INTRODUCTION

This study evaluates the transportation impacts associated with the proposed single-story office building located at 9770 SW Wilsonville Road in Wilsonville, Oregon.

The property is an approximately 2.05-acre empty plot of land on the southwest corner of the Wilsonville Road / Kinsman Road intersection. The proposed development will consist of approximately 15,750 square feet of office space for CIS.

The proposed site access will be located on Kinsman Road, opposite the Ore Pac Ave intersection.

The purpose of this transportation study is to conduct a traffic impact analysis (TIA), which will identify any potential mitigation measures that might be needed to offset transportation impacts that the proposed development may have on the nearby transportation network in the near-term.

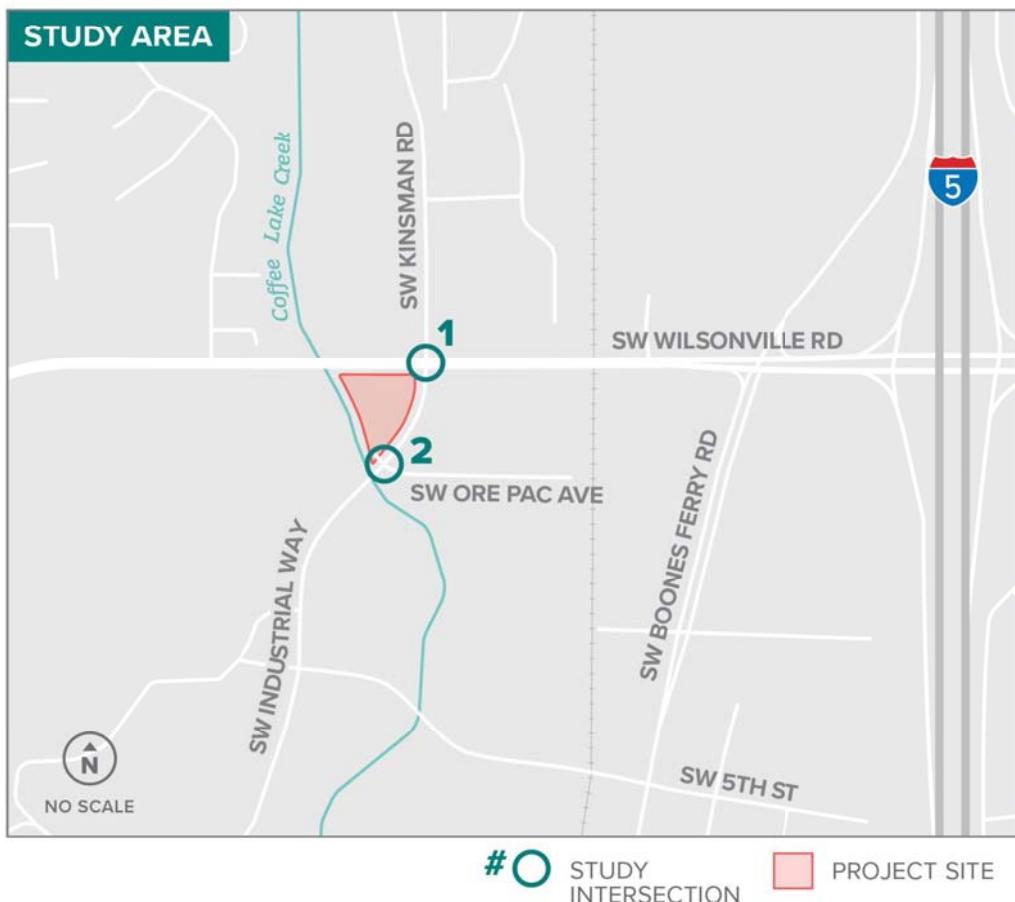

FIGURE 1: STUDY AREA

TRAFFIC IMPACT ANALYSIS (TIA)

The traffic impact analysis is focused on two existing intersections. The intersections are listed on the following page and shown in Figure 1. Important characteristics of the study area and proposed project are listed in Table 1.

1. SW Wilsonville Road / SW Kinsman Rd
2. SW Kinsman Road / SW Ore Pac Ave

TABLE 1: STUDY AREA & DEVELOPMENT CHARACTERISTICS

STUDY AREA	
NUMBER OF STUDY INTERSECTIONS	Two intersections
ANALYSIS PERIODS	Weekday PM peak hour (one hour between 4pm – 6pm)
PROPOSED DEVELOPMENT	
EXISTING LAND USE	Vacant
PROPOSED LAND USE	Office Space
PROJECT TRIPS	36 total PM peak hour trips (6 in, 36 out)
VEHICULAR ACCESS POINTS	One driveway access on Kinsman Rd

EXISTING CONDITIONS

This chapter provides documentation of existing study area conditions, including the study area roadway network, pedestrian and bicycle facilities, and existing traffic volumes and operations.

STUDY AREA ROADWAY NETWORK

Key roadways and their existing characteristics in the study area are summarized in Table 2. The functional classifications for City of Wilsonville streets are provided in the City of Wilsonville Transportation System Plan (TSP).^a

^a Chapter 3: The Standards, Wilsonville Transportation System Plan, City of Wilsonville, Amended November 2020.

TABLE 2: STUDY AREA ROADWAY CHARACTERISTICS

ROADWAY	FUNCTIONAL CLASS	OWNER	LANES	POSTED SPEED	SIDE-WALKS	BICYCLE FACILITIES	ON-STREET PARKING
SW WILSONVILLE RD	Major Arterial ^b	City of Wilsonville	4 ^c	35 mph	Yes	Yes	No
SW KINSMAN RD	Collector ^d	City of Wilsonville	3	30 mph	Yes	Yes	No

Bicycle and Pedestrian Facilities

Near the project site, there are on-street bicycle lanes along Kinsman Road and Wilsonville Road. The bicycle lanes on Wilsonville Rd, west of Kinsman Road are buffered. Sidewalks are present on Kinsman Road and Wilsonville Road. Along the project frontage, there are planter strips present that provide additional buffer between the sidewalks and roadway.

Public Transit Service

South Metro Area Regional Transit (SMART) provides public transportation services within Wilsonville and outlying areas. The Wilsonville Transit Center is located approximately 0.5 miles north of the project site along Kinsman Road. SMART provides bus service to Salem, Canby, and Tualatin. Additionally, Cherriots provides transit service from Keizer that stops in Woodburn and Wilsonville.

The Westside Express Service (WES) is a public commuter rail line that services Beaverton, Tigard, Tualatin, and Wilsonville. The WES station in Wilsonville shares a parking lot with the SMART Wilsonville Transit Center. Figure 2 below shows the transit stops near the project site. These stops are served by SMART Route 4.

^b Wilsonville Road is classified as a Minor Arterial west of Kinsman Rd

^c Wilsonville Road in the project area has 2 travel lanes in both directions and includes additional turning lanes at intersections

^d Kinsman Road is classified as a Minor Arterial north of Wilsonville Rd

FIGURE 2: TRANSIT STOPS

PLANNED PROJECTS

The City of Wilsonville Transportation System Plan (TSP) has a list of Higher Priority projects which includes the recommended projects reasonably expected to be funded through 2035. These are the highest priority solutions to meet the City's most important needs. The list includes the following projects that impact the key roadways near the proposed project site.

- **RE-04 (Brown Road Extension)** – Construct remaining 2-lane roadway with bike lanes, sidewalks, and transit stop improvements from Wilsonville Road to Boones Ferry Road (connect at 5th St); includes roadway connection to Kinsman Road (with bike lanes and sidewalks), portion of the Ice Age Tonquin Trail connecting to trail terminus on Arrowhead Creek Ln, and Brown Road / Kinsman Road intersection.
- **SI-06 (Kinsman Road Spot Improvements)** - Rebuild the northwest corner of the Wilsonville Road/Kinsman Road intersection to accommodate truck turning movements and improve pedestrian safety. Requires right-of-way acquisition, widening, pedestrian ramp replacement, and traffic signal pole relocation.

EXISTING TRAFFIC VOLUMES

New intersection turning movement count data was collected during the weekday PM peak period (4:00pm – 6:00pm) on Wednesday, November 8th, 2023, at the Kinsman Road / Ore Pac Ave intersection. Turning movement count data at the Wilsonville Road / Kinsman Road intersection was used from a previous project and no new counts were collected at this intersection because there was construction on SW Kinsman Road that had reduced travel to one-way on Kinsman Road. The counts for the Wilsonville Road / Kinsman Road were collected on Tuesday, August 8th, 2023. Because Wilsonville experiences higher vehicle volumes during the school year, a 6.2% growth was

applied to the Wilsonville Road / Kinsman Road intersection volumes to represent conditions when schools are in session. Figure 3 shows the adjusted Existing PM peak hour traffic volumes for the study intersections, along with the lane configurations and traffic control.

INTERSECTION PERFORMANCE MEASURES

Agency mobility standards often require intersections to meet level of service (LOS) or volume-to-capacity (v/c) intersection operation thresholds.

- The intersection LOS is similar to a “report card” rating based upon average vehicle delay. Level of service A, B, and C indicate conditions where traffic moves without significant delays over periods of peak hour travel demand. Level of service D and E are progressively worse operating conditions. Level of service F represents conditions where average vehicle delay has become excessive and demand has exceeded capacity. This condition is typically evident in long queues and delays.
- The volume-to-capacity (v/c) ratio represents the level of saturation of the intersection or individual movement. It is determined by dividing the peak hour traffic volume by the maximum hourly capacity of an intersection or turn movement. When the V/C ratio approaches 0.95, operations become unstable and small disruptions can cause the traffic flow to break down, resulting in the formation of excessive queues.

The City of Wilsonville requires study intersections on public streets to meet its minimum acceptable level of service (LOS) standard of LOS D for the PM peak period.

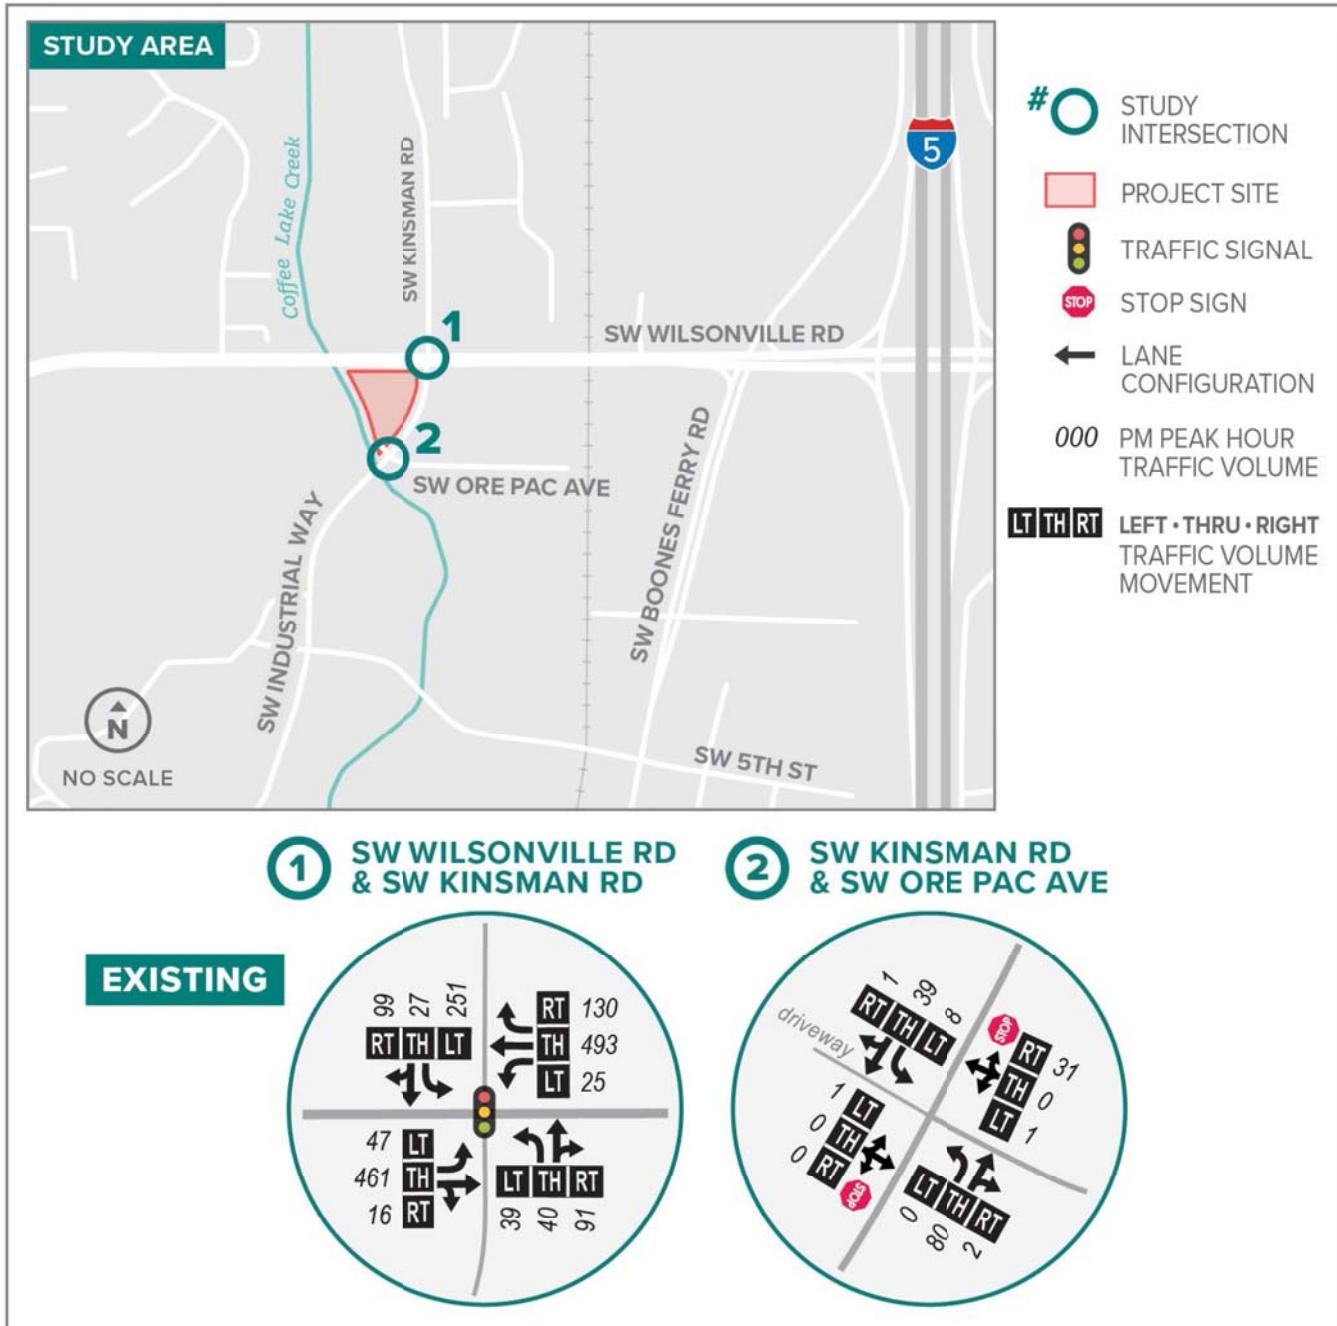

FIGURE 3: EXISTING PM PEAK HOUR TRAFFIC VOLUMES

EXISTING INTERSECTION OPERATIONS

Intersection operations were analyzed for the PM peak hour at all study intersections for the existing conditions using Highway Capacity Manual (HCM) 6th Edition methodology.^e The volume to capacity (v/c) ratio, delay, and level of service (LOS) of each study intersection are listed in Table 3. As shown, all study intersections meet the applicable operating standards under existing conditions.

TABLE 3: EXISTING (2023) INTERSECTION OPERATIONS (PM PEAK)

INTERSECTION	OPERATING STANDARD	EXISTING PM PEAK HOUR		
		V/C	DELAY	LOS
SIGNALIZED				
WILSONVILLE RD / KINSMAN RD	LOS D	0.63	18	B
TWO-WAY STOP-CONTROLLED				
KINSMAN RD / ORE PAC AVE	LOS D	0.01	9.9	A/A
SIGNALIZED INTERSECTION: Delay = Average Intersection Delay (secs) v/c = Total Volume-to-Capacity Ratio LOS = Total Level of Service		TWO-WAY STOP-CONTROLLED INTERSECTION: Delay = Critical Movement Delay (secs) v/c = Critical Movement Volume-to-Capacity Ratio LOS = Critical Levels of Service (Major/Minor Road)		

PROJECT IMPACTS

This section reviews the impacts that the proposed development may have on the transportation system within the study area. This analysis includes trip generation, trip distribution, future traffic volume development, and operations analysis for the study intersections.

PROPOSED DEVELOPMENT

The proposed development is a new single-story office building with a total square footage of approximately 15,750 SF with associated parking, landscaping, and site improvements at 9770 SW Wilsonville Road. The building will include office space, meeting areas, and training areas. A single access is proposed via an existing driveway on SW Kinsman Road.

FUTURE ANALYSIS SCENARIOS

Operating conditions were analyzed at the study intersections for the following traffic scenarios. The comparison of the following scenarios enables the assessment of project impacts:

- Existing + Project
- Existing + Stage II

^e Highway Capacity Manual, 6th Edition, Transportation Research Board, 2017.

- Existing + Project + Stage II

All future analysis scenarios assume the same traffic control as existing conditions. Stage II represents traffic from other developments that have Stage II approval or are under construction in Wilsonville, which are based on the list of currently approved Stage II developments provided by City staff.^f

TRIP GENERATION

Trip generation is the method used to estimate the number of vehicles added to site driveways and the adjacent roadway network by a development during a specified period (e.g., PM peak hour). The Institute of Transportation Engineers (ITE) publishes trip generation rates for the various land uses that can be applied to determine estimated traffic volumes.^g

Table 4 shows the total number of trips that this development will produce daily and during the PM peak hour. ITE code 710 (General Office Building) was used. The proposed office building is estimated to produce a total of 36 PM peak hour trips (6 in, 30 out) and 232 daily trips (116 in, 116 out)

TABLE 4: PROJECT VEHICLE TRIP GENERATION

LAND USE	ITE CODE	PM PEAK HOUR TRIP GENERATION RATE	PM PEAK HOUR VEHICLE TRIPS				DAILY TRIPS		
			SIZE	IN	OUT	TOTAL	IN	OUT	TOTAL
General Office Building	710	2.29 trips per 1000 Sq. Ft. GFA	15,750 Sq. Ft. GFA	6	30	36	116	116	232

VEHICLE TRIP DISTRIBUTION

Vehicle trip distribution provides an estimation of where vehicles would be coming from and going to. It is given as a percentage at key gateways to the study area and is used to route project trips through the study intersections. Figure 4 shows the trip distribution for the proposed site. The trip distribution for the passenger car trips was based on the Wilsonville Travel Demand model.

The vehicle trips generated by the site expansion were distributed as follows:

- 60% east of the project site (to/from I-5, Wilsonville Road, etc)
- 30% north of the project site via SW Kinsman Road
- 10% west of the project site via SW Wilsonville Road

^f Provided via email from Daniel Pauly, City of Wilsonville, August 8th, 2023.

^g Trip Generation Manual, 11th Edition, Institute of Transportation Engineers, 2021.

Project Trips Through City of Wilsonville I-5 Interchange Areas

The project trips through the two City of Wilsonville I-5 interchange areas were estimated based on the trip generation and distribution assumptions as discussed prior. Approximately 60% of the total vehicle project trips (21 PM peak hour trips, 140 daily trips) are expected to travel through the I-5/Wilsonville Road interchange area and approximately 0% of the project trips are expected to travel through the I-5/Elligsen Road interchange.

FUTURE TRAFFIC VOLUMES

Traffic volumes were estimated at the study intersections for the three future analysis scenarios previously listed using the various combinations of the three traffic types: Existing, Project, and Stage II. Figure 5 shows the Existing + Project PM peak hour traffic volumes, the Existing + Stage II PM peak hour traffic volumes, and the Existing + Project + Stage II PM peak hour traffic volumes.

FIGURE 4: PROJECT TRIPS & TRIP DISTRIBUTION

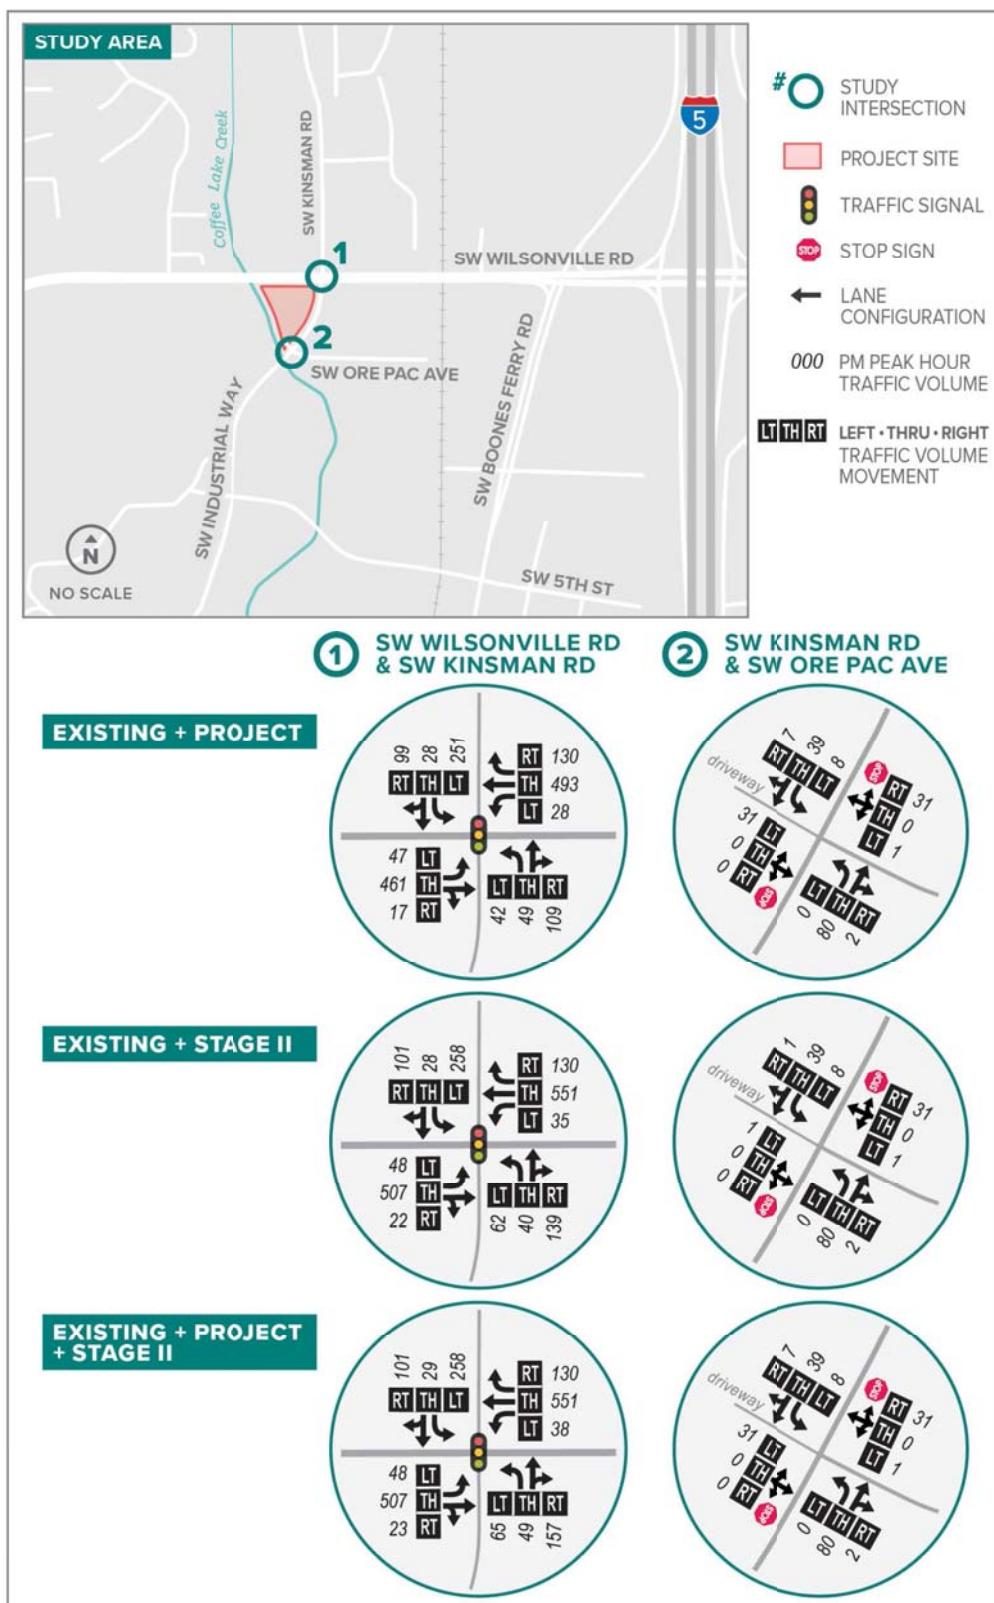

FIGURE 5: PM PEAK HOUR TRAFFIC VOLUMES FOR FUTURE SCENARIOS

FUTURE INTERSECTION OPERATIONS

Intersection operations were analyzed for the PM peak hour at all study intersections for the future scenarios using Highway Capacity Manual (HCM) 6th Edition methodology.⁸ The volume to capacity (v/c) ratio, delay, and level of service (LOS) of each study intersection are listed in Table 4.

As shown, all study intersections meet the applicable operating standards under all future analysis scenarios.

TABLE 4: FUTURE INTERSECTION OPERATIONS (PM PEAK)

INTERSECTION	OPERATING STANDARD	EXISTING + STAGE II		EXISTING + PROJECT		EXISTING + STAGE II + PROJECT

⁸ Highway Capacity Manual, 6th Edition, Transportation Research Board, 2017.

SITE PLAN REVIEW

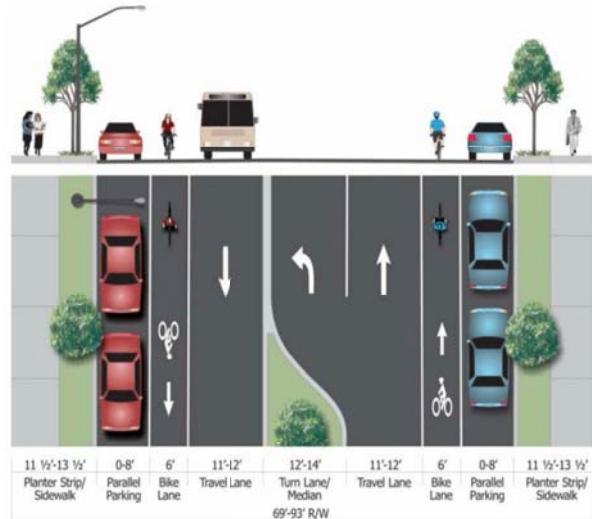

This section reviews the project site plan for consistency with the Wilsonville Transportation System Plan and other applicable transportation standards, including the Wilsonville Development Code and Wilsonville Public Works Standards. The purpose of this review is to help identify any major site plan design concerns that could impact the greater project goals and could necessitate overall site plan changes. The site plan is provided in the appendix.

VEHICULAR SITE ACCESS

There is one proposed site access (driveway) for the project. The access is located at the existing Kinsman Road / Ore Pac Ave intersection. This is an existing driveway.

The access point is required to meet the City's Access Spacing Standards for Collectors.⁹ The access spacing for collectors is to be a minimum of 100 feet from between adjacent curb returns, but the desired spacing is 300 feet. The proposed site access is approximately 350 feet from the Wilsonville Road / Kinsman Road intersection to the north. The proposed spacing meets the minimum and desired requirement. The access point to the development appears to align with SW Ore Pac Ave on the other side of Kinsman Rd, which is required by the City of Wilsonville.

Based on a preliminary sight distance evaluation, the sight distance at the proposed driveway on Kinsman Road appears to meet sight distance requirements, which is 335 feet of visibility. Prior to occupancy, sight distance at any existing or proposed driveways will need to be verified, documented, and stamped by a registered professional Civil Engineer licensed in the State of Oregon to assure that buildings, signs, or landscaping does not restrict sight distance.

COLLECTOR CROSS SECTION STANDARD

FRONTAGE IMPROVEMENTS

The project site shall provide street frontage improvements on Kinsman Road consistent with the City of Wilsonville's collector cross section standard, for which the roadways are classified as such.¹⁰ Today, Kinsman Roadfronting the project site has two travel lanes with a center turn lane, planter strip, sidewalk, and marked bike lanes fronting the project site. Based on the standards, the site frontage is consistent with the cross section standard for collector streets. On-street parking is allowed on Collectors but is not required or recommended for Kinsman Road.

¹⁰ Figure 3-8, Transportation System Plan, City of Wilsonville, Amended November 2020.

¹⁰ Figure 3-8, Transportation System Plan, City of Wilsonville, Amended November 2020.

ON-SITE CIRCULATION

The City requires that all modes of transportation have safe and convenient on-site circulation to the highest degree that the site practically allows.¹¹ The proposed parking lot shows 63 total parking stalls (38 standard, 22 compact, 3 accessible). According to the Wilsonville Development Code¹², an office space of this size has a parking stall minimum of 43 and a maximum of 65. Throughout the parking lot there are 24-foot driving aisles which should provide adequate circulation. A layout of the proposed parking lot can be shown in the appendix.

DRIVEWAY AISLE LENGTH

The City has minimum driveway aisle length standards.¹³ For driveways with more than 100 average daily traffic (ADT), the drive aisle must be clear of parking stalls and intersecting drive aisles within 100 feet from the back of sidewalk. Proposed parking stalls appears to be approximately 60 feet from the back of the sidewalk, which does not meet the City's requirements. However, queuing analysis at the site's driveway shows that the anticipated 95th percentile queue length would be 45 feet, which is less than the proposed 60-foot driveway aisle. This indicates that the proposed driveway aisle length will be able to accommodate the estimated vehicle queues during the PM peak hour and will not impact on-site circulation or safety. Based on this information, it is recommended that the applicant apply for a code variance for a driveway aisle length that is less than the required 100 feet.

¹¹ Section 4.421, Wilsonville Development Code, Updated March 2023.

¹² Section 4.155. – General Regulations – Parking, Loading, and Bicycle Parking – Table 5

¹³ Section 201.2.23 (Driveways), Public Works Standards, City of Wilsonville, Revised September 2017.

SUMMARY

The key findings of the transportation impact analysis (TIA).

- The proposed project is a general office building development that is expected to generate 36 (6 in, 30 out) PM peak hour vehicle trips, and 60% of those trips (21 vehicles) are expected to travel through the Wilsonville Road / I-5 interchange.
- The traffic operations at the two study intersections are expected to operate within the City's LOS standard under all future volume conditions.
- Kinsman Road along the project site frontage is consistent with the City's cross section standard for collector streets.
- The access point to the development appears to align with SW Ore Pac Ave on the other side of Kinsman Rd, which is required by the City of Wilsonville.
- Prior to occupancy, sight distance at any existing or proposed driveways will need to be verified, documented, and stamped by a registered professional Civil Engineer licensed in the State of Oregon to assure that buildings, signs, or landscaping does not restrict sight distance.
- It is recommended that the applicant apply for a code variance for a driveway aisle length that is less than the required 100 feet. Based on queuing analysis, there are no anticipated on-site circulation or safety concerns with the proposed 60-foot driveway aisle length.
