

Wilsonville Framework for Inclusive Engagement

Draft April 28, 2022

Purpose

The City of Wilsonville is committed to engaging residents, businesses, property owners, and other stakeholders in planning and decision making that impacts them. This includes planning, policy, and project decisions related to land use, housing, parks and recreation, transportation, and other community issues. The City is also committed to increasing and supporting the involvement of historically underrepresented community members through consistent, fair, and accessible public engagement activities that encourage participation by all members of the community.

This framework was developed to provide a foundation on which City outreach and involvement efforts can be based across a variety of projects to substantially increase diversity, equity, and inclusion in decisions by bringing meaningful engagement to all members of the community.

Benefits of Engaging the Public

Broad community involvement in City decisions provides a number of significant benefits:

- *Legitimacy and increased support for plans and projects.* With the substantive engagement of affected communities, developed plans will reflect legitimacy, community support, and incorporate equity outcomes. Legitimacy builds trust, political will, and ownership for effective implementation.
- *Improved community/government relations.* Community engagement can build trust between diverse stakeholders and help improve the quality of difficult discussions about racial disparities, economic conditions, and community development needs. By creating a multifaceted process built upon relationship building, trust, respect, and affirmation of community knowledge and power, more effective ways of dealing with difference will emerge.
- *Deeper understanding of the issues.* Regional housing plans will be stronger with the input of the people who are facing and addressing housing challenges. Regional economic opportunity plans will benefit by significant engagement of residents and organizations that have knowledge of the barriers to job access and experience in creating solutions to these challenges.
- *Increase in community capacity.* A meaningful engagement strategy will improve capacity for problem solving. Engagement builds stronger networks across racial, ethnic, generational, gender, and socioeconomic divides, an essential component to achieving equitable outcomes and leveraging additional resources, outside of public processes.
- *Reduced long-term costs.* Plans and development projects often end up in litigation when lack of or poor community engagement has not effectively crafted consensus. While conflicts may arise during planning (especially when there is a history of failed projects or unrealized promises), the community engagement process creates an environment of positive communication where creative and inclusive solutions can be found to resolve conflicts.
- *Democracy in action.* Community engagement is, in many ways, a microcosm of our American democratic system of government. It is one of the best ways that community residents can connect to and shape local and regional decision-making processes.

Principles for Effective Outreach

Community engagement should take a comprehensive approach, creating practices and institutionalized mechanisms that share power and vest decision-making control in all members of the community, including historically overlooked and marginalized groups and individuals. When utilized for the purpose of increasing community power and agency for problem solving, community engagement is guided by a few key principles:

- Honor the wisdom, voice, and experience of the community
- Treat participants with integrity and respect
- Be transparent about the process, motives and power dynamics
- Share decision making and initiative leadership
- Engage in continuous reflection and willingness to change course

Effective engagement can be the difference between a successful initiative and one that falls well short of its potential. It enables highly technical or routine projects and processes to produce real, tangible, and lasting benefits for communities. Effective engagement is:

- Collaborative – work together to generate ideas and develop solutions
- Outcome-driven – focus on solving a problem
- Inclusive – involve stakeholders in defining the problem, the desired outcome, and the process for decision making
- Fair – clearly define decision-making process
- Trackable – document all input and decisions
- Accessible – make meetings and information accessible for all

How to Use the Framework

The framework provided here offers general guidance for effective public outreach. It includes a six-step process that guides the focus of public engagement at each step of the process. It is intended to be a flexible, principle-driven process that can be easily followed by the City and the public to track the decisions and focus of each step, creating a fair and transparent process. The framework can be used as the foundation for designing public outreach for all City activities that include a public outreach or engagement component. The process is flexible and adaptable to the complexity and timeframes of different types of policy, planning, and project initiatives.

Questions to Consider

In applying the framework to your planning effort, it may be helpful to consider the following questions to set the context for the public outreach design:

- What would a successful public engagement effort look like for this initiative?
- Is the City starting from a relatively blank slate to understand the full set of needs or is it focused in on specific outcomes or constraints?
- What is the timeline and decision-making structure that will drive the process?
- What is your understanding of the community landscape? Who is affected? Which community groups or other stakeholders can help engage the most affected community members?

- What are the core questions and tradeoffs associated with the project? What are the most important questions and tradeoffs stakeholders and decision makers must consider? Are there segments of the community that will be particularly interested in those questions?

Designing the Process

Establish Goals for Community Engagement

It is important to be clear about why you are doing public engagement to ensure that the public outreach effort is designed to meet your intended outcome. The purpose can range from providing information to public, to obtaining input on a project or decision, to involving the community in decisions. It is always better to look to a more inclusive approach if you are unsure how much interest or controversy there is around a decision. Starting with more outreach and then backing off if the level of interest is not there is better than starting with an information campaign and being met with community resistance or controversy; such an approach does not engender trust in the process.

Establishing goals for engagement is not focused on a solution, it is focused on what the public process brings to developing a solution. The goal of community engagement is to provide opportunities for the public to gain information, provide input, and influence the outcome at whatever level necessary to support the final recommendation. Understanding the nature of the decisions being made, the opportunities to enhance decisions through community dialogue, and awareness of the challenges and community concerns is essential to designing an effective engagement process.

Framework for Engagement

The framework outlined below is easily adapted to a wide variety of applications to provide a structure to public engagement on a City-wide basis. Consistency in the approach allows the community to recognize the steps of the process and how their participation will be used in the City's decision making. This builds trust and confidence in the process and encourages public involvement.

Key Steps, Strategies, and Considerations

The steps outlined here are general in nature and can be adapted to meet the complexity and context of any decision. They are designed to make the process transparent and understandable to all interested parties, focus on developing a fair process that reflects community values from a broad range of interests, facilitate creative problem solving, and engage the community in weighing tradeoffs and values.

The framework for engaging the community in a fair and transparent decision-making process is developed around the six steps for public decision making, shown in Table 1.

Table 1: Steps for Public Decision Making

Step 1	Define the problem and identify desired outcome for a planning project
Step 2	Determine criteria and measures for the desired outcomes
Step 3	Brainstorm alternative solutions to the problem
Step 4	Evaluate the alternatives using the agreed upon criteria
Step 5	Consider tradeoffs between alternatives
Step 6	Develop recommendations to the decision makers

Step 1: Define the problem and identify desired outcome for a planning project

The first step of any process is to define the problem to be addressed. For most planning and policy decisions, it is important for the City to explore a problem through the broader lens of public engagement. Gaining the perspective of directly and potentially affected parties adds depth and dimension to the problem definition. What may seem like a problem for City officials may have unseen benefits to the community. Similarly, information gathered by the City about an issue may not include challenges obvious to those who live and work in or with the issue. By mutually defining a problem, the City is better prepared to develop solutions that are supported by the community and those directly affected by them.

Similarly, a mutually defined desired outcome is important to knowing what is important to the community in developing a plan or project that all parties can support. Answering the question: This project/plan will be success if... helps to frame community values and desired outcomes. It also provides the basis for developing an evaluation process in Step 2. It is important to discern between interests and solutions when exploring desired outcomes, and to redirect suggested solutions to a discussion about what they achieve or deliver. For example, in a planning effort someone might say that a new park is the desired outcome. The underlying interest may be a place for children to play or friends to gather or the creation of green space or aesthetics. Teasing out the underlying interests creates an opportunity to achieve an outcome without limiting it to a single solution.

Step 2: Determine criteria and measures for the desired outcomes

Mutually defining the desired outcome(s) in Step 1 provides the foundation for developing criteria and measures for comparing and selecting alternative solutions or ideas. It is important to design and gain endorsement for an evaluation process that reflects community values before brainstorming potential solutions. This demonstrates the City's commitment to a fair and transparent process and a way to track and evaluate what is most important to the community.

The purpose of the evaluation process is to provide a structure for comparing options across values. It is not intended to numerically rank each option or alternative; rather, it is designed to provide information on the tradeoffs across several key values and criteria. The evaluation process is a tool for understanding the tradeoffs and looking for a balance the community can support. What might be a disadvantage to one person or group may be an advantage to another. Through this process all interested parties have an opportunity to share their perspective and look for ways to find mutually beneficial solutions.

Step 3: Brainstorm alternative solutions to the problem

The process of brainstorming alternative solutions is generally the most fun part of a planning process and one stakeholders want to jump into from the beginning of the process. In most cases, the City has identified a range of options before going to the public in a planning process. It is important to complete Steps 1 and 2 before getting into potential solutions to provide an opportunity for solutions to evolve out of a broader perspective based on the desired outcomes and community values identified in Step 1. Brainstorming should be as creative as possible and not be incumbered by discussion of why things will or will not work. On plans or projects where the City is looking for public input and involvement, the structure of this activity would be as inclusive and interactive as possible. It is best that the City does not present their ideas until after the brainstorming phase. If the City has made

decisions or commitments, or there are parameters or limitations to what is to be considered, those should be shared. If there are examples from other plans, projects, or communities the City would like to present to generate ideas or get feedback, those can also be shared to stimulate discussion.

There are several techniques for engaging the community in the brainstorming phase. These include workshops, charrettes, online interactive activities, interactive displays in public areas, surveys, and others. As with other activities, the more interactive the better with opportunities for the community to share and hear a wide range of perspectives and interests.

After the initial brainstorming, the City develops alternative solutions for evaluation. These can include any ideas the City had coming into the process and should include the ideas generated by the public brainstorming process. They should also be distinctive from each other to test alternatives against different criteria and values. Ideas should be tracked and mapped to alternatives so the public can easily see how their ideas were incorporated into alternatives. If some ideas are not viable or realistic and cannot be used, they should also be documented with the rationale for not moving them into an alternative.

Step 4: Evaluate the alternatives using the agreed upon criteria

In Step 4, alternatives are evaluated in the preestablished evaluation process. For more complex projects, this may need to be a multistep process or ideas may need to be combined into packages of improvements that can be added to different alternatives. For most decisions, a range of three to five alternatives can be evaluated to provide a comparison between them. Criteria may be quantitative or qualitative, as designed in Step 2. The purpose of this step is to provide enough information about how each alternative addresses the values and criteria, and to share the evaluation results in a clear way. The easiest way to provide these results for comparison is in a matrix or table that allows the public and decision makers to see and compare how well each alternative meets the desired outcomes.

Step 5: Consider tradeoffs between alternatives

Step 5 shares the evaluation of the alternatives to open discussion and understanding of how different options impact desired outcomes. It helps the community see where ideas are mutually exclusive or contradictory and how they may positively or negatively affect interest groups or stakeholders. The goal of this step is not to rank or vote on an alternative, it is to use what it learned through discussions of tradeoffs to guide the selection of a preferred alternative, either one of the existing alternatives or one that evolves out of the community dialogue. If this step leads to the development of one or more new alternatives, Steps 4 and 5 are repeated to identify community preferences and determine a preferred alternative.

Step 6: Develop recommendations to the decision makers

The preferred alternative will be the basis for a recommendation to City decision makers. City interests and limitations should be included in Steps 1 through 5 to ensure that they are considered throughout the process. Recommendations should document the process the City followed to develop the recommended alternative, including the activities for involving the community, a summary of each step of the process, and any unresolved issues or challenges. If the process was followed and City and community criteria were addressed, the recommendation should meet the City's desired outcomes and limitations.

Modular and Flexible

Each of the steps is critical to a fair and transparent decision process; however, the time needed for each step and the number of meetings or activities devoted to each step should be adapted to the nature and complexity of the project or decision. For example, if the problem is well understood and agreed upon by all stakeholders, Step 1 can be a quick review and confirmation of the problem definition and desired outcomes, accomplished in the same meeting as developing the evaluation criteria and measures. For more complex and potentially controversial projects, several outreach activities and discussions may be needed to develop consensus on the problem definition and desired outcomes. Process design should consider the appropriate and reasonable number of meetings and activities needed to move the process forward in a way that keeps stakeholders engaged and does not feel like it is missing any of the key steps.

In-person and Virtual Community Engagement

Community engagement should be structured to encourage the sharing of perspectives across interest groups and individuals. In-person events are easily structured to encourage dialogue and conversation. Where in-person meetings are not feasible or appropriate, efforts should be made to create virtual environments that are as interactive as possible to encourage the community to share and understand a broad range of perspectives. It is important to provide interpretation services as needed to reduce language barriers and support communication between stakeholders.

There are times when virtual meetings, or a combination of virtual and in-person meetings provide greater flexibility to working families with children, who have limited time, transportation, or child care. Virtual meetings were also essential to continue public engagement during the COVID-19 pandemic, providing a safe option for participation. Whether in-person or virtual, forums should be structured to encourage interaction between community members and groups. Formal presentations by agency and subject experts should be minimized and opportunities to share ideas and perspectives should be maximized.

Identifying Key Stakeholders and Audiences

Effective community engagement is broad and deep. It allows all potentially interested or affected parties to be involved at the level appropriate to their interests. It should cast a broad net to identify stakeholders and meet the full range of levels of interest. Some residents or businesses may want to be kept informed while others have a vested interest in the outcome and want to influence the decisions that are made. It is important to understand the range of audiences, stakeholder, and interested and affected parties to develop outreach activities that meet their needs.

Some of the critical considerations for identifying stakeholders include:

- What level of interest does the general community have in this policy, plan or project, and how does that vary across different groups?
- What groups or individuals are potentially affected by the development of this policy, plan, or project?
- How can we engage the most affected community members from the beginning?
- What is the City asking of participants in the public process (e.g. time, input, resources, expertise, etc.) and is it clear to the participants what they are being asked to provide?

Considerations for Engaging Underrepresented Stakeholders

Engaging traditionally marginalized communities in decision-making processes is critical to realizing the full and authentic potential of sustainability and prosperity in Wilsonville. Public participation processes that are perfunctory and superficial do not include opportunities to share stories, access community assets and knowledge, or include all community members and organizations in shaping the agenda, the process, and the ultimate decisions. To be truly inclusive, the City must treat all members of the community as an asset and understand that community-based organizations bring important capacities and relationships that the City can leverage to produce more effective community outcomes. However, not all underrepresented members of the community are part of an organization. It is important to identify and engage all potentially interested or affected parties during outreach design and throughout the process. One way to do that is to continually ask, “who are we missing, who else should be involved,” in the early public meetings and as new issues arise.

It is essential to build bridges to underrepresented groups by creating a safe space conducive to sharing experiences, ideas, and preferences. Overcoming cultural and language challenges that may limit engagement should be a priority in the design and implementation of public outreach and engagement. This can be done through identifying and working with community ambassadors or advocates to directly address obstacles to participation. Clearly defining the purpose of involvement and how community involvement will be used to shape decisions is important.

It may be necessary to engage intermediaries to facilitate the inclusion of traditionally underrepresented parties. Intermediaries can help bridge the gap between the groups who trust them and other stakeholders. They can also support coalition building and information sharing between experts and partners to reach underrepresented communities. Implementing this approach will require that City officials invest their time in the process and appreciate that meaningful community engagement requires commitment to the principles outlined in this framework.

Some barriers to engaging traditionally underrepresented stakeholders and potential actions for overcoming the barriers are provided in 2 below.

Table 2: Barriers and Actions

Barrier	Potential Action
Participant resources	
Time needed to participate	Offer a variety of times and amount of time required
Ability to travel to meetings	Locate activities close to underrepresented communities, provide or subsidize transportation to meetings; provide a hybrid model for online and in person engagement
Childcare	Provide onsite childcare and activities to engage youth in the project
Limited knowledge of, or access to technology	
Internet access	Provide computer and internet access at public facilities
Comfort with online platforms	Simplify access and provide support
Lack of trust in government	
Past experiences with government	Document the range of past negative experiences and actively address concerns

Barrier	Potential Action
Fairness of the process	Clearly define the process and maintain transparency
Fear of government	Hold meetings in safe environments (schools, churches, neighborhood meeting places)
Language	Provide translation services and community liaisons
Cultural	Make accommodations for cultural and religious holidays and norms
Physical	Provide accommodations for varying physical abilities and limitations
Lack of project awareness	Provide information across a wide range of media, formal and informal
Power differentials and dynamics	Assess, document, and address full range of potential power dynamics related to initiative

Questions to Consider

In developing an outreach strategy and identifying tools, consider the following questions:

- How does the overall demographic makeup of those who are engaged in the public process compare to the overall makeup of the city?
- Who is underrepresented and how does the proposed policy, plan, or process potentially affect them?
- What are the historic and current power dynamics of the group in relation to the rest of the community?
- Who are the key organizational partners and intermediaries? Are specific community leaders, business associations, or activists engaged? Are these partners aware of and actively addressing historic inequities?
- What background information will underrepresented groups need to participate effectively? How will that information be prepared and delivered?

Strategies for Outreach and Engagement

This section discusses a range of strategies for public outreach and engagement. In addition to the tools described below, the City should consider the capacity of staff and the community to engage in an effective outreach effort. Outreach and engagement activities should be included in the scope of work for all City initiatives to ensure that it is a formal part of the process and adequate resources are available for effective engagement.

From the City's perspective, the following questions should be considered in designing and implementing a public outreach process:

- Does the City have the resources to design and facilitate an effective public process?
- Does the staff have the appropriate training and skillset to engage a diverse set of community members in the decision-making process?
- Does the staff need trainings on racial disparities, equitable practices, and other topics to help understand and respond to what they are hearing from community groups?
- Does the staff represent and/or have a history of working with the community groups that need to be included in the process?

An honest assessment of these questions at the outset can prepare the City for challenges and allow additional resources and capabilities to be brought into the process from the beginning.

Similarly, the City should consider the community's capacity to engage effectively in a process. If the issues are complex or historically underrepresented groups with little experience engaging in public processes are involved, there may be a need to support them. The City should consider:

- What kinds of training or materials will community members need to engage in the decision-making process comfortably and meaningfully?
- How will the materials and information be delivered in a way that ensures accessibility for a diverse range of community groups?
- Are translation services or other communication supports needed to engage a broader community?

Menu of Outreach Activities

The following is a list of public outreach activities that can be used to inform, solicit input, or engage the public. There is a general description of each and discussion of how and when they are applicable. A summary table of the application of each tool is shown in Table 3. In selecting tools for public outreach, it is important to consider the average age or digital literacy of targeted groups and potential barriers of each tool to engaging historically underrepresented groups.

Public Meetings

Public meetings can be used to provide information, solicit input, and engage the public depending on how they are structured. They can vary in the size and formality of the meeting. Meetings that are intended to engage the public in a dialogue and sharing of ideas and perspectives should minimize presentations by the City (talking at the public) and maximize opportunities for interaction (dialogue, brainstorming, breakout groups – listening to the public). Specific types of public meetings are discussed below. Each brings a different focus or structure to enhance interaction with the community.

Workshops

Workshops are a particular type of public meeting used to encourage collaboration between the City and the community. They are generally focused in terms of their scope and structured to allow cooperative problem solving. Workshops can be designed using a wide variety of interactive formats: breakout group, stations focused on specific issues or aspects of a plan or project, tabletop exercises, brainstorming sessions, presentations and videos, community-driven dialogues, and others. The main purpose of workshops is for the City and the community to work together and to share ideas and perspectives.

Focus/Community Interest Groups

Focus groups or interest groups are smaller public meetings focused on a specific issue, interest, or stakeholder group. These groups can be formed to engage a specific or diverse set of interests throughout a planning process or can be formed ad hoc as issues arise that need input and involvement by targeted groups. Focus groups can also be used to engage traditionally underrepresented stakeholders to ensure that their interests are included in the process.

Charettes

Charettes bring together City officials, planners, designers, and public stakeholders in a collaborative working meeting to address planning and design issues. Charettes may be time intensive, bringing stakeholders together to solve problems over one or more days. These can be held at key steps in the process to support the problem definition or the development and revision of alternative solutions.

Visioning Workshop

Visioning or future search workshops are useful in identifying community values and preferences. They should include a broad range of interests and disciplines in support of strategic planning or policy development. These workshops allow participants to share what is important to them, what they want to change, and what they want to build on in the future.

Open Houses

Open houses are one of the least structured public meeting options. They allow the public to drop-in and interact at their level of interest. Open houses should provide information about a policy, plan, or project; include opportunities for the public to ask question and give input on what is presented; and allow participants to interact with City officials involved in the process. Open houses should provide a variety of ways for gaining and documenting input through comment forms or recorders to capture comments. Information is provided through displays and handouts, with opportunities to discuss issues directly with City officials involved in the policy, plan, or project development.

Social/Community Events

Information about City initiatives can be brought to social and community events to provide information about policies, plans, or projects the City is working on. Information displays at community events increase the visibility of the initiative and allow interested citizens to learn about the effort, talk to City staff, provide input, and follow-up by accessing online information or getting involved in community engagement activities. Targeting a variety and diversity of events, the City can inform and potentially engage interested parties that are not traditionally engaged in policy and planning activities. An important event to focus on is the City's annual block party which in the past has brought diverse members of the community.

Websites

Websites specific to City initiatives can provide 24/7 access to information. They can be designed to include surveys, subscription push notifications of updates and key decisions, and interactive tools that allow the public to engage in the project. For complex policy issues, agencies have developed games that allow users to make choices and indicate priorities through fun and simple exercises. The results can be compiled to give decision makers a better sense of community values. Websites should be up to date and clearly track the status of the process. Let's Talk, Wilsonville is a "virtual City Hall" that features City projects and provides opportunities to provide input. Project sites on Let's Talk, Wilsonville! Include a brief description and survey questions that change over the life of the project to allow interested parties to provide focused input.

Surveys

Surveys are a tool for sharing information with, and gaining input from, the public. They can be conducted in-person, by phone, online, and by mail. Surveys can be included in other activities such as community events, open houses, project websites, or newsletters. Surveys are most helpful when there

is a need to gain input on what is important to the community. Surveys should be short, focused, and easy to complete. They should be designed to collect input rather than as a voting tool and should include opportunities for comments or open-ended questions.

Mailings

Mailings can be targeted or general to provide information on a project or invite participation in public engagement activities. Targeting mailings about a policy, plan, or project can be used to reach groups that may have a specific potential interest, those who may need additional encouragement to participate, or those who do not have internet access or have language limitations. Developing targeted mailings in Spanish or other languages, and mailing lists of those who are unlikely to receive emails or visit websites is important to reaching those who are traditionally underrepresented in City processes.

Emails

The City maintains a number of public email lists that can be used to provide updates on City activities. These should be used to deliver information on policies, plans, and projects with an option to opt out of future emails. Email can be used to notify the public of outreach activities and linked to project websites.

Newsletters

Newsletters can be electronic and delivered through email and websites, or printed and mailed or distributed at public meetings, community events, or public venues such as libraries and recreation centers. Newsletters provide information to the public and should document the public process and direct readers to websites, events, and City contacts. The City can also work with homeowners associations, business groups, and community organizations to include project updates in their member newsletters.

Social Media

Social media provides a format for quick updates and information about events and key milestones in a public process. It can be used to augment other information sources and direct readers to more comprehensive sources such as project websites. Social media is a good way to reach younger community members.

News Articles

Articles in the Spokesman can help disseminate information about policies, plans, and projects that are newsworthy. Media releases should be coordinated through the City's Public and Government Affairs Director.

Wilsonville TV

Wilsonville TV provides an opportunity to share information through live and recorded videos of committee meetings and planning efforts, such as this video on the [Frog Pond planning conversation](#). This information is easily accessed on the Wilsonville YouTube channel 24/7 and can be more engaging than a static website. Links to process-specific videos should be included on the project website and in other information pieces.

Wilsonville TV	✓		

Public hearings are not included in this list. Although a formal public hearing may be a required final step to adopt or approve a policy or plan, public hearings should not be considered a tool for public outreach. By working collaboratively throughout the process, the City should be able to address public concerns in developing a final policy or plan. This should lead to final recommendations that are accepted or supported by the community. There should be no surprises by the time a policy or plan gets to final approval or adoption. Time should be provided during the hearing for public comment for interested parties to express their concerns or support; however, if issues are raised that were not addressed during the public process, the process itself was not as robust as it needed to be.

Measure Success

After each public outreach or engagement process, it is important to assess effectiveness and document what worked, what could have worked better, what did not work, and why. This information can be used to improve the outreach framework and future outreach efforts. Some of the questions to consider in determining how success the public outreach process was include:

- Did Wilsonville officials learn new information about the needs or priorities of the community, particularly from segments of the community that have historically been excluded from, or marginalized in, government decision making?
- Did community participants learn about the constraints Wilsonville officials face, such as limited resource or legal barriers, the unintended consequences of certain policies, or conflicting community needs?
- Were the organizations, participants, and City officials involved able to explore new and creative solutions through dialogue, listening, and learning from each other?
- Are there concrete ways that the community involvement influenced the final strategy?
- Did the City explain why some community recommendations or requests were not included?

- Did participants, especially those from low-income communities of color and other vulnerable or disinvested communities, build political power and gain more access to government decision makers that they can leverage for influencing future processes or decisions?
- Was the recommended policy, plan, or project adopted and implemented?
