple, basic, industrial materials, such as board-formed or cast-in-place concrete, architectural metal panels, corrugated steel, brick masonry, and architecturally-finished concrete masonry units are encouraged.

Natural light
For manufacturing or warehousing facilities, the design guidelines strongly encourage the historic "saw tooth" roof form with integrated north-facing clerestory windows.

Roof edge
At a minimum, the roof edge of all buildings will create a distinctive profile against the sky when seen from the public realm.

Planning Commission Meeting - July 8, 2026
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

4.2 Emphasize base, body, and top

Materials should be organized on each building elevation to emphasize the three zones of base, body, and top and to highlight important features such as entrances.

4.3 Muted color palette

Site features and buildings should incorporate the subtle color palette derived from the natural landscape. Larger building forms can be made less prominent by employing a muted color palette drawn from the colors prevalent on the site.

5. SUSTAINABLE BUILDING DESIGN

5.1 Solar advantage and daylight

Sustainable building practices help to create healthy communities and ecosystems. To the extent possible, building orientation should consider solar exposure and capture the energy of the sun in a passive manner. Entries and public spaces should be sited where they can benefit from daylight.

5.2 Shading

Building elevations facing south and west should incorporate deep roof overhangs, projections, or sun shading devices.

5.3 Non-mechanical light and ventilation

Introduce natural light into buildings using clerestory windows and skylights. In those areas, such as offices, operable windows, and natural ventilation is encouraged.

5.4 Minimal site alteration

Where possible, buildings, surface parking lots, drive aisles, service yards, and loading areas should merge with the existing grades, rather than significantly altering them.

Base, body, and top
Materials should be organized on each building elevation to emphasize the three zones of base, body, and top and to highlight important features such as entrances.

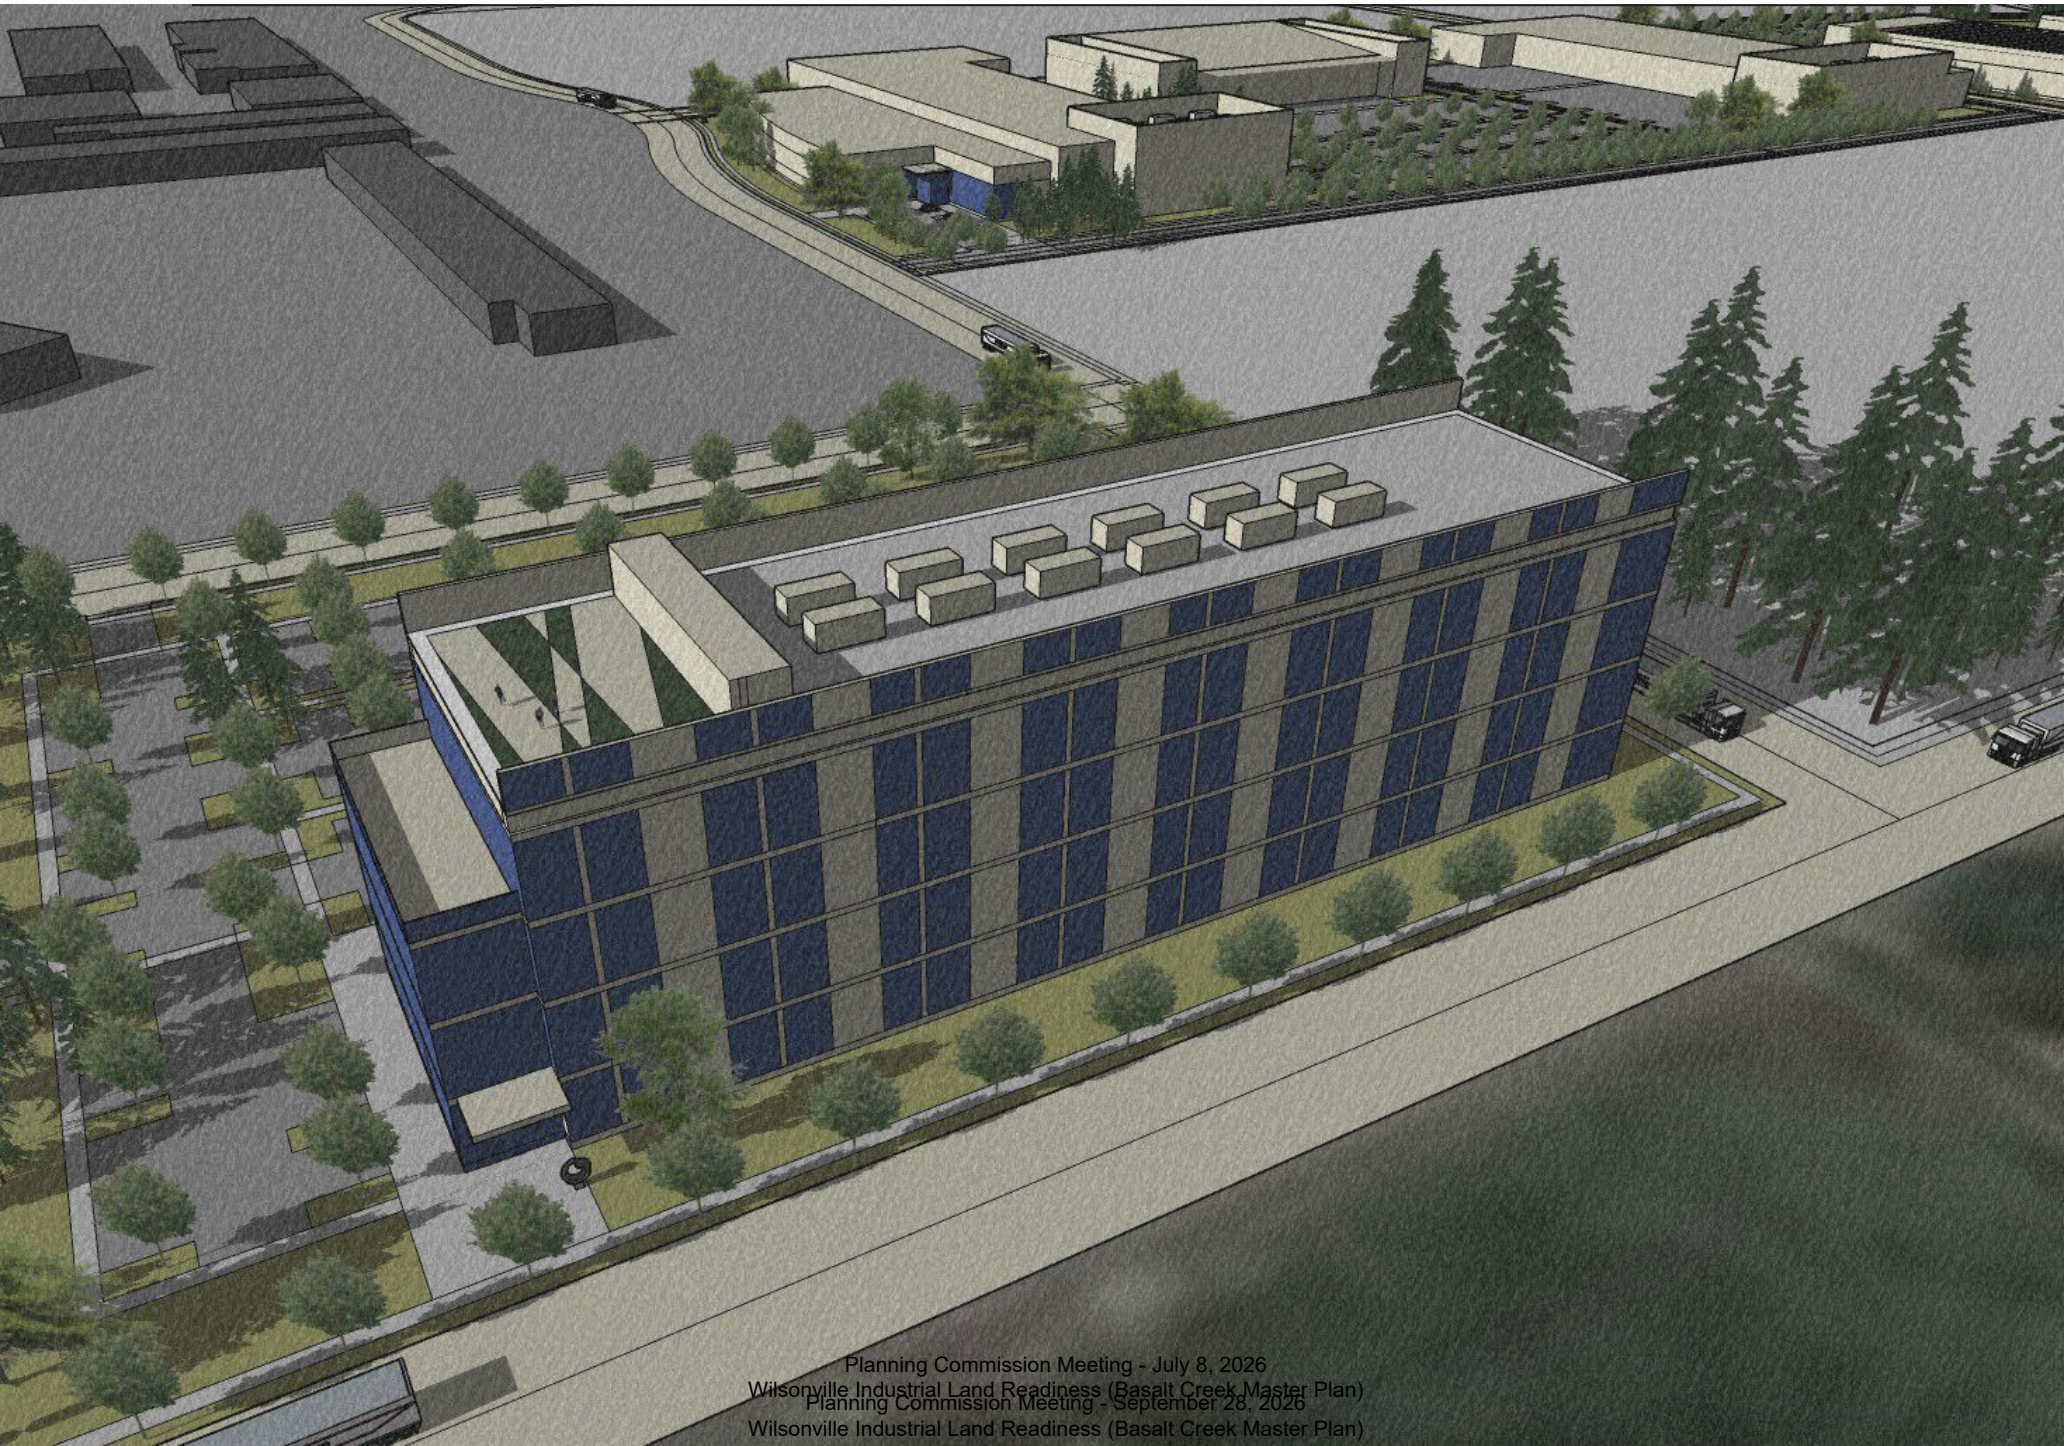
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

~~Coffee Creek Light Industrial~~ ***Northwest Industrial*** Patterns and Typologies

Prototypes



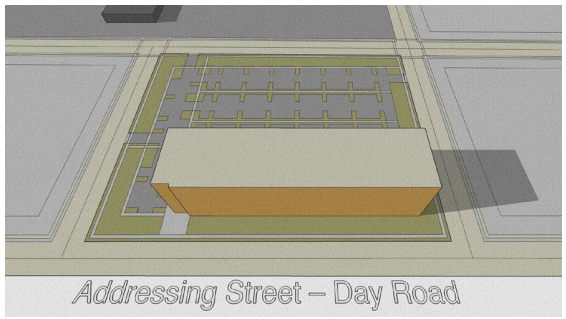
Connectivity and Street Design Patterns

Street and Path Typology

Site Design Patterns

Building Design Patterns

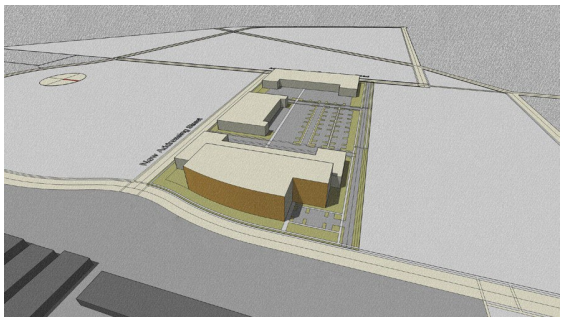
PATTERNS AND TYPOLOGIES



Overview of the Prototypes

Prototype 1

HYPOTHETICAL SITE AND BUILDING PROGRAM



- 142,000 square feet located on Day Road
- Multi-story office building
- 40,000 square feet for office, research, lab, fabrication
- Building footprint of 20,000 square feet

Prototype 2

HYPOTHETICAL SITE AND BUILDING PROGRAM

- 700,000 square feet located on Garden Acres Road
- Industrial / warehouse building with loading docks and service bays
- 400,000 square feet for warehouse, office

Prototype 3

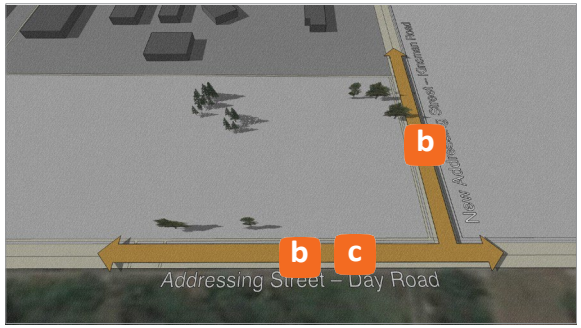
HYPOTHETICAL SITE AND BUILDING PROGRAM

- Existing 525,000 square foot industrial site on Grahams Ferry Road
- Combines existing structures with new development
- Hypothetical: 261,000 square feet for industrial fabrication and office

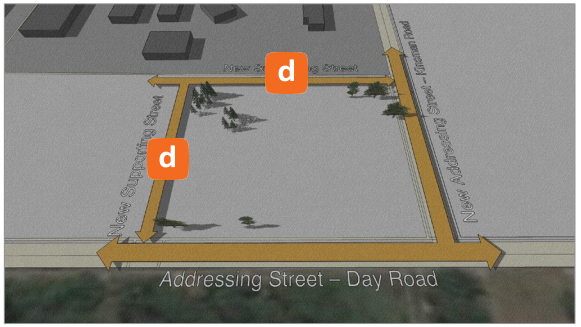
Connectivity and Street Design Patterns

A.1.1 CONNECTION SPACING

The intent for all streets and paths in the ***Northwest Industrial Zone*** Coffee Creek is to create an integrated district with a robust, resilient, and connected network that supports economic and environmental sustainability. There is a fixed structural framework of Addressing Streets that provides access from within Coffee Creek to the rest of the region. That framework is intended to support a well-integrated and fine-grained system of streets and paths where a multi-use path might be the connecting link between an Addressing Street and a Supporting Street or Through Connection. The design intent is to maximize connectivity –of all kinds– to the extent feasible.



a Potential industrial development site



b Location of nearest existing or planned Addressing Street

c Priority Addressing Street

d Location of Through Connections

Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

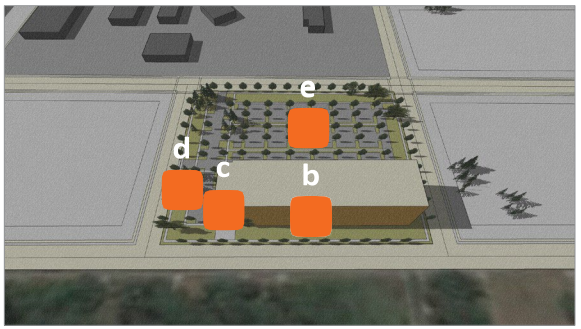
Site Design Patterns

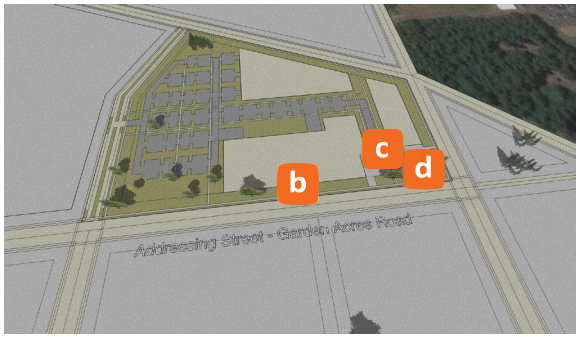


SECTION C. INTENT STATEMENT

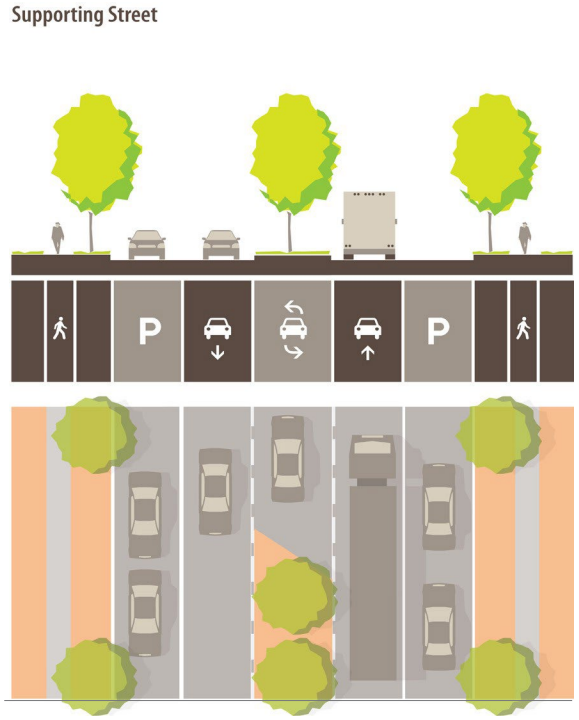
The primary building entry is a significant element of building design in the ***Northwest Industrial Zone*** ~~Coffee Creek.~~ The design guidelines recommend that the primary entrance for all buildings front on an Addressing Street. This is not a requirement of the Form-based Code; an entrance on a Supporting Street or Through Connection is acceptable provided the entry is clearly visible from the Addressing Street and a clear public route to the entry is provided. Emphasize the importance of the primary building entry with glass, canopies, signage, public art, landscaping, and lighting.

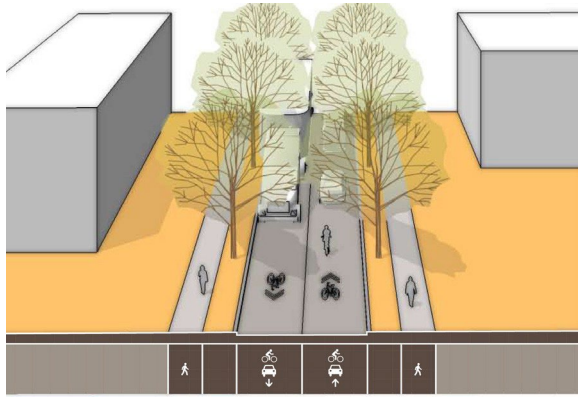
- **a** Development parcel delineated by Addressing and Supporting Streets
- **b** Primary building frontage
- **c** Primary entrance
- **d** Location of limited front yard surface parking
- **e** Surface parking

Prototype 1



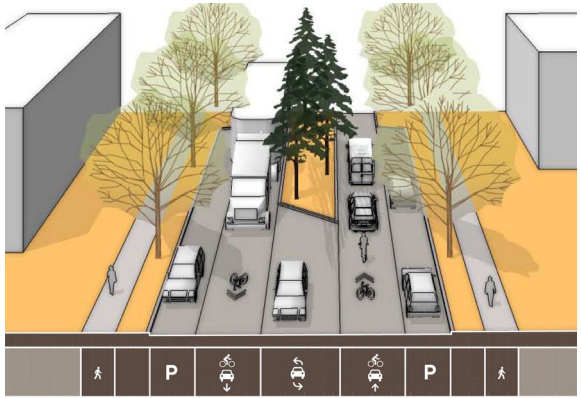
Prototype 2



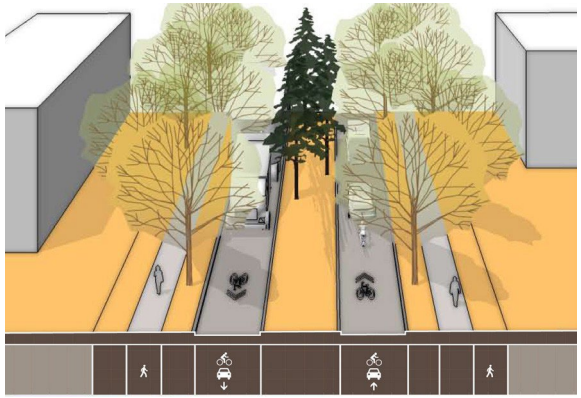


Prototype 3

Supporting Street Typology

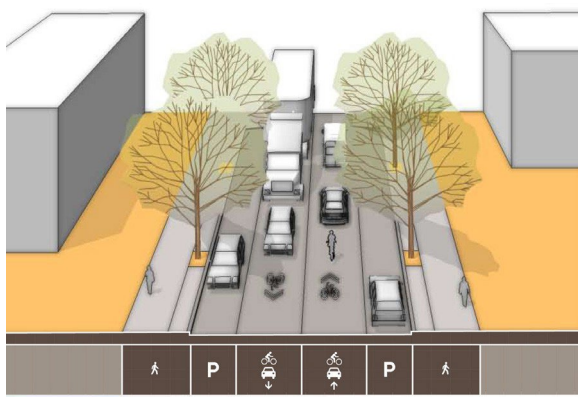


Supporting Street—Possible street section and plan



Minimal

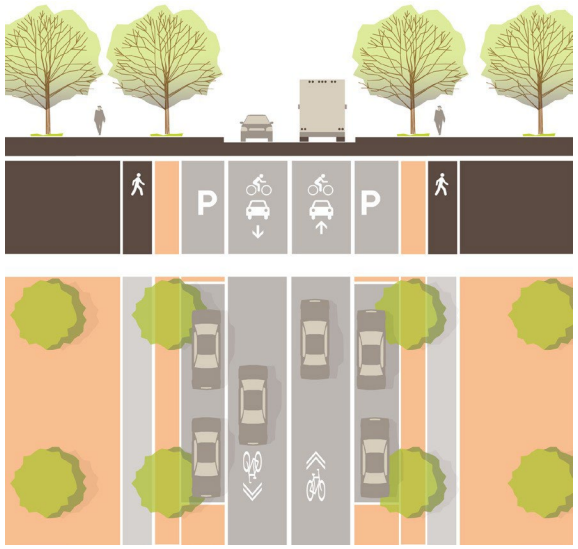
- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in continuous planted park strip
- ☐ Planted median
- ☐ Left turn lane
- ☐ On-street parking



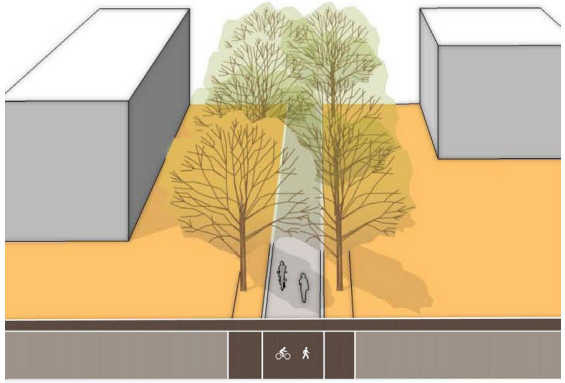
Monumental

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in continuous planted park strip
- ☑ Planted median
- ☑ Left turn lane
- ☑ On-street parking

Park-like character



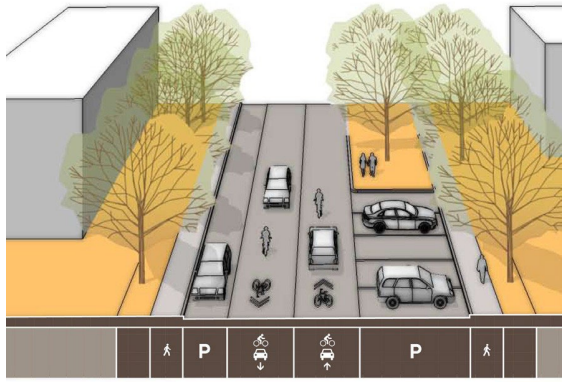
- ☑ Vehicular access
- ☑ Pedestrian access—sidewalks
- ☑ Bicycle access—shared lane
- ☑ Street trees—in continuous planted park strip
- ☑ Planted median
- ☐ Left turn lane
- ☐ On-street parking



Urban character

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in tree wells
- ☐ Planted median
- ☐ Left turn lane
- ☑ On-street parking

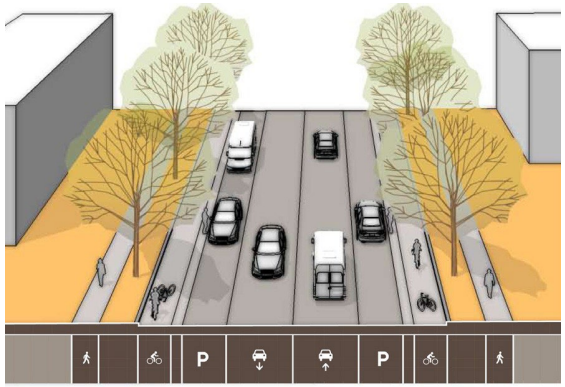
Through Connection Typology



Through Connection—Possible street section and plan

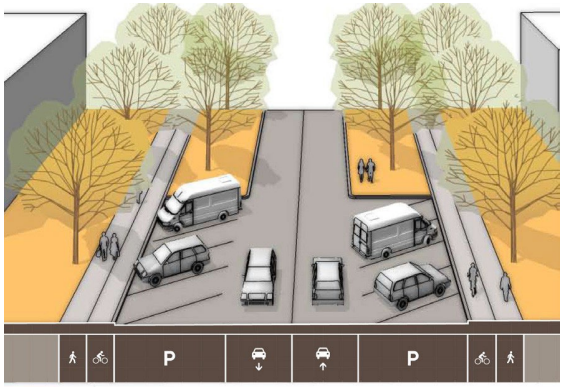
Minimal bike-ped

- ☐ Vehicular access
- ☑ Pedestrian access—in multi-use path
- ☑ Bicycle access—in multi-use path
- ☑ Street trees—in continuous planted park strip
- ☐ Pocket parks
- ☐ Planted median
- ☐ On-street parking



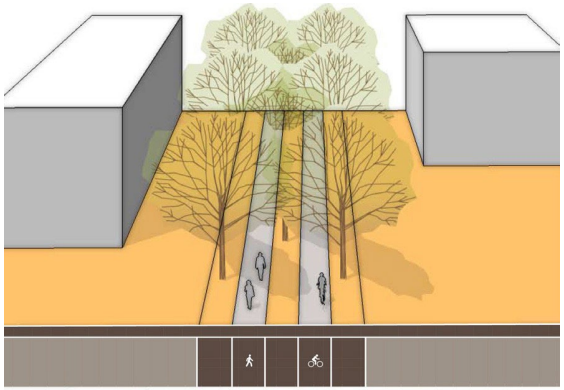
Park-like

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in shared lane
- ☑ Street trees—in continuous planted park strip
- ☑ Pocket parks—in parklets*
- ☐ Planted median
- ☐ On-street parking—head-in



*A "parklet" is a pocket park within the parking width

CONNECTIVITY AND STREET DESIGN PATTERNS: STREET AND MULTI-USE PATHS

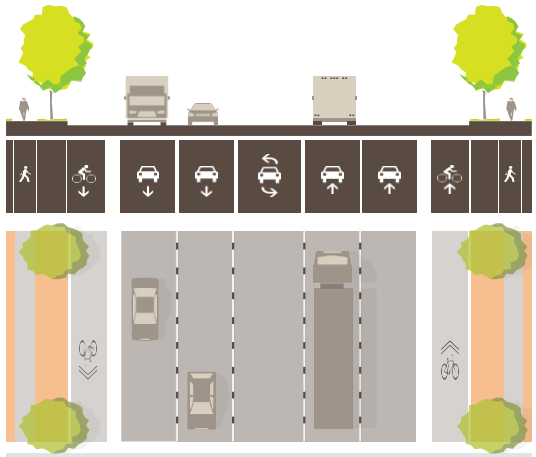


Bike priority

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalk
- ☑ Bicycle access—in buffered bike lane
- ☑ Street trees—in continuous planted park strip
- ☐ Pocket parks
- ☐ Planted median
- ☑ On-street parking—parallel

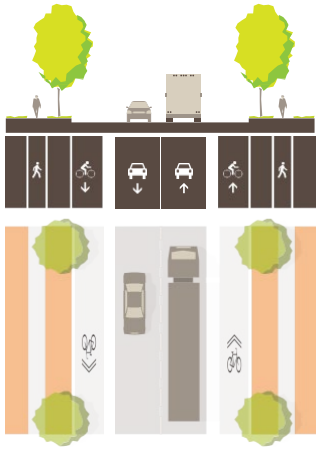
Maximum parking

- ☑ Vehicular access
- ☑ Pedestrian access—in sidewalks
- ☑ Bicycle access—in buffered bike lane
- ☑ Street trees—in continuous planted park strip
- ☑ Pocket parks—in parklets*
- ☐ Planted median
- ☐ On-street parking—diagonal



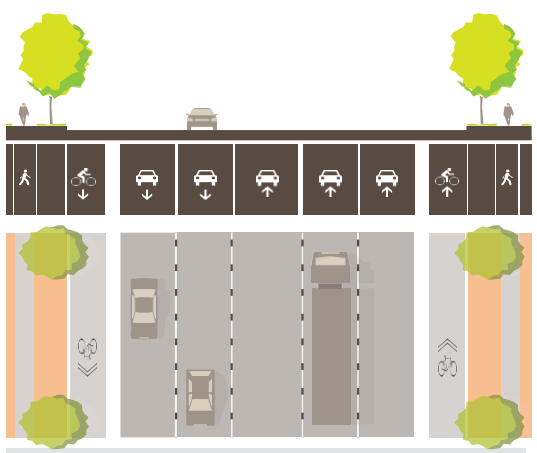
Bike-ped

- ☐ Vehicular access
- ☑ Pedestrian access—multi-use path
- ☑ Bicycle access—multi-use path
- ☑ Street trees—in continuous planted park strip
- ☐ Pocket parks—in parklets*
- ☑ Planted median
- ☐ On-street parking



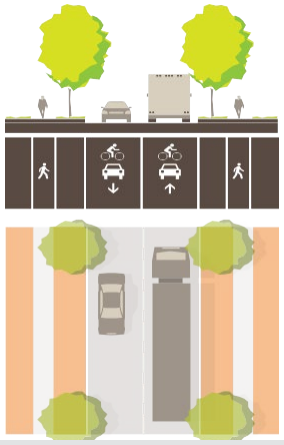
*A "parklet" is a pocket park within the parking width

Addressing Street Typology



Day Road

Type	Major Arterial
Role in Network	Freight and Bike Route
Design Speed	Under 35 mph
Right-of-Way Easement	110 feet
Curb-to-Curb Width	82 feet
Travel Lanes (number)	4
Travel Lane Width	10-12 feet
Center Turn Lane Width	14 feet
Parking Lane Width	0
Bike Facilities Width	10 feet Buffered Bike Lane
Sidewalk Width	6 feet each side
Planting Strip Width	8 feet



Cahalin Road

Type	Local Street
Role in Network	Bike Route
Design Speed	Under 20 mph
Right-of-Way Easement	72 feet
Curb-to-Curb Width	44 feet
Travel Lanes (number)	2
Travel Lane Width	10-11 feet
Center Turn Lane Width	NA
Parking Lane Width	0
Bike Facilities Width	10 feet Buffered Bike Lane
Sidewalk Width	6 feet each side
Planting Strip Width	8 feet

Grahams Ferry Rd

Type	Minor Arterial
Role in Network	Freight and Bike Route
Design Speed	Under 30 mph
Right-of-Way Easement	110 feet
Curb-to-Curb Width	82 feet
Travel Lanes (number)	4
Travel Lane Width	10-12 feet
Center Turn Lane Width	14 feet
Parking Lane Width	0
Bike Facilities Width	10 feet Buffered Bike Lane
Sidewalk Width	6 feet each side
Planting Strip Width	8 feet

Garden Acres Rd

Type	Minor Arterial
Role in Network	
Design Speed	Under 25 mph
Right-of-Way Easement	52 feet
Curb-to-Curb Width	24 feet
Travel Lanes (number)	2
Travel Lane Width	10-11 feet
Center Turn Lane Width	NA
Parking Lane Width	0
Bike Facilities Width	Cycle track
Sidewalk Width	6 feet each side
Planting Strip Width	8 feet

Clutter Road

Type	Collector
Role in Network	Freight Route
Design Speed	Under 25 mph
Right-of-Way Easement	86 feet
Curb-to-Curb Width	58 feet
Travel Lanes (number)	2
Travel Lane Width	10-12 feet
Center Turn Lane Width	14 feet
Parking Lane Width	0
Bike Facilities Width	10 feet Buffered Bike Lane
Sidewalk Width	6 feet each side
Planting Strip Width	8 feet

Prototype 1

B. 2.2 EXISTING TREE GROVES AT POINTS OF ACCESS

Incorporate elements such as existing stands of native trees to emphasize points of site access and building access.

C. 1.4 PARCEL ACCESS FROM AN ADDRESSING STREET

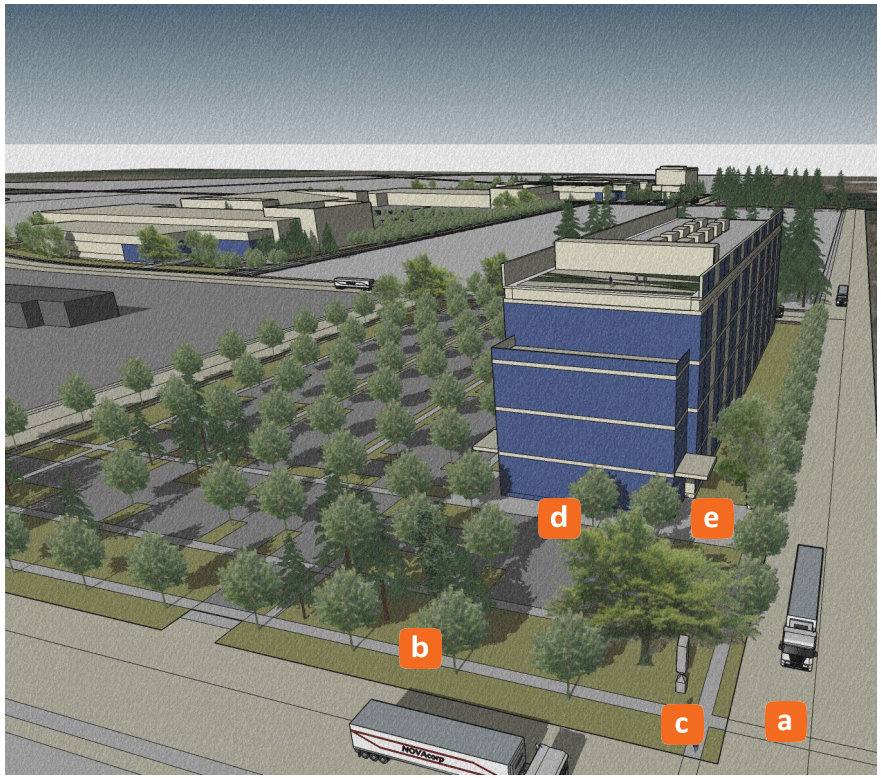
Where parcel access connects the primary building entrance to the Addressing Street extend the design, character, scale, and materials of the entry to the public sidewalk.

C. 1.10 FRONT YARDS THAT CONTRIBUTE TO THE PUBLIC REALM

Design the landscape in front yards along Addressing Streets to result in an attractive contribution to the quality of the public realm.

SECTION D. INTENT STATEMENT

Interaction between the private enterprise inside of a building and the public contributes to the vitality of the streets in the ***Northwest Industrial area.*** ~~Coffee Creek Industrial Area.~~ Transparency in front façade of buildings adds a subtle message that behavior in the public realm is being observed which contributes to the overall safety of the neighborhood. When passersby can sense activity that occurs inside of a building, they get a sense of people participating in their community.



D. 1.2 PRIMARY ENTRY AS SIGNIFICANT BUILDING FEATURE

Make the primary building entry a significant element of building design in ***the Northwest Industrial Zone.*** ~~Coffee Creek~~. Emphasize the importance of the primary building entry with elements that could include a landscaped forecourt; a wide pedestrian path from the sidewalk with special paving; accent and pathway lighting; special plantings and landscape; a prominent roof form at the building's entrance; a generous canopy of metal or glass that offers protection from the elements; a major recess in the façade; seating elements such as benches, ledges, and movable chairs; or an open, transparent building lobby or vestibule that projects beyond the body of the building. Place these functional elements on an Addressing Street or Supporting Street and make their function visible from the streets and sidewalks.

D. 2.5 ADDRESSING STREET ENCLOSURE AND STREET WALL

Site and building design shall support a uniform street wall of buildings along Addressing Streets that frames the public realm and supports a unified streetscape.

PATTERNS AND TYPOLOGIES

a Primary Addressing Street

b Existing tree groves at points of access

c Front yards that contribute to the public realm

d Enhanced public realm safety through interaction of public and private spaces

e Primary building entry relationship to Addressing Street

f Primary entrance

Prototype 2

A. 2.1 PARK-LIKE CHARACTER

Design Addressing Streets to establish and support a park-like character of the public realm. Addressing Streets shall provide continuous sidewalks on both sides of the street that protect the pedestrian with a planting strip landscaped with shade trees. Addressing Streets may also include a planted central median.

A. 2.3 PROMINENT ADDRESS

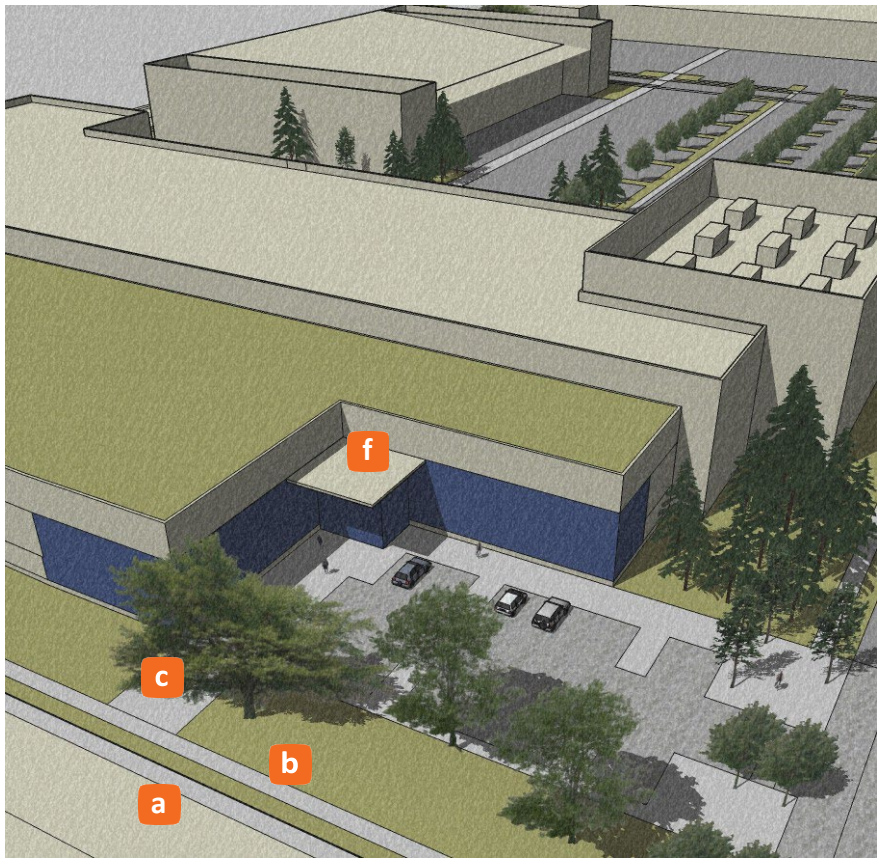
Design Addressing Streets to serve as the "front door" or "address" for new buildings and development. New Addressing Streets shall include sidewalks on both sides that provide safe, continuous access for pedestrians to all abutting sections of the primary street network of Addressing Streets. Unless interrupted by another Addressing Street or a Supporting Street, the sidewalks shall be protected by a continuous landscape strip planted with shade trees.

A. 2.4 ENCLOSED PUBLIC REALM

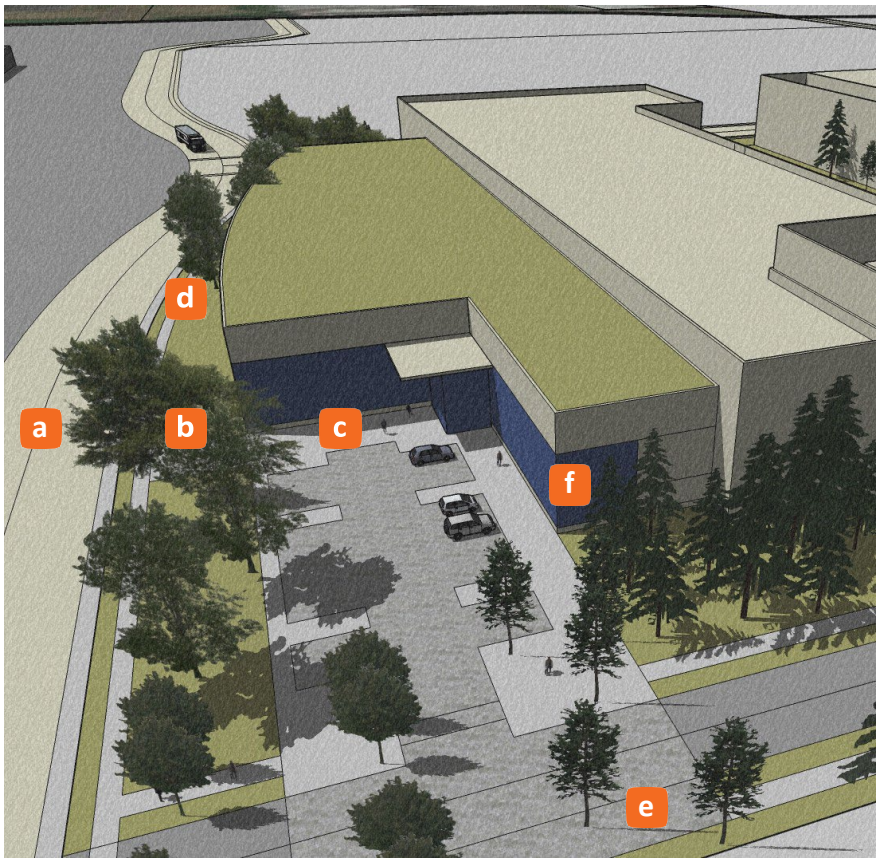
Orient building massing, form, architecture, and programmatic function along Addressing Streets to help define the public realm, create a distinctive enclosure of the public realm, and support the sense of place in the ***Northwest Industrial Zone.*** ~~Coffee Creek.~~

A. 3.3 EXTENSION OF PUBLIC REALM

Design Supporting Streets to establish and support the extension of the public realm established by the network of Addressing Streets.



SECTION C. INTENT STATEMENT



Trees help to define place. Whether individually, or in groves of native species, trees enhance the public realm by giving context and scale to the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area.~~ Landscape planting in front, side, and rear yards and as screening for parking lots, service drives, and service enclosures gives form and defines the public realm and parcels. Landscape design, installation, and maintenance helps to define the ***Northwest Industrial Zone.*** ~~Coffee Creek Industrial Area~~ and to diminish the large scale of industrial buildings. Landscaping also helps direct people to building entries. The native plant materials are climate adaptive, have low water and maintenance requirements, and visually blend with adjacent, undisturbed landscapes. Native trees should be preserved and employed as the visual anchors of new landscapes.

D. 1.3 VISUAL INTEREST AND HUMAN SCALE

Locate the office and support spaces for warehouse and industrial buildings on the Addressing Street or Supporting Street instead of burying these functions in the interior of a large monolithic structure. Expressing the smaller-scale of these programmatic functions on the ground floor can help soften the bulk of large buildings and add visual interest and a human scale to the public realm. This guideline may be accomplished by wrapping the high-bay industrial form with lower-scaled structures on the street; extending a discrete element of the building that contains these functions and giving this element a distinctive, contrasting architectural expression; or providing a visual break in the building mass and structure that creates an impression of two separate buildings.

PATTERNS AND TYPOLOGIES

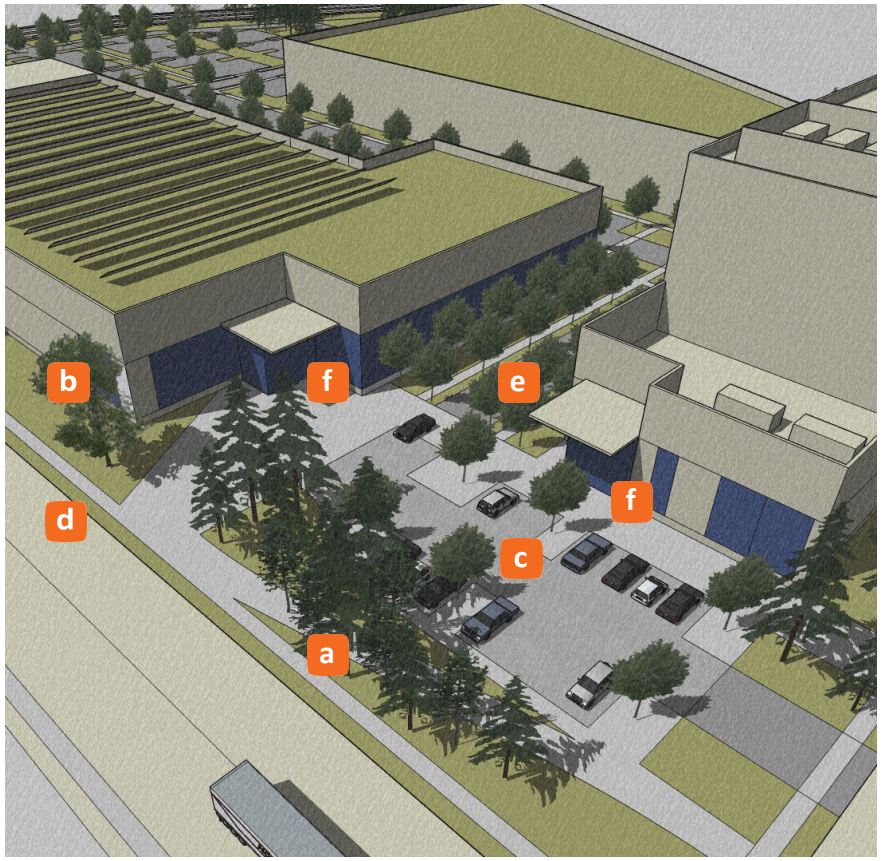
- **a** Primary Addressing Street
- **b** Addressing Street park-like character
- **c** Addressing Street as front door
- **d** Enclosed public realm
- **e** Native trees in the setback
- **f** Visual interest and human scale

Prototype 3

B. 1.6 TREE PRESERVATION WITHIN SETBACKS

Whether individually or in groves of native species, preserve trees within the setbacks of the development, particularly when they occur within the setback of an Addressing Street, or a Supporting Street that serves as the development's primary access street.

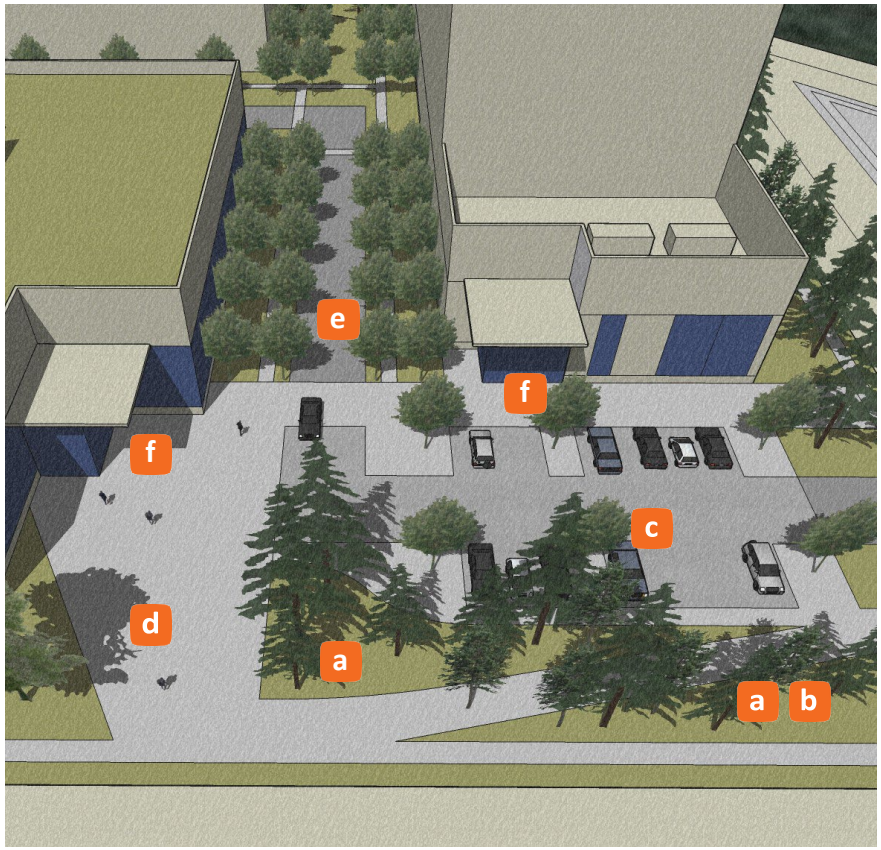
B. 1.7 INFORMAL PARK-LIKE LANDSCAPING



The park-like character of the design of the Addressing Streets should be complemented by landscaping around buildings, parking lots, and open space that reflects the informal, natural, and original landscape that preceded development and persists in places across the site.

SECTION C. INTENT STATEMENT

Surface parking is permitted in the front yard setback for development along Addressing Streets with limitations. Surface parking lots are limited in scale and designated for short-term parking for visitors, people with disabilities, and deliveries only. The design guidelines are intended to establish the character for surface parking lots in a manner that supports the City's goals for pedestrian convenience, comfort, and safety.



C. 1.1 DISTINCTIVE IDENTITY OF VISITOR ARRIVAL POINT

Where parcel access is also the primary automobile access to a building for visitors, use landscaping and signage to create a distinctive sense of arrival.

C. 1.3 FORMAL LANDSCAPE DESIGN THAT CONTRASTS

Design guidelines for the landscape of front yards along Addressing Streets encourage a natural, irregular pattern of native plant materials. Along parcel access routes consider breaking this informal character of the landscape frontage with design and plant materials that are more formal, regular, and ornamental.

D. 1.1 PRIMARY BUILDING ENTRY RELATIONSHIP TO ADDRESSING STREET

The primary building entrance shall be visible to and accessible from an Addressing Street.

- **a** Tree preservation within setbacks
- **b** Informal park-like landscaping
- **c** Limited surface parking in the front setback
- **d** Distinctive identity of visitor arrival point
- **e** Formal landscaping that contrasts
- **f** Primary entrance

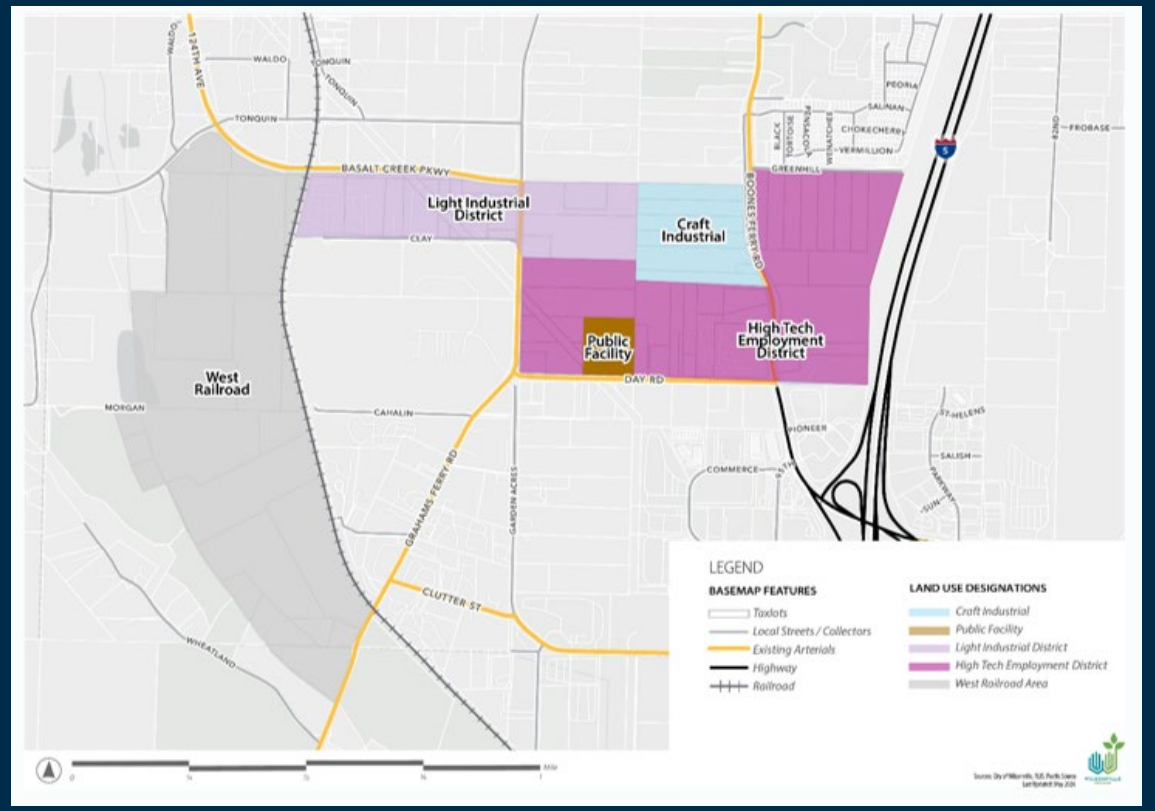
Basalt Creek Master Plan

Planning Commission Work Session #2

July 8, 2026

Work Session #2 Objectives



Tonight's discussion focuses on:

- Proposed Development Code Edits
  - Including new definitions
- Northwest Industrial Pattern Book
- Changes to the use table

WILSONVILLE
OREGON

Development Code

- Added Craft Industrial Code Language Section 4.130
- Coffee Creek Design Overlay District changed to Northwest Industrial Zone (NWI) Section 4.134

WILSONVILLE
OREGON

New Definitions

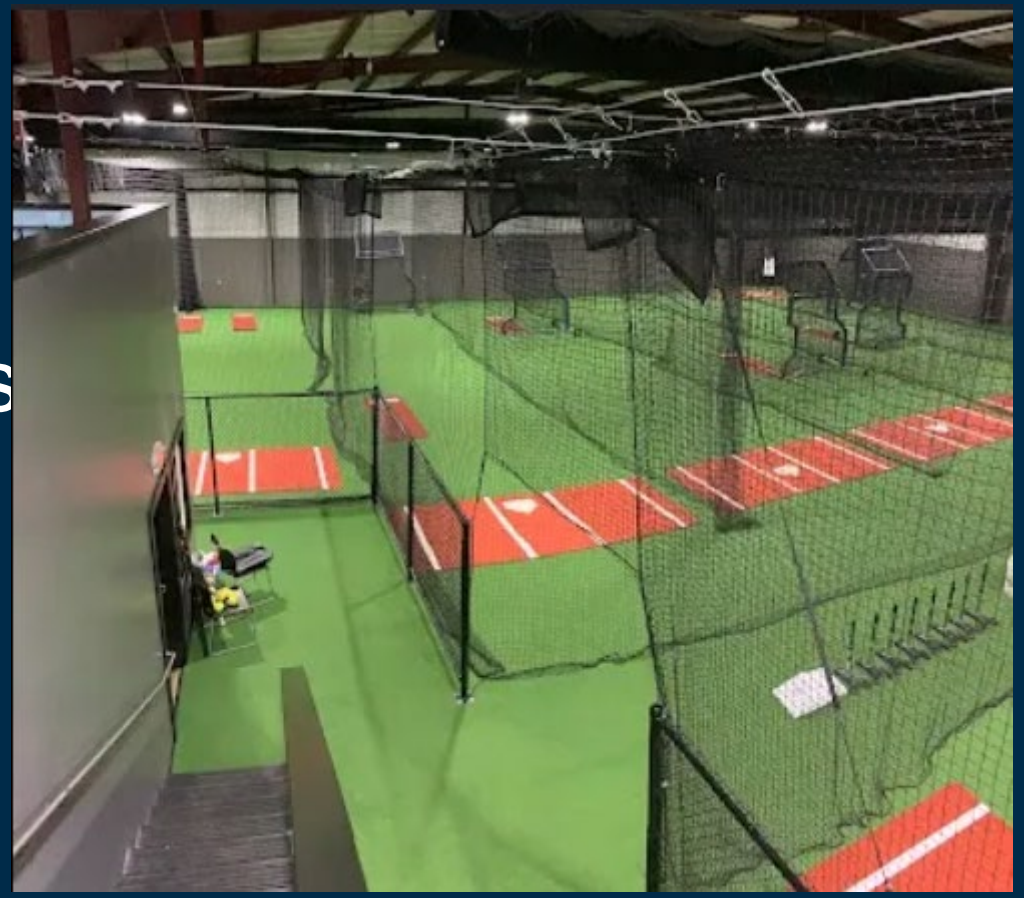
- 11 new definitions (Section 4.001) Including
  - Contractor Establishment
  - Direct-to-consumer E-commerce Fulfillment
  - Innovation Hub
  - Maker Space
  - Micro-Mobility Vehicle

WILSONVILLE
OREGON

Pattern Book

- Northwest Industrial Zone Pattern Book
  - Two track system
    - Track one – clear and objective standards
    - Track two – waiver track (DRB approval)

WILSONVILLE
OREGON



Changes to the Use Table

- Additions –
  - Direct-to-Consumer (e-commerce fulfillment)
  - Data Centers
  - Residential Hospital

WILSONVILLE
OREGON

Changes to the Use Table

- Removed –
  - Commercial Recreation
  - Self Storage Facilities

PC Work Session #3

- August 12, 2026
- Discuss the Final Draft of the Master Plan
- Review Technical infrastructure work for:
  - Stormwater
  - Sewer
  - Water

WILSONVILLE
OREGON

Questions for the Commission

1. Any questions regarding the proposed Development Code amendments as presented?
2. Are there any areas that need additional clarity?

WILSONVILLE
OREGON

WILSONVILLE
OREGON

Ryan Schera, Schnitzer Properties, LLC, introduced himself as a long-term industrial owner-operator serving manufacturing, wholesale, supplier and high-tech users. He compared a typical 40-acre flex industrial layout against the NWI Standards, noting that the NWI connectivity and layout standards would yield smaller buildings, thus limiting the range of employment users the City could attract; larger buildings were needed with the power that was available.(Slide 25)

- Schnitzer provides fully functional developments of different depth and sizes specifically to attract different sized employers for long-term leases with truck courts, parking located at every front entrance, and multiple front entries since the number of tenants and the space each would require was unknown; some need three bays, others ten.
  - Economically, smaller development meant lower assessed values, translating to only about half of the tax increment revenue flowing into the urban renewal district, money for public infrastructure, including parks, water, sewer, and transportation improvements the Basalt Creek area would need.
- Urban renewal growth scenario. If the NWI Code standards did not support development, landowners would simply hold the land and the tax revenue would be based under the existing County or farm zoning, leaving the City with minimal tax revenue. (Slide 26)
  - Schnitzer's site was currently just a nursery and Coffee Creek had small farms with houses. Without standards that attract developers to aggregate, then development would not occur and the assessed value and revenue would not come into the urban renewal district.
  - The chart showed a significant difference in projected urban renewal revenue between Flex Industrial and NWI development for both the Coffee Creek and future Basalt Creek areas.

ADMINISTRATIVE MATTERS

1. Consideration of the June 10, 2026 Planning Commission Minutes

The June 10, 2026 Planning Commission minutes were accepted as presented.

WORK SESSION

2. Wilsonville Industrial Land Readiness (Basalt Creek Master Plan) (Myers/Lorenzen)

Senior Planner Myers presented the changes to the Basalt Creek Master Plan (BCMP) via PowerPoint, reviewing proposed Development Code edits, including new definitions; the Northwest Industrial Pattern Book, formally the Coffee Creek Industrial Overlay District, featuring Track 1, clear and objective standards, and Track 2, allowing waivers with DRB approval; and additions and deletions to the allowed use table. He concluded noting a third work session would be held on August 12 to review the final Master Plan draft as well as the technical infrastructure work for water, sewer, and stormwater with input from the City's consultants.

Staff addressed questions as follows with Commissioner comments as noted:

- The maximum building sizes applied only to specific uses, like data centers and did not limit broader industrial uses, such as distribution warehouses.

- Existing contractor establishments would not be impacted by removing contractor establishments from the use table, unless perhaps, some change or development was proposed on the property.
  - The City's Economic Development Strategy continues to include actions intended to encourage transition of the area toward industrial uses in line with the City's vision, and additional City Code or policy changes could be considered in the future.
  - Washington County was currently assessing its code regarding contractor establishments, particularly in the FD-20 Holding Zone where many were frequently expanding and operating unpermitted. Through its code assessment project, the County might propose code amendments, so the City preferred to wait for the County's findings and potential outcomes before revisiting any modifications to the City's code.
  - Currently, the City's Code did not outright preclude contractor establishments. Some uses within the city limits operate very similarly to a contractor establishment but are held to the same design and use standards of any industrial development. The economic study found that new contractor establishments were not likely to annex into the city given the additional standards and City taxes to continue that use.
  - Existing contractor establishments would remain under FD-20 unless some type of development triggered them into the City's Development Code or annexation if they needed to connect to municipal services.
- Specifications for supporting streets and through connections were depicted within the regulating plan and NWI standards. Addressing and supporting street delineations are specific to Coffee Creek due to the Form-Based Code and were not a citywide street classification. Within the Coffee Creek area, addressing streets are held to a higher design standard, while connectivity spacing standards for typical city streets are fairly similar throughout the city, except in special areas like Town Center where the connectivity standards were higher to achieve smaller blocks for the highly pedestrian-oriented area.
  - Garden Acres was an addressing street for development along Garden Acres in Coffee Creek, and the Black Creek development, the site farthest north on the west side of Garden Acres, had constructed supporting streets on the north and south sides of its property.
  - The subject standards allow larger blocks due to the Industrial area and modeled on standards for 95th Avenue to support the same type of employment development which was supported by City Council and the Planning Commission.
  - Visual examples would be brought back for the Commission's review in August.
- Trucks were expected throughout the NWI District. The intent was to have 40-ft wide truck access from supporting streets and a 24-ft wide visitor/employee access on addressing streets where the building faced the street with parking in front. Although the Tracks in the Pattern Book added a layer of complexity to land use applications, applicants could request changes through the Track 2 process.
  - During the Basalt Creek master planning, the Planning Commission and City Council fully supported extending the Coffee Creek Design Overlay into Basalt Creek and now the NWI Area encompassed both areas. Design Overlay standards had not changed, but the proposed amendments would integrate the use table to make distinctions between the

High-Tech, Craft Industrial, Light Industrial, and West Railroad subdistricts while maintaining the use standards in Coffee Creek, a Regionally Significant Industrial Area (RSIA) brought in by Metro Title 4. Essentially, parts of the Code were being combined to ensure the Design Overlay applied to both Coffee Creek and Basalt Creek while maintaining use zoning correctly.
    - During the Coffee Creek Design Overlay assessment, a number of potential changes were discussed to make Track 1 more viable since no one had been able to utilize it.
    - The driveway access standards were also discussed significantly, and the truck access was modified from being a waiver request to requiring an outright 40-foot-wide access, which by Code was designed to come off a supporting street, rather than an addressing street, which had been requested during Citizen Input. However, neither the Planning Commission nor City Council supported changing the primary access on the addressing street where more multi-modal traffic and connectivity would be seen. Summaries of the Commission's and Council's discussions regarding the driveway access standards could be provided.
- The existing retaining wall standard required a 5-foot step back for every 48 inches of height and the proposed Code would increase that to every 60 inches of height. Delta Logistics on Day Road provided a real-world example of a significant retaining wall; however it required a waiver, so it did not follow the Code precisely. Staff could send a link from the City's Projects web page to provide details about the waiver.
    - Some Basalt Creek sites were flat while other sites, especially if adjacent to the Basalt Creek Wetland, could require 20-foot retaining walls, so the 5-foot offsets helped break up sheer walls and avoid angled wall faces. The standards varied depending on whether the wall could be seen from the primary addressing street.
    - Staff would research the historical origin of the 5-ft offset standard, whether it came from the Form-based Code adoption or a code provision that predated that Code. A Task Force and consultant team were involved in the Form-based Code's adoption, so industries were at the table, but industry standards change.
- The limited parking in front of the building was intended for customers, while employee parking was expected to be at the side or rear of the buildings.
    - Concern was expressed about employees parking in the same area as trucks.
- Staff described the extensive, multi-year outreach process to property owners and developers about the rezoning of the area and the proposed changes, including technical advisory committees, letters mailed to property owners, and site visits by the Economic Development Manager to discuss some of the changes with two property owners who responded. Developer interviews were also conducted during the original Coffee Creek Design Overlay District process, and the results were presented to the Planning Commission and City Council at that time.
- Concern was expressed that some Code items being addressed today may not be popular or appropriate in 10 to 20 years, potentially locking the City into having to revisit the Code. Was the City planning primarily for today's preferred industries or creating a flexible framework that could adapt to changing economic conditions to remain viable over the next 10 to 20 years?

- The Craft Industrial, High Tech, and Light Industrial subdistrict designations stemmed from the Basalt Creek Concept Plan and discussed with the Planning Commission, City Council, and with the City of Tualatin. The City's discussions included ways to maximize quality employment with the intent to avoid over-codifying the uses while preserving flexibility to allow for certain conditional uses where appropriate.
  - More than half of the Craft Industrial area was highly constrained by natural resources, making the development area fairly small, so the designation allowed additional industrial types or uses not typically allowed in an industrial area to encourage different uses that work with the land.
- Concern was expressed about the designated subdistricts being too specific and restrictive, making niche, craft-type uses unable to reliably sustain themselves and dooming part of the area to be perpetually vacant.
  - Commissioner comments noted that the Tualatin's residential development area was just north of the Craft Industrial zone, providing a customer base.
- The fee per waiver is $737 and the highest number requested on a single project was approximately five waivers, costing approximately $3,500. Following the Coffee Creek Design Overlay assessment, a Code change was made that would have eliminated one waiver requirement from all four Coffee Creek projects.
- The City did not track developers' costs associated with the waiver process, which would depend on each development, the timing of the development, materials and services, as well as the waivers being requested. The developments approved in Coffee Creek showed that development in the city was not cost prohibitive, though it might be to certain developers.
- Residential use had been a component of the Craft Industrial zone for some time due to the existing residential homes, and the definitions determined the type of residential allowed in the area. Residential would not be allowed as the only use on a property, unless superseded by a statutory requirement, and would have to be accessory to or in partnership with the business, meaning BIDUs and live/work units were the only residential types permitted.
  - Being industrially zoned, not all residential types had to be required; essentially, the City allowed certain residential units in conjunction with the employment use. The only exception regarded a Senate bill that allows affordable housing in industrially zoned properties that are publicly owned, so Staff did not anticipate state law superseding City Code at this time.
  - Some existing homes were already live/work, which was a use the City could continue supporting and seemed to be a good transitionary use between the City's industrial area and Tualatin's residential area to the north.
  - Given the size of the lots, it made sense to allow people to continue to grow their businesses and develop storefronts while still living on site. Council and the Planning Commission wanted that flexibility, especially in the transition area.
- Data centers were added as a new potential use due to the need and relevance, but the size would be limited. A data center was already operating in the city as a secondary use.

    - Commissioner comments suggested revisiting whether to include data centers, given their high energy consumption and low employee requirements. At a minimum, data centers should be secondary to the primary use to maximize value in the area.
        - Data centers raise everyone's energy costs..
- While data centers and a residential hospital had been discussed previously, additions were made to the Code to reflect those Planning Commission and City Council conversations; for example, further restrictions were made regarding data centers, limiting them in size and to a secondary use in the two higher use areas, the Coffee Creek and High-Tech Subdistricts. Originally, no maximum building size was included in the other Basalt Creek areas.
- "Secondary use" should be defined to distinguish between ordinary on-site business network/server infrastructure from a standalone data center operation.
- Data centers were previously only discussed a small bit with Council and the Planning Commission, namely around concerns regarding large data centers and the potential impact on utilities, which prompted the square footage limitations.
    - The secondary language was included in the Coffee Creek and High-Tech Subdistricts to help ensure high employment densities the City desired in those areas. Having only the size limitation in the Light Industrial and West Railroad areas seemed to meet the input received from the Planning Commission and City Council. However, Staff sought input about any additional changes or restrictions.
    - Data centers and e-commerce distribution and fulfillment centers did not exist and were not defined the last time uses were substantially updated the Industrial Code 20 years ago.
        - With these uses and definitions now explicitly addressed in the Code, developers meeting all the building standards could not include a data center, claiming it simply supported the industrial use.
        - Adding data centers to the use table was necessary so the City could address whether they were allowed and how they were addressed. The Commission could still recommend prohibiting data centers entirely or making them only a secondary use across the entire NWI District.
- Commissioner comments suggested also clearly defining data centers to avoid restricting tech companies, while not allowing a use that could potentially drain the grid and not provide the employment opportunities desired in the area.
    - Standalone data centers did not make sense if the goal was to maximize employment. Retaining commercial recreation in the use table would be better than allowing data centers given the trade-offs between community benefit, employment, and environmental impacts.
- Commissioners supported looking at options to further limit data centers in the NWI District.
- Information was requested on the rationale for requiring multimodal street design standards along heavily trafficked industrial routes, the benefits of such an infrastructure investment, and how such design requirements had played out in other areas of the city.

- Since the three-minute limit prevented all the material from being presented during Citizen Input, knowing more about the discussions with the landowners and any preliminary plans they might have discussed or submitted would be helpful.

Senior Planner Myers agreed to do further research and return in August with more options regarding data centers and clearer definitions for "secondary use" and “data centers”. He confirmed the City’s transportation and other consultants would attend the August Planning Commission meeting, as well as Economic Development Manager Lorenzen, who could summarize recent conversations with NWI District landowners.

- He noted the City had met with Mr. Schera and the Schnitzer team and discussed their desires for changes in the Code, which were consistent to the input received during Citizen Input. Mr. Schera had also provided detailed information on what was being requested, and Staff recognized the additional costs involved to do so.
- The City was doing its best to thread the needle between the needs of all developers and what the community, Planning Commission, and City Council has requested over the last 12 to 14 years of the project’s timeline.

3. Housing Statutory Compliance, Part 2 (Rybold)

Senior Planner Rybold noted that Part 1 took effect July 1, 2026, and that Staff had been working to get the City’s internal processes updated accordingly. Part 2 would address statutory requirements primarily from the 2025 and 2026 legislative sessions, as well as some additional minor carryover items regarding statutory requirements from prior years.

Heather Austin, 3J Consulting, presented Part 2 of the Housing Statutory Compliance via PowerPoint, noting the packet included a matrix identifying each proposed Code update, along with the corresponding legislation required Code cleanup, or the best practice supporting the change. The project team sought the Commission’s input on how to engage the public and decision makers for this round of proposed Code updates. The primary focus of Part 2 was to bring the Code into compliance with House Bill 2138, but also to address other legislative updates for compliance with all State legislation and to engage decision makers and the public specifically on tree removal and preservation standards regarding residential development. She reviewed the project schedule, the required Code updates related to HB 2138 and other legislation, and considerations regarding tree removal standards. (Slides 4-8)

Senior Planner Rybold reviewed questions for the Commission’s consideration. (Slide 9)

Commissioner questions were addressed by the project team as follows:

- **Ms. Austin** understood State statute only addressed removing relational/familial language from the definition of household, citing HB 2583 from 2022 which prohibits local governments from establishing or enforcing occupancy limits based on familial or non-familial relationships among occupants. The number of occupants was not the concern.

PLANNING COMMISSION

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

ISSUE BEFORE COMMISSION:

Staff seeks feedback from the Planning Commission regarding the Draft Basalt Creek Master Plan

BACKGROUND

In 2018, the City of Wilsonville and City of Tualatin jointly adopted the Basalt Creek Concept Plan (BCCP), which established a long-term vision and conceptual framework for future urbanization of the Basalt Creek Planning Area (BCPA). The BCCP identified preferred land uses, transportation and infrastructure systems, natural resource considerations, and implementation strategies intended to guide future development within the area.

Since adoption of the BCCP, the City of Wilsonville has completed several key implementation actions, including amendments to the Urban Planning Area Agreement, Comprehensive Plan, and Transportation System Plan to support coordinated future development.

While the BCCP was prepared jointly by Wilsonville and Tualatin, the Basalt Creek Master Plan (BCMP) focuses specifically on Wilsonville's portion of the BCPA. The BCMP builds upon the vision established in the BCCP while providing a more refined and updated framework informed by additional technical analysis, infrastructure planning, environmental review, and stakeholder coordination. Stated differently, the BCCP was a joint planning effort, high level, and conceptual in nature, while the BCMP is the document that will guide and regulate actual development exclusively in the City of Wilsonville. The BCMP is by Wilsonville, for Wilsonville.

EXECUTIVE SUMMARY:

This Basalt Creek Master Plan (Attachment 1) represents the next step in advancing the BCPA from a long-range concept toward a long-term framework for future employment and industrial development that can help meet Wilsonville's economic development goals. As one of the City's last major industrial growth areas within the Urban Growth Boundary, the BCPA plays an important role in expanding Wilsonville's supply of land for future manufacturing, logistics, and employment uses.

The Master Plan further refines the 2018 BCCP by identifying more detailed land use patterns, infrastructure needs, transportation improvements, funding strategies, and implementing policies intended to guide development over the next 10–20 years.

While the BCMP represents another important step toward realizing Wilsonville's long-term vision for industrial and employment growth within the BCPA, future development will depend on the continued alignment of infrastructure funding, market demand, environmental permitting, property owner participation, utility coordination, and regional transportation improvements over time. Building upon the Basalt Creek Transportation Refinement Plan, the BCMP incorporates a detailed transportation analysis prepared by DKS Associates to evaluate future roadway, freight, bicycle, pedestrian, and transit needs associated with planned

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

urbanization of the area (Attachment 2). The DKS analysis provides the technical foundation for identifying necessary transportation improvements, evaluating system performance, supporting compliance with Oregon Transportation Planning Rule requirements, and ensuring that future development can be accommodated in a safe, efficient, and multimodal manner.

The BCMP also builds upon the City's recently adopted Economic Opportunities Analysis (EOA) and Economic Development Strategy (EDS), which were previously reviewed by the Planning Commission during a work session on November 12, 2025, and a public hearing on February 11, 2026. Those planning efforts identified Basalt Creek as one of Wilsonville's most significant long-term employment growth areas and established the economic development priorities that help guide the BCMP. Consistent with the findings and recommendations of the EOA and EDS, amendments are proposed to the City's Comprehensive Plan (Attachment 3) to reflect updated conditions, economic development priorities, and policy objectives.

DISCUSSION QUESTIONS:

Staff is seeking Planning Commission (PC) feedback on the following questions:

1. What questions does the Commission have on the draft materials?
2. Does the draft Basalt Creek Master Plan reflect the long-term vision for the area and the broader economic development goals of the City as previously discussed with the Planning Commission and City Council?
3. Do the draft Comprehensive Plan Amendments address the intended policy outcomes of the Commission?
4. Are there any concerns the PC would like to address as the project team refines the draft Basalt Creek Master Plan for the next work session?

EXPECTED RESULTS:

Feedback from the Planning Commission during this work session will help guide refinement of the final draft of the BCMP.

TIMELINE:

Next steps in the project include a second work session with the Planning Commission on July 8, 2026, and a public hearing on September 9, 2026. We will also hold a work session with City Council on August 3, 2026, and public hearing on October 5, 2026 (first reading) and October 19, 2026 (second reading).

CURRENT YEAR BUDGET IMPACTS:

Work on the Basalt Creek Master Plan is funded through a Community Planning and Development Grant from Metro and the Planning Division budget's previously authorized project funding. Additional analysis related to water and stormwater infrastructure will be conducted utilizing the City's on-call consultant contracts using a combination of Metro grant funds, Planning Division professional services funds, and CIP 3000 funds.

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

COMMUNITY INVOLVEMENT PROCESS:
The Basalt Creek Master Plan project was preceded by the preparation of an Economic Opportunities Analysis (EOA) and Economic Development Strategy (EDS) to evaluate whether Wilsonville has sufficient employment land capacity to support anticipated business and job growth between 2026 and 2046. The project also identified strategies intended to support long-term economic growth, infrastructure planning, and employment opportunities aligned with community priorities that would inform the BCMP. To help inform the analysis and recommendations, the City conducted a public engagement process throughout 2025 and 2026 that included Technical Advisory Committee (TAC) meetings, stakeholder interviews, property owner outreach, Planning Commission work sessions and public hearings, and City Council work sessions and hearings.

The TAC included representatives from the City of Wilsonville, Business Oregon, Greater Portland Inc. (GPI), Metro, and the Wilsonville Chamber of Commerce. Stakeholder interviews included representatives from small businesses, manufacturing, redevelopment interests, and business-support organizations. Key themes identified through engagement included workforce development challenges, land and space constraints, high development and operating costs, demand for additional local-serving retail and services, and the importance of maintaining a proactive and collaborative City-business relationship. The City also conducted outreach to property owners within the West Railroad area of the Basalt Creek Planning Area regarding future development opportunities, Comprehensive Plan amendments, and proposed Development Code changes.

Overall, the BCMP engagement process provided numerous opportunities for coordination, stakeholder input, and public review. Feedback received from agencies, businesses, developers, property owners, and community members helped inform the City's understanding of local economic conditions, infrastructure needs, and long-term employment opportunities. The engagement process ultimately supported development of policies and implementation strategies intended to promote economic competitiveness, employment growth, and high-quality industrial and employment districts consistent with the long-term vision for Wilsonville and the Basalt Creek Planning Area.

POTENTIAL IMPACTS OR BENEFIT TO THE COMMUNITY:
The Basalt Creek Master Plan provides the Wilsonville community with a long-term framework for coordinated economic growth, infrastructure investment, and land use planning. By identifying appropriate locations for industrial and employment uses, a master plan helps ensure that transportation systems, utilities, stormwater infrastructure, and public services are designed efficiently and strategically rather than through piecemeal development. The BCMP will provide future job creation, strengthen the local tax base, diversify employment opportunities, and improve economic resilience by attracting a range of businesses such as advanced manufacturing, logistics, research and development, and technology industries. When thoughtfully designed, industrial employment districts can incorporate high-quality site design,

multimodal transportation networks, open spaces, and environmental protections that improve functionality and compatibility with surrounding areas.

The BCMP establishes the policies, land use framework, transportation network, infrastructure strategy, development standards, and environmental protections necessary to guide future urbanization of the Basalt Creek area. Together, these elements provide a coordinated and predictable approach to development that balances economic opportunity with infrastructure capacity, natural resource stewardship, and long-term community objectives.

ALTERNATIVES:
As the concept plan was refined, alternative approaches to land use configuration, transportation access, zoning, and infrastructure planning were considered in collaboration with the Planning Commission and City Council. Additional refinements to the BCMP and implementing policies may also be considered.

1 INTRODUCTION

Introduction

In 2018, the City of Wilsonville and City of Tualatin jointly adopted the Basalt Creek Concept Plan (BCCP), which established a long-term vision and conceptual framework for future urbanization of the Basalt Creek Planning Area (BCPA). The BCCP identified preferred land uses, transportation and infrastructure systems, natural resource considerations, and implementation strategies intended to guide future development within the area.

Since adoption of the BCCP, the City of Wilsonville has completed several key implementation actions, including amendments to the Urban Planning Area Agreement, Comprehensive Plan, and Transportation System Plan to support coordinated future development.

While the BCCP was prepared jointly by Wilsonville and Tualatin, this Basalt Creek Master Plan (BCMP) focuses specifically on Wilsonville's portion of the BCPA. The BCMP builds upon the vision established in the BCCP while providing a more refined and updated framework informed by additional technical analysis, infrastructure planning, environmental review, market conditions, and stakeholder coordination completed since 2018.

Supporting Wilsonville's Long-Term Employment Growth

This Master Plan represents the next step in advancing the BCPA from a long-range concept toward a long-term framework for future employment and industrial development that can help meet Wilsonville's economic development goals. As one of the City's last major industrial growth areas within the Urban Growth Boundary, the BCPA plays an important role in expanding Wilsonville's supply of land for future manufacturing, logistics, warehousing, and employment uses.

The Master Plan further refines the 2018 BCCP by identifying more detailed land use patterns, infrastructure needs, transportation improvements, funding strategies, and implementing policies intended to guide development over the next 10–20 years.

While the BCMP represents another important step toward realizing Wilsonville's long-term vision for industrial and employment growth within the BCPA, future development will depend on the continued alignment of infrastructure funding, market demand, environmental permitting, property owner participation, utility coordination, and regional transportation improvements over time.

WHAT IS A MASTER PLAN?

Master Planning identifies future land use patterns and development areas, along with parks, open spaces, streets, trails, and neighborhood amenities anticipated over the next 10–20 years. Master Planning also establishes implementing policies and regulatory strategies, and identifies water, sewer, stormwater, and transportation infrastructure needs and potential funding sources.

While Master Planning outlines the overall vision and framework for future development, it does not constitute approval for construction of specific uses or projects. Final City approvals occur as property owners seek annexation into the city and as proposed development applications and building permits are reviewed for compliance with applicable standards and regulations.

As detailed development plans are prepared and reviewed, some variation from the specific illustrations in the Master Plan may occur, while still remaining substantially consistent with the Plan and its implementing standards and regulations.

Relationship to Other City Planning Efforts

As an area-specific implementation tool of the City's Comprehensive Plan, the BCMP translates broader citywide goals and policies into more detailed strategies tailored to the BCPA. The Master Plan also coordinates with related City planning efforts, including economic development, transportation, utility, and capital improvement planning.

While the BCMP establishes the overall framework for future development, it does not approve specific construction projects or development proposals. Future development will remain subject to additional City review processes, implementing standards, and applicable development regulations to ensure consistency with the Master Plan.

ECONOMIC DEVELOPMENT ALIGNMENT

The BCMP directly supports the City of Wilsonville's recently adopted Economic Opportunities Analysis (EOA) (see Appendix H) and Economic Development Strategy (EDS), both of which identify Basalt Creek as one of the City's most important long-term employment growth areas. The EOA concludes that Basalt Creek and Coffee Creek together form a critical component of the Portland region's southern industrial land supply and will play an essential role in accommodating future manufacturing, logistics, warehousing, and traded-sector employment growth over the next 20 years.

The BCMP advances these findings by translating the broader economic and land use direction established in the EOA into a more detailed framework for land use, transportation, infrastructure, environmental stewardship, and implementation within the Basalt Creek Planning Area.

Responding to Development Constraints

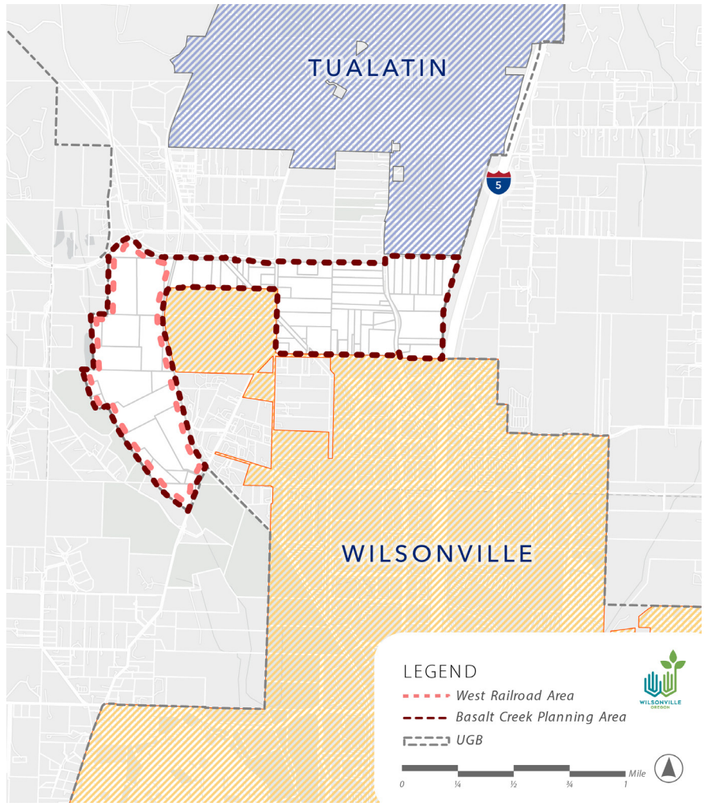
The EOA and EDS both recognize that much of Wilsonville's remaining industrial land supply is constrained by fragmented ownership patterns, limited urban infrastructure, transportation improvements, and site readiness challenges. The BCMP responds directly to these issues by identifying infrastructure concepts, transportation networks, funding strategies, zoning and development standards, and implementation tools intended to help transition Basalt Creek from a long-range concept area into a development-ready employment district over time.

In doing so, the BCMP supports the EDS focus on improving industrial site readiness, coordinating public investment, and creating conditions that attract higher-value employment uses and private investment consistent with Wilsonville's long-term economic development objectives.

Coordinating Planning and Implementation

The BCMP also complements the EDS goal of strengthening Wilsonville's position as a regional employment center while supporting broader community objectives related to livability, transportation, natural resource protection, and urban design.

Together, the EOA, EDS, and BCMP provide a coordinated planning framework that aligns economic development priorities with land use planning and infrastructure investment.



The EOA establishes the technical foundation for projected employment growth and land need, the EDS identifies strategic actions and implementation priorities, and the BCMP provides the area-specific planning and regulatory framework needed to guide future urbanization and development within Basalt Creek in a manner consistent with the City's Comprehensive Plan.

Basalt Creek Planning Area

In 2004, Metro identified the Basalt Creek Planning Area (BCPA), consisting of 847 acres located in Washington County between southern Tualatin and northern Wilsonville, as a good candidate for industrial development because it is near I-5, adjacent to Wilsonville's industrial area to the south, and contains large, flat sites suitable for industrial users.

Subsequently, Metro passed an ordinance annexing land, including the BCPA, into the existing Urban Growth Boundary (UGB) to ensure a sufficient regional supply of land for employment growth over the next twenty years. Currently, the Wilsonville portion of the BCPA falls under Washington County's Future Development 20-Acre District (FD-20) zoning, which allows a variety of low-intensity uses.

Figure 1. Regional Context

Basalt Creek Concept Plan

BACKGROUND

Areas brought into the UGB are required to have a land use and transportation concept plan before urban development can occur. Therefore, after a lengthy joint planning process, the Cities of Tualatin and Wilsonville adopted the Basalt Creek Concept Plan (BCCP or Concept Plan) in 2018, to meet this requirement and provide a roadmap for development of the area that is consistent with state, regional, and local land use planning laws. The BCCP:

- Established a vision for urbanization of the Basalt Creek Planning Area to meet local and regional goals.
- Coordinated future land use, transportation and infrastructure investments between Tualatin, Wilsonville, and Washington County.
- Established a new jurisdictional boundary between Tualatin and Wilsonville to determine which parts of the Planning Area could be annexed into and served by each city.
- Identified preferred land uses across the area.
- Recommended high-level designs for transportation and infrastructure systems to support future development consistent with local, regional and state goals.
- Set specific action items and implementation measures.

2019 GUIDING PRINCIPLES

Established by the Joint Council, these principles helped guide the BCCP. While conditions and opportunities have evolved since 2019, the principles continue to inform the long-term direction for growth and development within Basalt Creek.

1. Maintain and complement the Cities' unique identities

2. Capitalize on the area's unique assets and natural location

3. Explore creative approaches to integrate jobs and housing

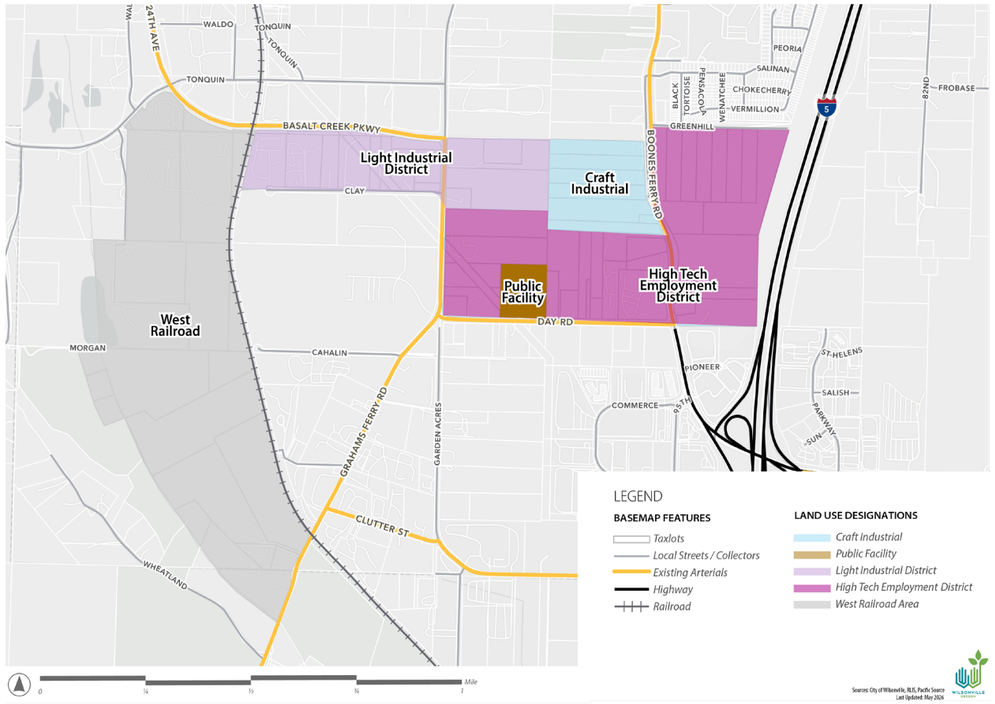
4. Create a uniquely attractive business community unmatched in the metropolitan region

5. Ensure appropriate transitions between land uses

6. Meet regional responsibility for jobs and housing

7. Design cohesive and efficient transportation and utility systems

8. Maximize assessed property value



9. Incorporate natural resource areas and provide recreational opportunities as community amenities and assets

JURISDICTIONAL BOUNDARY

During the Concept Plan process, the BCPA was roughly divided between Tualatin and Wilsonville, with the jurisdictional boundary defined by the Basalt Creek Parkway, which runs in an east-west direction through the center of the Planning Area. Wilsonville's portion consists of 453 acres on the south side of the Parkway.

It includes an eastern portion that was referred to as "Basalt Creek" and a western portion that was known as "West Railroad", as shown in the figure below. For the remainder of this Master Plan, references to the BCPA in Wilsonville refer to this combined area within Wilsonville's UGB.

Figure 2. Basalt Creek Concept Plan Map with Land Use Designations

↳ **The land use patterns identified in the 2018 BCCP responded to the area's setting and existing conditions. Because the Planning Area is well suited for industrial and employment uses, much of the BCPA was designated for employment land uses. However, because West Railroad was considered to have significantly lower development potential than the remainder of the BCPA, future land uses for the area were not identified in the BCCP.**

From Concept Plan to Master Plan

The BCCP established a vision for urbanization of the BCPA to meet local and regional goals, identified preferred land uses across the area, recommended high-level designs for transportation and infrastructure systems to support future development consistent with local, regional and state goals, and set specific action items and implementation measures. Following adoption of the BCCP, the City completed several early implementation actions to establish a policy and planning framework for future development in the area. These actions included updating the Urban Planning Area Agreement with Washington County, amending the Comprehensive Plan, and incorporating key transportation projects into the Transportation System Plan.

EARLY IMPLEMENTATION ACTIONS COMPLETED

Following adoption of the BCCP, the City completed several foundational actions to support future planning and development within the Planning Area.

Action Item 1: Amend Urban Planning Area Agreements

The City updated the Urban Planning Area Agreement with Washington County to formally recognize Wilsonville's planning authority within the BCPA and support coordinated future planning efforts.

Action Item 2: Amend Comprehensive Plan

The City amended the Comprehensive Plan and Transportation System Plan to incorporate policies, design objectives, and transportation projects intended to guide future development, infrastructure planning, and environmental stewardship within Basalt Creek and West Railroad.

Today, Wilsonville is working to advance the BCPA beyond the Concept Plan to a development-ready status through the adoption of this Master Plan. The Master Plan is the next step in refining and implementing the BCCP to guide development in the Planning Area over the next 10–20 years.

This Master Plan process implements Action Items 3, 5, and 6 of the BCCP including:

- **Action Item 3. Assure zoning is compatible with future land use.** This action evaluates the Wilsonville Development Code and zoning standards to ensure they support the types of industrial, employment, and mixed-use development envisioned for the BCPA. It also considers how special design elements from the BCCP, including potential expansion of the Coffee Creek Industrial Design Overlay District and development standards for the Craft Industrial district, could be applied within the Planning Area.
- **Action Item 5. Consider capital improvements to spur development.** This action evaluates infrastructure availability and identifies opportunities for strategic public investment needed to support future development in the BCPA. Potential implementation tools may include utility and transportation infrastructure financing, reimbursement mechanisms, local improvement districts, and other partnership approaches intended to help facilitate long-term industrial and employment growth.
- **Action Item 6. Master planning processes.** This action further refines many of the concepts introduced in the BCCP by evaluating development feasibility, infrastructure needs, transportation access, environmental constraints, and implementation strategies. Preparation of this Master Plan, along with related Code amendments and infrastructure funding planning, represents a key component of this effort.

The BCMP identifies general types and locations of uses in the BCPA, as well as implementing policies and regulatory strategies, and utility and infrastructure needs and funding sources. However, it is not an approval for construction of the identified uses.

Following or concurrently with Master Planning, the City will develop a variety of detailed standards and rules that development must follow to remain consistent with the BCMP. Final City approval of private development within the BCPA comes as property owners request annexation and the City reviews proposed development plans and building permits against the implementing standards and rules. Some variation from specific illustrations in the Master Plan may occur as detailed development plans are approved, while still remaining substantially consistent with the BCMP and with the implementing standards and rules.

2

THE PLANNING PROCESS

The Planning Process

Chapter Overview and Planning Context

This chapter describes the planning process, technical analysis, and outreach that informed the Basalt Creek Master Plan (BCMP). It builds upon the guiding principles established through the Basalt Creek Concept Plan (BCCP) process and subsequent Comprehensive Plan amendments and Areas of Special Concern that continue to shape the long-term vision for the Basalt Creek Planning Area (BCPA).

The BCMP was informed by technical studies, infrastructure and transportation analysis, environmental review, market analysis, stakeholder outreach, and work sessions with the Wilsonville Planning Commission and City Council completed since adoption of the BCCP.

Implementation of the long-term vision for the BCPA will require significant coordination, infrastructure investment, and phased redevelopment over time. While Wilsonville retains a limited supply of vacant industrial land, much of the BCPA, particularly the West Railroad area, is not yet development-ready due to infrastructure constraints, limited transportation access, environmental considerations, and fragmented property ownership.

To help address these challenges, the City completed additional planning and technical analysis to refine land use concepts, transportation connections, infrastructure needs, and development considerations within West Railroad and the broader BCPA. These efforts helped further define the Master Plan while recognizing that long-term implementation will depend on market conditions, infrastructure funding, environmental permitting, property owner participation, and regional coordination over time.

Concepts that Shaped the Master Plan

The BCMP builds on the Guiding Principles established by the Joint Council during preparation of the 2019 Basalt Creek Concept Plan. These principles continue to provide the foundation for planning within the BCPA.

For the BCMP, the original principles were refined to reflect updated analysis, current planning priorities, and Wilsonville's focus within the Planning Area. The adapted principles shown on the next page guided development of the Master Plan while carrying forward the long-term vision established through the Concept Plan.

Guiding Principles

The Guiding Principles for the BCMP, which were adapted from the Basalt Creek Concept Plan process, continue to represent the interests and goals for the Planning Area during this Master Plan process. The Guiding Principles are a reflection of the updated vision and objectives for the BCMP:

1. **Meet regional responsibility for jobs and housing**
2. **Maximize assessed property value**
3. **Capitalize on the area's unique assets and natural location**
4. **Explore creative approaches to integrate jobs and housing in the Craft Industrial land use type**
5. **Ensure appropriate transitions between land uses**
6. **Design cohesive and efficient transportation and utility systems**
7. **Maintain and complement Wilsonville's unique identity**
8. **Create a uniquely attractive business community unmatched in the metropolitan region**
9. **Incorporate natural resource areas and provide recreational opportunities as community amenities and assets**

COMPREHENSIVE PLAN AMENDMENTS

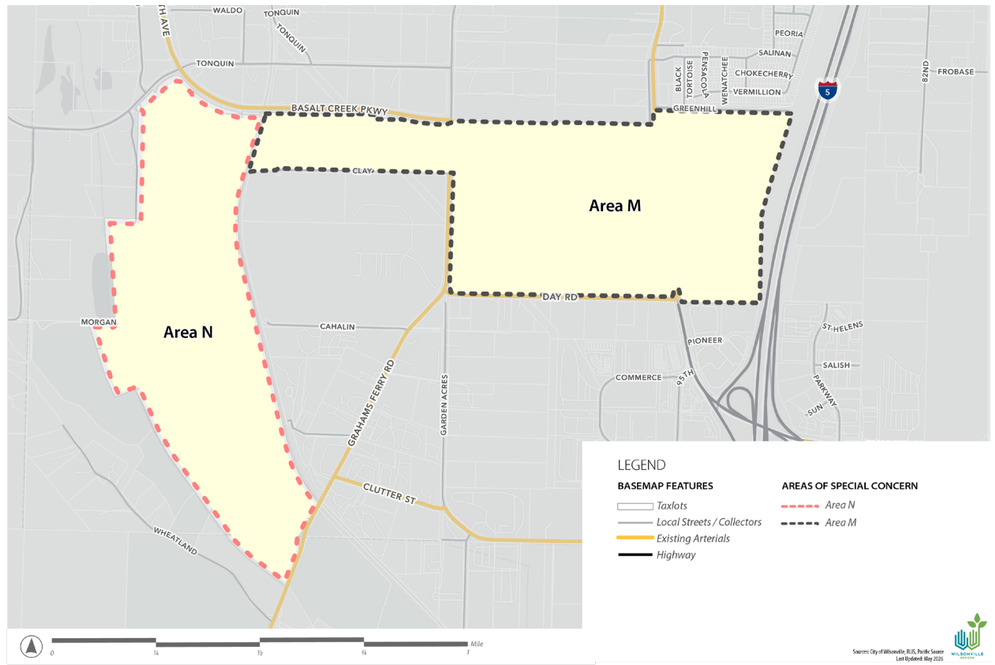
In 2019, the City Council adopted amendments to the City's Comprehensive Plan to help guide future development within the BCPA (see Ordinance No. 834 in Appendix A). These amendments added new policies and Areas of Special Concern related to Basalt Creek and West Railroad to provide more detailed direction for future planning and development within the area.

Implementation Measures

The City's Comprehensive Plan includes policies and implementation measures intended to guide industrial development throughout Wilsonville. The amendments adopted in 2019 and further refined in 2026 specifically focused on supporting the types of employment and industrial development envisioned for the BCPA, including advanced manufacturing, craft industrial businesses, higher-density employment areas, and integrated open space and trail amenities. These implementation measures help inform this Master Plan and future development standards for the area:

- **Implementation Measure 4.1.3.j.** All industrial areas will be developed in a manner consistent with industrial planned developments in Wilsonville. Non-industrial uses may be allowed within a Planned Development Industrial Zone, provided that those non-industrial uses do not limit the industrial development potential of the area.
- **Implementation Measure 4.1.3.k.** Encourage high-growth employment industries in which the city is already competitive, including advanced manufacturing, corporate and professional services, and health care and medical-related fields.
- **Implementation Measure 4.1.3.l.** Encourage growth in emerging and innovative industrial business types, including craft industrial uses, maker spaces, artisan manufacturing, breweries, distilleries, bicycle manufacturing, and similar industries that contribute to a diverse employment base. Designated craft industrial areas may incorporate smaller-scale supporting commercial uses and limited live/work opportunities where compatible with surrounding employment uses.
- **Implementation Measure 4.1.3.m.** Encourage new industrial development that contributes to employment districts with a high density of jobs and a range of employment opportunities.
- **Implementation Measure 4.1.3.n.** Encourage development that incorporates active urban green spaces, such as trails, linear parks, and pocket parks, and use vegetation for buffering where possible.

Areas of Special Concern



The Comprehensive Plan includes several Areas of Special Concern where additional policy direction is needed beyond the general guidance provided elsewhere in the Plan (Figure 3). There are two within the BCPA: Area of Special Concern M (Basalt Creek) and Area of Special Concern N (West Railroad). These areas were created to provide interim policy direction and identify key planning considerations pending more detailed planning for the area.

AREAS OF SPECIAL CONCERN

The Wilsonville Comprehensive Plan identifies "Areas of Special Concern" where additional planning direction is needed to address unique site conditions, development challenges, or community goals. Each area includes specific objectives and considerations that help guide future planning, infrastructure investment, zoning, and development review.

For the BCPA, the City established Areas of Special Concern for both Basalt Creek and West Railroad to provide additional guidance related to industrial development, transportation, infrastructure, natural resources, and regional connectivity.

Figure 3. Comprehensive Plan Areas of Special Concern in the BCPA

The BCMP represents the next phase of that planning effort. As a supporting document to the Comprehensive Plan, the Master Plan provides more detailed guidance regarding land use, transportation, infrastructure, natural resources, and implementation within the BCPA. The BCMP serves as the primary planning framework for the area, carrying forward and refining the intent of the AOSCs through more detailed policies, recommendations, and implementation strategies.

Area of Special Concern M includes the focus of the BCCP. It includes four Design Objectives that provide policy guidance:

1. **Consider adoption of a form-based code**, similar to that adopted in the Coffee Creek Industrial Area, for new industrial development located in Basalt Creek. A form-based code in Basalt Creek would guide the development of a well-designed and uniquely attractive business community, while providing flexibility for development.
2. **Protect key natural resources and sensitive areas while making recreational opportunities accessible** by integrating the new parkland, open spaces, natural areas and trails in Basalt Creek into existing regional networks. The area has distinctive natural features, particularly its namesake—Basalt Creek—and the surrounding wetlands habitat.
3. **Locate north to south trails near the Basalt Creek Canyon and provide bicycle connections** that would connect to other cities and trail systems, serving as an asset for both residents and employees in the area.
4. **Provide strong transit access** to support employment within Basalt Creek. Integrate transit access with the bike, pedestrian, and trail services at key access points along Grahams Ferry Road, Boones Ferry Road, Day Road, SMART Central, and the Coffee Creek Correctional Facility.

Area of Special Concern N focuses on the West Railroad portion of the BCPA, which at the time of the BCCP was recognized as one of the most constrained areas within the BCPA. The area is characterized by significant natural and physical constraints, including wetlands habitat, steep slopes, limited access, and fragmented property ownership, all of which limited its assumed near-term development potential. It is also located outside the city limits but within the Urban Growth Boundary (UGB), reinforcing its status as a long-term opportunity area. The area was also identified for its potential value in resource conservation and future public access to natural areas, particularly given its proximity to the Coffee Lake Creek wetlands.

Since adoption of the BCCP, the City has undertaken additional planning work to better understand West Railroad's opportunities and constraints and to refine a long-term vision for the area.

Information Gathering

To inform this Master Plan, the City undertook several studies that update and refine various aspects of the BCCP. A more detailed description of the planning for the West Railroad Area is described on the following page. Work products include the following:

- The **Wilsonville Industrial Land Readiness Phase 1 Report for Basalt Creek** that evaluated market conditions, development capacity, and site development potential through several interconnected analyses (see Appendix B), including the following:
  - An **Economic Inventory and Land Use Analysis** that evaluates current market trends and identifies industries suitable for the area.
  - An updated **Buildable Lands Inventory** (BLI) that reflects recent land developments, adjusted constraints, and revised capacity estimates.
  - A **Site Suitability Analysis** that evaluates three key opportunity sites for their potential to support target industries based on attributes like size, location, and constraints.
  - An **Analysis of Future Development of Contractor Establishments in the BCPA** given prevailing market conditions.
- A **Transportation System Plan (TSP) Evaluation** to review the current list of TSP projects related to the BCPA and ensure that the land use assumptions and identified transportation projects are still applicable, as well as to identify any new transportation improvement projects that might be needed to further support the current development plan for the BCPA (Appendix C).
- A **Transportation Analysis for the Basalt Creek Master Plan** to evaluate the impacts of full development of the West Railroad area on the surrounding street network (Appendix D).
- An updated **Local Street Concept Map** that identifies likely connection points and alignments for future local streets in the BCPA (Appendix E).
- The **Grahams Ferry Road Freight Traffic Accommodation Evaluation** to analyze the SW Grahams Ferry Road undercrossing of the PNWR railroad, develop conceptual roadway alignments, and identify planning-level cost estimates for arterial upgrades, widening, and freight clearance improvements (Appendix F).
- An updated **Natural Resources Inventory** of wetlands, upland tree groves, and riparian areas within the BCPA in compliance with Statewide Planning Goal 5 to identify resources to include in the Significant Resource Overlay Zone (SROZ) (Appendix G).
- A citywide **Economic Opportunities Analysis** that included an evaluation of Basalt Creek (Appendix H).
- A **West Railroad Concept Plan** to refine the long-term land use vision, identify potential employment and industrial uses, and assess transportation and infrastructure needs.

ADDITIONAL BULLETS ON THE FINAL INFRASTRUCTURE ANALYSIS REPORTS RELATED TO WATER, SANITARY SEWER, AND STORMWATER WILL BE ADDED HERE.

Planning for West Railroad

As part of preparation of the Basalt Creek Master Plan, the City undertook additional planning work focused on the West Railroad area to better understand its long-term development potential and implementation challenges. Although the 2018 Basalt Creek Concept Plan identified West Railroad as constrained by environmental conditions, limited transportation access, fragmented ownership, and lack of urban services, the area remained one of Wilsonville's last large industrial growth opportunities within the Urban Growth Boundary.

The West Railroad planning work has resulted in an initial framework envisioning a mix of employment-oriented and craft industrial uses supported by future regional access and utility infrastructure. The City recognizes that development of West Railroad is a long-term effort dependent on resolving complex environmental, access, infrastructure, and market challenges, as well as future coordination among multiple stakeholders.

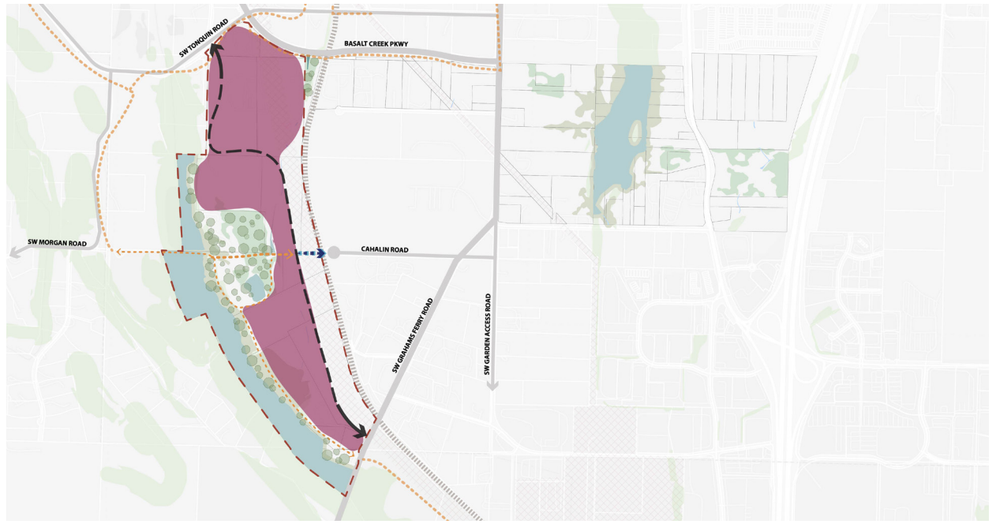
CONCEPT PLANNING AND VISION DEVELOPMENT

In 2025, the City initiated a focused planning and urban design effort for West Railroad through the Wilsonville Industrial Land Readiness (WILR) process. This work included analysis of existing conditions, environmental constraints, infrastructure availability, market opportunities, and transportation access, along with preparation of several alternative land use and urban design concepts for the area. The concepts explored varying approaches to balancing employment development, industrial uses, natural resource preservation, recreation opportunities, and long-term flexibility.

The planning process included a joint Planning Commission and City Council work session in October 2025 where existing conditions and alternative concepts were reviewed and discussed. The discussion generally favored a preferred concept that combined industrial employment opportunities with integration of remaining natural features. Participants emphasized the importance of balancing job creation, transportation access, freight mobility, environmental stewardship, and long-term economic opportunity in shaping the future of the area.

Additional Planning Commission and City Council work sessions were held in April 2026 to review and refine the preferred concept (Figure 4) for West Railroad as part of the broader Master Plan process.

ZONING AND DEVELOPMENT CODE COORDINATION



In parallel with the concept planning effort, City staff conducted several work sessions focused on evaluating appropriate zoning and development standards for West Railroad. This work considered how the City's existing industrial zoning districts and development code could support the long-term vision for the area, including potential updates needed to address industrial development form, transportation access, environmental features, and transitions between uses.

Because the West Railroad area is currently outside Wilsonville city limits, City zoning and development standards do not yet apply to the area. However, the Master Plan establishes a framework intended to guide future zoning and development standards should properties annex into the City over time.

TECHNICAL ANALYSIS AND INFRASTRUCTURE PLANNING

In tandem with development of the preferred concept, the City worked with consultants to complete additional transportation and utility analysis related to long-term access, freight mobility, infrastructure feasibility, and service planning needed to support future development in the area. This work helped refine implementation considerations and better understand the scale of investment, coordination, and phased improvements that may be required for future urbanization of West Railroad.

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Stakeholder Interviews and Focus Groups

Stakeholder outreach helped inform the technical analysis and recommendations developed for the BCMP. Interviews with economic development partners, developers, property owners, and other stakeholders provided insights into market conditions, development barriers, infrastructure needs, and opportunities within the BCPA. This input helped shape the planning analysis and provided additional context for Planning Commission and City Council discussions throughout the Master Plan process.

As part of the Master Plan process, interviews were conducted with Business Oregon (the state's economic development agency), Greater Portland Inc. (a public-private partnership dedicated to destination business marketing and economic development), developers knowledgeable about the region, and local property owners. These discussions focused on identifying barriers to industrial development and opportunities relevant to future growth within Basalt Creek. The key themes summarized below represent important considerations as the BCPA moves toward long-term redevelopment and implementation.

- **Site Readiness:** Many sites lack the necessary transportation and utility infrastructure and preparations to immediately accommodate industrial users.
- **Power Availability:** Immediate or quick access to heavy power is currently the most significant barrier for many industrial businesses. The increasing power demands of modern industrial operations make this a crucial factor.
- **Outdated Existing Buildings:** Many existing structures do not meet the needs of modern industrial users, requiring significant renovations or complete rebuilds.
- **Lack of Intermediate Industrial Spaces:** Medium-sized industrial users (users that require 20,000 to 40,000 square feet) have limited spaces to choose from.
- **Misaligned Visions and Overly Prescriptive Zoning:** Sometimes, the landowners' or City's vision for an area does not align with the diverse needs of potential users. Discussions highlighted the importance of allowing a mix of uses for better financing opportunities, particularly for speculative development, and avoiding overly prescriptive zoning can prevent clustering for supply chain benefits.
- **Fragmented Land Ownership:** Areas with small parcels under different ownership can make it difficult to assemble larger sites needed for significant industrial development.

Decision Making Process

Development of the BCMP was informed through a collaborative process that combined policy guidance, technical analysis, and stakeholder and decision-maker input.

Establishing the Foundation. The planning process was grounded by the Guiding Principles established through the 2019 Basalt Creek Concept Plan. Those principles were refined during preparation of the BCMP to reflect updated analysis, current planning priorities, and Wilsonville's focus within the Planning Area. Together with adopted Comprehensive Plan policies, implementation measures, and Areas of Special Concern, they provided the foundation for development of the Master Plan.

Evaluating Opportunities and Constraints. Technical studies were then completed to better understand economic conditions, development potential, transportation needs, infrastructure requirements, natural resources, and long-term opportunities within the BCPA.

Gathering Stakeholder Input. Input from property owners, developers, economic development organizations, agency partners, and other stakeholders helped identify market realities, redevelopment challenges, infrastructure needs, and implementation considerations that informed the Master Plan.

Refining the Plan. Throughout the planning process, the Wilsonville Planning Commission and City Council reviewed technical findings and stakeholder feedback through a series of work sessions. Their direction helped refine recommendations and shape the preferred approach reflected in the BCMP.

Public Review and Adoption. The Planning Commission and City Council ultimately considered the information gathered throughout the planning process during public hearings leading to adoption of the final Master Plan.

Final Decision-Makers. The Wilsonville City Council, based on a recommendation from the Planning Commission, served as the final decision-making body for the BCMP, ensuring that the Master Plan reflects both technical analysis and community and stakeholder input while advancing the City's long-term vision for the BCPA.

3

EXISTING CONDITIONS & FUTURE NEEDS

Existing Conditions & Future Needs

During the Master Planning process, existing conditions, prior planning efforts, and future development needs within the BCPA were evaluated. Several supporting analyses were updated and refined to reflect current conditions, market trends, infrastructure planning, and development considerations. The following sections summarize these findings, which are described in greater detail in the BCMP Appendices.

Economic Inventory and Targeted Industries

The updated Economic Inventory evaluates current market conditions, development trends, and targeted industry opportunities within the BCPA and broader regional industrial market (see Appendix B). The analysis helps inform the long-term land use, infrastructure, and economic development strategies reflected in the BCMP.

REGIONAL INDUSTRIAL MARKET CONDITIONS

Since adoption of the BCCP in 2018, economic conditions have shifted considerably. Nationally, the industrial sector continues to experience strong demand fueled by e-commerce growth, reshoring efforts, and federal investments supporting domestic manufacturing.

In the Portland Metro area, industrial trends generally mirror national patterns, including low vacancy rates and rising rents. While demand for industrial space has slowed from the highs experienced between 2021 and 2023, demand is expected to remain relatively strong in the near term.

Within the region, industrial demand is primarily driven by businesses expanding or upgrading existing facilities rather than large numbers of new businesses relocating from outside the region.

WILSONVILLE'S INDUSTRIAL ECONOMY

Wilsonville's industrial sector continues to play a significant role in the city's economy, with manufacturing, wholesale trade, and construction accounting for a substantially larger share of employment than the regional average. However, neighboring Sherwood and Tualatin have experienced stronger recent industrial growth, largely due to the availability of large, development-ready industrial sites.

As one of Wilsonville's last major industrial growth areas within the Urban Growth Boundary, the BCPA represents an important long-term opportunity to expand the city's supply of employment land and support future industrial growth.

EXISTING CONDITIONS WITHIN THE BCPA

The Economic Inventory found that much of the BCPA remains underdeveloped and characterized by low-intensity rural and industrial uses permitted under Washington County zoning. Existing uses within the area include contractor establishments, storage yards, and other low-employment uses that do not reflect the urban employment densities envisioned in the BCCP.

While these uses contribute economic activity and jobs, they typically require limited building and infrastructure improvements and support lower employment densities than the urban industrial development envisioned for the area. Employment density within the BCPA remains substantially below the levels anticipated in the BCCP, and fragmented land ownership patterns continue to create challenges for redevelopment and large-site industrial development.

CHANGING DEVELOPMENT TRENDS AND TARGETED INDUSTRIES

The 2018 BCCP envisioned a mix of industrial and office uses, including a significant amount of office development within the High-Tech Employment District. Since that time, demand for office space has declined both regionally and nationally due to the rise of remote and hybrid work. While office uses are still expected to remain part of the BCPA, their role is anticipated to be smaller than originally envisioned.

At the same time, the Economic Inventory identified continued opportunities for industrial growth in sectors that align with Wilsonville's existing economic strengths, including:

- Advanced manufacturing
- Semiconductor supply chain businesses
- Logistics and distribution
- Employment-generating industrial uses
- Other traded-sector and industrial businesses

LONG-TERM DEVELOPMENT CHALLENGES

Several factors continue to affect the BCPA's readiness for future industrial development. Fragmented land ownership, existing contractor establishments and outdoor storage uses, and rural infrastructure that does not yet meet urban standards remain barriers to higher-intensity industrial and employment uses.

Although transportation and utility planning has advanced significantly since adoption of the BCCP, major infrastructure investments will still be required to support long-term urban development within the area.

Land Use and Development

BUILDABLE LANDS INVENTORY

The updated Buildable Lands Inventory (BLI) revises the 2014 inventory from the BCCP, providing an updated assessment of the BCPA for employment-related growth (Appendix B). It identifies developable land and highlights areas with existing economic uses that offer redevelopment potential due to low improvement values and/or low employment density.

Of the roughly 453 acres in the BCPA:

173 ACRES
ARE CURRENTLY IN ACTIVE USE AND CONSIDERED DEVELOPED

129 ACRES
ARE CONSTRAINED BY PHYSICAL OR ENVIRONMENTAL FACTORS

150 ACRES
ARE CONSIDERED BUILDABLE AND AVAILABLE FOR DEVELOPMENT

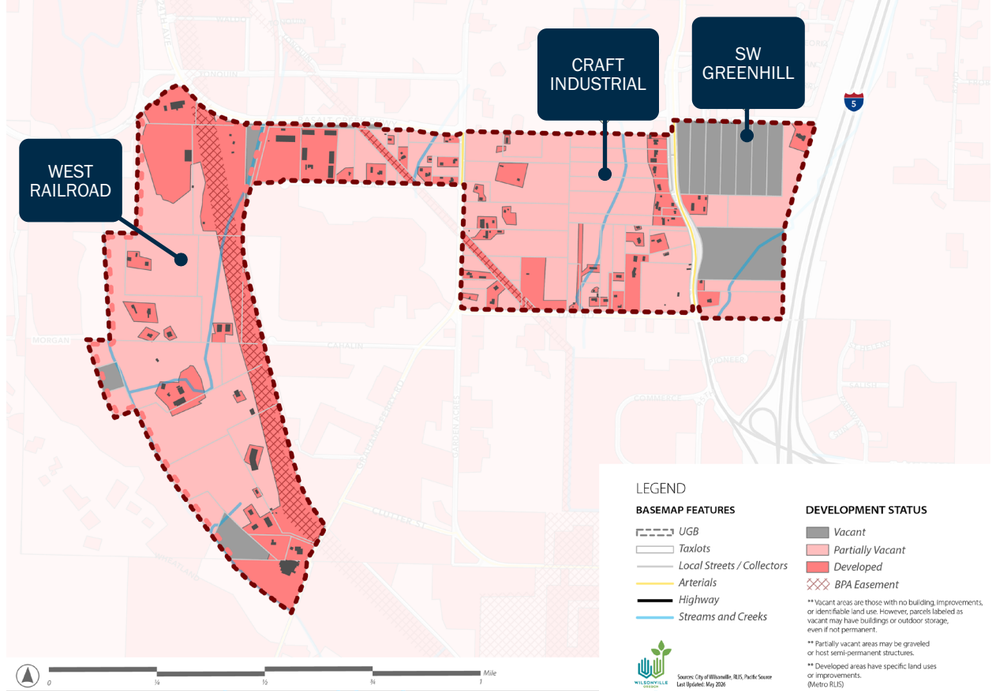
The 150-acre buildable land supply is distributed across a range of parcel sizes, from small lots under five acres to larger parcels exceeding 25 acres, offering flexibility to meet diverse industrial and employment needs.

Given the 150 acres of buildable land and the expectation of employment densities between 10 (low-density model) and 18.5 (high-density model) employees per gross acre, the BCPA is expected to accommodate between 1,500 and 2,780 jobs, compared with the BCCP estimated employment capacity of about 2,500 jobs (in 2018). The range of potential employment densities was estimated to more accurately reflect evolving market conditions.

The updated BLI provides a clearer understanding of the land available to attract industries and support future employment growth. It emphasizes the BCPA's potential to support a variety of industrial and employment uses aligned with Wilsonville's economic development goals. However, it also reveals an increase in land used for contractor establishments since the previous BLI, particularly in West Railroad, highlighting the decreasing supply of land for urban industrial development. This trend is likely to continue if the area remains outside the city and unprepared for urban growth.

An external actor, whether public or private, working to aggregate property to create viable development sites is likely required in order to realize a coherent and comprehensive development pattern throughout the BCPA. Market forces alone will likely create a slow, and 'patchy' development pattern.

Figure 5. 2024 Aerial of the BCPA



↳ Source: Metro Regional Land Information System (RLIS)

SITE SUITABILITY

The Site Suitability Analysis (see Appendix B) focused on three opportunity areas within the BCPA that were identified as having unique development opportunities and challenges. Factors such as parcel size, location, access, existing land use patterns, and redevelopment potential informed the selection of the three opportunity areas. These areas were selected for more detailed evaluation because they represent the most likely locations for future employment growth and infrastructure investment.

The analysis does not suggest that other areas within the BCPA are unsuitable for future development or redevelopment. Rather, it reflects that the selected opportunity sites have characteristics that make them particularly important to understanding long-term industrial development potential, infrastructure needs, and market competitiveness within the BCPA. Other areas may continue to evolve over time based on future market conditions, infrastructure availability, property ownership changes, and redevelopment opportunities.

Figure 6. Opportunity Sites in the BCPA

The Site Suitability Analysis evaluates three opportunity sites within the BCPA that were identified as having the greatest potential to accommodate future industrial and employment development based on factors such as parcel size, location, access, existing land use patterns, and redevelopment potential (Figure 6).

The evaluation focused on physical site characteristics, including size, access, visibility, topography, environmental constraints, infrastructure availability, and proximity to regional industrial and freight networks, without factoring in the likelihood of redevelopment. The analysis found that different sites may be better positioned to support different types and intensities of industrial and employment uses over time.

The analysis provides a broad understanding of site benefits, barriers, and potential industry suitability to help inform future planning, infrastructure coordination, and zoning considerations. The analysis does not suggest that other areas within the BCPA are unsuitable for future development or redevelopment, but rather identifies the sites most likely to influence long-term industrial growth and investment within the Planning Area.

Opportunity Sites

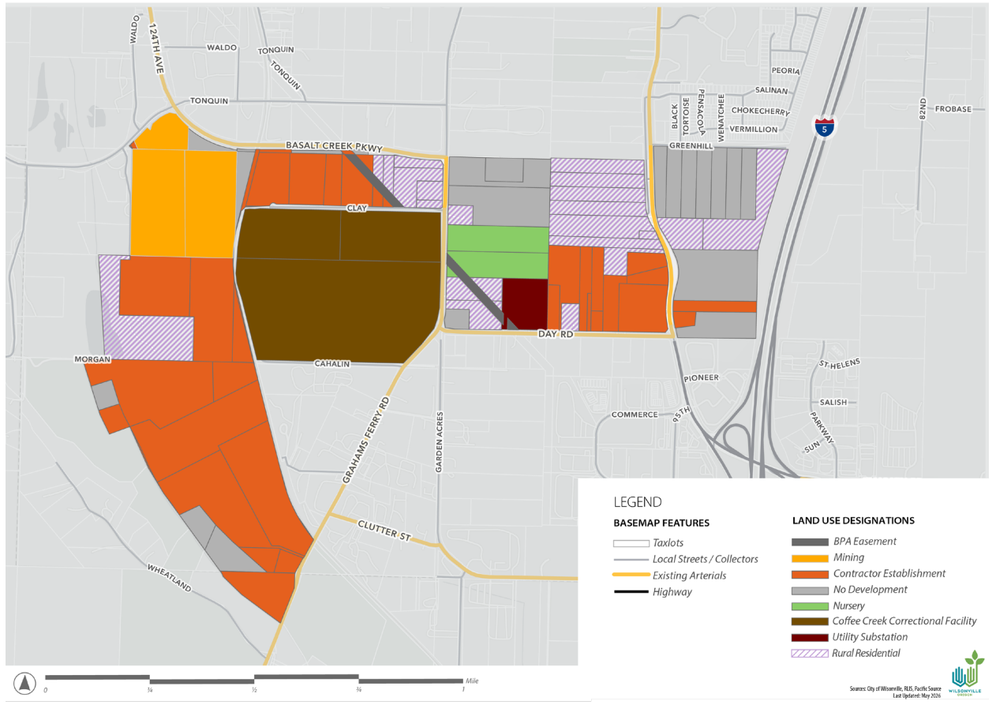
The following opportunity sites highlight the range of physical conditions, development opportunities, and implementation considerations present throughout the BCPA. Together, they illustrate how different parts of the Planning Area may support different types and intensities of future industrial and employment uses over time.

- **SW Greenhill Site:** The 57-acre SW Greenhill site is one of the most development-ready areas within the BCPA, with approximately 52 unconstrained acres, limited slopes, consolidated ownership, and proximity to existing infrastructure. The site is well positioned for uses such as advanced manufacturing, logistics, food processing, warehousing and distribution, and industrial business park or research and development uses.
- **Craft Industrial Area:** Located in the southwest portion of the BCPA near SW Boones Ferry Road and the future Basalt Creek Parkway extension, the approximately 22-acre Craft Industrial area consists of smaller, fragmented parcels constrained by environmental features and proximity to residential development. As envisioned in the BCCP, the area is better suited for smaller-scale industrial and employment uses such as makerspaces, live-work units, small production spaces, and office or industrial condominium-style development.
- **West Railroad Site:** The 165-acre West Railroad site includes approximately 90 unconstrained acres and has the potential to support general manufacturing, food processing, warehousing, distribution, and industrial support services. However, the area faces significant infrastructure and transportation access constraints, including limited vehicular access and the low Grahams Ferry Road railroad undercrossing, which will require additional planning and investment to support long-term development.

CONTRACTOR ESTABLISHMENTS

Contractor establishments have a substantial presence in Basalt Creek, particularly in West Railroad and along SW Day Road (Appendix B includes the full analysis of contractor establishments). These properties—often comprising small offices, storage buildings, and laydown yards—contribute limited employment and yield lower property values compared to urbanized industrial land. Figure 7 identifies the current land use categories and highlights areas occupied by contractor establishments.

While the Site Suitability Analysis assessed opportunity sites based on physical characteristics and their potential to support target industries should landowners opt to develop or redevelop, this analysis evaluates the redevelopment potential of contractor establishments under current market conditions.



Key findings include:

» **Existing contractor establishments generate substantial income for property owners, reducing their motivation to sell or redevelop.** For redevelopment to be financially viable, urban industrial rents would need to increase by 60 percent or more to justify the investment. Developers assess property value based on what remains after accounting for construction, entitlement, and operational costs, as well as conservative revenue assumptions. In Basalt Creek this is likely to result in developers offering less than what existing owners value their property for, especially when they are already hosting or running successful contractor establishments.

» **Relocation options for businesses currently occupying these sites are limited, creating additional challenges.** Owner-occupied properties are even less likely to redevelop, as owners face relocation costs and potential increases in operational expenses. With limited regional industrial land, relocation could push these businesses farther from their markets, increasing costs for labor, transportation, and operations. Without considerable increases in urban industrial rents or land values, redevelopment for these properties remains unlikely.

» **Contractor establishments are unlikely to transition to higher intensity uses without City intervention.** The gap between property values expected by owners and what developers can pay is unlikely to close naturally, as rising rents for industrial uses will likely coincide with increased contractor establishment rents. If the City seeks to promote urban industrial development in these areas, a more proactive approach will be necessary, including targeted incentives and policies to encourage redevelopment.

Figure 7. Land Use Categories with Constraints

Natural Resources

Although the BCPA is planned primarily for future employment and industrial development, the area also contains a diverse network of wetlands, streams, riparian corridors, floodplain, upland habitat, and forested areas that influence future land use and infrastructure planning. These natural resources contribute to habitat connectivity, water quality, stormwater functions, and the overall environmental character of the area, while also creating important development constraints and opportunities for integration of open space and trail systems.

As part of preparation of the Master Plan, the City updated the natural resources inventory originally prepared for the BCCP to further evaluate resources within the Planning Area in compliance with Statewide Planning Goal 5. This work is included as Appendix G and summarized below (and in Figure 8) related to wetlands, streams, riparian areas, upland tree groves, and wildlife habitat.

WETLANDS

The inventory identified approximately 59.02 acres of potentially jurisdictional wetlands within the BCPA. Of these, Wetland BC-1 and Wetland BC-2 meet the criteria for significance.

Wetland BC-1 is a wetland complex surrounding Tapman Creek (Basalt Creek) in the eastern portion of the Planning Area and provides diverse wildlife habitat while maintaining important hydrologic functions.

Wetland BC-2 surrounds Coffee Lake Creek in the western portion of the Planning Area and also maintains intact hydrologic functions. This wetland complex has a surface water connection to downstream waters that support indigenous anadromous salmonids near the confluence with the Willamette River.

All other identified wetlands within the BCPA, including BC-3 through BC-8, were determined not to be locally significant.

STREAMS

Two primary stream systems exist within the BCPA: Tapman Creek (BC-TC) and Coffee Lake Creek (BC-CLC). A small tributary to Coffee Lake Creek (BC-CLCa) is also present within the Planning Area.

RIPARIAN AREAS

Two primary riparian corridors were identified and assessed within the BCPA. One corridor is associated with Coffee Lake Creek and its tributary (BC-CLC and BC-CLCa), while the second follows Tapman Creek (BC-TC).

In both areas, the riparian corridors extend less than one Appropriate Potential Tree Height (APTH) before encountering steep slopes. Where slopes exceed 25%, the riparian areas were extended an additional 50 feet beyond the break in slope in accordance with Metro Water Quality Resource Area standards and Wilsonville Municipal Code (WMC 4.139). Areas with habitat connectivity through adjoining riparian forested areas were also incorporated into the riparian corridor boundaries.

UPLAND TREE GROVES

Several upland tree groves were identified within the BCPA, including some located adjacent to wetlands or near riparian corridors but separated by breaks in tree canopy. The mapping focused on significant groupings of trees and excluded areas dominated by scrub-shrub or herbaceous vegetation. The inventory was based on aerial and field mapping rather than detailed tree surveys or measured tree diameters.

WILDLIFE HABITAT

Wilsonville recognizes riparian corridors and upland forested areas as important components of the area's wildlife habitat network. Habitat areas were evaluated based on their potential for habitat diversity, water quality protection, ecological integrity, connectivity, and uniqueness. Based on these criteria, Upland Tree Grove BC-G7 was identified as significant due to its unique habitat characteristics and connectivity to significant wetland areas.

WILSONVILLE'S SIGNIFICANT RESOURCE OVERLAY ZONE (SROZ)

Wilsonville protects environmentally significant natural resources through the Significant Resource Overlay Zone (SROZ), which applies additional development standards and review requirements to wetlands, streams, riparian corridors, floodplain, and other identified habitat areas. The SROZ is intended to protect water quality, wildlife habitat, flood storage functions, and ecological connectivity while allowing development to occur in a manner consistent with Statewide Planning Goal 5 and the City's Comprehensive Plan policies.

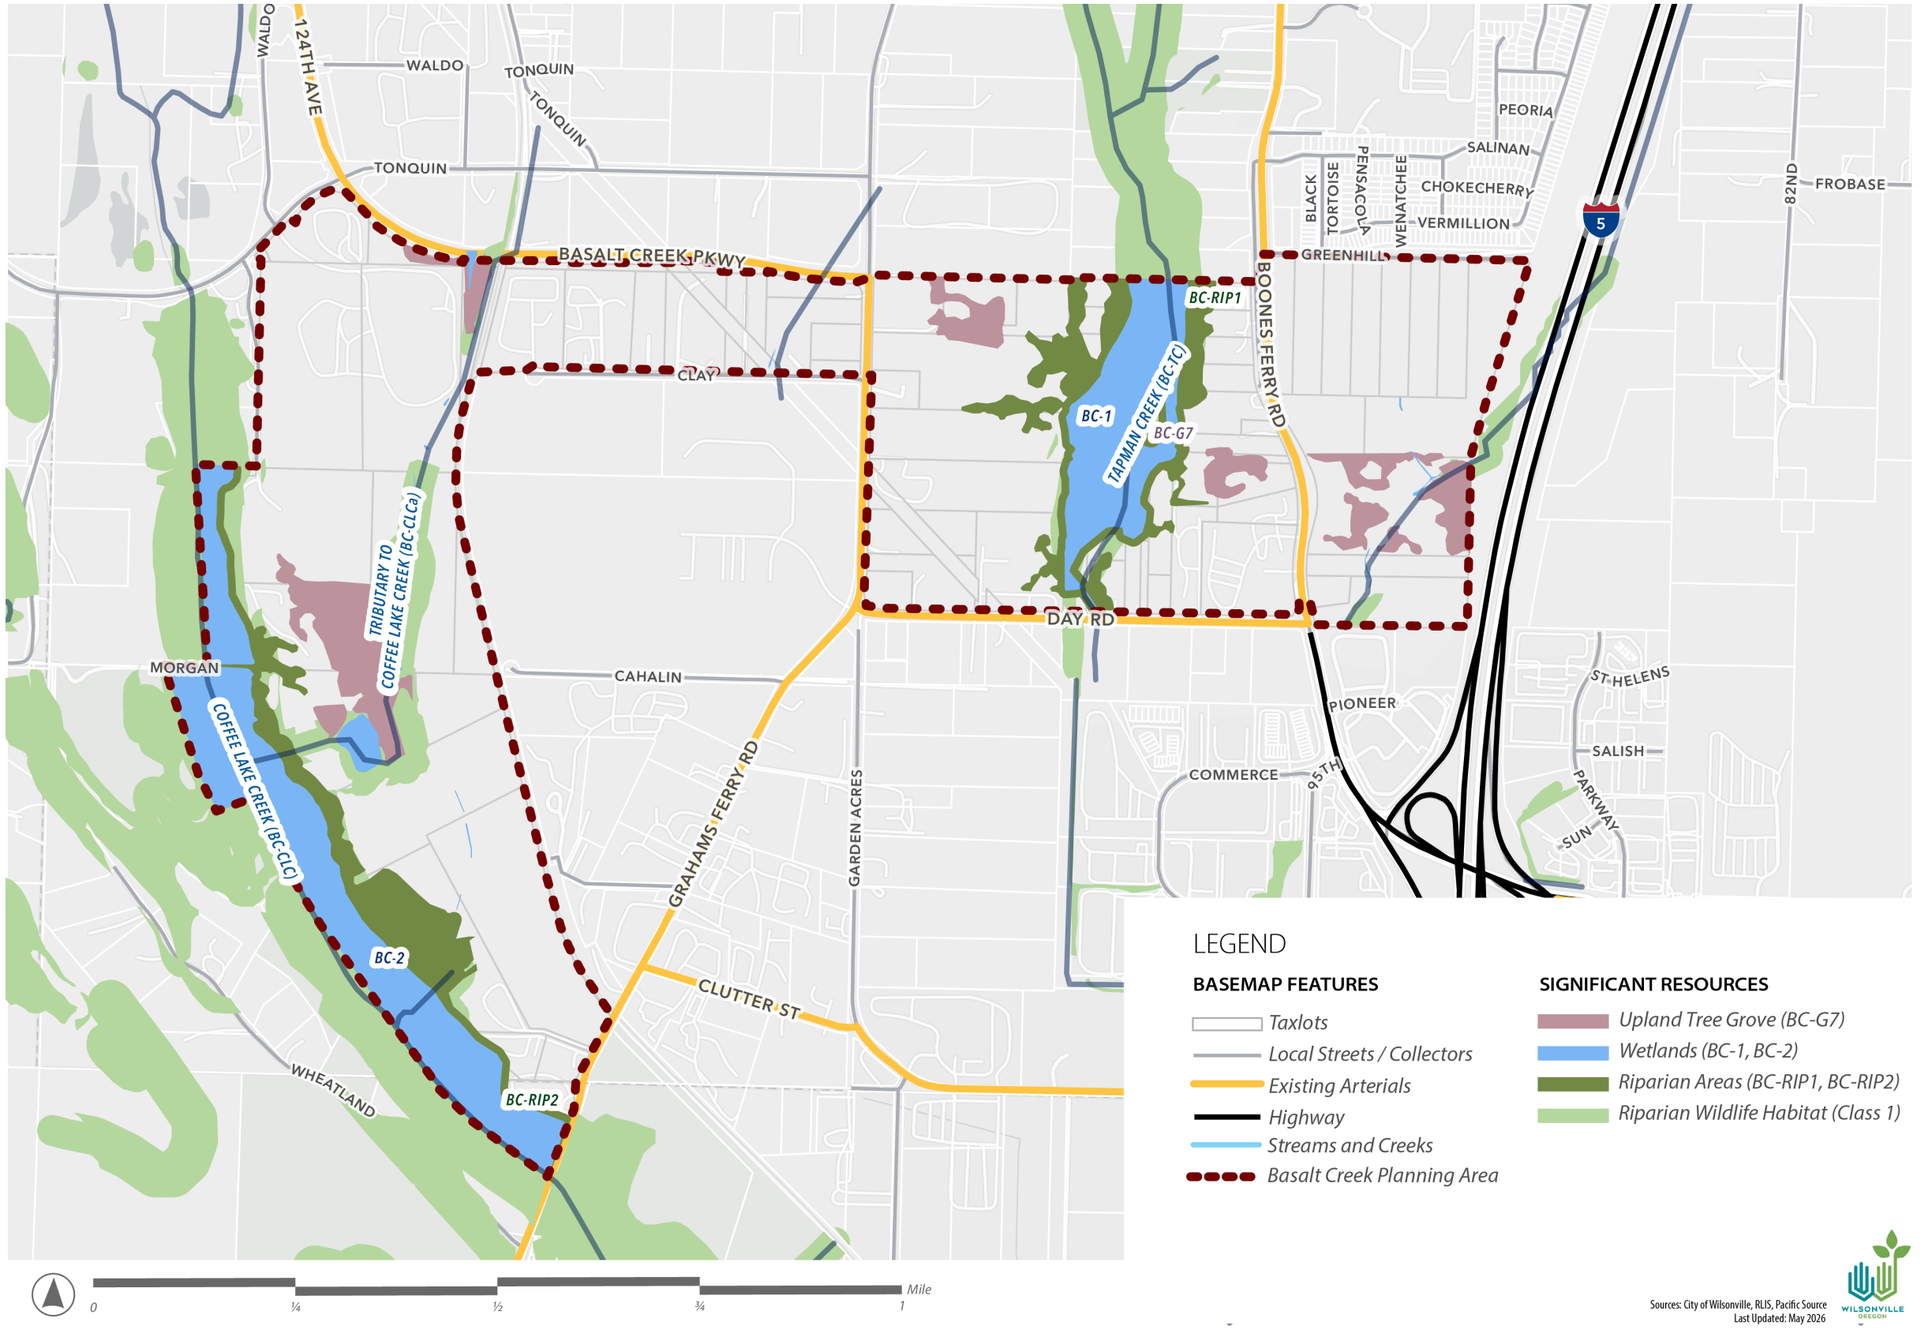


Table 1. Significant Resources to Include in Significant Resource Overlay Zone, 2024.

	Resources to Include in Significant Resource Overlay Zone (SROZ)
Streams	BC-TC (Tapman Creek); BC-CLC (Coffee Lake Creek); BC-CLCa (Tributary to Coffee Lake Creek
Wetlands	BC-1; BC-2
Riparian Areas	BC-RIP1; BC-RIP2
Wildlife Habitat	BC-G7 (Upland Tree Grove)

Figure 8. Natural Resources Inventory

Transportation

BACKGROUND

The BCCP evaluated both the existing transportation system and the planned transportation network identified through the Transportation Refinement Plan (TRP), which included phased investments intended to support regional and local transportation needs through 2035. Following adoption of the BCCP in 2018, the City amended the Transportation System Plan (TSP) to incorporate key transportation projects identified through the Concept Plan process, many of which were already included in the 2014 Metro Regional Transportation Plan.

Table 2 summarizes the Basalt Creek transportation projects that were added or updated through the 2019 TSP amendment. Since that time, the city has adopted additional TSP amendments in 2020 and 2023 related to the Town Center Plan and Frog Pond East and South Master Plan areas. These later amendments did not modify transportation projects within the BCPA.

TSP EVALUATION

To further inform the Master Plan, the city's transportation consultant, DKS, prepared a TSP Evaluation to review the city's current list of transportation projects related to the BCPA and confirm that the land use assumptions and planned transportation improvements remain applicable to the updated development vision for the area (Appendix C).

The evaluation also considered whether additional transportation improvements may be needed to support future development within the BCPA.

In 2026, the city completed additional transportation analysis focused on the West Railroad area to reevaluate the assumptions and transportation findings from the 2018 BCCP under a full development scenario for West Railroad (Appendix D). This analysis evaluated whether the transportation improvements previously identified in the BCCP and TSP would continue to adequately support future development and considered whether additional roadway, freight, bicycle, pedestrian, or intersection improvements may be needed to accommodate future travel demand associated with development of the area.

Table 2. Basalt Creek TSP Projects

Project #	Project Name	Notes
RE-P6	Basalt Creek Parkway Overcrossing of I-5	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP
RE-P5	Day Road Overcrossing of I-5 (Boones Ferry Road to Elligsen Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP 2025-2032
RE-P15	Pioneer Court Extension (north and west to Boones Ferry Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List
RE-14	Basalt Creek Parkway Extension (Grahams Ferry Road and Boones Ferry Road)	Moved from Additional Planned Project List to Higher- Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP
RW-04	Boones Ferry Road Widening to Five Lanes (Day Road to Basalt Creek Parkway)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP #11487
RW-05	Grahams Ferry Road Widening to Three Lanes (Day Road to Basalt Creek Parkway)	Moved from Additional Planned Project List to Higher- Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #10588
SI-07	Boones Ferry Road at I-5 Southbound Ramps (add dual southbound left turn lanes)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP
SI-08	Boones Ferry Road at 95th Avenue (access management strategies)	New to 2019 Wilsonville TSP, added to High Priority Project List
LT-02	Basalt Creek Canyon Ridge Trail	New to 2019 Wilsonville TSP, added to High Priority Project List
LT-03	I-5 Easement Trail	New to 2019 Wilsonville TSP, added to High Priority Project List

Notes: As of December 2024, there are two projects included in the Metro Regional Transportation Plan (2023) that are not included in the current Wilsonville TSP: METRO RTP Project #11924, Grahams Ferry Road from Tonquin Road to Day Road and METRO RTP Project #12095, Boones Ferry Road-Elligsen Road from 95th Avenue to I-5 Interchange Ramps.

Another project of note in the Metro RTP is the I-5 Boone Bridge and Seismic Improvement Project (#12305). This project would replace Boone Bridge with a seismically resilient structure and add an auxiliary lane on SB I-5 from Wilsonville Road to the Wilsonville-Hubbard Highway (OR 551) interchange and is on the 2045 Long-Term Constrained Project List. Although this project is not directly located in the BCPA, it is anticipated to relieve some level of the current congestion on the I-5 mainline through Wilsonville, which today often has secondary impacts on traffic congestion at the two Wilsonville I-5 Interchanges, including Boones Ferry Road, Day Road, and Grahams Ferry Road.

CHANGES SINCE 2018

Since the Basalt Creek Concept Plan was adopted, there has been little development within the BCPA. Approved developments, including two in Tualatin (Autumn Sunrise Subdivision, Plambeck Gardents Apartments) and one in Washington County (Brown Contracting Expansion), account for approximately 20% of the total anticipated vehicle trips generated by development through 2035 as documented in the larger Concept Plan area that includes both Wilsonville and Tualatin. One transportation infrastructure project, the Basalt Creek Parkway/124th Avenue extension between Grahams Ferry Road and Tualatin-Sherwood Road, completed in 2019, has been constructed since 2018.

Although nearly half of the original 21-year BCCP planning horizon has elapsed, only a limited portion of the anticipated development and transportation infrastructure within the BCPA has occurred. As a result, a full reevaluation of long-range 2035 traffic operations was determined to be unnecessary at this time. The evaluation concluded that the transportation projects currently identified in Wilsonville's TSP remain sufficient to support planned development within the BCPA, including future development of the West Railroad area.

The analysis also noted that the original BCCP traffic modeling occurred prior to the COVID-19 pandemic, which significantly affected travel patterns and traffic volumes throughout the region. While traffic volumes on surrounding roadways declined during 2020 and 2021 and had not fully returned to pre-pandemic levels by 2023, traffic volumes appeared to continue increasing through 2024.

These trends suggest there may be additional available vehicle capacity within the transportation network beyond what was originally assumed in the BCCP.

The transportation analysis found that all study intersections currently meet applicable mobility standards except for the Grahams Ferry Road/ Day Road intersection. Today, this intersection experiences high southbound traffic volumes during the PM peak hour and serves as an important route for traffic traveling from Tualatin and surrounding communities toward the I-5 interchange. To address these conditions, the City's TSP identifies two high-priority improvement projects at this intersection, including realignment of the intersection with a new traffic signal or roundabout and widening of Day Road to five lanes.

Grahams Ferry Road: Access Constraint

The SW Grahams Ferry Road undercrossing beneath the Portland and Western Railroad (PNWR) is a major transportation constraint within the western portion of the Basalt Creek Planning Area (BCPA). The existing crossing provides only approximately 12'-6" of vertical clearance, limiting freight and truck access through the corridor and restricting its ability to support future industrial development. The roadway also includes narrow travel lanes and shoulders, limited bicycle and pedestrian facilities, and substandard roadway geometry and sight distance conditions.

UPGRADE OVERVIEW

Upgrading Grahams Ferry Road from a collector to an arterial roadway would include:

- Two 12-foot travel lanes
- Bicycle lanes
- Sidewalks and buffers
- Improve roadway geometry and sight distance conditions
- Railroad Crossing Improvements

Providing modern freight clearance would require:

- Lowering the roadway profile beneath the railroad crossing
- Replacing the existing railroad bridge structure
- Construction staging to maintain active rail operations
- Temporary "shoofly" rail infrastructure during construction

MAJOR CONSIDERATIONS

Constraints include:

- Coffee Lake Creek wetlands and floodplain areas
- Stormwater treatment and water quality requirements

Improvements may require:

- Utility relocation
- Retaining walls
- Right-of-way acquisition
- Reconfiguration of nearby driveways and local access points

Planning-level construction costs are estimated at approximately:

$33 million – $37.5 million*

*(*In 2025 dollars and excluding right-of-way acquisition, utility relocation, environmental mitigation, and railroad permitting costs)*

FREIGHT AND ACCESS CONSTRAINTS

The SW Grahams Ferry Road undercrossing beneath the Portland and Western Railroad (PNWR) remains a significant constraint to freight mobility and future industrial development within the BCPA. The existing undercrossing provides approximately 12 feet 6 inches of vertical clearance, which restricts freight and truck access through the corridor and limits its function as a future industrial transportation route. In addition, the roadway currently operates as a collector street with substandard geometry, narrow shoulders, constrained sight distance, and limited bicycle and pedestrian facilities.

To better understand the feasibility of improving the corridor, the City commissioned the Grahams Ferry Road Freight Traffic Accommodation Evaluation in 2025 (Appendix F). The study evaluated existing conditions and developed conceptual roadway and bridge improvement alternatives intended to upgrade Grahams Ferry Road from a collector to an arterial roadway while providing sufficient vertical clearance for freight movement beneath the railroad crossing. The evaluation examined potential roadway widening, revised roadway alignments, improved bicycle and pedestrian facilities, and replacement bridge concepts capable of accommodating between 16 feet and 17 feet 4 inches of vertical clearance.

The study found that accommodating modern freight access at the crossing would require substantial infrastructure investment, including lowering portions of the roadway profile, reconstructing the railroad bridge, widening the roadway to arterial standards, constructing retaining walls, and relocating utilities. The evaluation also identified potential impacts to wetlands, floodplain areas, utilities, adjacent access points, and nearby developed properties. Planning-level construction costs were estimated to range from approximately $33 million to $37.5 million, excluding right-of-way acquisition, utility relocation, environmental mitigation, and railroad permitting costs.

MULTIMODAL CONSIDERATIONS

The transportation analysis also reviewed transit, freight, bicycle, and pedestrian needs within the BCPA. While the general multimodal transportation framework established through the BCCP remains applicable, additional coordination and future improvements may be needed over time to support transit access, trail connectivity, bicycle and pedestrian circulation, and safe crossings between future employment areas, open spaces, and regional trail systems.

The transportation analyses completed for the BCMP confirm that the general transportation framework established through the BCCP and Transportation System Plan remains applicable to support long-term development within the BCPA. Chapter 4 builds upon these findings by identifying the proposed roadway, freight, bicycle, pedestrian, and transit framework intended to guide future transportation improvements within the Planning Area.

Parks and Trails

No public parks currently exist within the BCPA and none are anticipated to be developed by the City in the future. However, Metro owns extensive land holdings bordering West Railroad on the west, southwest and southeast in the North Coffee Lake Creek Wetlands, Tonquin Scablands, Coffee Lake Creek Wetlands natural areas. In addition, park facilities are planned in the City of Tualatin north of the Basalt Creek Parkway.

Tualatin recently acquired approximately 14 acres at 23465 and 23515 Boones Ferry Road for a neighborhood park. The City of Tualatin plans to engage the community in site planning to determine design and select park amenities when residential units to the east across SW Boones Ferry Road, at Plambeck Gardens affordable housing complex and Autumn Sunrise subdivision are occupied. A pedestrian bike path, in a 0.4-acre tract, between Plambeck Gardens and Autumn Sunrise will connect residents to Boones Ferry Road near the traffic signal and TriMet bus stop. The City of Tualatin also owns a three-acre parcel at 11200 SW Tonquin Road for a future trailhead where the regional Ice Age Tonquin Trail intersects the Sherwood to Sandy Power Line Trail.

WAYSIDES

Extension of the Coffee Creek Design Overlay District to part or all the BCPA, consistent with Design Objective 1 of Area of Special Concern M, would include the requirement for Waysides to provide multiple, distributed destinations for passive and active recreation for the public and employees. The standard would apply to all development projects in the Overlay District except for those with a parcel area of 5.0 acres or less. The required area and number of waysides required per project varies based on parcel area as defined in Table CC-5 of WC 4.134 (.12).

TRAILS

The BCCP and subsequent Transportation System Plan amendments identified several future local and regional trail opportunities within the BCPA intended to improve bicycle and pedestrian connectivity, provide recreational access, and integrate future development with surrounding natural resources and regional trail systems. Planned trail facilities include the Ice Age Tonquin Trail, the Basalt Creek Canyon Ridge Trail, and the I-5 Easement Trail. These trail concepts informed the multimodal framework evaluated as part of the Master Plan process and are discussed further in Chapter 4.

Utilities

The BCPA is currently served primarily by rural-scale infrastructure and will require significant utility improvements to support future urban industrial and employment development. Since adoption of the BCCP in 2018, the City has updated its utility master plans to incorporate the BCPA and further evaluate long-term infrastructure needs for the area.

The infrastructure planning completed to date identifies several major backbone utility improvements necessary to serve the BCPA, including extensions of water and sewer mains, stormwater facilities, roadway-related utility infrastructure, and supporting pump and booster facilities.

NOTE THAT MORE DETAILED DOCUMENTATION OF EXISTING UTILITY CONDITIONS AND INFRASTRUCTURE PLANNING, INCLUDING ADDITIONAL GRAPHICS, WILL BE INCLUDED IN THE REVISED DRAFT MASTER PLAN.

WATER SYSTEM CONDITIONS

Future potable water service to the BCPA will require several major system improvements identified through the City's Water Distribution Master Plan and subsequent infrastructure planning efforts. Key improvements include construction of the Basalt Creek Parkway extension between SW Grahams Ferry Road and SW Boones Ferry Road, a future Zone C booster station, and new water main extensions along SW Boones Ferry Road and other future roadway corridors.

Additional hydraulic modeling and infrastructure analysis are ongoing to further refine system sizing, extension requirements, and associated costs necessary to support long-term development within the BCPA.

SANITARY SEWER SYSTEM CONDITIONS

Wastewater service to the BCPA will require completion of several regional and local sanitary sewer improvements identified in the City's Collection System Master Plan. Key regional improvements include Phase 2 of the Coffee Creek Interceptor and associated railroad crossing infrastructure needed to convey wastewater flows through the area.

Future sewer service within the BCPA is expected to require a combination of gravity sewer infrastructure, deep trenching, and rock excavation due to existing topography and subsurface conditions. Additional infrastructure challenges exist within the West Railroad area, where future sewer service would require a gravity connection beneath the railroad corridor, a lift station, and pressure main infrastructure to connect with the existing system.

STORMWATER SYSTEM CONDITIONS

Stormwater infrastructure improvements will also be required to support future urban development within the BCPA. The City's Stormwater Master Plan identifies the Day Road Improvements Phase 1 and Phase 2 projects as key infrastructure components needed to serve the area.

Future stormwater planning will need to address the area's wetlands, floodplain, streams, riparian corridors, and other significant natural resources while accommodating future urban development and roadway improvements.

UTILITY PLANNING CONCLUSIONS

The utility planning completed to date confirms that substantial infrastructure investment will be necessary to support long-term development within the BCPA, particularly in the West Railroad area where access, topography, environmental constraints, and distance from existing urban services create additional challenges. Continued utility planning, engineering analysis, and coordination with future transportation improvements will be necessary as development planning advances.

Chapter 4 builds upon these existing conditions, constraints, and infrastructure needs by establishing the long-term land use, transportation, utility, and development framework intended to guide future growth and investment within the BCPA.

BPA EASEMENTS

A Bonneville Power Administration (BPA) transmission easement generally follows the railroad corridor through portions of the West Railroad area. The easement contains high-voltage transmission infrastructure that serves an important regional utility function and may limit certain types of development, building placement, grading activities, tree planting, and other site improvements within or adjacent to the corridor. Another smaller easement crosses through the Planning Area near Day Road.

While the BPA easements present development constraints, they may also provide opportunities for compatible uses such as stormwater facilities, trails, utility corridors, landscape buffers, or limited circulation improvements, subject to BPA review and approval requirements. As planning and development occur within the BCPA, continued coordination with BPA will be important to better understand long-term easement requirements, allowable uses, access needs, and opportunities for integrating the easements with future infrastructure and multimodal connections.

4

MASTER PLAN FOR BASALT CREEK

Master Plan for Basalt Creek

Master Plan Overview

The Basalt Creek Master Plan (BCMP or Master Plan) establishes a long-term framework to guide future land use, transportation, infrastructure, open space, and employment development within the Basalt Creek Planning Area (BCPA) over the next 10–20 years. Building upon the vision established in the 2018 Basalt Creek Concept Plan (BCCP), the Master Plan refines development patterns, infrastructure needs, transportation connections, and implementation strategies needed to support future growth in the area.

As one of Wilsonville's last major industrial growth areas within the Urban Growth Boundary, the BCPA represents an important opportunity to support long-term economic development and expand the City's employment base. At the same time, the Master Plan recognizes the significant infrastructure, environmental, transportation, and property ownership challenges that will require long-term coordination, investment, and phased implementation over time, particularly within the West Railroad area.

The following sections describe the proposed land use framework, transportation and utility systems, trail and open space network, and development strategies intended to guide future growth and investment within the BCPA.

KEY ELEMENTS OF THE MASTER PLAN

- Land Use and Development
- Transportation
- Parks and Natural Resources
- Utilities

KEY CONSIDERATIONS AND CONCLUSIONS

The following considerations and conclusions informed development of the Basalt Creek Master Plan and helped shape the land use, transportation, infrastructure, and implementation framework.

Economic Development and Market Conditions

- The BCPA can support regional economic growth and industrial development while expanding Wilsonville's employment base.
- The BCPA's strategic location near regional transportation networks, access to a skilled labor force, and proximity to established industrial clusters make it well positioned to attract businesses.
- Development-ready sites and engaged property owners create opportunities for early catalytic projects that could spur additional development in the BCPA.
- Declining national and regional demand for office space, driven by remote and hybrid work trends, reduces the role of office uses compared to assumptions in the BCCP.
- Restrictive development requirements, such as mandating a high share of manufacturing uses, may discourage investment and direct users to more flexible locations.

Development Constraints and Infrastructure

- Fragmented land ownership and the continued presence of contractor establishments currently limit opportunities for the higher-intensity urban industrial uses envisioned in the BCCP.
- Existing rural infrastructure constrains industrial development in the BCPA and limits the area's ability to support higher-density employment uses.

Natural Resources and Connectivity

- Protect key natural resources and sensitive areas in the BCPA while making recreational opportunities accessible through integration of new parkland, open spaces, natural areas and trails into existing regional networks.
- Protect, enhance, and provide access the area's distinctive natural features, particularly its namesake - Basalt Creek - and the surrounding wetlands habitat running north-south through the eastern half of the area.
- Provide strong transit access to support employment within Basalt Creek, and integrate transit access with the bike, pedestrian, and trail services at key access points along Grahams Ferry Road, Boones Ferry Road, Day Road, SMART Central, and the Coffee Creek Correctional Facility.

Development Code and Design

- Adopt Development Code standards that permit and encourage the anticipated land uses within each BCPA subdistrict, including High-Tech Employment, Light Industrial, Craft Industrial, and West Railroad, while maintaining flexibility to respond to evolving market conditions and employment opportunities.
- Apply the design standards of the Coffee Creek Design Overlay District, or a successor district, throughout the BCPA to promote a cohesive, high-quality development pattern and reinforce a consistent design character across the broader northwest Wilsonville industrial area.
- Implement special development and design standards for the Craft Industrial subdistrict along SW Boones Ferry Road and other locations suitable for craft industrial development.

Figure 9. Basalt Creek Master Plan

PLACEHOLDER FOR MASTER GRAPHIC SHOWING AN OVERVIEW OF ALL PLAN COMPONENTS, THIS WILL BE ADDED WHEN UTILITY AND INFRASTRUCTURE ANALYSIS IS COMPLETE.

Land Use and Development

The proposed land use framework builds upon the development pattern established in the BCCP while responding to updated market conditions, infrastructure constraints, transportation access, natural resources, and long-term employment needs. The framework is intended to support a range of industrial and employment uses while creating transitions between districts, protecting significant natural resources, and coordinating future transportation and utility investments throughout the BCPA.

Development within the BCPA is expected to occur incrementally over time and will likely vary by district based on infrastructure availability, market conditions, environmental constraints, transportation access, and property ownership patterns. Areas with fewer constraints and larger consolidated parcels may develop earlier, while other areas may transition more gradually over the long term.

NOTE THAT THE DESCRIPTIONS OF EACH DISTRICT MAY BE REFINED FURTHER PENDING THE OUTCOME OF THE ZONING CODE DISCUSSION AND FINAL ZONING RECOMMENDATIONS.

LIGHT INDUSTRIAL DISTRICT

COMPREHENSIVE PLAN DESIGNATION: INDUSTRIAL (EXISTING)

The Light Industrial District is planned for land south of the future Basalt Creek Parkway between the Parkway and SW Clay Street, north of the Coffee Creek Correctional Facility, and east of SW Grahams Ferry Road to the Basalt Creek Canyon. This district is intended to support primarily manufacturing, warehouse, logistics, and industrial uses in single- or multi-tenant buildings with supporting office and limited commercial activities.

As modeled in the BCCP, the district is anticipated to accommodate approximately 581 jobs and provide a transition between the more intensive High-Tech Employment District and surrounding natural features and infrastructure corridors. Future development will need to integrate with adjacent natural resource areas and comply with applicable resource protection standards.

HIGH-TECH EMPLOYMENT DISTRICT

COMPREHENSIVE PLAN DESIGNATION: INDUSTRIAL (EXISTING)

The High-Tech Employment District is planned for all land in the BCPA east of SW Boones Ferry Road and most of the land south of a future extension of SW Clay Street to the east side of SW Grahams Ferry Road, extending south to SW Day Road and bordered to the west by the Coffee Creek Correctional Facility. This district is intended to serve as the primary employment center within the BCPA and, as modeled in the BCCP, is anticipated to accommodate the largest share of future jobs in the Planning Area, estimated at approximately 1,916 jobs.

The district is envisioned to support a mix of high-tech employment, advanced manufacturing, industrial, research and development, office, and supporting warehouse uses. While the original BCCP assumed a development pattern that was roughly half office and half industrial, changing market conditions and reduced demand for traditional office space may result in a greater emphasis on industrial and flex employment uses over time. Development is generally anticipated to occur in one- to three-story buildings, while select locations near I-5 and SW Boones Ferry Road may accommodate taller employment buildings.

The district is intended to provide flexibility in tenant mix and building types while supporting development of a cohesive, high-quality employment area integrated with surrounding transportation and utility infrastructure.

CRAFT INDUSTRIAL DISTRICT

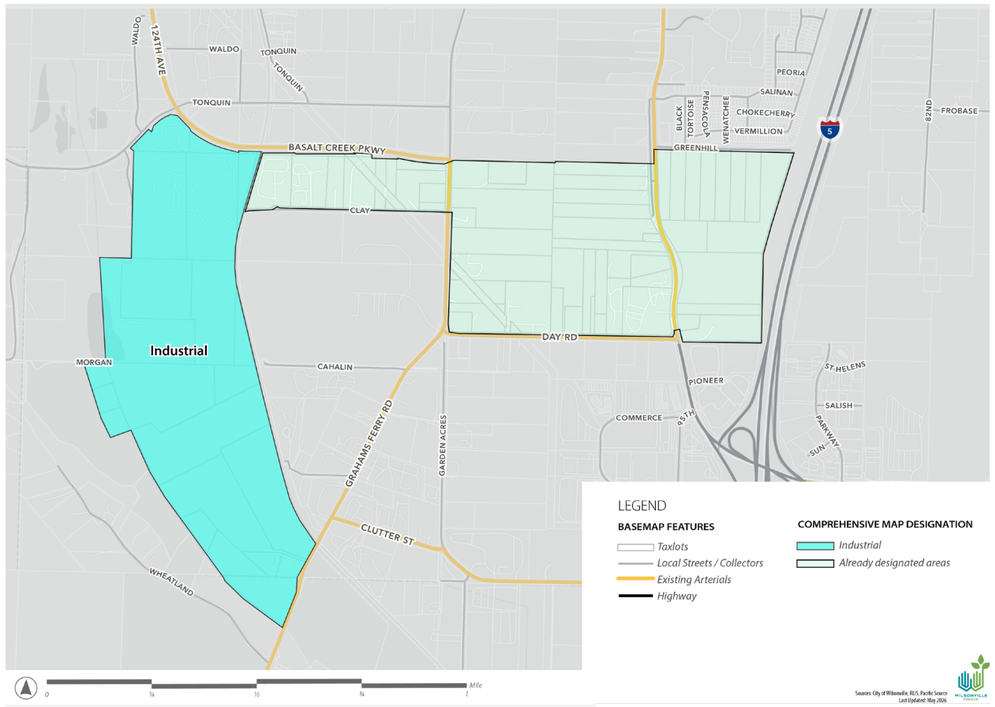
COMPREHENSIVE PLAN DESIGNATION: INDUSTRIAL (EXISTING)

The Craft Industrial District is planned in the southwest corner of the intersection of SW Boones Ferry Road and the future Basalt Creek Parkway extension. The district is intended to support smaller-scale employment uses and creative industries while responding to nearby residential development, natural constraints associated with the Basalt Creek Canyon, and the area's location adjacent to future neighborhood commercial and residential areas in Tualatin.

Development is anticipated to occur incrementally over time and serve as a transition between surrounding residential uses and the more intensive employment districts to the east and south. The area is envisioned to accommodate two- to three-story buildings with smaller tenant spaces for light industrial, maker, artisan, incubator, office, and limited commercial uses. Some limited residential or live-work opportunities may also occur as part of mixed-use or work-live development concepts.

The district is intended to provide flexibility for smaller-scale employment and mixed-use development while maintaining compatibility with surrounding residential areas and natural features. As modeled in the BCCP, the district is expected to accommodate approximately 27 jobs and 6 housing units.

WEST RAILROAD DISTRICT



COMPREHENSIVE PLAN DESIGNATION: INDUSTRIAL (PROPOSED)

The West Railroad District is located between the active rail line and the Coffee Lake Creek wetlands and encompasses approximately 165 acres, of which roughly 90 acres are considered unconstrained and potentially developable. Development potential within the district is significantly influenced by wetlands habitat, steep slopes, varied terrain, and limited transportation access opportunities.

Due to these constraints, the West Railroad area was excluded from the primary development assumptions of the BCCP and is expected to develop incrementally over the long term as infrastructure and access improvements occur. Future development is anticipated to consist primarily of industrial park-style employment uses, including manufacturing, warehousing, distribution, office, and industrial support services. Development within the district is expected to generate a relatively high proportion of freight and heavy vehicle traffic compared to other areas within the BCPA.

Because the West Railroad area was excluded from the original BCCP development assumptions, no specific employment capacity estimate was established for the district. Future development will need to carefully balance infrastructure feasibility, freight access, environmental constraints, and long-term market conditions.

Figure 10. Recommended Amendments to Comprehensive Plan Map

↳ **This figure illustrates proposed Comprehensive Plan designation updates within the BCPA informed by the BCMP. While most of the Planning Area was addressed through the 2018 BCCP (and designated Industrial), the West Railroad area was largely excluded from the original planning effort due to access, infrastructure, and environmental constraints. The BCMP identifies an Industrial Comprehensive Plan designation for West Railroad to guide future long-term development and planning efforts.**

Figure 11. Recommended Zoning

PLACEHOLDER FOR RECOMMENDED ZONING GRAPHIC. TO BE INCLUDED WITH ZONING CODE AND FINAL ZONING CODE RECOMMENDATIONS IN THE SECOND WORK SESSION.

Transportation

ROADWAY NETWORK

The transportation network envisioned for the BCPA is intended to support long-term industrial and employment development while improving local and regional connectivity for all modes of travel. Building upon the framework established in the BCCP, the City prepared an updated Local Street Concept Map identifying future roadway alignments, key access points, and multimodal connections throughout the Planning Area, including the West Railroad area.

The transportation framework includes a hierarchy of arterial, collector, and local industrial streets intended to support freight mobility, local circulation, and regional access. Key improvements include the planned Basalt Creek Parkway extension, improvements to the Grahams Ferry Road and Day Road intersection, and enhanced north-south connectivity along Grahams Ferry Road. Together, these improvements are intended to improve access between the BCPA, Interstate 5, Tonquin Road, and surrounding industrial districts.

The Local Street Concept Map (Figure 12) illustrates the anticipated long-term street network within the BCPA. Alignments are conceptual and intended to guide future connectivity and circulation as development occurs. Final roadway alignments and design details will be determined through future development review, engineering, and infrastructure planning processes.

Future local street connections are expected to be constructed incrementally as properties redevelop and urban infrastructure is extended throughout the Planning Area.

Within the West Railroad area, future transportation planning focuses on improving long-term access while recognizing the area's physical and environmental constraints. The Master Plan identifies a future north-south industrial street connection between Tonquin Road and SW Grahams Ferry Road as the primary internal circulation route. Additional long-term access opportunities, including a potential future extension of Cahalin Road across the railroad corridor, may further improve connectivity if determined to be feasible through future engineering, railroad coordination, and funding efforts.

Because many future uses within the BCPA are expected to generate truck traffic, future roadway improvements should prioritize efficient freight access while integrating bicycle, pedestrian, and potential transit facilities where appropriate.

Implementation of the transportation network will occur incrementally over time as development occurs and funding becomes available. Continued coordination among the City, Washington County, Metro, ODOT, regional transit providers, and railroad operators will be necessary to refine roadway alignments and implement future transportation improvements.

High Priority Projects in the Area

The following projects are identified as high priorities within the City's Transportation System Plan (TSP) and support future development within the Basalt Creek Planning Area (BCPA). These projects provide foundational transportation infrastructure intended to improve regional access, freight mobility, local circulation, and multimodal connectivity throughout the area.

Basalt Creek Parkway Extension: TSP Project RE-14

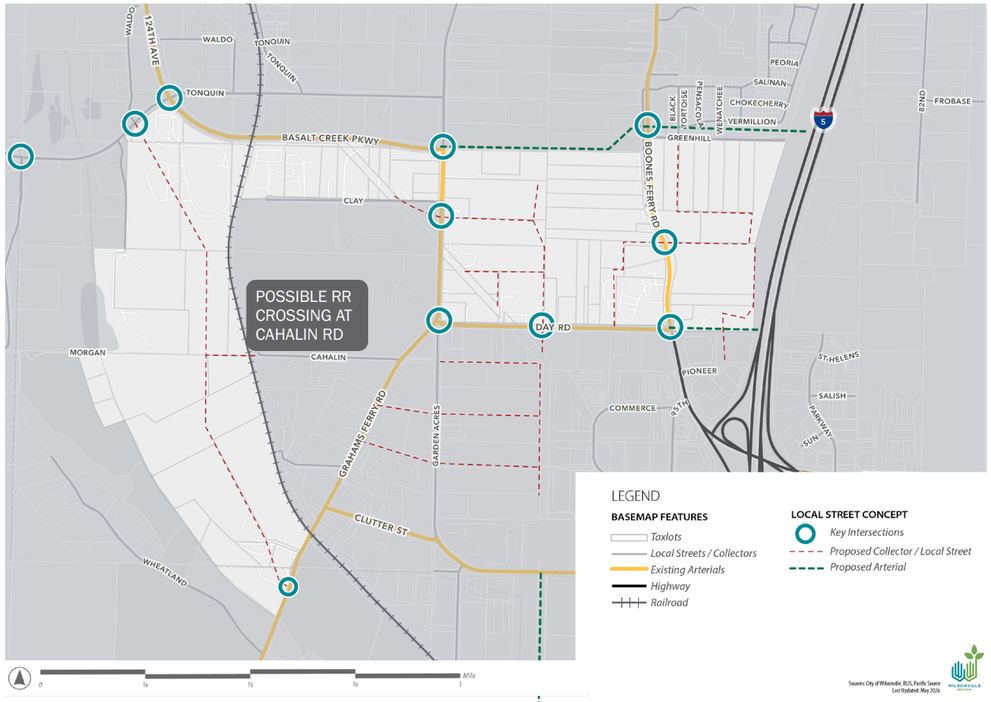
This project will extend Basalt Creek Parkway from Grahams Ferry Road to Boones Ferry Road. This will create a new east-west connection parallel to Day Road. The study's future traffic volumes were adjusted to reflect the expected changes in traffic patterns resulting from this project's construction.

Grahams Ferry Road/Day Road/Garden Acres Road Reconstruction: TSP Project UU-08

This intersection will be upgraded to either signal or roundabout control. Additionally, it will be completely reconstructed to incorporate the following changes:

- **Include an upgraded Garden Acres Road as the intersection's south leg;**
- **Construct a new west leg that will be the continuation of Grahams Ferry Road; and**
- **Remove the Coffee Creek Correctional Facility entrance from the intersection and construct a new entrance along the new west leg extension of Grahams Ferry Road.**

It should be noted that the reconstruction of this intersection and traffic control change will address the existing operational deficiency shown in Table 1. This traffic study assumes signal control at this location.



Grahams Ferry Road/Clutter Road Closure and Traffic Signal at a Currently Unnamed Road: TSP Project RE-13

Once the currently unnamed road extension (planned south of Cahalin Road) is constructed and signalized at the intersection with Grahams Ferry Road, close Clutter Road at its approach to Grahams Ferry Road.

Day Road Widening: TSP Project RW-02

Widen Day Road from Boones Ferry Road to Grahams Ferry Road to include additional travel lanes in each direction with bike lanes and sidewalks.

Figure 12. Local Street Concept Map

↳ Key intersections shown on the map are assumed to be fixed. Local street alignments are conceptual and intended to guide future connectivity and circulation within the BCPA. Final alignments of new public streets or private streets within public easements will be determined as development occurs.

RAILROAD CORRIDOR AND FREIGHT ACCESS

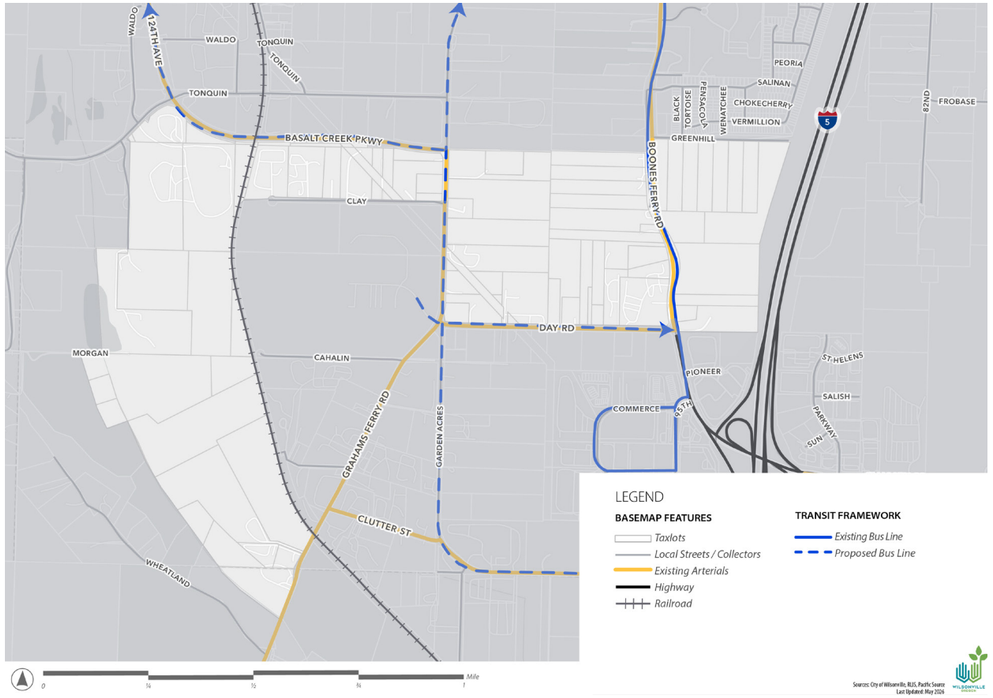
The Portland and Western Railroad (PNWR) corridor is a defining feature of the BCPA and plays an important role in shaping future development patterns, transportation access, and infrastructure planning throughout the area. The active rail line creates both opportunities and constraints for future industrial development. Proximity to regional freight infrastructure can support manufacturing, warehousing, and distribution uses, while the railroad corridor also limits east/west connectivity and creates access challenges in portions of the Planning Area, particularly within the West Railroad area.

The BCMP works within these existing conditions by focusing future industrial development in areas with the greatest long-term access and infrastructure potential, while also identifying opportunities for future transportation improvements and crossings where feasible. The City is currently coordinating with Portland and Western Railroad regarding the potential conversion of the existing private rail crossing at Cahalin Road to a future public crossing. Preliminary discussions indicate that PNWR would support industrial development within the area and may support conversion of the crossing if additional safety improvements and crossing upgrades are provided.

Although the Master Plan does not assume a future public crossing at Cahalin Road, the BCMP recognizes that an additional east/west connection across the railroad could improve long-term circulation, freight mobility, and overall access within the West Railroad area. Continued coordination with PNWR, ODOT Rail, and regional partners will be necessary as future access, crossing feasibility, freight mobility, and infrastructure needs are further evaluated over time.

FUTURE TRANSIT FRAMEWORK

The creation of additional bus lines along existing and new routes in the Basalt Creek Planning Area will be necessary to increase connectivity and to support the job and household growth envisioned for this area. Transit service in the area requires coordination between TriMet and SMART to enhance service along existing bus routes and to provide effective connections north-to-south and east-to-west through the Planning Area. This service would also provide access to surrounding and regional employment centers and residential neighborhoods.



In addition to local service within Wilsonville, SMART provides regional connections north to Portland and south to Woodburn and Salem, making the transit network an important asset for supporting workforce access to and from the BCPA as a future regional employment center. Transit service should facilitate riders commuting to and from work and visiting major local destinations such as the Wilsonville and Tualatin Town Centers.

SMART and TriMet routes will be integrated with the bike, pedestrian, and trail services with key access points along Grahams Ferry Road, Boones Ferry Road, Day Road, SMART Central, and the Correctional Facility. All extensions will comply with ADA requirements. SMART will continue to serve Wilsonville, including the areas annexed within the Planning Area into Wilsonville. The Cities will work with TriMet to integrate with SMART service. Lawmakers and staff will work together to ascertain the impacts of and process for a possible service boundary change.

The existing Portland and Western Railroad (PNWR) runs along the western side of the Basalt Creek Planning Area. In addition to transporting freight, it also provides the Westside Express Service (WES), a commuter rail line serving Beaverton, Tigard, Tualatin and Wilsonville. WES runs on weekdays during the morning and afternoon rush hours, with trains every 30 minutes, connecting commuters to both the TriMet and SMART transit systems.

As development and employment within the BCPA increase over time, the feasibility of a new WES station serving the Basalt Creek Planning Area should be studied to improve regional transit access and support future ridership demand.

Figure 13. Future Transit Framework

BICYCLE, PEDESTRIAN, AND TRAIL NETWORK

The BCMP envisions an expanded multimodal network that improves bicycle and pedestrian connectivity throughout the BCPA while linking future employment areas to surrounding neighborhoods, transit services, open spaces, and regional trail systems. The planned network builds upon concepts established in the BCCP and Transportation System Plan and is intended to support both transportation and recreational functions within the Planning Area. The multimodal framework is also intended to support future transit access to employment areas and coordinate pedestrian and bicycle connections to future transit stops and services.

Future bicycle and pedestrian facilities are planned to be integrated into new and improved roadway corridors in accordance with State, County, and City standards. Key planned connections include new east/west bicycle and pedestrian facilities along the Basalt Creek Parkway and Tonquin Road corridors, as well as a continuous north/south connection along Grahams Ferry Road. Together, these improvements are intended to improve access between employment districts, the planned neighborhood commercial area, nearby residential neighborhoods, future transit services, and regional trail systems.

The Master Plan also recognizes the importance of integrating multimodal transportation facilities into future development within the West Railroad area where feasible. While freight mobility will remain the primary transportation need in the district, future internal streets should incorporate complete street principles that safely accommodate pedestrians, bicycles, and potential future transit service.

Natural resources and open spaces within the BCPA create opportunities to integrate trails and recreational amenities into the broader transportation network while enhancing access to significant environmental features. Future trail alignments should balance public access and recreation with long-term protection and enhancement of wetlands, streams, riparian corridors, and habitat areas.

Three future trails within the BCPA are identified as Higher Priority Projects in Wilsonville's Transportation System Plan (TSP), including the regional Ice Age Tonquin Trail (RT-03A), the Basalt Creek Canyon Ridge Trail (LT-02), and the I-5 Easement Trail (LT-03). These trails are shown in Figure 14 and summarized on the following page.

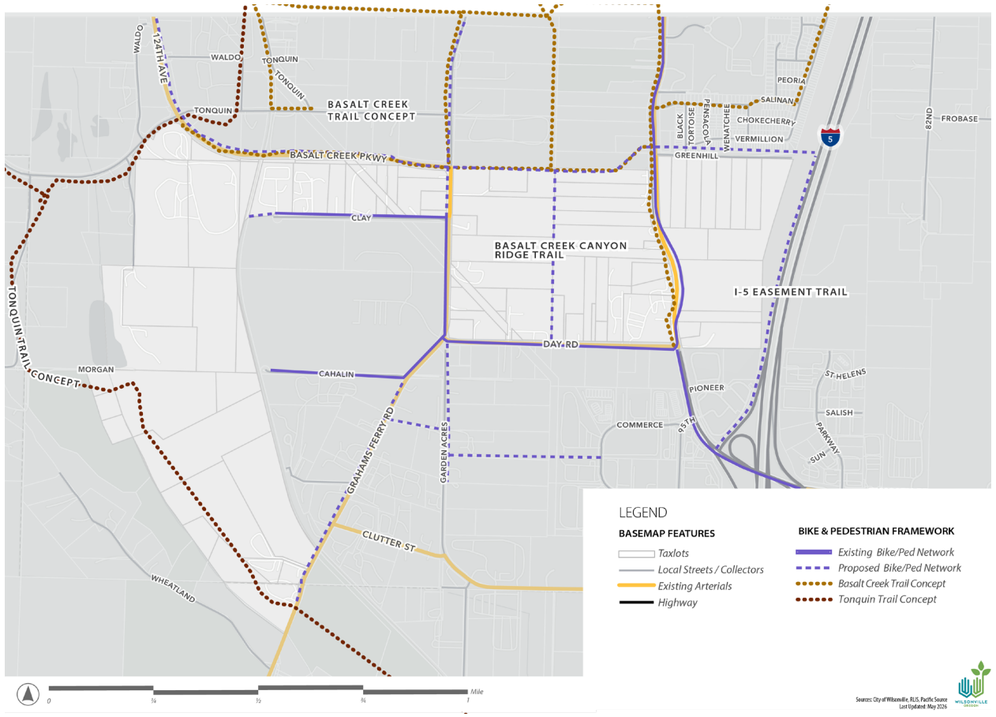
Ice Age Tonquin Trail (#RT-03A)

The Ice Age Tonquin Trail is planned as a regional multiuse trail connection extending through Wilsonville and into neighboring communities. Within the BCPA, the trail is intended to connect future employment areas, open spaces, and regional bicycle and pedestrian facilities while helping integrate the Planning Area into the broader regional trail network. The Master Plan also assumes that the regional Ice Age Tonquin Trail can generally be accommodated through the West Railroad area, subject to future alignment refinement and coordination during development.

Basalt Creek Canyon Ridge Trail (#LT-02)

The Basalt Creek Canyon creates a significant barrier to east/west movement within portions of the Planning Area, making north/south trail connections particularly important to overall network connectivity. The Basalt Creek Canyon Ridge Trail is planned as a north/south trail connection west of the Basalt Creek Canyon intended to improve local bicycle and pedestrian circulation and create connections to east/west roadway corridors throughout the Planning Area. The trail is envisioned to connect to the regional trail network through future improvements along Tonquin Road and Grahams Ferry Road and may ultimately require grade-separated crossings of Basalt Creek Parkway.

A trail landing area and at-grade undercrossing have already been incorporated into the design of the Basalt Creek Parkway extension between SW Grahams Ferry Road and SW Boones Ferry Road to help accommodate future trail connections in this area.



I-5 Easement Trail (#LT-03)

The I-5 Easement Trail is planned as a north/south trail within the ODOT easement parallel to Interstate 5. The trail would provide an additional off-street bicycle and pedestrian connection through the Planning Area while linking to existing and future regional bicycle and pedestrian facilities.

Implementation of the planned multimodal network is expected to occur incrementally alongside roadway, utility, and development improvements throughout the BCPA and will require continued coordination among the City, Metro, Washington County, ODOT, utility providers, and regional partners as development occurs over time.

Planning Commission Meeting - June 10, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Figure 14. Future Bicycle and Pedestrian Framework

THE ICE AGE TONQUIN TRAIL

Metro's Ice Age Tonquin Trail Master Plan provides a framework for local and regional implementation of the regional Ice Age Tonquin Trail, which is intended to complement the Ice Age Floods National Geological Trail Planning (the national trail will be a network of driving routes with spurs for biking and walking, from Montana to the Pacific Ocean). The preferred alignment for the regional Ice Age Tonquin Trail includes a section bordering the Basalt Creek Planning Area as part of a 22-mile trail alignment through Wilsonville, Tualatin, and Sherwood with trail facility types varying by location based upon landscape and setting. The Ice Age Tonquin Trail is intended to connect in the north to the Tualatin River Greenway Trail, Fanno Creek Trail, and the Westside Trail, and to the south to the Willamette River.

Table 3. Higher Priority Basalt Creek Trail Projects Included in the TSP

Project #	Project Name	Notes
RT-03A	Ice Age Tonquin Trail (North)	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP
LT-02	Basalt Creek Canyon Ridge Trail	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP 2025-2032
LT-03	I-5 Easement	New to 2019 Wilsonville TSP, added to Additional Planned Project List

Parks and Natural Resources

One of the guiding principles of the Basalt Creek Concept Plan is to protect key natural resources and sensitive areas while making recreational opportunities accessible by integrating new parkland, open spaces, natural areas and trails in the Planning Area and connecting to existing regional networks.

PARKS

The Planning Area provides opportunities for a range of future recreational amenities that could serve both nearby residents and future employees within the BCPA. Potential park types may include small gathering spaces, pocket parks, natural open spaces, trail-oriented recreation areas, and potentially larger community-serving recreational facilities.

Because much of the Planning Area is intended for employment and industrial uses, parks and open spaces are envisioned not only as recreational amenities, but also as important components of the overall employment environment that can support walking, outdoor gathering, recreation, and visual access to natural features.

The Basalt Creek Canyon and associated natural resource areas provide opportunities for passive recreation activities such as walking, jogging, hiking, and nature viewing, while future trail connections may help link employment areas to surrounding neighborhoods, transit services, and regional recreation networks.

Future recreational amenities within the BCPA are expected to be integrated into employment areas through industrial waysides, plazas, landscaped gathering spaces, and trail-oriented open spaces that support employees, visitors, and nearby residents. These amenities can help create a more attractive employment environment while providing opportunities for walking, outdoor gathering, and connections to surrounding natural features.

Future planning efforts should continue exploring opportunities to connect trails, viewpoints, interpretive features, and habitat enhancement projects with the area's natural resource network, particularly within and adjacent to Basalt Creek Canyon and the Coffee Lake Creek wetlands. Any recreational improvements should be designed to complement resource protection objectives while expanding access to the BCPA's natural amenities where appropriate.

NATURAL RESOURCES

Overview

The BCPA contains a diverse network of wetlands, streams, riparian corridors, upland habitat areas, floodplain, and tree groves that significantly influence future development patterns within the Planning Area. Many of these resources are concentrated within and around the Basalt Creek Canyon and the West Railroad area, where extensive environmental constraints shape long-term land use, transportation, infrastructure, and recreation planning.

To support the Master Plan process, the City updated portions of the natural resource inventory originally prepared during the BCCP process to reflect current conditions and comply with Oregon Statewide Planning Goal 5 requirements. This work included updated mapping and evaluation of wetlands, streams, riparian corridors, upland tree groves, and wildlife habitat areas within the BCPA (See Figure 8).

Regulatory Framework for Natural Resources

Future development within the BCPA is subject to a layered regulatory framework intended to protect wetlands, streams, riparian corridors, floodplains, wildlife habitat, and other significant natural resources. Resource protection requirements are established through Oregon Statewide Planning Goal 5, Metro's Urban Growth Management Functional Plan, and local regulations adopted by the City of Wilsonville and Clean Water Services. Together, these regulations influence where development can occur, the extent of environmental review required, and how impacts to natural resources must be avoided, minimized, or mitigated.

Oregon Statewide Planning Goal 5

Oregon Statewide Planning Goal 5: Natural Resources, Scenic and Historic Areas, and Open Spaces directs local governments to inventory and protect significant natural resources and open spaces through local planning and development regulations. In the Portland metropolitan region, Goal 5 is implemented primarily through Metro Titles 3 and 13.

Metro Title 3: Water Quality and Flood Management

Metro Title 3 establishes requirements intended to protect water quality and reduce impacts to flood management areas, wetlands, streams, and riparian corridors. Within the BCPA, approximately 116 acres have been identified as Water Quality and Flood Management Areas under Metro Title 3. These areas are generally constrained from development and require vegetated corridor protection, environmental mitigation, and stormwater management measures where impacts occur. As a result, many of these areas were excluded from the developable lands assumptions used during planning and scenario evaluation.

Metro Title 13: Nature in Neighborhoods

Metro Title 13 is intended to protect and restore a connected system of stream corridors, riparian habitat, and upland wildlife habitat throughout the region. Metro's regional habitat inventory identified Habitat Conservation Areas within portions of the BCPA based on riparian, wetland, and upland habitat characteristics.

While development is not prohibited within Title 13 areas, future development must incorporate low-impact design approaches and mitigation strategies intended to maintain ecological function and habitat connectivity. Portions of the BCPA designated as Riparian Habitat Classes I and II are subject to additional development limitations and reduced development potential.

Local Resource Protection Regulations

In addition to Metro requirements, both the City of Wilsonville and Clean Water Services administer local regulations that further protect significant natural resources and sensitive environmental areas. Upon annexation into the City, development within the BCPA will be subject to Wilsonville's Significant Resource Overlay Zone (SROZ), which regulates development near wetlands, floodplains, riparian corridors, and vegetated corridors. Development within or near mapped resource areas generally requires preparation of a Significant Resource Impact Report (SRIR) evaluating potential impacts and applicable mitigation measures.

Properties that develop within the City of Tualatin or within the Clean Water Services service area must also comply with Clean Water Services' Design and Construction Standards and Service Provider Letter (SPL) requirements related to streams, wetlands, vegetated corridors, and watershed protection areas.

Natural Resource Protection and Enhancement Strategies

Most environmentally constrained land within the BCPA is located within or adjacent to the Basalt Creek Canyon and the West Railroad area (see Figure 8). The Cities have agreed to manage these areas in a manner generally consistent with Metro Titles 3 and 13 while balancing future development, recreational access, and habitat protection objectives.

The Basalt Creek Canyon is one of the most significant natural features within the Planning Area and is intended to remain an important visual, ecological, and recreational asset. Future development should seek to protect and enhance the Canyon while providing carefully located visual and physical access points that connect to the broader bicycle, pedestrian, and trail network serving both residents and employees.

Potential future enhancement and restoration strategies may include removal and management of invasive plant species such as reed canary grass, Himalayan blackberry, and English ivy; restoration of native aquatic and upland vegetation communities; and retention or installation of snags and woody debris to support wildlife habitat functions. Important habitat species identified within the area include Red-legged Frogs, Pileated Woodpeckers, Oregon white oak, Ponderosa pine, and Geyer willow. Additional information is provided in Appendix G.

In addition to habitat protection and restoration, maintaining connections between habitat areas will be important to support wildlife movement and ecological function as the area develops over time. Future development within the BCPA should consider opportunities to maintain and enhance wildlife connectivity through site design, open space planning, natural resource protection, and infrastructure improvements.

Where appropriate, wildlife crossings, habitat corridors, culverts, bridge structures, and other design measures should be evaluated to facilitate the safe movement of wildlife across developed areas and transportation facilities. Such measures can help reduce wildlife-vehicle conflicts, improve habitat connectivity, support ecosystem health, and reinforce the City's broader environmental stewardship objectives. The BCMP encourages consideration of wildlife movement and connectivity during future planning, infrastructure design, and development review processes, particularly in areas adjacent to Basalt Creek, associated wetlands, and other significant natural resource features.

NOTE THAT THE OVERALL MASTER PLAN GRAPHIC (PLACEHOLDER ON PAGE 44) WILL SHOW NATURAL RESOURCES WITH ANNOTATIONS.

IMPLEMENTATION & PHASING STRATEGY

Implementation and Phasing Strategy

Recommendations

The recommendations for the BCPA are structured into four categories: Further Exploration, Planning, Funding, and Investment. These strategies address zoning, infrastructure, and development challenges while providing a phased approach for implementation. Central to these recommendations is the recognition that the status quo is unlikely to change without the City taking a more direct approach to encouraging development. Challenges such as fragmented ownership, the presence (and continued growth) of contractor establishments, and substantial needed infrastructure upgrades to serve urban developments are unlikely to resolve without City intervention.

Wilsonville can approach Basalt Creek's development with varying levels of involvement. A conservative approach would prioritize zoning and regulation, planning control, and limited infrastructure investments to guide development. A more proactive approach would accelerate the BCPA's vision by supporting relocation of contractor establishments, acquiring and aggregating land, and investing in additional infrastructure needs in areas like West Railroad. Which strategy the City chooses will ultimately depend on balancing risks with the desire to unlock the Planning Area's potential.

ADDITIONAL IMPLEMENTATION AND PHASING ITEMS MAY COME OUT OF THE ADDITIONAL INFRASTRUCTURE ANALYSIS. PENDING COMPLETION OF THOSE REPORTS RELEVANT DETAILS WILL BE ADDED TO THIS CHAPTER.

IMPLEMENTATION ORGANIZATION

FURTHER EXPLORATION

This category focuses on coordination, technical analysis, stakeholder engagement, and relationship building needed to support future decision-making and long-term implementation

PROPERTY OWNER AND STAKEHOLDER COORDINATION

- **Outreach to Property Owners:** Continue engaging property owners to better understand development plans, operational needs, redevelopment barriers, and willingness to participate in future infrastructure or redevelopment efforts. Explore opportunities for coordinated redevelopment, land assembly, and phased transitions over time.
- **Craft Industrial Opportunity:** Continue discussions with landowners in the Craft Industrial area regarding potential lot reconfiguration or partitioning opportunities that could improve long-term redevelopment potential while responding to site constraints and surrounding residential uses.
- **West Railroad Opportunity Sites:** Identify willing landowners and opportunity sites within West Railroad that may support incremental redevelopment and help establish momentum for future investment.
- **Support Contractor Establishment Relocation or Compliance:** Develop strategies to help contractor establishments relocate, consolidate, or conform with City standards. This could involve creating incentives for relocation or working with businesses to improve operations over time to better align with long-term City development objectives.
- **Explore Partnerships:** Identify opportunities to work with public entities and private partners to align resources and attract desired industries. Potential partners may include Business Oregon, Greater Portland Inc. (GPI), the Port of Portland, utility providers, and regional agencies.

TRANSPORTATION AND INFRASTRUCTURE COORDINATION

- **Coordinate with Utilities and Service Providers:** Continue coordination with utility providers, including Portland General Electric (PGE), Clean Water Services, and regional infrastructure partners, to evaluate long-term water, sewer, stormwater, and power needs associated with future industrial and employment uses.

- **Coordinate with Regional and Railroad Partners:** Continue coordination with Washington County, Metro, ODOT, Portland and Western Railroad (PNWR), Business Oregon, Greater Portland Inc. (GPI), and other regional partners related to transportation access, rail crossings, freight mobility, infrastructure funding, and economic development opportunities. Coordination should continue regarding the long-term feasibility of a future public railroad crossing at Cahalin Road, which could improve access, circulation, and freight mobility within the West Railroad area.
- **Evaluate Transportation Access Opportunities:** Continue exploring long-term access opportunities for West Railroad, including the feasibility of a future public railroad crossing at Cahalin Road, modernization of the Grahams Ferry Road undercrossing, and phased improvements to Tonquin Road and internal circulation routes.

ENVIRONMENTAL AND INFRASTRUCTURE ANALYSIS

- **Continue Environmental and Infrastructure Analysis:** Continue evaluating environmental constraints, utility alignments, stormwater strategies, and infrastructure feasibility to better understand long-term development potential and phasing considerations, particularly within the West Railroad area.

PLANNING

This category focuses on aligning zoning, infrastructure planning, transportation systems, environmental regulations, and economic development strategies with the long-term vision for the BCPA.

LAND USE AND ZONING

- **Apply the Planned Development Industrial (PDI) Zone Across Basalt Creek with Modifications:** Support a broad range of industrial and employment uses consistent with the BCCP and Economic Inventory while allowing flexibility for evolving market conditions and business types.
- **Prohibit Low-Intensity Uses and Address Existing Contractor Establishments:** Establish zoning prohibitions or limitations on low-intensity uses that do not support long-term employment density goals. Determine appropriate approaches for existing contractor establishments, such as conditional, nonconforming, or prohibited use status.
- **Evaluate Additional Standards or Allowances for the Craft Industrial Area:** Consider additional uses and development standards within the Craft Industrial Area, such as live-work spaces, small-scale offices, incubator spaces, or small-scale production facilities, that better respond to site constraints and nearby residential development.
- **Evaluate West Railroad Zoning Flexibility:** Consider zoning and development standards within West Railroad that maintain flexibility for a variety of industrial and employment uses while emphasizing site organization, environmental integration, circulation, and development quality. This work should continue to involve coordination with property owners, regional partners, and potential development interests.
- **Update Urban Planning Area Agreement (UPAA):** Amend agreement with Washington County to transfer planning authority for Basalt Creek to the City, ensuring alignment with Wilsonville's long-term vision. This would reduce the risk of continued low-intensity uses, alleviate staffing burdens at the County level, and reduce future pressures to expand the urban growth boundary (UGB). As an example, Troutdale has an Intergovernmental Agreement with Multnomah County that transfers planning authority to the City for areas within its UGB.

COORDINATION AND INFRASTRUCTURE PLANNING

- **Coordinate with Washington County on Annexation Planning:** Continue coordinating with Washington County on development review, transition planning, and long-term implementation within the BCPA. For properties that remain under County jurisdiction, encourage interim site

and design improvements that support the long-term industrial and employment vision for the area while maintaining communication with property owners regarding future expectations. Upon annexation into the city, require new development and redevelopment to comply with the City's Development Code and applicable design, infrastructure, and resource protection standards consistent with the BCMP vision. Continue evaluating whether future updates to the Urban Planning Area Agreement (UPAA) are needed to support long-term implementation and coordination.

» **Conduct Preliminary Urban Renewal Area (URA) Analysis:** Conduct a feasibility study evaluating whether expanding the existing Coffee Creek Urban Renewal Area or establishing a new URA for Basalt Creek could support infrastructure, redevelopment, environmental, and site readiness improvements. The study should also evaluate opportunities for land assembly and coordinated redevelopment within fragmented portions of the Planning Area. Findings should provide City Council with options and recommendations regarding long-term infrastructure funding and implementation strategies.

» **Coordinate Future Transit Service:** Continue coordinating with SMART to expand future transit service within the BCPA as development occurs, including consideration of future routes, stops, and connections serving employment areas and regional destinations.

» **Coordinate Future TSP and Regional Transportation Planning:** Continue coordinating with Metro, Washington County, and neighboring jurisdictions regarding long-range transportation projects identified in the Metro Regional Transportation Plan (RTP) that may affect the BCPA. This includes evaluating whether additional long-range roadway improvements, such as future Grahams Ferry Road widening or improvements to 124th Avenue, should be incorporated into future updates to the Transportation System Plan (TSP).

NATURAL RESOURCES, OPEN SPACE, AND TRAILS

» **Evaluate Wildlife Corridor and Habitat Impacts:** Continue evaluating potential impacts to wildlife movement, habitat connectivity, and ecological function associated with future development and infrastructure improvements within West Railroad and the broader BCPA. Future planning efforts should consider opportunities to avoid fragmentation, maintain habitat connections where feasible, and integrate restoration or enhancement strategies into long-term development and infrastructure planning.

» **Update the Significant Resource Overlay Zone (SROZ):** Update Wilsonville's SROZ maps, inventory, and Development Code provisions using the findings of the PHS 2024 Natural Resources Inventory. Consider whether updates to mapping, buffers, mitigation standards, review procedures, or habitat enhancement requirements may be appropriate to support long-term implementation and coordination with future development and infrastructure planning efforts.

» **Evaluate Enhanced Day Road Crossing:** Consider an enhanced pedestrian and bicycle crossing of Day Road connecting the southern end of the Basalt Creek Canyon Ridge Trail (LT-02) with future pedestrian and bicycle facilities along the Coffee Creek Supporting Street.

» **Support Ice Age Tonquin Trail Connectivity:** As development occurs within the West Railroad area, continue evaluating opportunities for development to improve or extend on-street sidewalks, bicycle lanes, and related multimodal facilities that support safe and comfortable connections to the future Ice Age Tonquin Trail.

ECONOMIC DEVELOPMENT AND IDENTITY

» **Promote Economic Development, Site Readiness, and Branding:** Continue actively marketing the BCPA as a long-term industrial and employment opportunity area by maintaining clear information related to site readiness, infrastructure availability, incentives, zoning flexibility, and available funding tools. Continue coordinating with Greater Portland Inc. (GPI), Business Oregon, regional partners, developers, employers, and site selectors to increase awareness of Wilsonville's industrial development opportunities and strengthen the city's position within the regional industrial market. Outreach efforts should include proactive communication, targeted engagement, and site-specific marketing materials that highlight the BCPA's transportation access, environmental amenities, flexible development potential, and long-term infrastructure planning efforts. As redevelopment opportunities become clearer over time, consider establishing a distinct identity and branding strategy for West Railroad and the broader BCPA.

» **Extend Wayfinding and Signage Planning to the BCPA:** As future updates to the City's wayfinding and signage program occur, extend the framework to include the BCPA. Future wayfinding planning should consider gateway features, district identity, freight and visitor navigation, trail and multimodal connections, and coordinated signage that supports the long-term employment, industrial, and recreational vision for the Planning Area.

FUNDING

This category focuses on identifying financing tools, partnerships, and long-term funding strategies needed to support infrastructure improvements and redevelopment.

- **Explore and Establish Funding Mechanisms:** Continue evaluating funding tools and financing strategies that could support transportation, utility, stormwater, environmental, and redevelopment improvements throughout the BCPA.
- **Evaluate Urban Renewal and Tax Increment Financing:** Evaluate use of Urban Renewal or Tax Increment Financing mechanisms to help fund infrastructure improvements, site preparation, transportation upgrades, environmental restoration, and redevelopment coordination efforts.
- **Explore Local Improvement Districts (LIDs) and Cost Sharing:** Explore Local Improvement Districts, reimbursement districts, public-private partnerships, and horizontal development agreements to distribute infrastructure costs among benefiting properties. Recognize that participation levels may vary depending on the operational needs of existing uses.
- **Pursue Regional Infrastructure Partnerships:** Continue coordinating with Metro, Business Oregon, Washington County, utility providers, and regional economic development organizations to pursue infrastructure funding partnerships and implementation support.
- **Explore and Leverage State and Federal Funding:** Leverage grants, loans, and other funding programs to support infrastructure upgrades and attract investment. These could include, but are not limited to: Statewide Transportation Improvement Program (STIP); Immediate Opportunity Fund (IOF); Oregon Transportation Infrastructure Bank (OTIB); Safe Drinking Water Revolving Fund (SDWRLF); Water Wastewater Fund (W/W); Special Public Works Fund (SPWF); U.S. Economic Development Association (EDA) Public Works Program; Business Oregon Industrial Site Readiness Programs; Metro planning and development grant programs

INVESTMENTS

This category focuses on prioritizing infrastructure, redevelopment, and economic development investments that could help catalyze long-term growth within the BCPA.

- **Prioritize Early Infrastructure Investments:** Focus early infrastructure improvements on properties that are cost-effective to serve and likely to develop in alignment with the BCPA vision, such as the SW Greenhill Road site. These early investments can demonstrate feasibility and attract additional development. The City could collaborate with property owners, Greater Portland Inc. (GPI), and Business Oregon to attract a catalytic user that could justify and accelerate infrastructure development for the site.
- **Invest in Transportation Access and Freight Mobility:** Prioritize improvements that enhance regional access, freight circulation, and multimodal connectivity, including future improvements to Grahams Ferry Road, Tonquin Road, and Basalt Creek Parkway.
- **Expand Site Readiness and Development Incentive Programs:** Continue evaluating opportunities to expand or refine existing economic development and infrastructure assistance programs, including the Wilsonville Investment Now (WIN) program and Regional Site Investment Strategy (RSIS) opportunities, to better support infrastructure delivery, site preparation, redevelopment coordination, and industrial land readiness within the BCPA. Priority should be placed on strategic sites and catalytic infrastructure investments that can support long-term employment growth and phased redevelopment.
- **Explore Development Incentives:** Consider system development charge (SDC) adjustments or deferrals for targeted developments that support the City's vision for BCCP and where it would not place undue burdens on funds available for capital improvements. Explore providing relocation assistance to contractor establishments to enable redevelopment. This could include support identifying alternative sites and streamlining permitting processes if those sites are in Wilsonville.
- **Pursue Site Acquisition and Aggregation:** Partner with public or private entities to assemble large, contiguous parcels that can support high-value industrial users. The City could explore securing purchase options on key parcels to facilitate land assembly. A purchase option allows Wilsonville the right to buy property within a specified timeframe, offering flexibility without the immediate cost of full acquisition. This proactive approach provides leverage and control over future development while allowing the City to decline the purchase if circumstances change or acquisition becomes unfeasible. To advance this strategy, the City should identify and prioritize purchase option agreements with property owners of high-opportunity sites, building momentum for collaboration and development.

Phasing Strategy

Implementation of the BCMP is expected to occur incrementally over time as infrastructure funding, market demand, redevelopment interest, and partnership opportunities evolve. The phasing strategy outlined in Table 4 below organizes the BCMP recommendations into near-term, medium-term, and long-term actions intended to guide ongoing coordination, planning, investment, and implementation efforts over time.

The timing categories generally reflect when an action may begin or become a higher priority rather than when it would necessarily be completed. Many actions, particularly those related to infrastructure coordination, economic development, environmental planning, and partnership building, are expected to continue across multiple phases as development occurs and conditions change.

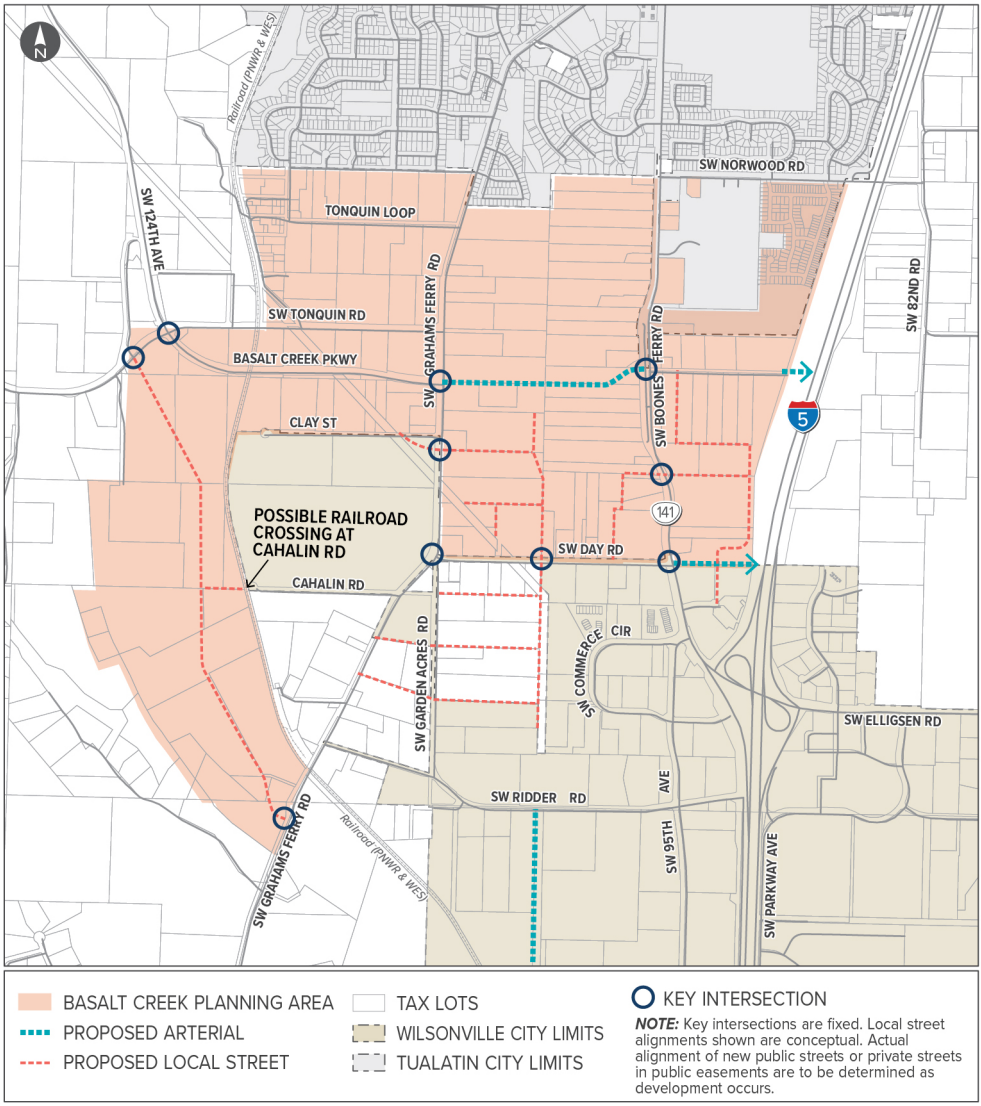
Table 4. Implementation Phasing

Action Step	Description	Timeframe		
		Near-Term 0-5 yrs	Mid-Term 6-10 yrs	Long-Term 11+ yrs
Conduct Preliminary Urban Renewal Area (URA) Analysis	Evaluate whether expanding the existing Coffee Creek URA or establishing a new URA for Basalt Creek could support infrastructure, redevelopment, environmental, and site readiness improvements.	●		
Amend the Urban Planning Area Agreement (UPAA)	Coordinate with Washington County to strengthen annexation planning, development review coordination, and long-term implementation authority within the BCPA.	●		
Coordinate with Washington County on Annexation Planning	Coordinate on development review, transition planning, and implementation for properties remaining under County jurisdiction prior to annexation.	●	●	
Evaluate Zoning and Development Code Updates	Update to zoning and development standards related to industrial uses, contractor establishments, Craft Industrial development, and long-term flexibility within the BCPA.	●		
Evaluate Additional Standards or Allowances for the Craft Industrial Area	Consider additional development standards and use allowances supporting live-work, incubator, and small-scale industrial uses compatible with surrounding residential areas.	●		
Evaluate West Railroad Zoning Flexibility	Consider zoning and development standards that maintain flexibility for industrial and employment uses while addressing environmental and access constraints.	●		
Continue Property Owner and Stakeholder Coordination	Engage property owners, utility providers, regional agencies, and railroad partners regarding development opportunities, infrastructure needs, and redevelopment barriers.	●	●	●
Support Contractor Establishment Relocation or Compliance	Explore relocation assistance, redevelopment coordination, or compliance strategies for contractor establishments over time.	●	●	●
Coordinate with BPA Regarding Power Easement Opportunities	Coordinate with the Bonneville Power Administration (BPA) regarding potential development, access, trail, stormwater, utility, or multimodal circulation opportunities within or adjacent to the BPA transmission easement in the West Railroad area.	●		
Coordinate with PGE on Anticipated Power Needs	Continue coordinating with Portland General Electric (PGE) regarding anticipated long-term power demand, transmission capacity, substation needs, and utility infrastructure requirements associated with future industrial and employment development within the BCPA.	●	●	●
Explore Partnerships	Coordinate with public agencies, utilities, Business Oregon, GPI, and other regional partners to support infrastructure and economic development goals.	●	●	●
Coordinate with Utilities and Service Providers	Continue coordination regarding long-term water, sewer, stormwater, and power needs associated with industrial and employment growth.	●	●	●
Coordinate with Regional and Railroad Partners	Continue coordination regarding freight mobility, regional transportation planning, and long-term opportunities such as a future Cahalin Road railroad crossing.	●	●	●
Evaluate Transportation Access Opportunities	Continue evaluating long-term access opportunities related to Grahams Ferry Road, Tonquin Road, and the West Railroad area.	●	●	
Continue Environmental and Infrastructure Analysis	Continue evaluating and understanding environmental constraints, utility alignments, stormwater strategies, and infrastructure feasibility throughout the Planning Area.	●	●	
Coordinate Future Transit Service	Coordinate with SMART regarding future transit routes, stops, and employment-serving connections within the BCPA.	●	●	●
Coordinate Future TSP and Regional Transportation Planning	Coordinate with Metro, Washington County, and neighboring jurisdictions regarding future transportation improvements affecting the BCPA. This includes potentially adding Metro RTP projects #11924 and #11469.	●	●	
Evaluate Enhanced Day Road Crossing	Consider enhanced bicycle and pedestrian crossing improvements connecting the Basalt Creek Canyon Ridge Trail and future Coffee Creek facilities.	●	●	
Support Ice Age Tonquin Trail Connectivity	Continue evaluating opportunities to improve multimodal access and connections supporting the future Ice Age Tonquin Trail.	●	●	●
Promote Economic Development, Site Readiness, and Branding	Continue marketing the BCPA as a long-term industrial and employment opportunity area while coordinating with regional economic development partners.	●	●	●
Extend Wayfinding and Signage Planning to the BCPA	Extend future wayfinding, gateway, and signage planning efforts to include the BCPA and West Railroad areas.	●		
Explore and Establish Funding Mechanisms	Continue evaluating funding tools and financing strategies supporting transportation, utility, stormwater, and redevelopment improvements.	●	●	●
Monitor Market Trends and Adjust Policies Over Time	Continue monitoring economic and industry trends and adjust zoning, policies, incentives, or infrastructure strategies as needed.	●	●	●

Planning Commission Meeting - June 10, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)
Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Action Step	Description	Timeframe		
		Near-Term 0-5 yrs	Mid-Term 6-10 yrs	Long-Term 11+ yrs
Evaluate Urban Renewal and Tax Increment Financing	Explore tax increment financing and Urban Renewal strategies supporting infrastructure and redevelopment investments.	●	●	●
Explore Local Improvement Districts (LIDs) and Cost Sharing	Explore reimbursement districts, cost-sharing agreements, and public-private partnerships to distribute infrastructure costs.		●	●
Pursue Regional Infrastructure Partnerships	Coordinate with regional agencies and organizations regarding infrastructure funding and implementation support.	●	●	
Explore and Leverage State and Federal Funding	Pursue grants, loans, and infrastructure funding opportunities supporting industrial land readiness and redevelopment.	●	●	●
Prioritize Early Infrastructure Investments	Focus early infrastructure planning and investment efforts on strategic opportunity sites that are cost-effective to serve and likely to redevelop.	●	●	
Invest in Transportation Access and Freight Mobility	Prioritize improvements supporting regional access, freight circulation, and multimodal connectivity.		●	●
Expand Site Readiness and Development Incentive Programs	Continue evaluating opportunities to expand or refine programs such as WIN and RSIS to support redevelopment and industrial land readiness.	●	●	●
Explore Development Incentives	Consider SDC adjustments, relocation assistance, infrastructure participation agreements, and other targeted incentives supporting redevelopment.	●	●	
Pursue Site Acquisition and Aggregation	Explore land assembly, redevelopment partnerships, purchase options, and acquisition strategies supporting larger development-ready industrial sites.		●	●
Complete Phased Infrastructure Build-Out	Continue phased transportation, utility, and stormwater infrastructure improvements supporting long-term redevelopment and full site utilization.			●
Implement Major Regional Transportation and Freight Improvements	Advance major regional transportation and freight mobility improvements as funding and partnerships allow.			●
Reassess Infrastructure Priorities and Implementation Strategies	Reevaluate infrastructure priorities, development strategies, and implementation approaches as redevelopment occurs over time.			●
Evaluate Wildlife Corridor and Habitat Impacts	Conduct additional analysis of wildlife movement corridors, habitat connectivity, and ecological impacts associated with future development and infrastructure improvements within West Railroad and the broader BCPA. Use findings to help inform refined alignments, site design, mitigation strategies, habitat restoration opportunities, and long-term resource planning efforts.	●	●	
Update the Significant Resource Overlay Zone (SROZ)	Update SROZ maps and Development Code provisions using the PHS 2024 Natural Resources Inventory.	●		

Moving Forward



The Basalt Creek Master Plan establishes a long-term framework for future industrial and employment development within one of Wilsonville's last major growth areas inside the Urban Growth Boundary. The Master Plan builds upon the vision established in the Basalt Creek Concept Plan while responding to changing economic conditions, updated infrastructure analysis, environmental considerations, and evolving development opportunities.

Implementation of the BCMP will require ongoing coordination among the city, property owners, utility providers, regional agencies, and private development partners over many years. While portions of the Planning Area are positioned for earlier redevelopment and infrastructure investment, other areas, particularly West Railroad, will require additional coordination, funding, environmental review, and infrastructure improvements before redevelopment can occur at an urban scale.

As development occurs over time, Wilsonville will continue refining infrastructure planning, zoning, transportation improvements, environmental protection strategies, and economic development tools needed to support implementation of the BCMP. Future development proposals, public investments, and infrastructure decisions should continue to balance economic opportunity, freight mobility, natural resource protection, multimodal connectivity, and long-term employment growth objectives.

Ultimately, the BCMP positions the BCPA as a long-term employment and industrial opportunity area capable of supporting Wilsonville's economic competitiveness, expanding the city's industrial land supply, and creating opportunities for family-wage jobs in industries that contribute to the region's economic vitality. Through continued coordination and investment over time, the BCPA can become a place where businesses thrive, workers have access to quality employment opportunities, and future generations benefit from a strong local economy.

TECHNICAL MEMORANDUM

DATE: May 20, 2026

TO: Chris Myers | City of Wilsonville
Amy Maag | City of Wilsonville

FROM: Jenna Bogert, PE | DKS Associates
Hallie Turk, EI, RSP$_1$ | DKS Associates

SUBJECT: Wilsonville Basalt Creek Master Plan - Transportation Analysis

Project #26367-000

INTRODUCTION

The Basalt Creek Planning Area (BCPA) is located between the southern edge of Tualatin and the northern boundary of Wilsonville. See Figure 1.

Within the BCPA, the West Railroad Area is the westernmost portion that extends south of Tonquin Road to Grahams Ferry Road, as shown in Figure 1. It is bound to the east by the railroad, owned by Oregon Department of Transportation and operated by Portland & Western railroad, and bound to the west by Coffee Lake Creek.

Currently, the City of Wilsonville is preparing a Master Plan for the BCPA. This Master Plan will be one of many studies and plans prepared for the BCPA (see *Background* section for summary of previous planning efforts). The purpose of this memorandum is to provide a summary of the previous transportation planning efforts, identify any new transportation improvements needed to support the development of the BCPA and West Railroad area, and to provide a conceptual local street layout within the City of Wilsonville portion of the BCPA.

Figure 1 Basalt Creek Planning Area and jurisdictional boundaries.

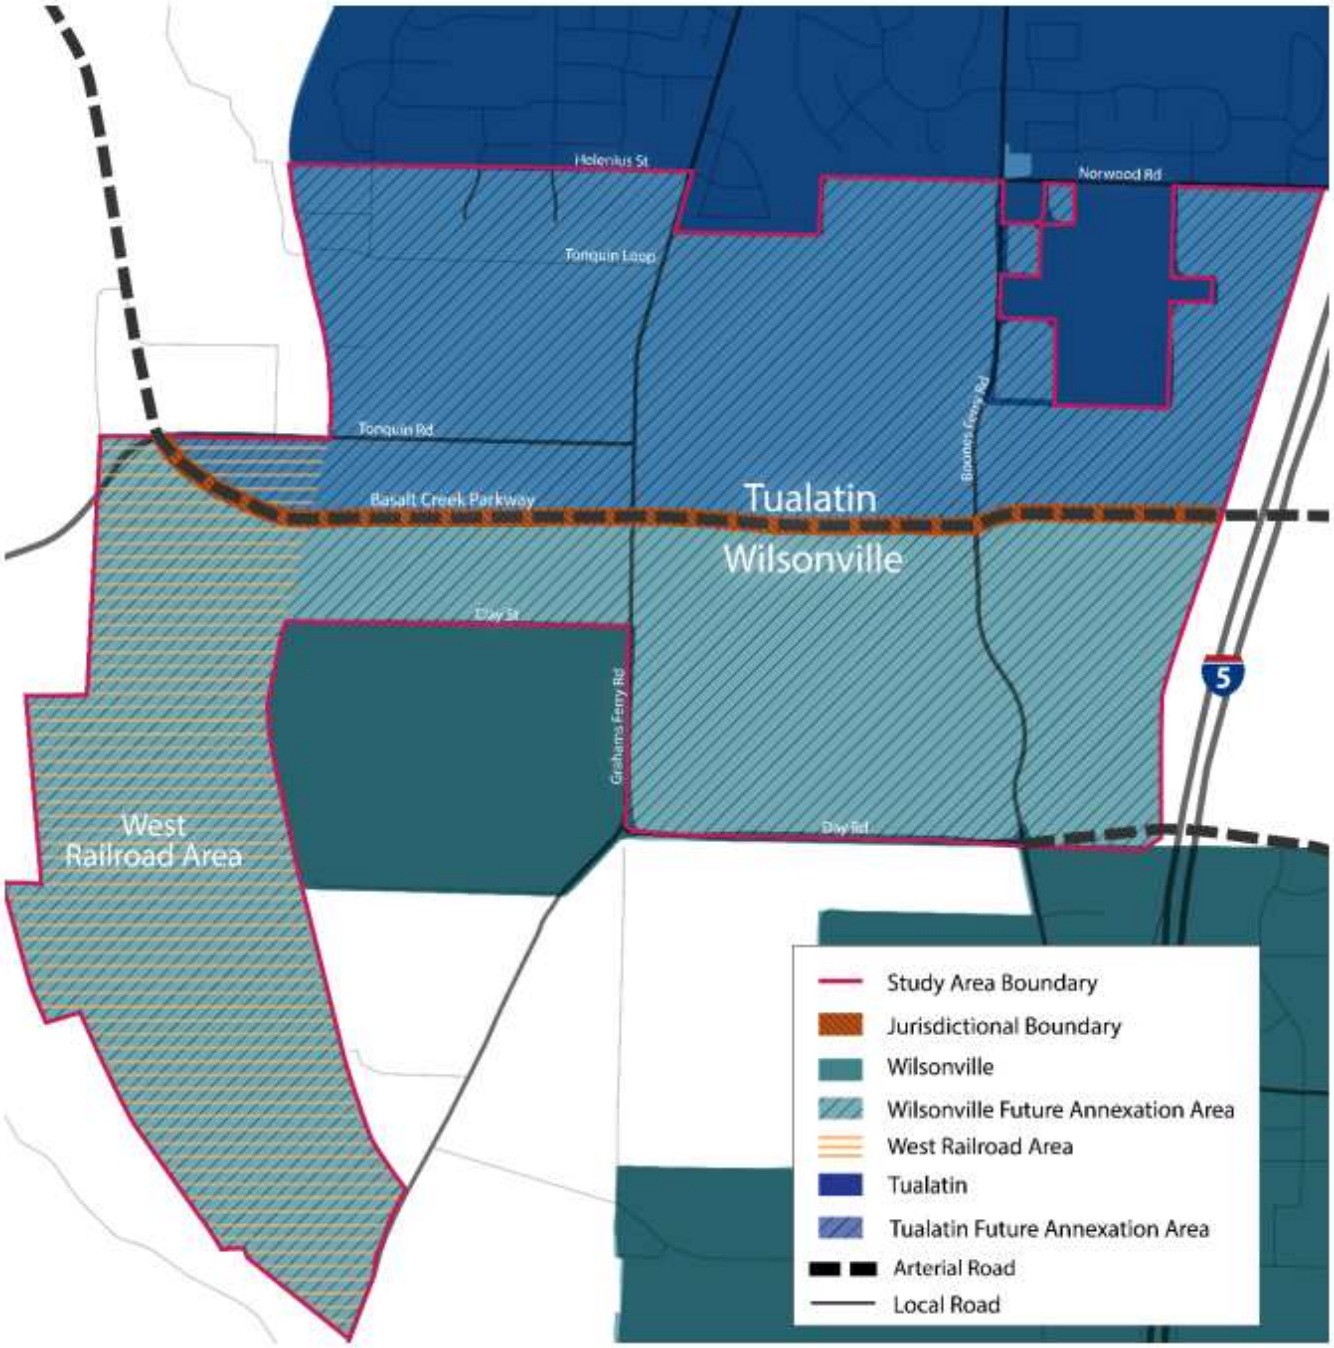

FIGURE 1: BCPA DESIGNATIONS, INCLUDING WEST RAILROAD AREA

Source: 2018 Basalt Creek Concept Plan

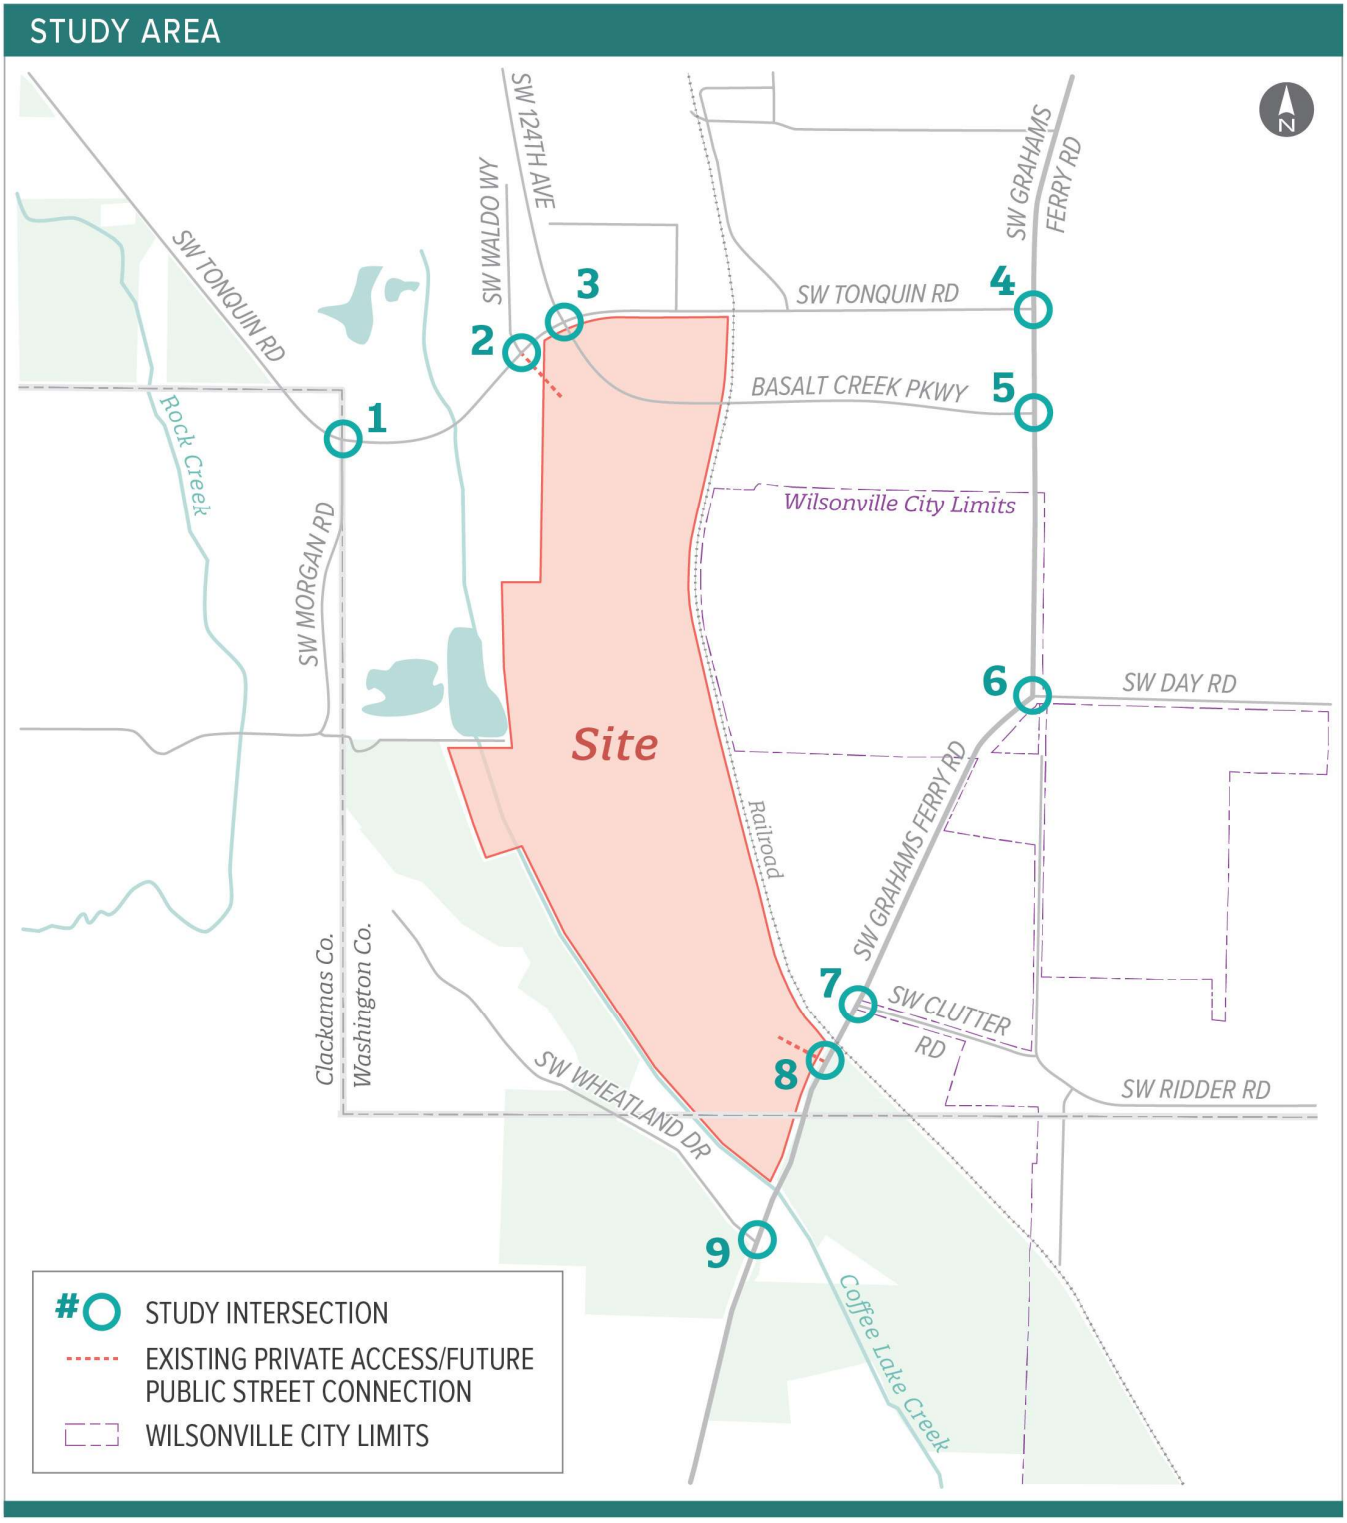
BACKGROUND

Previous planning and construction efforts relevant to the Basalt Creek area are summarized below.

- **2013 Basalt Creek Transportation Refinement Plan (TRP):** The TRP identified major new roads and improvements to support regional and local needs through 2035. The plan provided 18 transportation investments broken into short, medium, and long-term projects, all of which are important to ensure that the transportation network functions at acceptable levels over time. The transportation analysis was coordinated with the 2014 Metro Regional Transportation Plan (RTP).
- **2018 Concept Plan:** The Basalt Creek Concept Plan was formally adopted by the cities of Tualatin and Wilsonville in August 2018 and provides guidance for future land use and transportation decisions in the BCPA. The 2018 Concept Plan transportation analysis assumed multiple future transportation projects would be in place by 2035, as identified in the 2014 Metro RTP.
- **2019 Wilsonville TSP Amendment:** The City's Transportation System Plan (TSP) was amended in 2019 to add key transportation projects identified in the Basalt Creek Concept Plan to the city's project list. Some projects were new to the TSP; others were already identified in the TSP. See the table in the Appendix for a detailed description of the TSP amendments related to Basalt Creek Planning Area.
- **Ice Age Tonquin Trail:** The Ice Age Tonquin Trail is a planned regional pedestrian and bicycle trail system connecting Sherwood, Tualatin, and Wilsonville through the Basalt Creek planning area. Through the West Railroad area, the trail is proposed to be a paved shared-use path that loosely follows the alignment of Coffee Lake Creek and connects to Tonquin Road via Morgan Road.
- **Recent Transportation Improvements & Developments:** Since the adoption of the 2018 concept plan, several new transportation improvements and developments have been constructed within the BCPA, including:
  - **Basalt Creek Parkway/124th Avenue new roadway extension (opened 2019)**
  - **Autumn Sunrise Subdivision in Tualatin** consists of 400 single-family homes to be constructed in four phases.
  - **Plambeck Gardens Apartments in Tualatin** consist of 116 apartment units within two, four-story buildings.
  - **Brown Contracting Expansion in Washington County**; located at 9675 SW Day Road and includes the addition of covered, open-air storage building and a gravel storage expansion.

WEST RAILROAD TRANSPORTATION ANALYSIS

At the time of the 2018 BCPA Concept Plan, the West Railroad area was excluded from development assumptions due to large amount of geographical constraints (varied terrain with wetlands habitat and steep slopes), limited access, and the anticipated cost and complexity of serving the area with utilities.



Therefore, the following section provides a transportation analysis of the impacts of full development of the West Railroad area on the surrounding street network.

EXISTING CONDITIONS

The study intersections are listed in Table 1 and shown in Figure 2.

TABLE 1: STUDY INTERSECTIONS

#	INTERSECTION	JURISDICTION	TRAFFIC CONTROL
1	SW Morgan Road/SW Tonquin Road	Washington County	Two-Way Stop Control
2	SW Tonquin Road/SW Waldo Way/ North Site Access (Future)	Washington County	Two-Way Stop Control
3	Basalt Creek Parkway/SW 124th Avenue/ SW Tonquin Road	Washington County	Signal
4	SW Grahams Ferry Road/SW Tonquin Road	Washington County	Two-Way Stop Control
5	SW Grahams Ferry Road/ Basalt Creek Parkway	Washington County	Signal
6	SW Grahams Ferry Road/SW Day Road	City of Wilsonville	Signal
7	SW Grahams Ferry Road/SW Clutter Road	City of Wilsonville	All-Way Stop Control
8	SW Grahams Ferry Road/ South Site Access (Future)	Washington County	Two-Way Stop Control
9	SW Grahams Ferry Road/ SW Wheatland Drive	Clackamas County	Two-Way Stop Control

Note: The portion of the study area north of Basalt Creek Parkway would be under City of Tualatin jurisdiction in the future at buildout.

FIGURE 2: STUDY AREA

PEDESTRIAN AND BICYCLE FACILITIES

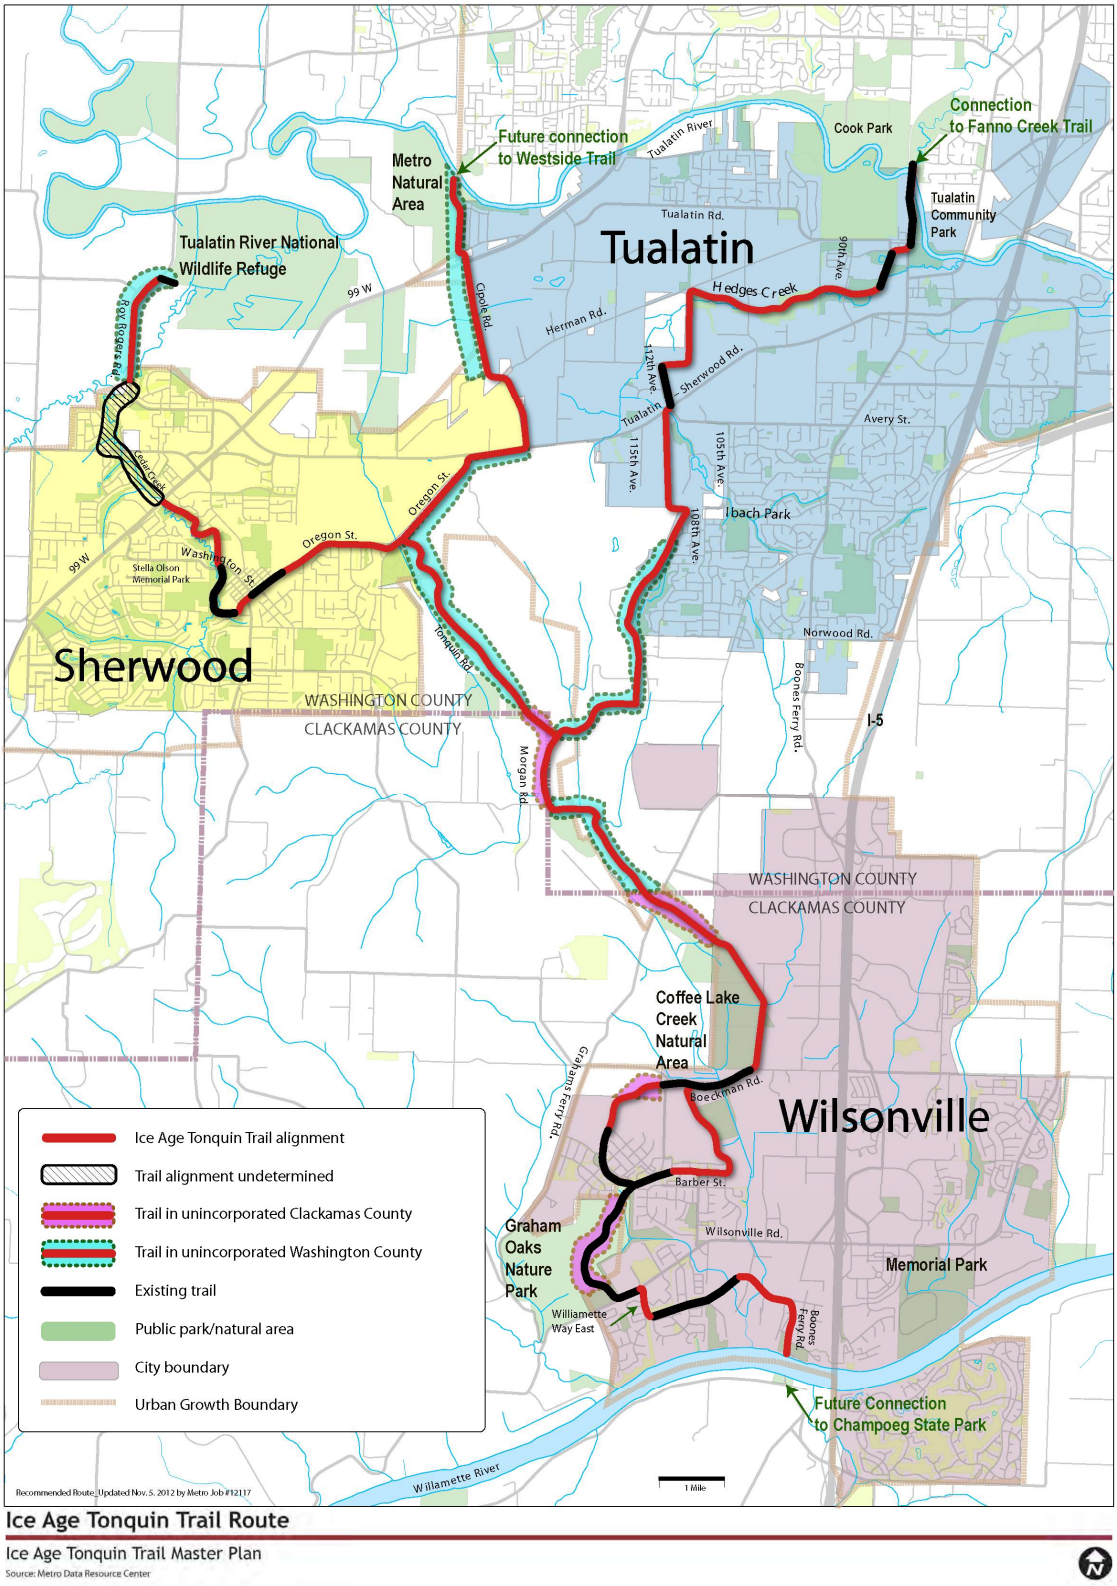
Along Grahams Ferry Road, bike lanes are present on both sides of the road from Basalt Creek Parkway to Day Road. From Day Road to Cahalin Road, there are no bike lanes. Sidewalks are present only on the west side of the road between Clay Road to Cahalin Road. From Cahalin Road to about 600 ft south of Cahalin Road, sidewalks and bike lanes are present only on the east side of the road. From this point to Wheatland Drive, there are no sidewalks or bike lanes.

Along Tonquin Road from Morgan Road to Basalt Creek Parkway, there are no sidewalks or bike lanes. West of Basalt Creek Parkway, sidewalks are intermittent until Grahams Ferry Road.

Along Basalt Creek Parkway from Tonquin Road to Grahams Ferry Road, there are no bike lanes, but the shoulders are over 5 feet wide. Sidewalks are intermittent, present only along the bridge over the Portland & Western-owned rail line and at the Grahams Ferry Road intersection.

Ice Age Tonquin Trail

Figure 3 shows the proposed alignment of the Ice Age Tonquin Trail, a planned regional pedestrian and bicycle trail system connecting Sherwood, Tualatin, and Wilsonville through the Basalt Creek planning area. Through the West Railroad area, the trail is proposed to be a paved shared-use path that loosely follows the alignment of Coffee Lake Creek and connects to Tonquin Road via Morgan Road.



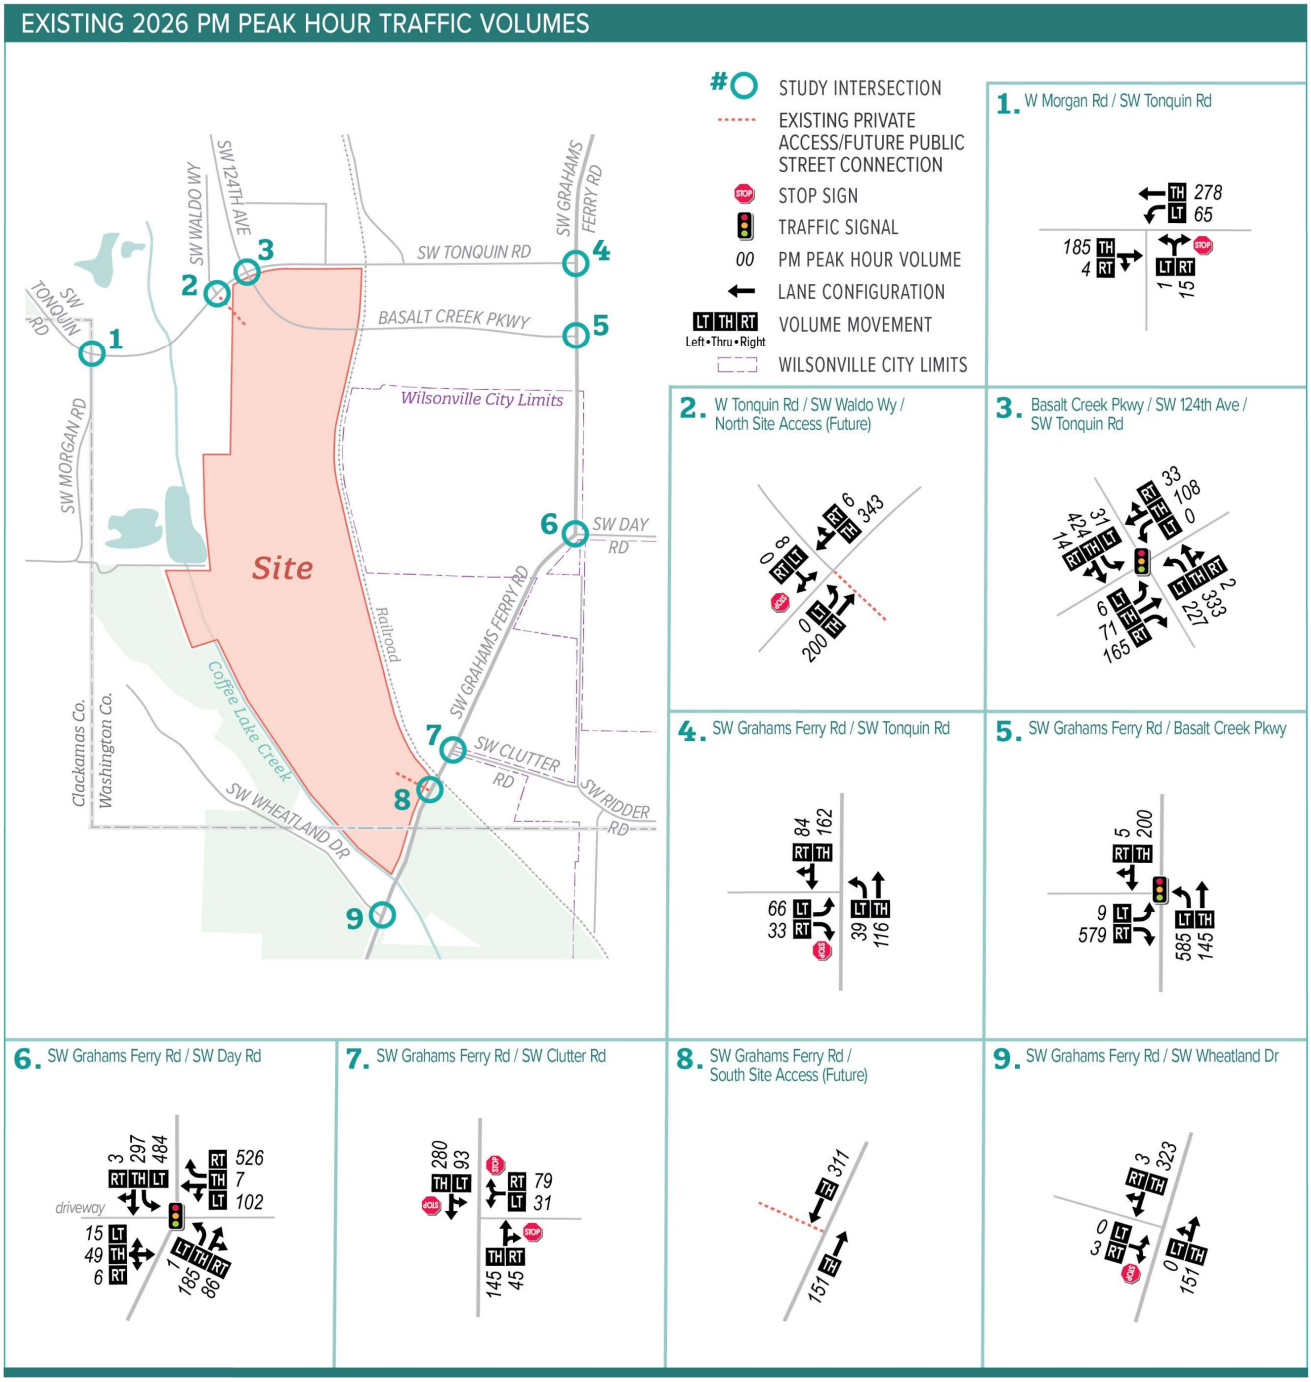


FIGURE 3: ICE AGE TONQUIN TRAIL ROUTE

Source: Ice Age Tonquin Trail Master Plan

EXISTING TRAFFIC VOLUMES

New intersection turning movement count data was collected during the weekday PM peak period (4:00pm – 6:00pm) at the study intersections in February 2026. Figure 4 shows the existing traffic volumes.

Note: The portion of the study area north of Basalt Creek Parkway would be under City of Tualatin jurisdiction in the future at buildout.

FIGURE 4: EXISTING 2026 STUDY INTERSECTION VOLUMES

INTERSECTION PERFORMANCE MEASURES

Agency operating standards often require intersections to meet level of service (LOS) or volume-to-capacity (v/c) intersection operation thresholds.

- The intersection LOS is similar to a "report card" rating based upon average vehicle delay. Level of service A, B, and C indicate conditions where traffic moves without significant delays over periods of peak hour travel demand. Level of service D and E are progressively worse operating conditions. Level of service F represents conditions where average vehicle delay has become excessive, and demand has exceeded capacity. This condition is typically evident in long queues and delays.
- The volume-to-capacity (v/c) ratio represents the level of saturation of the intersection or individual movement. It is determined by dividing the peak hour traffic volume by the maximum hourly capacity of an intersection or turn movement. When the V/C ratio approaches 0.95, operations become unstable and small disruptions can cause the traffic flow to break down, resulting in the formation of excessive queues.

City of Wilsonville: The City of Wilsonville requires study intersections on public streets to meet its minimum acceptable level of service (LOS) standard of LOS D for the PM peak period.

Washington County: Washington County's performance standards are outlined in the Washington County Transportation System Plan (TSP).[1] County intersections within an Urban Growth Boundary, but outside city limits, are considered to be within "Other Urban Areas." Therefore, the intersection mobility standard is a v/c ratio of 0.99 and LOS E.

Clackamas County: Clackamas County's performance standards are outlined in the Clackamas County Comprehensive Plan.[2] For county rural road unsignalized intersections, the intersection mobility standard is LOS E.

EXISTING INTERSECTION OPERATIONS

Intersection operations were analyzed for the PM peak hour at all study intersections for the existing conditions using Highway Capacity Manual (HCM) 7th Edition methodology.[3] The volume to capacity (v/c) ratio, delay, and level of service (LOS) of each study intersection are listed in Table 2.

[1] Table 4, Washington County Transportation System Plan. Effective November 18, 2024.

[2] Table 5-2b, Clackamas County Comprehensive Plan. Last updated March 2014.

[3] Highway Capacity Manual, 7th Edition, Transportation Research Board, 2022.

TABLE 2: EXISTING 2026 INTERSECTION OPERATIONS

INTERSECTION	JURISDICTION	TRAFFIC CONTROL[1]	MOBILITY TARGET	PM PEAK HOUR [2]		
				V/C RATIO	DELAY (SEC)	LOS
MORGAN ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.20/0.03	7.9/10.0	A/B
BASALT CREEK PARKWAY/ 124TH AVENUE/ TONQUIN ROAD	Washington County	Signal	v/c ≤ 0.99, LOS E	0.45	17.5	B
GRAHAMS FERRY ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.08/0.14	7.9/12.7	A/B
GRAHAMS FERRY ROAD/ BASALT CREEK PARKWAY	Washington County	Signal	v/c ≤ 0.99, LOS E	0.60	14.2	B
GRAHAMS FERRY ROAD/ DAY ROAD	Wilsonville	Signal	LOS D	**0.98**	**77.0**	**E**
GRAHAMS FERRY ROAD/ CLUTTER ROAD	Wilsonville	AWSC	LOS D	0.54	13.1	B
GRAHAMS FERRY ROAD/ WHEATLAND DRIVE	Clackamas County	TWSC	LOS E	0.10/0.01	0.0/10.3	A/B

Notes:
1. TWSC = Two-Way Stop Control
   AWSC = All-Way Stop Control
2. **Bold/Highlighted** = Does not meet mobility standards

As shown, all study intersections meet mobility standards under existing conditions, except for Grahams Ferry Road/Day Road. Today, this intersection experiences high vehicle volumes on the southbound approach during the PM peak hour and funnels traffic from Tualatin and other neighboring cities towards the I-5 interchange. The City has identified two high-priority improvement projects in their TSP at this intersection that include the realignment of the intersection and a new traffic signal or roundabout as well as the widening of Day Road to 5 lanes.[4]

[4] Wilsonville TSP Projects RW-02 and UU-08.

FUTURE CONDITIONS

To represent full buildout conditions, a background growth rate and trip generation estimates for full buildout conditions were applied to existing volumes. This methodology was used rather than future volume forecasting because the travel demand models assumed minimal growth in this area, which is no longer an accurate assumption.

TRAFFIC GROWTH ASSUMPTIONS

Existing traffic volumes were forecasted to the future year 2046 by applying a linear growth rate of 3.0% per year to the existing year traffic counts. This growth rate was derived from Washington County travel demand models. **The Washington County travel demand models are up to date and consistent with the 2023 METRO Regional Transportation Plan.**

The following transportation projects in the Wilsonville TSP within the West Railroad study area were assumed to be constructed by 2046:

- **Basalt Creek Parkway Extension: TSP Project RE-14**
  This project will extend Basalt Creek Parkway from Grahams Ferry Road to Boones Ferry Road. This will create a new east-west connection parallel to Day Road. The study's future traffic volumes were adjusted to reflect the expected changes in traffic patterns resulting from this project's construction.
- **Grahams Ferry Road/Day Road/Garden Acres Road Reconstruction: TSP Project UU-08**
  This intersection will be upgraded to either signal or roundabout control. Additionally, it will be completely reconstructed to incorporate the following changes:
  a) include an upgraded Garden Acres Road as the intersection's south leg;
  b) construct a new west leg that will be the continuation of Grahams Ferry Road; and
  c) remove the Coffee Creek Correctional Facility entrance from the intersection and construct a new entrance along the new west leg extension of Grahams Ferry Road.
    - It should be noted that the reconstruction of this intersection and traffic control change will address the existing operational deficiency shown in Table 1. This traffic study assumes signal control at this location.
- **Grahams Ferry Road/Clutter Road Closure and Java Road Traffic Signal: TSP Project RE-13**
  Once the Java Road extension is constructed and signalized at the intersection with Grahams Ferry Road, close Clutter Road at its approach to Grahams Ferry Road. Therefore, the Clutter Road intersection will not exist in the year 2046.
- **Day Road Widening: TSP Project RW-02**
  Widen Day Road from Boones Ferry Road to Grahams Ferry Road to include additional travel lanes in each direction with bike lanes and sidewalks.

LAND USE ASSUMPTIONS

The West Railroad planning area is assumed to have four separate areas of development, as shown in the figure below. The numbering of the areas is not indicative of the expected order of development for the planning area.

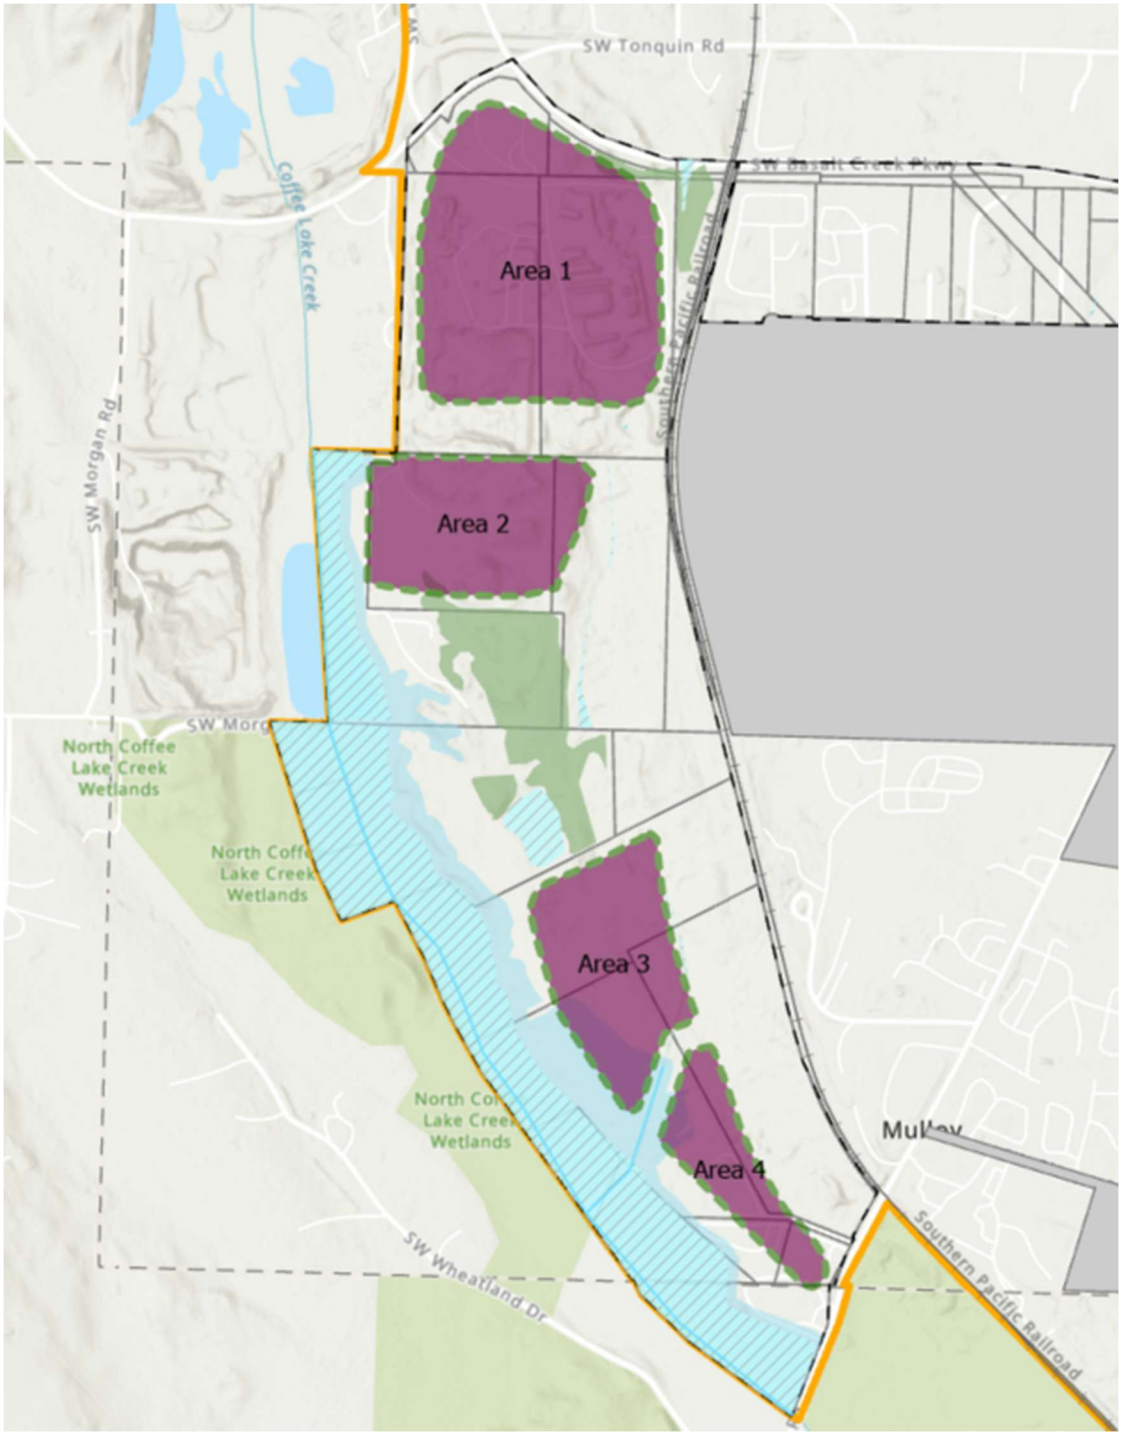

FIGURE 5: BREAKDOWN OF FUTURE EMPLOYMENT AREAS

For each of the four planning areas, trip generation was estimated for the reasonable worst-case development scenario, then added on top of the future background volumes established in the previous section. For this study, the Institute of Transportation Engineers (ITE) 12th Edition average trip generation data was used, which is based on national land use data.[5] This methodology was used in lieu of future volume forecasting because the travel demand models assumed minimal growth in this area, which does not reflect the study's assumptions.

The reasonable worst-case development scenario is based on the following assumptions:

- 35% of the overall site acreage is assumed for building footprint. The remaining 65% of the site acreage is assumed to accommodate streets, landscaping, off-street parking, and on-site circulation.
- The majority of the development is categorized as industrial, with a mix of manufacturing, warehouse, craft industries, office facilities, and some supporting retail. It is intended to be a highly diverse mix of facilities that will generate mostly employment trips and a high percentage of heavy vehicle trips. This traffic study uses ITE Land Use Code (LUC) 130: Industrial Park to represent this land use.
- One restaurant/brewery about 6,000 square feet in size within Area 1. This traffic study uses ITE LUC 971: Brewery Taproom to represent this land use.

The table below shows the trip generation estimate used to represent the full buildout of the West Railroad area.

TABLE 3: FUTURE BUILDOUT TRIP GENERATION ESTIMATE

AREA	LAND USE	SIZE [A]	PM PEAK HOUR TRIPS
AREA 1	Industrial Park	562 KSF	129 (36 in, 93 out)
	Restaurant/Brewery	6 KSF	59 (41 in, 18 out)
AREA 2	Industrial Park	265 KSF	61 (17 in, 44 out)
AREA 3	Industrial Park	278 KSF	64 (18 in, 46 out)
AREA 4	Industrial Park	151 KSF	35 (10 in, 25 out)
FUTURE DEVELOPMENT TOTAL			**348** **(122 in, 226 out)**

[A] KSF = Thousand Square Feet

[5] Trip Generation Manual, 12th Edition, Institute of Transportation Engineers, 2025.

PUBLIC STREET CONNECTIONS

Public industrial local streets were assumed to be constructed through the planning area to support connectivity and access to the future development area. Due to the railroad and environmental constraints, the planning area was assumed to be accessed via two locations: Tonquin Road at the north end of the study area and Grahams Ferry Road at the south end of the study area.

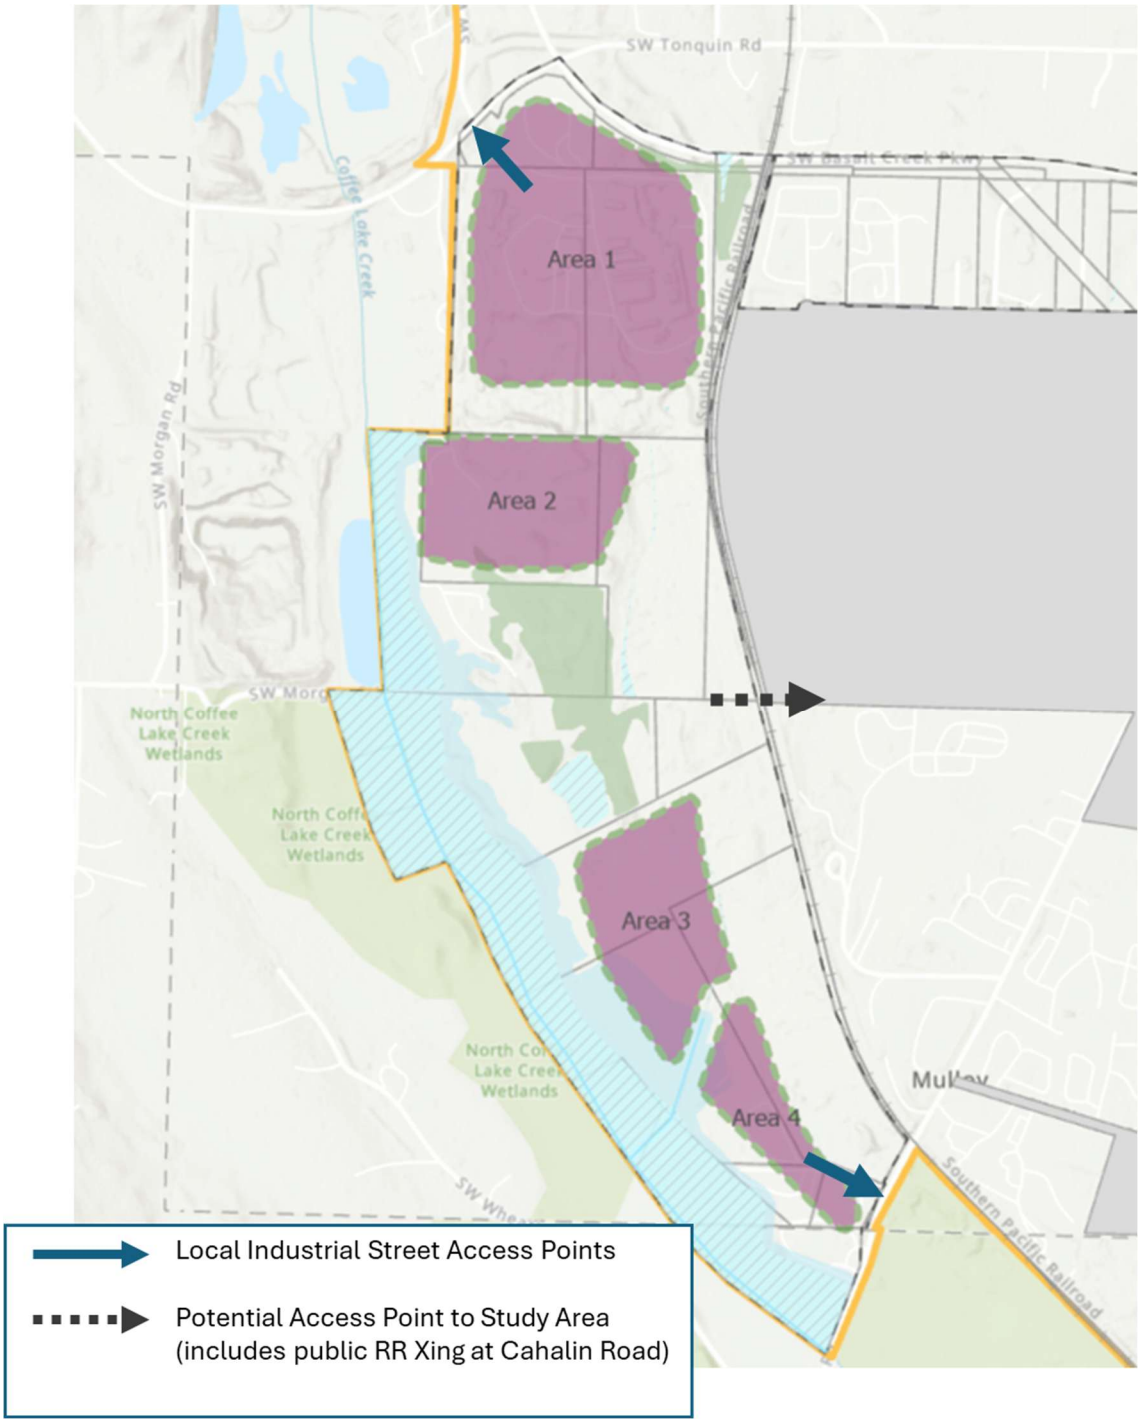

FIGURE 6: PLANNING AREA ACCESS POINTS

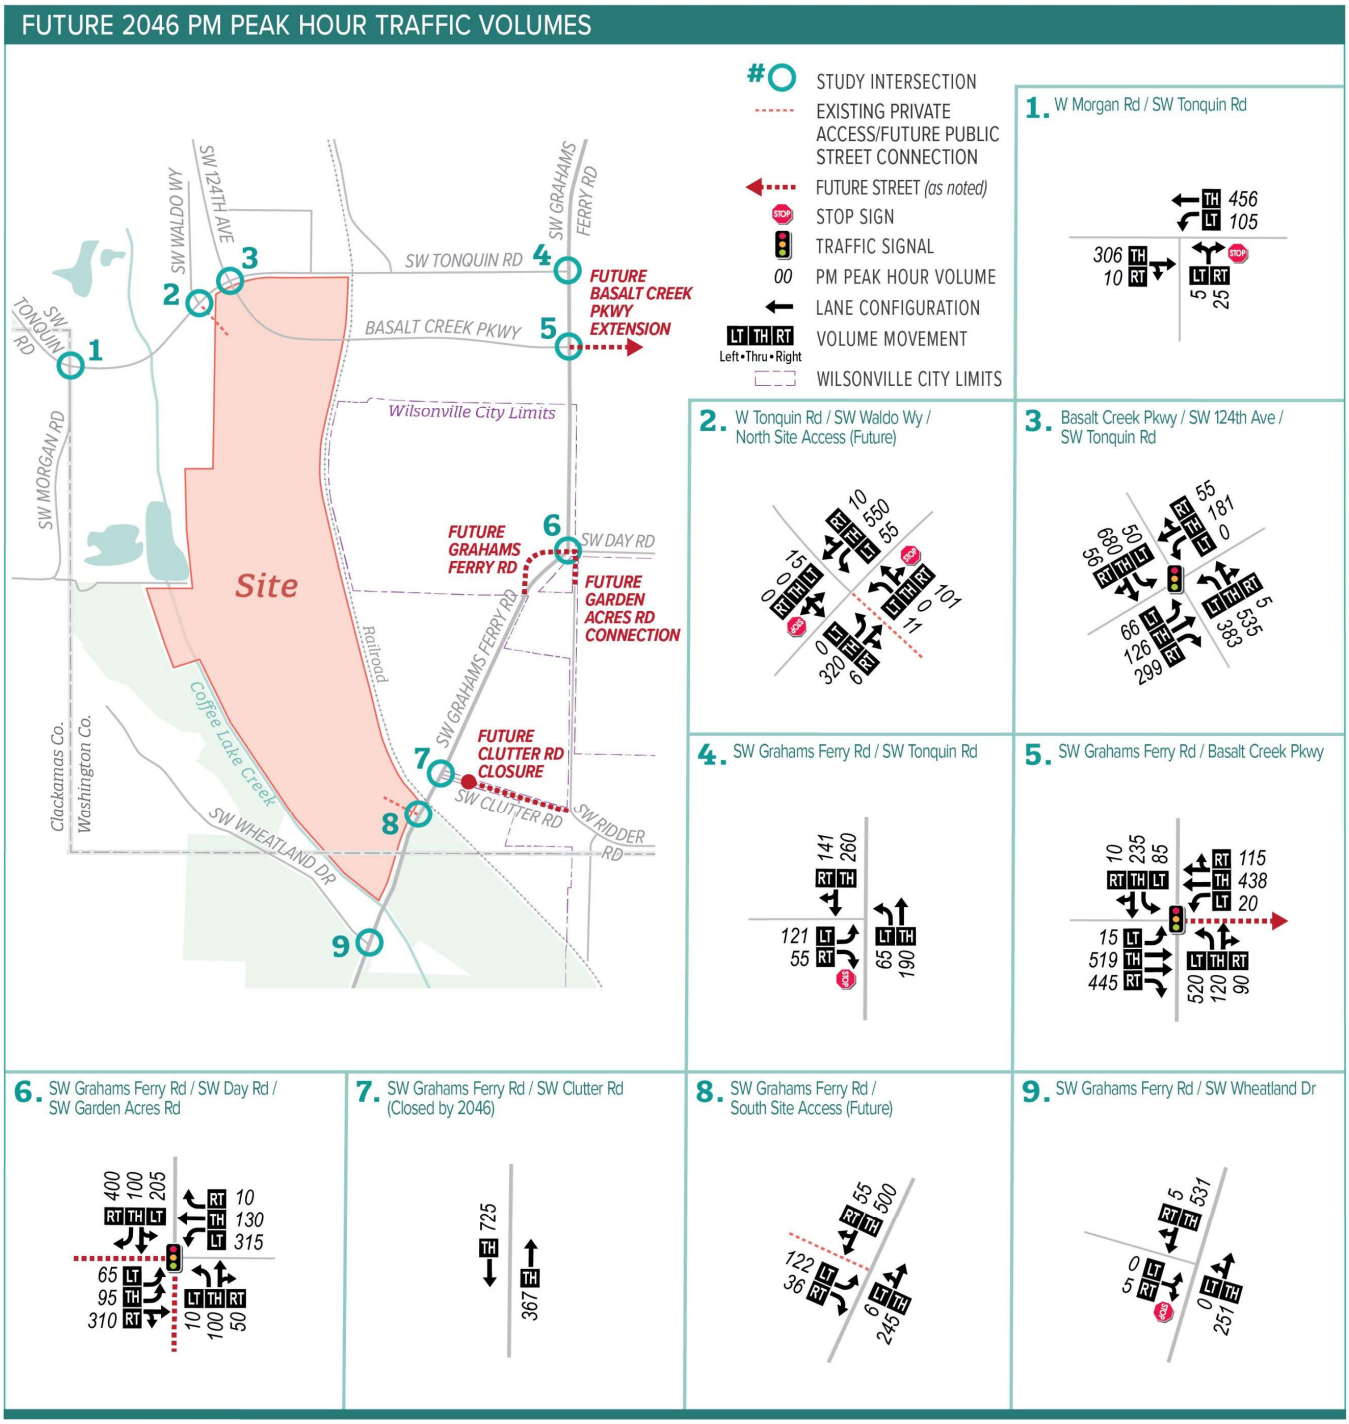
The City of Wilsonville is currently in conversation with Porland & Western Railroad (PNWR)[6] regarding the potential conversion of the existing private rail crossing at Cahalin Road to a public rail crossing. PNWR has stated that they would support industrial park development in the area and would be open to converting the crossing at Cahalin Road to a public crossing. The conversion would require that additional protection be added (i.e., gates, lights) at the existing private crossing as well as additional upgrades, yet to be determined, in lieu of the closure of an existing crossing.



For the purposes of this traffic study, the analysis assumes that there is no public railroad crossing at Cahalin Road. However, a third public street connection to the planning area across the railroad would further improve vehicle operations at the two assumed access points and provide improved general traffic circulation through the planning area and should continue to be explored as a possibility with PNWR.

> *Note: Access from the planning area to Morgan Road was briefly considered by the project team. However, this connection was ultimately found to be noncrucial to provide adequate connectivity to the planning area. Additionally, a connection to this road would have required significant street improvements to Morgan Road, which is located in a rural reserve area of Clackamas County.*

FUTURE TRAFFIC VOLUMES

Figure 5 shows the future 2046 peak hour traffic volumes for the study intersections. These volumes incorporate background growth and the estimated trip generation for the worst-case future development scenario. Additionally, the study area map shows the changes to the roadway network that are expected to be completed by 2046. Lane configurations and signal timing at future intersections (including Grahams Ferry Road/Basalt Creek Parkway and Grahams Ferry Road/Day Road/Garden Acres) were assumed to be optimized for intersection operations.

[6] PNWR is a subsidiary of Genesee & Wyoming Railroad.

Note: The portion of the study area north of Basalt Creek Parkway would be under City of Tualatin jurisdiction in the future at buildout.

FIGURE 7: FUTURE 2046 STUDY INTERSECTION VOLUMES

FUTURE INTERSECTION OPERATIONS

Intersection operations were analyzed for the PM peak hour at all study intersections for future 2046 conditions using Highway Capacity Manual (HCM) 7th Edition methodology. Operations at each study intersection are shown in Table 4.

TABLE 4: FUTURE (2046) STUDY INTERSECTION OPERATIONS

INTERSECTION	JURISDICTION	TRAFFIC CONTROL[1]	MOBILITY TARGET	PM PEAK HOUR [2]		
				V/C RATIO	DELAY (SEC)	LOS
MORGAN ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.32/0.08	8.4/13.6	A/B
NORTH SITE ACCESS/ WALDO WAY/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.37/0.11	8.2/32.3	A/D
BASALT CREEK PARKWAY/ 124TH AVENUE/ TONQUIN ROAD	Washington County	Signal	v/c ≤ 0.99, LOS E	0.79	64.0	E
GRAHAMS FERRY ROAD/ TONQUIN ROAD	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.13/0.38	8.5/21.1	A/C
GRAHAMS FERRY ROAD/ BASALT CREEK PARKWAY	Washington County	Signal	v/c ≤ 0.99, LOS E	0.58	18.8	B
GRAHAMS FERRY ROAD/ DAY ROAD/ GARDEN ACRES ROAD	City of Wilsonville	Signal	LOS D	0.83	23.8	C
GRAHAMS FERRY ROAD/ CLUTTER ROAD	City of Wilsonville	*This intersection is assumed to be closed by the year 2046*				
GRAHAMS FERRY ROAD/ SOUTH SITE ACCESS	Washington County	TWSC	v/c ≤ 0.99, LOS E	0.17/0.43	8.8/25.0	A/C
GRAHAMS FERRY ROAD/ WHEATLAND DRIVE	Clackamas County	TWSC	LOS E	0.16/0.01	0.0/12.1	A/B

Notes:

1. TWSC = Two-Way Stop Control
   AWSC = All-Way Stop Control

As shown, all study intersections meet mobility standards under future conditions. No additional improvements beyond what is assumed in the City's Transportation System Plan or the 2023 METRO RTP are necessary to support development of the planning area.

MULTIMODAL TRANSPORTATION RECOMMENDATIONS

MOTOR VEHICLE RECOMMENDATIONS

Based on the West Railroad Transportation Analysis in this report, no additional motor vehicle improvement projects beyond the High-Priority projects in the City of Wilsonville TSP or the METRO RTP are necessary to support the full buildout of the West Railroad area.

Based on a review of the 2023 Metro RTP, there are currently two projects within the City of Wilsonville Urban Growth Boundary (current or planned) and within the BCPA that were included in the 2023 Metro RTP that are *not* included in the current Wilsonville TSP.[7] The City should discuss these projects internally and with partner agencies for inclusion in the City of Wilsonville next TSP update as Additional Projects (not High-Priority projects) as both of these projects are long-range (2045) and are unconstrained (no identified funded) projects in the RTP.

- **METRO RTP Project #11924**, Grahams Ferry Road from Tonquin Road to Day Road, Improve roadway to 5 lanes including sidewalks and bike lanes. Long-Term 2045 Strategic Project List.
  The City of Wilsonville TSP currently lists a project on Grahams Ferry Road for a three-lane roadway improvement; there is no five-lane widening project identified. Therefore, the City of Wilsonville should discuss this project internally and with Washington County and City of Tualatin to determine whether a three-lane or five-lane cross section is preferred on Grahams Ferry Road within the BCPA.
- **METRO RTP Project #11469,** 124th Ave Improvements. Improve 124th from 2 lanes to 5 lanes with bike lanes and sidewalks. Long-Term 2045 Strategic Project List.

PEDESTRIAN, BICYCLE, TRANSIT TSP RECOMMENDATIONS

The following list of non-motor vehicle projects have been identified as needed to support the Basalt Creek Planning Area (BCPA) beyond what is already in the Wilsonville Transportation System Plan (TSP).

- Coordinate with SMART to expand transit service (e.g., new routes, bus stops, etc.) to the Basalt Creek Planning Area as it develops.
- Consider an enhanced pedestrian/bicycle crossing of Day Road where the south end of LT-02 (Basalt Creek Canyon Trail) would connect with the north end of the pedestrian/bicycle facilities along the Coffee Creek Supporting Street.
- Consider a trail connection (pedestrian and bicycle only) from Ridder Road north to the future Coffee Creek Supporting Street. Approximately 800 feet in length. Trail alignment would run along the west side of the BPA Substation.

[7] Link to map of METRO RTP Projects.

- Alignment of the Tonquin Ice Age Trail through the West Railroad planning area consistent with the Ice Age Tonquin Trail Master Plan. The trail/pathway through the West Railroad area would serve both regional and local pedestrian and bicycle traffic.
- Provide interim connections at Tonquin Road and Grahams Ferry Road between the Ice Age Tonquin Trail and existing on-street sidewalks and on-street bike lanes adjacent to the West Railroad area. These crossing improvements could include new marked and/or enhanced crosswalks and should be provided or improved to facilitate safe and comfortable travel for pedestrians and cyclists.

LOCAL STREET CONCEPTUAL LAYOUT

DKS identified reasonable connection points and alignments for the future local streets in the Wilsonville portion of the BCPA. See Figure 8 for the local street concept map.

Within the West Railroad area, local street connections to Tonquin Road and to Grahams Ferry Road will be necessary to provide adequate access for the planning area under full development. The public railroad crossing at Cahalin Road was not included in this analysis and was found to be noncritical to providing adequate traffic circulation/access to the planning area. However, a third public street connection across the railroad would be desirable as it would further improve vehicle operations at the two assumed access points and provide improved general traffic circulation through the planning area and should continue to be explored as a possibility with PNWR. Local street connections within the planning area will be provided by development; they are not within the scope or purview of projects to be completed by the City of Wilsonville and will just be needed to the extent of serving development in this area.

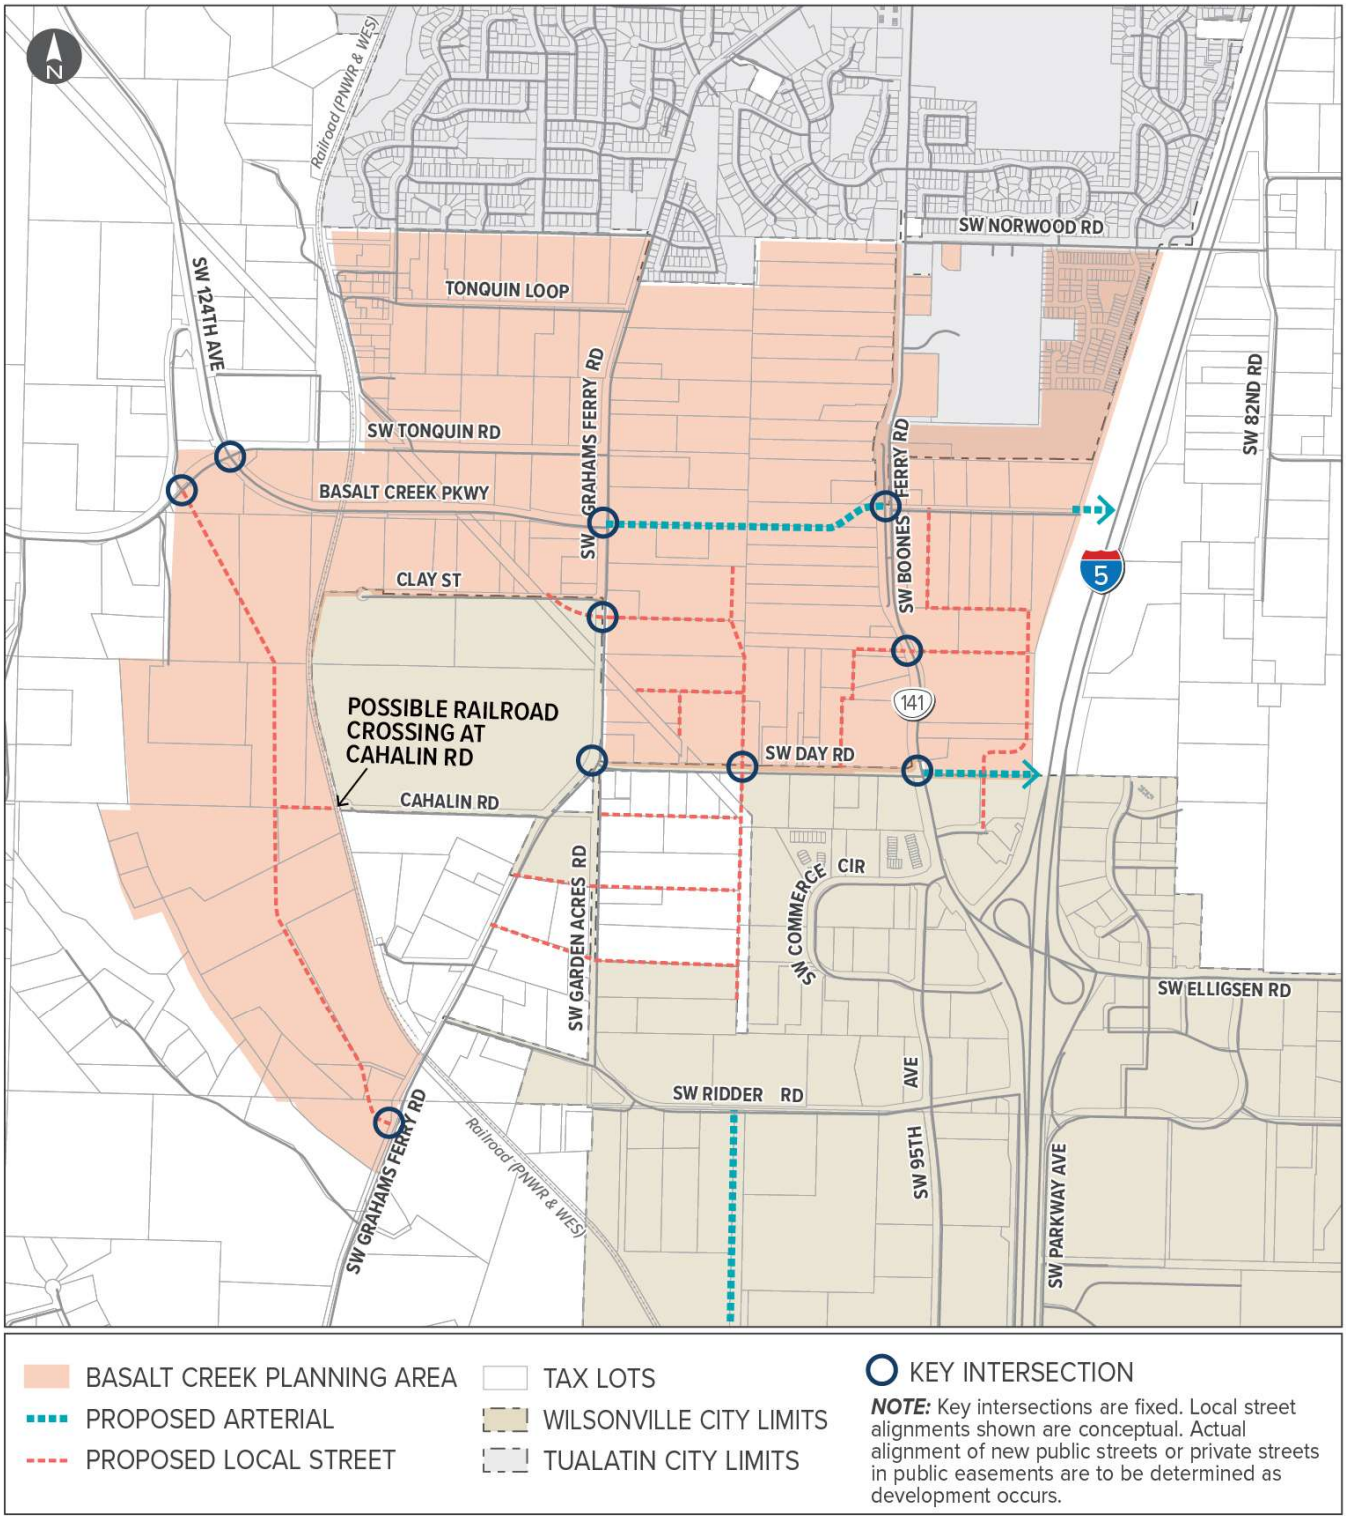


FIGURE 8: BCPA WILSONVILLE LOCAL STREET CONCEPT MAP

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

SUMMARY OF FINDINGS

The following summarizes the findings of this report for the Basalt Creek Planning Area in Wilsonville, Oregon.

Background

- Transportation planning efforts for the Basalt Creek Planning Area began as early as 2013 with the Transportation Refinement Plan (TRP). Recent planning efforts include the 2018 Basalt Creek Concept Plan and a 2019 amendment to the City of Wilsonville TSP.
- In 2019, the 124th Avenue extension was constructed and open for travel.
- The City of Wilsonville is currently preparing a Master Plan for the Basalt Creek Planning Area.

West Railroad Transportation Analysis

- At the time of the 2018 BCPA Concept Plan, the West Railroad area was excluded from development assumptions due to significant geographical constraints (varied terrain with wetlands habitat and steep slopes) and limited access.
- Full development of the West Railroad planning area results in an assumed 1,262,000 square feet of industrial uses, including a mix of manufacturing, warehouse, craft industries, office facilities, and some supporting retail.
- Under future 2046 traffic conditions (full development), all study intersections meet applicable agency mobility standards.
- Future 2046 conditions include future transportation projects consistent with the 2023 METRO Regional Transportation Plan as well as transportation projects in the Wilsonville TSP High-Priority project list within the West Railroad.
- No additional improvements beyond what is assumed in the METRO RTP and the City's Transportation System Plan are necessary to support the full development of the West Railroad planning area.

Multimodal Transportation Recommendations

- The two projects listed on Page 18 are located within the BCPA and are included in the 2023 Metro RTP and included in the future traffic conditions analysis in this report, but are not included in the current Wilsonville TSP. These should be discussed and considered for inclusion in the City's next TSP update.
- Coordinate with SMART to expand transit service (e.g., new routes, bus stops, etc.) to the Basalt Creek Planning Area as it develops.
- Consider an enhanced pedestrian/bicycle crossing of Day Road where the south end of LT-02 (Basalt Creek Canyon Trail) would connect with the north end of the pedestrian/bicycle facilities along the Coffee Creek Supporting Street.
- Consider a trail connection (pedestrian and bicycle only) from Ridder Road north to the future Coffee Creek Supporting Street. Approximately 800 feet in length. Trail alignment would run along the west side of the BPA Substation.

- To support the Ice Age Tonquin Trail through the West Railroad planning area, connections to existing on-street sidewalks and on-street bike lanes should be provided or improved to facilitate safe and comfortable travel for pedestrians and cyclists.

Local Street Concept

- The local street concept shown in Figure 8 shows the alignment of local and arterial streets through the Wilsonville portion of the BCPA. All alignments shown are conceptual and actual alignment will be determined at the time of development.
- Local street connections within the planning area will be provided by development; they are not within the scope or purview of projects to be completed by the City of Wilsonville and will just be needed to the extent of serving development in this area.

APPENDIX

B. Traffic Counts

C. Existing HCM Reports

D. Trip Generation Table and Land Use Assumptions

E. Future HCM Reports

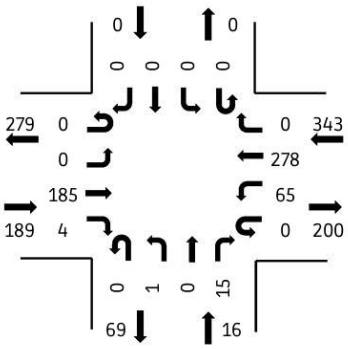

TABLE A: BASALT CREEK TSP PROJECTS - 2019 TSP AMENDMENT SUMMARY

PROJECT #	PROJECT	NOTES
RE-P6	Basalt Creek Parkway Overcrossing of I-5	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP #11436
RE-P5	Day Road Overcrossing of I-5 (Boones Ferry Road to Elligsen Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List; On the 2045 Long-Term Strategic Project List in the Metro RTP #11490
RE-P15	Pioneer Court Extension (north and west to Boones Ferry Road)	New to 2019 Wilsonville TSP, added to Additional Planned Project List
RE-14	Basalt Creek Parkway 5-lane Extension (Grahams Ferry Road and Boones Ferry Road)	Moved from Additional Planned Project List to Higher-Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP #11470
RW-02	Day Road Widening to 5 lanes (Grahams Ferry Road to Boones Ferry Road)	Already on TSP Higher-Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #11243
RW-04	Boones Ferry Road Widening to Five Lanes (Day Road to Basalt Creek Parkway)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #11487
RW-05	Grahams Ferry Road Widening to Three Lanes (Day Road to Basalt Creek Parkway)	Moved from Additional Planned Project List to Higher-Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #10588 (Tonquin to Day Road)
UU-08	Garden Acres Road Urban Upgrade & Extension	Already on TSP Higher-Priority Project List; On the 2030 Near-Term Constrained Project List in the Metro RTP #10853
SI-07	Boones Ferry Road at I-5 Southbound Ramps (add dual southbound left turn lanes)	New to 2019 Wilsonville TSP, added to High Priority Project List; On the 2045 Long-Term Constrained Project List in the Metro RTP #11489

Basalt Creek Master Plan – Proposed Comprehensive Plan Text Amendments – DRAFT May 2026

Proposed added language **bold underline.** Proposed removed language ~~struck through~~.

COMPREHENSIVE PLAN[1]

The Wilsonville Comprehensive Plan was revised in entirety and adopted by City Council Ord. No. 517 on October 16, 2000. It has been amended since then by the ordinances and resolutions below. These ordinances have been incorporated into the July 2024 Comprehensive Plan.

Legislative Amendments

Ord. No.	Description	Adoption Date
903	Housing Statutory Compliance	6-1-2026
902	Revise The Definition Of Abandoned Vehicles And To Reduce The Duration Allowed For Parking On Public Streets.	4-20-2026
901	2026 Economic Opportunities Analysis (EOA) And The Accompanying Economic Development Strategy (EDS) As A Sub-Element Of The Wilsonville Comprehensive Plan.	3-2-2026
900	Implementing An Administrative Warrants Process	11-17-2025
899	Adopting The Climate Friendly And Equitable Communities (CFEC) Parking Compliance Development Standards	7-1-2025
898	City of Wilsonville 2025-2045 Housing Needs and Capacity Analysis Adoption and Comprehensive Plan Text Amendments	6-16-2025
897	Zone Map Amendment On Frog Pond Lane For Residential Development	1-6-2025
896	Annexing 9.0 Acres on Frog Pond Lane For Residential Development	1-6-2025
895	Zone Map Amendment 8.66 Acres At OREPAC Properties	10-7-24
894	Vacation of Public Right-Of-Way For Extension of Bailey Street	10-7-2024
893	Adding Code Sections 2.380 Through 2.386 Concerning Diversity, Equity, and Inclusion	9-5-2024
892	Code To Implement Frog Pond East And South Master Plan	12-2-2024
891	Public Contracts Repealing and Replacing Code Sections	5-20-2024
890	Stormwater Master Plan Adoption	4-15-2024
888	Wastewater Treatment Plant Master Plan Adoption	1-18-2024
880	Transit Master Plan Adoption	7-17-2023

[1]Editor's note(s)—Printed herein is the Comprehensive Plan of the City of Wilsonville revised in entirety and adopted by City Council Ordinance No. 517 on October 16, 2000. It has been amended since then by the ordinances listed in the table of legislative amendments. These ordinances have been incorporated into the current Comprehensive Plan. Amendments to the ordinance are indicated by parenthetical history notes following amended provisions. The absence of a history note indicates that the provision remains unchanged from the original ordinance. Obvious misspellings and punctuation errors have been corrected without notation. Additions made for clarity are indicated by brackets.

ECONOMIC DEVELOPMENT

Industrial development has historically been a primary element of Wilsonville's economic growth and identity. Over time, the City's economy has expanded to include a broader mix of commercial, office, professional service, technology, logistics, and employment uses that contribute to a diverse and resilient local economy. Housing development has also increased substantially in recent decades and continues to play an important role in supporting the City's workforce, economic competitiveness, and overall quality of life. Wilsonville's strategic location within the Portland metropolitan region, proximity to major transportation corridors, and supply of industrial and employment land have positioned the City as a significant regional employment center and an attractive location for continued economic investment and development.

Metro and more recent local planning efforts project continued employment and housing growth in Wilsonville over the next twenty years. Wilsonville's Economic Opportunities Analysis (EOA) projects employment growth from approximately 33,165 jobs in 2026 to approximately 39,297 jobs by 2046, representing an increase of more than 6,100 jobs over the twenty-year planning period. Population and household growth are also expected to continue, although at a slower pace than previous decades as regional growth trends moderate. Despite continued housing growth, Wilsonville is expected to remain a major regional employment center with a significant concentration of industrial, manufacturing, warehousing, logistics, and technology-related employment uses.

Economic conditions in Wilsonville and the broader Portland metropolitan region have fluctuated over time in response to national, regional, and global economic cycles. Wilsonville's economy has evolved from its early industrial base into a diverse employment center that includes advanced manufacturing, logistics, technology, professional services, health-related industries, and commercial services. Recent economic studies indicate that Wilsonville continues to benefit from its strategic location along the Interstate 5 corridor, proximity to regional freight infrastructure, and supply of industrial employment land. The City remains one of the region's primary employment centers and continues to attract a broad range of businesses and industries that contribute to long-term economic resiliency and diversification.

Industrial development is the basic element of economic growth as it produces goods for marketing, as well as being the primary employment generator. Commercial development is also important in that it creates secondary employment and provides retail outlets for manufactured goods. The commercial sector also provides support services for industry and personal goods and services (e.g., doctors, lawyers, food, clothing, etc.) for local residents and workers. It should be noted that having adequate commercial services in proximity to homes and other businesses reduces the need for travel and helps to meet state and regional goals for air quality and traffic congestion.

While commercial and industrial developments are generally associated with economic growth, housing is also an important element of the local economy. Housing development provides employment in planning, engineering, architecture, construction and real estate. More important, however, is the relationship of the availability of affordable housing to the local labor market. The first section of this element of the Plan is oriented to commercial and industrial development. However, this Plan recognizes the importance of providing housing commensurate with the social and economic needs of local employees and is, therefore, followed by a section on housing.

The State's Economic Development Goal (Goal 9) is, "To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens." Prior to adoption of this statewide goal, Wilsonville had developed the 1971 General Plan. The 1971 General Plan's goals and objectives included:

> To develop an attractive and economically sound community.
>
> Encourage commercial and industrial development to provide a balanced tax base and take advantage of the City's strategic location along I-5 and the rail line.
>
> Maintain high-quality industrial development that enhances the livability of the area and promotes diversified economic growth.
>
> Protect industrial lands from incompatible uses.
>
> Encourage only industries interested in and willing to participate in development and preservation of a high-quality environment.
>
> Encourage incorporation of large office complexes in industrial parks.
>
> Develop performance standards, in addition to site development standards, which will limit emissions of smoke, dust, odor, glare, noise, and vibration from industrial uses.
>
> Plan for industry to take advantage of the railroad and I-5 where necessary services can be provided.

These goals and objectives are still as much value today, as they were in 1971. In addition, the 1971 Plan attempted to provide for a reasonable amount of commercial facilities in a planned relationship to the people they will serve. Commercial areas were designated to reinforce existing development patterns and to be centered along Wilsonville Road and the north freeway interchange.

Existing commercial and industrial development has generally conformed to these guidelines and the 1988 Plan reaffirmed them as desirable objectives. The Comprehensive Plan continues to retain a focus on commercial development in the form of centers, rather than strip development.

In 2026, these goals and objectives continue to resonate and remain foundational to Wilsonville's long-term economic vision. Completion of the City's Economic Opportunities Analysis (EOA) and Economic Development Strategy (EDS) reaffirmed the importance of maintaining a strong industrial and employment base while also identifying additional opportunities and focus areas intended to support long-term economic resiliency, competitiveness, and community vitality. The EDS emphasizes the importance of maintaining development-ready industrial lands, coordinating strategic infrastructure investments, supporting commercial and mixed-use redevelopment opportunities, and fostering a diverse range of employment sectors, including advanced manufacturing, logistics, technology, professional services, and small business entrepreneurship. The EDS also highlights the importance of supporting tourism, local-serving businesses, unique commercial destinations, and small-scale business opportunities that contribute to Wilsonville's economic identity, quality of life, and fiscal sustainability. Together, these planning efforts reinforce the City's commitment to balancing economic growth, infrastructure readiness, environmental stewardship, and high-quality urban development.

Wilsonville is strategically located within the southern portion of the Portland metropolitan region near the confluence of Interstate 5 and Interstate 205, major freight corridors, rail infrastructure, and regional employment centers. This strategic location continues to make the City highly attractive for industrial, commercial, and employment development. As a result, Wilsonville has a significant opportunity to proactively guide future growth and redevelopment through coordinated land use planning, infrastructure investment, and economic development policies rather than relying solely on market-driven development patterns. Through implementation of the Comprehensive Plan, Economic Development Strategy, infrastructure master plans, and area-specific planning efforts such as the Coffee Creek and Basalt Creek Master Plans, the City can help ensure that future growth supports a strong and diverse economy, development-ready employment lands, high-quality industrial and commercial districts, mixed-use redevelopment opportunities, multimodal transportation systems, and a vibrant community that supports residents, businesses, employees, and visitors alike.

No additional changes proposed in this section

DRAFT

INDUSTRIAL DEVELOPMENT

Comprehensive Plan Goal 4.1

~~Wilsonville is basically a compact City, for this reason all industrial development should be compatible with adjacent or nearby commercial and/or residential areas. Therefore, there is little need for more than one industrial designation.~~

Wilsonville shall support a range of industrial and employment designations to accommodate advanced manufacturing, research and development, industrial office, craft industrial, logistics, and other employment uses. Industrial and employment areas shall function as high-quality employment districts that balance economic competitiveness, environmental constraints, infrastructure efficiency, and urban design.

~~Policy 4.1.3 City of Wilsonville shall encourage light industry compatible with the residential and urban nature of the City.~~

Policy 4.1.3 The City of Wilsonville shall encourage a range of employment and industrial uses compatible with the urban nature of the City, including advanced manufacturing, research and development, industrial office, logistics, craft industrial uses, and warehousing where appropriate. The City shall emphasize job density, family-wage jobs, economic productivity, land efficiency, and high-quality urban design within employment districts.

Implementation Measure 4.1.3.a. Develop an attractive and economically sound community.

Implementation Measure 4.1.3.b. Maintain high-quality industrial development that enhances the livability of the area and promotes diversified economic growth and a broad tax base.

~~Implementation Measure 4.1.3.c. Favor capital intensive, rather than labor intensive, industries within the City.~~
Implementation Measure 4.1.3.c. Encourage employment uses that maximize economic productivity, job density, capital investments, innovation, and long-term adaptability.

Implementation Measure 4.1.3.d. Encourage industries interested in and willing to participate in development and preservation of a high-quality environment. Continue to require adherence to performance standards for all industrial operations within the City.

Implementation Measure 4.1.3.e. Site industries where they can take advantage of existing transportation corridors such as the freeway, river, and railroad.

Implementation Measure 4.1.3.f. Encourage a diversity of industries compatible with the Plan to provide a variety of jobs for the citizens of the City and the local area.

Implementation Measure 4.1.3.g. Encourage energy-efficient, low-pollution industries.

Implementation Measure 4.1.3.h. The City, in accordance with Title 4 of the Metro Urban Growth Management Functional Plan, supports appropriate retail development within Employment and Industrial Areas. Employment and Industrial areas are expected to include some limited retail commercial uses, primarily to serve the needs of people working or living in the immediate Employment or Industrial Areas, as well as office complexes housing technology-based industries. Where the City has already designated land for

commercial development within Metro's employment areas, the City has been exempted from Metro development standards.

Implementation Measure 4.1.3.i. The City shall limit the maximum amount of square footage of gross leasable retail area per building or business in areas designated for industrial development. In order to assure compliance with Metro's standards for the development of industrial areas, retail uses with more than 60,000 square feet of gross leasable floor area per building or business shall not be permitted in areas designated for industrial development.

Implementation Measure 4.1.3.j. All industrial areas will be developed in a manner consistent with industrial planned developments in Wilsonville. Non-industrial uses may be allowed within a Planned Development Industrial Zone, provided that those non-industrial uses do not limit the industrial development potential of the area.

Implementation Measure 4.1.3.k. Encourage high-growth employment industries in which the City is already competitive, including advanced manufacturing, corporate and professional services, and health care and medical-related fields.

Implementation Measure 4.1.3.l. Encourage growth in emerging and innovative industrial business types, including craft industrial uses, maker spaces, artisan manufacturing, breweries, distilleries, bicycle manufacturing, and similar industries that contribute to a diverse employment base. Designated craft industrial areas may incorporate smaller-scale supporting commercial uses and limited live/work opportunities where compatible with surrounding employment uses.

Implementation Measure 4.1.3.m. Encourage new industrial development that contributes to employment districts with a high density of jobs and a range of employment opportunities.

Implementation Measure 4.1.3.n. Encourage development that incorporates active urban green spaces, such as trails, linear parks, and pocket parks, and use vegetation for buffering where possible.

Implementation Measure 4.1.3.o. Encourage development-ready parcels that support multiple building types, multiple tenants, incremental development, and long-term adaptability.

Implementation Measure 4.1.3.p. Encourage interconnected street networks and avoid superblock industrial campuses where feasible.

Implementation Measure 4.1.3.q. Support freight mobility, pedestrian and bicycle circulation, and transit-supportive design within employment districts.

Implementation Measure 4.1.3.r. Coordinate development with sewer, water, stormwater, and transportation infrastructure improvements making strategic investments to make industrial land development-ready.

Implementation Measure 4.1.3.s. Encourage high-quality industrial site and building design, including building orientation toward streets, screened parking and loading, and pedestrian-accessible frontages.

Implementation Measure 4.1.3.t. Support trails, shared-use paths, open spaces, and employee amenities within industrial and employment districts.

Implementation Measure 4.1.3.v. Utilize specialized zoning districts or subdistricts, including the Northwest Industrial (NWI) Zone and Craft Industrial (CI) Zone, to implement area Master Plans and the Comprehensive Plan vision for newly developing employment districts.

Implementation Measure 4.1.3.w. Industrial development shall integrate wetlands, streams, buffers, open space systems, trails, recreational opportunities and green infrastructure where feasible.

No additional changes proposed in this section

AREAS OF SPECIAL CONCERN

AREA M

This area, known as Basalt Creek, is located to the northwest of Wilsonville in Washington County. The area is generally oriented east-west, and is bound by Interstate 5 (I-5) to the east, the Portland and Western Railroad (PNWR) and the Coffee Creek Correctional Facility to the west, and Clay Street and Day Road to the south. The northern boundary is the location of the Basalt Creek Parkway, which extends from 124th Avenue and connects to Grahams Ferry Road. The Basalt Creek Parkway will run east-west between Grahams Ferry Road and Boones Ferry Road, and eventually extend over I-5. The Parkway is designed as a high-capacity major freight arterial with limited access to local streets providing industrial access between Tualatin, Sherwood, and Wilsonville.

The primary existing land uses in Basalt Creek are rural agriculture, industrial and rural residential consisting of low-density single-family housing. South of the area within the City of Wilsonville are existing and planned commercial, office, and industrial uses. The employment areas around Commerce Circle, Ridder Road, and 95th Avenue include advanced manufacturing, clean tech, warehouse, distribution, and logistics businesses. Abutting Area M along the south side of Day Road is the Coffee Creek Industrial Area, which has an adopted Master Plan and Industrial Form-based Code to enable the creation of a high-caliber business district.

The Cities of Wilsonville and Tualatin prepared the Basalt Creek Concept Plan to provide a framework for development and the provision of services in the area between the two cities. Land uses planned within the Wilsonville portion of Basalt Creek include a mix of employment development types and modest opportunities for live/work housing to support the nearby employment areas. The Concept Plan identifies three land use categories within Basalt Creek.

• High Tech Employment District. Most of the buildable acres in this area are devoted to a mix of higher density employment land. The High Tech Employment District is expected to accommodate jobs in manufacturing and high tech, with warehousing components. This land use is in the southern and eastern sections of the area, covering all land east of Boones Ferry Road, and most of the land south of Clay Street, extending to Day Road and bordered to the west by Coffee Creek Correctional Facility.

• Craft Industrial. The southwest corner of the intersection of Boones Ferry Road and the future Basalt Creek Parkway is planned as Craft Industrial, which allows for a mix of smaller scale commercial uses. This area allows less than 20 percent residential use and is expected to accommodate live/work units. This development responds to the topography on these parcels and their location directly south from residential land and southwest of the neighborhood commercial node north of the Basalt Creek Parkway. Craft Industrial provides a transition to the higher intensity employment uses to the south.

• Light Industrial District. This land is located along the southern edge of the Basalt Creek Parkway just north of the Coffee Creek Correctional Facility and will accommodate jobs primarily in warehousing and light manufacturing.

The 2013 Basalt Creek Transportation Refinement Plan (TRP) sets the layout of major new roads and improvements for the area. As the area develops, property owners will plan and build local roads connecting to this network. These roadway improvements will include enhanced bike and pedestrian facilities and connections to the future SMART transit system.

Design Objectives

Planning Commission Meeting - September 28, 2026
Wilsonville Industrial Land Readiness (Basalt Creek Master Plan)

Basalt Creek Master Plan

Planning Commission Work Session
June 10, 2026
Presented by: Chris Myers, Senior Planner
Lauren Scott, MIG
Alex Dupey, MIG

Why Are We Here Tonight?

Tonight's discussion focuses on:

- Draft Basalt Creek Master Plan
- Draft Comprehensive Plan Amendments
- Transportation Analysis

Goal: Receive Planning Commission feedback

WILSONVILLE
OREGON

What Is a Master Plan?

A Master Plan:

- Establishes a long-term vision
- Coordinates infrastructure investments
- Identifies transportation needs
- Protects environmental resources
- Guides future development patterns
- Creates certainty for property owners and investors

Why Basalt Creek Matters

Basalt Creek represents:

- One of the city's largest remaining employment growth opportunities
- A key component of Wilsonville's long-term economic strategy
- A major industrial and employment center within the Portland region
- An opportunity to coordinate growth before development occurs

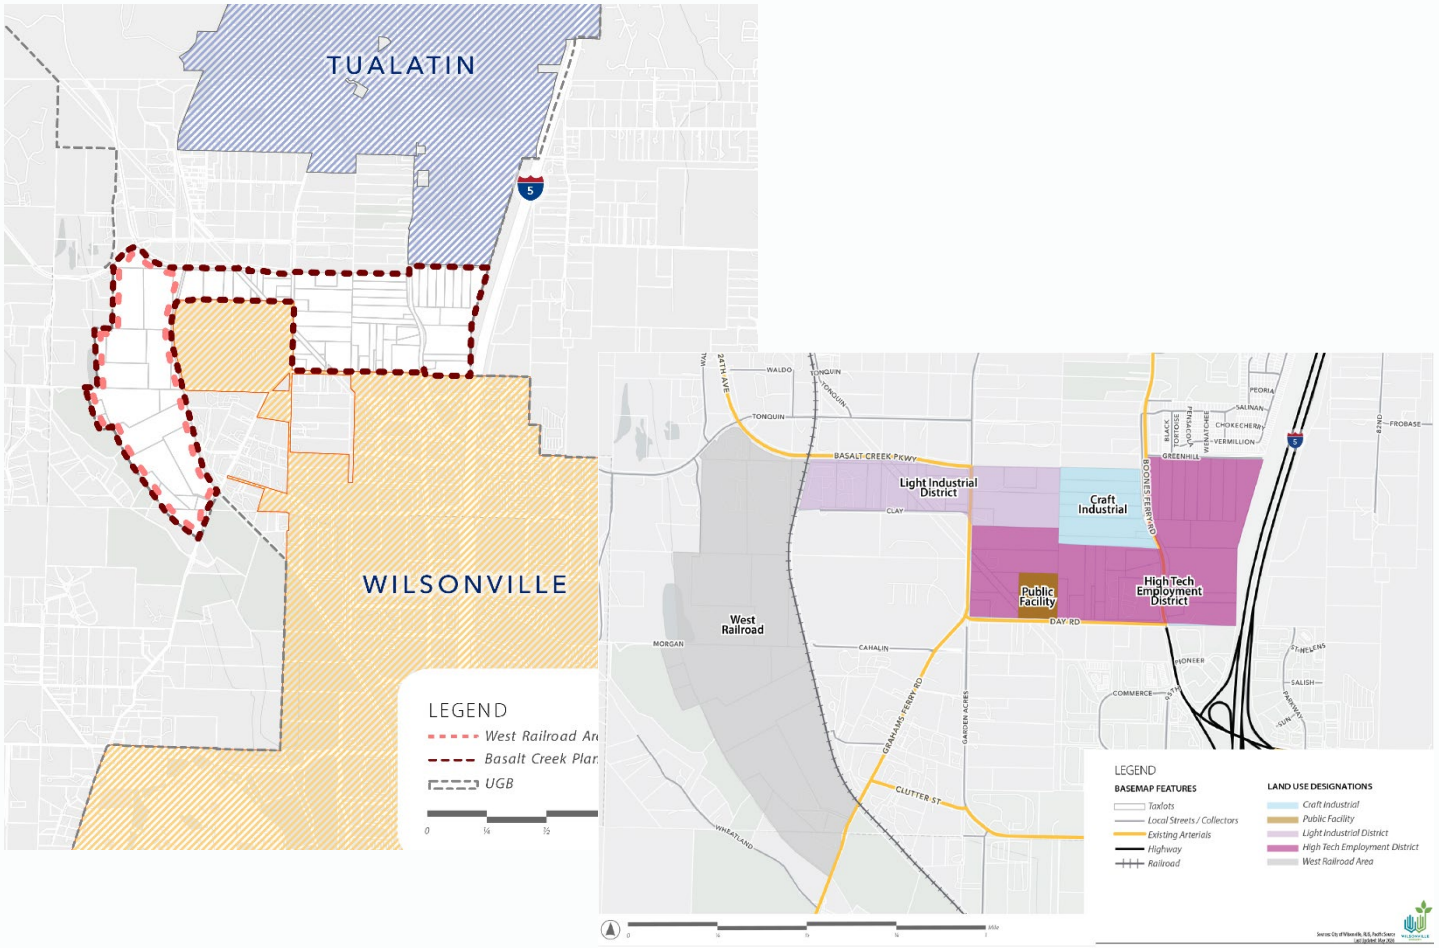
WILSONVILLE
OREGON

The Basalt Creek Vision

Guiding Principles

- Employment-focused development
- Transportation connectivity
- Environmental stewardship
- Flexible industrial opportunities
- Efficient infrastructure investment
- Long-term economic vitality

WILSONVILLE
OREGON

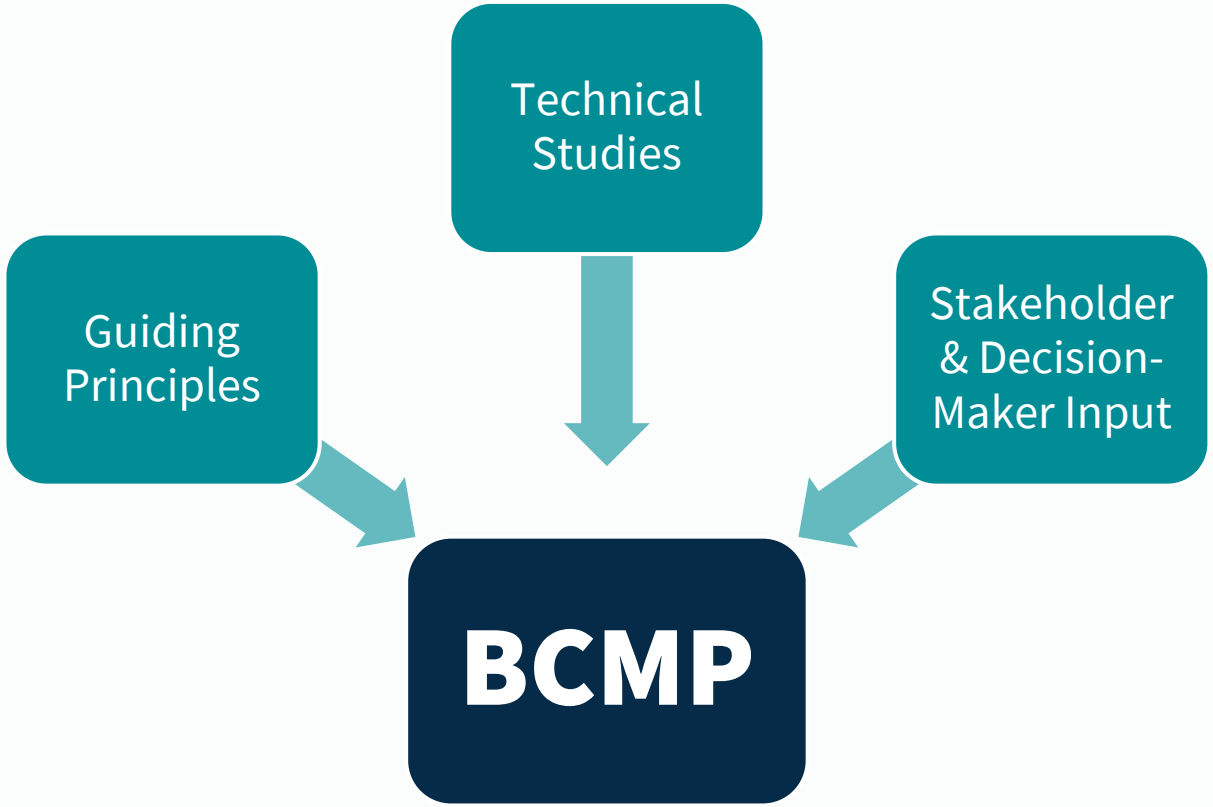


Next Steps

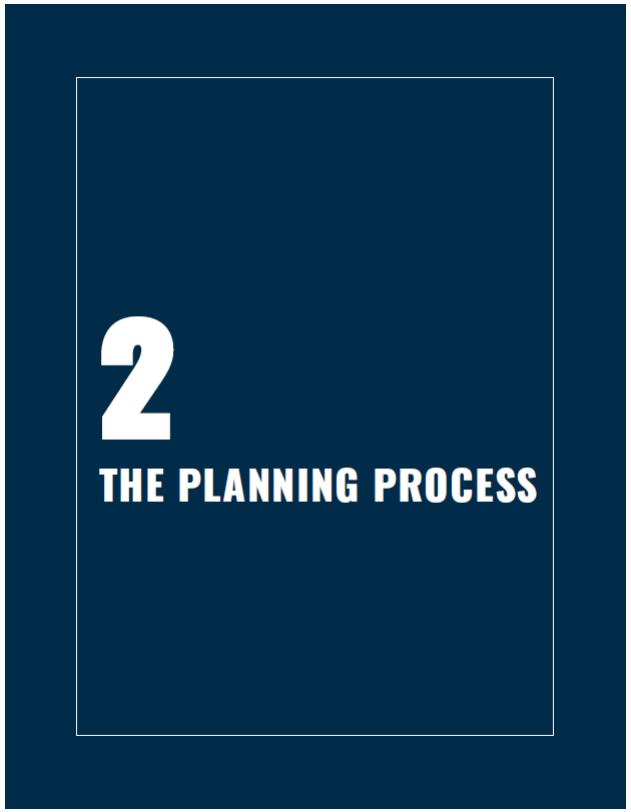
- July 8 PC Work Session #2
  - Draft code amendments
  - Final Draft Master Plan
  - Technical appendices
    - Sewer/stormwater
    - Water

WILSONVILLE
OREGON

WILSONVILLE
OREGON



Chapter 1: Introduction



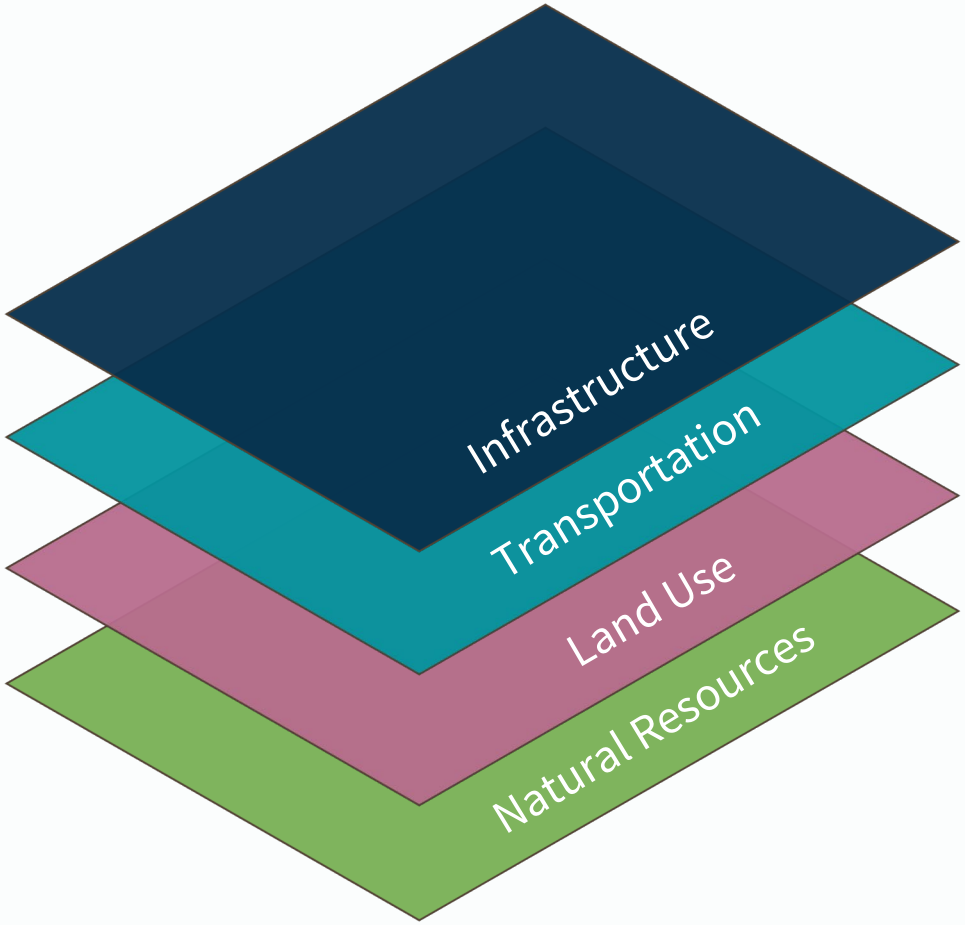
1

INTRODUCTION

Chapter 2: The Planning Process

Chapter 3: Existing Conditions & Future Needs

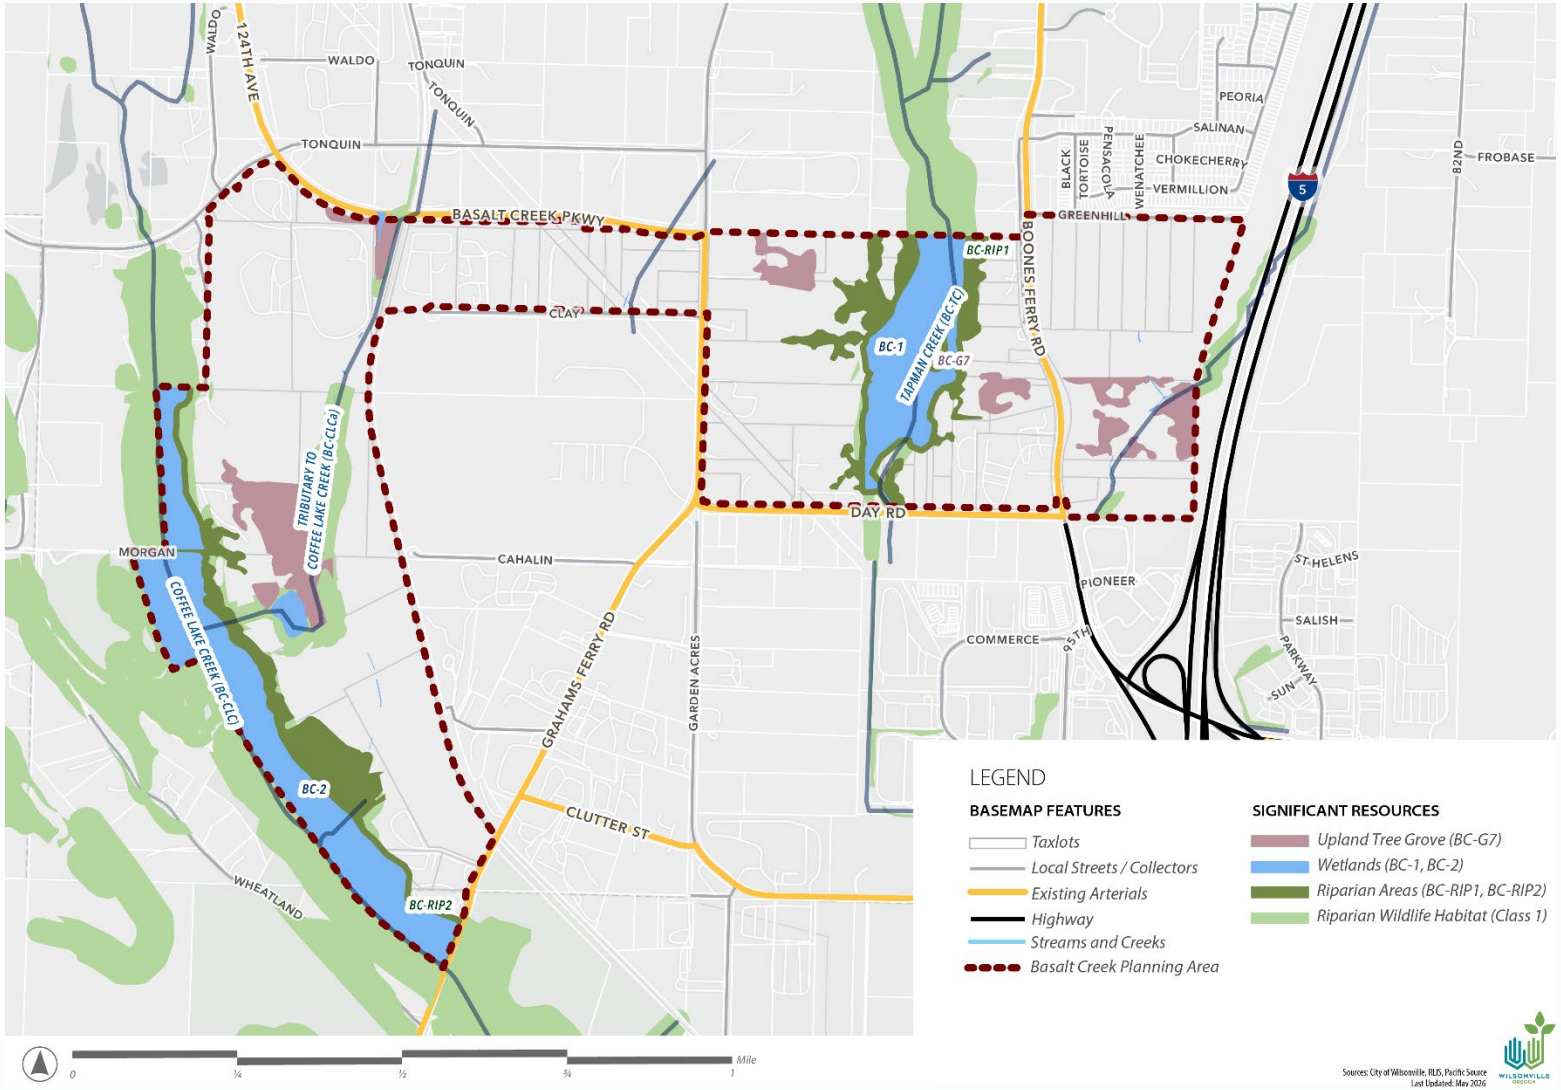
173 ACRES
ARE CURRENTLY IN ACTIVE USE AND CONSIDERED DEVELOPED



129 ACRES
ARE CONSTRAINED BY PHYSICAL OR ENVIRONMENTAL FACTORS

150 ACRES
ARE CONSIDERED BUILDABLE AND AVAILABLE FOR DEVELOPMENT

3
EXISTING CONDITIONS & FUTURE NEEDS



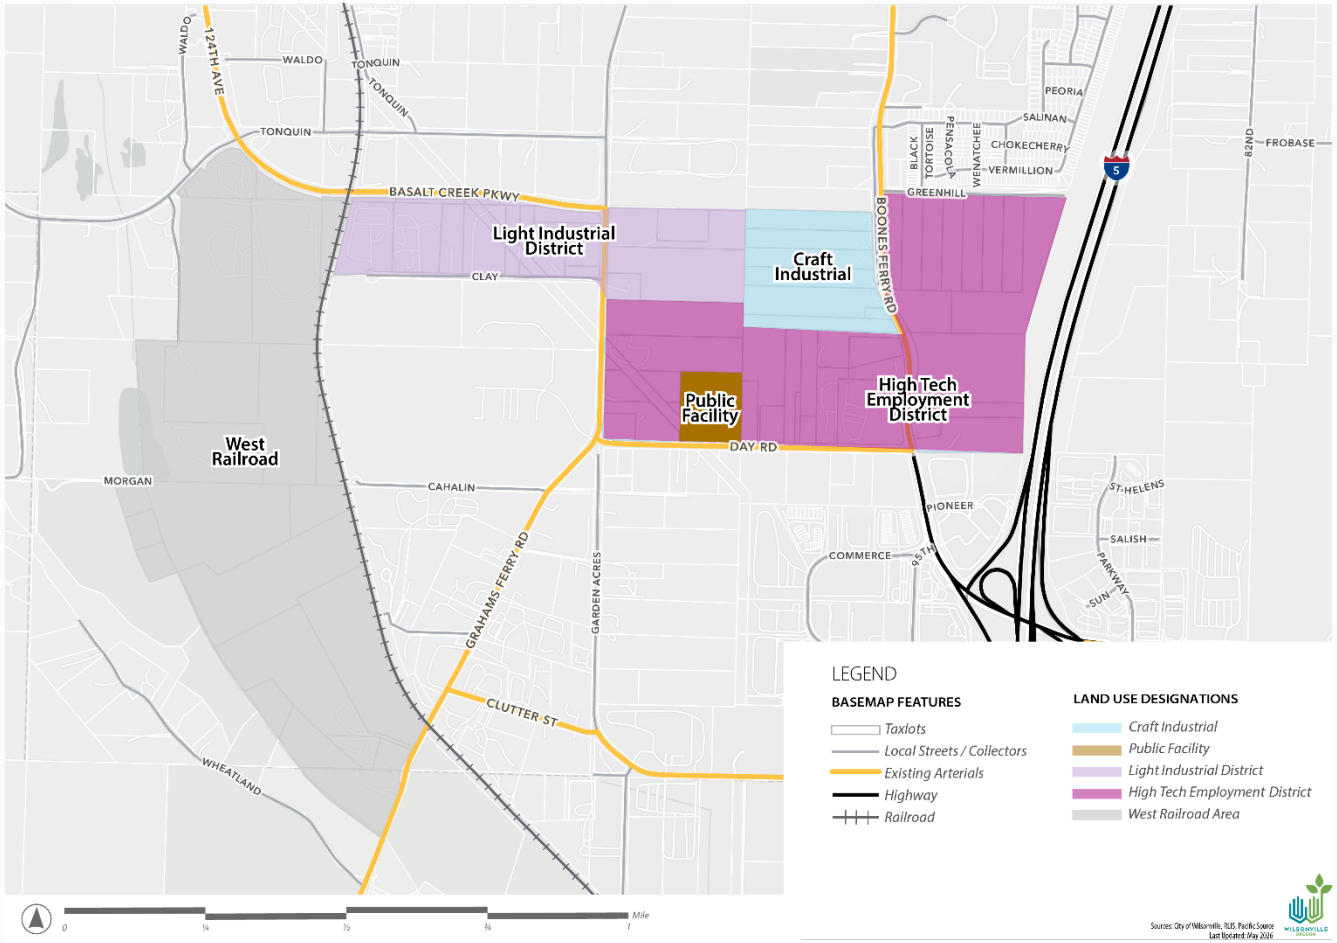
Chapter 4: Master Plan for Basalt Creek

4

MASTER PLAN FOR BASALT CREEK

Natural Resources

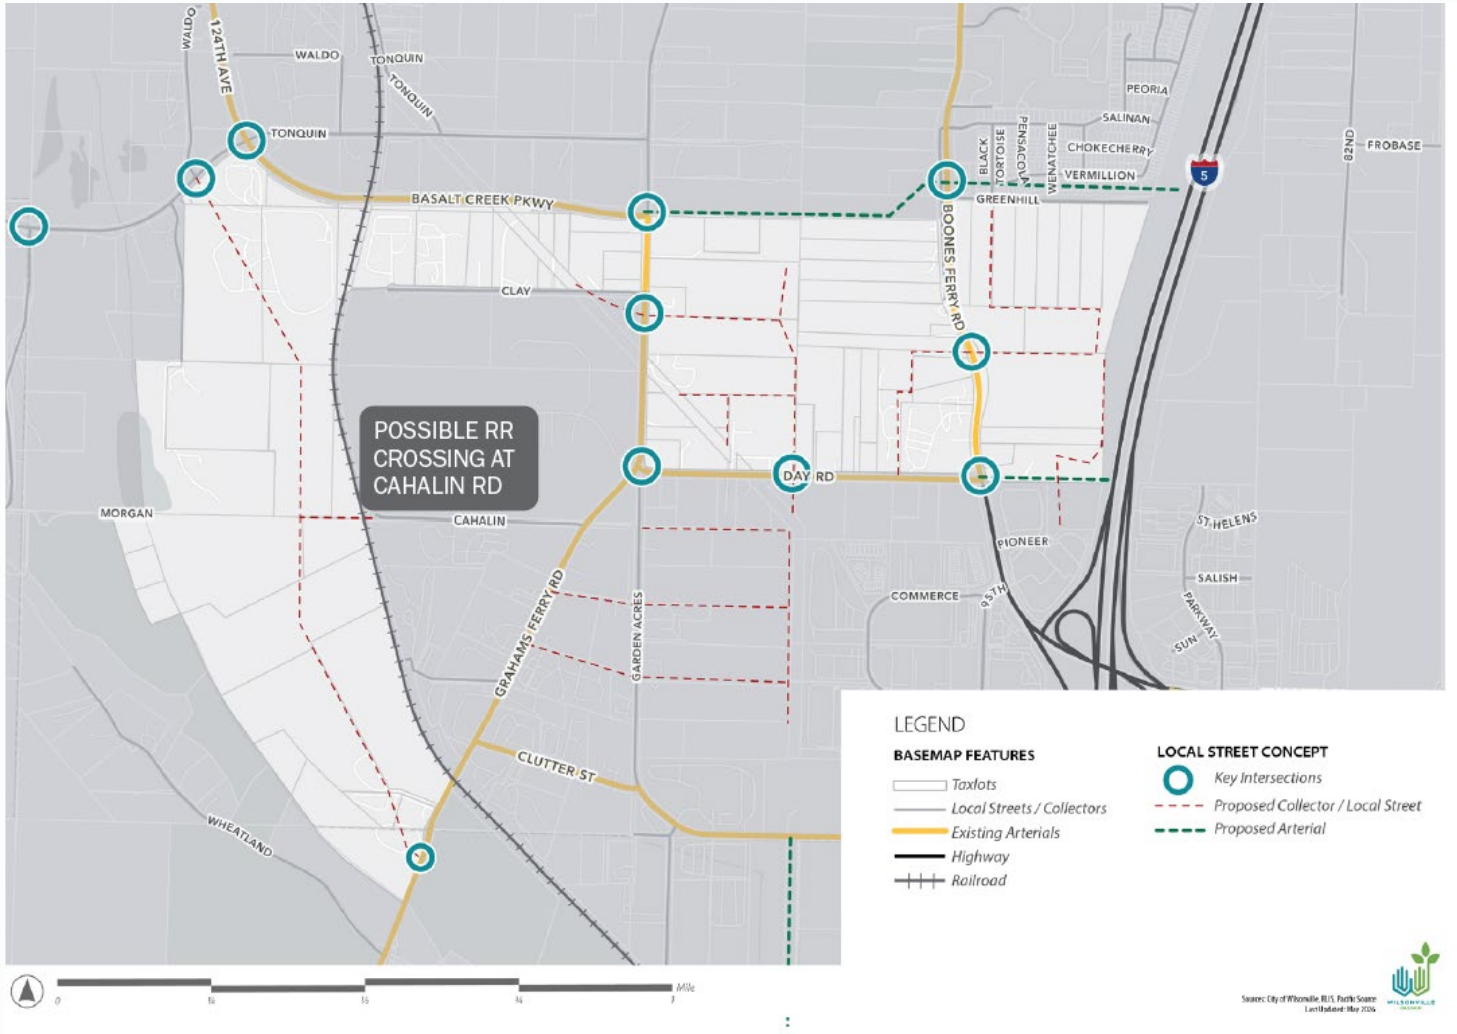
Wetlands & Riparian Areas



Upland Tree Groves

Wildlife Habitat

Streams

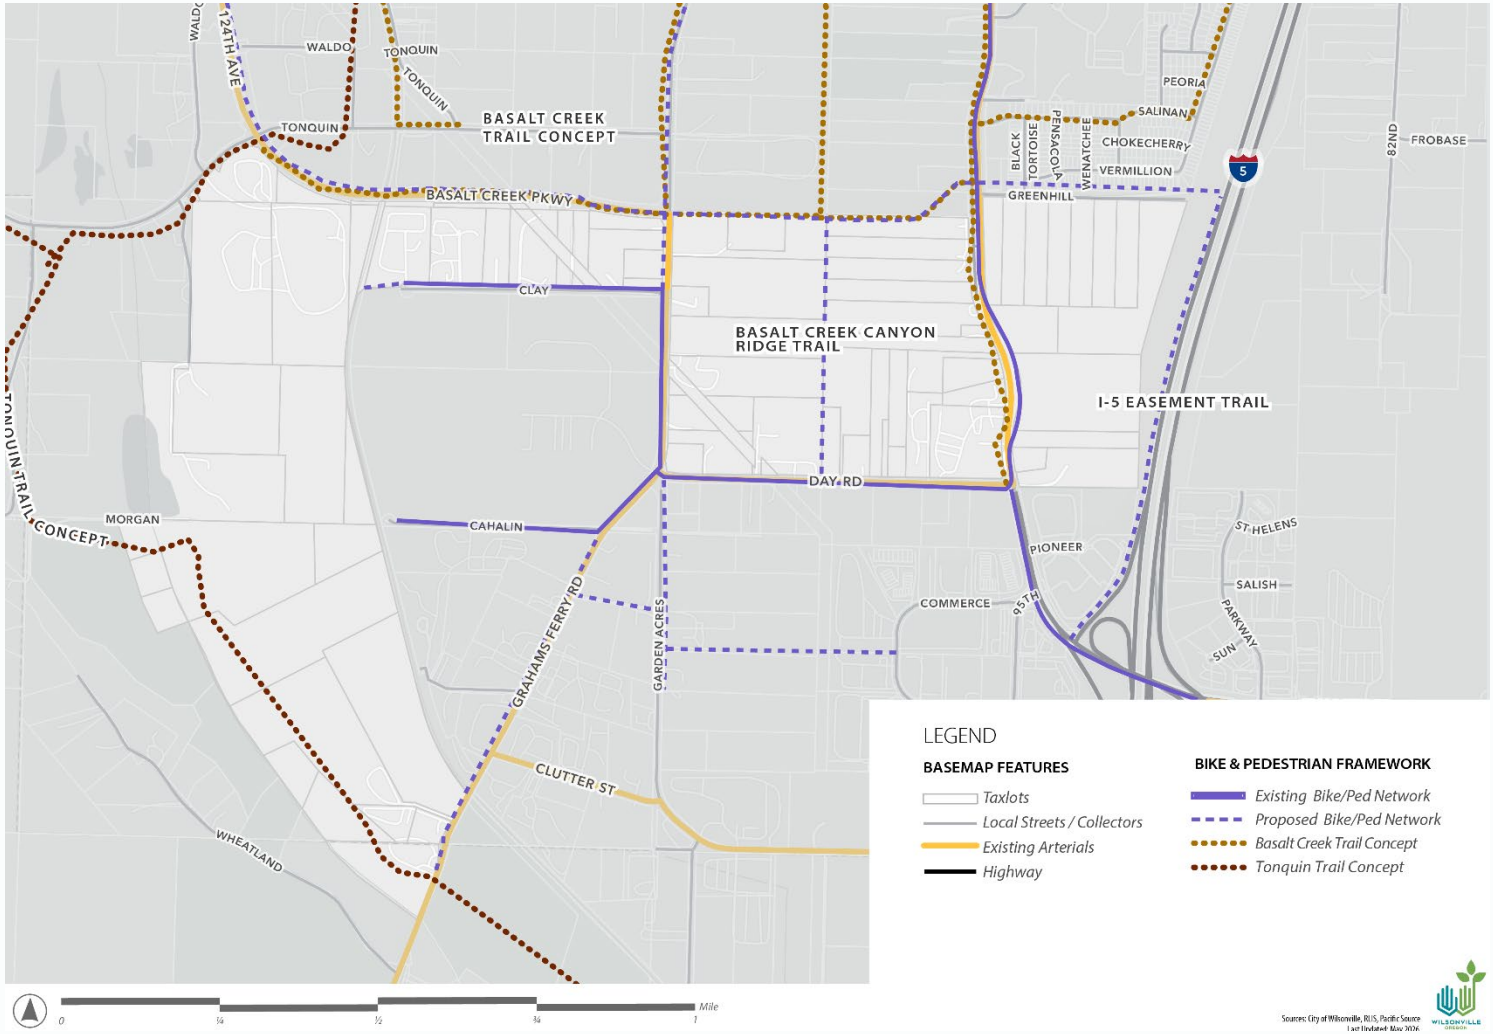


Trail & Habitat Connectivity Opportunities

Land Use Framework & Development Districts

High-Tech Employment	Employment-intensive and technology-oriented uses
Light Industrial	Manufacturing, logistics, and industrial businesses
Craft Industrial	Small-scale production, makers, and flexible employment spaces
West Railroad	Long-term industrial and employment growth area

Transportation Analysis Highlights



✓ Existing framework remains valid

✓ West Railroad evaluated

✓ Future access identified

Bike & Pedestrian Framework

Employee & Commuter Access

Regional Trail Connections

Connections to Transit Service

Access to Natural Areas

Improved Connectivity

Infrastructure Framework

- Supports long-term employment growth
- Builds on previous utility planning
- Significant infrastructure needs in West Railroad
- Coordination with utility providers
- Phased investment over time
- Further water, sewer, and stormwater analysis underway

More to come!

Chapter 5: Implementation & Phasing

Chapter 5: Implementation & Phasing

Near-Term Actions

Planning, coordination, and implementation foundations

Medium-Term Actions

Infrastructure, funding, and redevelopment planning

Long-Term Actions

Buildout, redevelopment, and continued investment

Placeholders & Remaining Work

- Water system analysis
- Sanitary sewer analysis
- Stormwater analysis
- Zoning refinements
- Associated maps, figures, and recommendations

WILSONVILLE
OREGON

Proposed Comprehensive Plan Amendments

Basalt Creek Master Plan

Purpose

- Update Comprehensive Plan language to reflect current economic conditions
- Implement the 2026 Economic Opportunities Analysis (EOA)
- Implement the Economic Development Strategy (EDS)
- Support future industrial and employment growth
- Align policies with the Basalt Creek Master Plan

Why Are Amendments Needed?

Why Are Amendments Needed?

Existing Language

- Much of the current Economic Development chapter dates to the 1990s and early 2000s
- References outdated employment projections and economic conditions

Proposed Changes

- Reflect current employment forecasts
- Recognize Wilsonville as a major regional employment center
- Incorporate findings from the 2026 EOA and EDS
- Modernize economic development policies

WILSONVILLE
OREGON

Economic Development Updates

New Language Highlights

- Employment projected to grow from approximately 33,000 to 39,000 jobs by 2046
- Recognizes Wilsonville's role in:
  - Manufacturing
  - Logistics
  - Technology
  - Professional services
  - Health-related industries

WILSONVILLE
OREGON

Modernizing Industrial Development Policies

- Economic resilience
- Employment land readiness
- Strategic infrastructure investment
- Long-term competitiveness

WILSONVILLE
OREGON

New Industrial Development Strategies

New Implementation Measures

- Development-ready employment lands
- Multiple building types and tenants
- Interconnected street networks
- Freight mobility
- Bicycle and pedestrian circulation
- Transit-supportive design
- Infrastructure readiness

Supporting Innovation & Economic Diversity

New Industrial Types

- Craft industrial businesses
- Maker spaces
- Artisan manufacturing
- Breweries and distilleries
- Small business entrepreneurship

Goal:

- Diversify employment opportunities
- Encourage innovation
- Support emerging industries

WILSONVILLE
OREGON

Transportation Analysis Overview

Purpose of the Analysis

- Evaluate transportation impacts associated with future buildout of the BCPA and WRR Area
- Assess roadway, freight, bicycle, pedestrian, and trail connections
- Identify transportation improvements needed to support future development
- Ensure consistency with the Transportation Planning Rule (TPR)

WILSONVILLE
OREGON

Future Development Assumptions

Existing Transportation Conditions

Existing Challenges

- West Railroad area currently has limited access
- Significant environmental constraints
- Railroad corridor limits connectivity
- Incomplete pedestrian and bicycle facilities
- Existing congestion at Grahams Ferry Road / Day Road

Existing Assets

- Basalt Creek Parkway
- Grahams Ferry Road
- Tonquin Road
- Regional freight access
- Planned Ice Age Tonquin Trail

WILSONVILLE
OREGON

Transportation Network Access

Planned Access Strategy

Future development is anticipated to be served by:

- Northern access via Tonquin Road
- Southern access via Grahams Ferry Road
- Internal local street network

Additional Opportunities

- Potential future public railroad crossing at Cahalin Road
- Ice Age Tonquin Trail connection
- Future pedestrian and bicycle network improvements

WILSONVILLE
OREGON

Transportation Analysis Findings

Existing Conditions

- Most study intersections currently meet mobility standards
- Grahams Ferry Road / Day Road is the primary existing deficiency

Future Conditions (2046)

The analysis assumes completion of planned Transportation System Plan projects, including:

- Basalt Creek Parkway Extension
- Grahams Ferry Road improvements
- Day Road widening
- Garden Acres Road intersection reconstruction

WILSONVILLE
OREGON

Key Recommendations

Key Recommendations

- Continue implementation of Transportation System Plan projects
- Advance Ice Age Tonquin Trail connections
- Preserve opportunities for future railroad crossing discussions
- Coordinate transportation improvements with future development

Conclusion

The transportation analysis concludes that:

The BCPA and WRR Area can be developed with planned network and currently identified transportation improvements. No additional major transportation capacity projects are necessary to support future buildout.

Discussion Questions

- What questions on draft materials?
- Does the BCMP reflect the vision?
- Do draft Comp Plan edits address intended policy outcomes?
- Does PC have any concerns re: BCMP

WILSONVILLE
OREGON

Draft PC Minutes were reviewed and approved at the July 8, 2026 PC Meeting.

Wilsonville Planning Commission
Regular Meeting Minutes
June 10, 2026
Wilsonville City Hall & Remote Video Conferencing
https://www.ci.wilsonville.or.us/meetings/pc

CALL TO ORDER - ROLL CALL
Chair Semenova called the meeting to order at 6:00 pm.

Present:	Yana Semenova, Jeff Zundel, Nicole Hendrix, Rob Candrian, and Andrew Karr
Excused:	Matt Constantine
Staff Present:	Miranda Bateschell, Amanda Guile-Hinman, Chris Myers, and Mandi Simmons

PLEDGE OF ALLEGIANCE
The Pledge of Allegiance was recited.

CITIZEN INPUT
Synthea Russell, **Building Height Waiver Task Force Committee Member**, stated the Committee had a lot of good discussion and ultimately agreed on many things. She was excited to hear the Commission's discussion and direction, adding she appreciated all the materials provided and everyone's efforts on the matter.

ADMINISTRATIVE MATTERS
1. Consideration of the May 13, 2026, Planning Commission Minutes
Commissioner Zundel expressed concerns that the minutes did not capture that the Planning Commission had addressed key points offered during Public Comment.

City Attorney Guile-Hinman explained that the minutes were structured according to updates to Oregon public meetings law, adding that all the City's meeting recordings were available for the public to view.

The May 13, 2026, Planning Commission minutes were accepted as presented.

WORK SESSION
2. Wilsonville Industrial Land Readiness (Basalt Creek Master Plan) (Myers/Lorenzen)
Senior Planner Myers introduced the five-month adoption process for the Basalt Creek Master Plan, following two years of preliminary work on the Wilsonville Industrial Land Readiness Project and West Railroad Study, which culminated into the Master Plan. Basalt Creek is one of the largest remaining employment opportunity areas in Wilsonville, providing a unique

opportunity to look forward to future industrial and employment growth in a coordinated manner. The work enabled the City to examine transportation needs, environmental resources, infrastructure requirements, and economic development opportunities within a framework that will help the City guide future development in the area for decades to come.

Senior Planner Myers and **Lauren Scott, MIG**, presented the Basalt Creek Master Plan (BCMP) via PowerPoint, briefly explaining the purpose of a Master Plan, economic importance of Basalt Creek, and guiding principles of the Basalt Creek Vision. The structure and key components of the draft Master Plan's five chapters were also presented, along with the placeholders that would be addressed in the next work session (Slides 8-19), as well as the proposed Comprehensive Plan Amendments, which included key Economic Development chapter updates as well as modernized and new Industrial Development Policies and Strategies to support innovative and economic diversity. (Slides 21-26) An overview of the Transportation Analysis conducted by DKS Associates was presented. The analysis evaluated the transportation impacts of the future build-out of Basalt Creek and the West Railroad area and included future development assumptions, a planned access strategy, and key recommendations while ensuring consistency with the State's Transportation Planning Rule. The analysis concluded that Basalt Creek and West Railroad could be developed with no additional major transportation capacity project requirements not already included in Transportation System Plan.The Commission's feedback was requested on the draft Master Plan document, draft Comprehensive Plan amendments, and DKS' Transportation Analysis ahead of the July 8, 2026, work session. The public hearing at Planning Commission was scheduled for September 9, 2026, and the Council's public hearing process in October 2026.

The project team's responses to Commissioner questions were as follows:

- **Jenna Bogert, Transportation Engineering Associate, DKS Associates,** addressed concerns about creating more traffic capacity and inducing even more through traffic on major roads in the area, noting a marked increase in regional through traffic at the Interstate 5 (I-5) interchange since the 124th Avenue extension was completed around 2018–2019. The City's Transportation System Plan (TSP) projects identified in Staff's presentation were also in the Metro TSP, acknowledging that many of these improvements serve regional purposes, cross-city travel, and I-5 interchange access. While increased traffic can occur when expanding roadway infrastructure, the Basalt Creek area features high development potential and anticipated job growth that would utilize the planned capacity over the next 20 years, so additional regional through traffic was not a concern. Additionally, multiple regional partners, including the City of Wilsonville, City of Tualatin, Washington County, and Metro, remain actively engaged in monitoring local conditions and issues.
- **Planning Director Bateschell** highlighted how the City's TSP plans fit into broader regional system plans, noting that the 2014 Basalt Creek Transportation Refinement Plan predated the City and Tualatin's concept plans because the Basalt Creek planning area was brought into the Metro Urban Growth Boundary to serve regional industrial needs. The multi-jurisdictional Refinement Plan modeled and accounted for the regional traffic coming through and the local traffic generated by growth in the Tualatin, Wilsonville, and Sherwood industrial areas. The Refinement Plan was cognizant of the land uses being planned for in

relationship to the transportation system being planned regionally, including the Basalt Creek Parkway, the majority of which was paid for by federal and County funding. During the Basalt Creek planning project, the County also prioritized specific infrastructure projects to allocate its Transportation Development Tax (TDT) to and one of the main projects was Day Road improvements, understanding that both Day Road and the Basalt Creek Parkway were both needed for the area to function well and efficiently. Locally, traffic analysis models accompany every development project, allowing the City to continuously track development and actual growth against long-range planning assumptions to make programmatic pivots or adjustments if needed.

  - Multimodal transportation, including bike and pedestrian routes, would be considered during the planning process. Trails in the Basalt Creek planning area included the Ice Age Tonquin Trail throughout West Railroad and hopefully, the Ridge Trail just north of Day Road. Bicycle infrastructure has changed, as seen on Garden Acres Road where the industrial project includes a buffered bike lane separated by a curb, and the City was working on infrastructure for bike and pedestrian movement that was less hostile, and more friendly and buffered. However, some roads in Basalt Creek were under the County's ownership and would be built to Washington County standards until transferred to the City in the future, so there could be differences in how the cross sections were built.

- **Ms. Bogert** clarified that Metro's model and traffic forecasts did not include the Interstate 5 (I-5) Boone Bridge replacement because it was an unfunded long-range project. She acknowledged changes at the I-5 interchange ramps in the last few years have created more traffic flow difficulties. The travel models and forecasts account for constraints, including I-5 pinch points and congestion at the off ramps and through the I-5 corridor between Interstate 205 and the Boone Bridge, as well as growth rates and assumptions. When incidents happen, especially during peak hour conditions, they can feel catastrophic, but those were not average days, so they try to capture a typical average day.
- **Planning Director Bateschell** explained that during the Basalt Creek concept planning process, the City worked very closely with the City of Tualatin, which included joint council sessions and bi-weekly staff meetings that resulted in guiding principles, a concept for growth in the area, land uses, etc. that were built upon the Transportation Refinement Plan produced in partnership with County, Metro, Tualatin, and Wilsonville. Coordination continued during the City's Comprehensive Plan amendments since the transportation modeling was done together and the Transportation Planning Rule (TPR) findings were required by the State. Master planning and the resulting local Development Code had less coordination since details around specific land uses, site design, transportation design, public realm design, etc. regarded Wilsonville's preferences. However, coordination would continue on things like the design of the Ice Age Tonquin Trail as it connects under the parkway.
  - The City also tracks Tualatin's development in the area by participating in their pre-application meetings. Because most of the Basalt Creek stormwater would eventually drain into Wilsonville's system and into its wetlands, the City specifically coordinates on the transportation and stormwater systems of Tualatin's development impacting Basalt

Creek. Likewise, Tualatin would be invited to pre-application meetings when Wilsonville begins seeing development in its portion of the Basalt Creek planning area.

- **Ms. Bogert** explained that an Intersection Control Evaluation (ICE) was used to determine whether a traffic signal or roundabout is constructed at intersections. The analysis evaluates standard traffic mobility metrics, including capacity and vehicle delay, as well as right-of-way impacts, costs, stormwater, and truck and freight movements. Heavy freight and truck movement through an intersection did not disqualify a roundabout from being an option, provided adequate right-of-way was available to accommodate the appropriate size and design for freight vehicles to navigate the intersection well and safely. A multifaceted approach was used involving a list of criteria, looking at all the variables and weighing the pros and cons at each intersection to get a comprehensive picture of which option was most appropriate and preferred.
- **Ms. Bogert** stated that after analyzing the traffic for the West Railroad area under full development assumptions, DKS found it could be adequately served by two access points via Tonquin Road to the north and Grahams Ferry Road to the south without the connection across the railroad to Cahalan Road. While a future public railroad crossing would be better, the two existing access points were adequate.
- **Planning Director Bateschell** confirmed the Grahams Ferry Road railroad undercrossing was a long-term investment and its high cost would likely require some form of City investment, potentially through urban renewal. Staff was conducting an initial analysis to determine how integrating the project could affect the City's preliminary estimates for potentially expanding urban renewal into Basalt Creek based on anticipated revenues. The southern undercrossing improvement had been identified not only to support development of the West Railroad area, but also to provide broader citywide transportation benefits. The project was not currently included in the Capital Improvement Program (CIP) and would likely remain outside the next two to three CIP update cycles while other improvements needed to support the undercrossing were completed first.
  - Both the potential Cahalin Road railroad crossing and the Grahams Ferry Road undercrossing depended on coordination with the railroad and were outside the City's direct control. While a definitive timeline could not be provided for coordinating with the railroad because each project differed; prior projects, like the 5th Street to Kinsman Road project, required considerable time working with the railroad. Adopting a master plan would establish the policy framework and direction needed for Staff to begin the necessary analyses, planning work, and to initiate discussions with the railroad.
- **Alex Dupey, Project Consultant, MIG,** confirmed that identifying both the Cahalin Road crossing and the Grahams Ferry Road undercrossing in a master plan as potential future connections would provide sufficient direction to continue evaluating both options. The two connections would be essential for future development, although the undercrossing also addressed transportation needs extending beyond the West Railroad area, even as a long-term project.
  - **Senior Planner Myers** added that the City's Economic Development Manager has reached out and has had a couple of conversations with the railroad, though the coordination process was still expected to take considerable time.

- Staff explained that permanent structures, anything with any height, such as trees, any metal, and other features that could interfere with BPA access were generally prohibited, while trails and certain low-impact improvements could be permitted through coordination with BPA. Additionally, any improvements placed within the easement could be disturbed if BPA needed access to its facilities, and repair or replacement costs were typically not borne by BPA. The City had previously coordinated with BPA during the Frog Pond East planning process regarding a regional trail connection, but no specific West Railroad negotiations had occurred. Parking and other developer-related improvements would likely require separate coordination between BPA, the property owner, and the developer.
- **Senior Planner Myers** clarified that the infrastructure analysis was focused on what would be needed within the 847-acre Basalt Creek planning area for future development, including roadway buildout, roadway widths, sidewalks, utilities, as well as the associated costs.
    - **Planning Director Bateschell** confirmed that the technical analysis would also consider how the proposed infrastructure fits within the City's broader water, sewer, and transportation master plans, including downstream impacts and whether certain facilities would need to be oversized to serve the larger system. Engineering Staff and the technical consultants would be prepared to address those relationships at the next work session.
- **Planning Director Bateschell** explained that the Basalt Creek planning area was added to the Metro Urban Growth Boundary for industrial and employment development. Residential development was limited primarily to the northern portion within Tualatin to provide a transition from existing neighborhoods, while Wilsonville's portion was intended to remain predominantly industrial and employment land. Business-related dwelling units or live-work units could be appropriate in Craft Industrial areas, but City Council had consistently supported maintaining the area primarily for employment and industrial uses. Council wanted to mirror the Coffee Creek Industrial Area, which fronts onto Day Road and uses the Form-based Code to create a kind of business district, on the north side of Day Road up to the City's boundary. Creating an isolated neighborhood in Basalt Creek for the City to serve in more of a residential manner versus adjacent to our existing residential areas did not make sense. Residential was in the guiding principles primarily because the City of Tualatin would have housing in its portion of the planning area.
- The land-use pattern also placed High-Tech and Craft Industrial uses closer to existing residential development, with heavier Industrial uses located farther away.
- Information was requested about identifying appropriate parcel sizes for the different employment districts and whether that information could guide future City efforts to aggregate, divide, or otherwise facilitate property owners adjusting their lot sizes.
- **Planning Director Bateschell** confirmed Tapman Creek functioned as a significant thriving wetland and riparian area despite being largely hidden from nearby roads. The creek, steep slopes, and associated habitat would be protected through the Significant Resource Overlay Zone (SROZ), which would limit development in the Craft Industrial area primarily to the portions adjacent to Boones Ferry Road. While all the properties required a base zoning designation, the SROZ overlay would protect the creek corridor and slopes from development. The area also receives substantial stormwater runoff, contains significant

wildlife habitat, and includes areas where basalt that is normally buried deep underground is visible, which could create development challenges. The visible basalt also influenced the Ice Age Tonquin Trail route.

Commissioner Karr believed the draft master plan reflected the long-term vision and nine guiding principles established through the planning process, and that the Economic Opportunities Analysis (EOA) and Economic Development Strategy (EDS) further supported those principles. The proposed Comprehensive Plan amendments adequately addressed land use and development, transportation, parks and natural resources, and utilities. He expressed concern that fragmented ownership and existing contractor uses could prevent redevelopment without proactive City intervention, whether built into the Master Plan or during implementation. He strongly supported the effective use of urban renewal in the area, whether by expanding the Coffee Creek Urban Renewal Area or creating a new district, to help fund infrastructure. He also requested continued attention to traffic and wildlife mitigation.

Commissioner Hendrix agreed that the draft master plan reflected the Commission's previous discussions and conclusions. She questioned whether the amount of implementation phasing identified for completion within the first five years was realistic given Staff capacity and the project's reliance on outside partners. She requested that the economic development language on Pages 167 and 168 of the meeting packet be reviewed for continuity and possible redundancy.

Chair Semenova believed the draft master plan reflected the vision, adding it was fantastic work and she looked forward to seeing it continue to grow and develop. She noted that any proposed roundabouts should be designed to accommodate freight traffic and large vehicles, including pole trailers, to avoid creating maneuverability or gridlock issues.

Senior Planner Myers confirmed that the upcoming stormwater analysis would evaluate Tapman Creek, drainage flows, and related conditions. The consultant's findings would be included in the meeting packet and presented at the next work session, along with additional information about the parcel sizes best suited for the anticipated development.

3. Town Center Building Height Waiver (Guile-Hinman)

City Attorney Guile-Hinman presented the second work session on the Town Center Building Height Waiver project via PowerPoint, reviewing updated waiver options, Task Force feedback and recommendations, proposed menu-item concepts, and discussion questions. She explained that the Task Force had completed its work and that the purpose of this second work session was to gather the Commission's feedback before Council's second work session and the anticipated public hearing.

- She reviewed four revised waiver options affecting the Commercial Mixed-Use (C-MU) and Mixed-Use (MU) subdistricts, explaining how each option would affect allowable building heights and the rationale for treating the eastern MU area separately because of its

Wilsonville Industrial Land Readiness (Basalt Creek Master Plan) (Myers)(Lorenzen)

CITY COUNCIL MEETING
STAFF REPORT

Meeting Date: April 20, 2026	**Subject:** Wilsonville Industrial Land Readiness – West Railroad Area – Basalt Creek Master Plan **Staff Members:** Chris Myers, Senior Planner; and Matt Lorenzen, Economic Development Manager **Department:** Community Development
Action Required	**Advisory Board/Commission Recommendation**
☐ Motion ☐ Public Hearing Date: ☐ Ordinance 1st Reading Date: ☐ Ordinance 2nd Reading Date: ☐ Resolution ☒ Information or Direction ☐ Information Only ☐ Council Direction ☐ Consent Agenda	☐ Approval ☐ Denial ☐ None Forwarded ☒ Not Applicable **Comments:** N/A
Staff Recommendation: Provide feedback on the Preliminary Preferred Concept for the West Railroad Area and provide directions on potential policy considerations.	
Recommended Language for Motion: N/A	
Project / Issue Relates To:	

☒Council Goals/Priorities: Attract high-quality industry and support economic opportunity for all in Wilsonville	☒Adopted Master Plan(s): Wilsonville Economic Development Strategy; Wilsonville Comprehensive Plan; Basalt Creek Concept Plan	☐Not Applicable

ISSUE BEFORE COUNCIL:

Staff seeks feedback from City Council regarding the Preliminary Preferred Concept for the West Railroad Planning Area, including land use, transportation access, natural resource integration, and potential zoning approaches. This discussion will help guide further refinement of the concept for the Basalt Creek Master Plan and Development Code updates.

EXECUTIVE SUMMARY:

The West Railroad Area represents a key opportunity within the Basalt Creek planning area to support employment growth and economic development while integrating natural resources and transportation infrastructure. Following the joint work session and additional technical analysis, staff and the consultant team developed a Preliminary Preferred Concept that combines elements of the previously presented concepts to balance economic development potential with environmental preservation and infrastructure feasibility.

The preferred concept focuses on maximizing developable employment land while preserving key natural resource areas and integrating recreational amenities such as the Ice Age Tonquin Trail. The concept also identifies transportation improvements needed to support long-term employment development and freight access in the area.

BACKGROUND

The West Railroad Area lies within the broader Basalt Creek planning area, which was originally identified as a strategic employment area to accommodate long-term regional job growth. The Basalt Creek Concept Plan established a series of guiding principles intended to shape future development of the area. These guiding principles emphasize:

- Market-driven development
- Meeting regional responsibilities for employment growth
- Maximizing assessed property value
- Creating balanced development that integrates jobs, housing, and natural resources
- Designing cohesive transportation and utility systems
- Maintaining Wilsonville's identity as an attractive and innovative employment center

In October 2025, the Planning Commission and City Council participated in a joint work session to review existing conditions and evaluate three potential development concepts for the West Railroad Area. These concepts explored different approaches to development intensity, transportation connectivity, and environmental integration:

Concept 1 – Tonquin Environment
Focused on leveraging natural resources and trail connectivity to create an employment and innovation district.

Concept 2 – Manufacturing & Industry
Maximized employment potential through improved transportation access and higher intensity industrial development.

Concept 3 – Limited Connectivity / Market Driven Development
Relied largely on existing infrastructure and incremental development with minimal City intervention.

Feedback from the joint work session emphasized the importance of balancing economic development opportunities with environmental stewardship while ensuring the area remains accessible for employment uses.

Staff is seeking City Council feedback on the preferred concept and related policy considerations.

Discussion Questions
Staff is seeking feedback on the following questions:

1. Is the Preliminary Preferred Concept consistent with the previously provided feedback?

2. Are there elements of the Concept that require additional refinement or clarification?

EXPECTED RESULTS:
Feedback from City Council during this work session will help guide refinement of the preferred concept, the draft Basalt Creek Master Plan, and Development Code updates.

TIMELINE:
Next steps in the project include sessions with the Planning Commission and City Council during spring and summer 2026 to review the draft Basalt Creek Master Plan and related Development Code amendments, followed by formal hearings for adoption of the Basalt Creek Master Plan and related Development Code amendments in fall 2026.

CURRENT YEAR BUDGET IMPACTS:
Work on the Basalt Creek Master Plan is funded through a Community Planning and Development Grant from Metro and the Planning Division budget's previously authorized project funding. Additional analysis related to water and stormwater infrastructure will be conducted using the City's on-call consultants.

COMMUNITY INVOLVEMENT PROCESS:
City staff mailed notification letters to the eleven (11) property owners within the Basalt Creek Planning Area to inform them of the ongoing planning process. At the time this staff report was prepared, staff had received one comment from a property owner expressing support for the planning effort and one request for a site visit with City staff. Matt Lorenzen, Economic Development Manager for the City of Wilsonville, met with the property owner to discuss the project. The property owner's feedback was generally positive and supportive of the Basalt Creek Master Plan.

Feedback received through these engagement activities has helped inform refinement of the preferred concept and will continue to guide the development of future policies and code amendments associated with the Basalt Creek planning effort.

POTENTIAL IMPACTS OR BENEFIT TO THE COMMUNITY:
Planning for the West Railroad Area supports Wilsonville's long-term economic development strategy by creating opportunities for employment growth while preserving natural resources and improving transportation connectivity. Successful implementation of the preferred concept will support family-wage job creation, strengthen Wilsonville's economic base, and reinforce the City's reputation as a forward-thinking employment center.

ALTERNATIVES:
As the concept is refined, alternative approaches to land use configuration, transportation access, zoning, and infrastructure planning may be considered in collaboration with the Planning Commission and City Council.

re West Railroad Area Preliminary Preferred Concept: Implementation and Policy Considerations

date 4/01/2026

Introduction

This memorandum describes the conceptual development framework and implementation considerations for the emerging *Preliminary Preferred Concept* for the West Railroad area within the Basalt Creek Concept Plan. The intent is to establish a visionary direction to guide future technical work and City planning.

It is anticipated that this list will continue to be refined during and following discussions with the Planning Commission, City Council, and staff as the West Railroad Preferred Concept is defined and integrated into the Basalt Creek Concept Plan.

Implementation Considerations

The following sections identify potential opportunities and issues that could impact future development as envisioned for the West Railroad area.

A. Land Use Considerations for Implementation

The West Railroad area today is primarily occupied by contractor yards and outdoor storage uses that are profitable for existing property owners and require little reinvestment. This presents a challenge for advancing more intensive, higher-value development in the near term. At the same time, Wilsonville is recognized for its visionary and forward-thinking planning that delivers economic growth, high-quality jobs, and attractive development.

Given these dualities, the City's land use approach should strike a balance between aspiration and adaptability (two Guiding Principles): maintaining flexibility to accommodate a variety of employment uses today, while positioning the area for more sophisticated, high-quality employment in the long term.

1. Establish a Clear Long-Term Vision

- Define the area as a premier employment destination that leverages its natural setting and multimodal pathways, roadways, and trails to attract modern industrial, manufacturing, and innovation-oriented users.
- Integrate existing open space corridors, wetlands, and potential trail connections into the development identity—creating an employment district that feels both productive and environmentally connected.
- Emphasize design excellence and site organization over rigid land use restrictions to elevate development quality.

2. Recognize Current Market Realities

- Acknowledge that existing contractor and yard uses are economically viable and likely to remain for some time; focus policy efforts on incremental improvement rather than immediate transformation.
- Identify opportunity sites or willing owners where redevelopment could feasibly occur first, setting the stage for future transitions.
- Allow interim or evolving use patterns that enable property owners to remain active participants in the area's evolution.

3. Promote Flexibility through Zoning and Policy

- Apply the Planned Development Industrial (PDI) or Northwest Industrial (NWI) Zone to West Railroad to better reflect the area's unique mix of rail adjacency, environmental context, and long-term vision.
- Consider a performance or form-based code that defines desired outcomes—such as design quality, environmental integration, and circulation standards—without limiting allowable uses too narrowly.
- Maintain broad use allowances to avoid turning away potential investment, even if near-term uses differ from the City's long-range aspirations.

4. Encourage High-Quality Design and Place Identity

- Develop design standards or guidelines for landscaping, building form, and site layout that create a cohesive and marketable identity for the area.
- Use natural amenities and trail connections as a distinguishing feature — positioning West Railroad as an attractive and sustainable employment area within the region.
- Explore opportunities for public realm investments (e.g., gateway features or greenways) that signal the City's commitment to quality development.

B. Transportation Considerations for Implementation

Transportation access is a defining challenge for the West Railroad area. The site's limited connections, physical barriers, and infrastructure deficiencies create significant uncertainty around how future development can effectively move goods, workers, and services. Despite these constraints, it will be important to explore all potential access opportunities to ensure the area's long-term viability as an employment district.

The City has engaged a consultant firm (DKS Associates) to conduct a preliminary transportation analysis to further evaluate the concept plan. Key assumptions and findings from that analysis are presented below and incorporated into the transportation considerations that follow.

» The analysis assumes development consistent with an industrial park setting, including a mix of smaller service businesses, larger manufacturers, and supporting commercial uses.

» The analysis assumes implementation of key regional Transportation System Plan projects, including the Basalt Creek Parkway extension and improvements to the Grahams Ferry Road/Day Road intersection, but does not assume a future I-5 overcrossing.

- » The analysis identifies a north–south local industrial street connecting Tonquin Road to SW Grahams Ferry Road as the primary internal circulation route.
- » The analysis identifies a potential eastward connection across the railroad at Cahalin Road as a long-term improvement.
- » The analysis indicates that no major off-site transportation improvements are required beyond those already identified in City and County Transportation System Plans.

1. Address Access and Connectivity Constraints

- **Tonquin Road (North Access):** Local street access to Tonquin Road may be feasible based on preliminary coordination with Washington County, but will need to meet County access, safety, and operational standards upon redevelopment.
- **Cahalin Road (Potential East Access):** A potential extension of Cahalin Road across the railroad could offer a strong central connection into the area, but would require crossing the rail line, a significant coordination challenge with Portland and Western Railroad and ODOT Rail (owner of the railroad ROW). The City has been in contact with railroad representatives who are open to the idea of a public crossing in the area, preferably by upgrading the existing Cahalin Road crossing with additional protections, while noting that improvements at another crossing may be required as mitigation. While not assumed in the baseline analysis, this connection could reduce reliance on other access points and provide long-term system benefits. Conceptual planning should continue to evaluate its feasibility, including estimated costs (approximately $500,000 in 2026 planning level costs) and permitting requirements.
- **Grahams Ferry Road Undercrossing (South Access):** The existing undercrossing is a critical freight linkage but currently undersized and in need of modernization. A site evaluation of this undercrossing was conducted in February 2025 and revealed that upgrading this facility could significantly improve freight mobility and overall connectivity at the southern end of the site but it is costly. For more detailed information, refer to the *Graham's Ferry Road: Freight Traffic Accommodation Evaluation (2025)*.

2. Prioritize Regional and Freight Mobility

- Focus on ensuring efficient and safe connections to regional corridors such as I-5, Tonquin Road, and Basalt Creek Parkway.
- Recognize that freight traffic will define the area's transportation needs, and future design solutions should prioritize large-vehicle maneuverability and industrial circulation.

3. Incorporate Multimodal and Complete Network Principles
